BMI and documented respiratory-failure acuity / OHS

All valid BMI: primary | Encounter-wide; model/reference N = 380,206 | Firth bias reduction

Events: chronic/OHS 2,198; acute/chronic 6,258; acute 7,339; unspecified 268

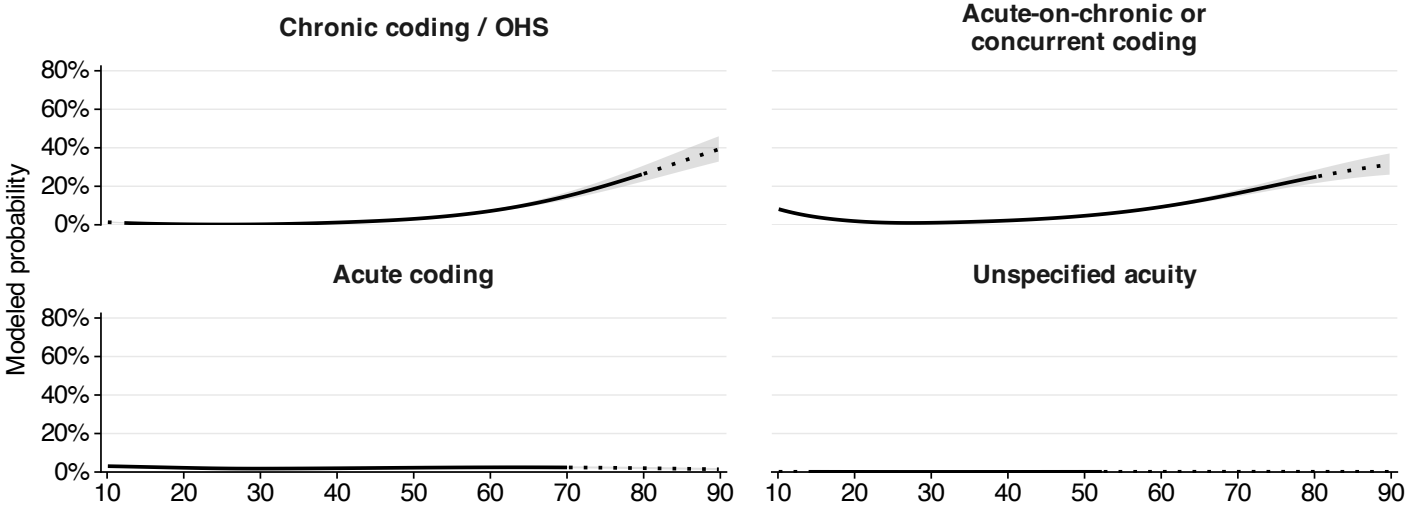

A Documented diagnoses divided by acuity coding

Band thickness = component; upper boundary = total with 95% CI

B Component magnitudes on common axes

Pointwise 95% intervals; dotted segments indicate local sparsity

C Patients in the shared diagnosis-capture population
