2.24 rfs semantics

Table 42: rfs_semantics

requirement	status	note
OBESITY rfs	authenticated historical source membership	accepted compatibility FULL DATA encounter product; 252d4ae2f380a98d720b8ab7a84880db5b8b6357; original patient-encounter key; historical family/setting source-file representation; 0,1; metadata missing retained unknown; nonmembership after family merge; not clinical absence; Historical source extraction may retain earliest qualifying family/setting event; accepted flags authenticate membership, not exhaustive criterion ascertainment. Exact historical query parameters remain unavailable.; Source family includes BMI and diagnoses in producer catalog; actual historical trigger unresolved; do not infer from analysis BMI.

requirement	status	note
ABG rfs	authenticated historical source membership	accepted compatibility FULL DATA encounter product; 252d4ae2f380a98d720b8ab7a84880db5b8b6357; original patient-encounter key; historical family/setting source-file representation; 0,1; metadata missing retained unknown; nonmembership after family merge; not clinical absence; Historical source extraction may retain earliest qualifying family/setting event; accepted flags authenticate membership, not exhaustive criterion ascertainment. Exact historical query parameters remain unavailable.; Family implies a historical arterial selection criterion; may incorporate elevated gas. Producer catalog default lower bound 45; exact historical source query threshold/window not authenticated from flag alone.
VBG rfs	authenticated historical source membership	accepted compatibility FULL DATA encounter product; 252d4ae2f380a98d720b8ab7a84880db5b8b6357; original patient-encounter key; historical family/setting source-file representation; 0,1; metadata missing retained unknown; nonmembership after family merge; not clinical absence; Historical source extraction may retain earliest qualifying family/setting event; accepted flags authenticate membership, not exhaustive criterion ascertainment. Exact historical query parameters remain unavailable.; Family may incorporate elevated venous gas; producer catalog default lower bound 45 differs from current >=50. Actual historical query/window not inferred from default.
RESPFAIL rfs	authenticated historical source membership	accepted compatibility FULL DATA encounter product; 252d4ae2f380a98d720b8ab7a84880db5b8b6357; original patient-encounter key; historical family/setting source-file representation; 0,1; metadata missing retained unknown; nonmembership after family merge; not clinical absence; Historical source extraction may retain earliest qualifying family/setting event; accepted flags authenticate membership, not exhaustive criterion ascertainment. Exact historical query parameters remain unavailable.; Diagnosis family; producer catalog includes J96 prefix and E66.2, overlapping but broader than current five-code ICD outcome.
VENTSUPPORT rfs	authenticated historical source membership	accepted compatibility FULL DATA encounter product; 252d4ae2f380a98d720b8ab7a84880db5b8b6357; original patient-encounter key; historical family/setting source-file representation; 0,1; metadata missing retained unknown; nonmembership after family merge; not clinical absence; Historical source extraction may retain earliest qualifying family/setting event; accepted flags authenticate membership, not exhaustive criterion ascertainment. Exact historical query parameters remain unavailable.; Procedure-based family; may select severe respiratory illness, does not by itself define current gas outcome.

requirement	status	note
PREDISPOSITION rfs	authenticated historical source membership	accepted compatibility FULL DATA encounter product; 252d4ae2f380a98d720b8ab7a84880db5b8b6357; original patient-encounter key; historical family/setting source-file representation; 0,1; metadata missing retained unknown; nonmembership after family merge; not clinical absence; Historical source extraction may retain earliest qualifying family/setting event; accepted flags authenticate membership, not exhaustive criterion ascertainment. Exact historical query parameters remain unavailable.; Diagnosis-based family; not itself a complete current gas/ICD ascertainment.
