BMI–hypercapnia: complete construction and model audit

Table of contents

1 Coverage and provenance **10**

2 Detailed observational cohort construction **61**

2.1 icd acuity status . . . 143
2.2 icd acuity categories . . . 143
2.3 icd acuity patterns . . . 143
2.4 icd acuity reconciliation . . . 157
2.5 icd acuity contrasts . . . 157
2.6 icd acuity probability covariance . . . 195
2.7 icd acuity curve reconciliation . . . 1861
2.8 icd acuity observed bands . . . 1861
2.9 cooccurrence status . . . 1863
2.10 cooccurrence reconciliation . . . 1864
2.11 cooccurrence availability . . . 1864
2.12 cooccurrence measurements . . . 1865
2.13 cooccurrence categories . . . 1868
2.14 same day contrasts . . . 1869
2.15 same day probability covariance . . . 1872
2.16 same day curve reconciliation . . . 2323
2.17 rfs summary . . . 2323
2.18 rfs outcomes . . . 2324
2.19 rfs combinations . . . 2326
2.20 rfs by bmi . . . 2343
2.21 bmi provenance . . . 2350
2.22 demographic crosswalk . . . 2408
2.23 prior run reconciliation . . . 2410
2.24 rfs semantics . . . 2411
2.25 expected models . . . 2413
2.26 cohort nodes . . . 2415
2.27 cohort edges . . . 2424
2.28 exclusion reasons . . . 2429
2.29 exclusion overlaps . . . 2431
2.30 population registry . . . 2432
2.31 timing audit . . . 2442
2.32 observation patterns . . . 2444
2.33 evidence by bmi . . . 2453
2.34 numerical reconciliation . . . 2611

3 Complete stage and variable profiles **2645**

3.1 variable summary . . . 2645
3.2 patient id . . . 2645
3.3 encounter id . . . 2649
3.4 encounter date . . . 2654
3.5 age at encounter . . . 2662
3.6 encounter type . . . 2670
3.7 bmi . . . 2675
3.8 sex . . . 2683
3.9 race ethnicity . . . 2688
3.10 location . . . 2693
3.11 has abg . . . 2698

1 Coverage and provenance

Every required population, variable and model is indexed below. Identical stage summaries are shared only after exact equality of all nonidentifier fields, with an explicit stage-to-display mapping; this does not assert identical patient membership. Missing, pending, failed, empty and not-applicable states are explicit. No patient identifiers, exact dates, individual predictions or model frames are exported. CSV/RDS tables retain full numerical precision. Distribution/prediction coordinates are exported in full; their complete plotted ranges are displayed here rather than printing every coordinate as a separate table row.

2 Detailed observational cohort construction

Source records, encounter versions and patients have distinct counting units. Global pre-index accounting belongs to the combined reference. Subgroup input/eligibility recheck nodes begin with already fixed indexes; they are not new upstream extraction counts or a

new clinical selection. First-failure exclusions are exclusive at their declared grain; all-reason counts overlap. Gas and ICD samples are parallel overlapping analytic branches.

Obesity-only is retained here solely for cohort reconciliation, source-quality checks and descriptive profiles, not as a scientific comparator or selection-sensitivity analysis. No obesity-only adjusted curve, observation model, current-measurement model, PIF or weighting analysis is planned. Excluding gas-related entry pathways selects against the evidence needed to evaluate gas outcomes. Residual captured gases despite absent historical gas-family membership remain discrepancy counts; they are not recoded away or interpreted as a physiological comparison. The exact relationship to the historical extraction remains unresolved. Known diagnosis capture denotes source coverage, not ICD positivity; complete capture is not presented as an inferential availability curve.

Source-entry partition at the fixed index

Mutually exclusive patient groups; overlap remains in primary

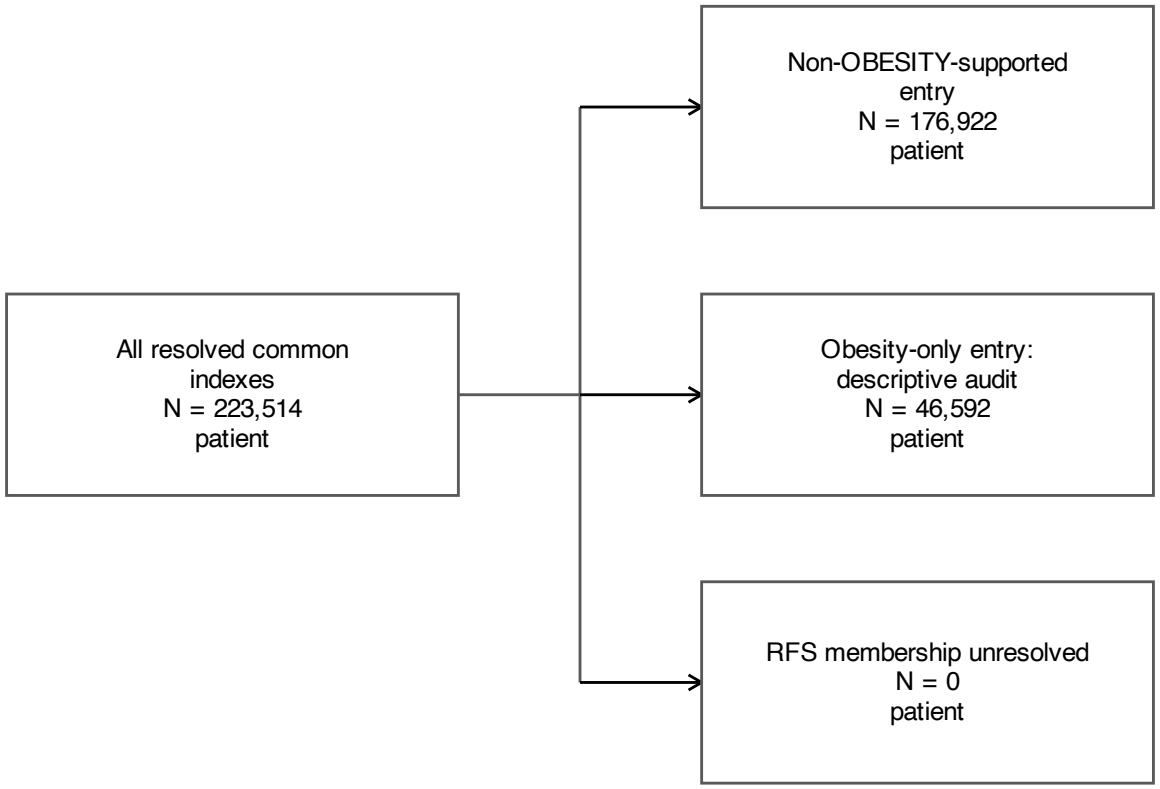

Figure 1: Fixed common indexes partition into primary non-OBESITY-supported source entry, obesity-only source entry and unresolved RFS. Overlapping OBESITY/non-OBESITY membership remains primary. Counts and units derive from the ledger; all-OBESITY supporting models overlap and are not a fourth partition branch.

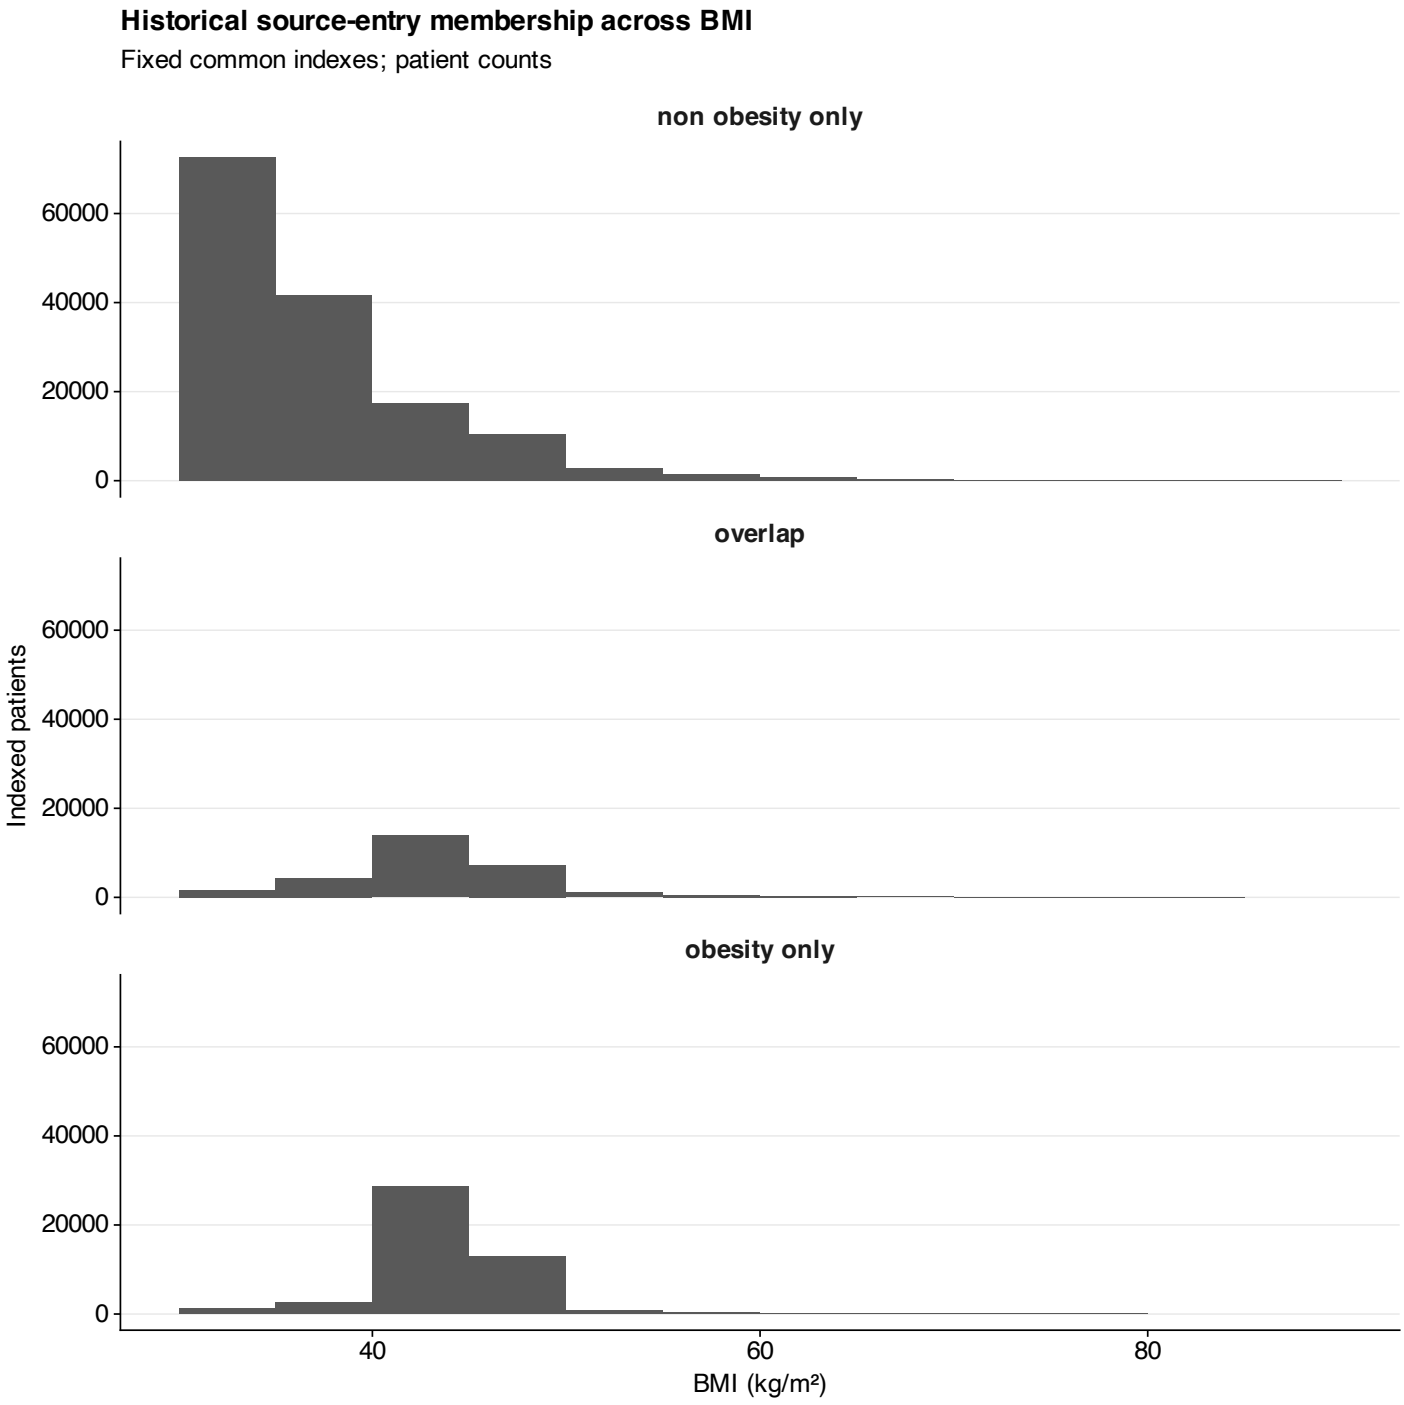

Figure 2: Historical source-entry subgroup counts by BMI, pooling the two acute settings on fixed indexes. Overlap remains in primary; obesity-only is a descriptive selection audit without adjusted outcome models. Membership records source-file representation, not exhaustive clinical criteria. Unresolved and all-zero discrepancies are retained. All groups partition the common indexed population. No association or causal bias correction follows from this partition.

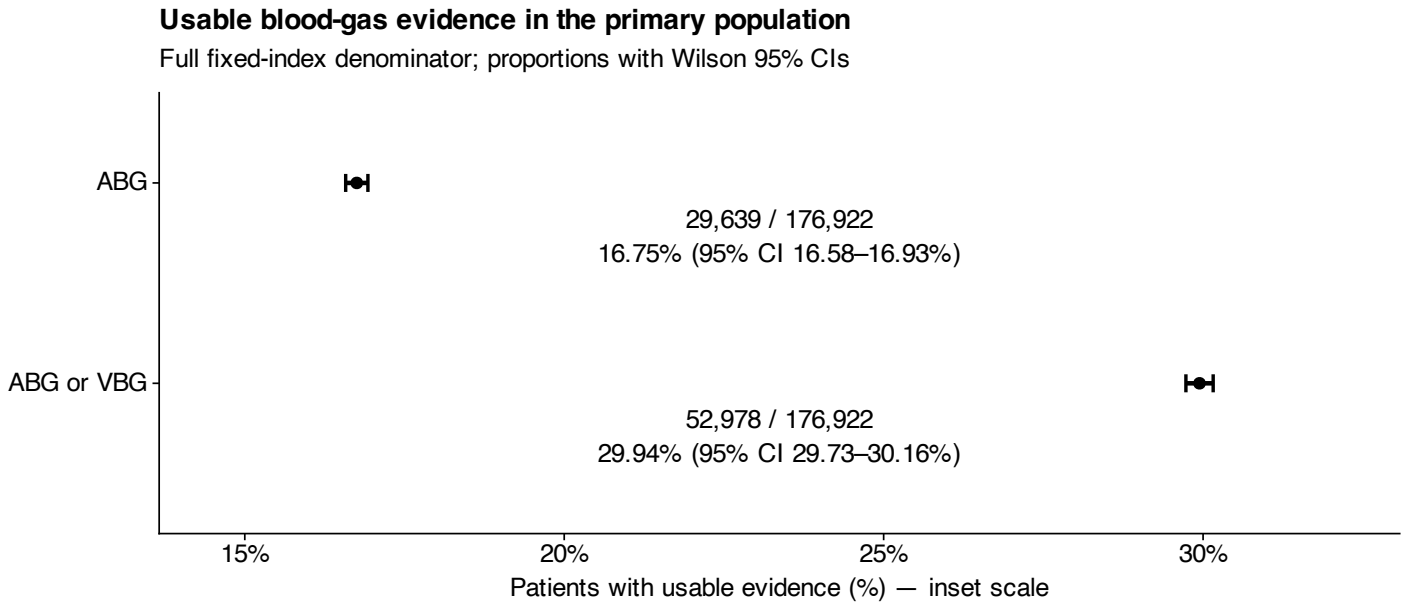

Figure 3: Encounter-wide usable gas evidence among all primary fixed indexes, before adjustment completeness. Labels give evaluable/full N, percentage and 95% Wilson CI; capped intervals use their exact endpoints on a labeled inset scale. ABG: arterial blood gas; VBG: venous blood gas. The combined row accepts either usable specimen; the two rows overlap and are not summed. These percentages describe evidence availability, not hypercapnia positivity. Primary includes non-OBESITY pathways and their OBESITY overlaps. Complete diagnosis capture, when present, is a source fact rather than ICD positivity and is reported separately. Obesity-only counts and residual-gas discrepancies are confined to the cohort flow and audit; they do not define a scientific comparator or weighting analysis.

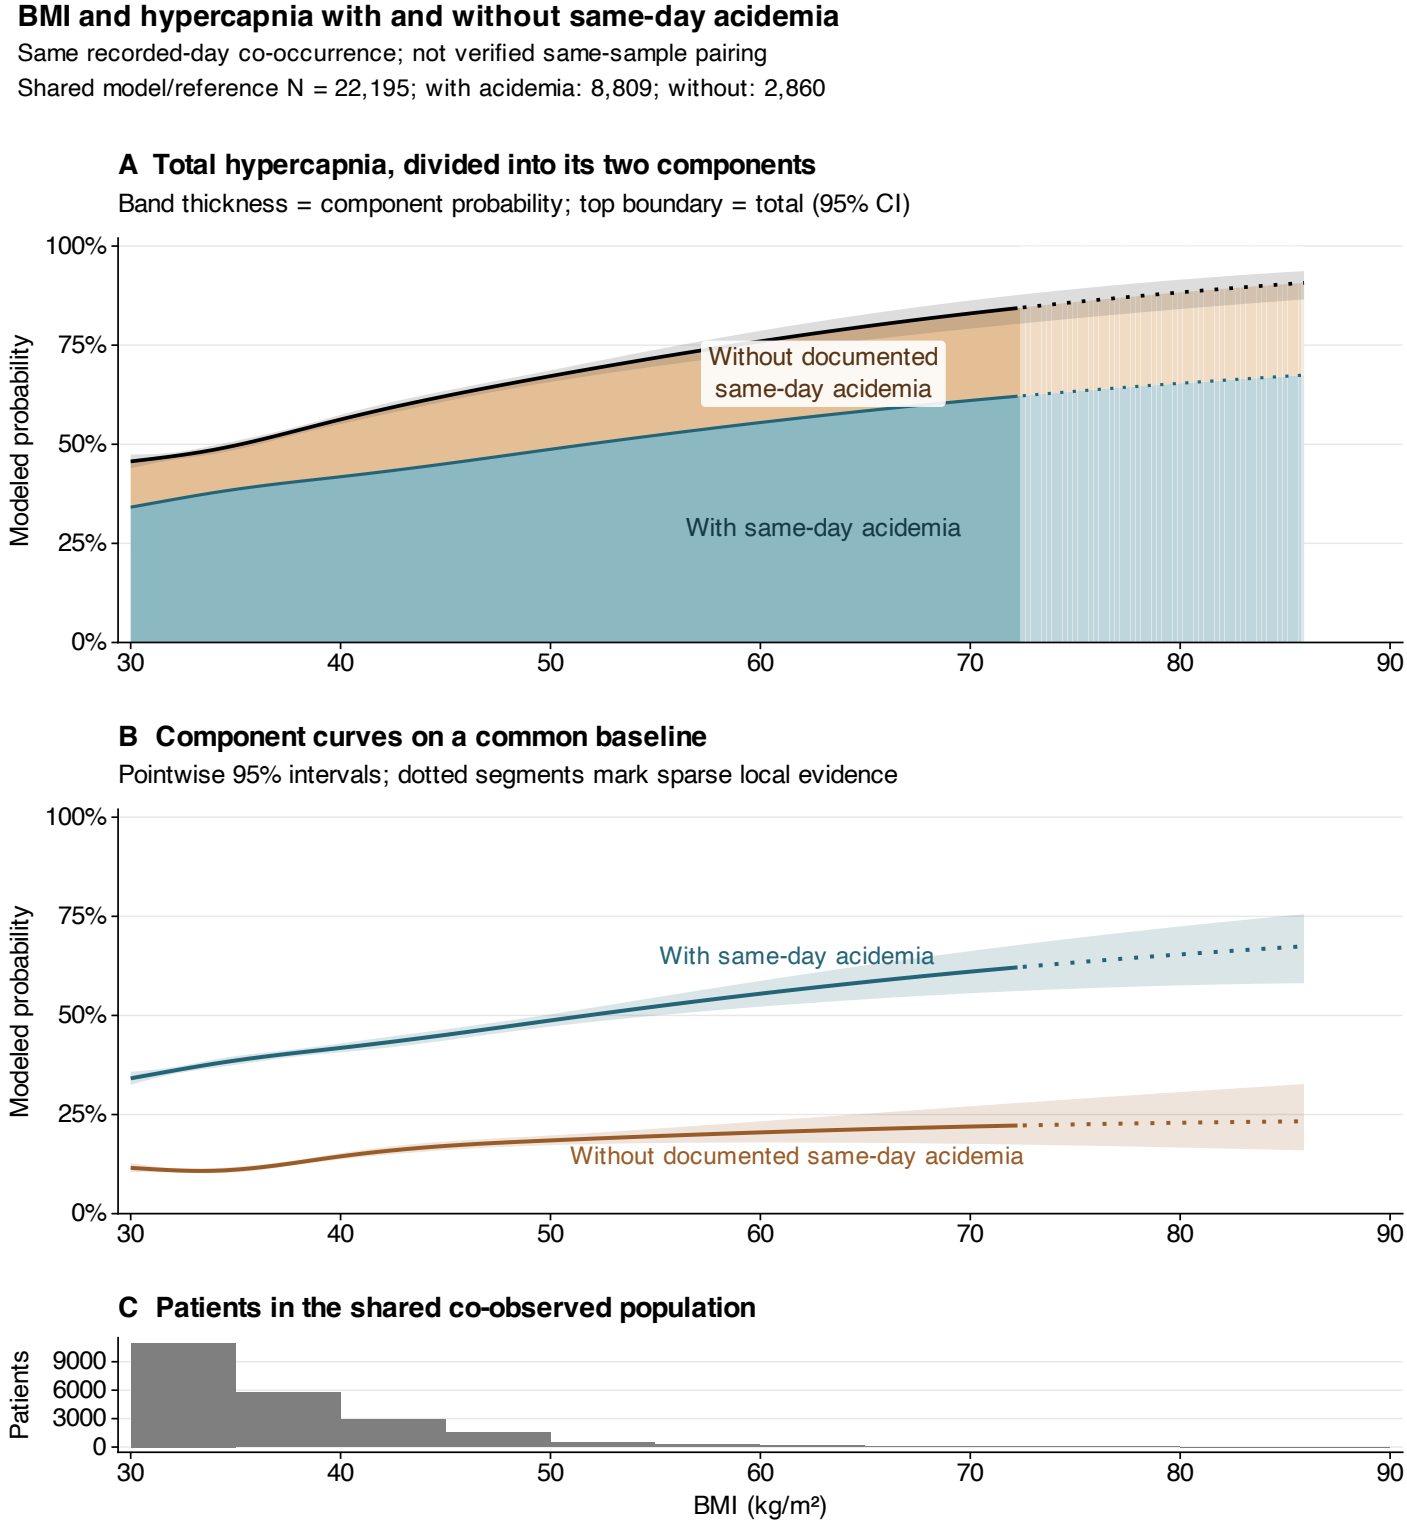

Figure 4: Same recorded-day co-occurrence; not verified same-sample pairing. Primary fixed-index patients with both arterial analytes share inherited adjustment and the primary BMI spline. Any eligible day with $PaCO_2$ ≥45 mm Hg and pH <7.35 assigns the with-acidemia category; remaining hypercapnic patients have no documented same-day acidemia. Different samples may contribute. A: band thicknesses give component probabilities; the upper boundary is total hypercapnia. B: components share a baseline. Shading denotes pointwise 95% intervals using full joint covariance. C: shared-population BMI frequencies. Fading/dotted lines mark local windows below 30 patients or five events/non-events; marginal checks do not establish joint support. These recorded outcomes do not establish simultaneous physiology, acute respiratory failure or compensation. Selection, treatment timing and confounding remain limitations.

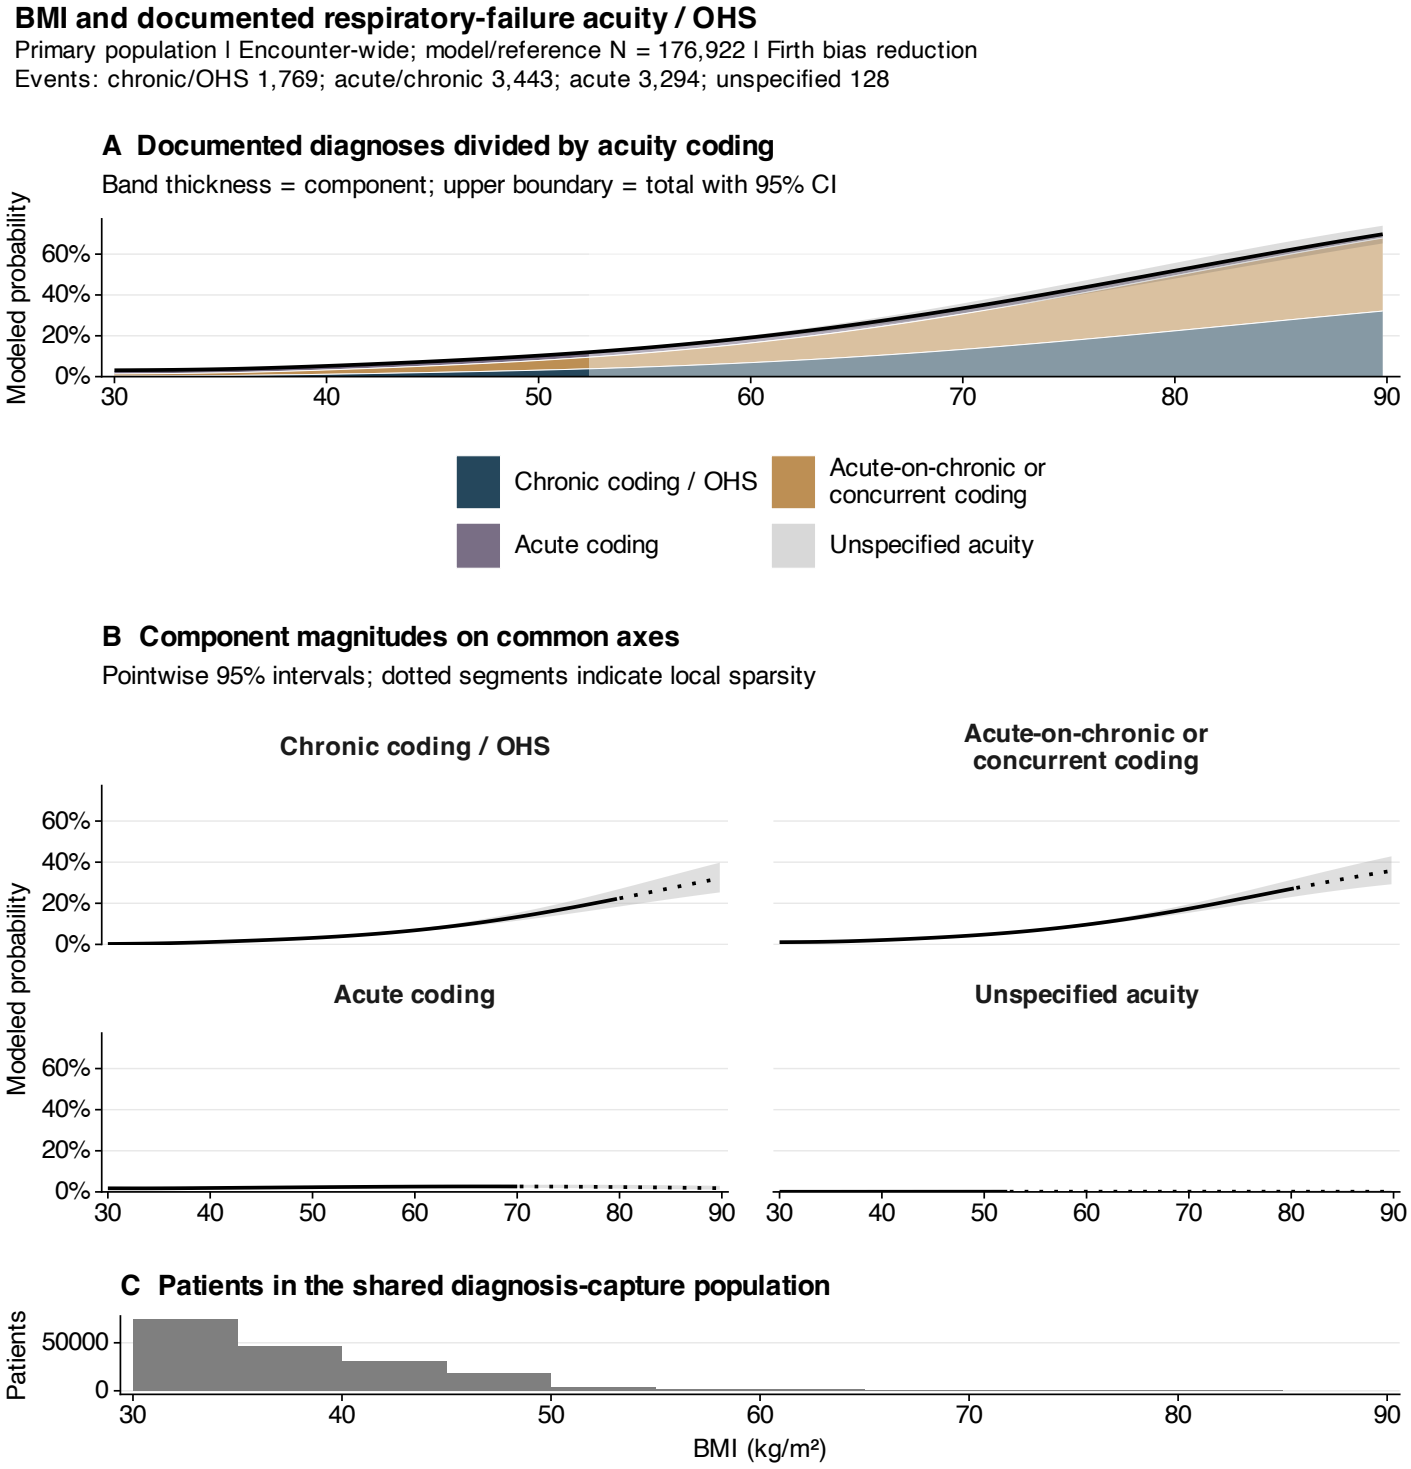

Figure 5: Mean-bias-reduced five-category multinomial spline; all diagnosis-evaluable primary patients retained. Encounter-wide coding, no gas requirement; inherited adjustment and primary spline basis. Bands partition the composite; thickness gives component probability. Shading: pointwise 95% intervals from joint information covariance, conditional on the empirical reference and basis. Fading/dots: local sparsity; histogram N equals model/reference N. Acute-on-chronic includes explicit or concurrent acute/chronic coding. OHS (obesity hypoventilation syndrome) is analytically chronic; this does not establish chronic respiratory failure. Source selection and diagnostic incorporation limit physiological interpretation.

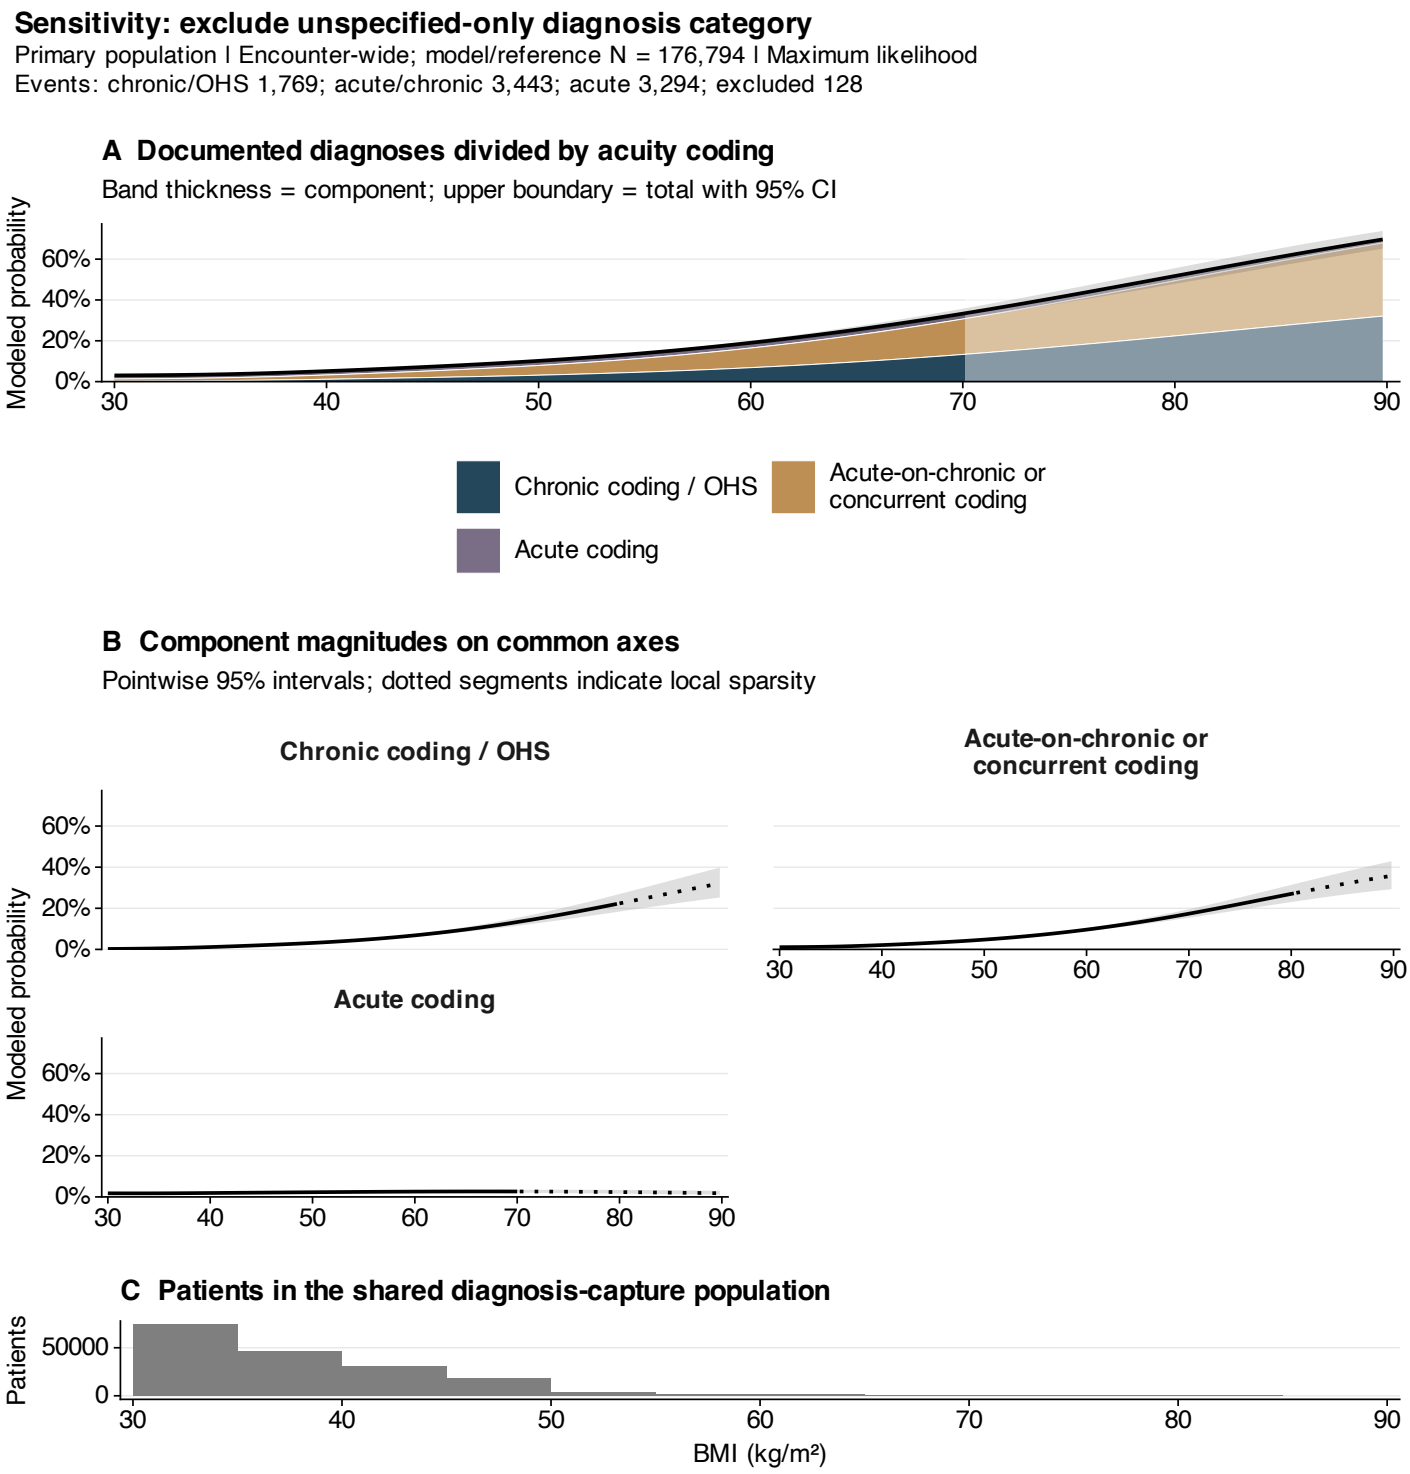

Figure 6: Unpenalized four-category sensitivity excluding unspecified-only encounters and standardizing over the remaining patients. Encounter-wide coding, no gas requirement; inherited adjustment and primary spline basis. Bands partition the composite; thickness gives component probability. Shading: pointwise 95% intervals from joint information covariance, conditional on the empirical reference and basis. Fading/dots: local sparsity; histogram N equals model/reference N. Acute-on-chronic includes explicit or concurrent acute/chronic coding. OHS (obesity hypoventilation syndrome) is analytically chronic; this does not establish chronic respiratory failure. Source selection and diagnostic incorporation limit physiological interpretation.

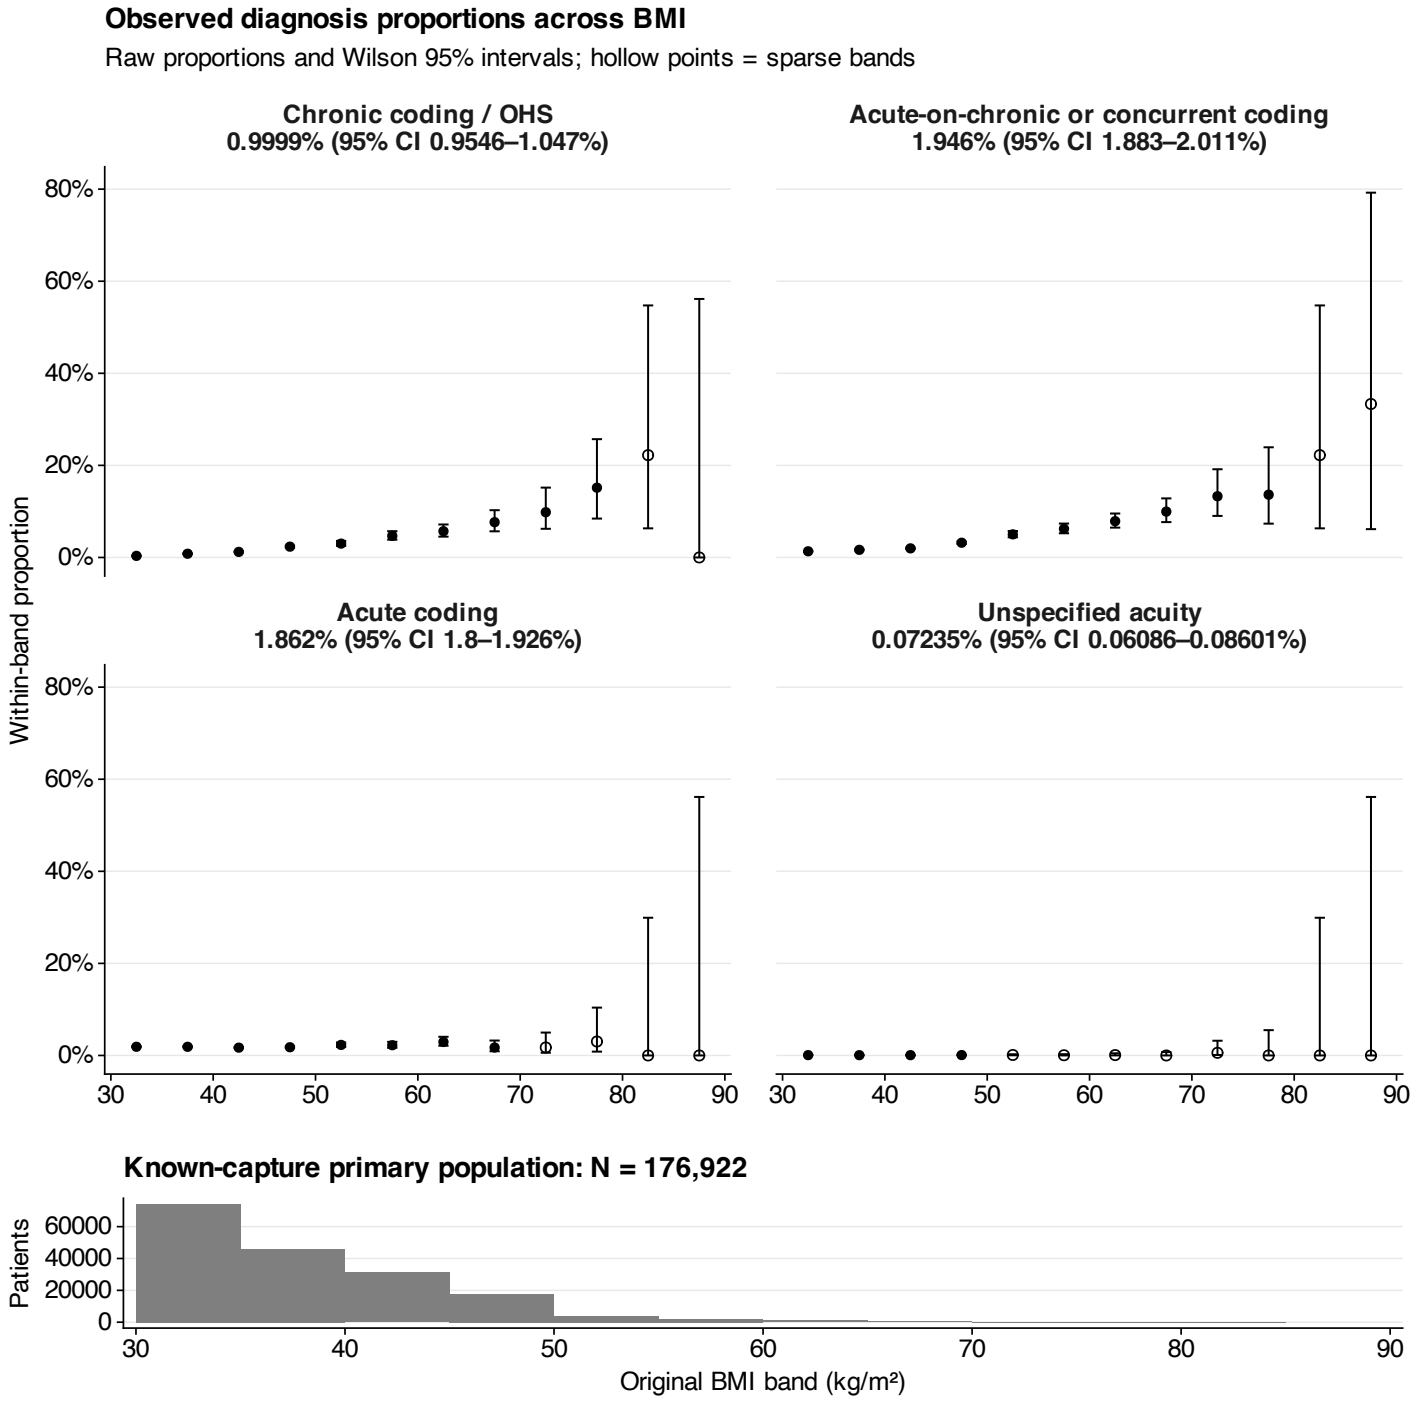

Figure 7: Observed encounter-wide diagnosis proportions within five-unit BMI bands of the covariate-complete primary population with known capture; no gas requirement. These are unadjusted descriptions, not fitted curves. Error bars are Wilson 95% intervals; hollow points mark sparse patient/event/non-event counts. The histogram shows each band denominator, shared by every category. Empty bands have no estimate. OHS is grouped with chronic coding analytically; codes do not establish physiology. Overall percentages and their Wilson intervals are printed in each panel; no-target coding is the complement of the four displayed categories.

Cohort accounting: partition

Partition: eligibility

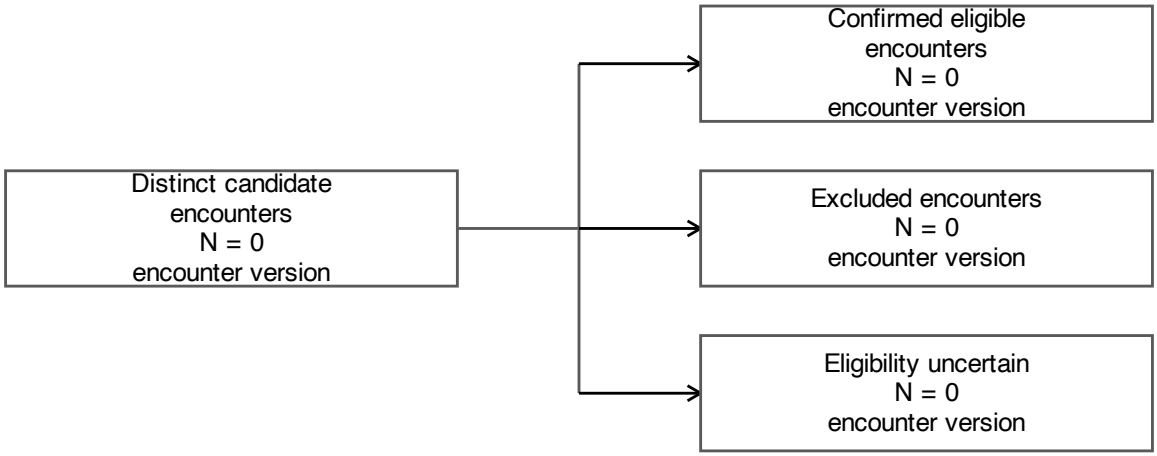

Figure 78: Source-entry population: unresolved. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. Detailed cohort edges: partition . Counts and grain come from cohort_nodes. Subsets overlap; only named partitions sum to their parent.

Cohort accounting: unit_conversion

Children are not an exclusive partition

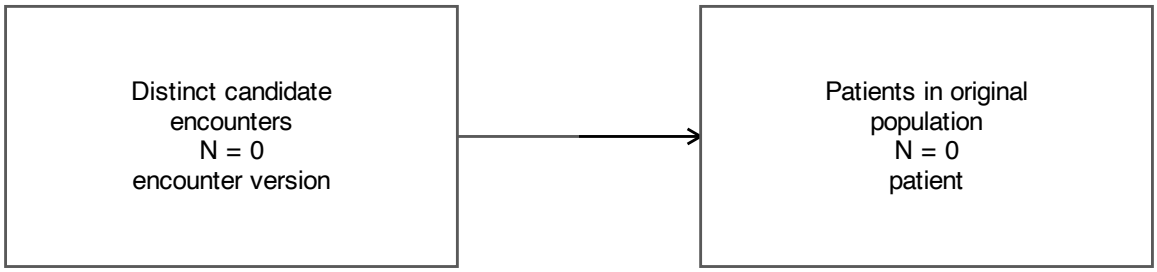

Figure 79: Source-entry population: unresolved. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. Detailed cohort edges: unit_conversion . Counts and grain come from cohort_nodes. Subsets overlap; only named partitions sum to their parent.

Cohort accounting: partition

Partition: index

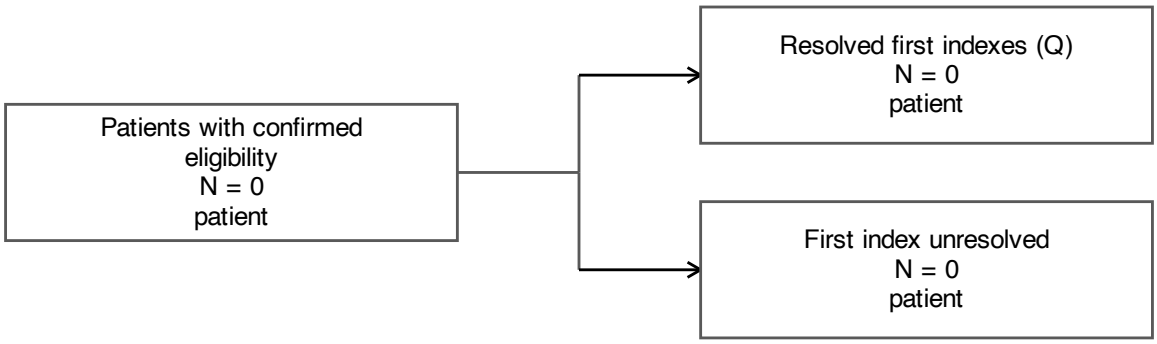

Figure 80: Source-entry population: unresolved. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. Detailed cohort edges: partition . Counts and grain come from cohort_nodes. Subsets overlap; only named partitions sum to their parent.

2.1 icd acuity status

Table 5: icd_acuity_status

module	status	reason	n primary complete	n complete capture	analysis population id
icd acuity v1	qualified	Complete encounter diagnosis capture; inherited five-code composite	176922	176922	primary

2.2 icd acuity categories

N: 176922; status: qualified; analysis population id: primary.

Table 6: icd_acuity_categories

category id	label	n	proportion	conf low	conf high
no target	No target diagnosis documented	168288	0.9511988	0.9501851	0.952193
chronic ohs	Chronic coding / OHS	1769	0.009998757	0.009545674	0.01047312
acute chronic	Acute-on-chronic or concurrent coding	3443	0.01946055	0.01882723	0.02011474
acute	Acute coding	3294	0.01861837	0.01799888	0.01925877
unspecified	Unspecified acuity	128	7.234827e-04	6.08567e-04	8.600792e-04

2.3 icd acuity patterns

analysis population id: primary.

Table 7: icd_acuity_patterns — panel 1/2

2.4 icd acuity reconciliation

Table 9: icd_acuity_reconciliation

metric	n	status	analysis population id
complete capture	176922	qualified	primary
incomplete capture	0	qualified	primary
unavailable capture	0	qualified	primary
original composite positive	8634	qualified	primary
classified positive	8634	qualified	primary

2.5 icd acuity contrasts

window: encounter; ascertainment window: encounter; model form: multinomial_spline; status: estimated; reason: Pointwise descriptive contrast; not multiplicity adjusted; analysis population id: primary.

Table 10: icd_acuity_contrasts — panel 1/4

population id	outcome id	model id	reference id	n reference	n model	family	bmi low
primary	no target	primary:: icd acuity/ encounter/multinomial spline	primary:: C icd acuity	176922	176922	icd acuity	30
primary	chronic ohs	primary:: icd acuity/ encounter/multinomial spline	primary:: C icd acuity	176922	176922	icd acuity	30
