BMI–hypercapnia: complete construction and model audit

Table of contents

1 Coverage and provenance **10**

2 Detailed observational cohort construction **59**

2.1 icd acuity status . . . 122
2.2 icd acuity categories . . . 122
2.3 icd acuity patterns . . . 122
2.4 icd acuity reconciliation . . . 154
2.5 icd acuity contrasts . . . 154
2.6 icd acuity probability covariance . . . 253
2.7 icd acuity curve reconciliation . . . 4516
2.8 icd acuity observed bands . . . 4517
2.9 cooccurrence status . . . 4522
2.10 cooccurrence reconciliation . . . 4522
2.11 cooccurrence availability . . . 4523
2.12 cooccurrence measurements . . . 4525
2.13 cooccurrence categories . . . 4533
2.14 same day contrasts . . . 4534
2.15 same day probability covariance . . . 4557
2.16 same day curve reconciliation . . . 5669
2.17 rfs summary . . . 5670
2.18 rfs outcomes . . . 5670
2.19 rfs combinations . . . 5672
2.20 rfs by bmi . . . 5689
2.21 bmi provenance . . . 5697
2.22 demographic crosswalk . . . 5755
2.23 prior run reconciliation . . . 5757
2.24 rfs semantics . . . 5759
2.25 expected models . . . 5761
2.26 cohort nodes . . . 5761
2.27 cohort edges . . . 5768
2.28 exclusion reasons . . . 5772
2.29 exclusion overlaps . . . 5772
2.30 population registry . . . 5773
2.31 timing audit . . . 5781
2.32 observation patterns . . . 5783
2.33 evidence by bmi . . . 5793
2.34 numerical reconciliation . . . 6035

3 Complete stage and variable profiles **6085**

3.1 variable summary . . . 6085
3.2 patient id . . . 6085
3.3 encounter id . . . 6090
3.4 encounter date . . . 6095
3.5 age at encounter . . . 6103
3.6 encounter type . . . 6113
3.7 bmi . . . 6118
3.8 sex . . . 6128
3.9 race ethnicity . . . 6133
3.10 location . . . 6138
3.11 has abg . . . 6143

Run: curve-analyze-20261024T123452-59248. Numerical review: FALSE. Scientific review: FALSE.

1 Coverage and provenance

Every required population, variable and model is indexed below. Identical stage summaries are shared only after exact equality of all nonidentifier fields, with an explicit stage-to-display mapping; this does not assert identical patient membership. Missing, pending, failed, empty and not-applicable states are explicit. No patient identifiers, exact dates, individual predictions or model frames are exported. CSV/RDS tables retain full numerical precision. Distribution/prediction coordinates are exported in full. The graphical stage atlas focuses on BMI, adjustment variables and measurement provenance; helper flags, source counters and basis values retain complete tables and coordinates without repeated charts. Every modeled outcome retains its diagnostics, coefficients and covariance.

Table 3: Complete variable dictionary — panel 1/2

variable id	source name	display label	type	unit	allowed levels	reference level	derivation
patient id	patient id	patient id	identifier			unavailable	Preserved authent icated typed source value
encounter id	encounter id	encounter id	identifier			unavailable	Preserved authent icated typed source value
encounter date	encounter date	encounter date	date	calendar date		unavailable	Authent icated encount er-start date
age at encounter	age at encounter	age at encounter	continuous	years		unavailable	Approved encounter-start-year minus birth-year proxy; not exact age
encounter type	encounter type	encounter type	categorical		EMER|IMP|OTHER	unavailable	Preserved authent icated typed source value
bmi	bmi	bmi	continuous	kg/m2		unavailable	Available encounter/prior reported BMI then observed height/weight calculation; inherited numeric transport; no statist ical imputat ion
sex	sex	sex	categorical		0|1|2	0	Inherited codes: 0 Female, 1 Male, 2 named Unknown

variable id	source name	display label	type	unit	allowed levels	reference level	derivation
race ethnicity	race ethnicity	race ethnicity	categorical		0|1|2|3|4|5|6	0	Inherited numeric precedence: Hispanic ethnicity overrides White/Unknown race; Black/Asian/AIAN/NHPI race overrides ethnicity; 0 White with non-Hispanic or unknown ethnicity (inherited category)
location	location	location	categorical		0|1|2|3	0	Inherited geographic region: 0 South, 1 Northeast, 2 Midwest, 3 West; not facility
has abg	has abg	has abg	categorical		0|1	unavailable	Captured documented testing evidence; distinct from usable results
abg pco2	abg pco2	abg pco2	continuous	mm Hg		unavailable	Encounter maximum valid ordinary specimen-authenticated PCO2
abg pco2 index day	abg pco2 index day	abg pco2 index day	continuous	mm Hg		unavailable	Maximum valid PCO2 collected on encounter-start calendar date
abg index day available	abg index day available	abg index day available	categorical		0|1	unavailable	Availability of usable index-day value; not a testing-order flag
has vbg	has vbg	has vbg	categorical		0|1	unavailable	Captured documented testing evidence; distinct from usable results

variable id	source name	display label	type	unit	allowed levels	reference level	derivation
vbg pco2	vbg pco2	vbg pco2	continuous	mm Hg		unavailable	Encounter maximum valid ordinary specimen-authent icated PCO2
vbg pco2 index day	vbg pco2 index day	vbg pco2 index day	continuous	mm Hg		unavailable	Maximum valid PCO2 collected on encount er-start calendar date
vbg index day availab le	vbg index day availab le	vbg index day availab le	categorical		0|1	unavailable	Availability of usable index-day value; not a testing-order flag
icd hypercapnia	icd hyperca pnia	icd hyperca pnia	categorical		0|1	unavailable	J96.02, J96.12, J96.22, J96.92, E66.2; no code with complete capture is 0; unknown capture NA
bmi evidence state	bmi evidence state	bmi evidence state	categorical		valid| missing| unresolved	unavailable	Completed mapping missing distinct from unresolved source evidence
.key conflict	.key conflict	.key conflict	categorical		FALSE| TRUE	unavailable	Determi nistic source/ selection diagnostic; not an additional inclusion rule
.index day conflict	.index day conflict	.index day conflict	categorical		FALSE| TRUE	unavailable	Determi nistic source/ selection diagnostic; not an additional inclusion rule
in scope	in scope	in scope	categorical		FALSE| TRUE	unavailable	Three-valued conjunction of calendar, setting and age; reliable FALSE overrides other unknowns

variable id	source name	display label	type	unit	allowed levels	reference level	derivation
severe obesity	severe obesity	severe obesity	categorical		FALSE|TRUE	unavailable	Deterministic source/selection diagnostic; not an additional inclusion rule
abg drawn	abg drawn	abg drawn	categorical		FALSE|TRUE	unavailable	Deterministic source/selection diagnostic; not an additional inclusion rule
any gas drawn	any gas drawn	any gas drawn	categorical		FALSE|TRUE	unavailable	Deterministic source/selection diagnostic; not an additional inclusion rule
common valid bmi	common valid bmi	valid available BMI	categorical		FALSE|TRUE	unavailable	Valid available BMI; completed missing BMI FALSE; unresolved NA
icd	icd	icd	categorical		0|1	unavailable	Approved five-code or inclusive 45/50 gas definition; combined negatives concern available evidence only
abg	abg	abg	categorical		0|1	unavailable	Approved five-code or inclusive 45/50 gas definition; combined negatives concern available evidence only
any gas	any gas	any gas	categorical		0|1	unavailable	Approved five-code or inclusive 45/50 gas definition; combined negatives concern available evidence only

variable id	source name	display label	type	unit	allowed levels	reference level	derivation
abg index calendar day	abg index calendar day	abg index calendar day	categorical		0|1	unavailable	Approved five-code or inclusive 45/50 gas definition; combined negatives concern available evidence only
any gas index calendar day	any gas index calendar day	any gas index calendar day	categorical		0|1	unavailable	Approved five-code or inclusive 45/50 gas definition; combined negatives concern available evidence only
bmi ns1	bmi ns1	bmi ns1	continuous			unavailable	Fixed natural cubic spline: C quantiles .05,.35,.65,.95; type 7; two interior knots
bmi ns2	bmi ns2	bmi ns2	continuous			unavailable	Fixed natural cubic spline: C quantiles .05,.35,.65,.95; type 7; two interior knots
bmi ns3	bmi ns3	bmi ns3	continuous			unavailable	Fixed natural cubic spline: C quantiles .05,.35,.65,.95; type 7; two interior knots
.outcome	.outcome	.outcome	categorical		0|1	unavailable	Registered model-specific observed response
observed abg encounter	observed abg encounter	observed abg encounter	categorical		0|1	unavailable	Usable outcome evidence or known diagnosis capture; not necessarily test ordered

variable id	source name	display label	type	unit	allowed levels	reference level	derivation
observed vbg encounter	observed vbg encounter	observed vbg encounter	categorical		0|1	unavailable	Usable outcome evidence or known diagnosis capture; not necessarily test ordered
observed any gas encounter	observed any gas encounter	observed any gas encounter	categorical		0|1	unavailable	Usable outcome evidence or known diagnosis capture; not necessarily test ordered
observed icd encounter	observed icd encounter	observed icd encounter	categorical		0|1	unavailable	Usable outcome evidence or known diagnosis capture; not necessarily test ordered
observed abg index calendar day	observed abg index calendar day	observed abg index calendar day	categorical		0|1	unavailable	Usable outcome evidence or known diagnosis capture; not necessarily test ordered
observed vbg index calendar day	observed vbg index calendar day	observed vbg index calendar day	categorical		0|1	unavailable	Usable outcome evidence or known diagnosis capture; not necessarily test ordered
observed any gas index calendar day	observed any gas index calendar day	observed any gas index calendar day	categorical		0|1	unavailable	Usable outcome evidence or known diagnosis capture; not necessarily test ordered
eligibility calendar	derived	eligibility calendar	categorical		FALSE|TRUE	unavailable	Three-valued reviewed calendar eligibility; key-version consensus for state

variable id	source name	display label	type	unit	allowed levels	reference level	derivation
eligibility setting	derived	eligibility setting	categorical		FALSE|TRUE	unavailable	Three-valued reviewed setting eligibility; key-version consensus for state
eligibility adult	derived	eligibility adult	categorical		FALSE|TRUE	unavailable	Three-valued reviewed adult eligibility; key-version consensus for state
eligibility bmi	derived	eligibility bmi	categorical		FALSE|TRUE	unavailable	Three-valued reviewed bmi eligibility; key-version consensus for state
eligibility state	derived	eligibility state	categorical		FALSE|TRUE	unavailable	Three-valued reviewed state eligibility; key-version consensus for state
fitted probability	registered model diagnostic	fitted probability	continuous	probability		unavailable	Fitted training probability from the registered logistic model
response residual	registered model diagnostic	response residual	continuous	probability difference		unavailable	Observed binary outcome minus fitted probability
deviance residual	registered model diagnostic	deviance residual	continuous	unitless		unavailable	Signed binomial deviance residual
leverage	registered model diagnostic	leverage	continuous	unitless		unavailable	Diagonal of the fitted GLM hat matrix
cooks	registered model diagnostic	cooks	continuous	unitless		unavailable	Full-sample Cook distance; threshold 4/n is diagnostic only

variable id	source name	display label	type	unit	allowed levels	reference level	derivation
max abs dfbeta	registered model diagnostic	max abs dfbeta	continuous	unitless		unavailable	Maximum absolute standar dized coefficient-deletion change per model case; aggregate quantiles only

2 Detailed observational cohort construction

Source records, encounter versions and patients have distinct counting units. Global pre-index accounting belongs to the combined reference. Subgroup ledgers begin with already fixed indexes and do not rerun eligibility or selection. First-failure exclusions are exclusive

at their declared grain; all-reason counts overlap. Gas and ICD samples are parallel overlapping analytic branches.

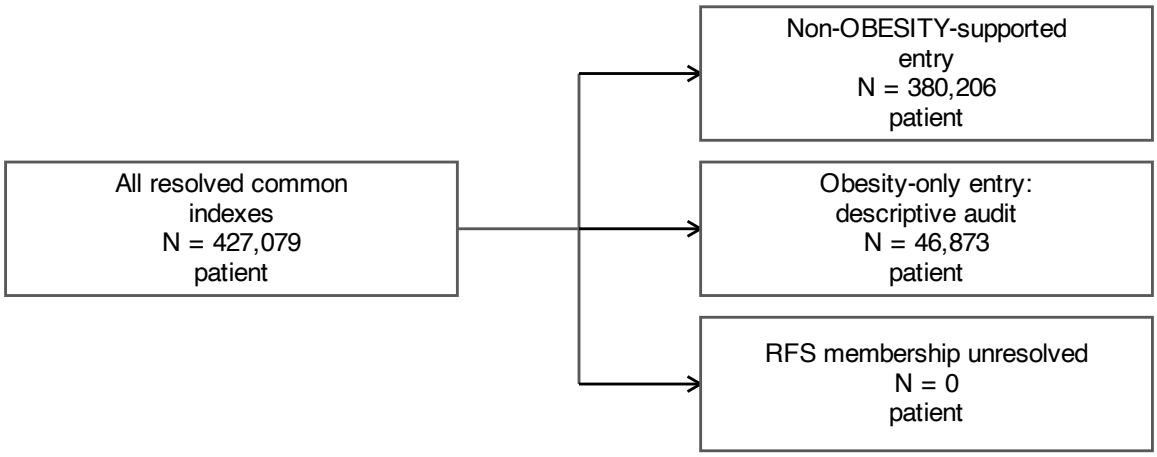
Obesity-only is retained here solely for cohort reconciliation, source-quality checks and descriptive profiles, not as a scientific comparator or selection-sensitivity analysis. No obesity-only adjusted curve, observation model, current-measurement model, PIF or weighting analysis is planned. Excluding gas-related entry pathways selects against the evidence needed to evaluate gas outcomes. Residual captured gases despite absent historical gas-family membership remain discrepancy counts; they are not recoded away or interpreted as a physiological comparison. The exact relationship to the historical extraction remains unresolved. Known diagnosis capture denotes source coverage, not ICD positivity; complete capture is not presented as an inferential availability curve.

Populations at the new all-BMI index

The source-entry partition and the nested BMI subset are separate steps

A Source-entry partition

Mutually exclusive patient groups; overlap remains in primary



B Nested BMI-restricted secondary

Same primary indexes; no later-encounter substitution

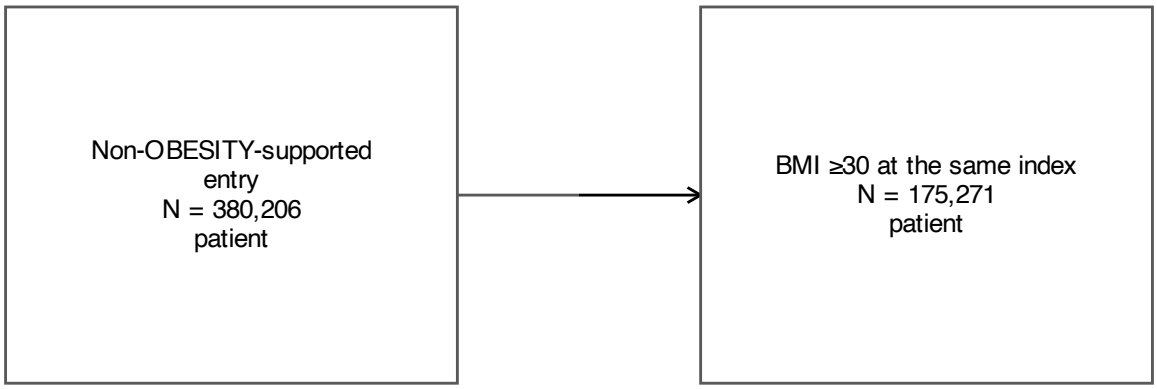


Figure 1: Fixed common indexes partition into primary non-OBESITY-supported source entry, obesity-only source entry and unresolved RFS. Overlapping OBESITY/non-OBESITY membership remains primary. Counts and units derive from the ledger; BMI ≥30 secondary is nested within primary at the same indexes; all-OBESITY supporting models overlap and are not a fourth partition branch.

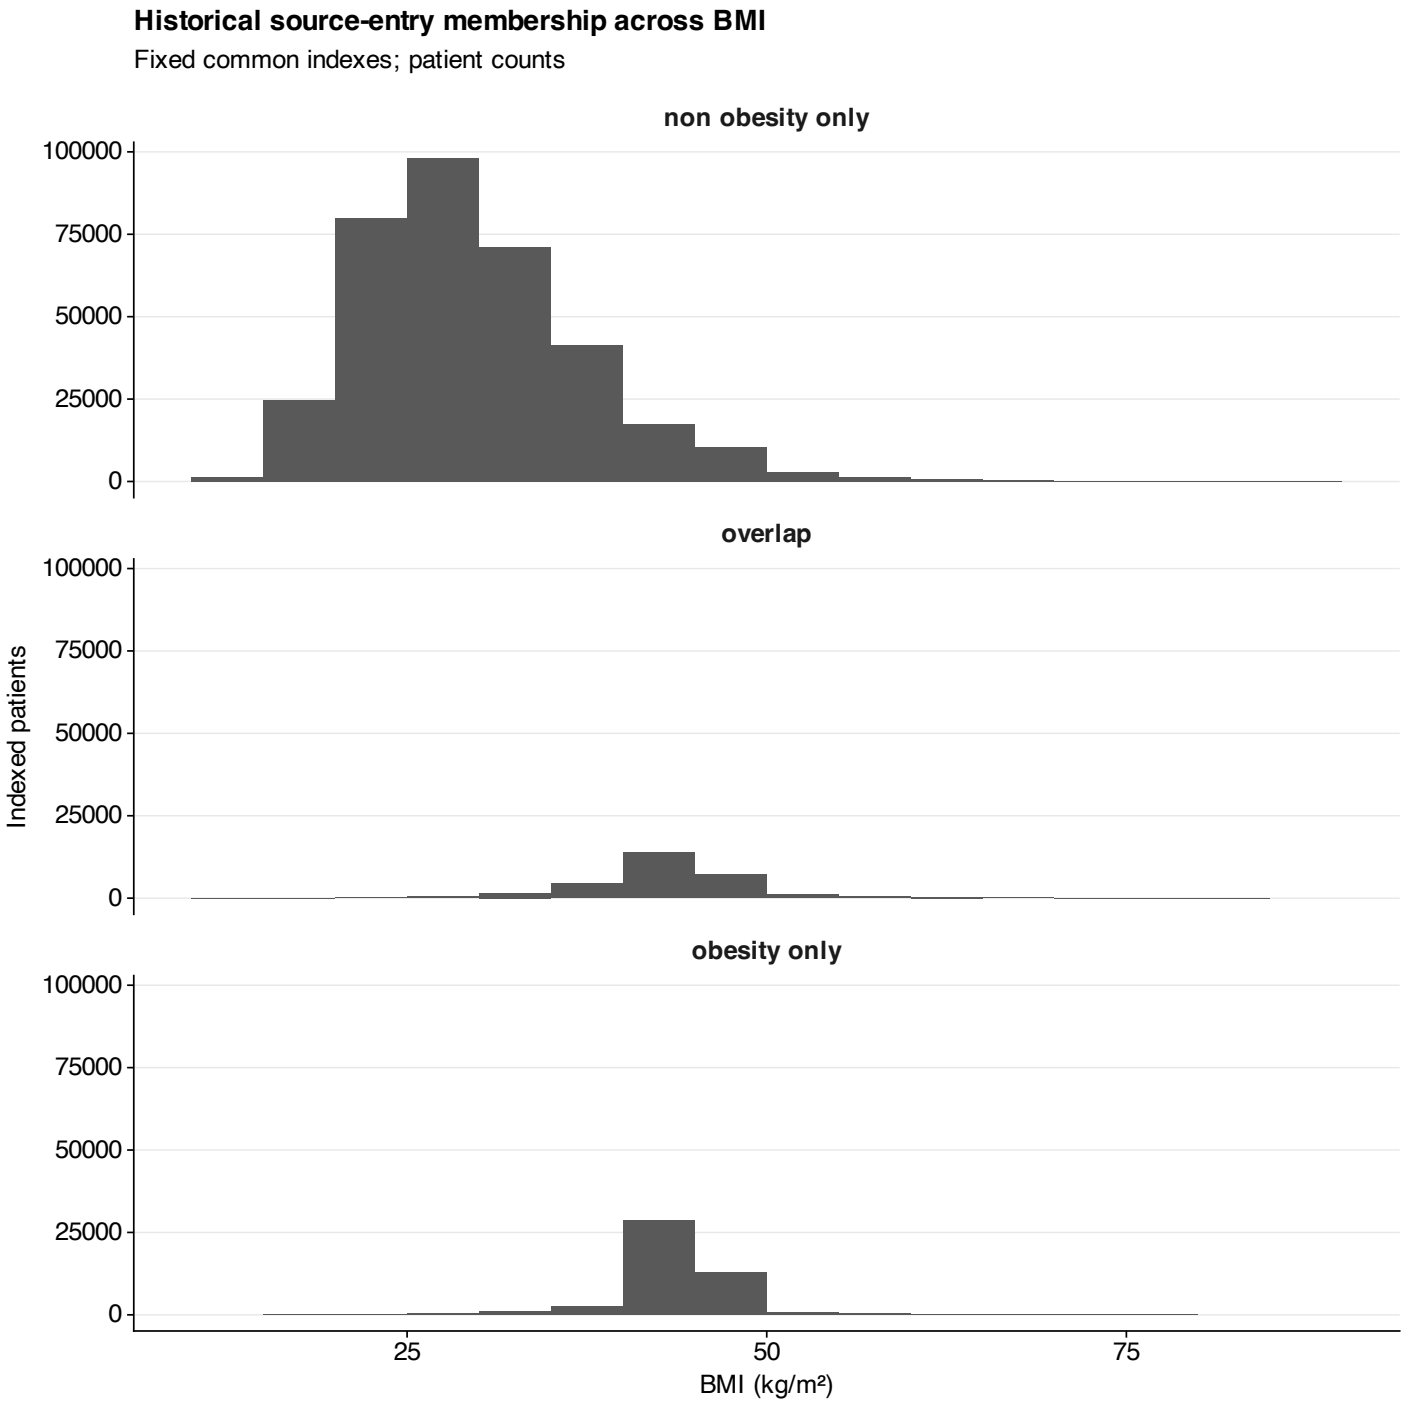

Figure 2: Historical source-entry subgroup counts by BMI, pooling the two acute settings on fixed indexes. Overlap remains in primary; obesity-only is a descriptive selection audit without adjusted outcome models. Membership records source-file representation, not exhaustive clinical criteria. Unresolved and all-zero discrepancies are retained. All groups partition the common indexed population. No association or causal bias correction follows from this partition.

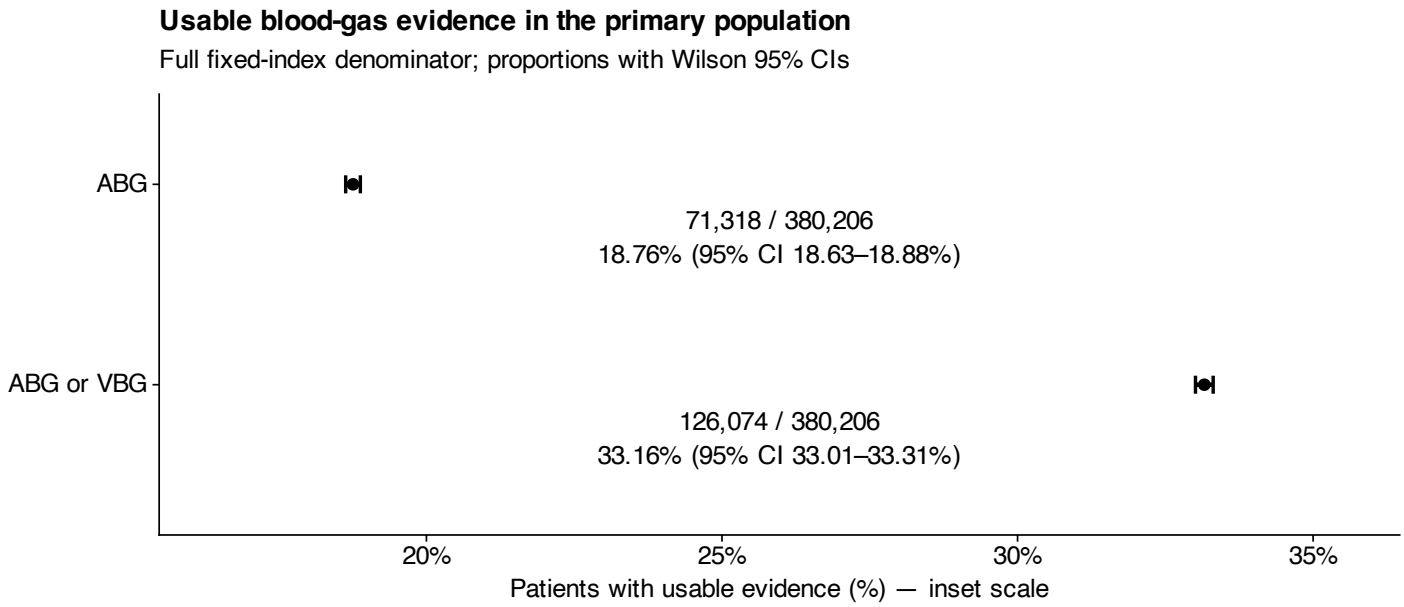

Figure 3: Encounter-wide usable gas evidence among all primary fixed indexes, before adjustment completeness. Labels give evaluable/full N, percentage and 95% Wilson CI; capped intervals use their exact endpoints on a labeled inset scale. ABG: arterial blood gas; VBG: venous blood gas. The combined row accepts either usable specimen; the two rows overlap and are not summed. These percentages describe evidence availability, not hypercapnia positivity. Primary includes non-OBESITY pathways and their OBESITY overlaps. Complete diagnosis capture, when present, is a source fact rather than ICD positivity and is reported separately. Obesity-only counts and residual-gas discrepancies are confined to the cohort flow and audit; they do not define a scientific comparator or weighting analysis.

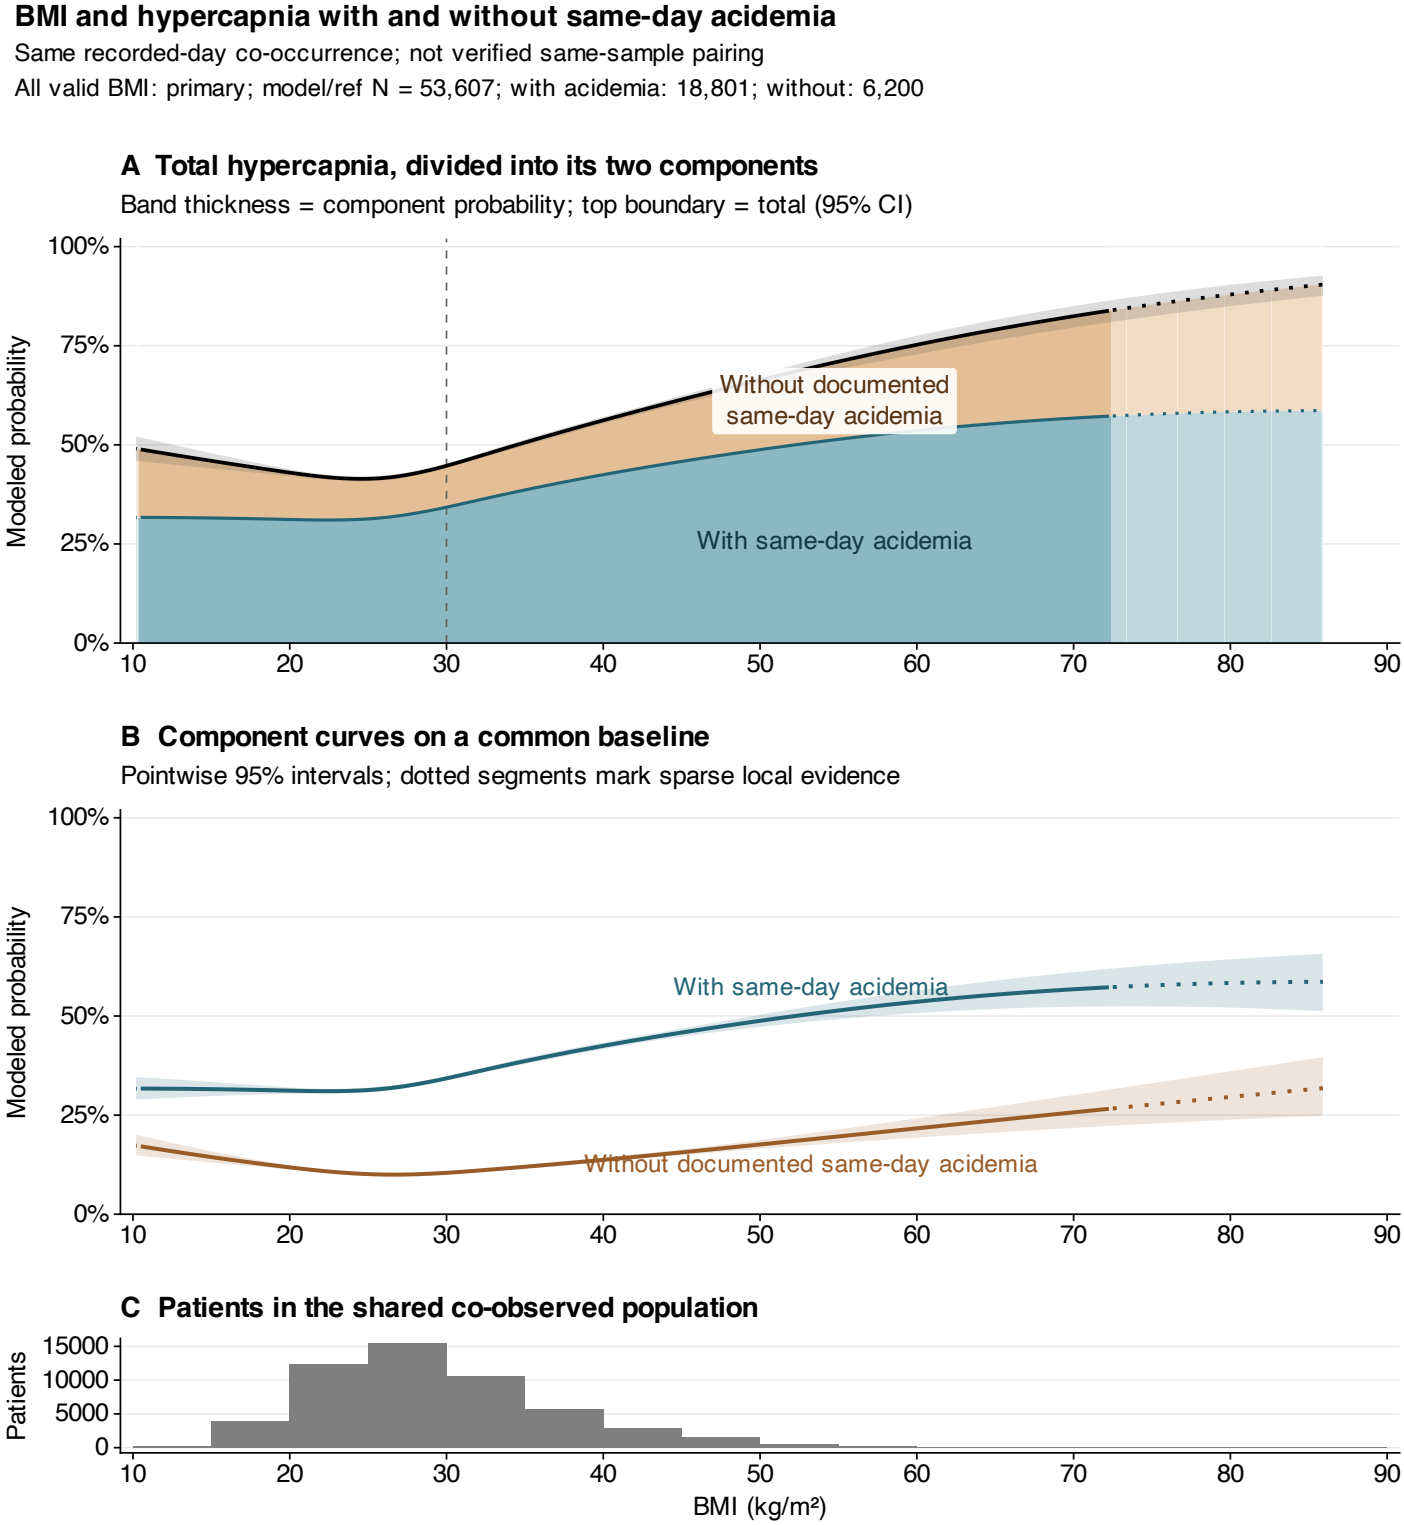

Figure 4: All valid BMI: primary. Same recorded-day co-occurrence; not verified same-sample pairing. Fixed-index patients with both arterial analytes share inherited adjustment and their analysis population's fixed BMI spline. Any eligible day with $PaCO_2$ ≥45 mm Hg and pH <7.35 assigns the with-acidemia category; remaining hypercapnic patients have no documented same-day acidemia. Different samples may contribute. A: band thicknesses give component probabilities; the upper boundary is total hypercapnia. B: components share a baseline. Shading denotes pointwise 95% intervals using full joint covariance. C: shared-population BMI frequencies. Fading/dotted lines mark local windows below 30 patients or five events/non-events; marginal checks do not establish joint support. These recorded outcomes do not establish simultaneous physiology, acute respiratory failure or compensation. Selection, treatment timing and confounding remain limitations.

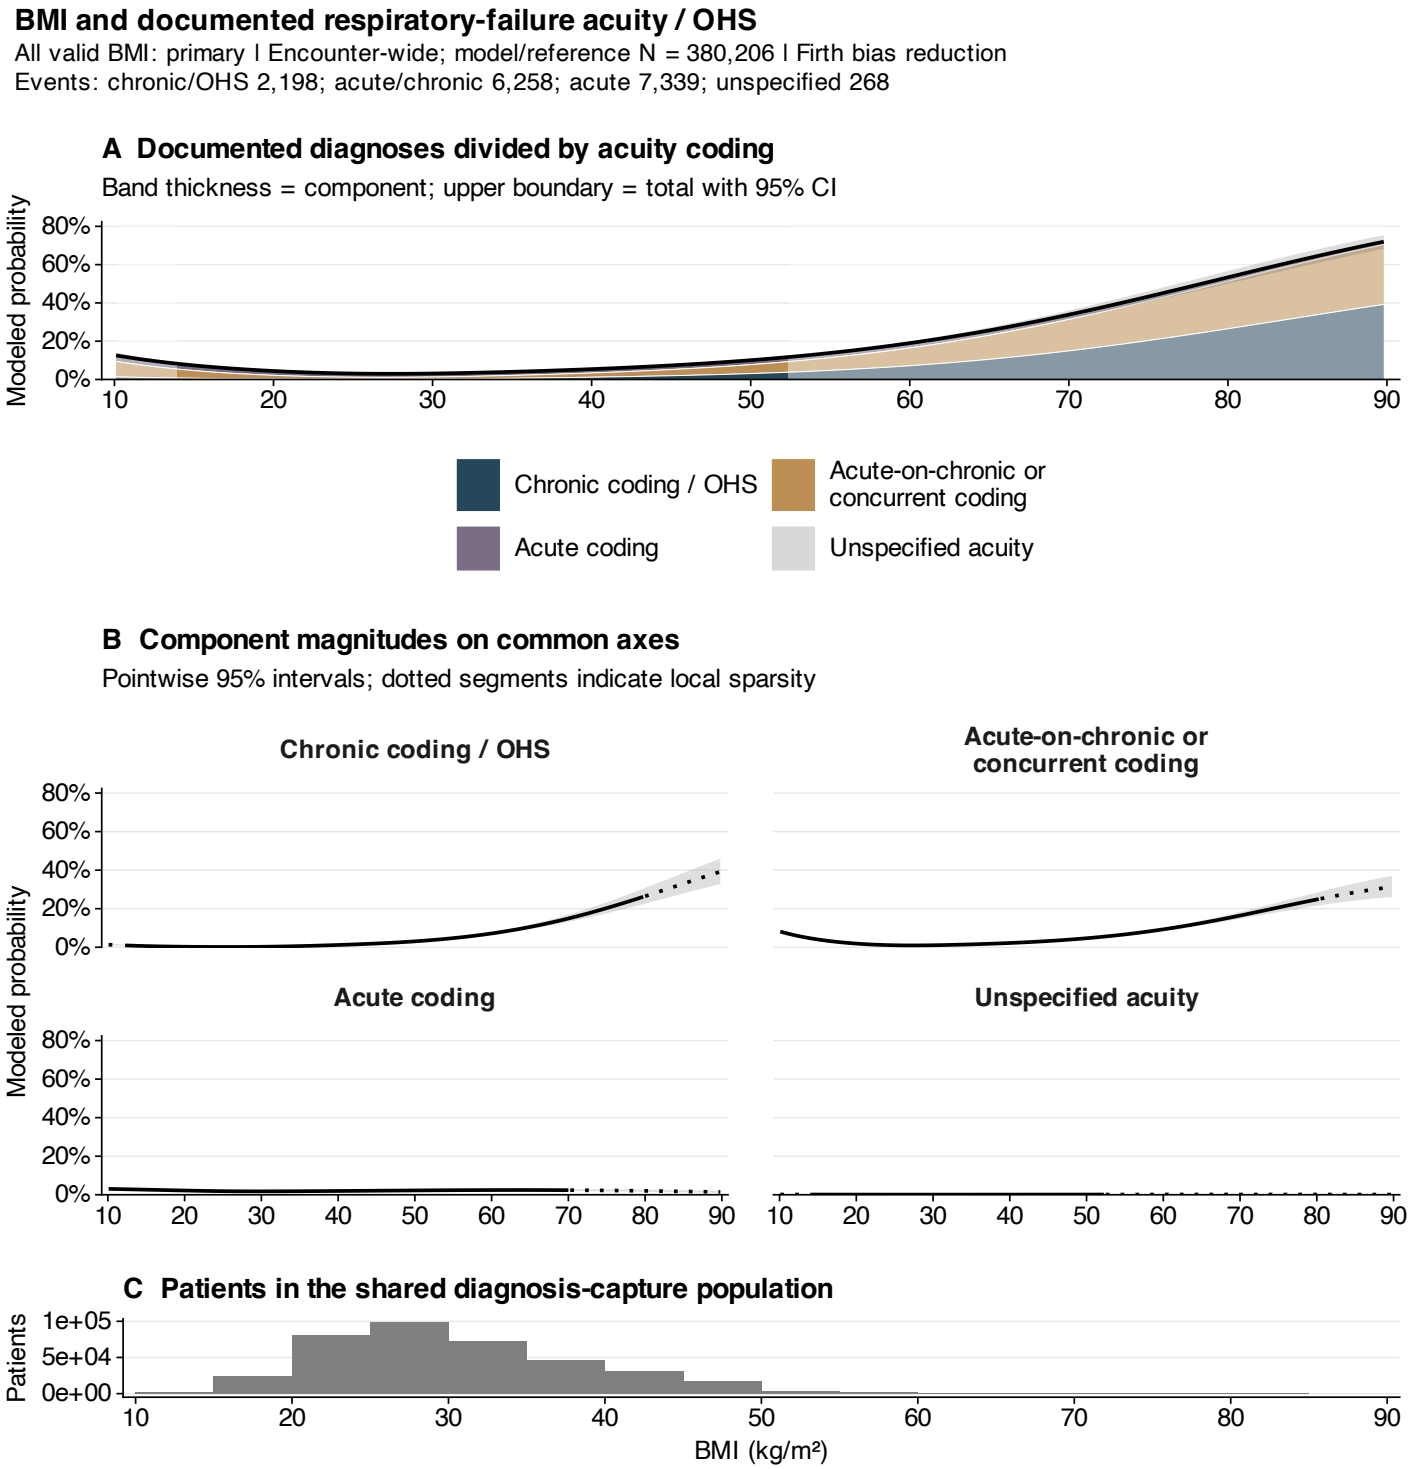

Figure 5: All valid BMI: primary. Mean-bias-reduced five-category multinomial spline; all diagnosis-evaluable patients in the stated population retained. Encounter-wide coding, no gas requirement; inherited adjustment and the population-specific spline basis. Bands partition the composite; thickness gives component probability. Shading: pointwise 95% intervals from joint information covariance, conditional on the empirical reference and basis. Fading/dots: local sparsity; histogram N equals model/reference N. Acute-on-chronic includes explicit or concurrent acute/chronic coding. OHS (obesity hypoventilation syndrome) is analytically chronic; this does not establish chronic respiratory failure. Source selection and diagnostic incorporation limit physiological interpretation.

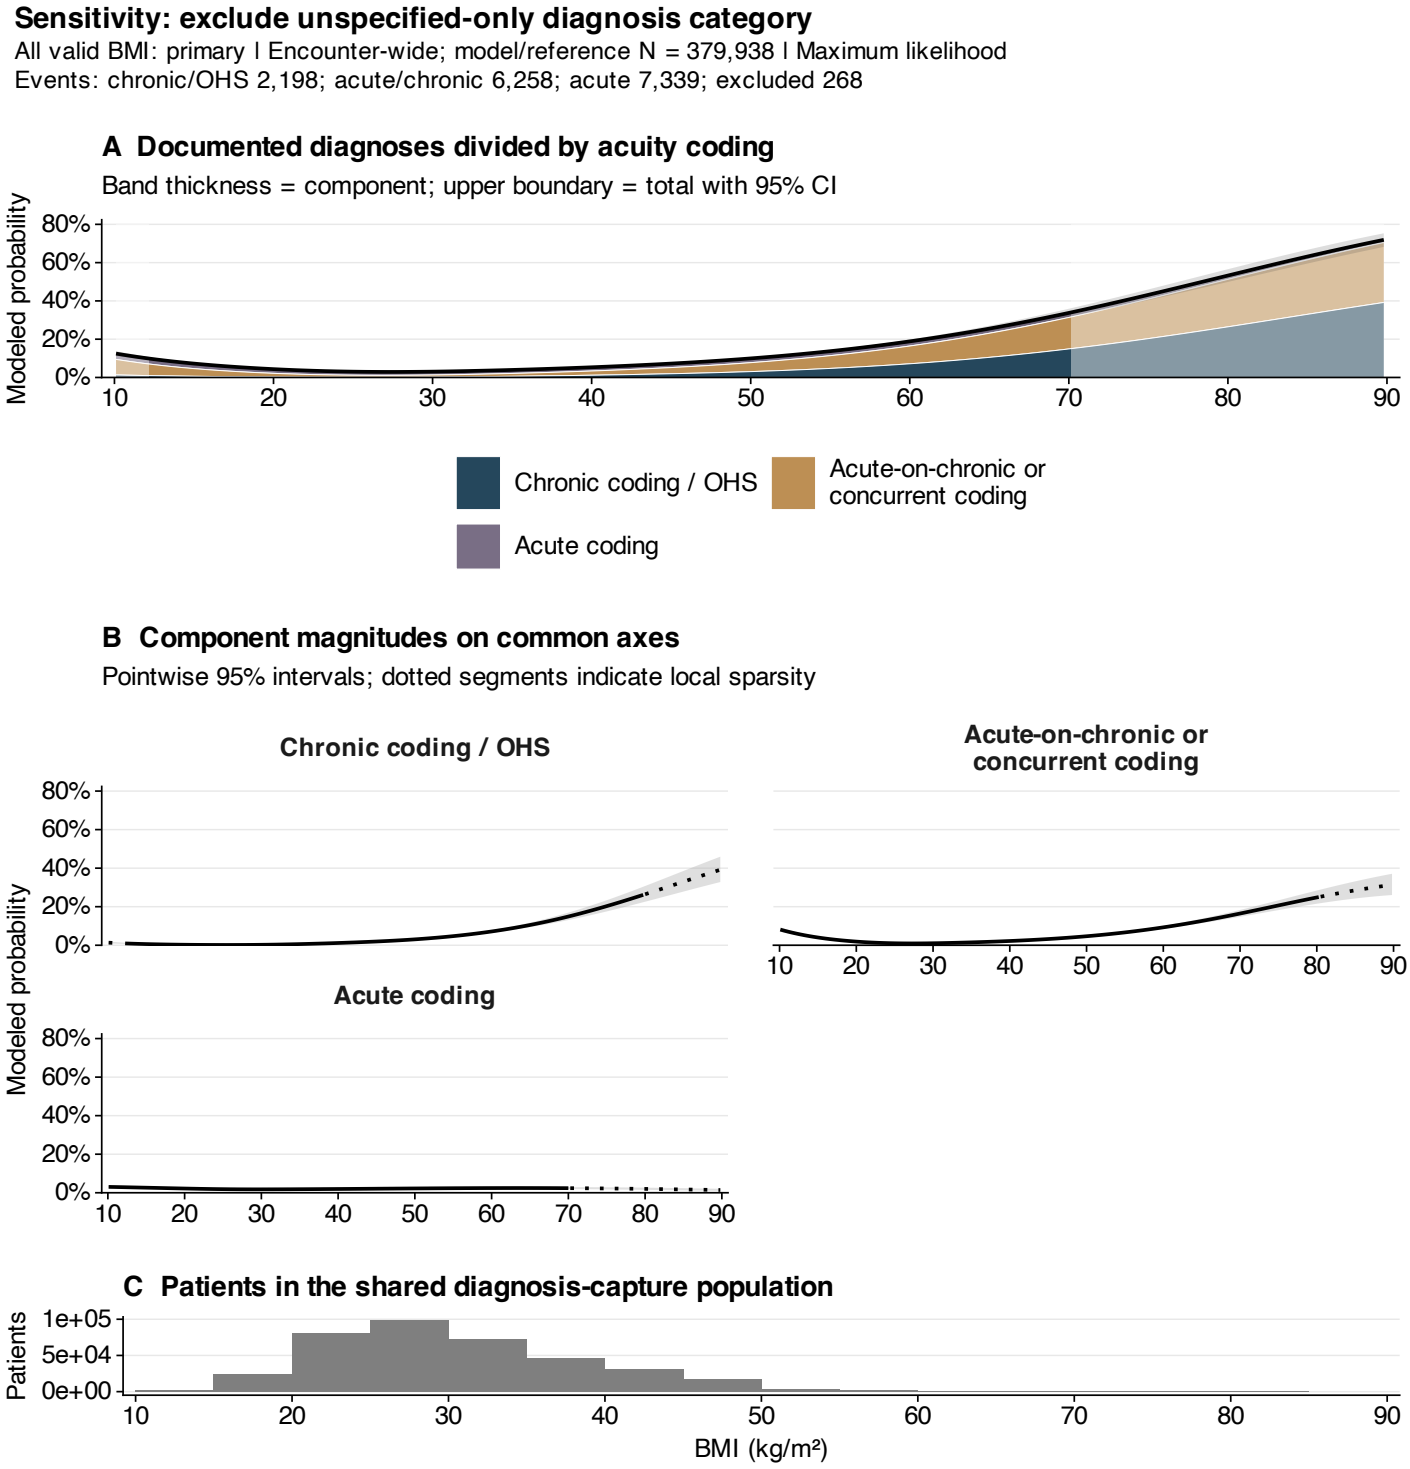

Figure 6: All valid BMI: primary. Unpenalized four-category sensitivity excluding unspecified-only encounters and standardizing over the remaining patients. Encounter-wide coding, no gas requirement; inherited adjustment and the population-specific spline basis. Bands partition the composite; thickness gives component probability. Shading: pointwise 95% intervals from joint information covariance, conditional on the empirical reference and basis. Fading/dots: local sparsity; histogram N equals model/reference N. Acute-on-chronic includes explicit or concurrent acute/chronic coding. OHS (obesity hypoventilation syndrome) is analytically chronic; this does not establish chronic respiratory failure. Source selection and diagnostic incorporation limit physiological interpretation.

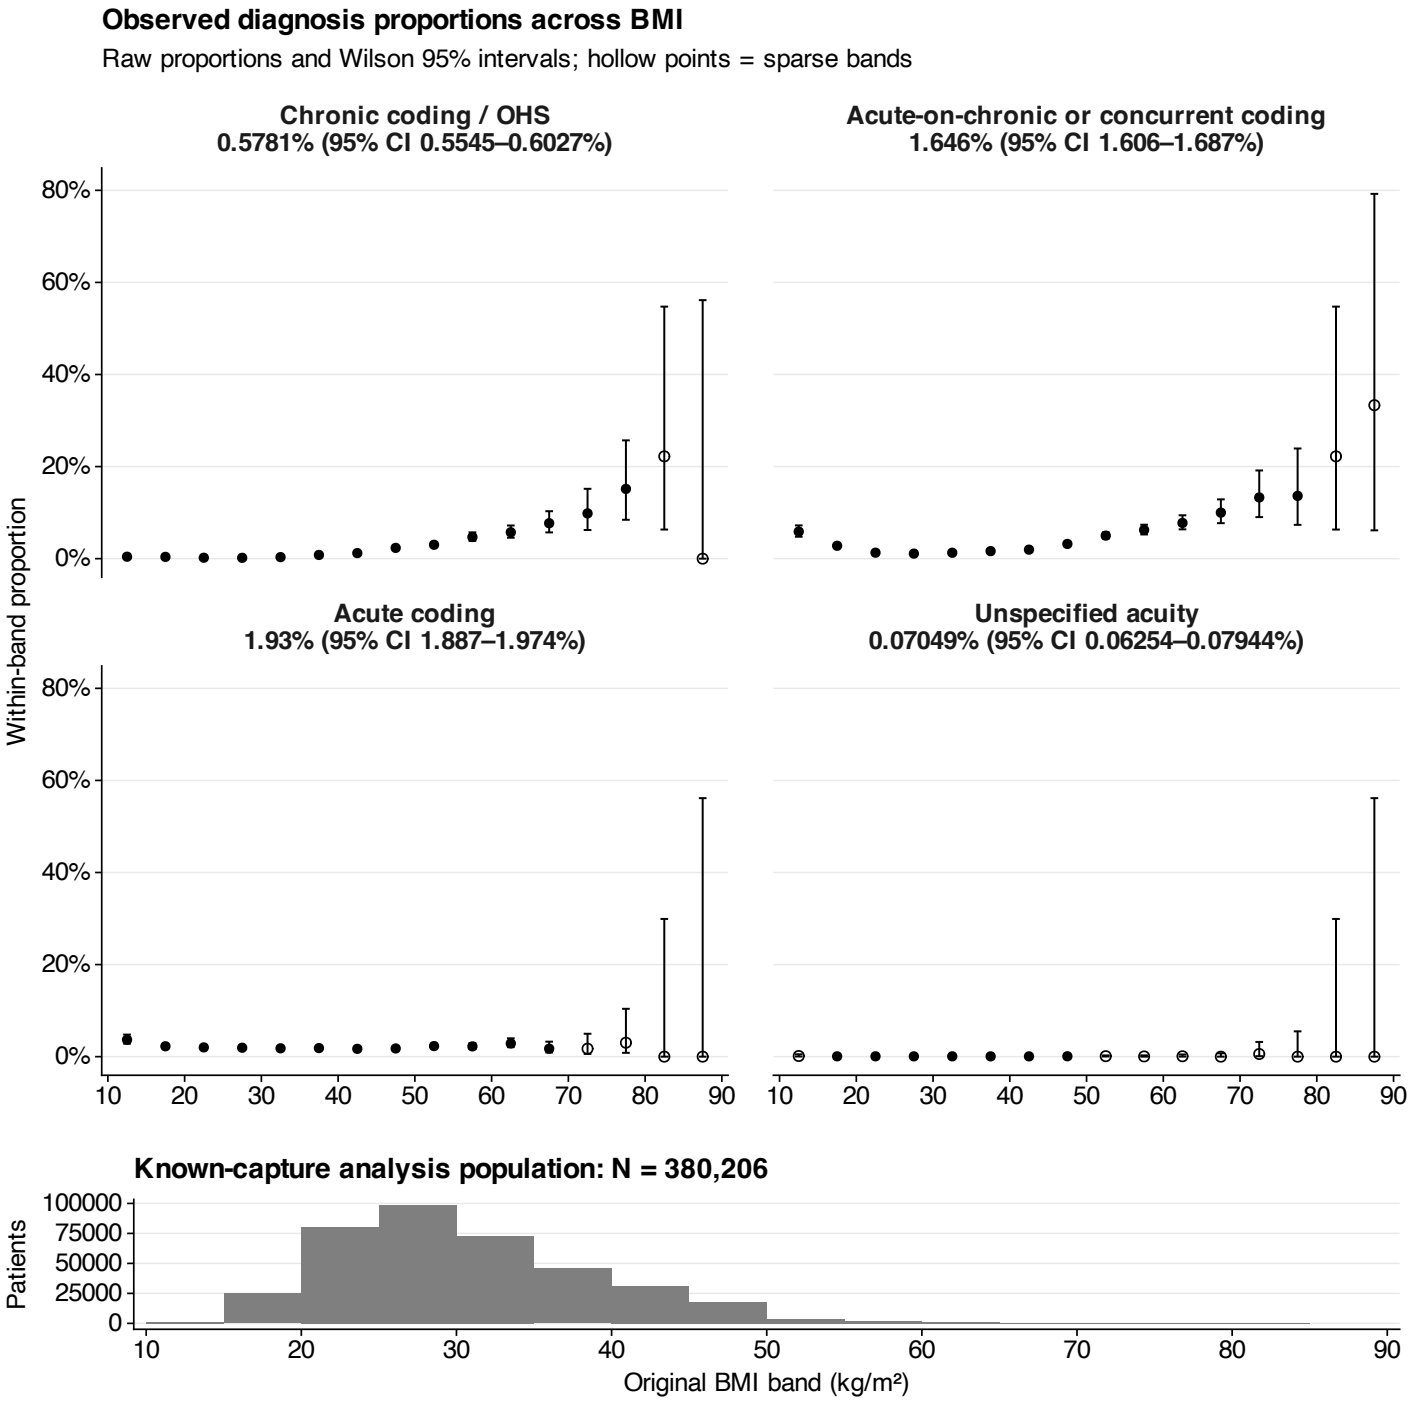

Figure 7: All valid BMI: primary. Observed encounter-wide diagnosis proportions within five-unit BMI bands of the covariate-complete analysis population with known capture; no gas requirement. These are unadjusted descriptions, not fitted curves. Error bars are Wilson 95% intervals; hollow points mark sparse patient/event/non-event counts. The histogram shows each band denominator, shared by every category. Empty bands have no estimate. OHS is grouped with chronic coding analytically; codes do not establish physiology. Overall percentages and their Wilson intervals are printed in each panel; no-target coding is the complement of the four displayed categories.

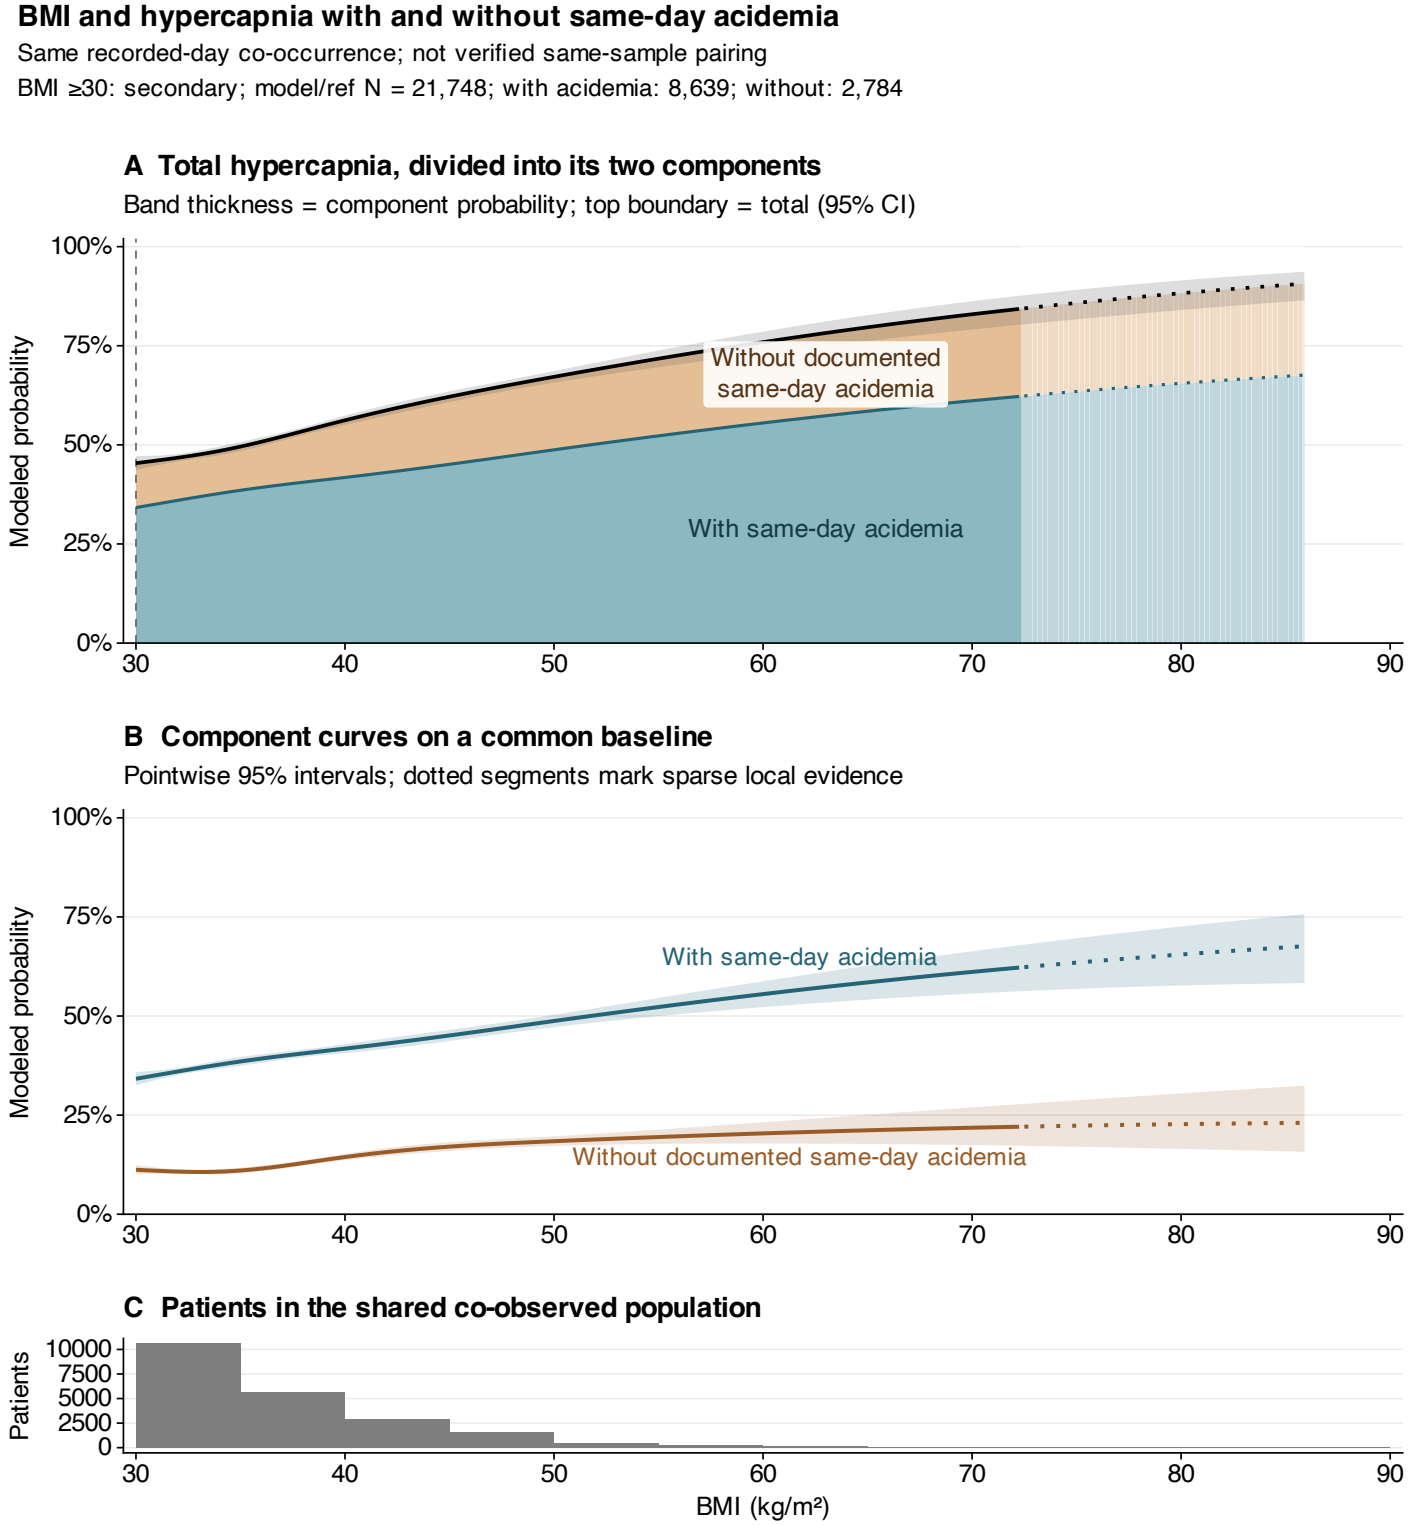

Figure 8: BMI ≥30: secondary. Same recorded-day co-occurrence; not verified same-sample pairing. Fixed-index patients with both arterial analytes share inherited adjustment and their analysis population's fixed BMI spline. Any eligible day with $PaCO_2$ ≥45 mm Hg and pH <7.35 assigns the with-acidemia category; remaining hypercapnic patients have no documented same-day acidemia. Different samples may contribute. A: band thicknesses give component probabilities; the upper boundary is total hypercapnia. B: components share a baseline. Shading denotes pointwise 95% intervals using full joint covariance. C: shared-population BMI frequencies. Fading/dotted lines mark local windows below 30 patients or five events/non-events; marginal checks do not establish joint support. These recorded outcomes do not establish simultaneous physiology, acute respiratory failure or compensation. Selection, treatment timing and confounding remain limitations.

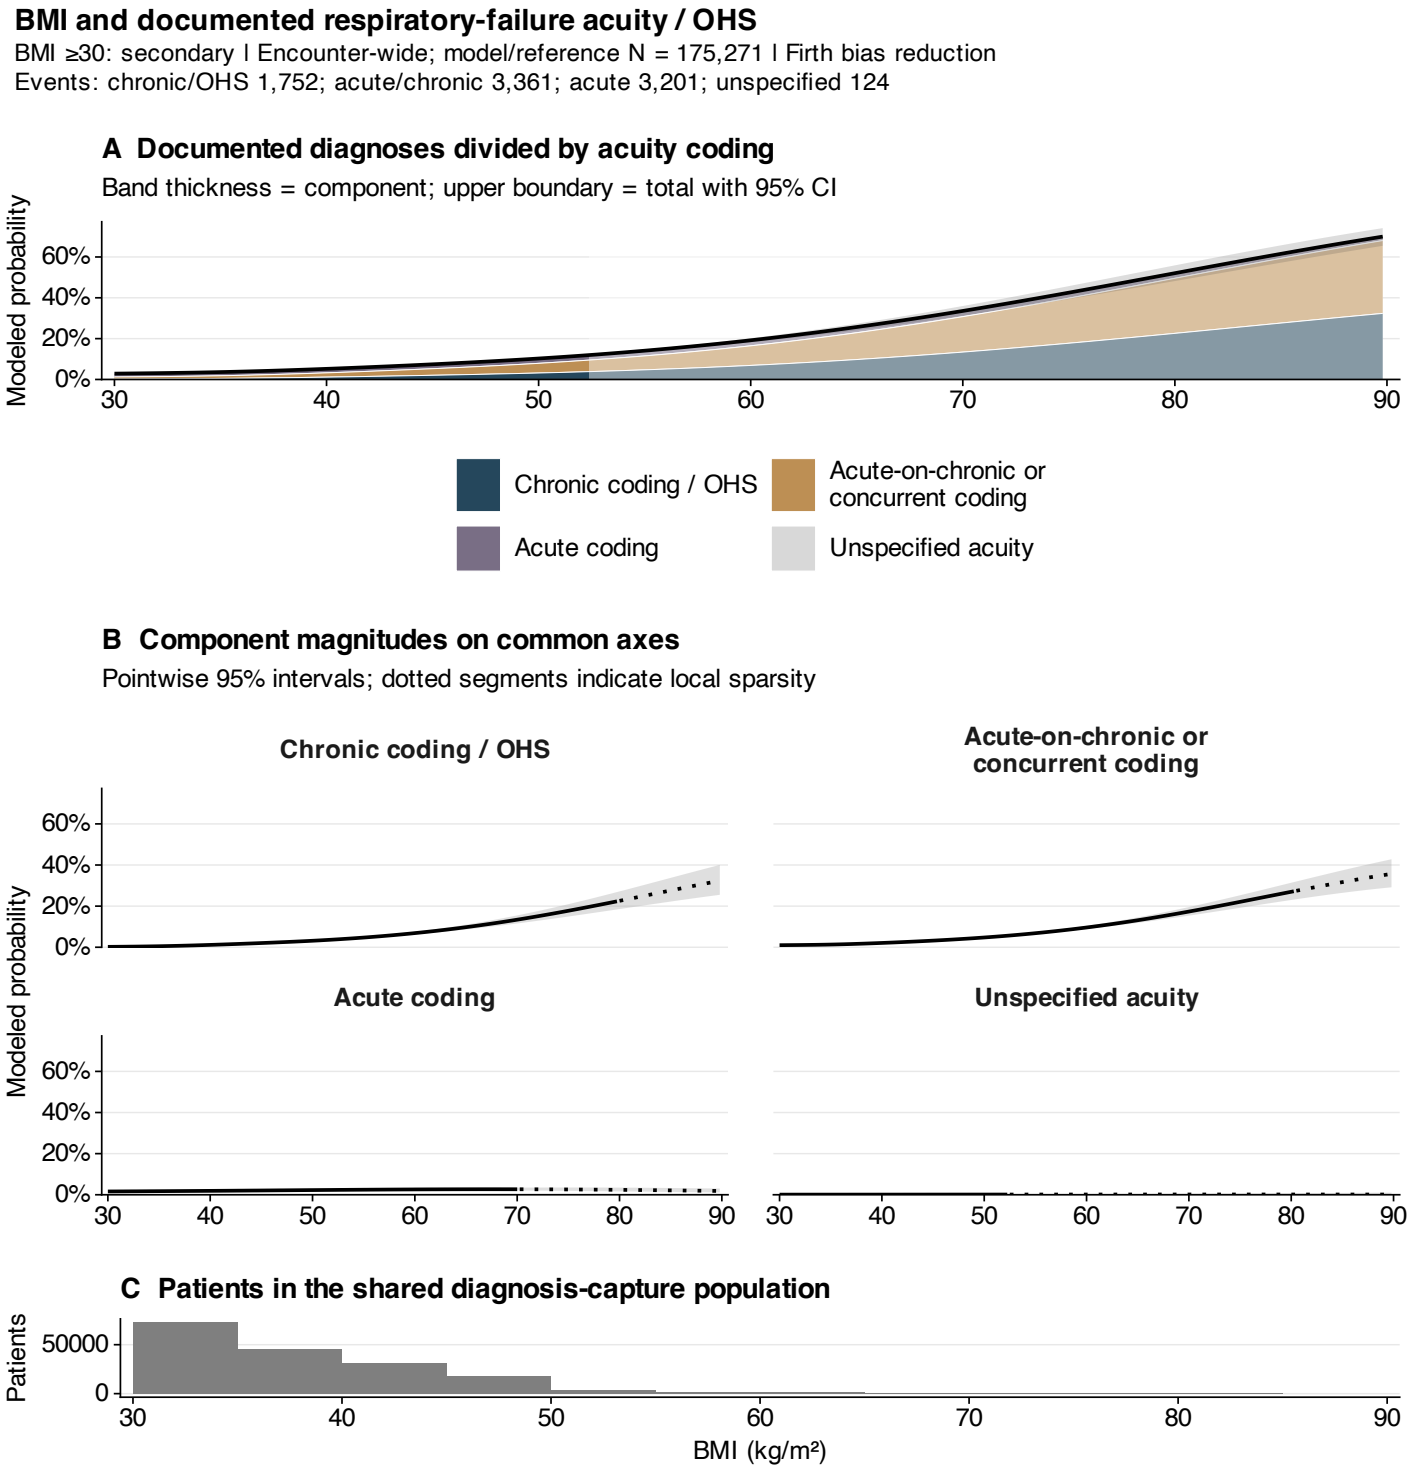

Figure 9: BMI ≥30: secondary. Mean-bias-reduced five-category multinomial spline; all diagnosis-evaluable patients in the stated population retained. Encounter-wide coding, no gas requirement; inherited adjustment and the population-specific spline basis. Bands partition the composite; thickness gives component probability. Shading: pointwise 95% intervals from joint information covariance, conditional on the empirical reference and basis. Fading/dots: local sparsity; histogram N equals model/reference N. Acute-on-chronic includes explicit or concurrent acute/chronic coding. OHS (obesity hypoventilation syndrome) is analytically chronic; this does not establish chronic respiratory failure. Source selection and diagnostic incorporation limit physiological interpretation.

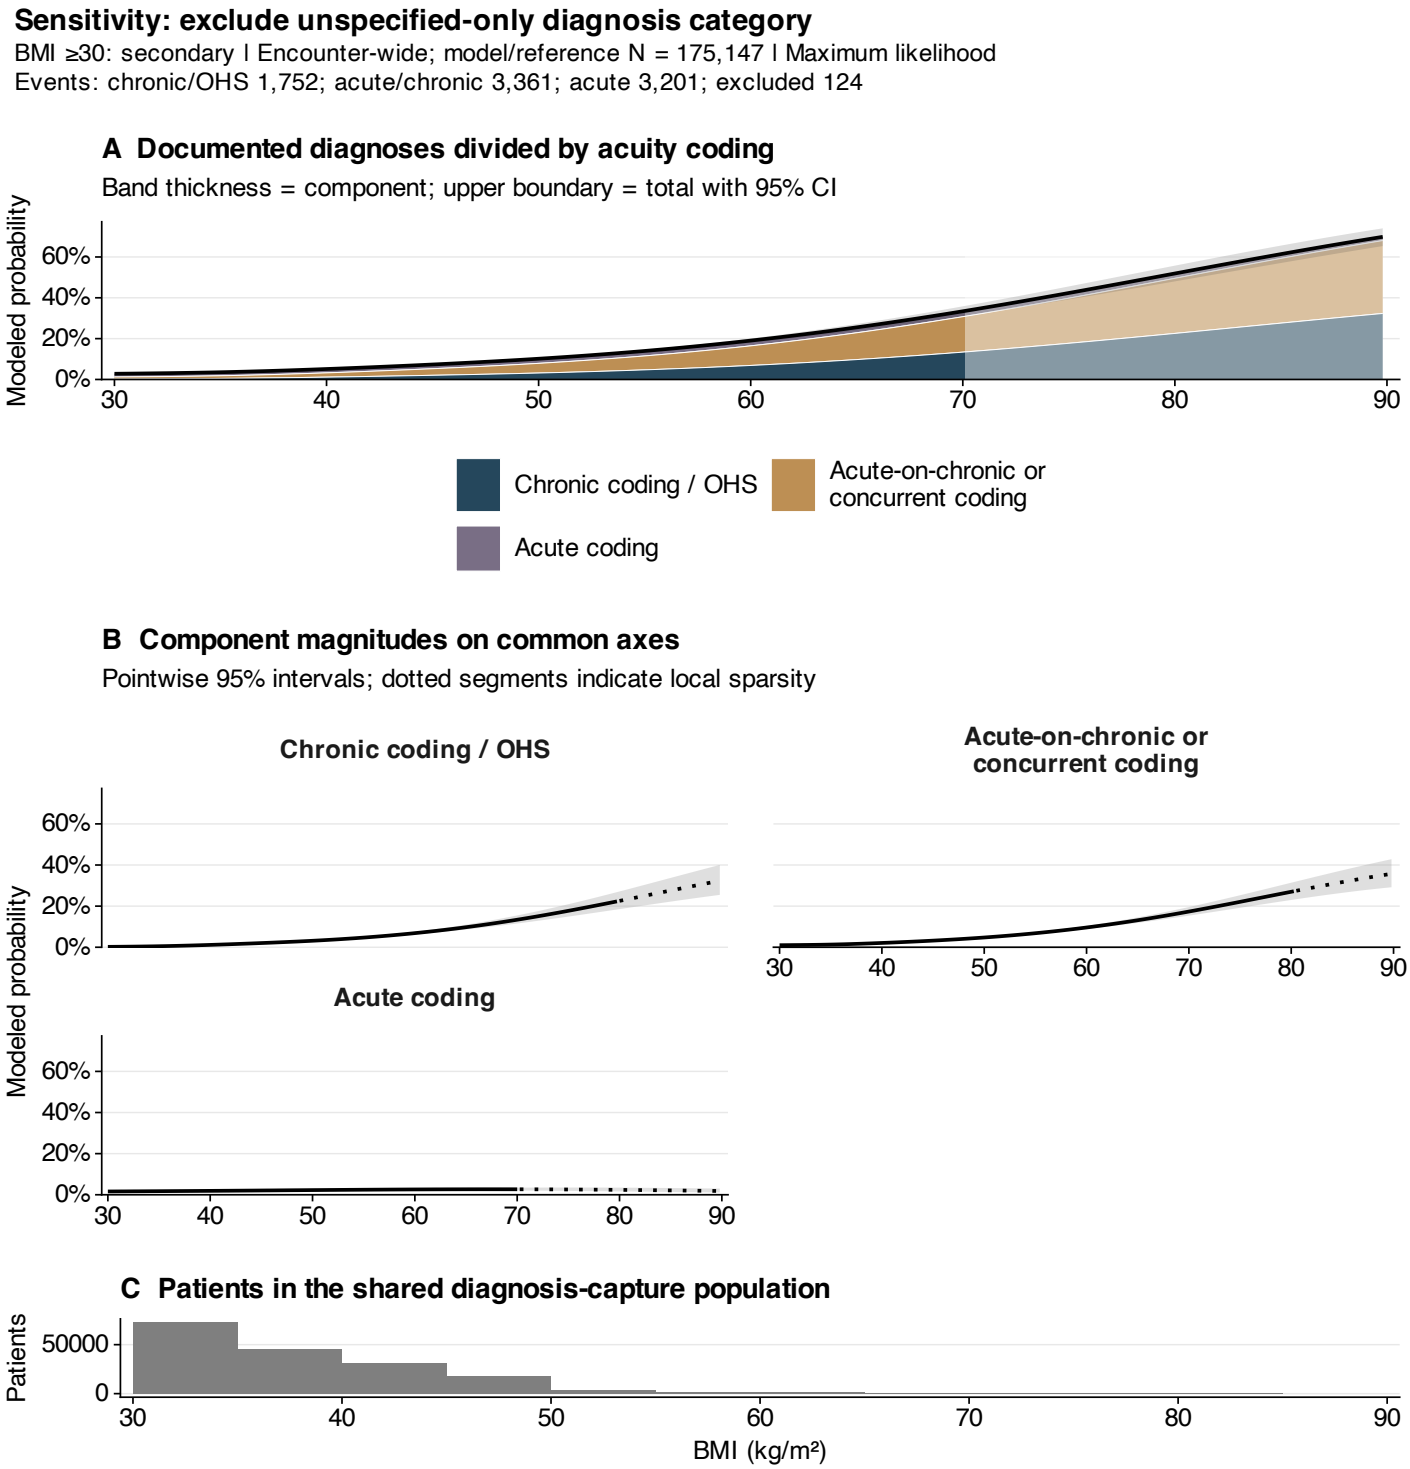

Figure 10: BMI ≥30: secondary. Unpenalized four-category sensitivity excluding unspecified-only encounters and standardizing over the remaining patients. Encounter-wide coding, no gas requirement; inherited adjustment and the population-specific spline basis. Bands partition the composite; thickness gives component probability. Shading: pointwise 95% intervals from joint information covariance, conditional on the empirical reference and basis. Fading/dots: local sparsity; histogram N equals model/reference N. Acute-on-chronic includes explicit or concurrent acute/chronic coding. OHS (obesity hypoventilation syndrome) is analytically chronic; this does not establish chronic respiratory failure. Source selection and diagnostic incorporation limit physiological interpretation.

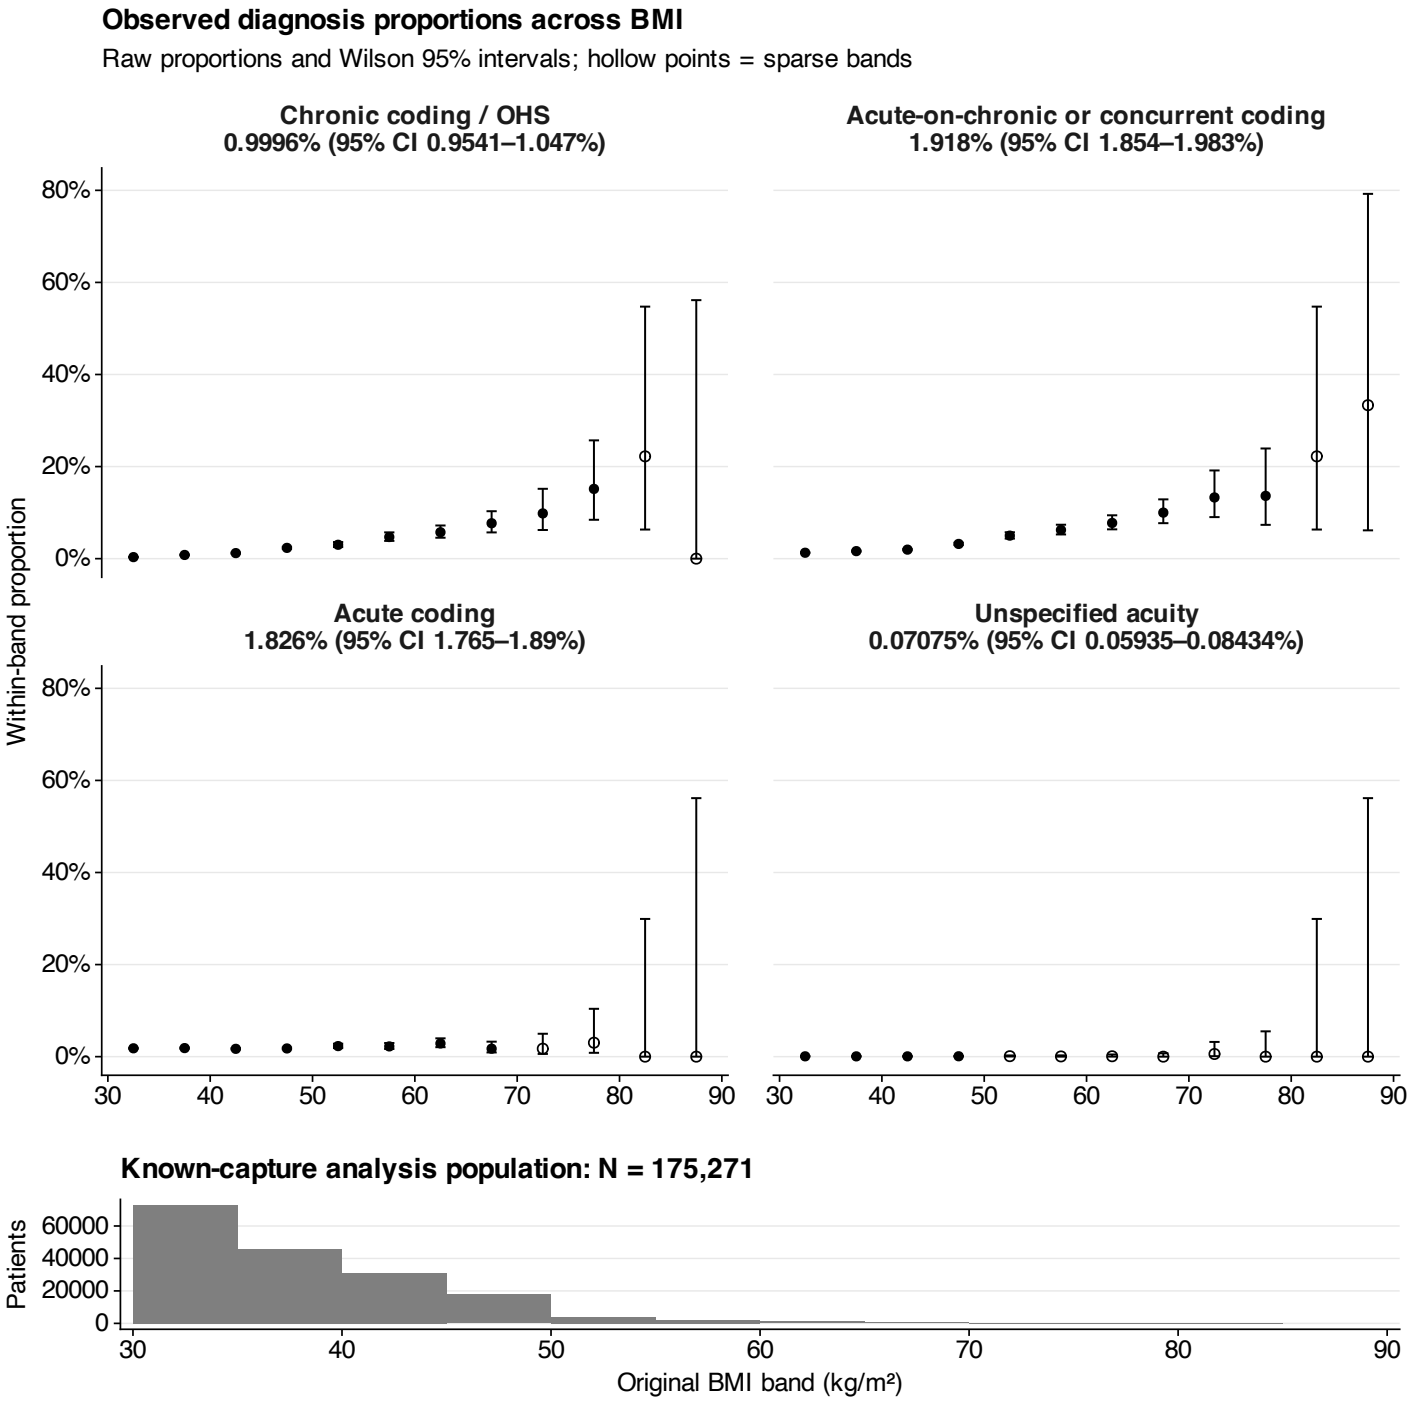

Figure 11: BMI ≥30: secondary. Observed encounter-wide diagnosis proportions within five-unit BMI bands of the covariate-complete analysis population with known capture; no gas requirement. These are unadjusted descriptions, not fitted curves. Error bars are Wilson 95% intervals; hollow points mark sparse patient/event/non-event counts. The histogram shows each band denominator, shared by every category. Empty bands have no estimate. OHS is grouped with chronic coding analytically; codes do not establish physiology. Overall percentages and their Wilson intervals are printed in each panel; no-target coding is the complement of the four displayed categories.

Detailed cohort edges: partition . Counts and grain come from cohort_nodes. Subsets overlap; only named partitions sum to their parent.

Cohort accounting: partition

Partition: abg index calendar day

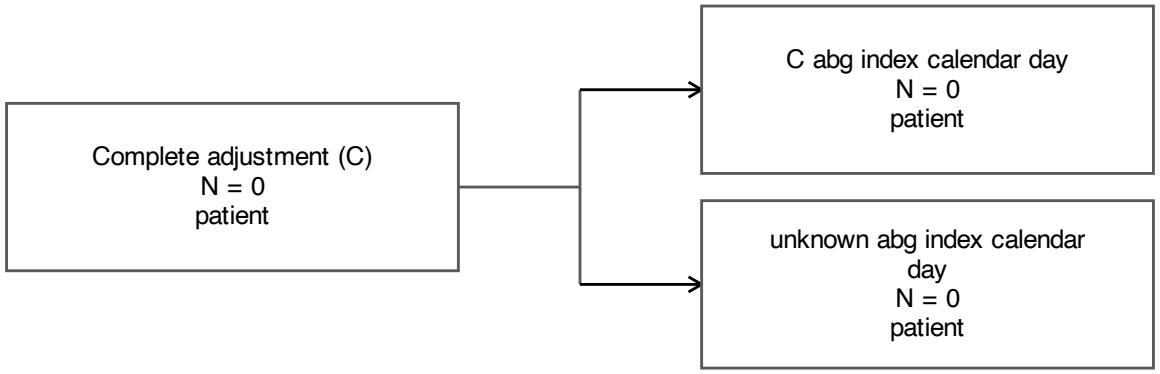

Figure 57: Analysis population: Unresolved RFS: audit. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. Detailed cohort edges: partition . Counts and grain come from cohort_nodes. Subsets overlap; only named partitions sum to their parent.

Cohort accounting: partition

Partition: any gas encounter

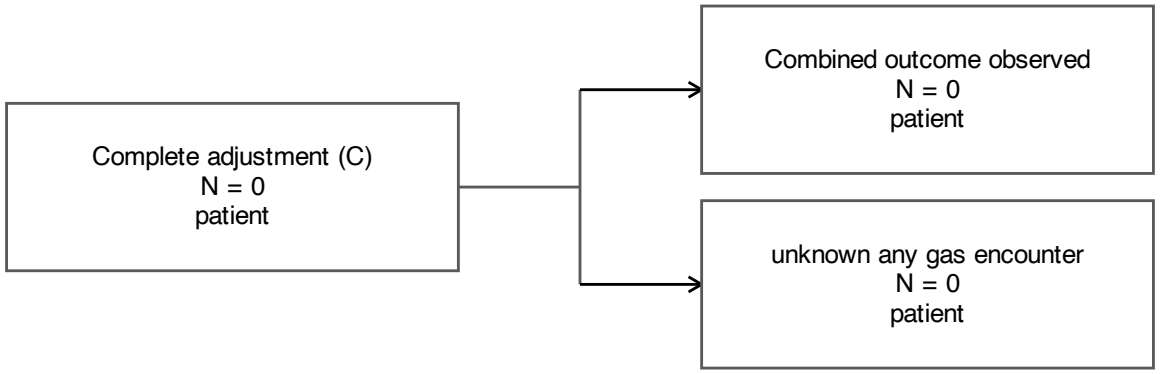

Figure 58: Analysis population: Unresolved RFS: audit. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. Detailed cohort edges: partition . Counts and grain come from cohort_nodes. Subsets overlap; only named partitions sum to their parent.

Cohort accounting: partition

Partition: any gas index calendar day

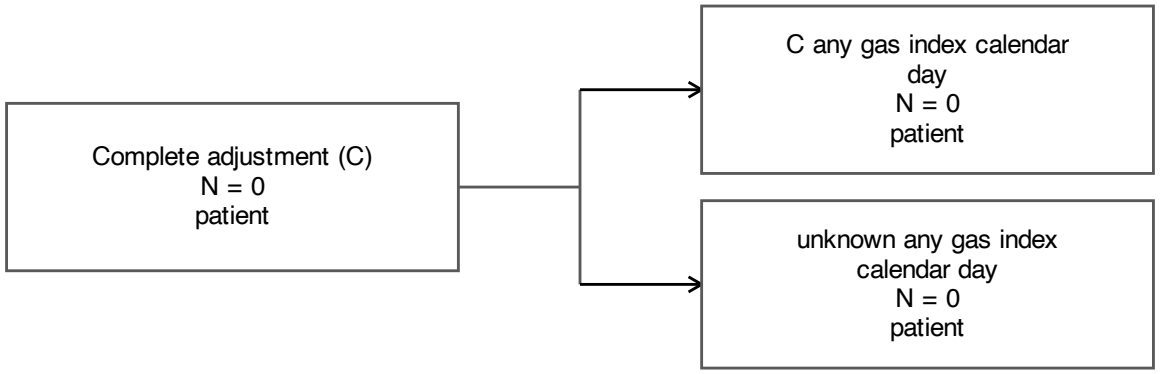

Figure 59: Analysis population: Unresolved RFS: audit. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. Detailed cohort edges: partition . Counts and grain come from cohort_nodes. Subsets overlap; only named partitions sum to their parent.

Cohort accounting: subset

Children are not an exclusive partition

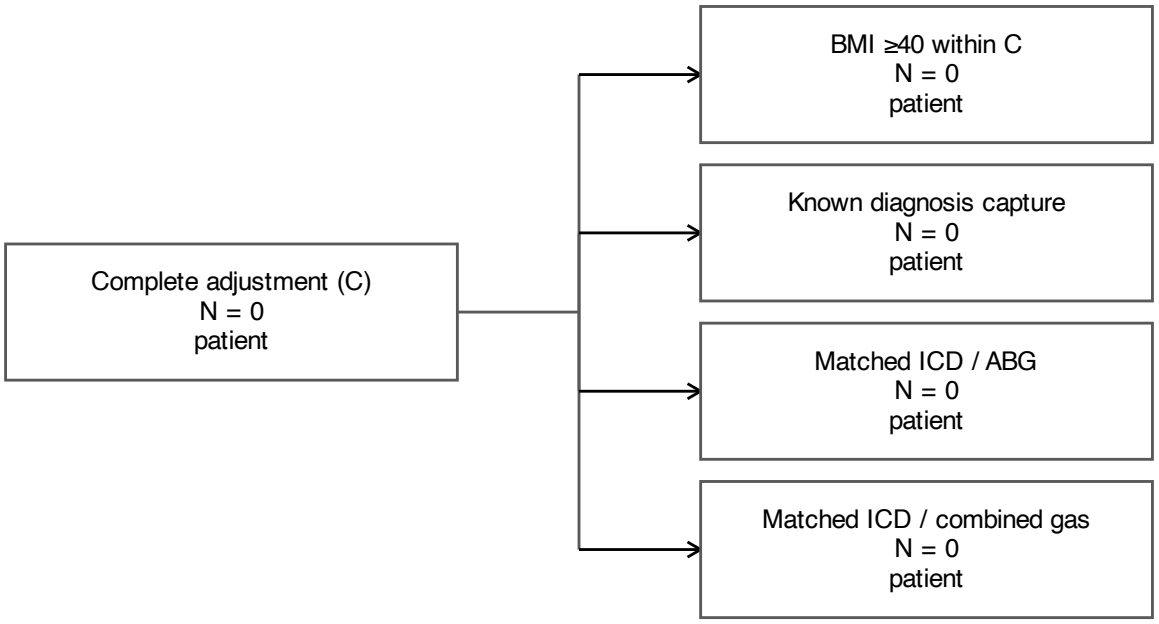

Figure 60: Analysis population: Unresolved RFS: audit. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. Detailed cohort edges: subset . Counts and grain come from cohort_nodes. Subsets overlap; only named partitions sum to their parent.

Cohort accounting: partition

Partition: adjustment

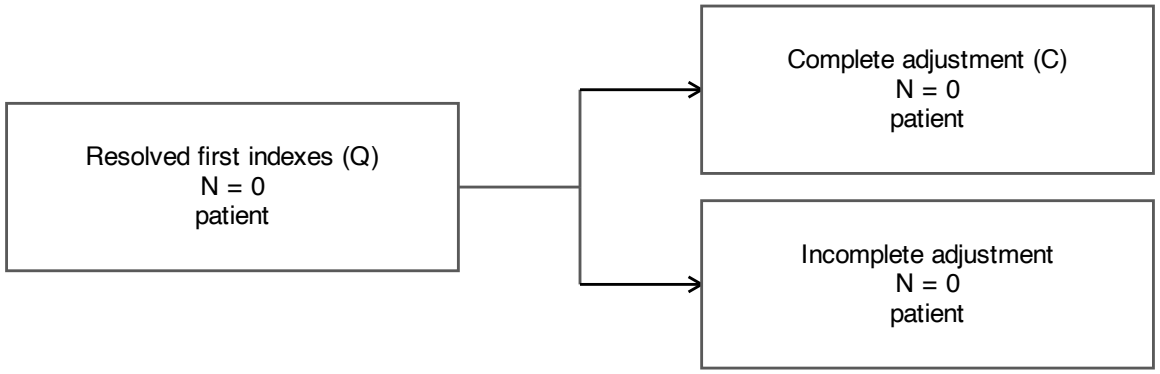

Figure 61: Analysis population: Unresolved RFS: audit. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. Detailed cohort edges: partition . Counts and grain come from cohort_nodes. Subsets overlap; only named partitions sum to their parent.

2.1 icd acuity status

Table 5: icd_acuity_status

module	status	reason	n primary complete	n complete capture	analysis population id
icd acuity v1	qualified	Complete encounter diagnosis capture; inherited five-code composite	380206	380206	primary
icd acuity v1	qualified	Complete encounter diagnosis capture; inherited five-code composite	175271	175271	primary bmi ge30

2.2 icd acuity categories

status: qualified.

Table 6: icd_acuity_categories
