BMI and documented respiratory-failure acuity / OHS
Primary population | Encounter-wide; shared model/reference N = 176,922
Events: chronic/OHS 1,769; acute/chronic 3,443; acute 3,294; unspecified 128

ICD components unavailable

separation: Complete or quasi-complete multinomial separation

Component intervals unavailable

separation: Complete or quasi-complete multinomial separation

No modeled comparison

separation: Complete or quasi-complete multinomial separation

Adjusted ICD-acuity curves and intervals are unavailable: separation: Complete or quasi-complete multinomial separation This is a model-status display, not an estimated relationship. The accompanying table reports observed category counts only when source evidence is qualified. Primary fixed indexes, adjustment and existing analyses are unchanged; no fallback estimator was used.
