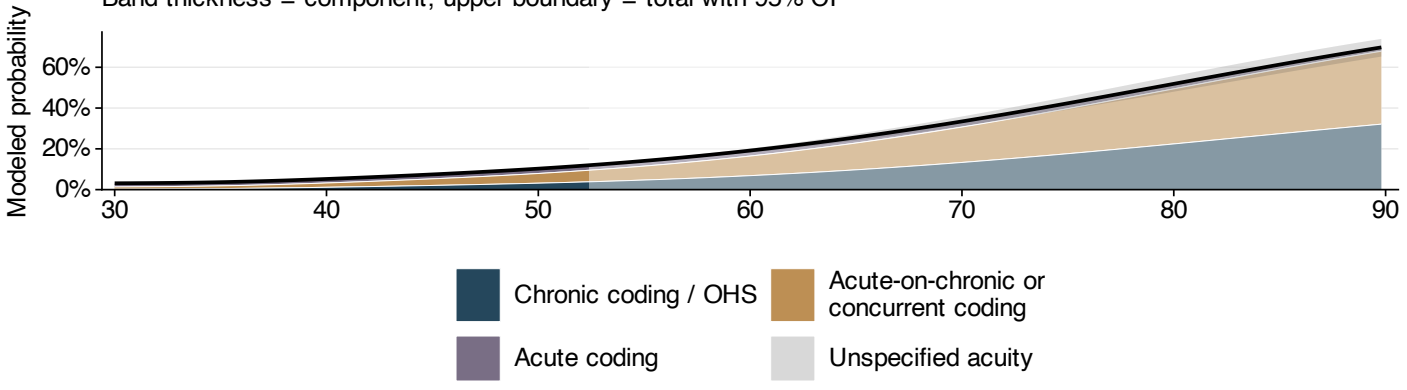
BMI and documented respiratory-failure acuity / OHS

Primary population | Encounter-wide; model/reference N = 176,922 | Firth bias reduction
Events: chronic/OHS 1,769; acute/chronic 3,443; acute 3,294; unspecified 128

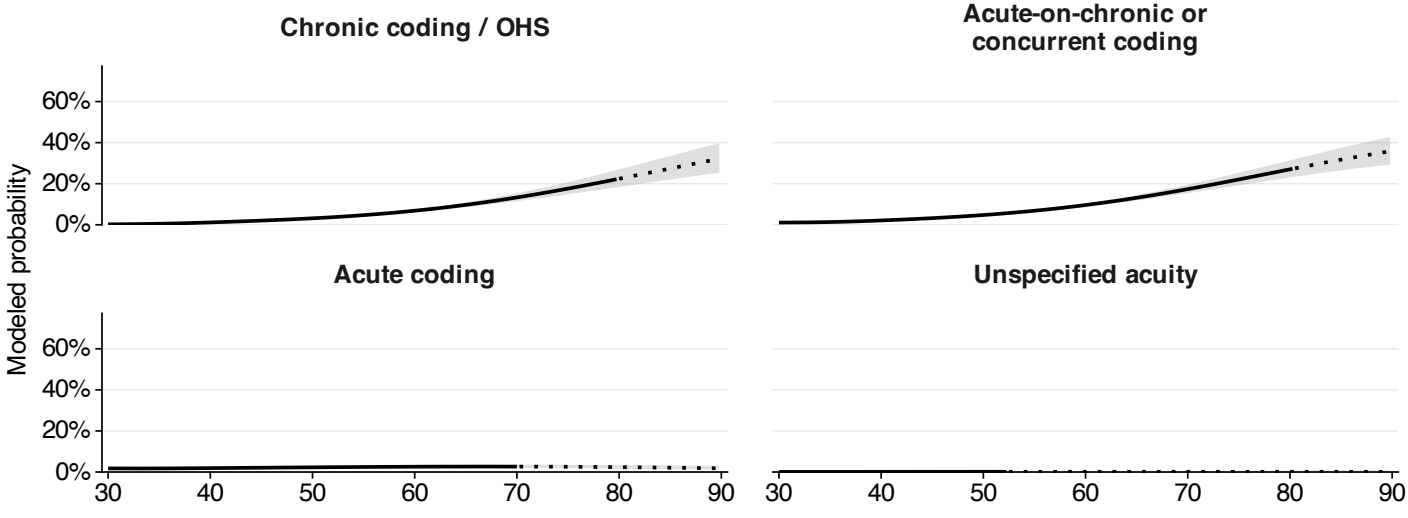
A Documented diagnoses divided by acuity coding

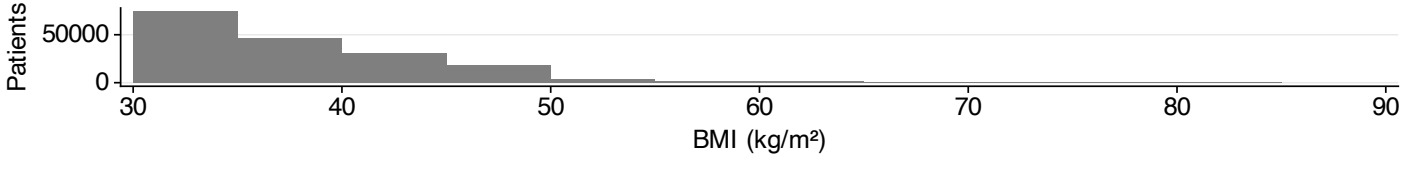
Band thickness = component; upper boundary = total with 95% CI



B Component magnitudes on common axes

Pointwise 95% intervals; dotted segments indicate local sparsity





C Patients in the shared diagnosis-capture population
