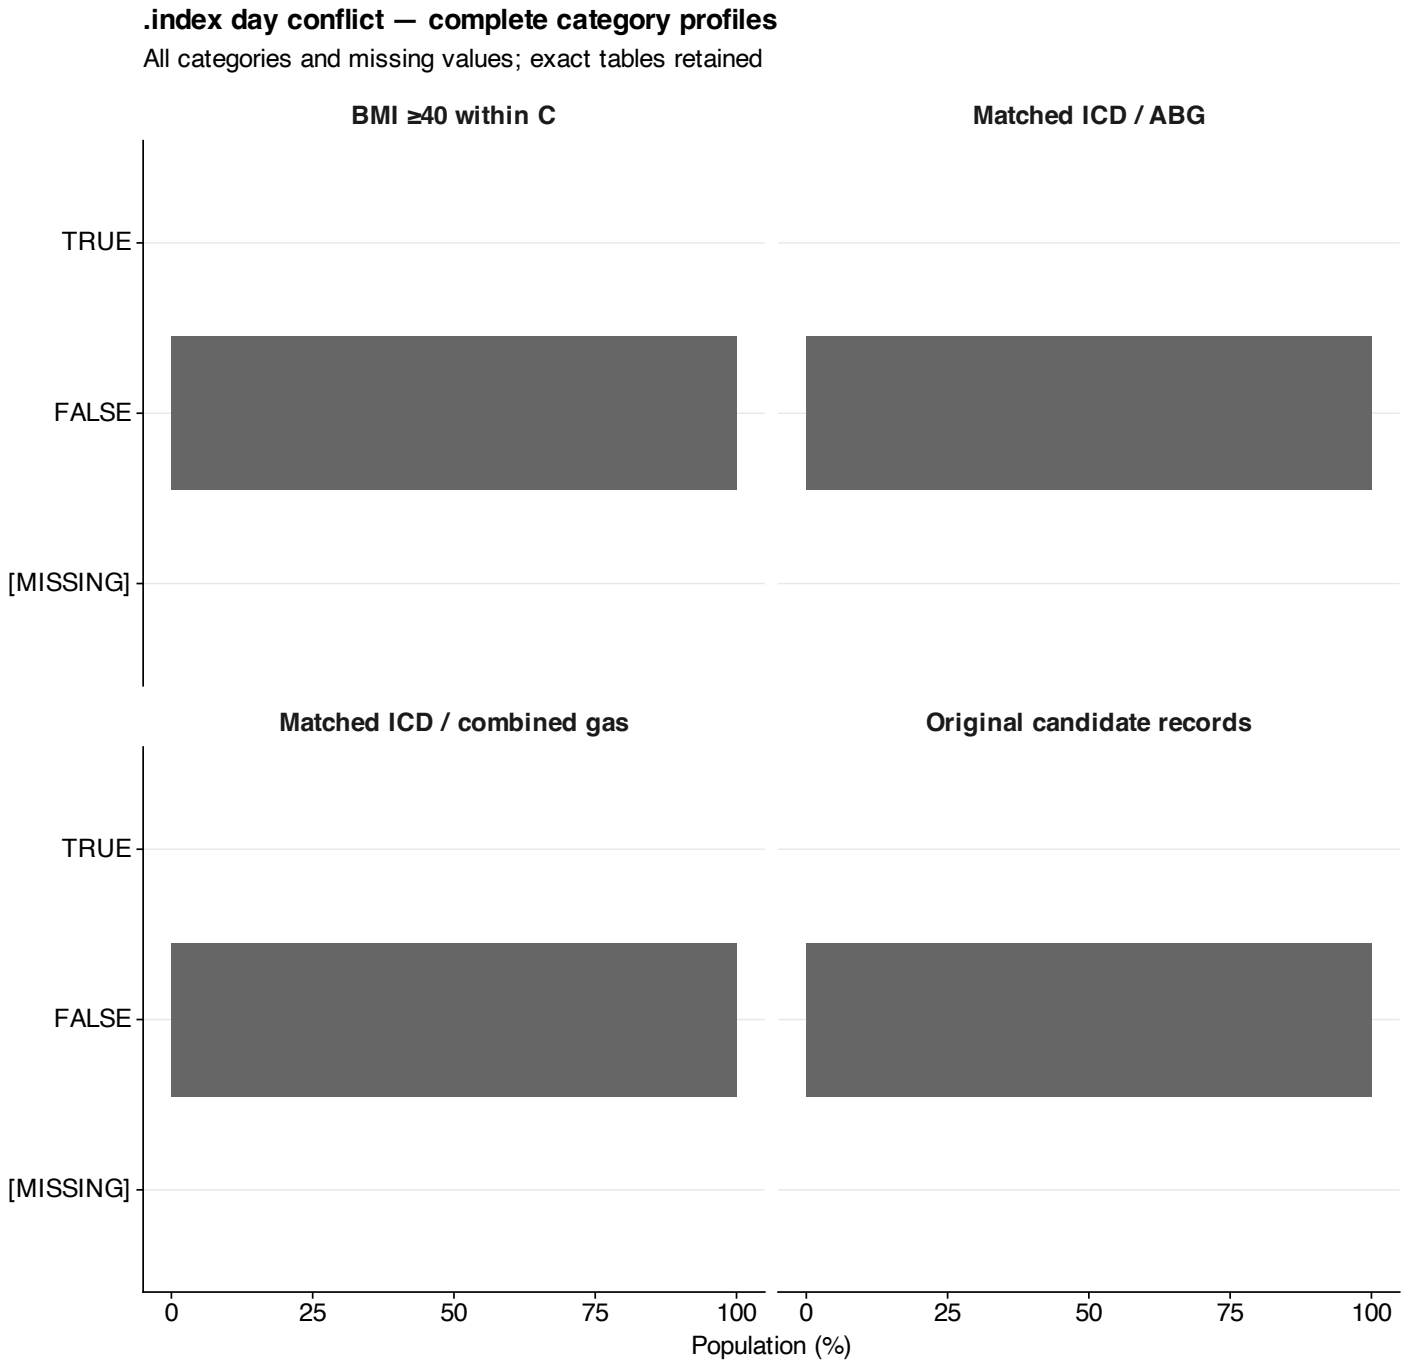

Figure 78: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete .index_day_conflict stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

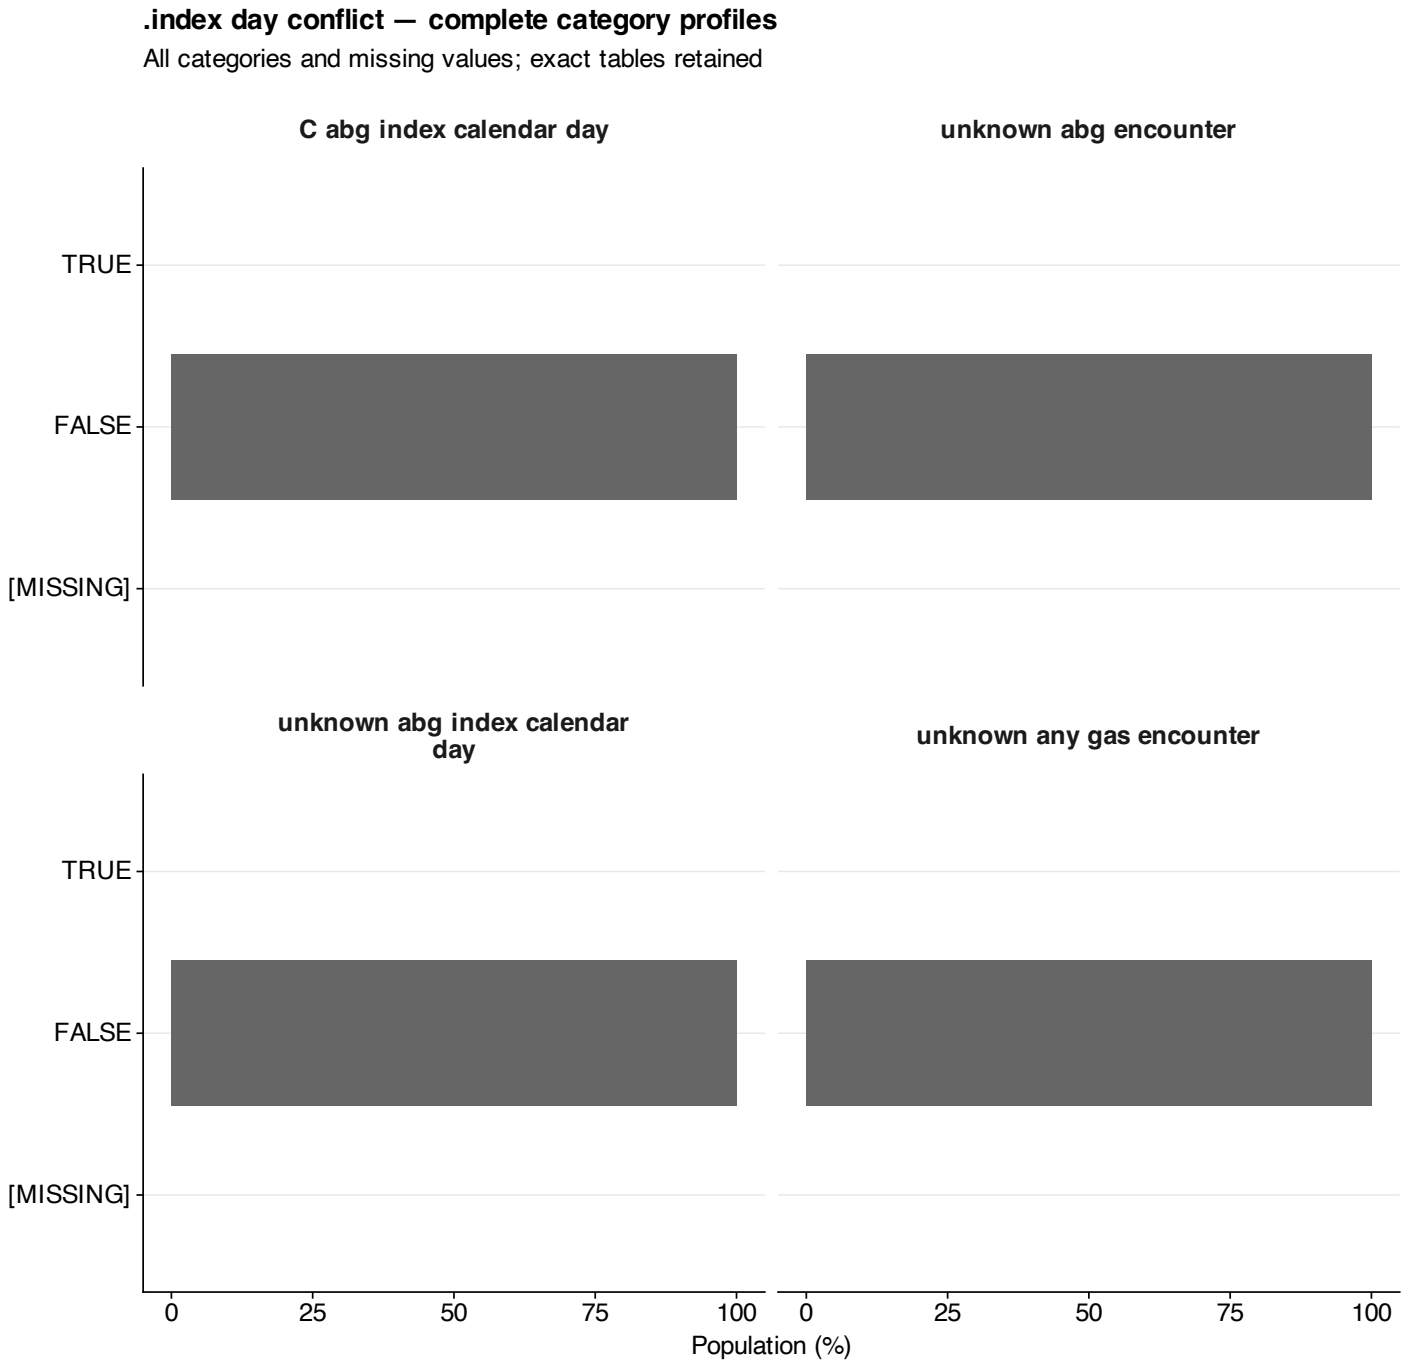

Figure 79: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete .index_day_conflict stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

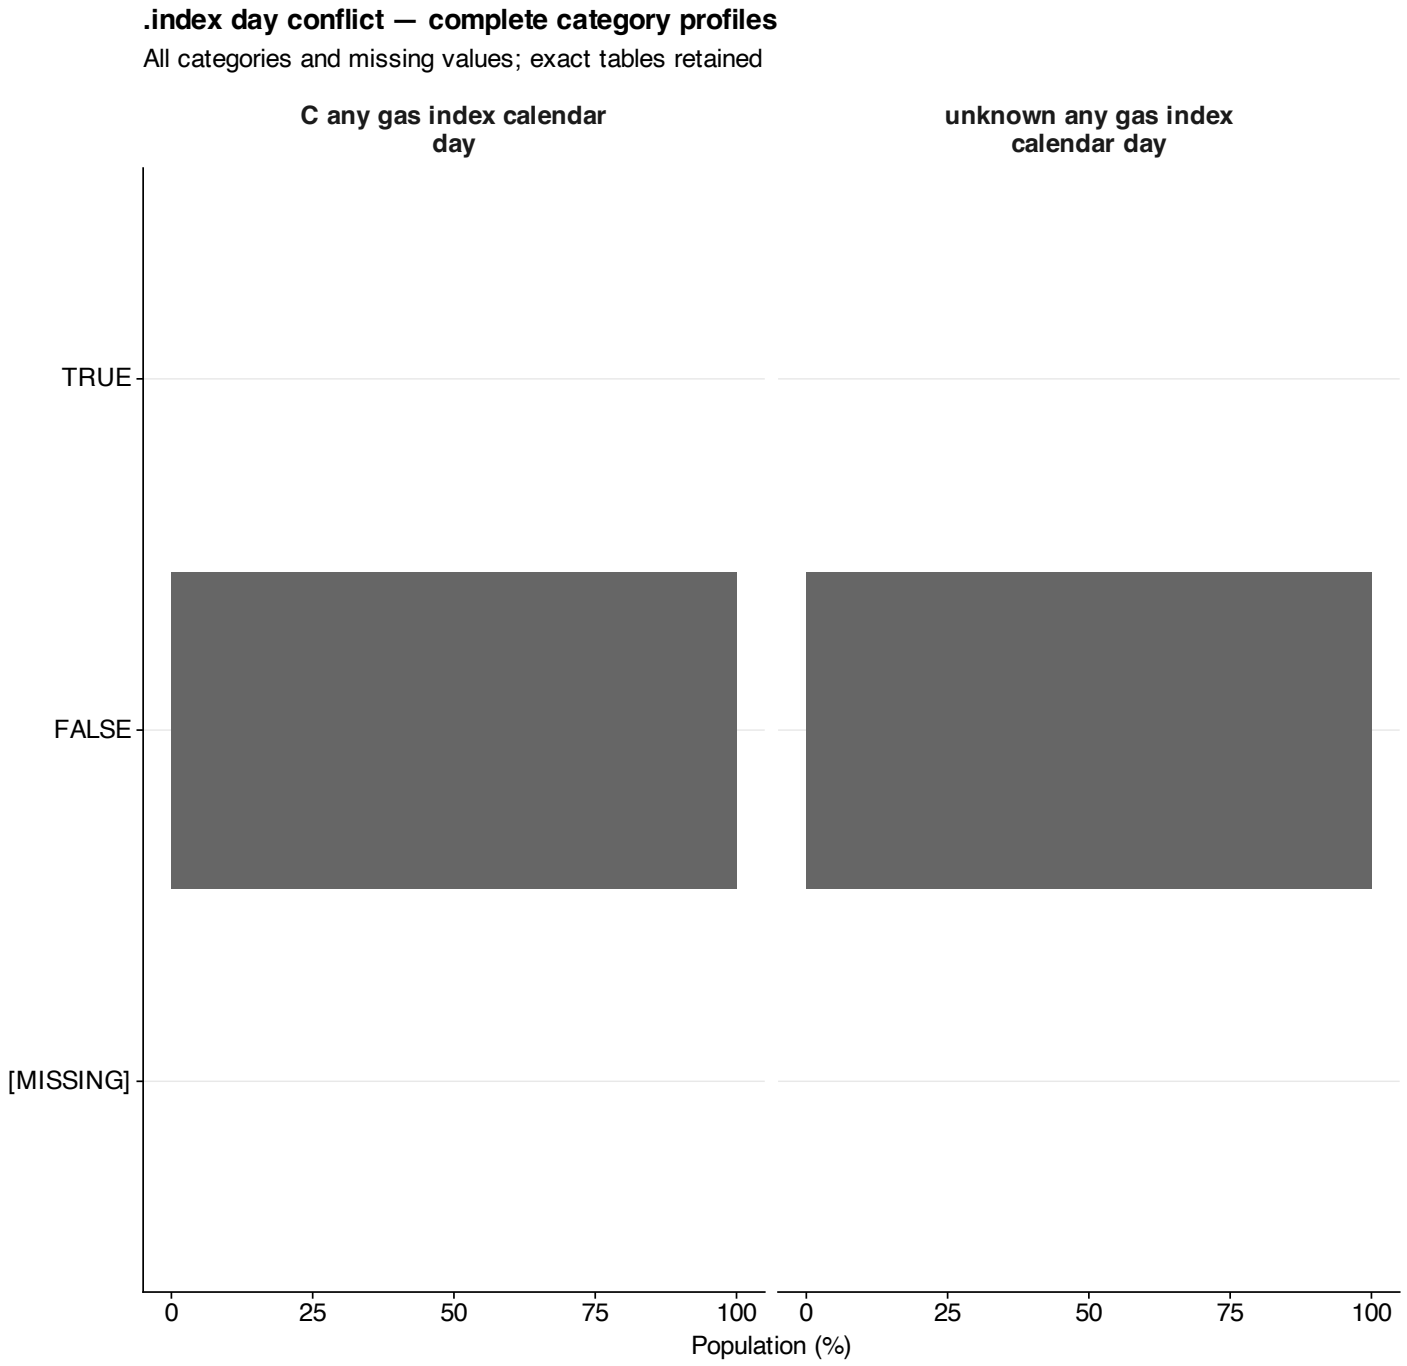

Figure 80: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete .index_day_conflict stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

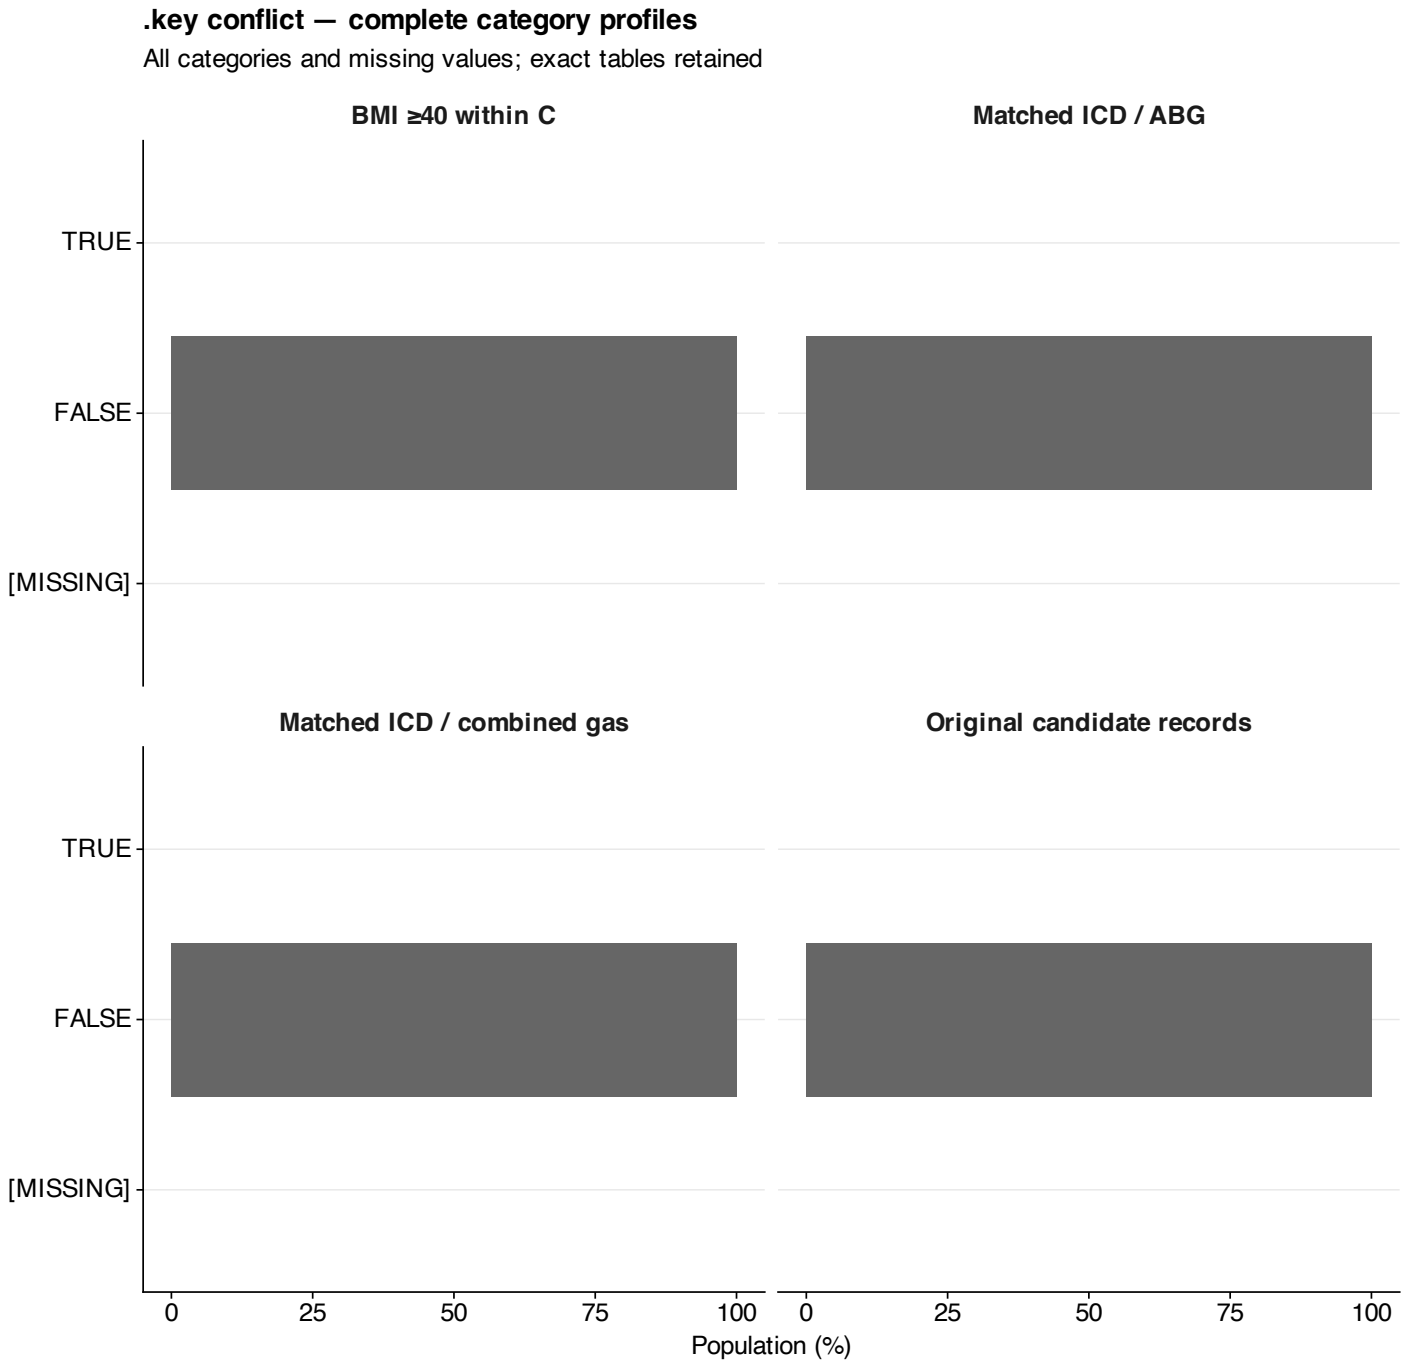

Figure 81: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete .key_conflict stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

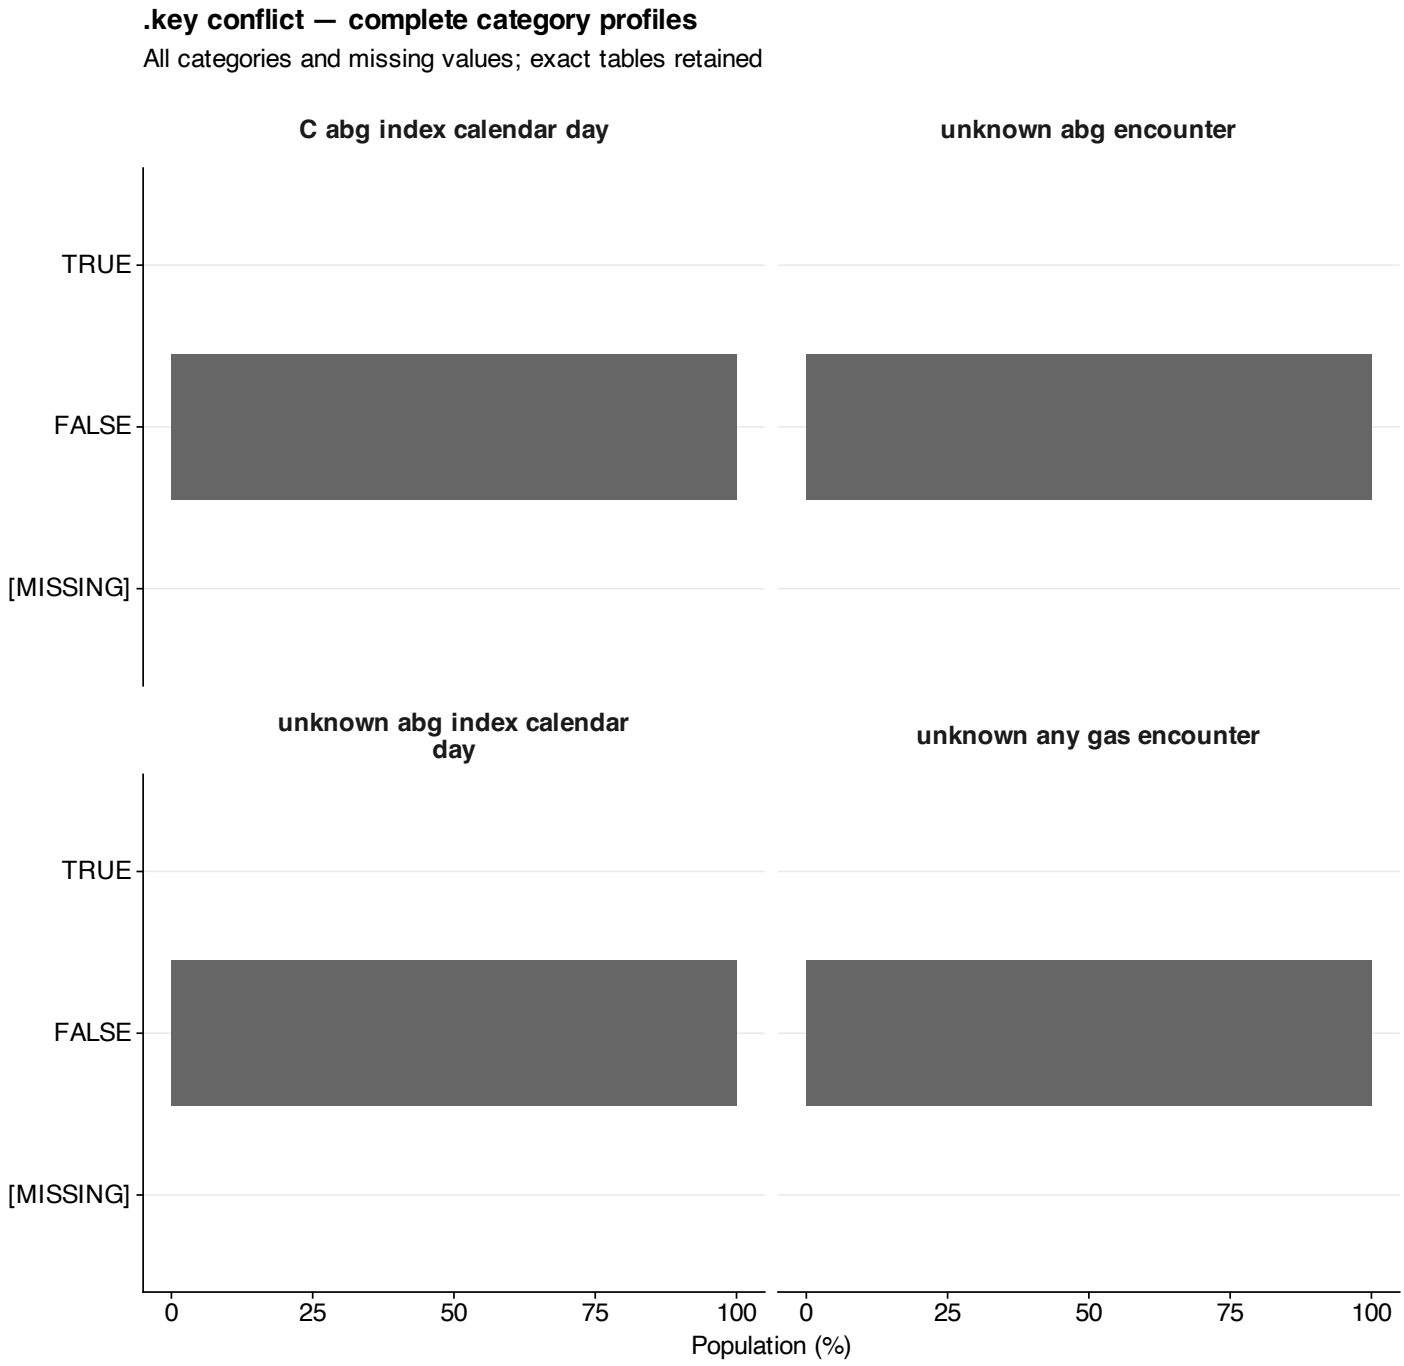

Figure 82: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete .key_conflict stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

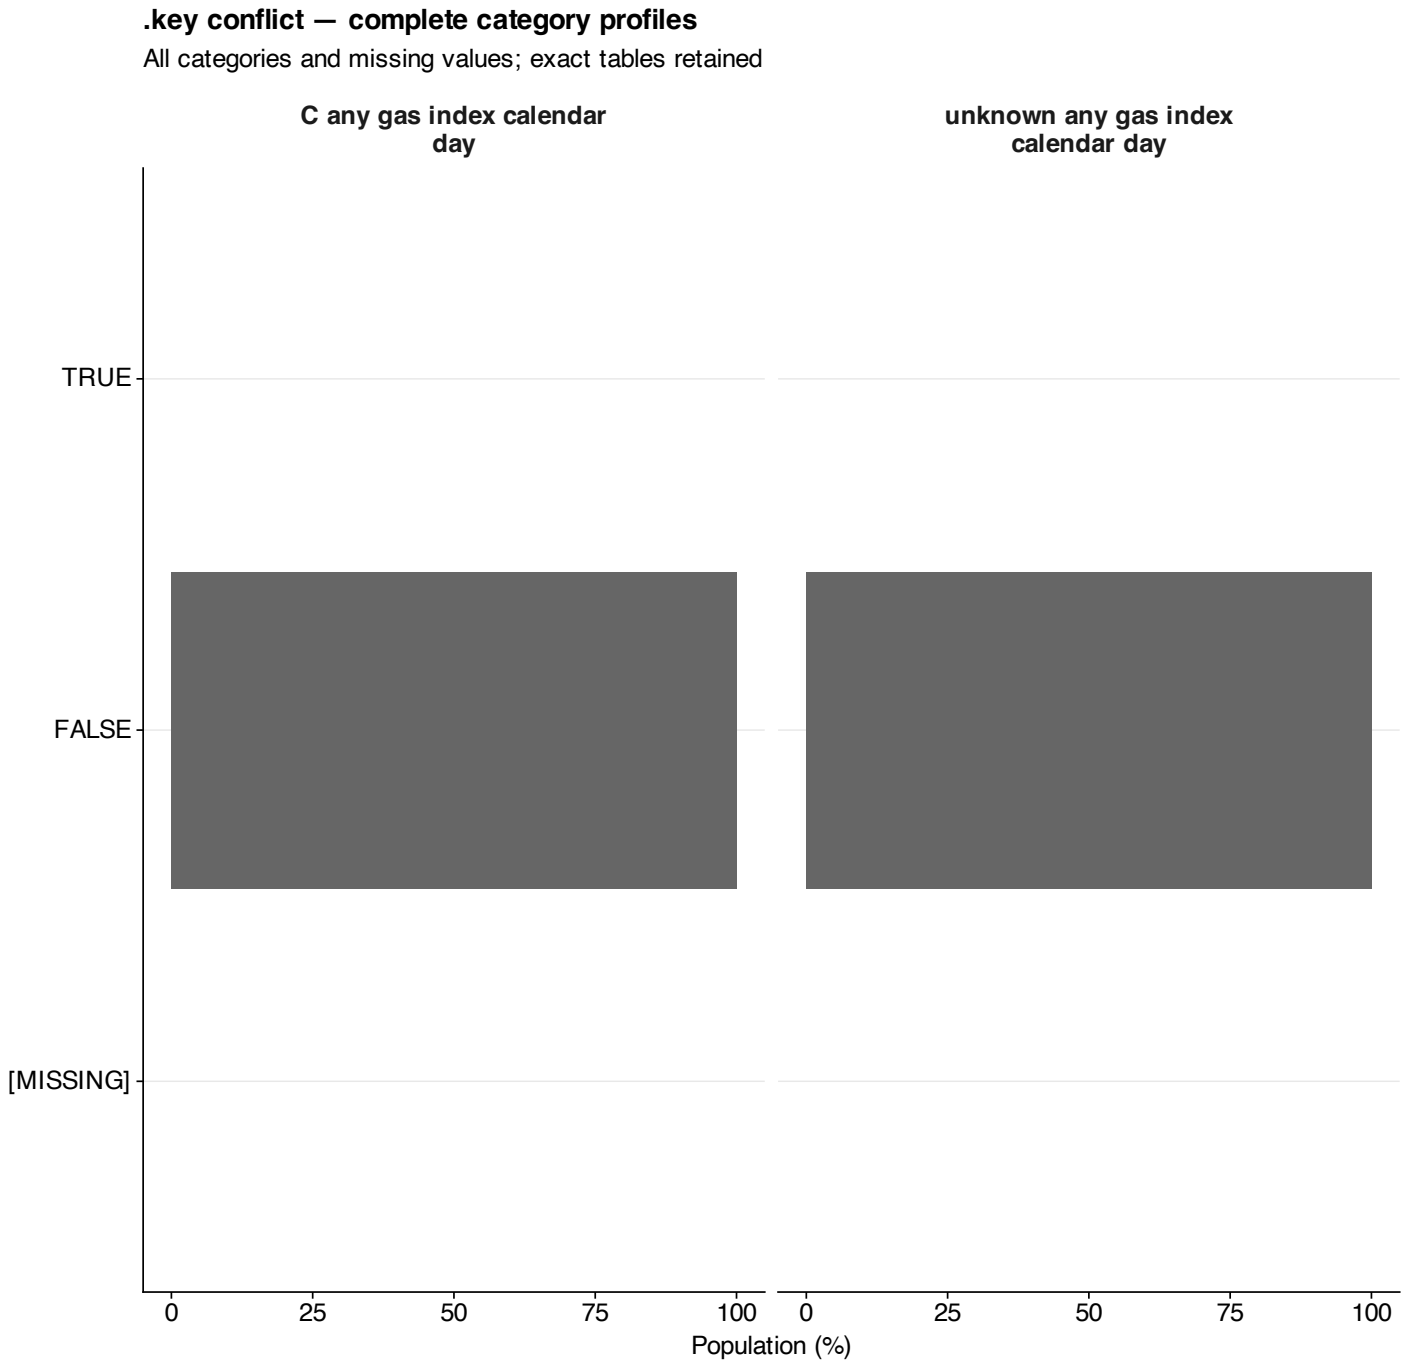

Figure 83: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete .key_conflict stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

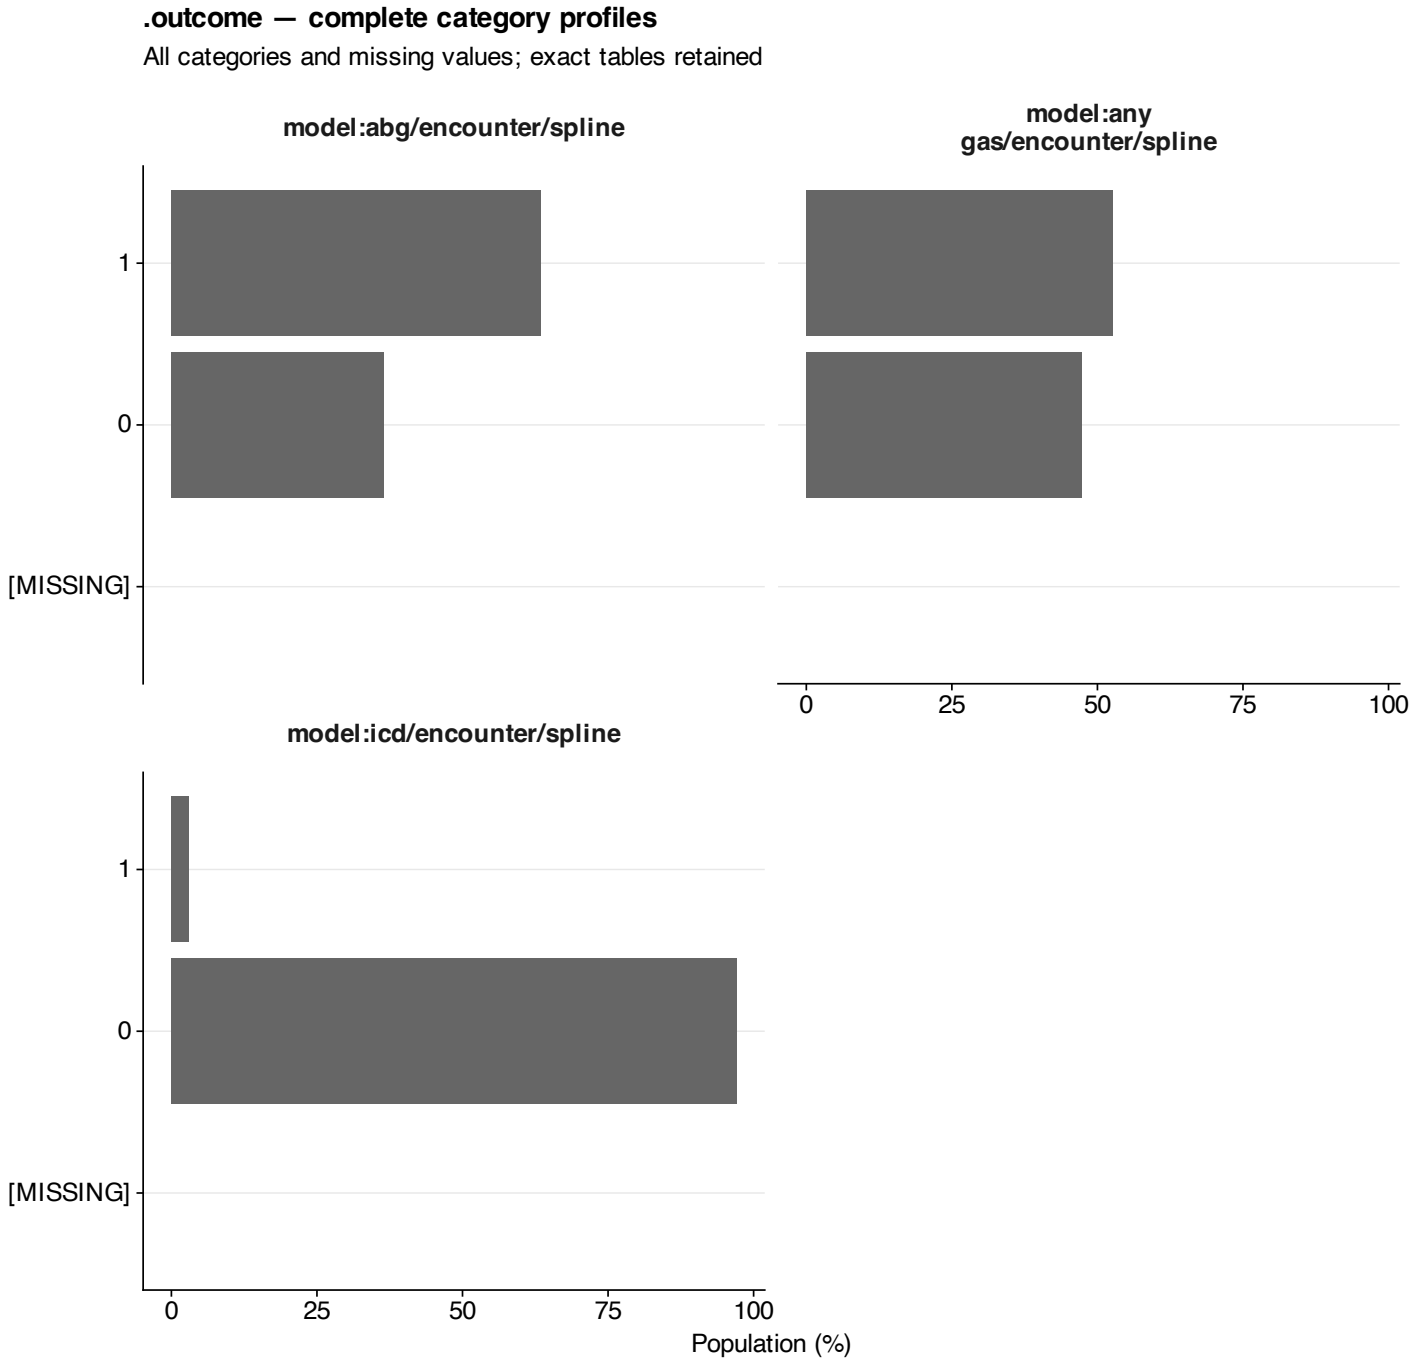

Figure 84: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete .outcome stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

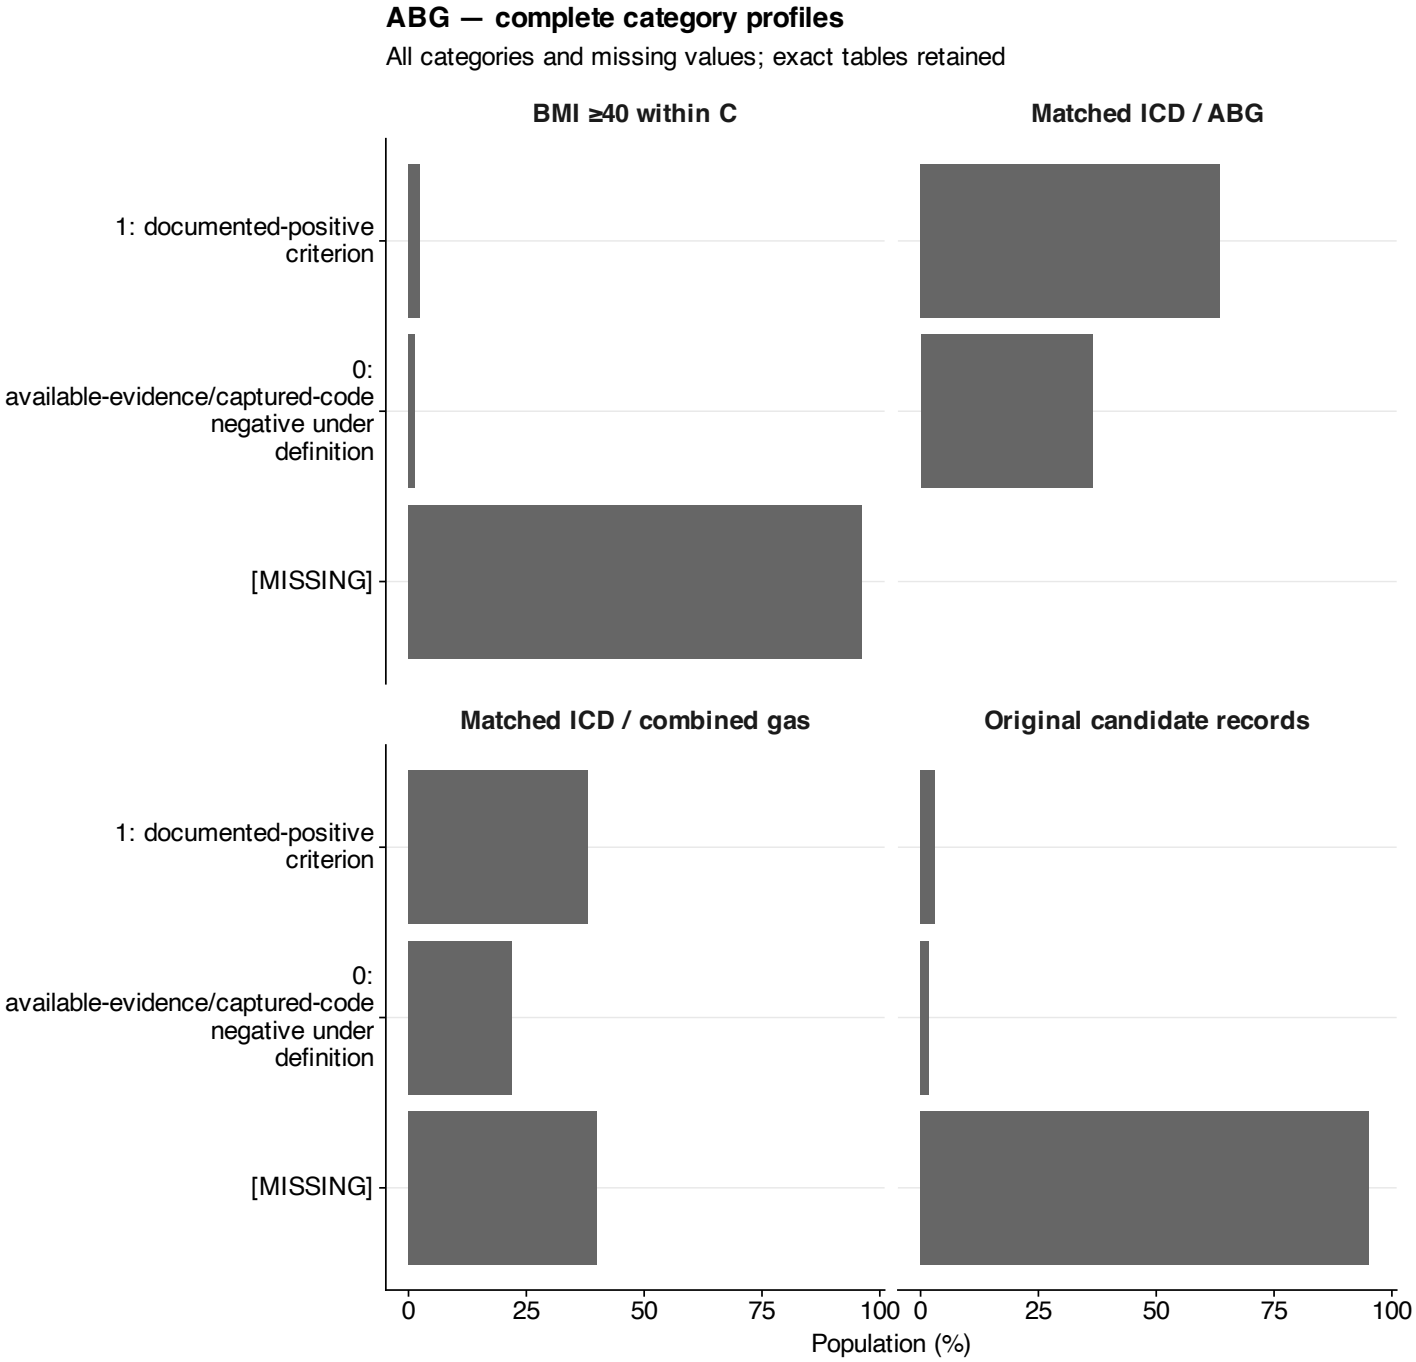

Figure 85: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete abg stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

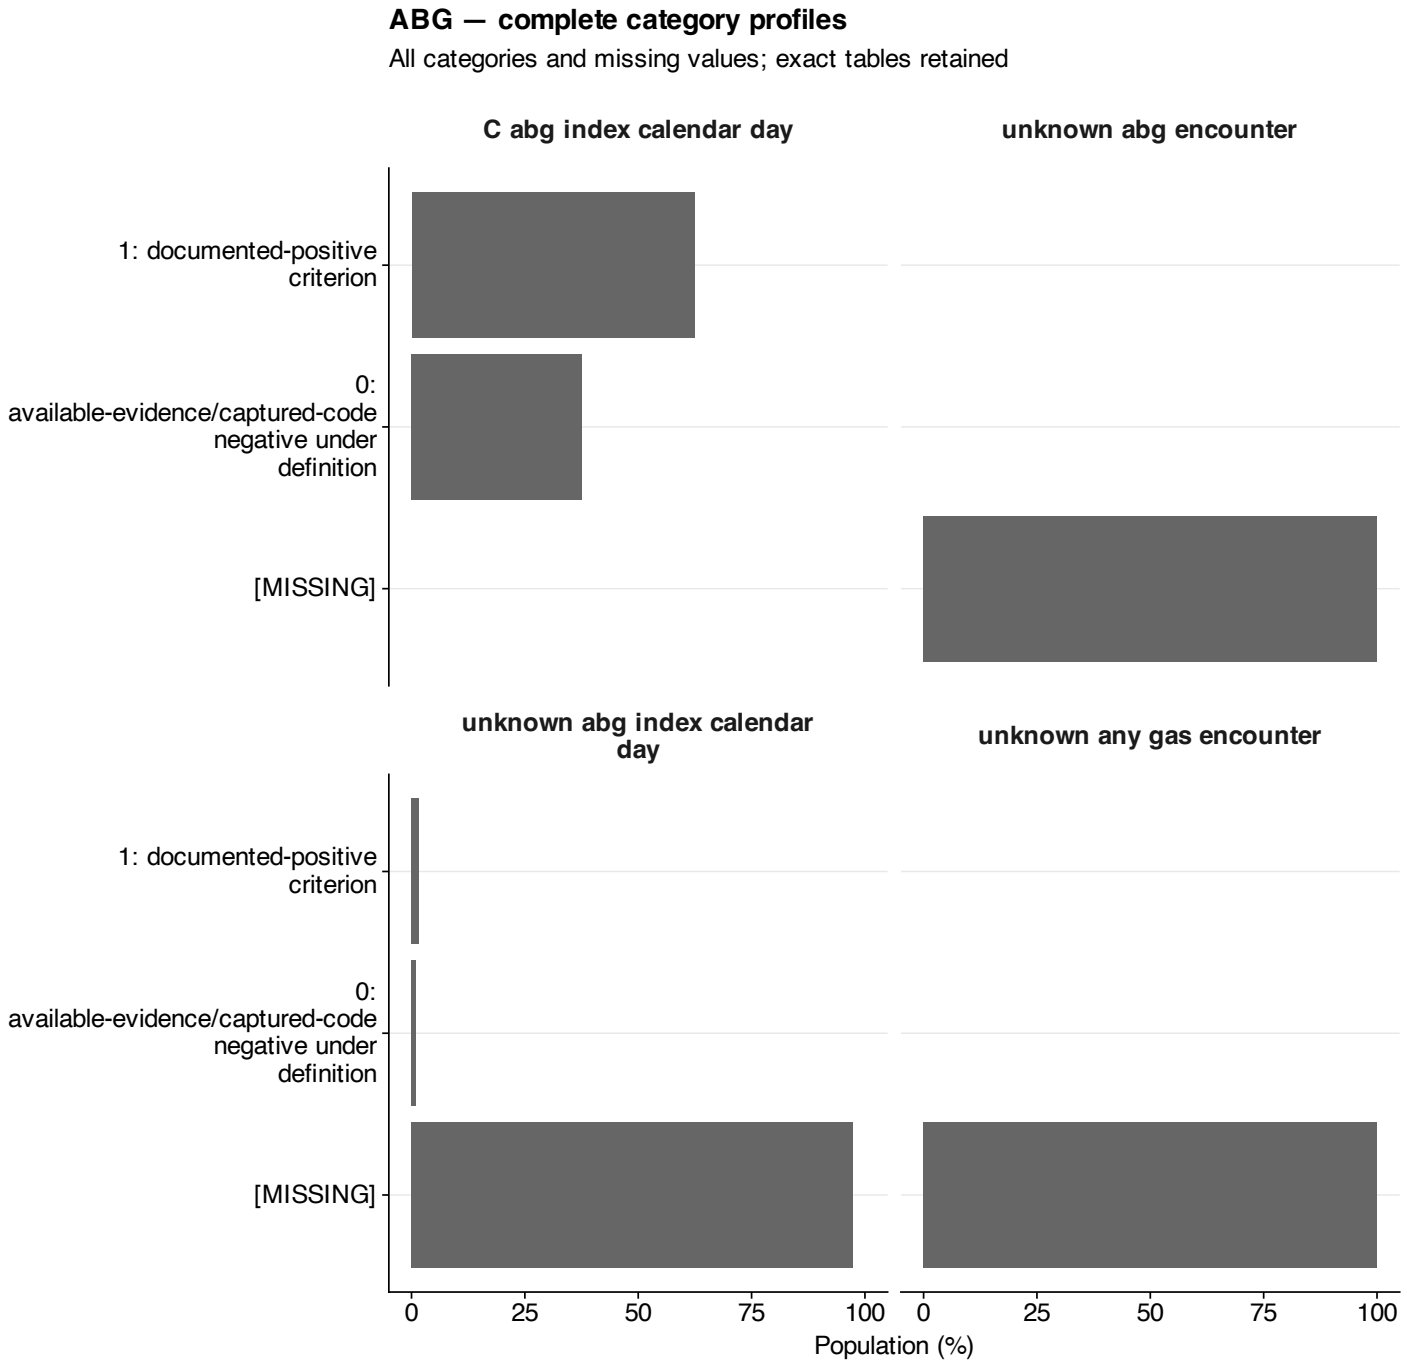

Figure 86: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete abg stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

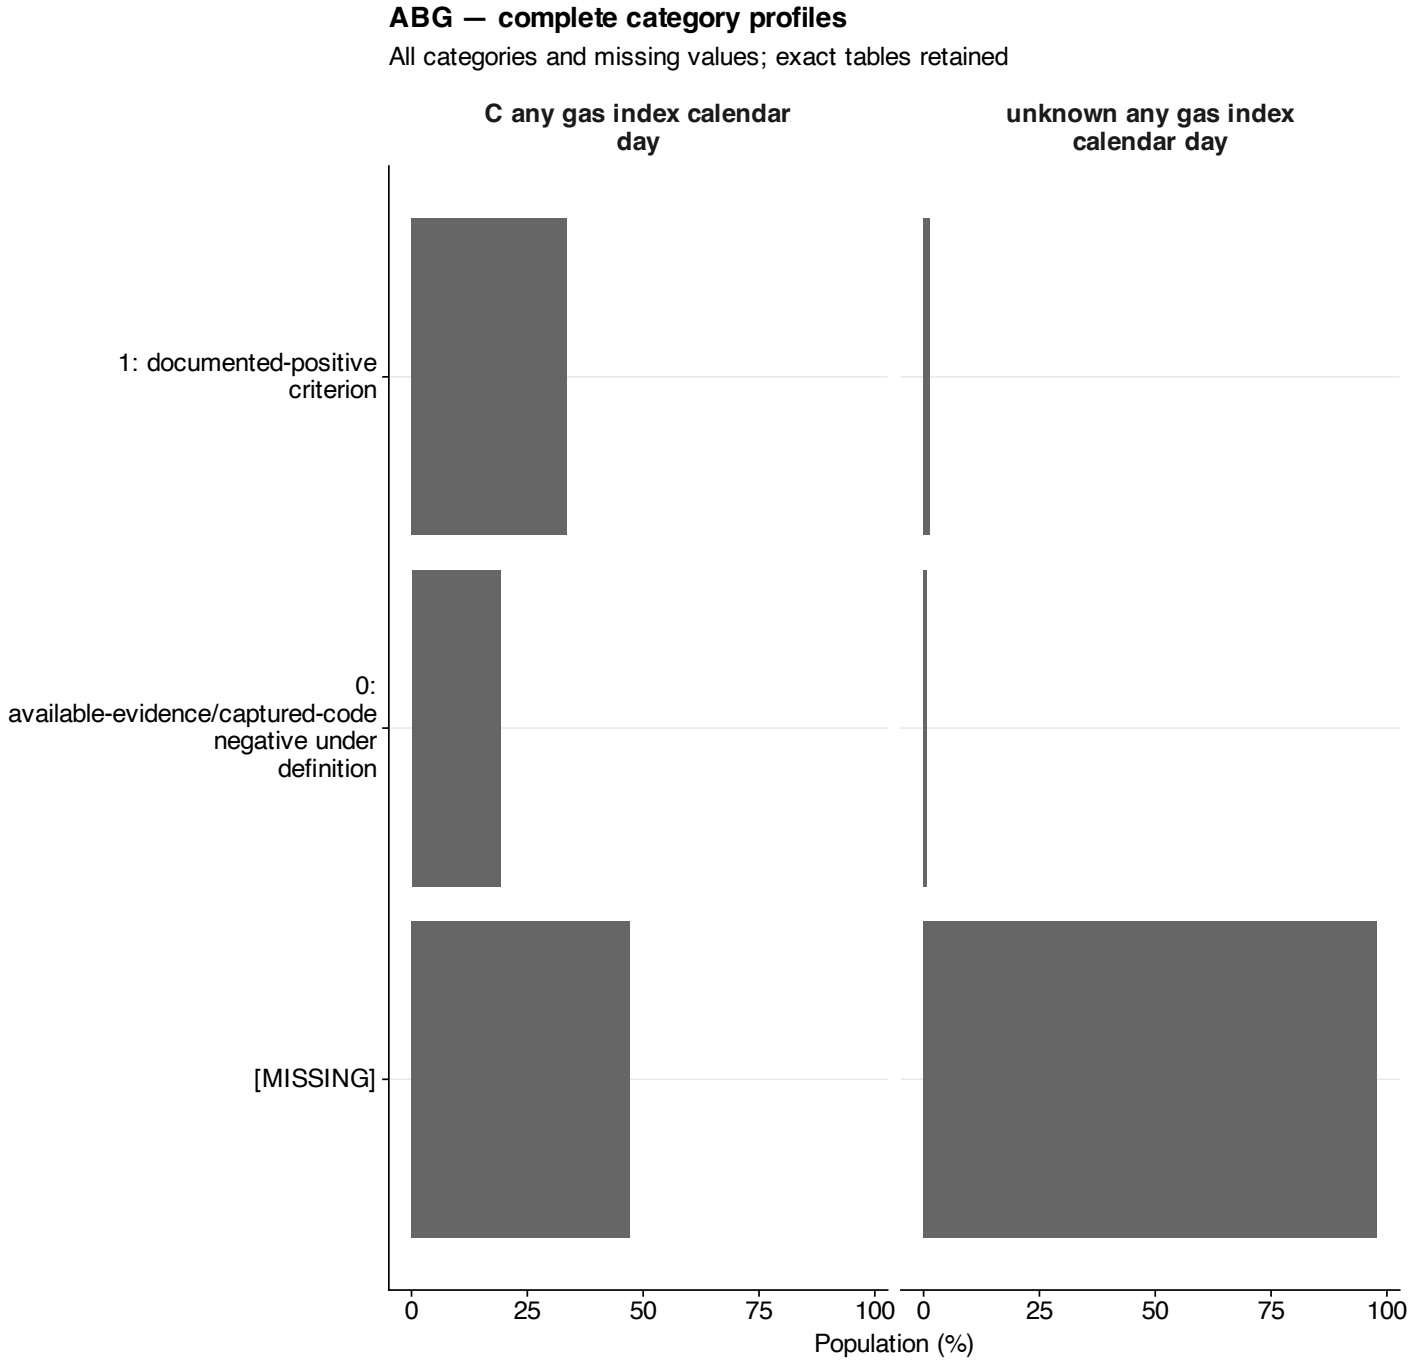

Figure 87: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete abg stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

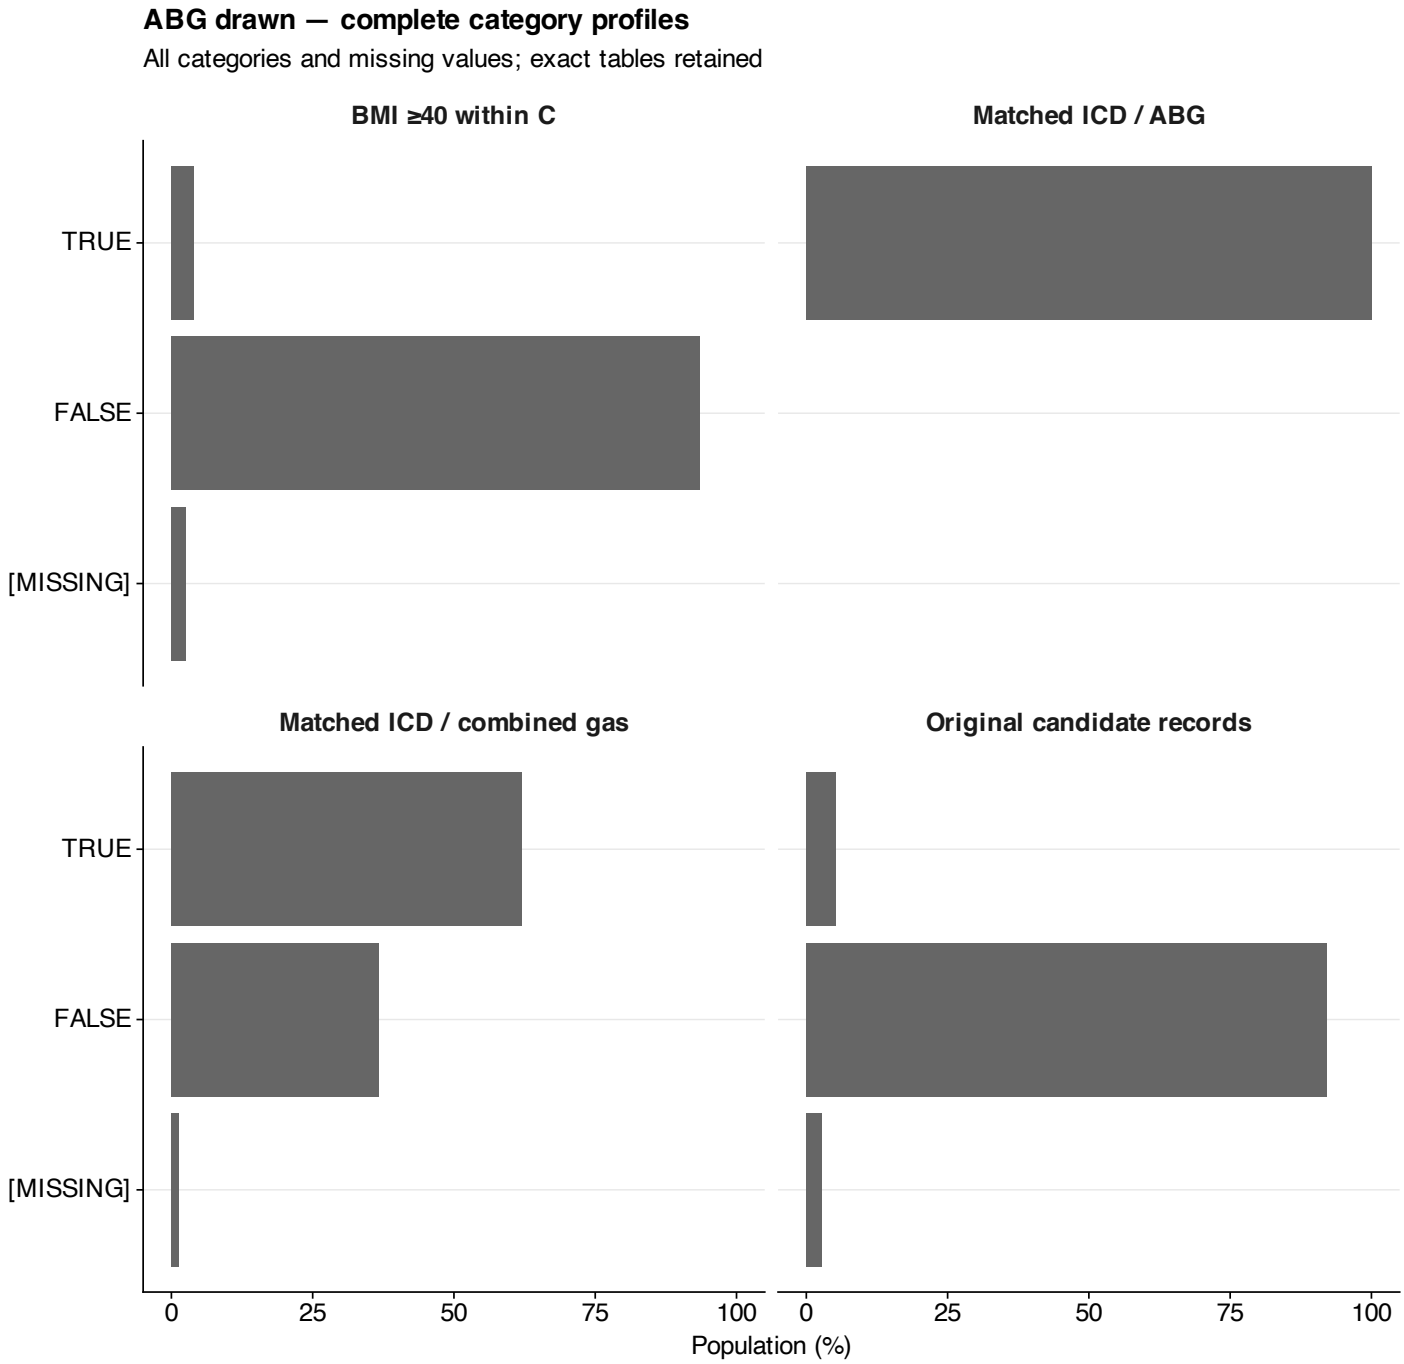

Figure 88: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete abg_drawn stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

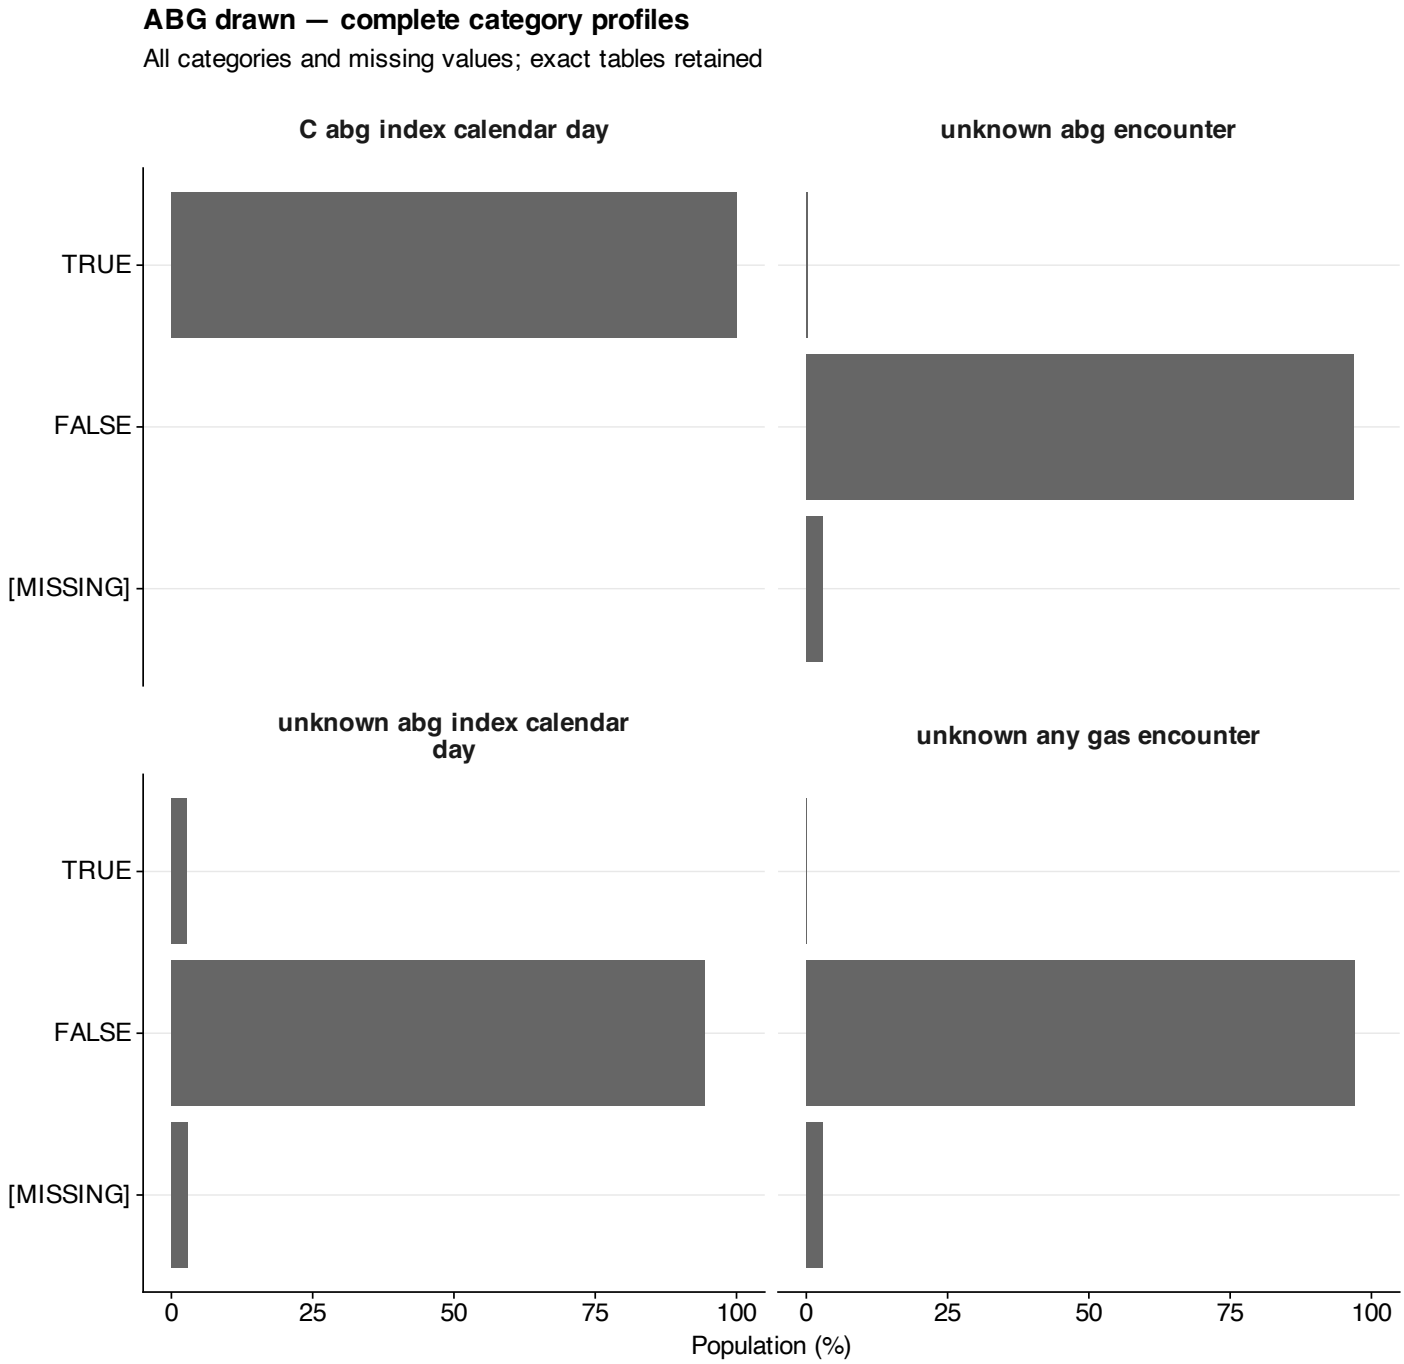

Figure 89: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete abg_drawn stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

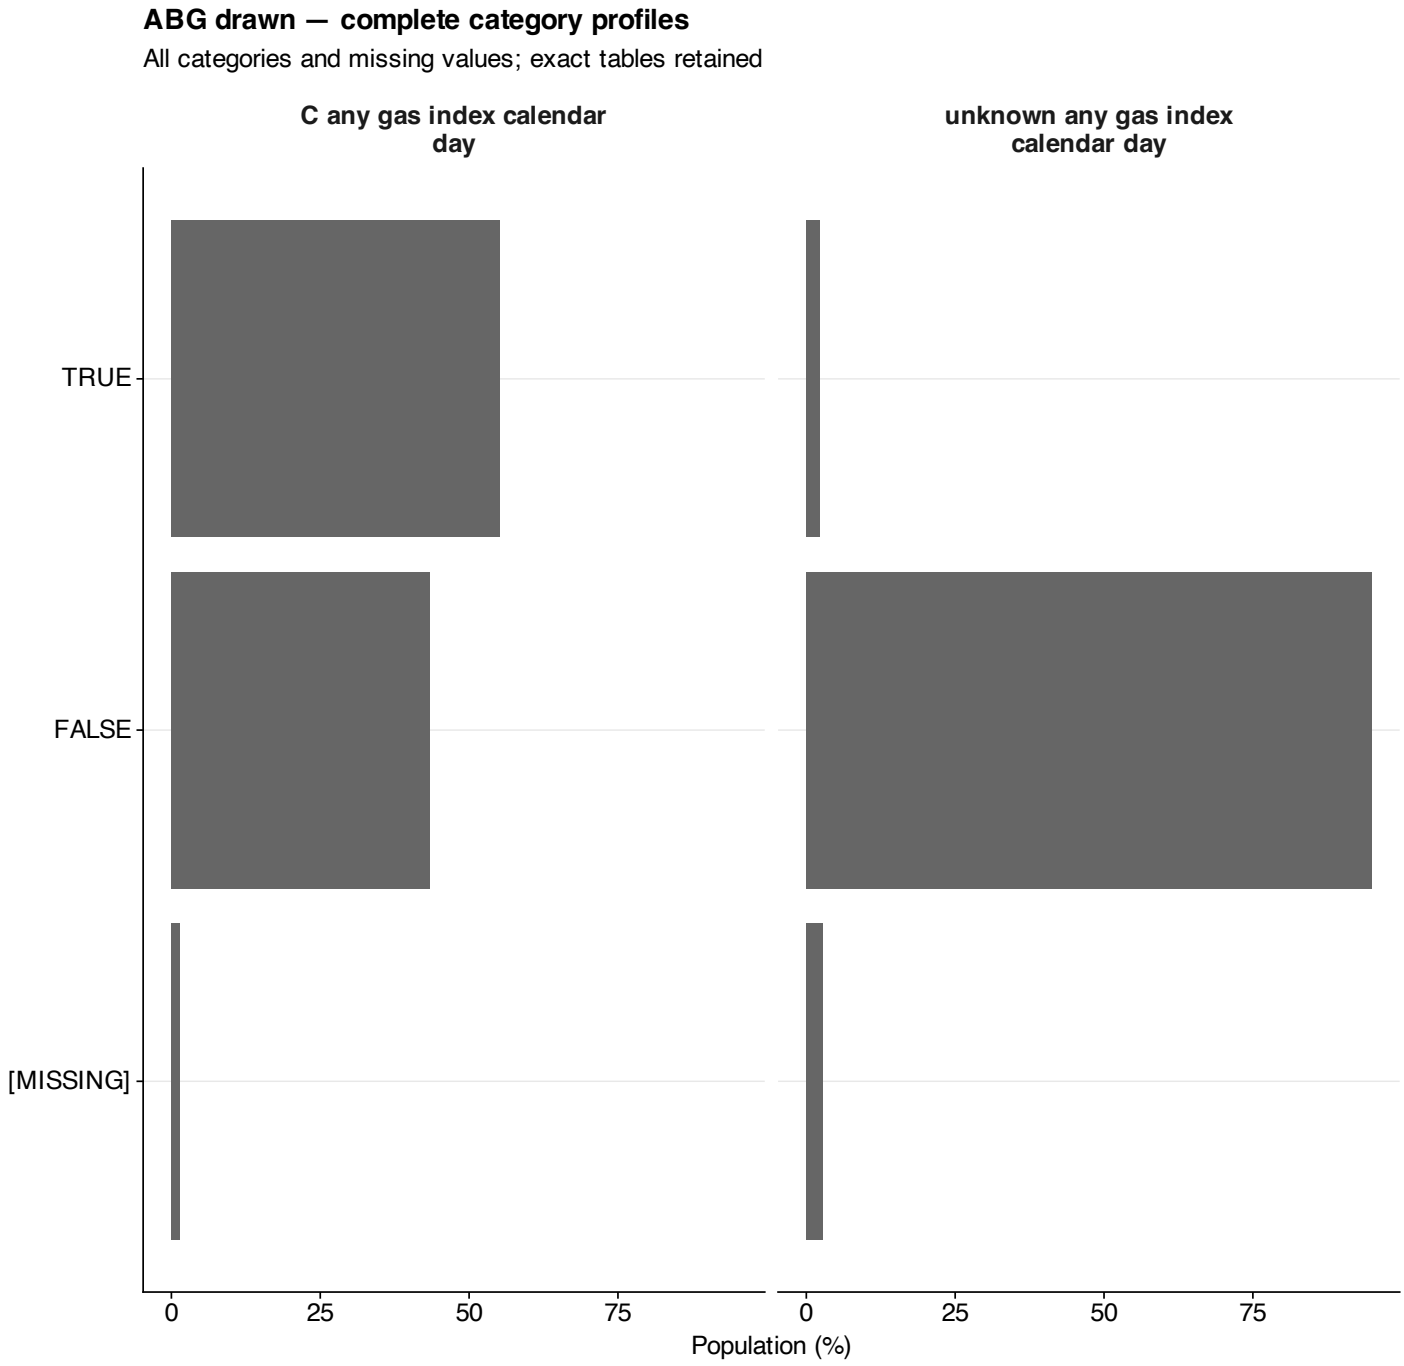

Figure 90: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete abg_drawn stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

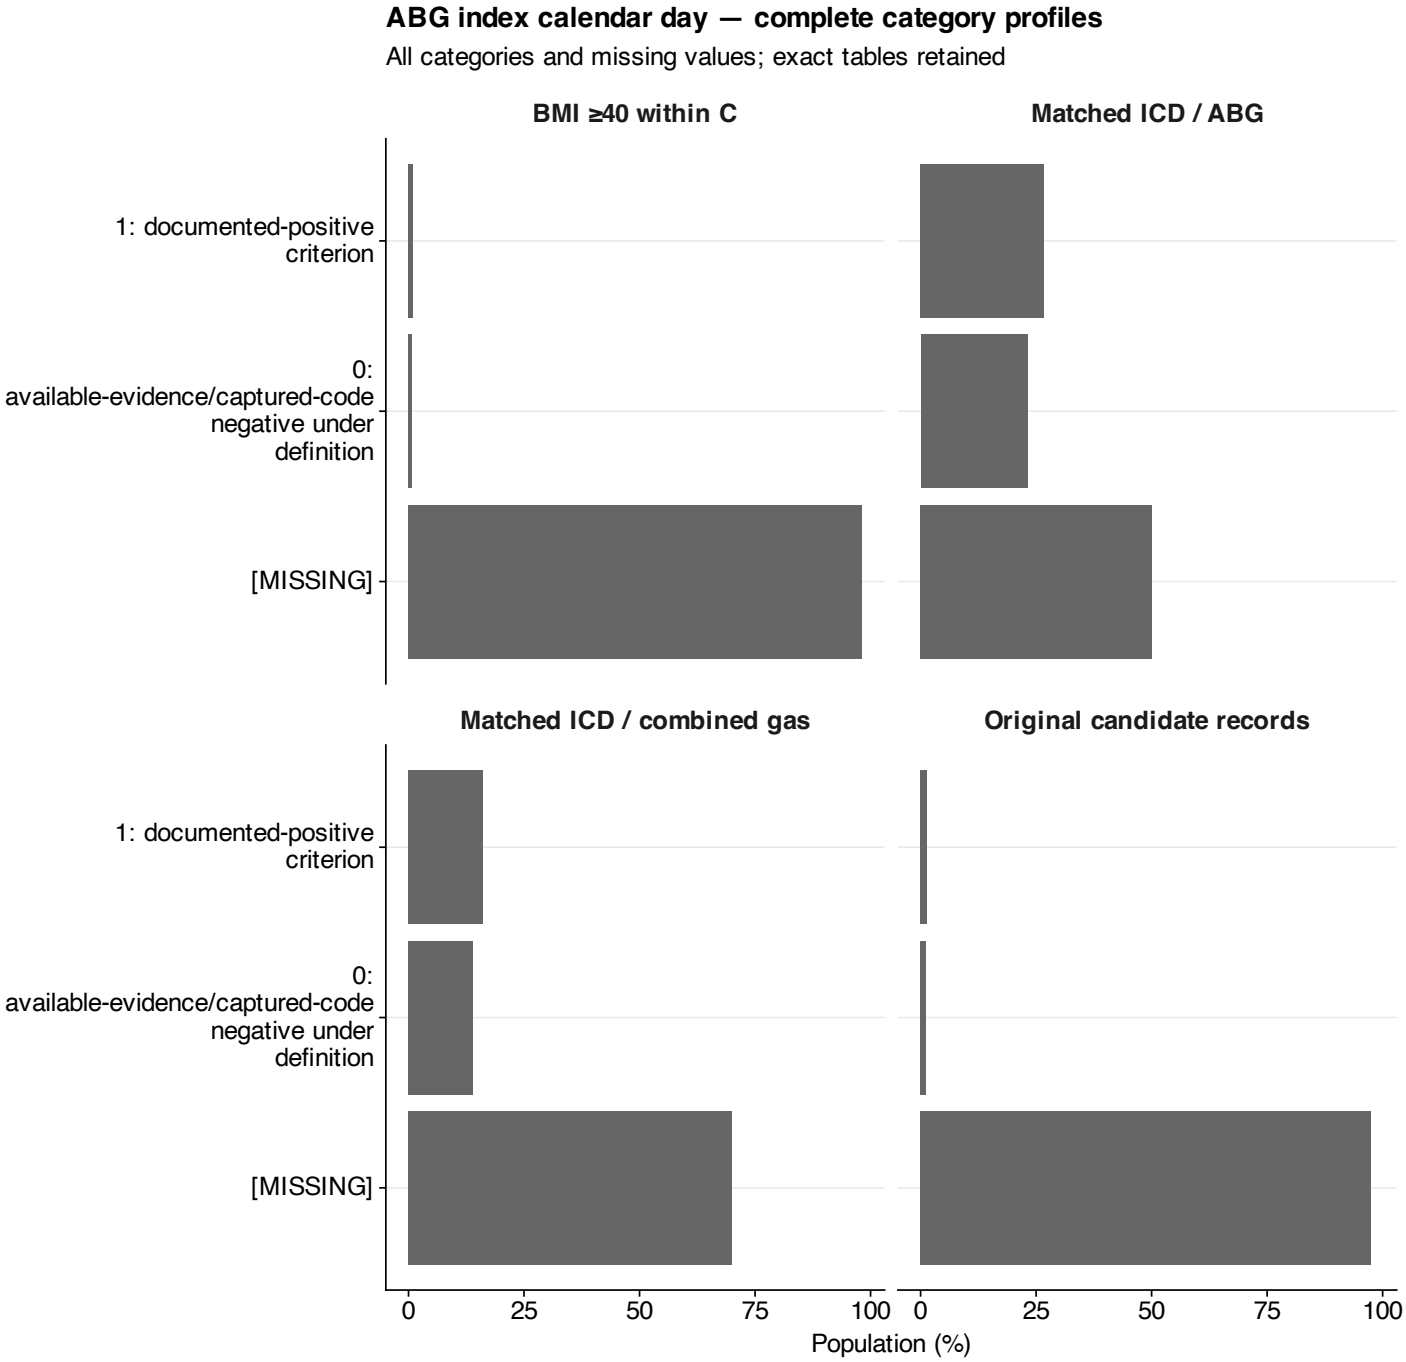

Figure 91: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete abg_index_calendar_day stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

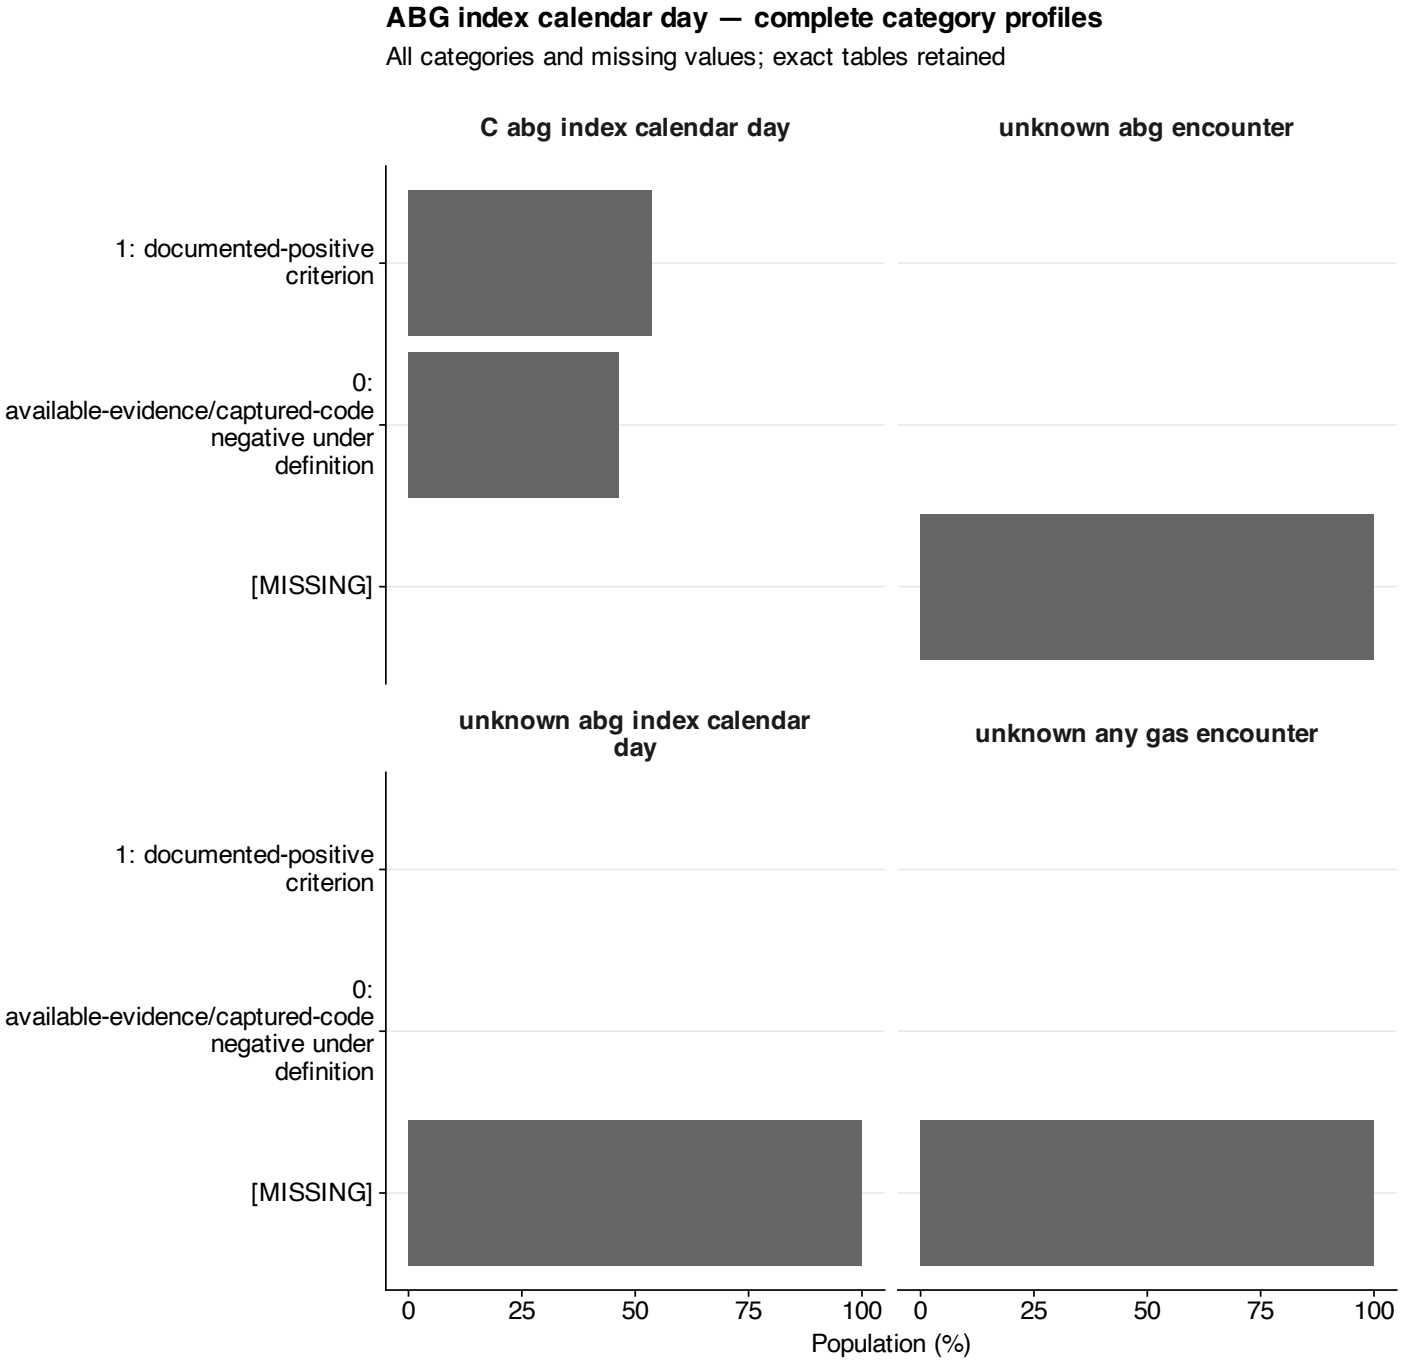

Figure 92: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete abg_index_calendar_day stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

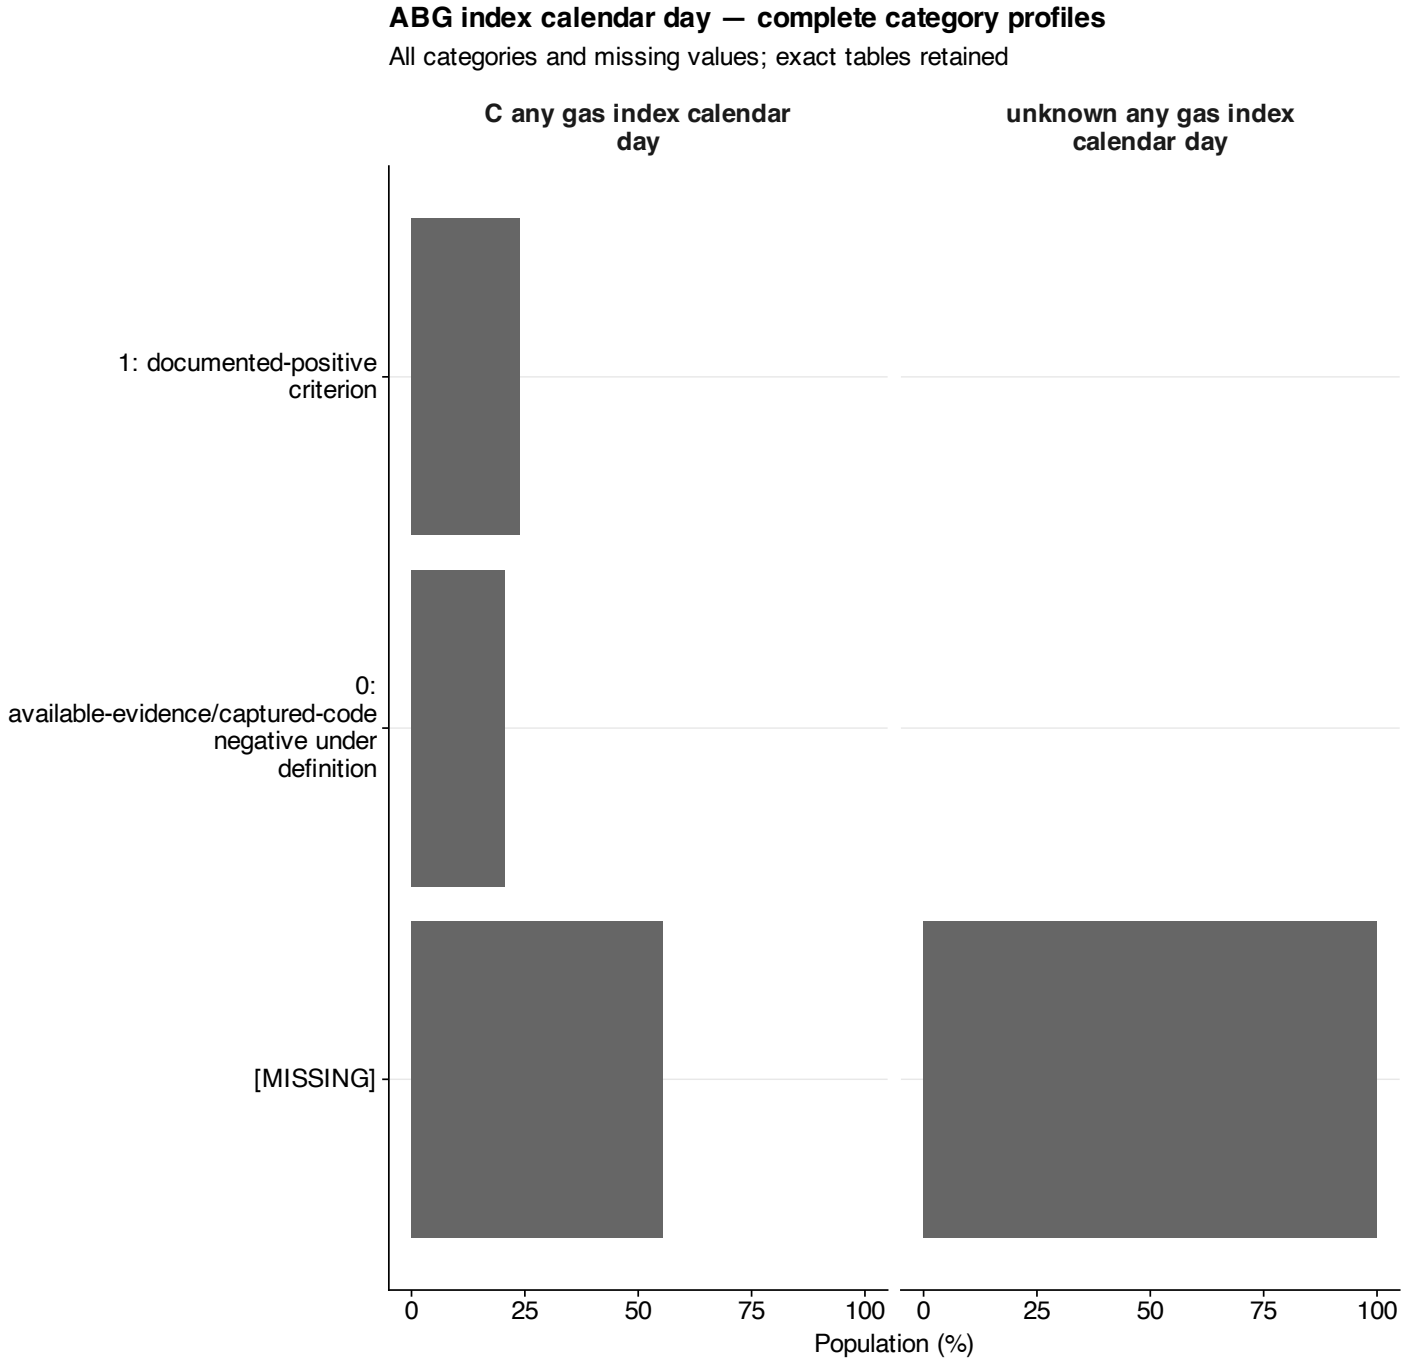

Figure 93: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete abg_index_calendar_day stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

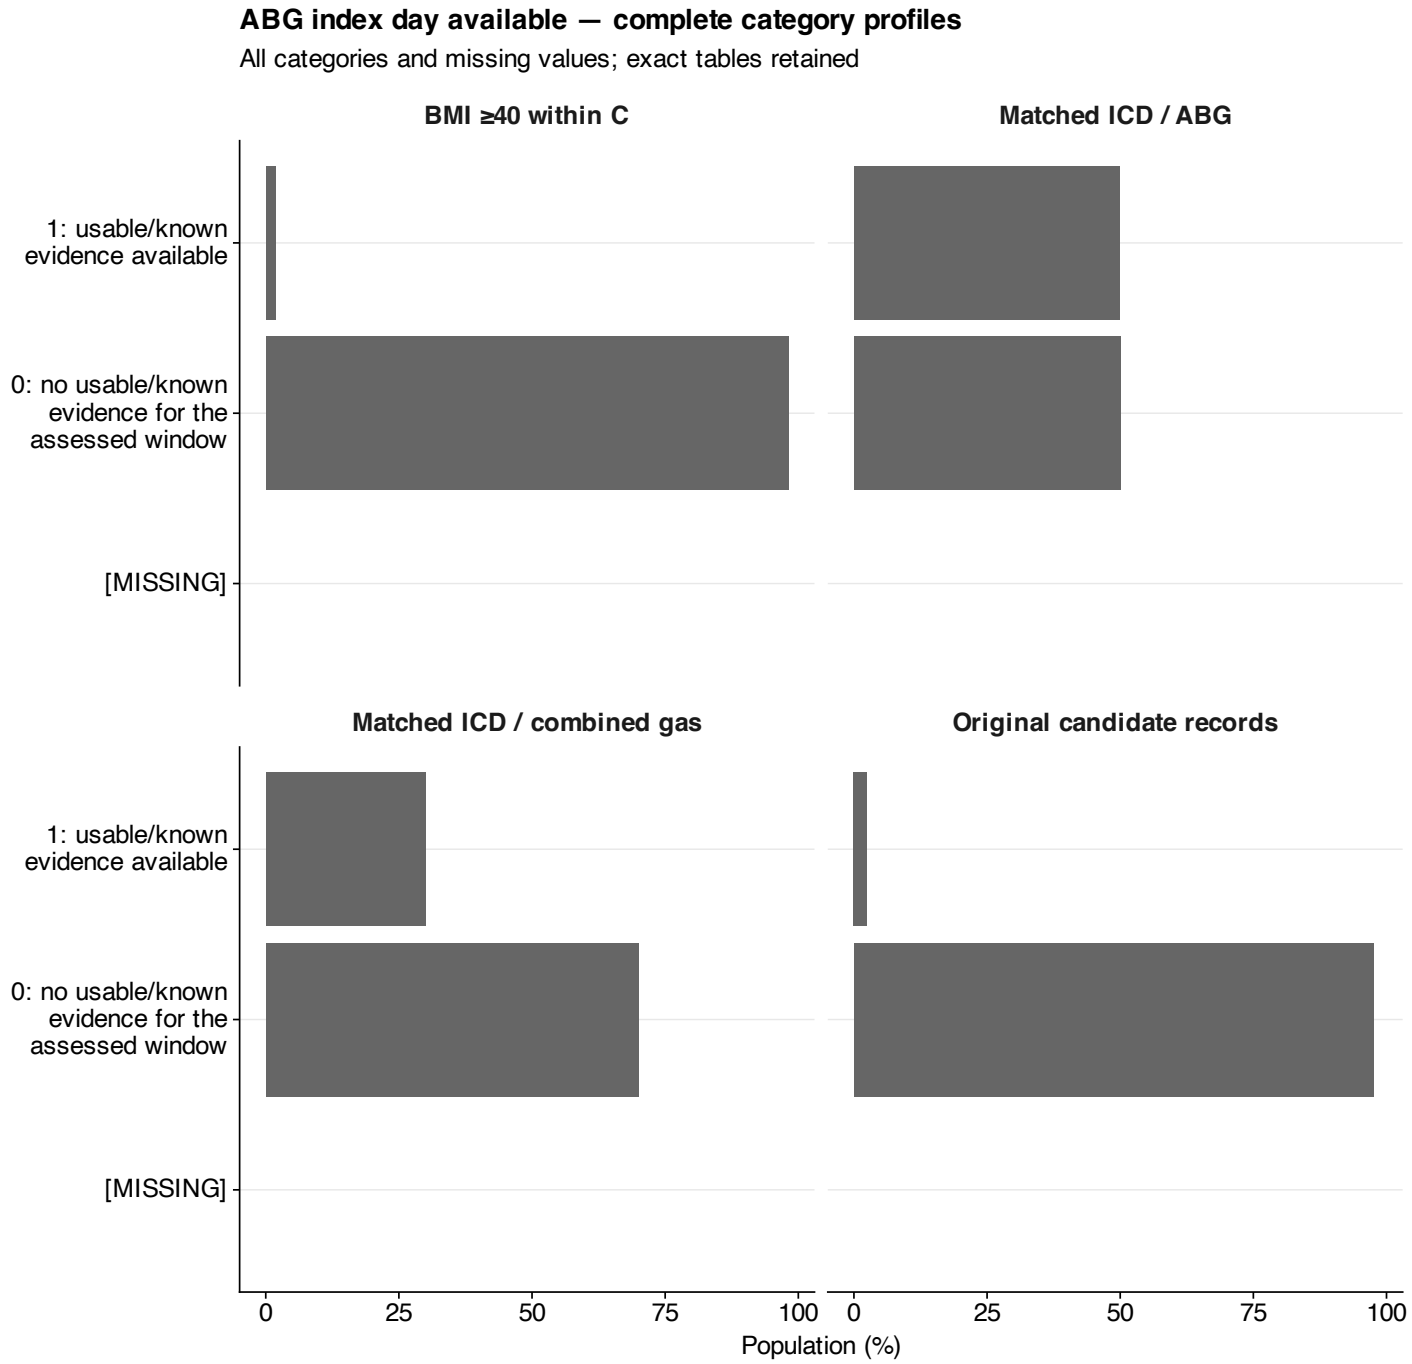

Figure 94: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete abg_index_day_available stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

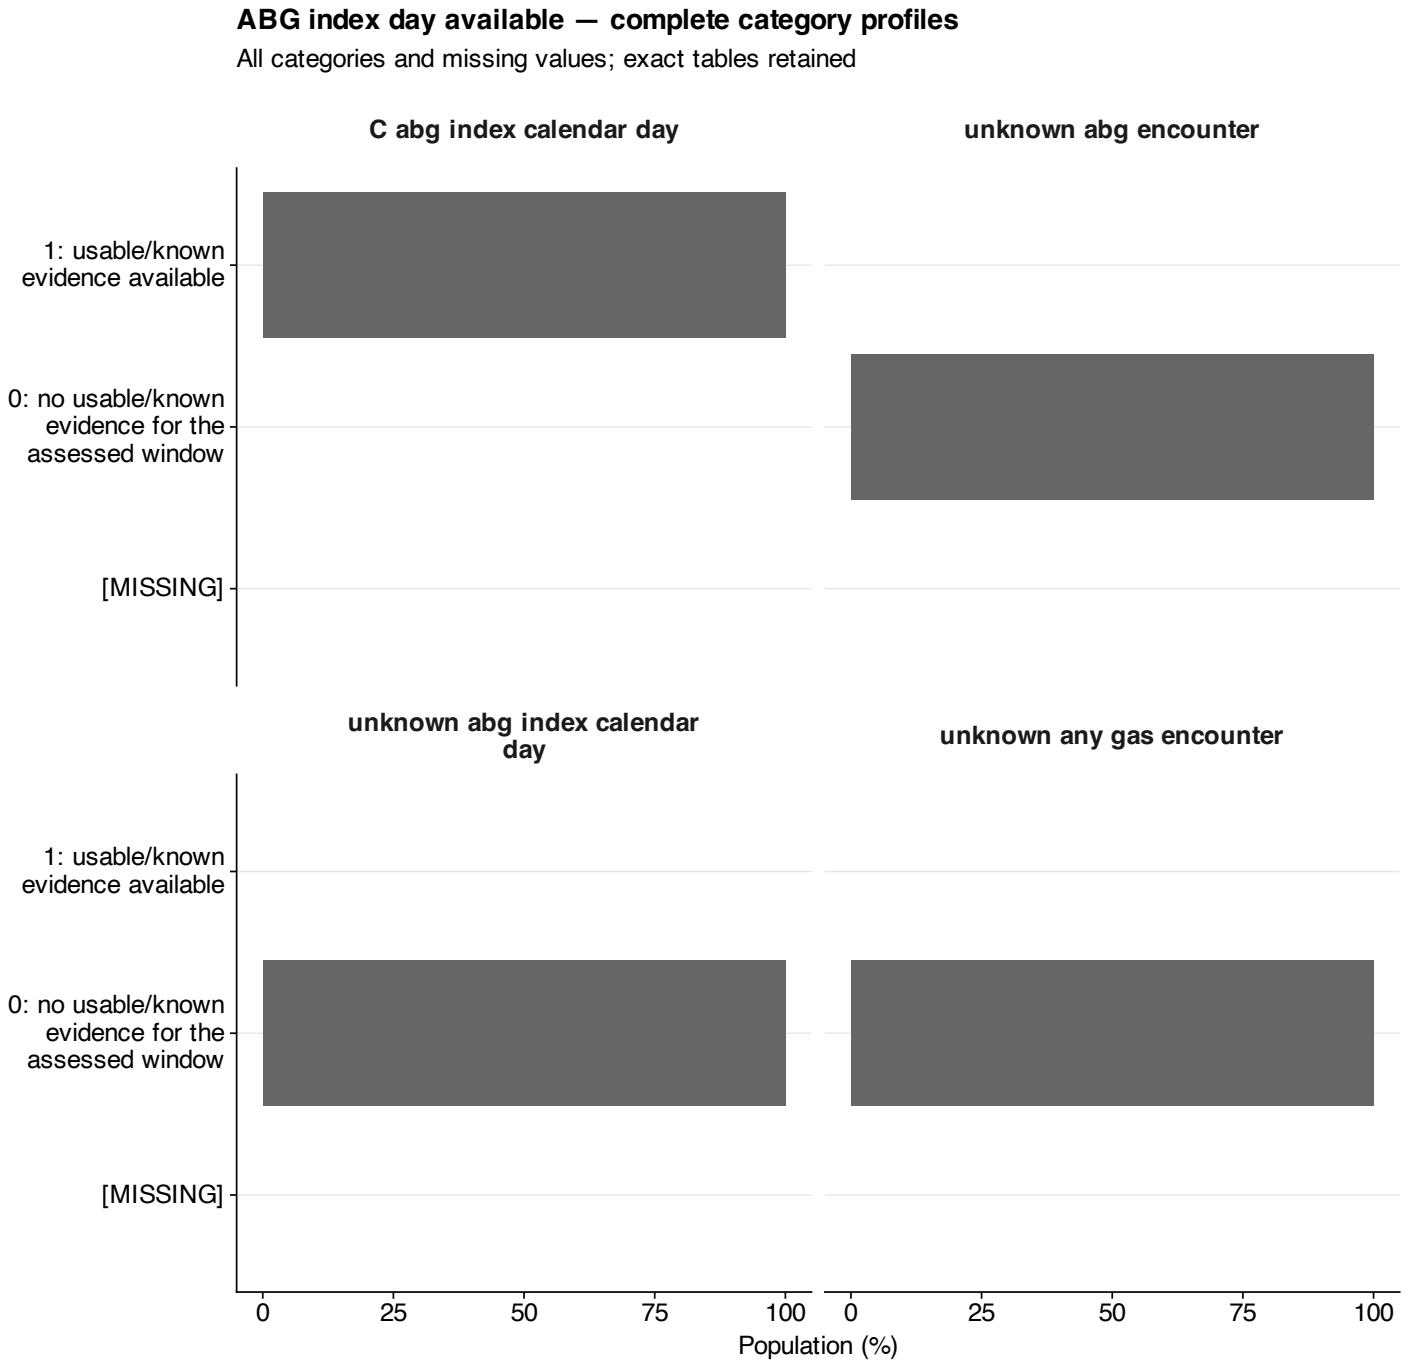

Figure 95: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete abg_index_day_available stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

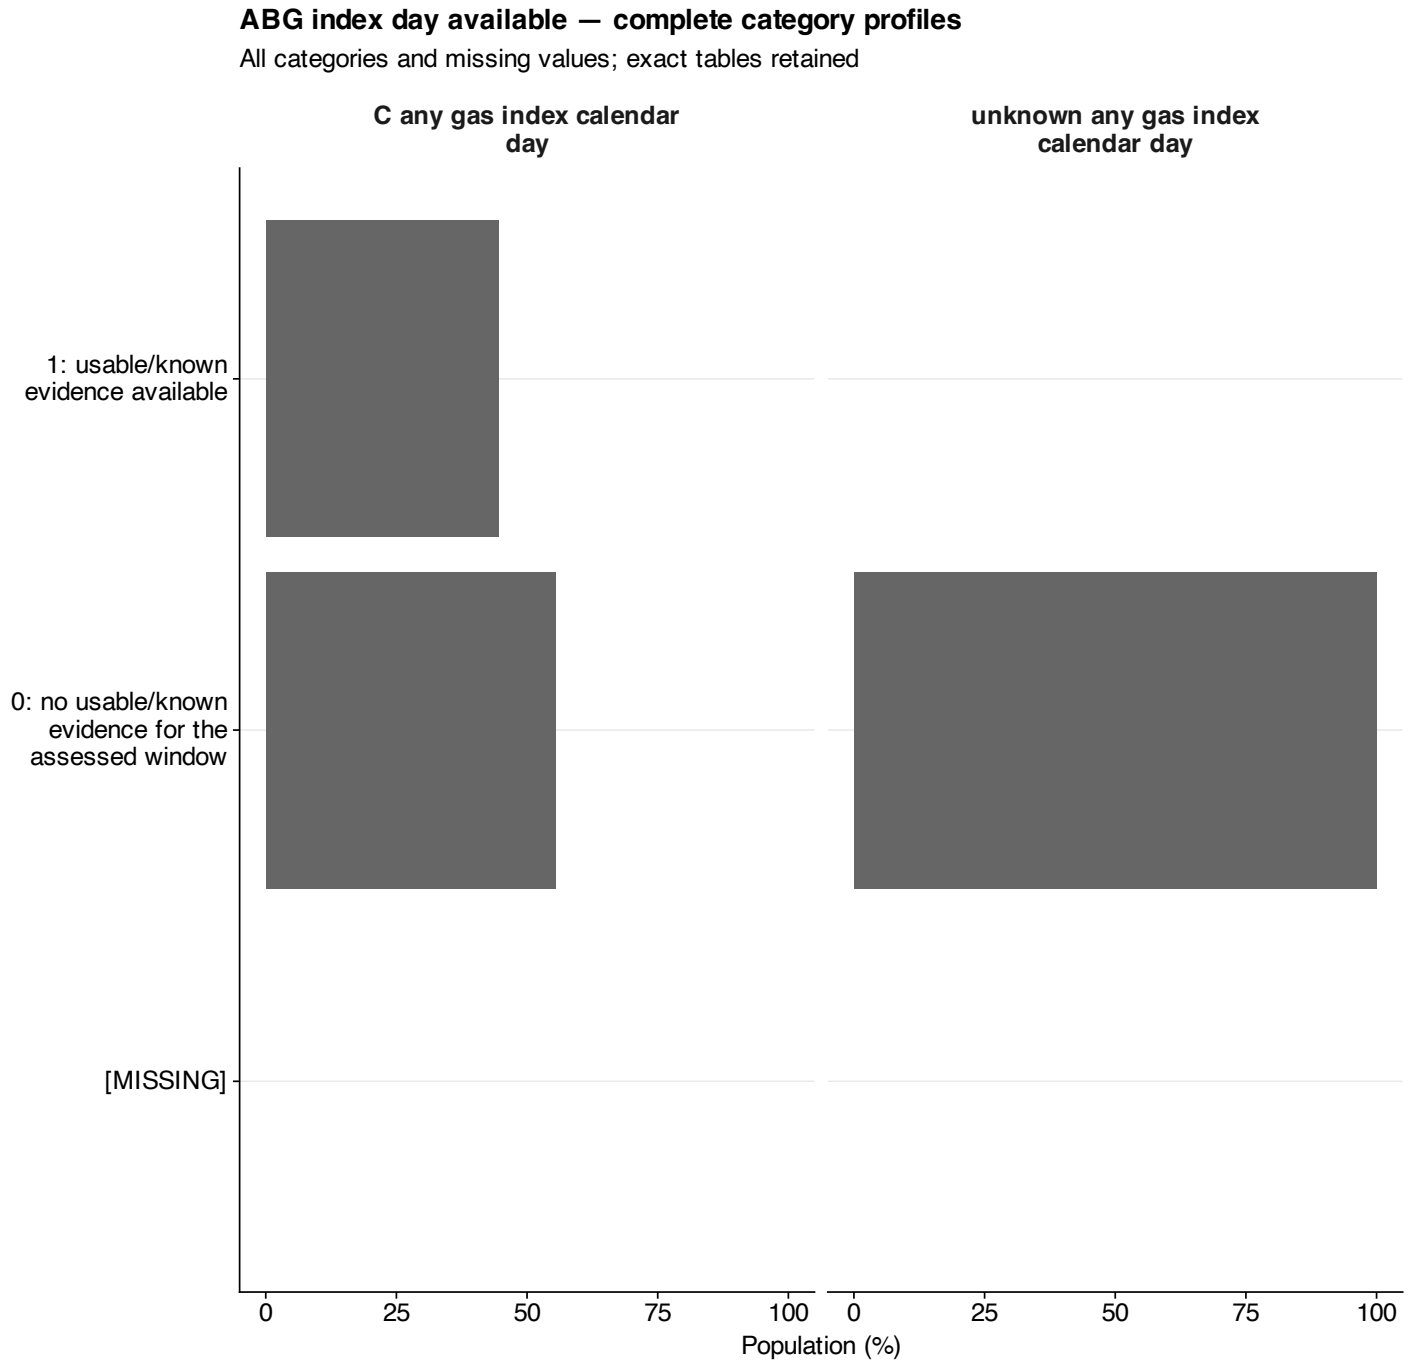

Figure 96: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete abg_index_day_available stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

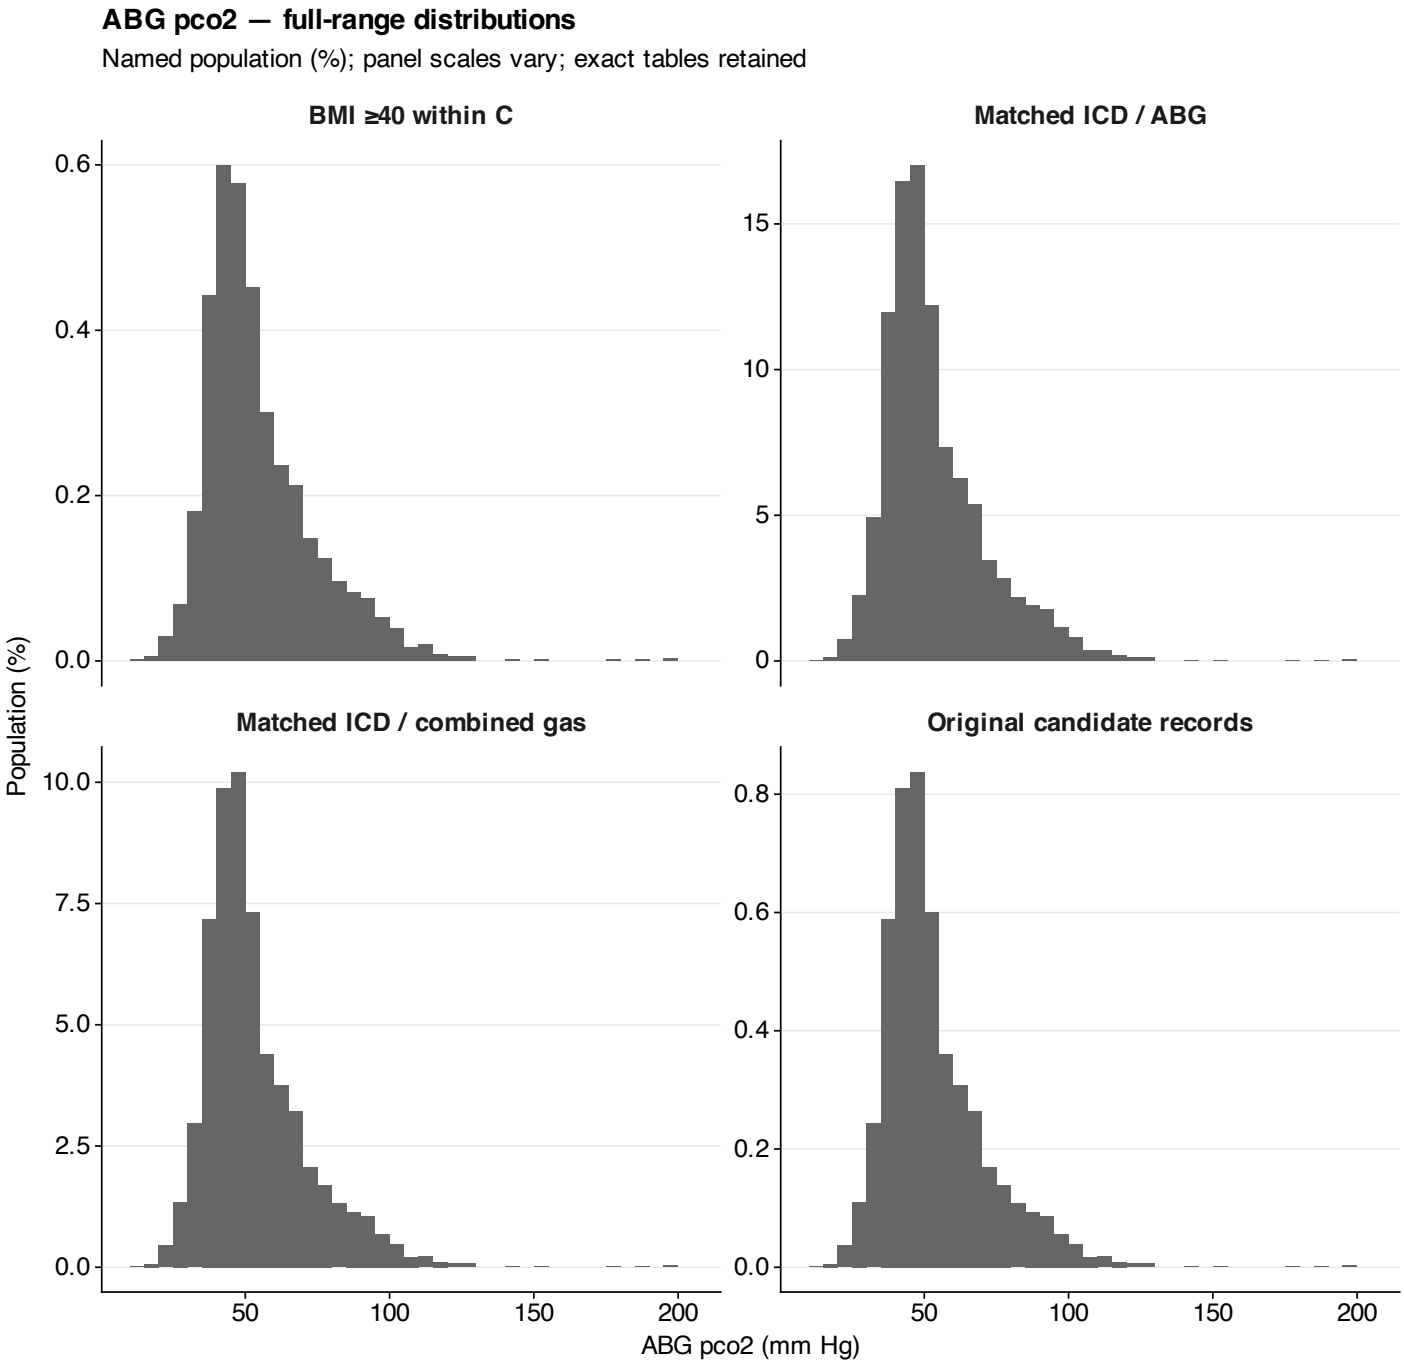

Figure 97: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete abg_pco2 stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

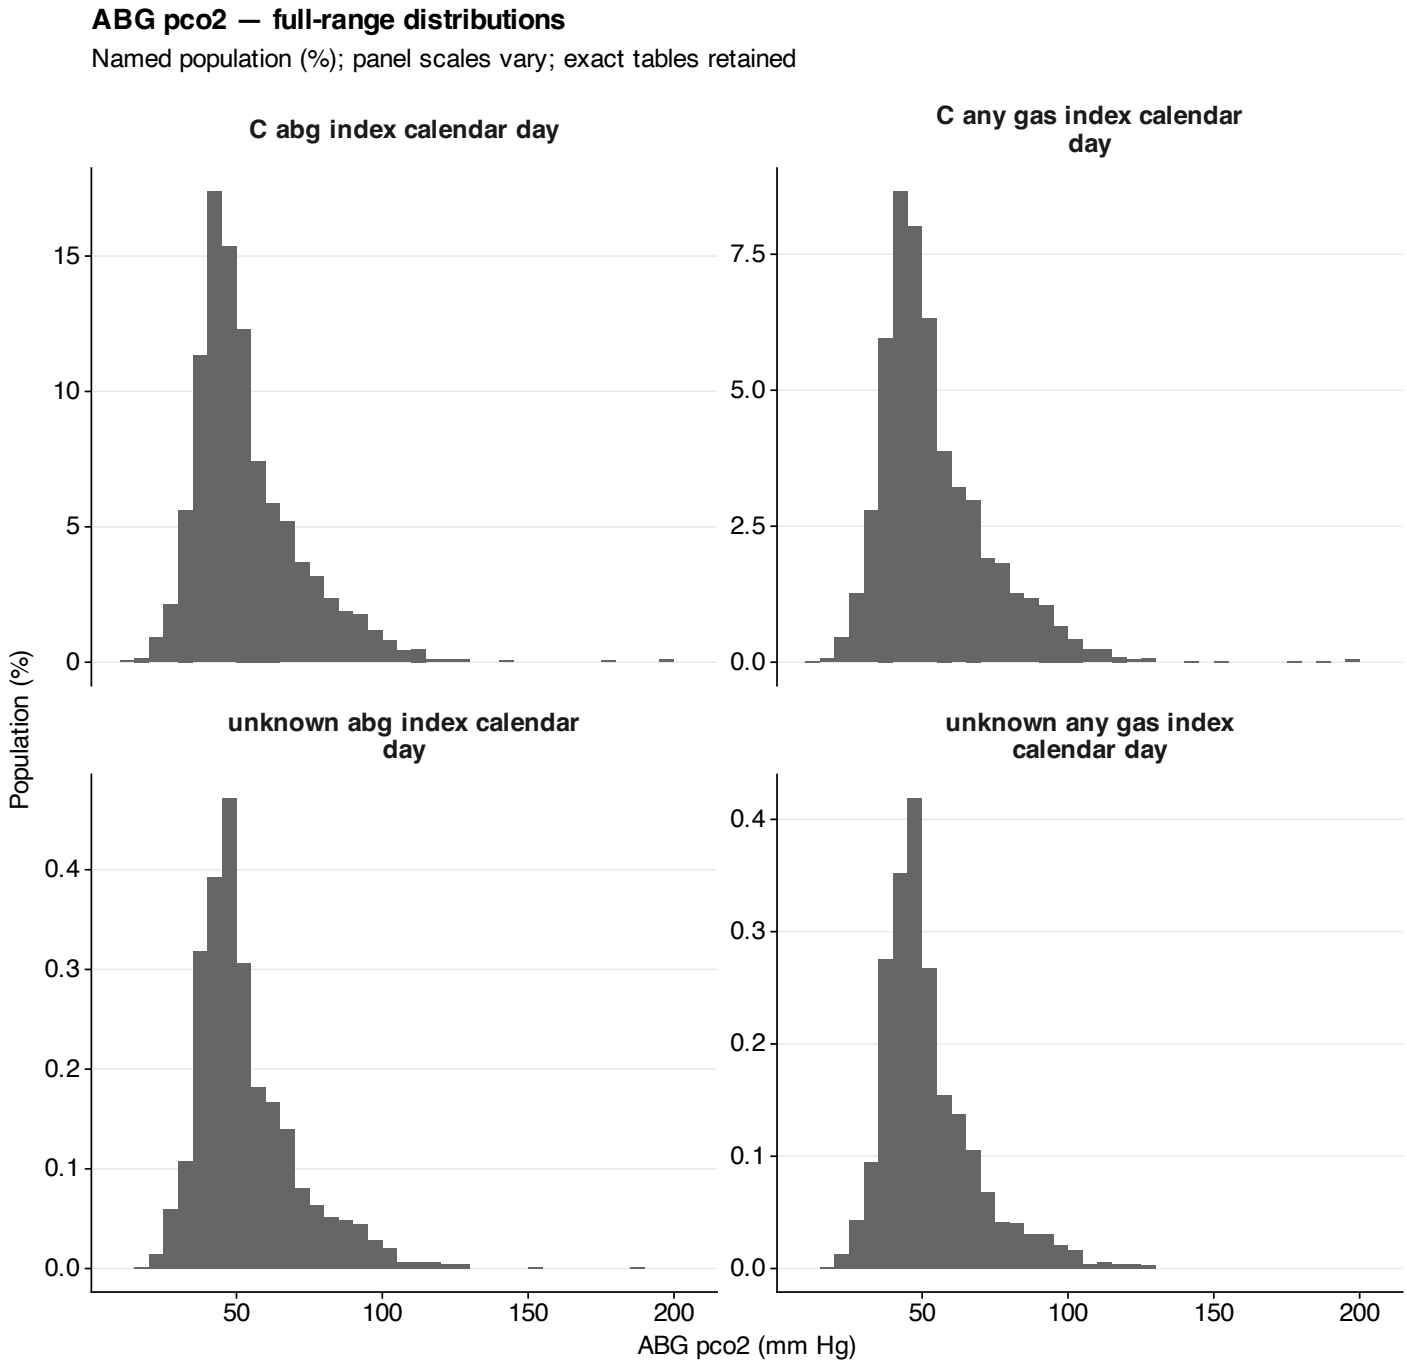

Figure 98: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete abg_pco2 stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

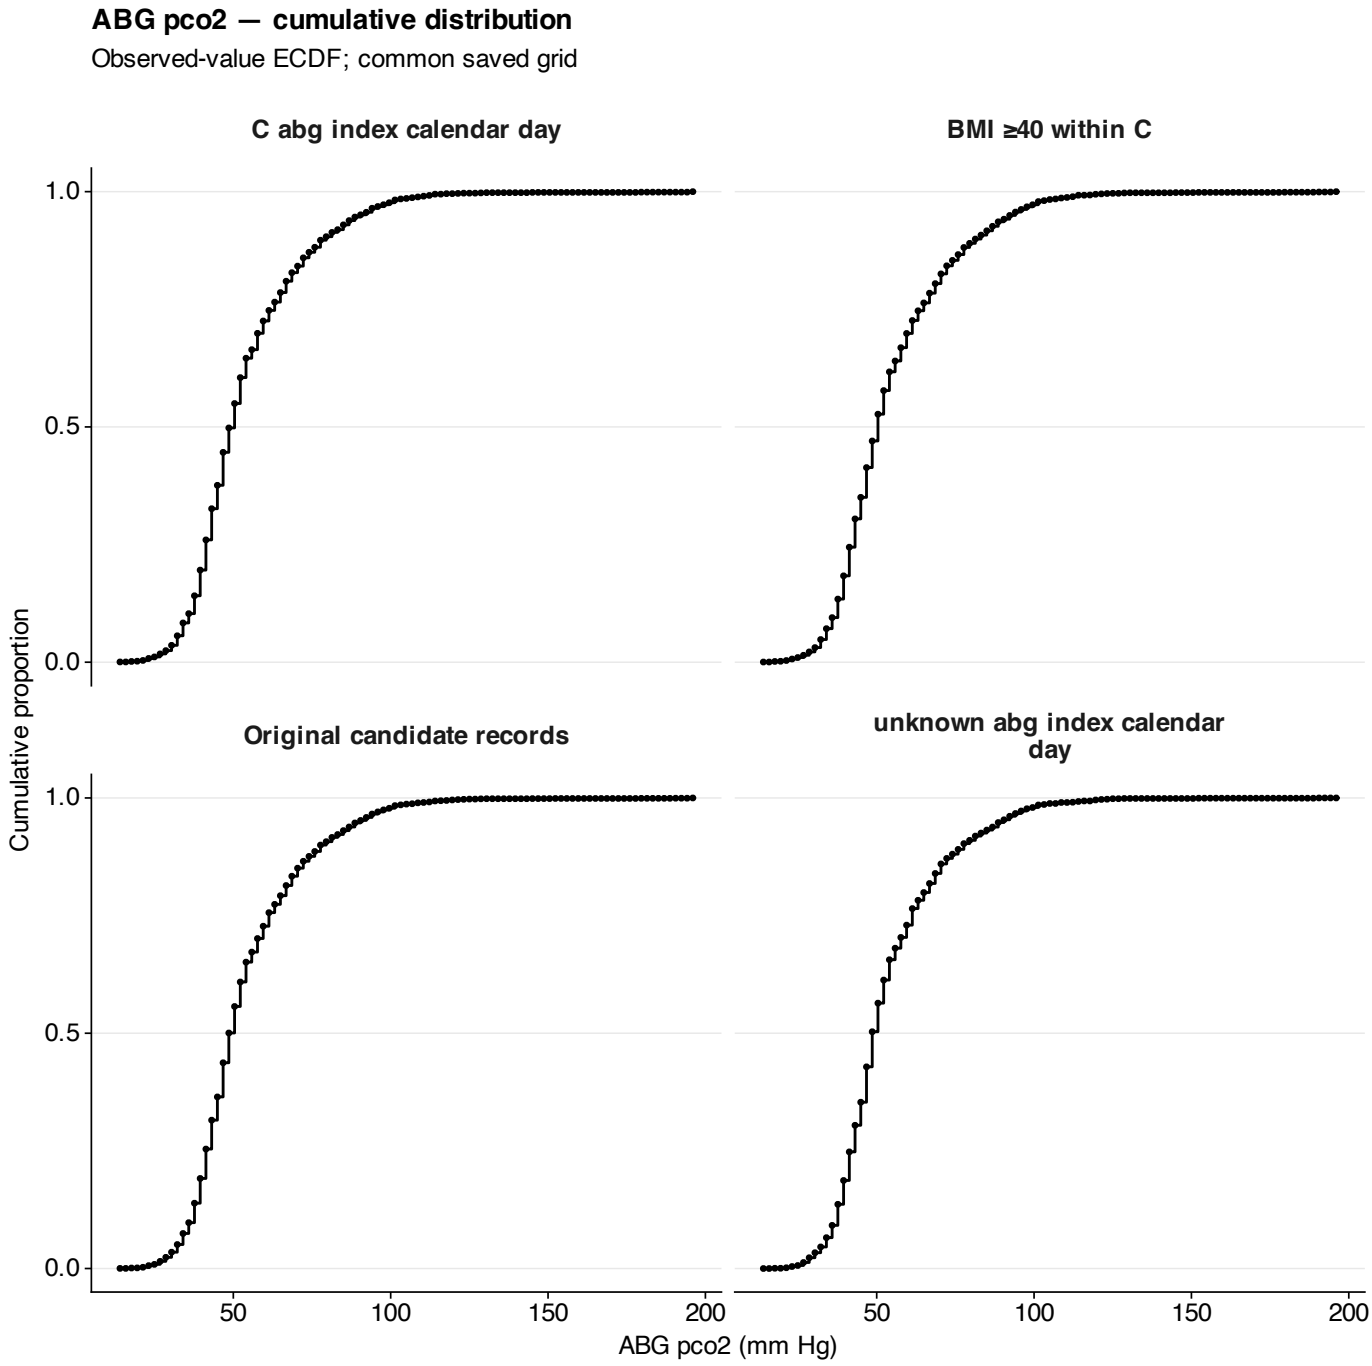

Figure 99: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. abg_pco2 ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

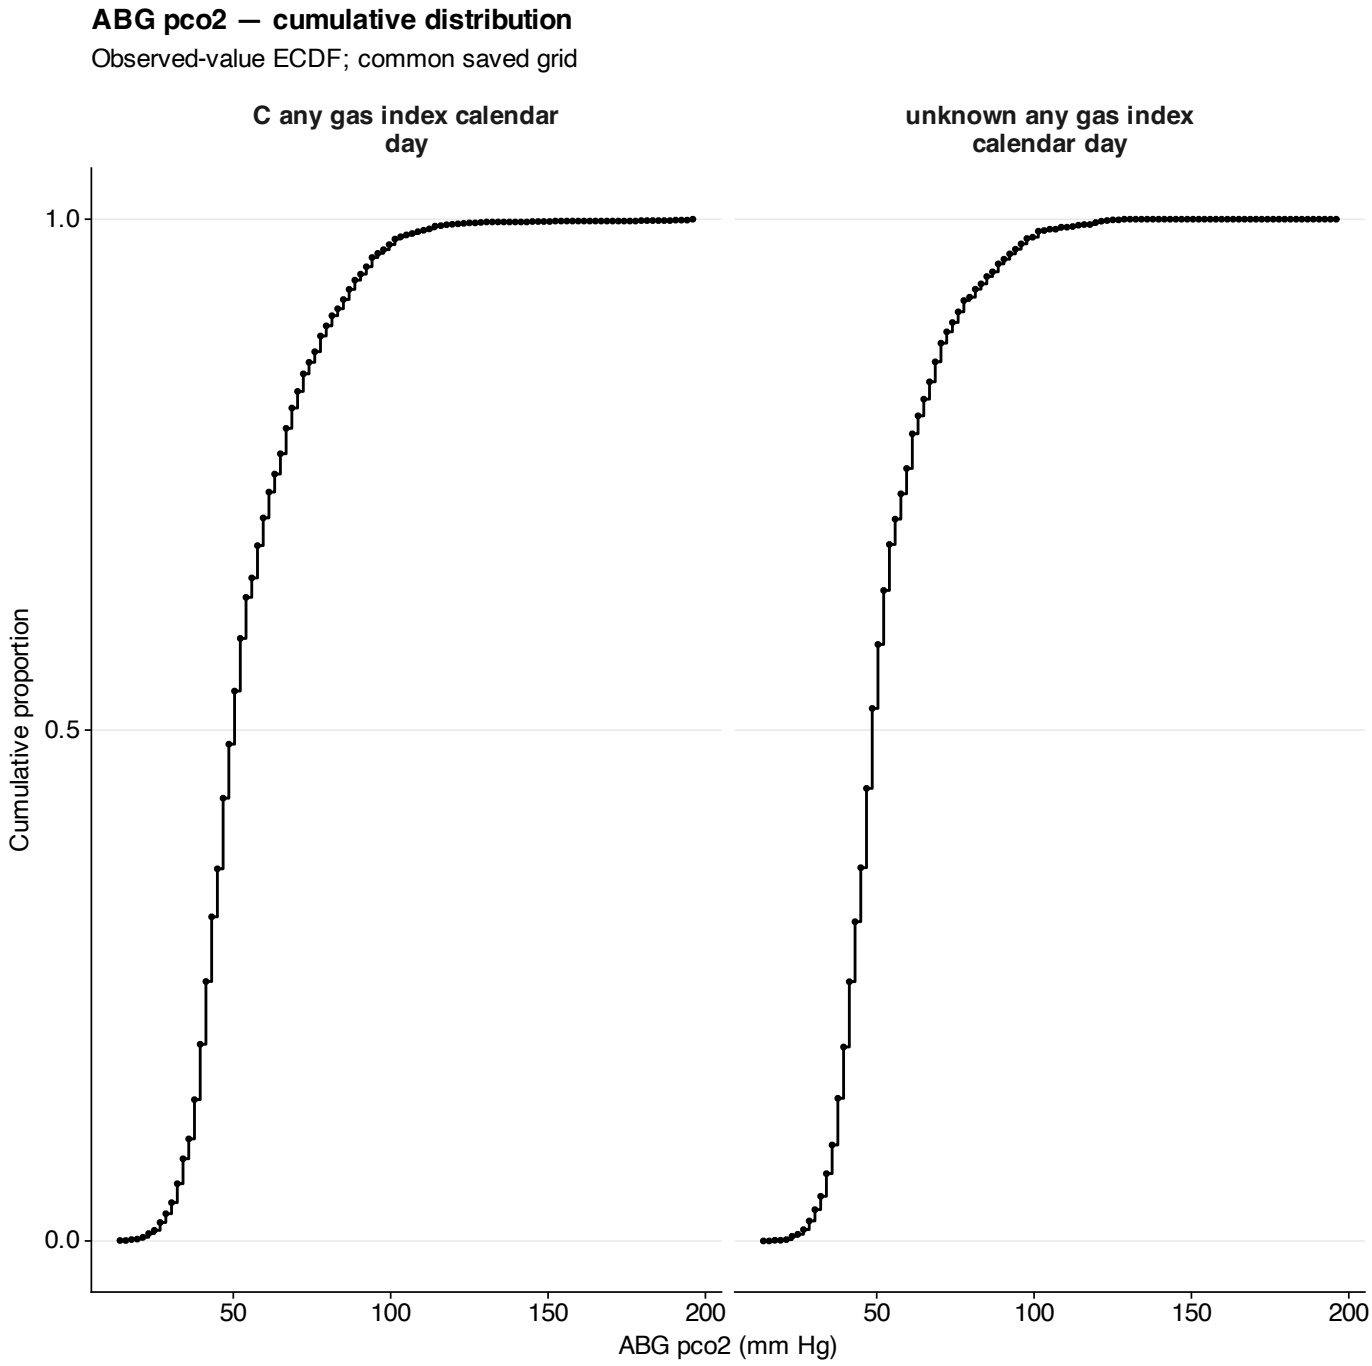

Figure 100: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. abg_pco2 ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

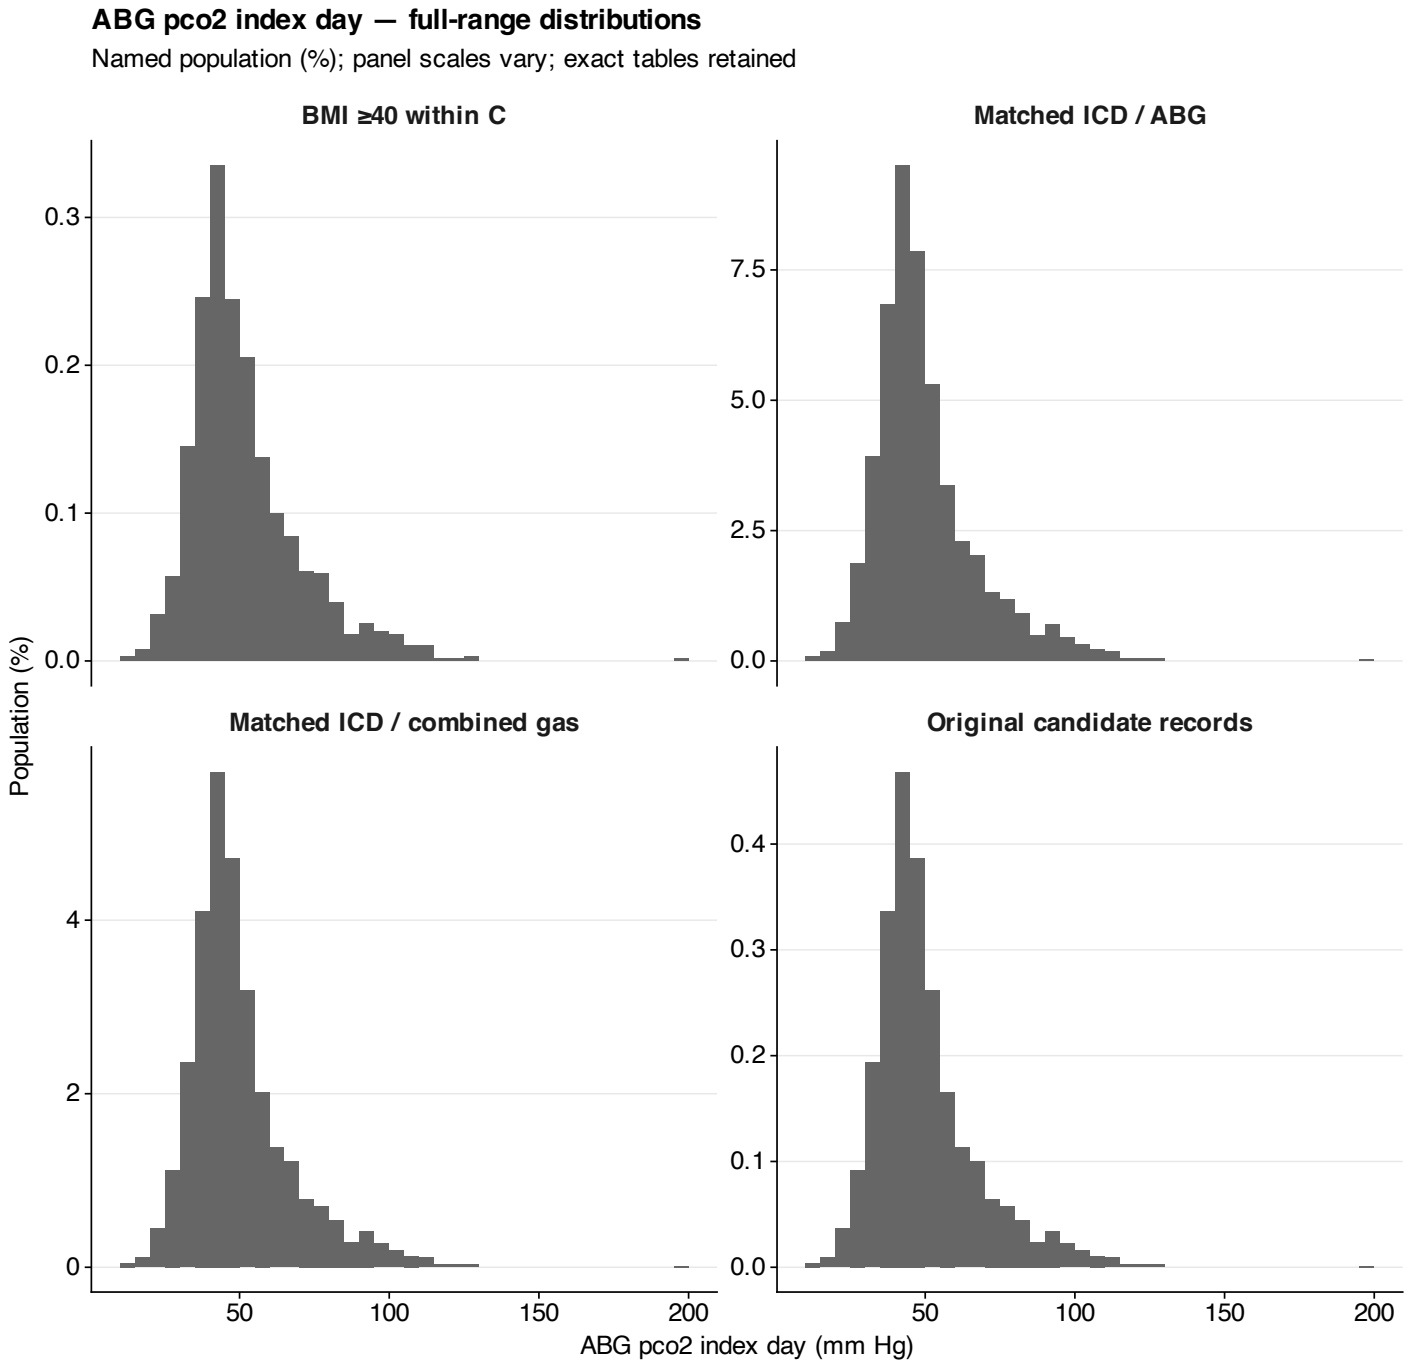

Figure 101: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete abg_pco2_index_day stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

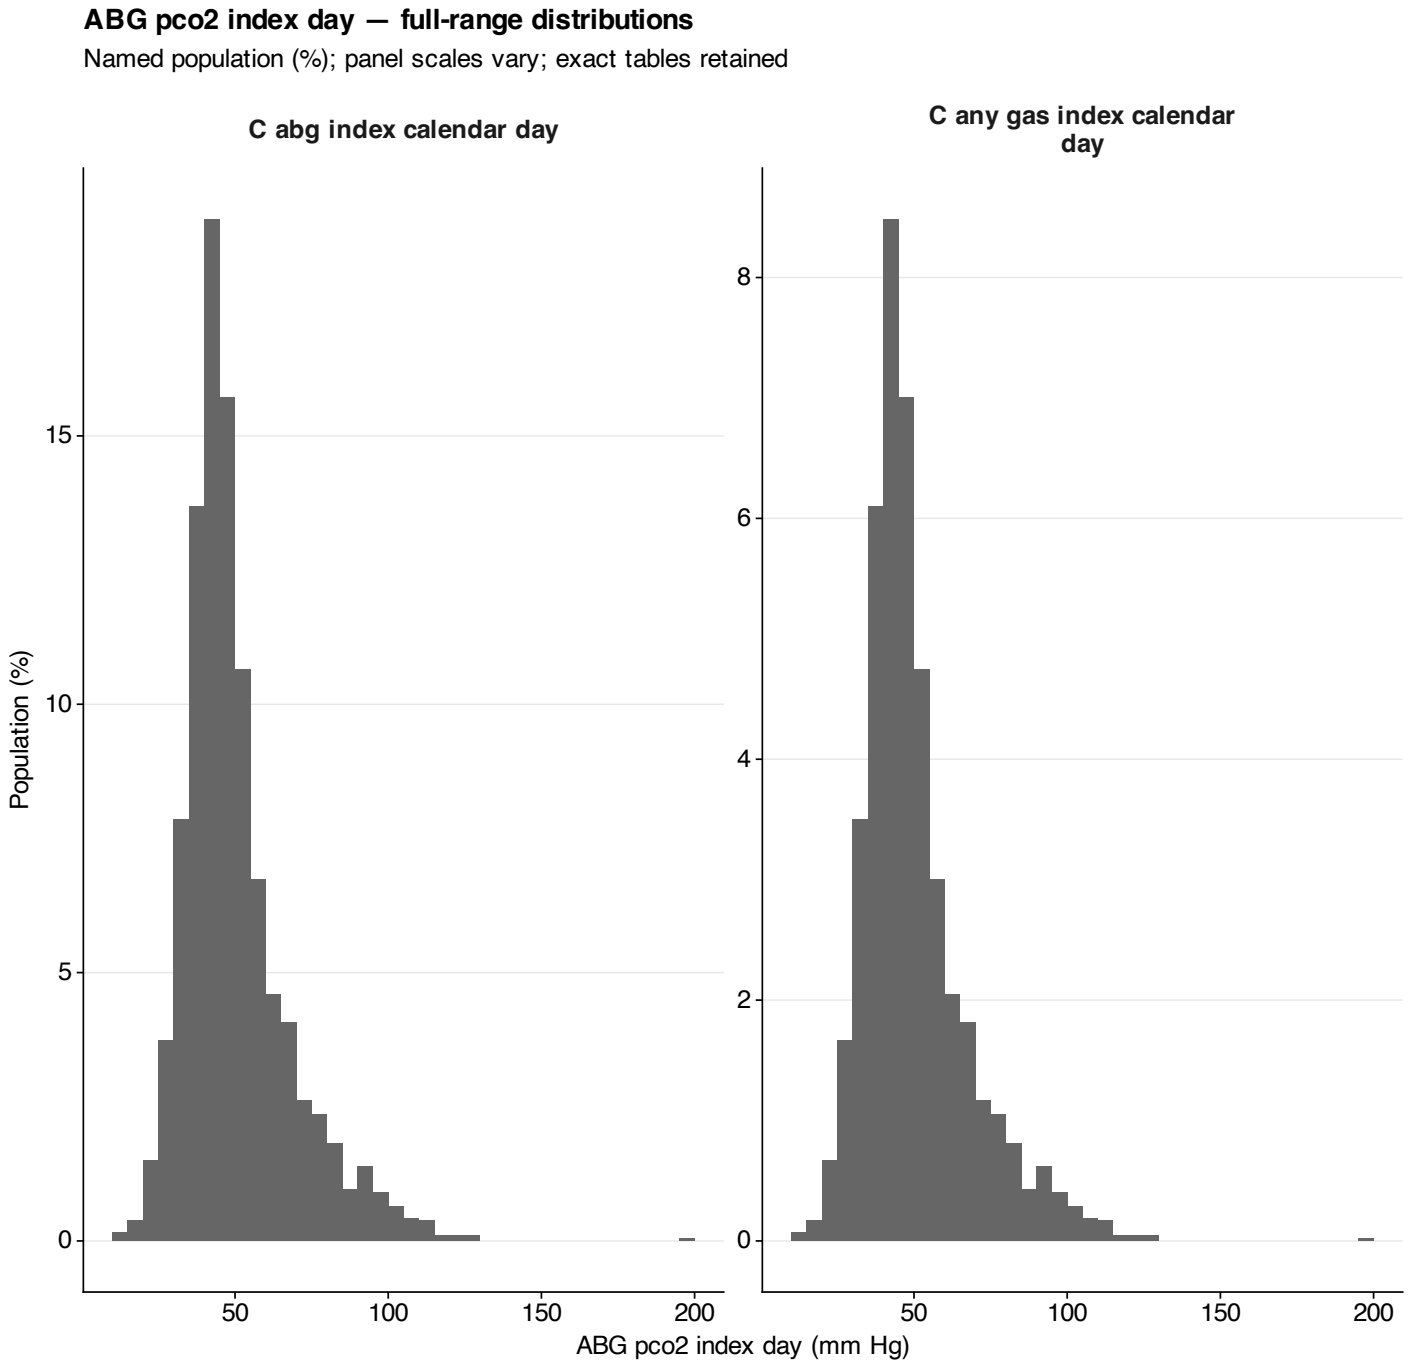

Figure 102: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete abg_pco2_index_day stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

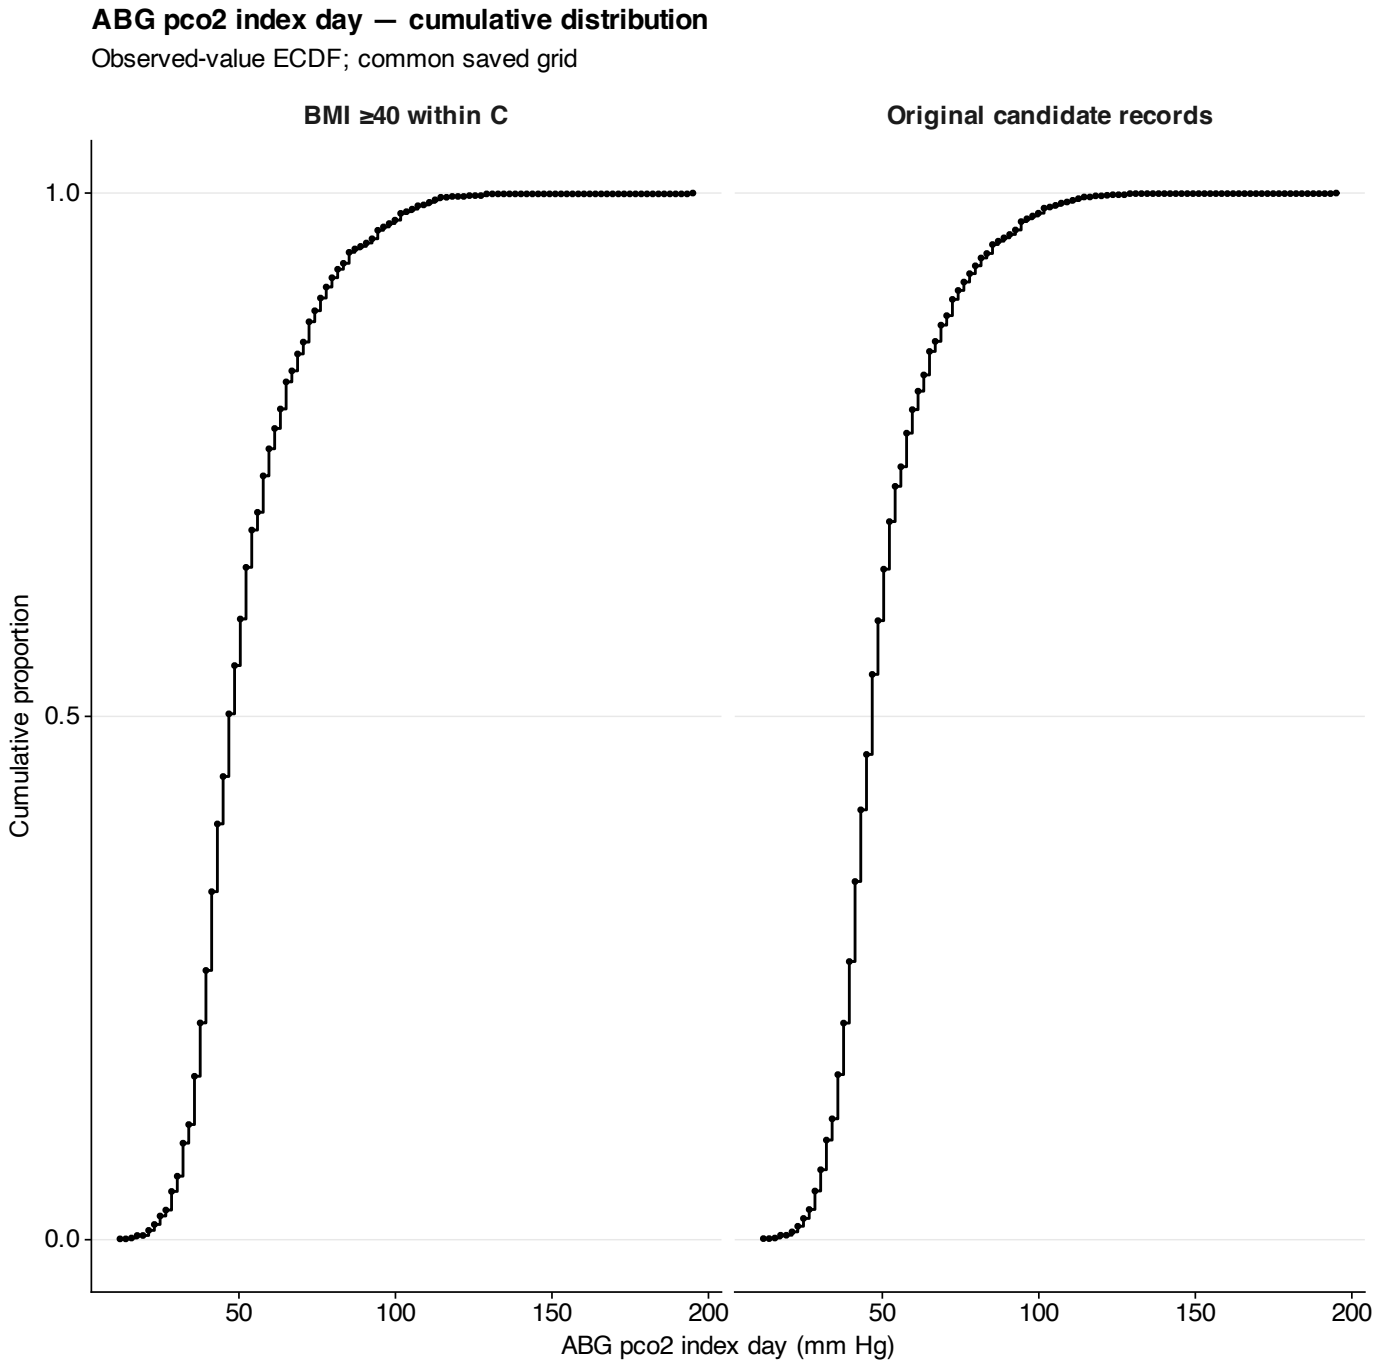

Figure 103: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. abg_pco2_index_day ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

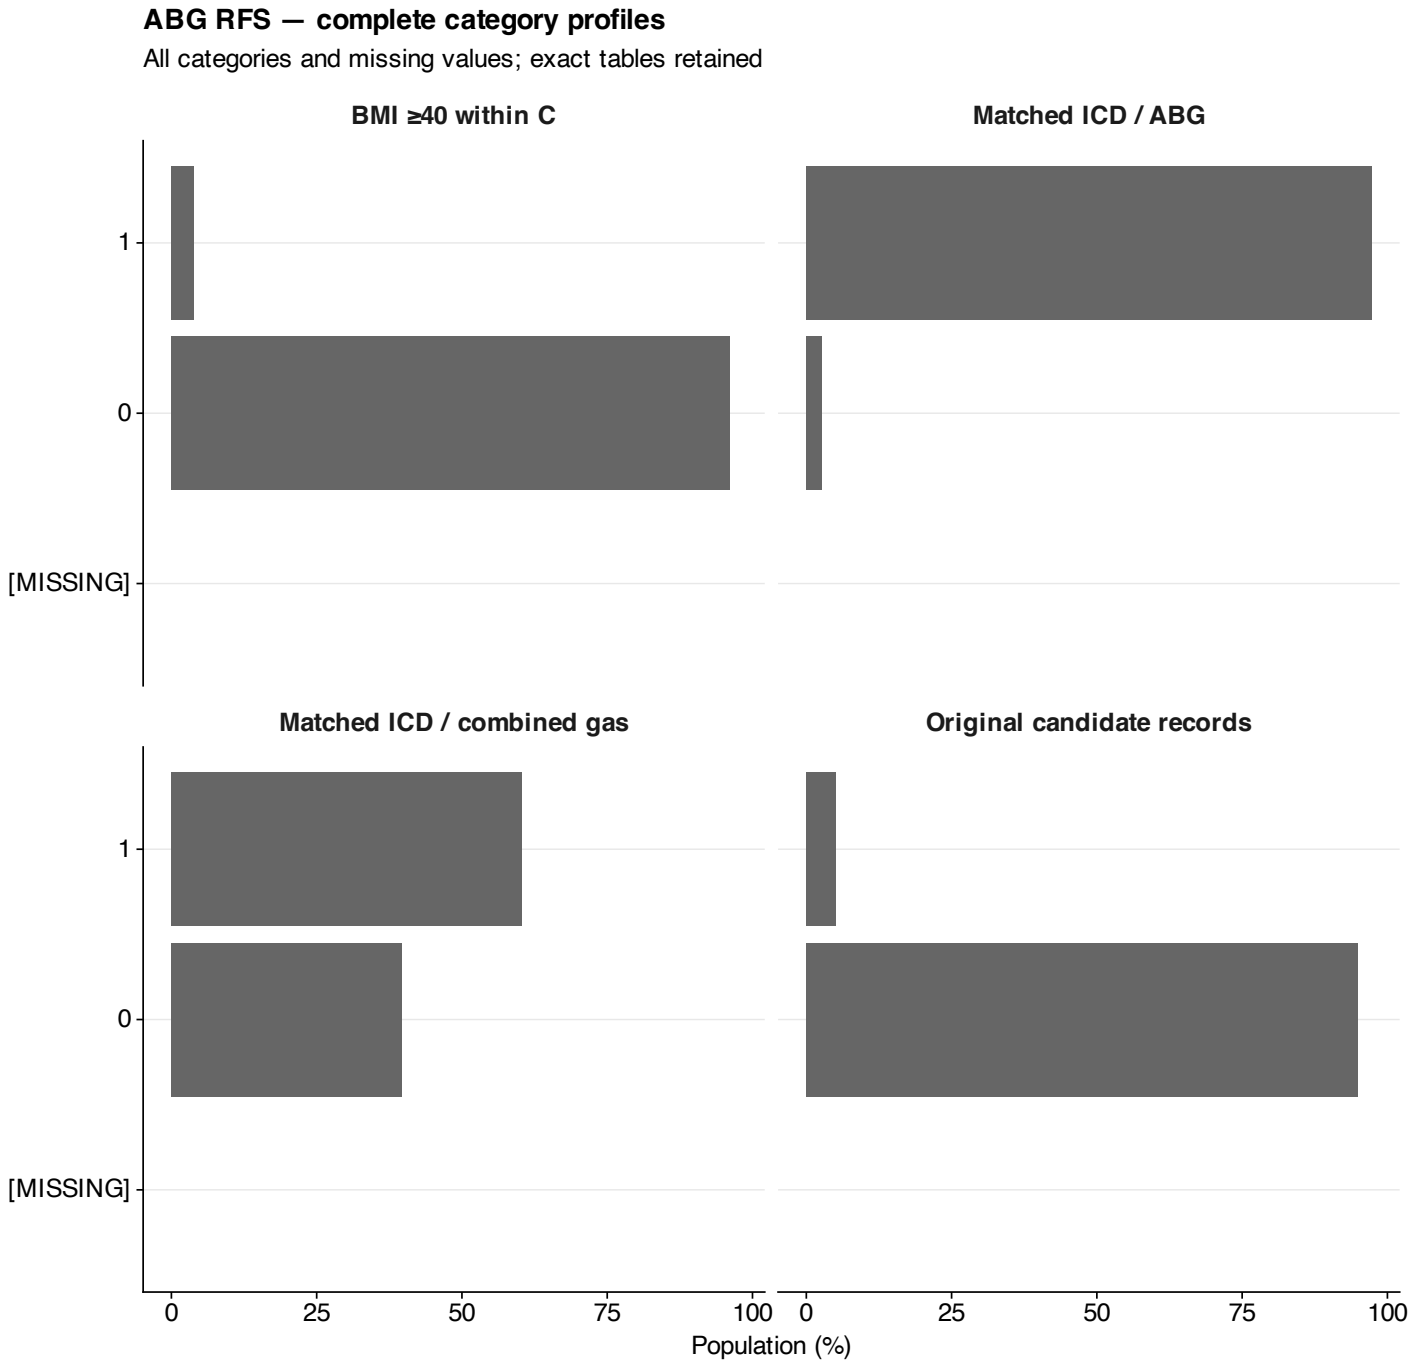

Figure 104: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete ABG_rfs stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

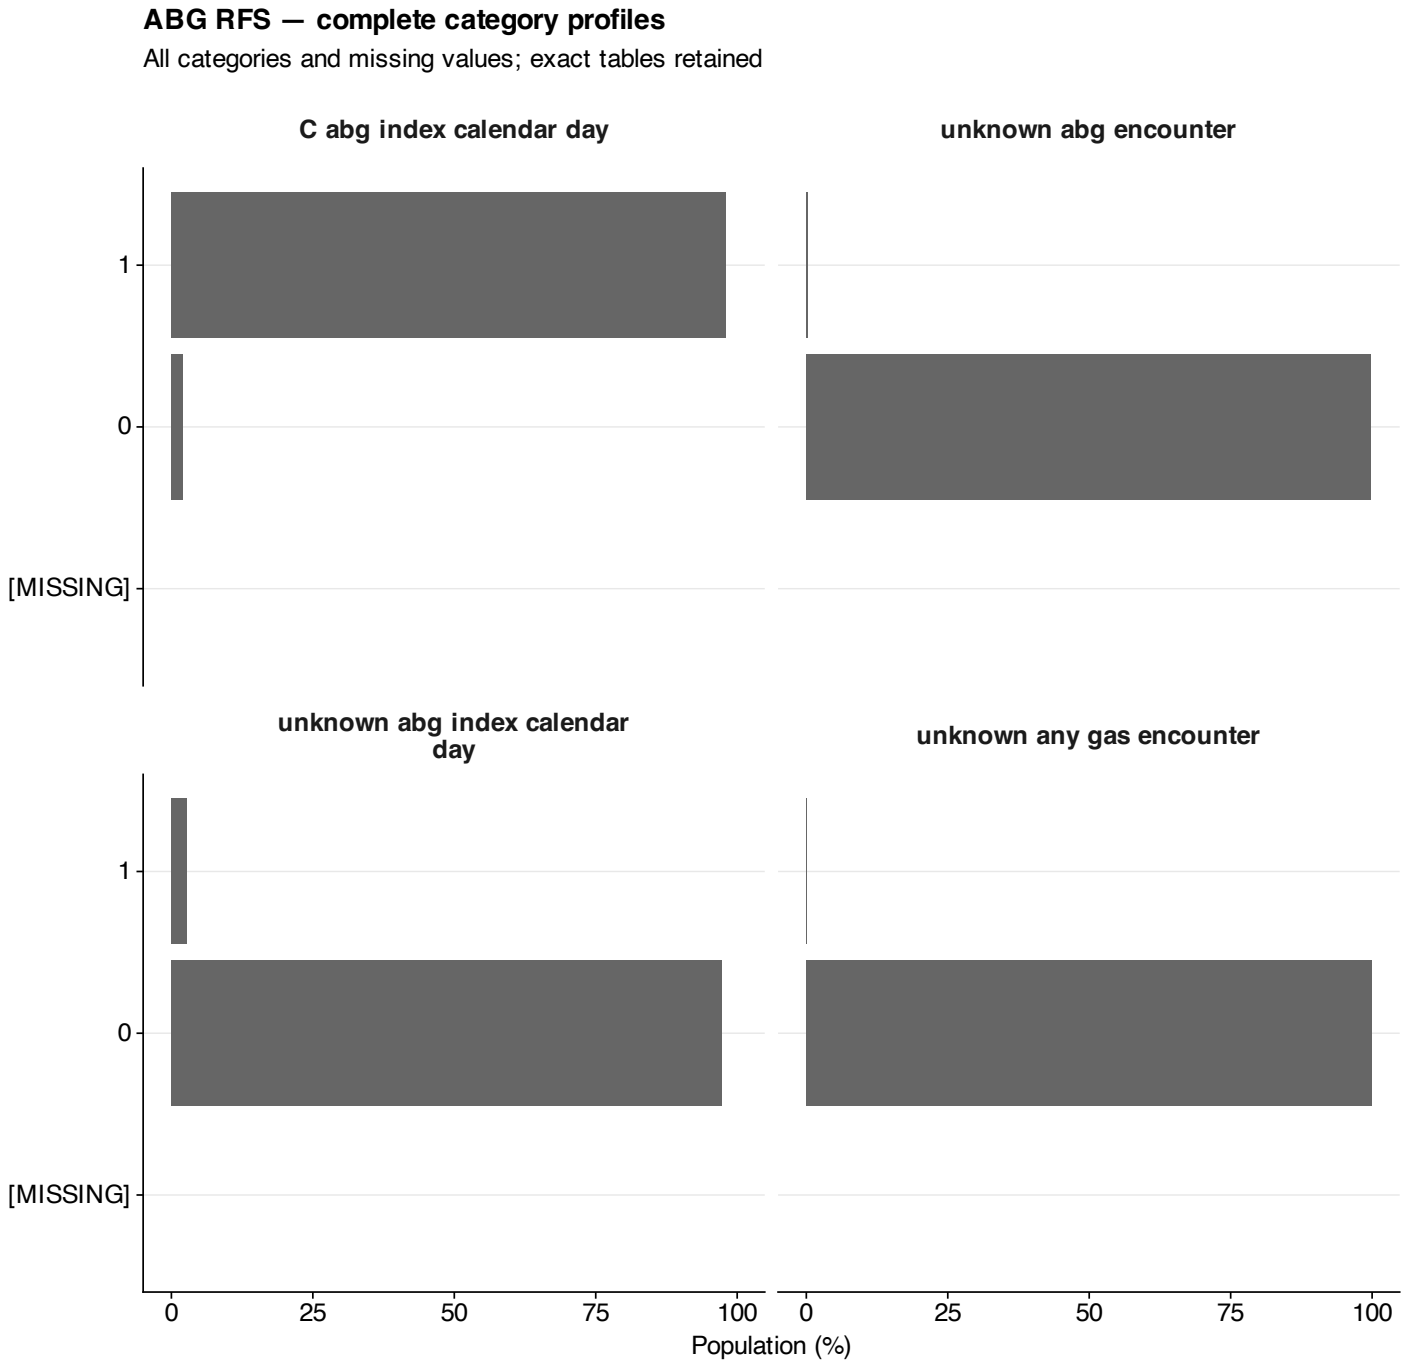

Figure 105: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete ABG_rfs stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

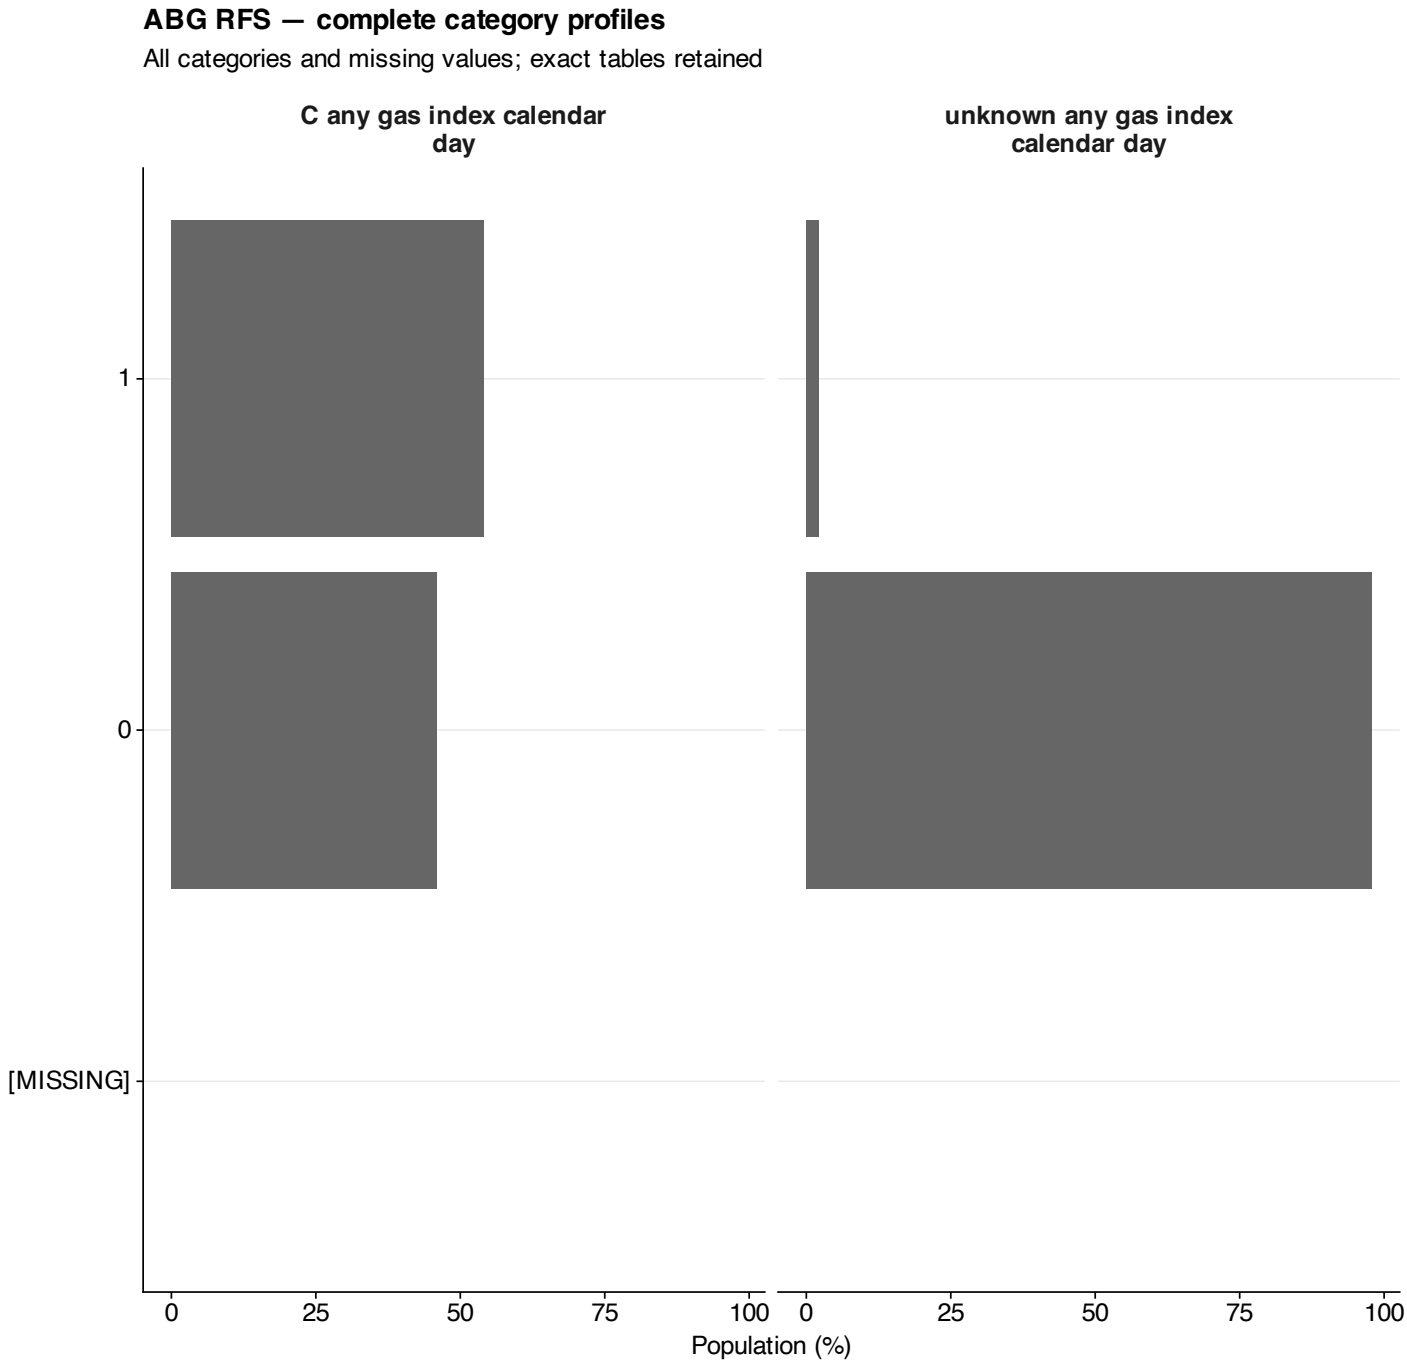

Figure 106: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete ABG_rfs stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

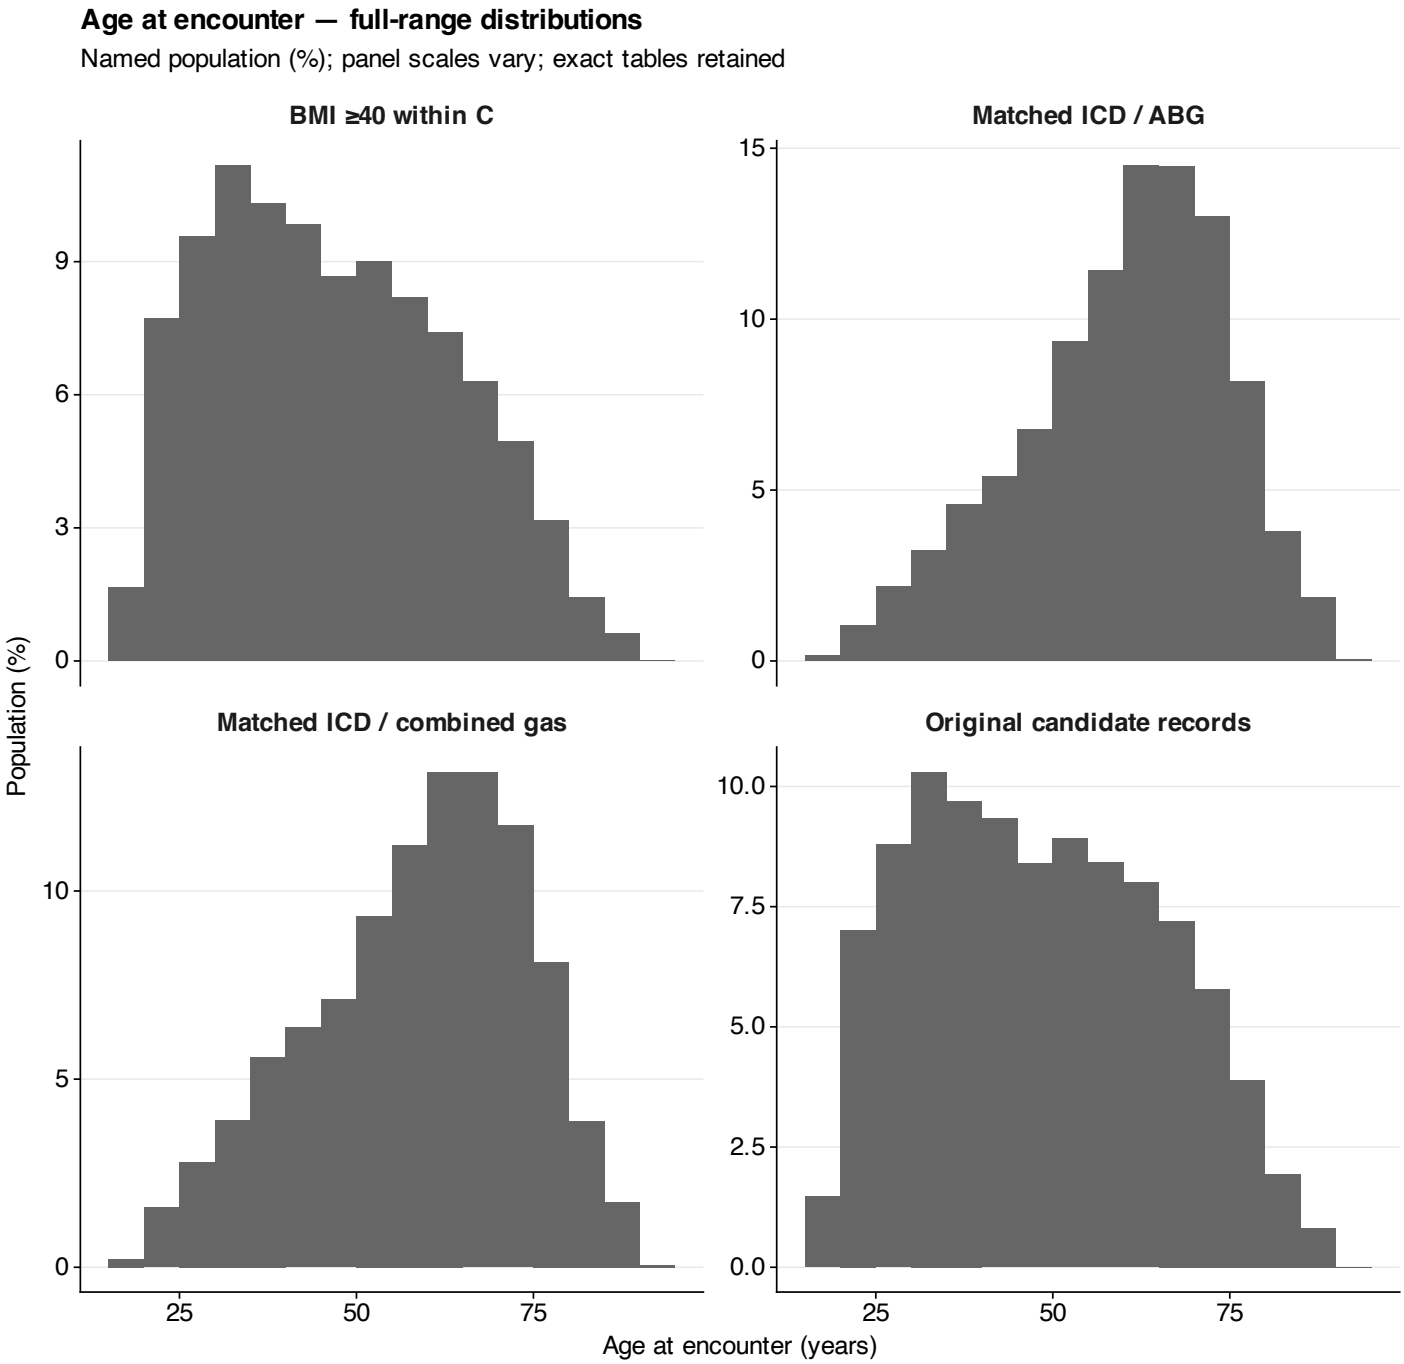

Figure 107: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete age_at_encounter stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

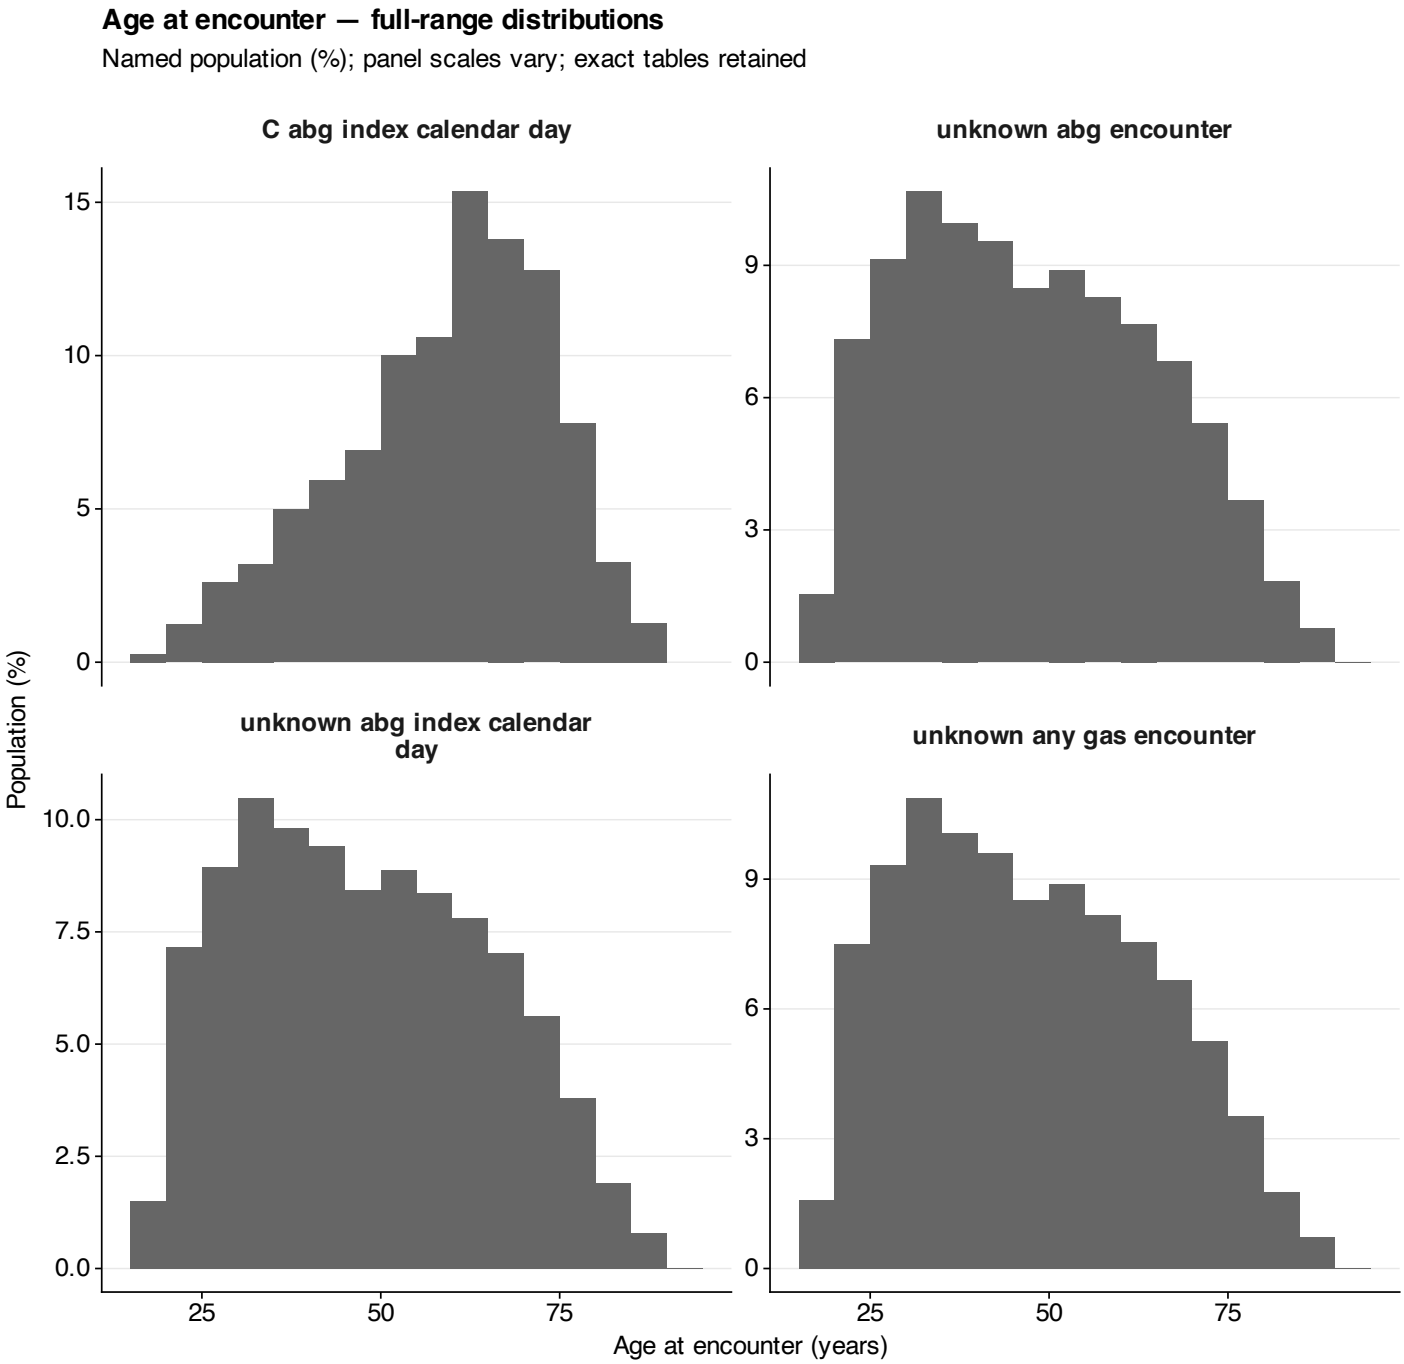

Figure 108: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete age_at_encounter stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

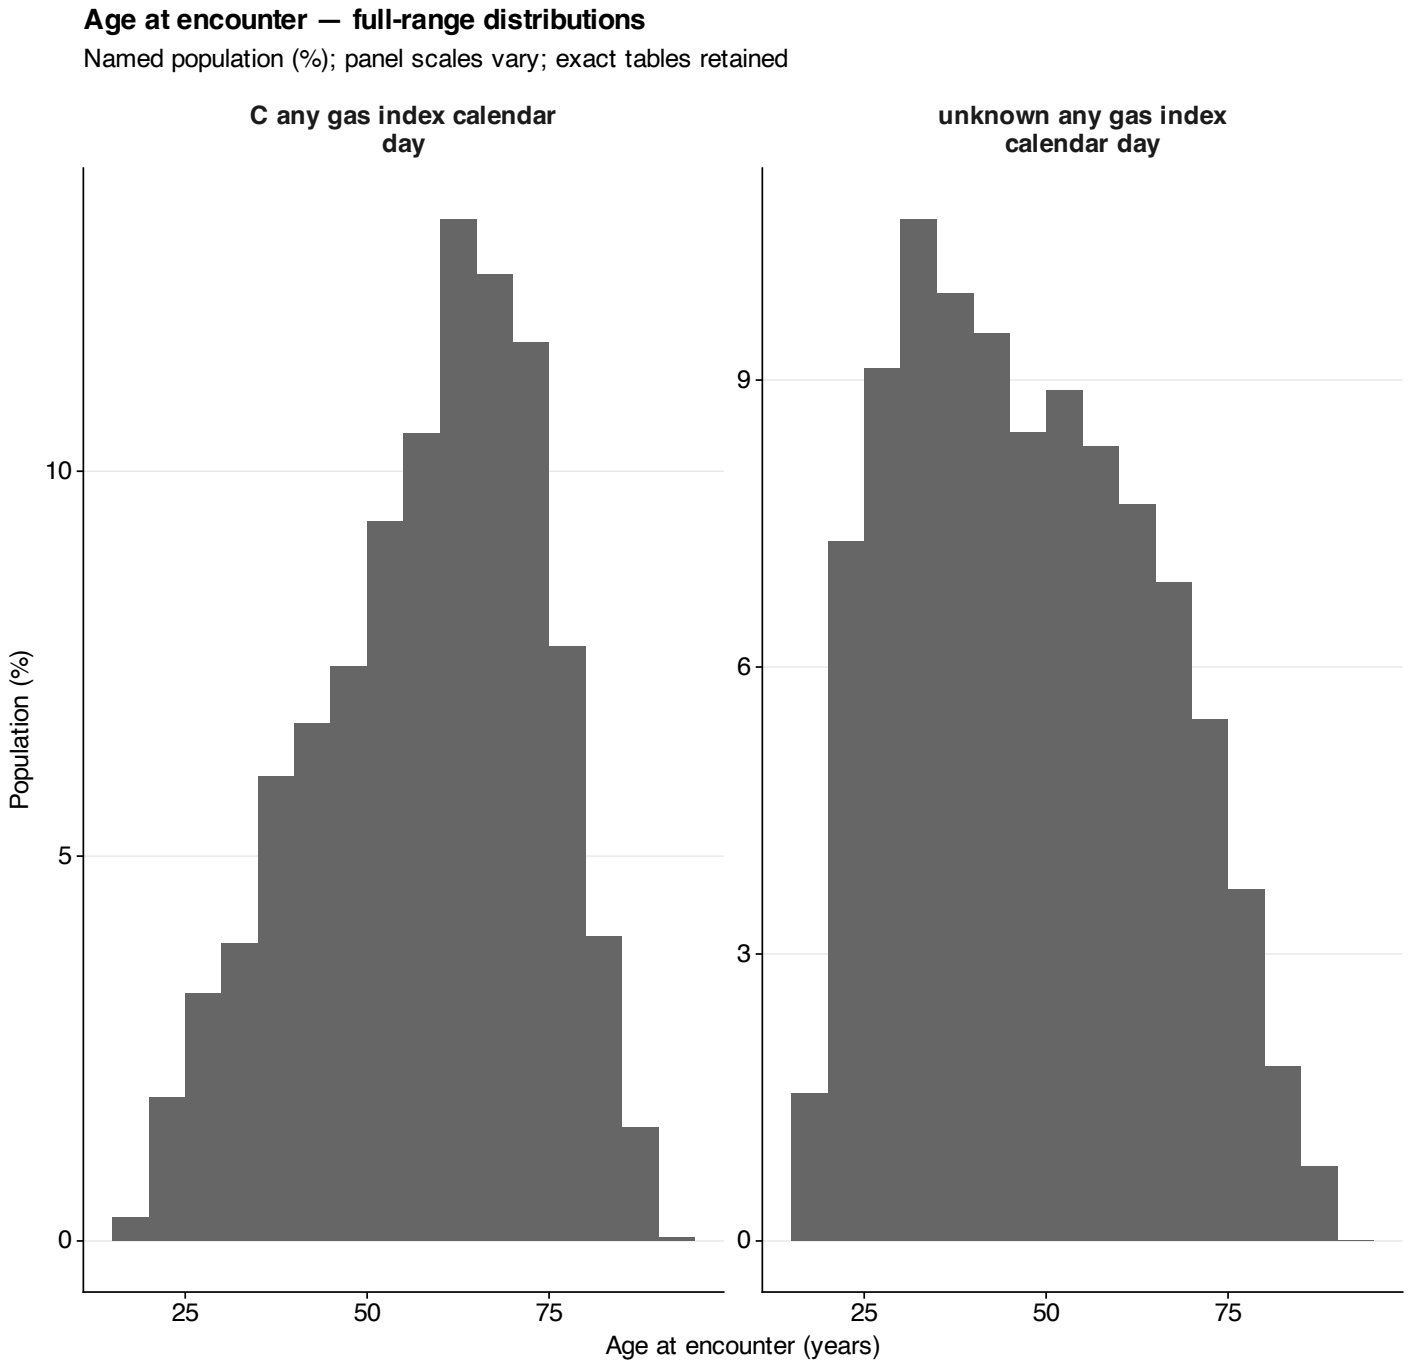

Figure 109: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete age_at_encounter stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

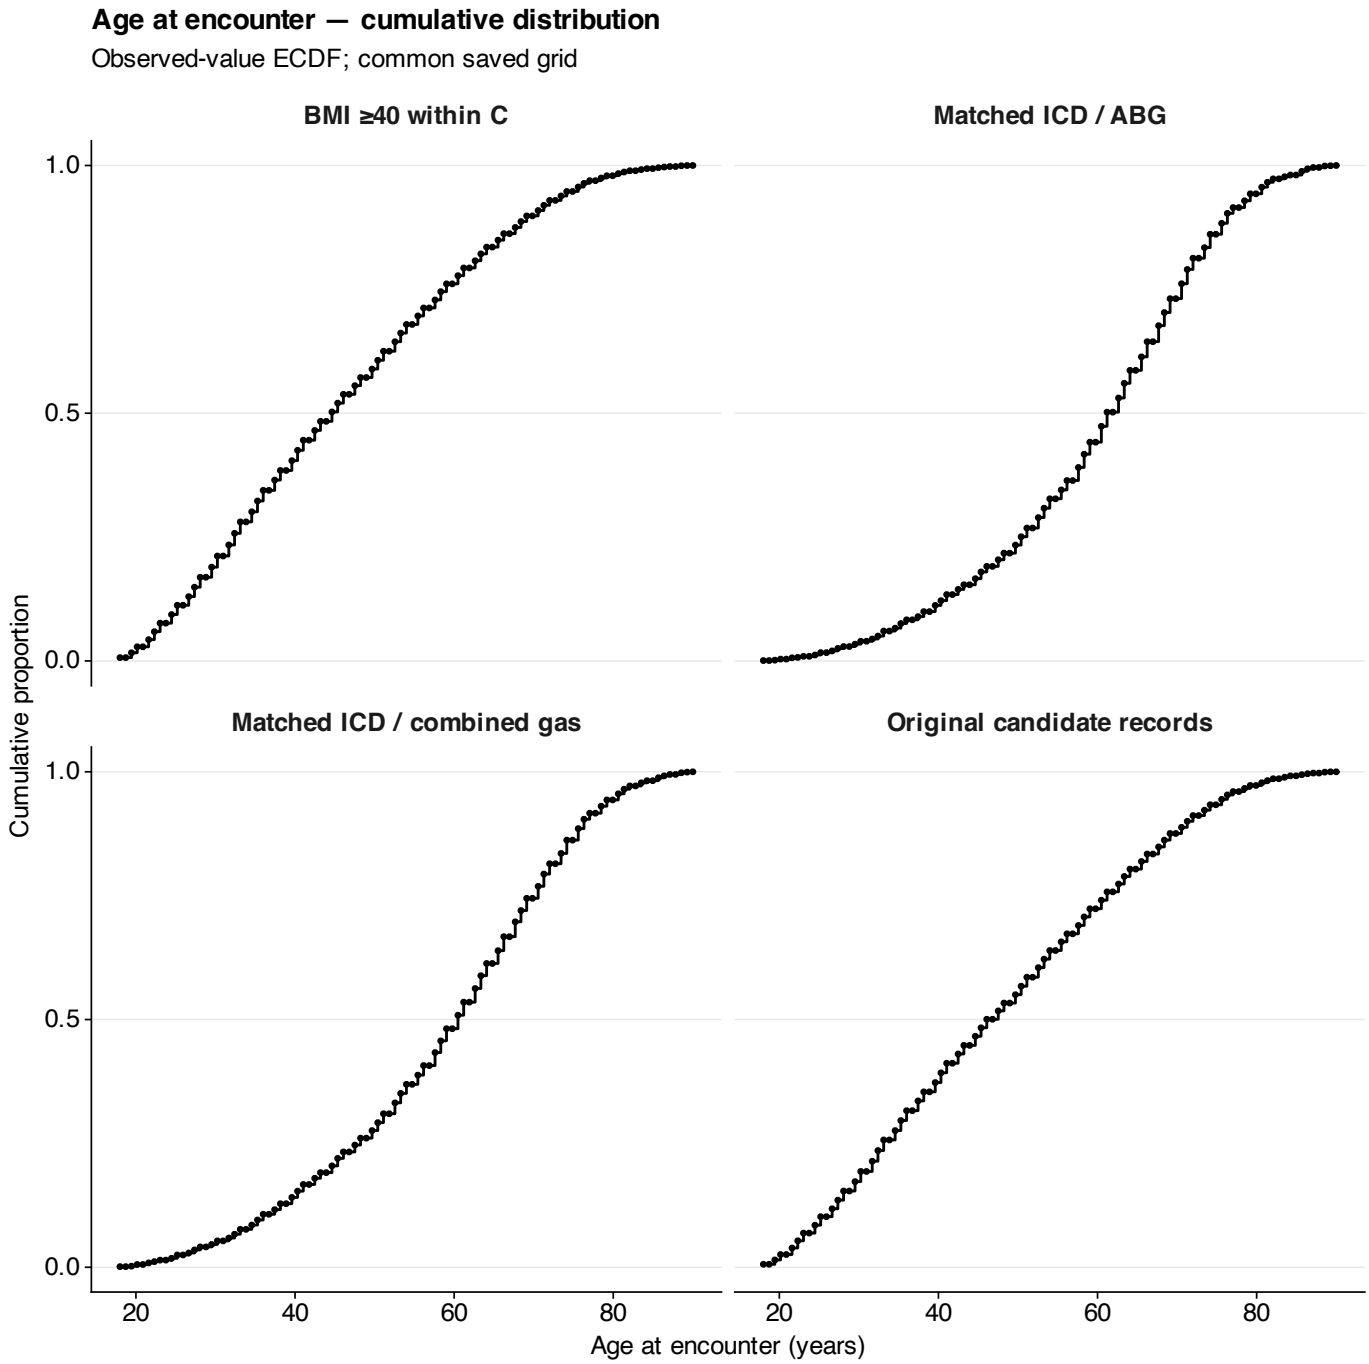

Figure 110: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. age_at_encounter ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

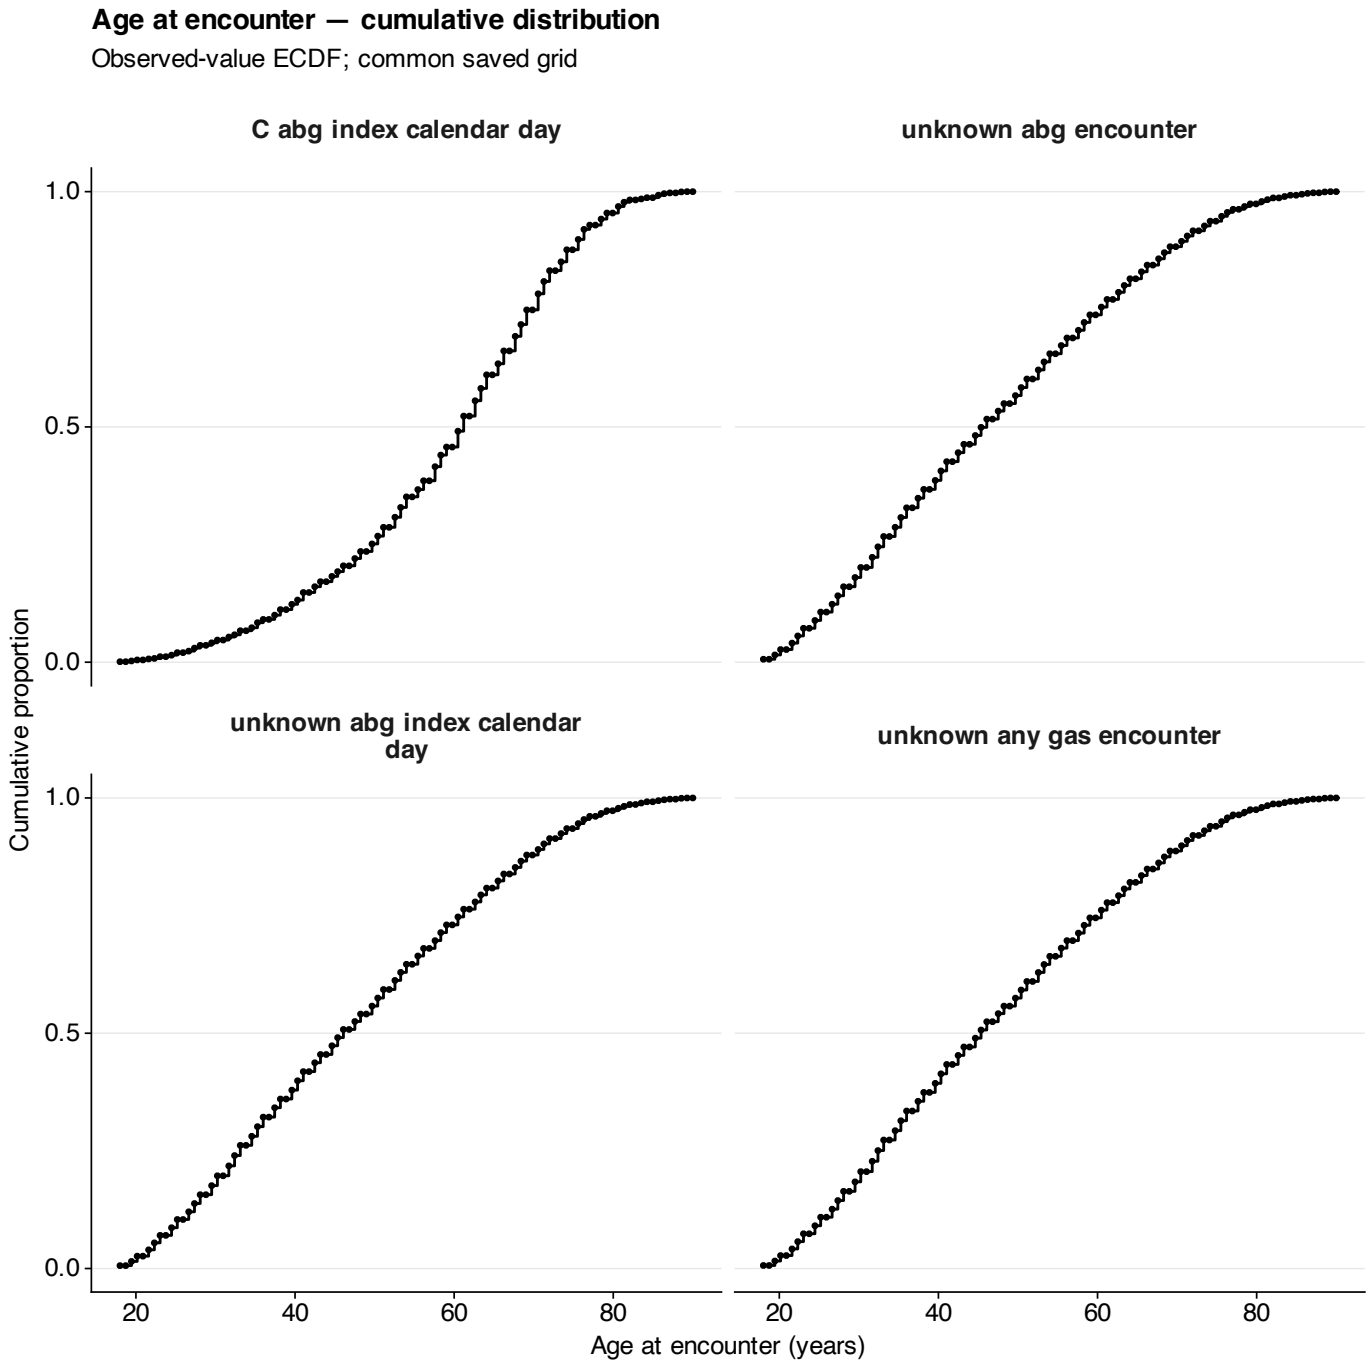

Figure 111: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. age_at_encounter ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

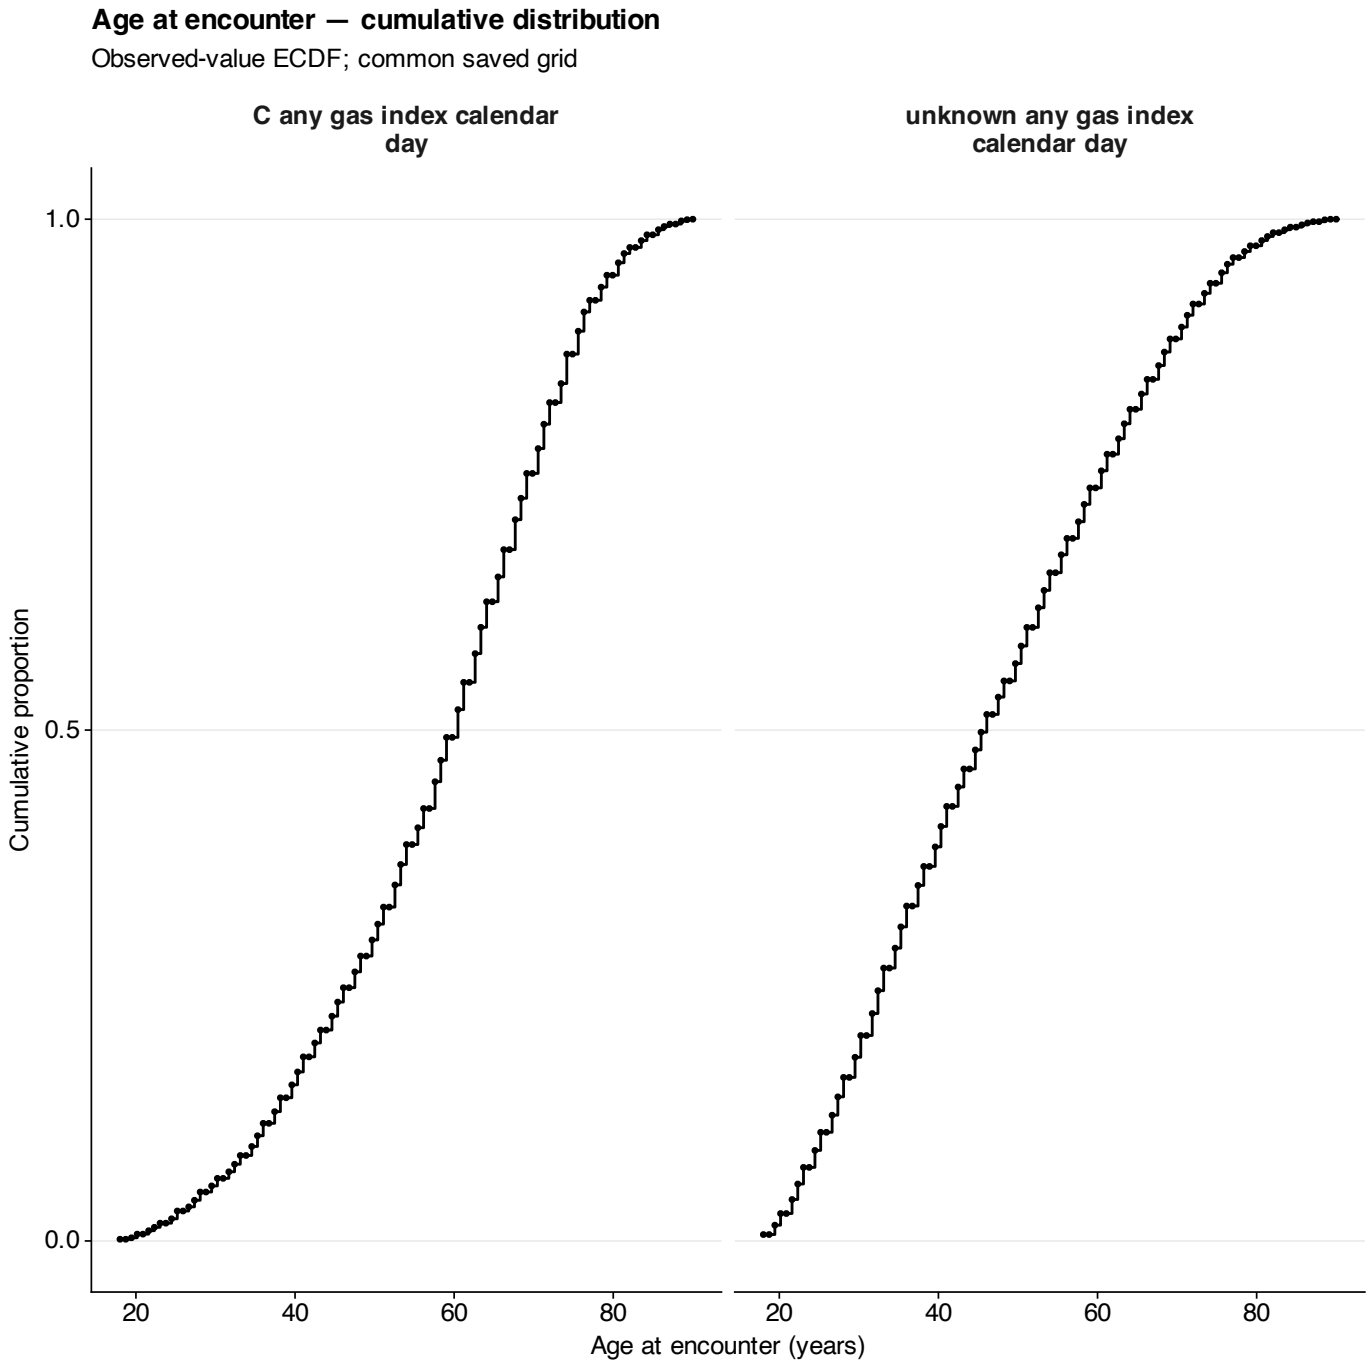

Figure 112: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. age_at_encounter ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

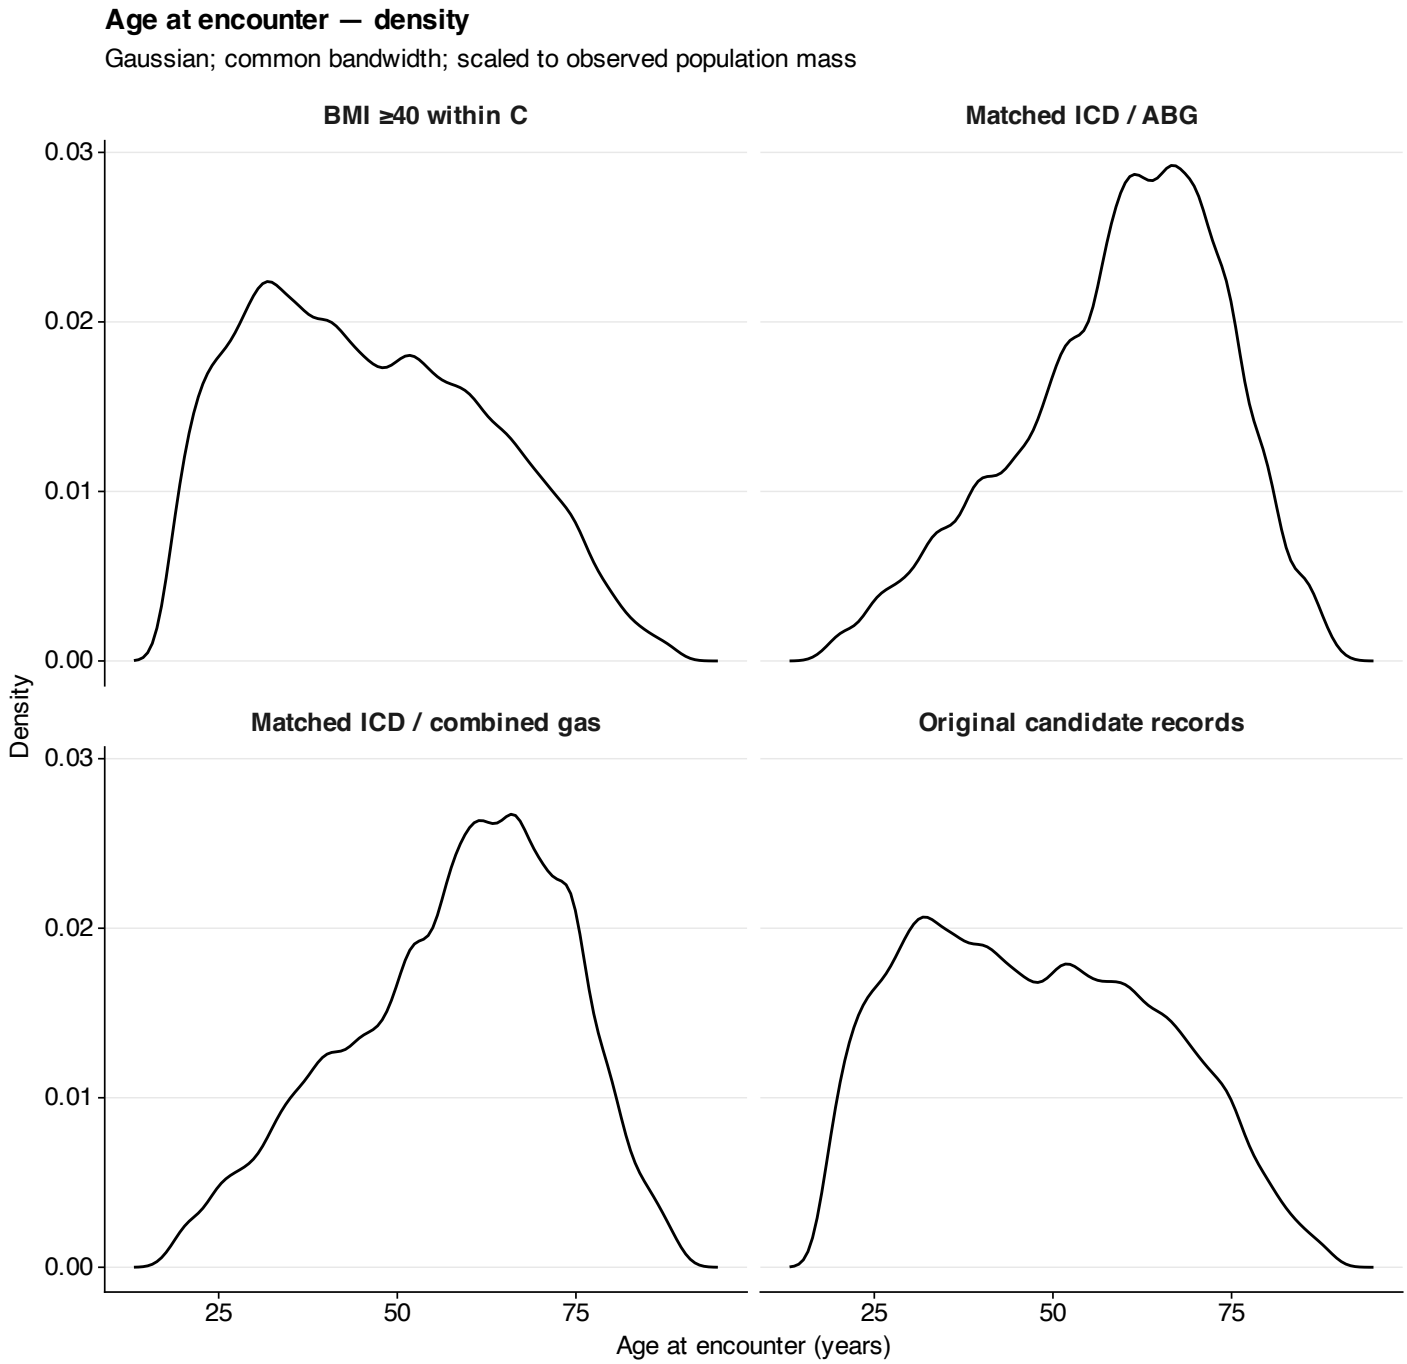

Figure 113: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. age_at_encounter kde across named stages; full coordinate export and normalization metadata in distribution_curves.

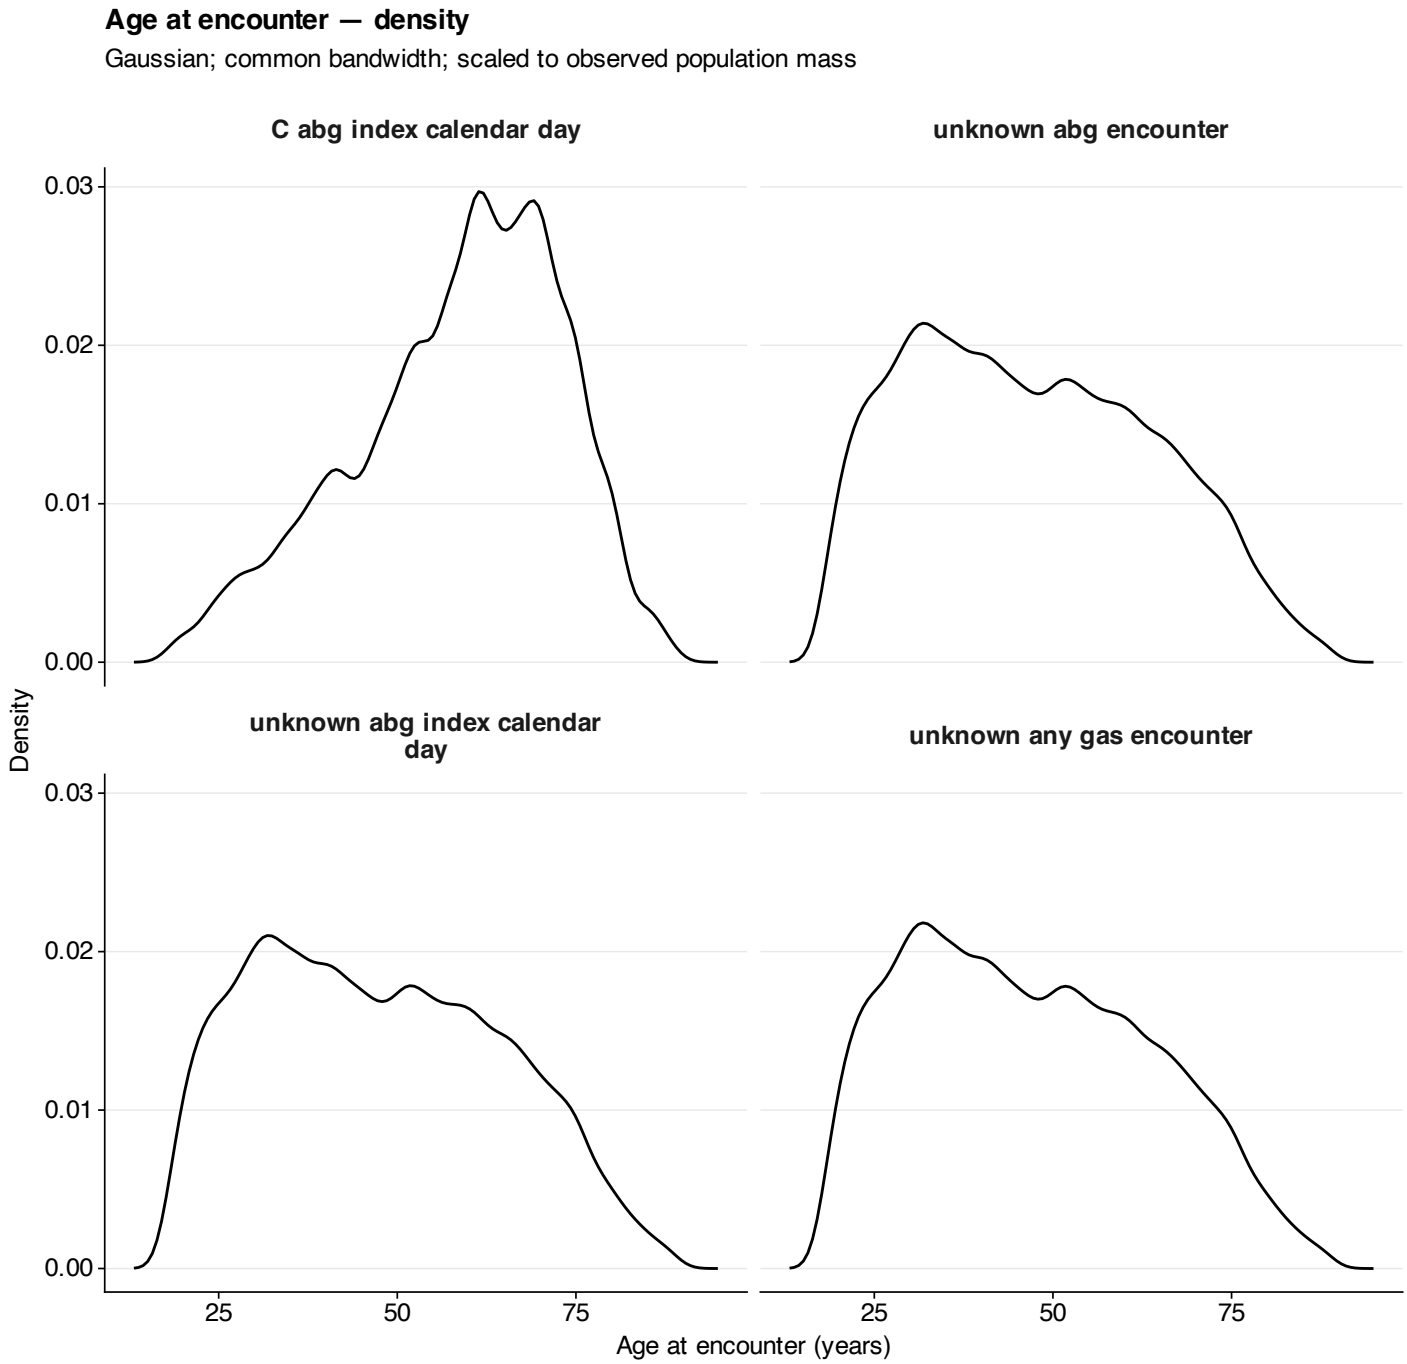

Figure 114: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. age_at_encounter kde across named stages; full coordinate export and normalization metadata in distribution_curves.

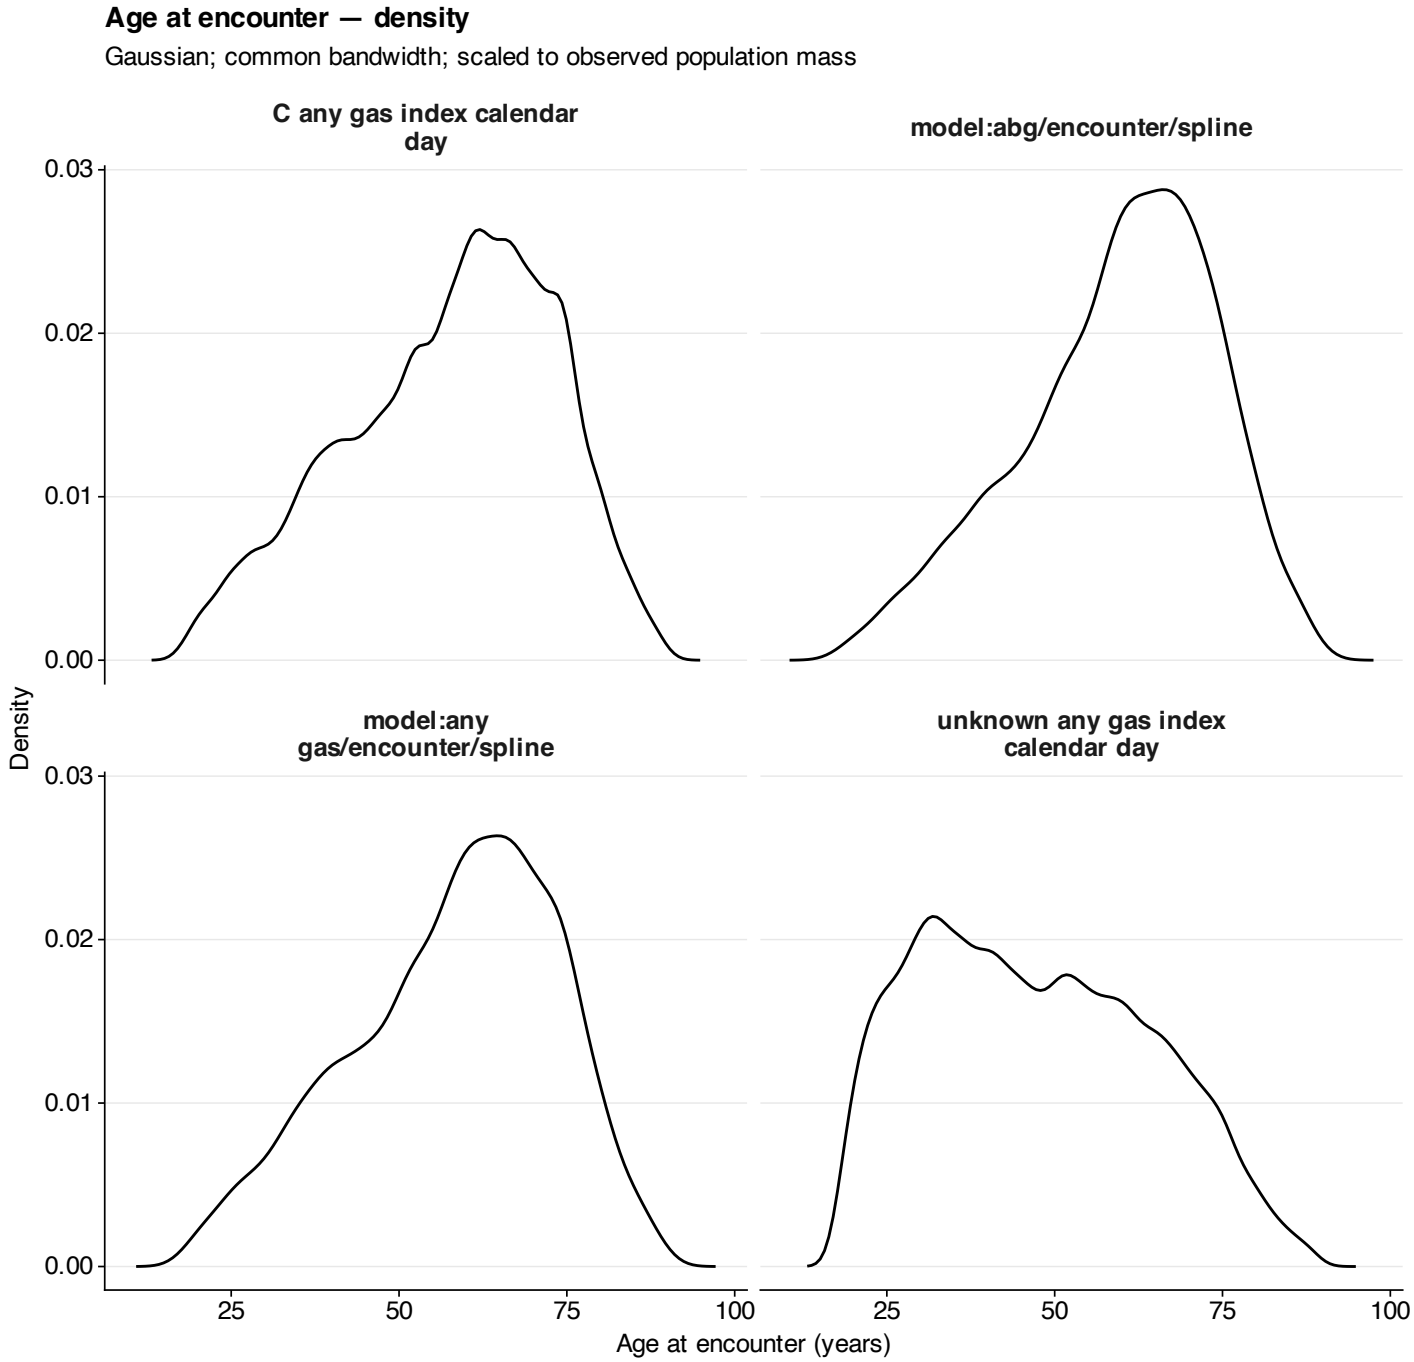

Figure 115: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. age_at_encounter kde across named stages; full coordinate export and normalization metadata in distribution_curves.

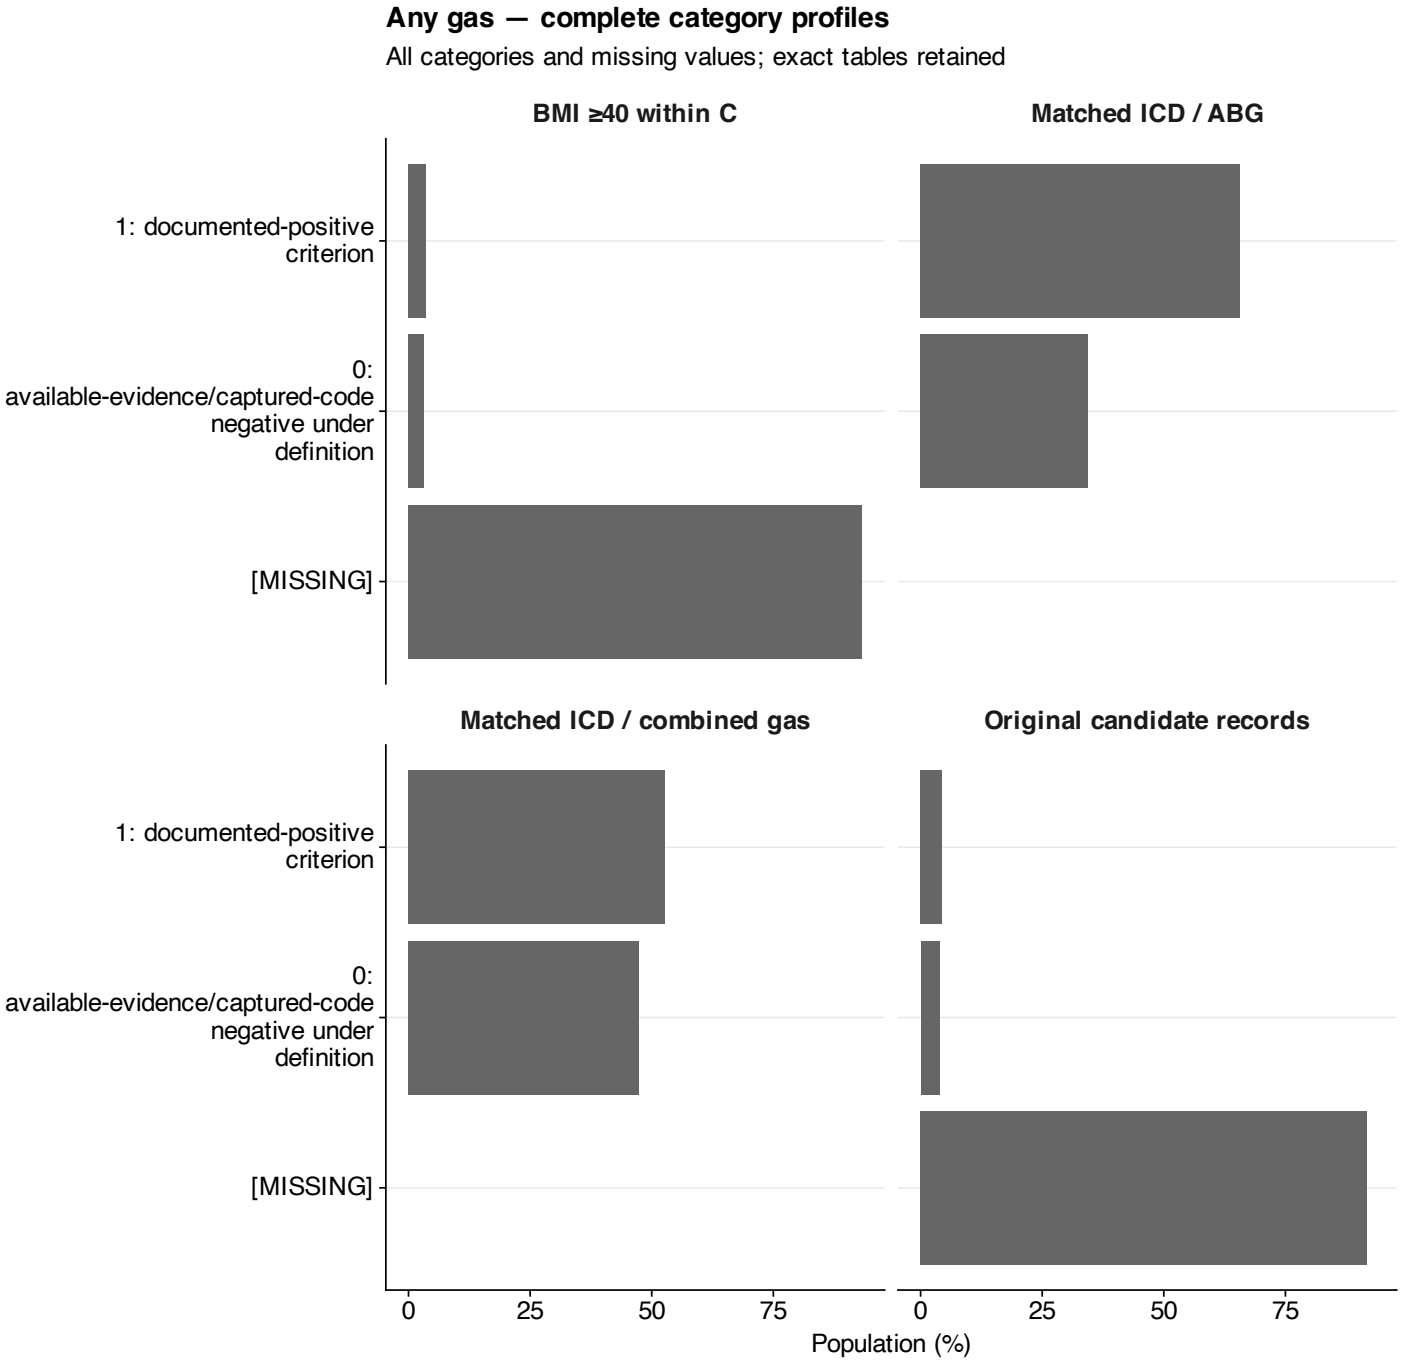

Figure 116: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete any_gas stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

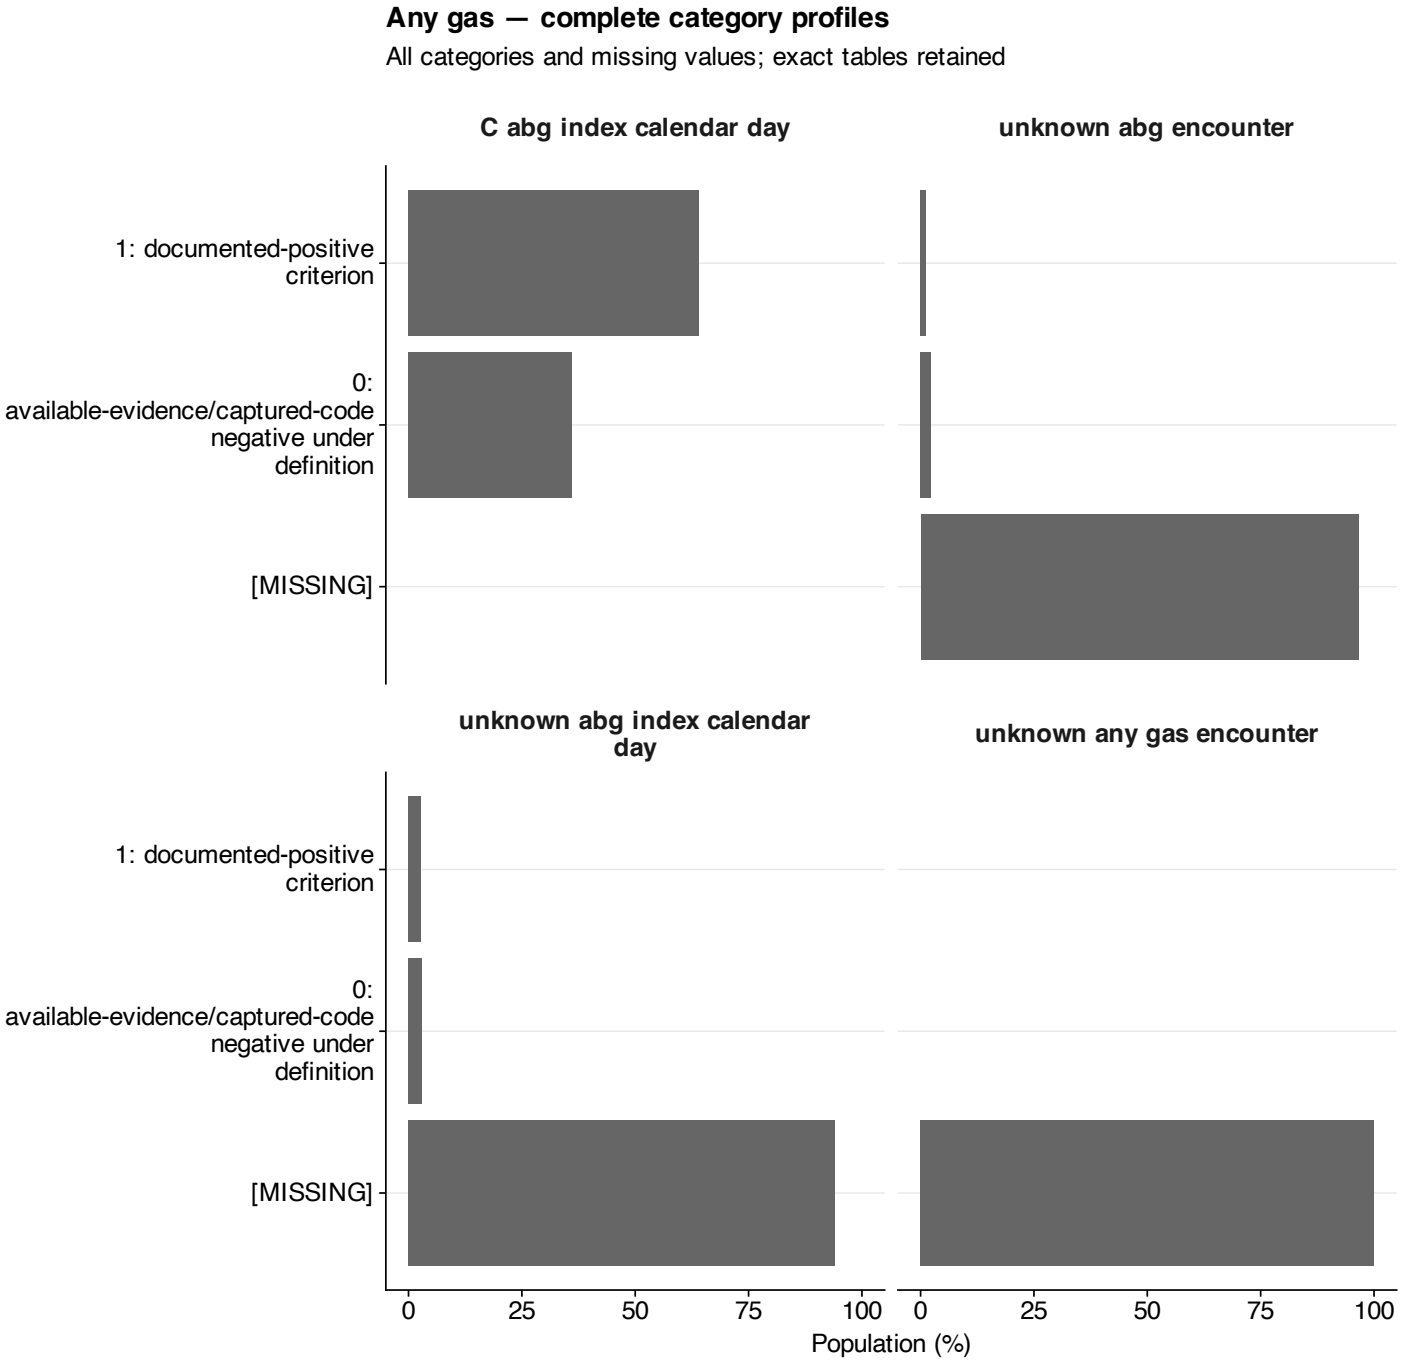

Figure 117: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete any_gas stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

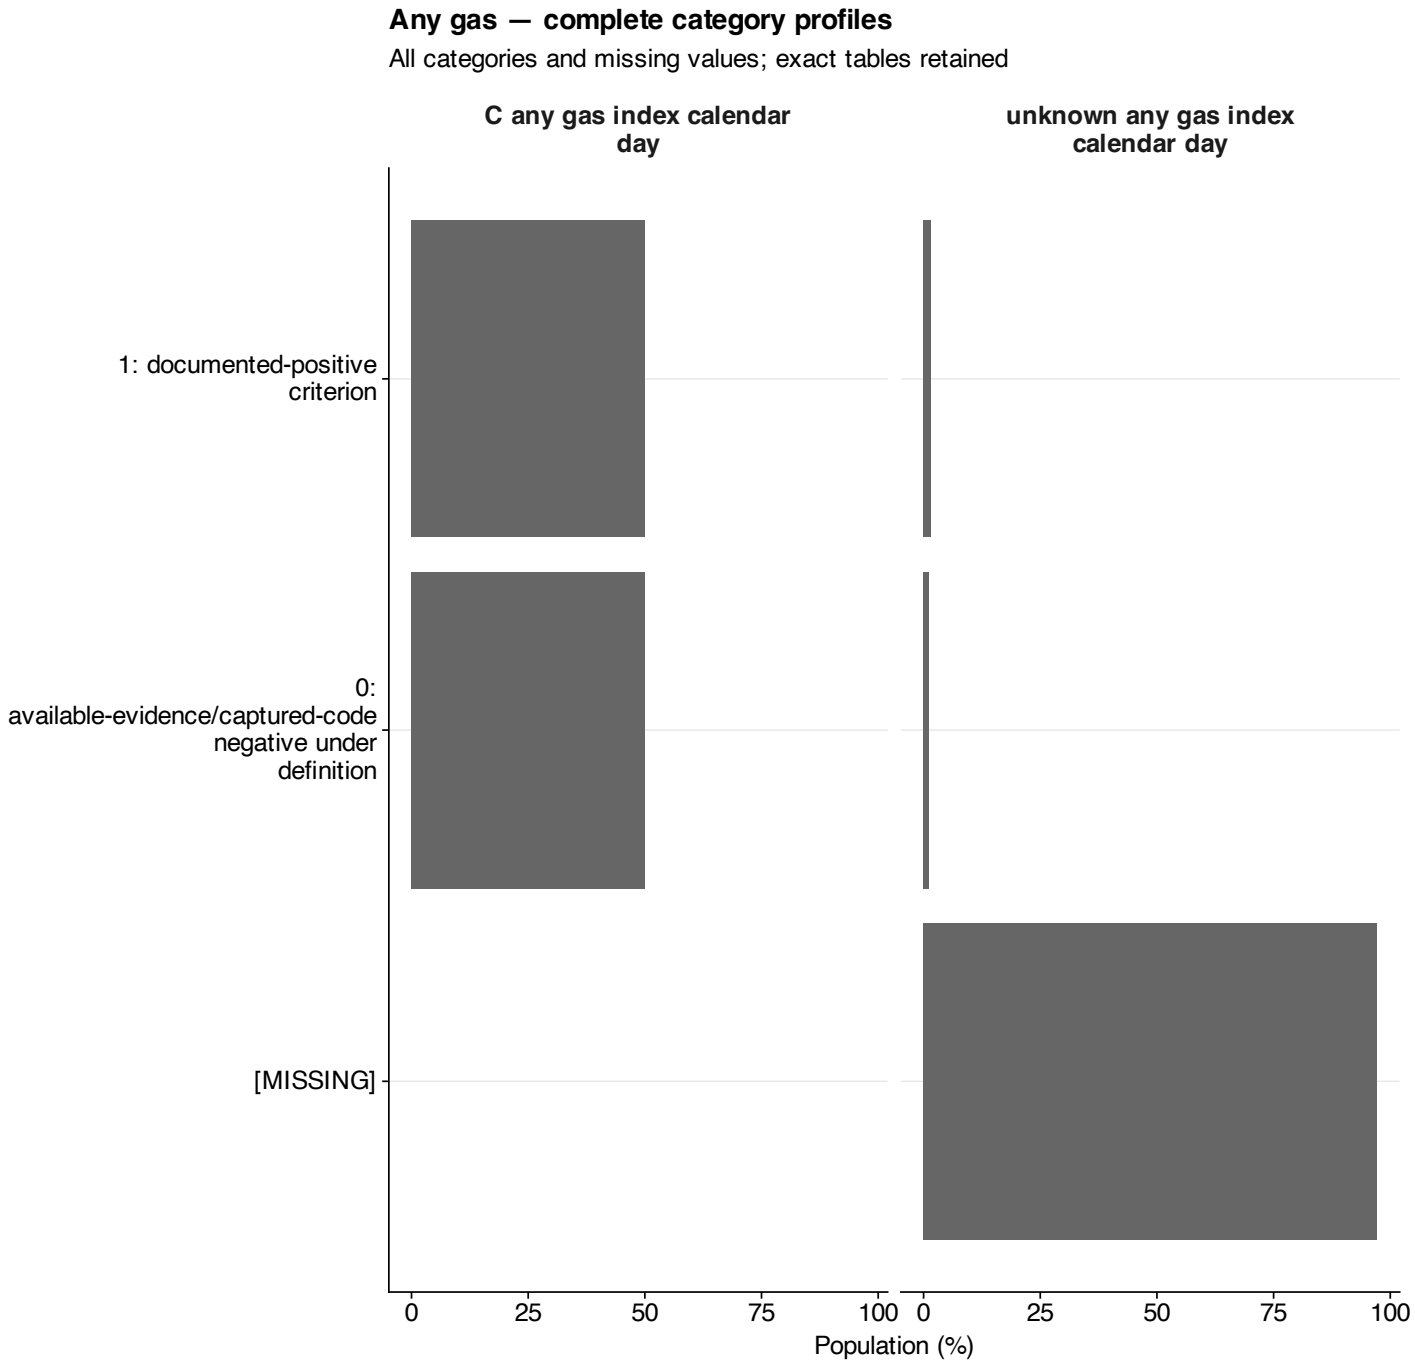

Figure 118: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete any_gas stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

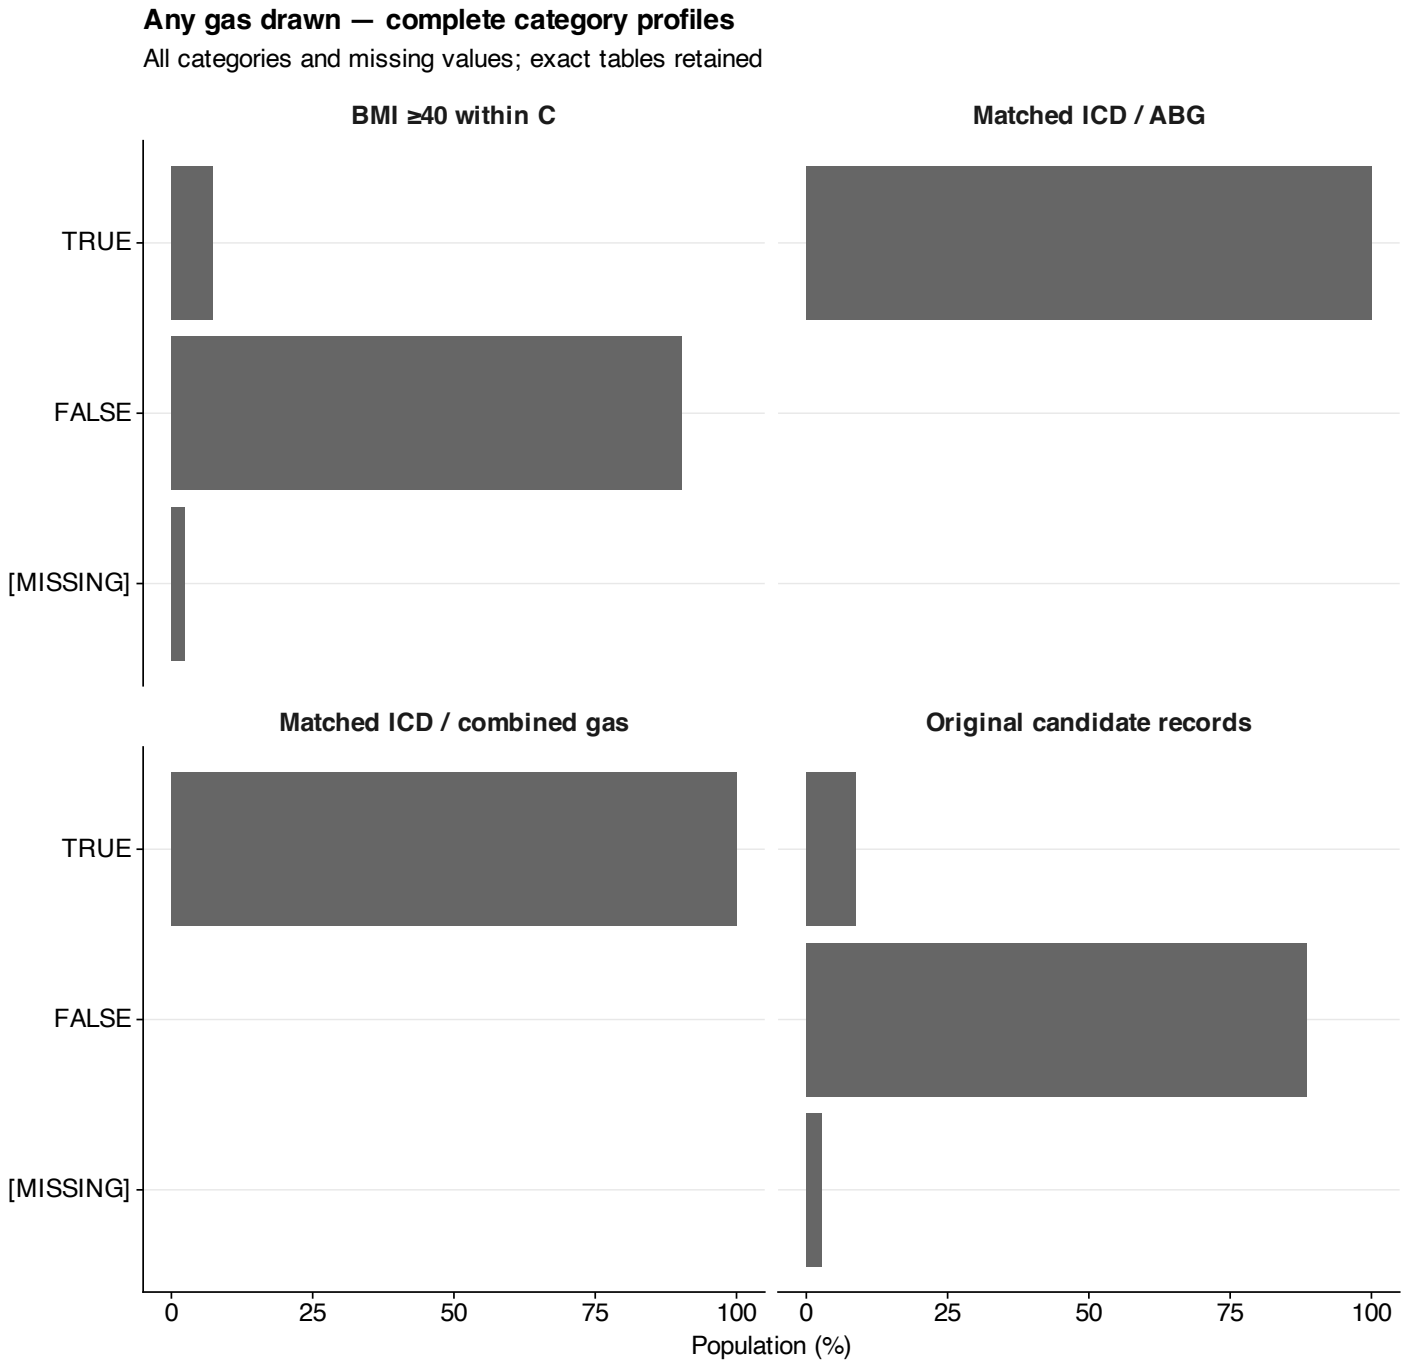

Figure 119: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete any_gas_drawn stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

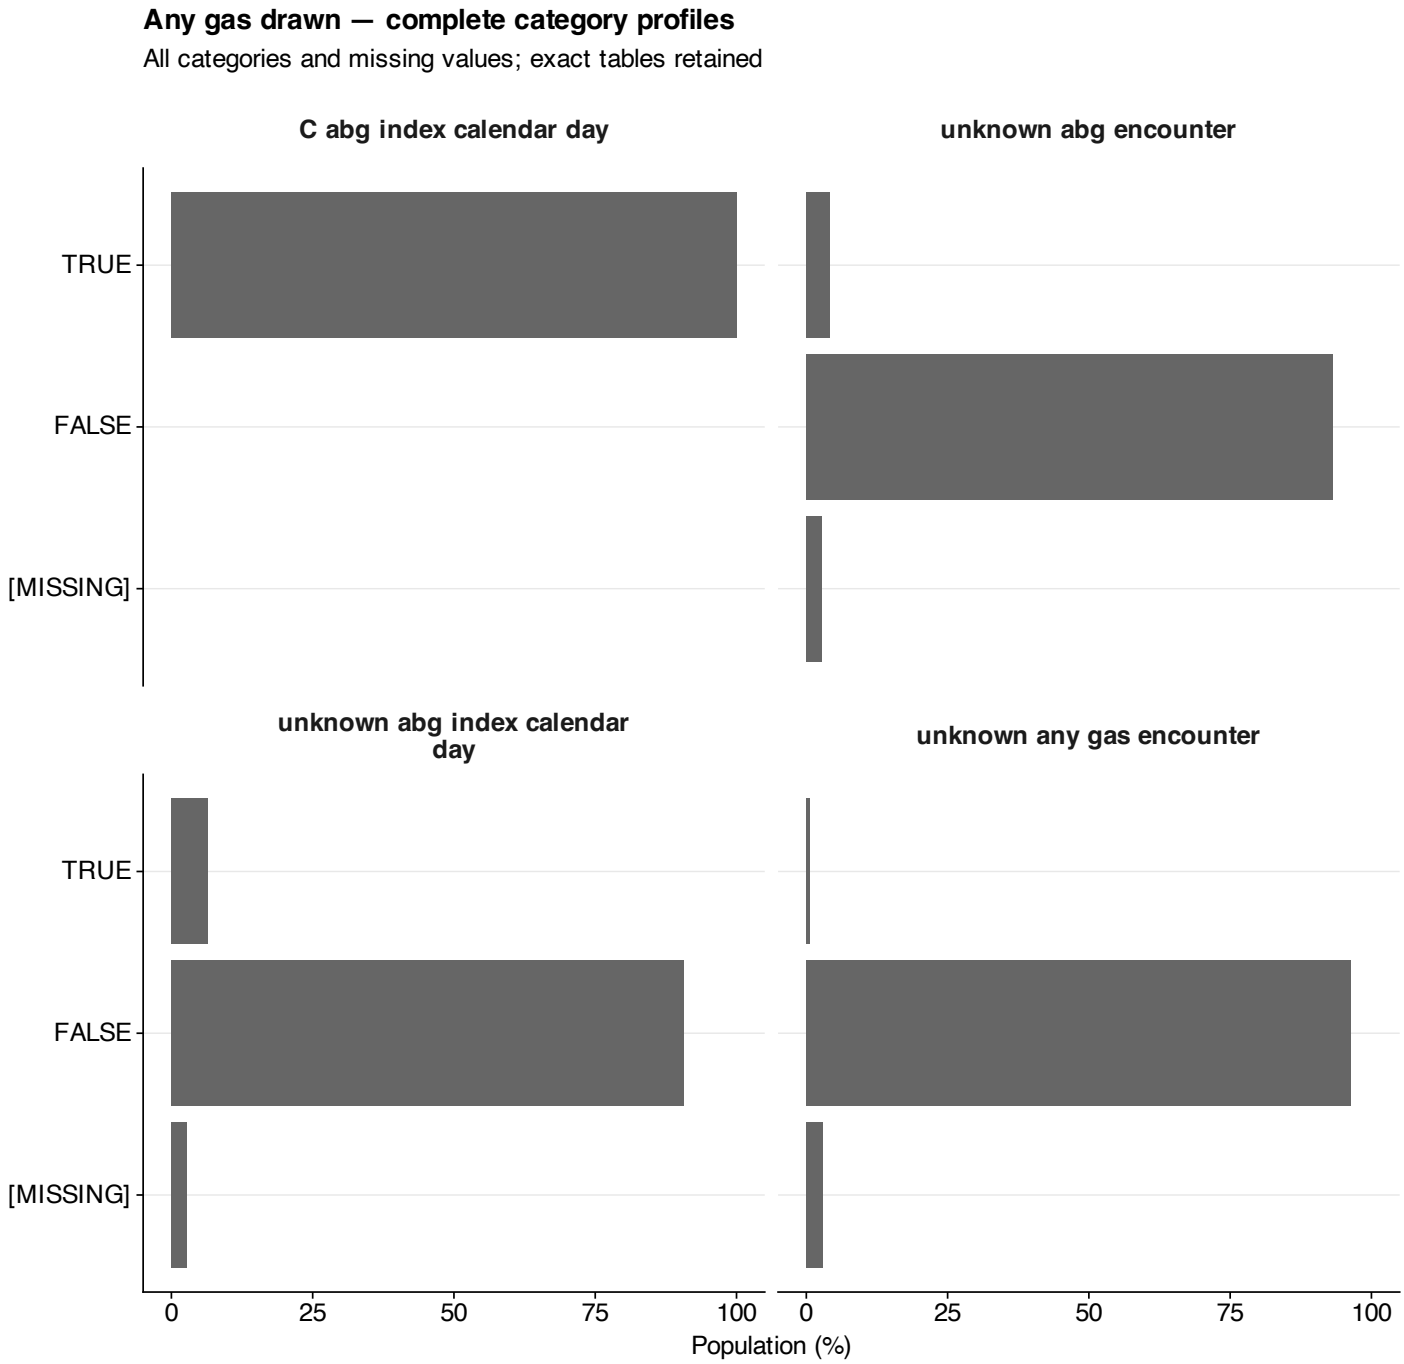

Figure 120: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete any_gas_drawn stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

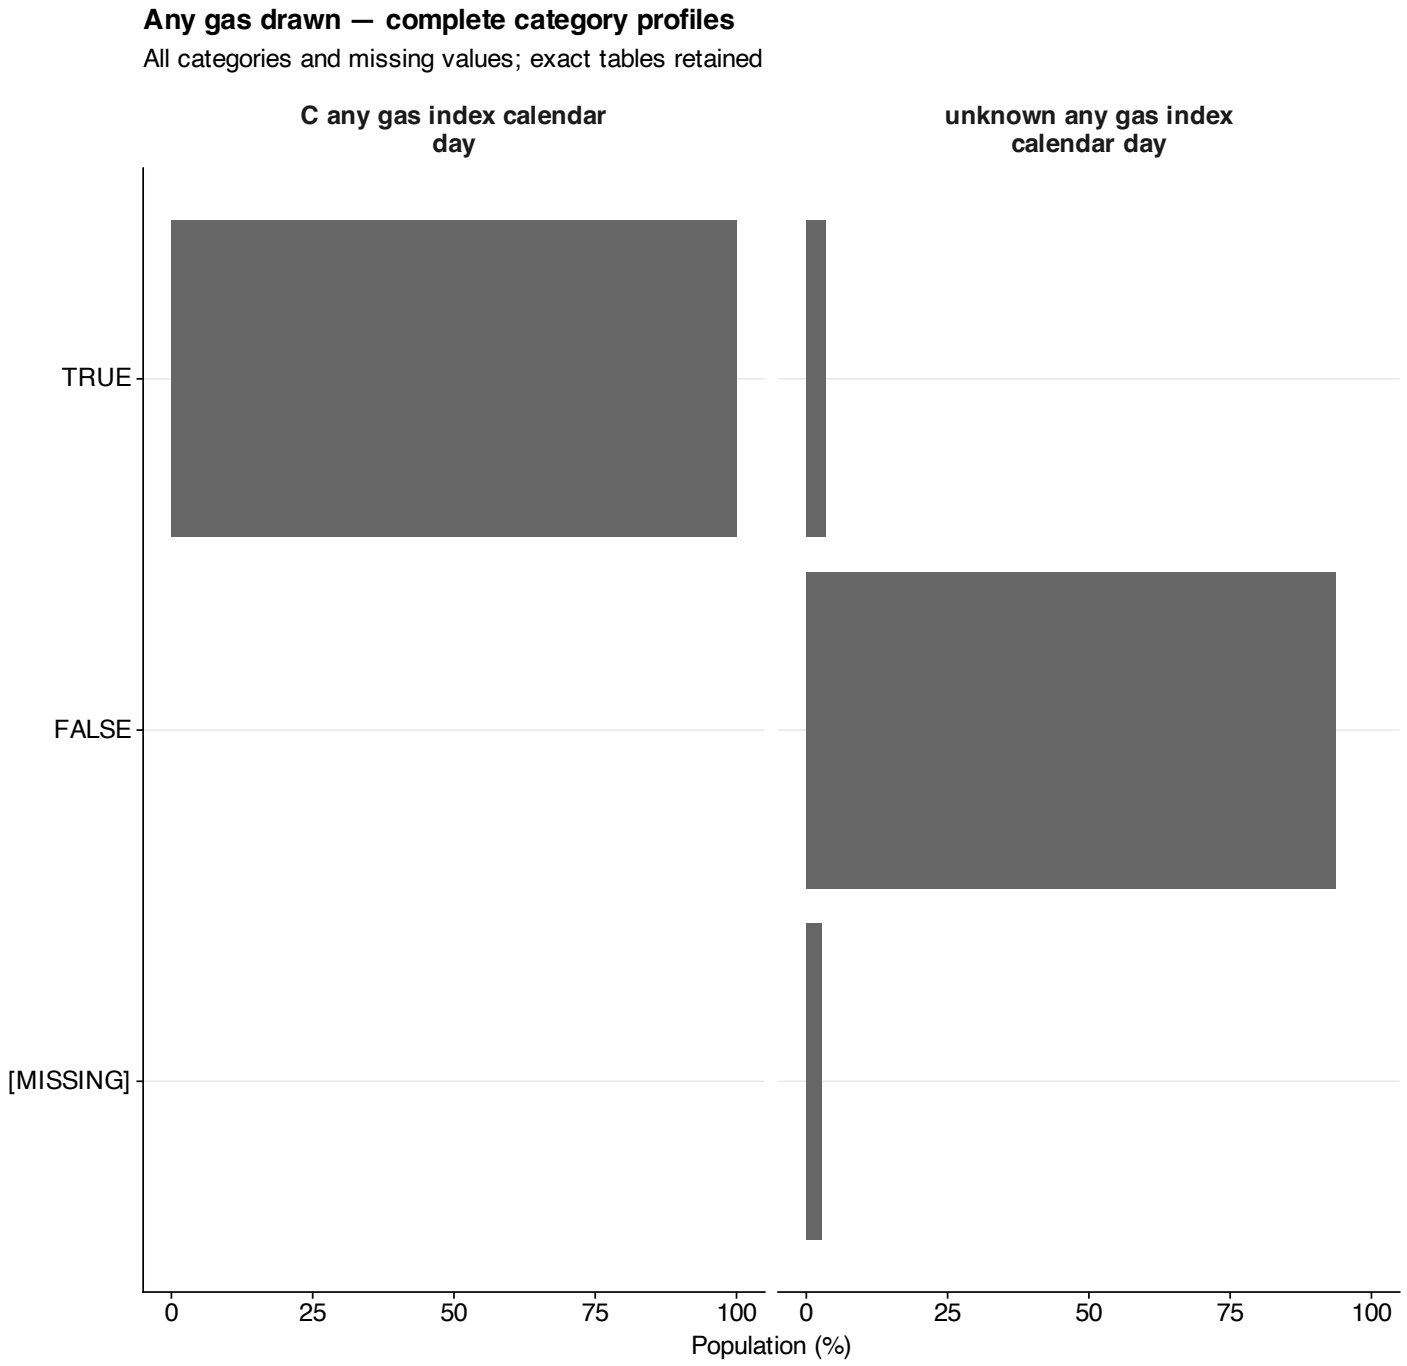

Figure 121: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete any_gas_drawn stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

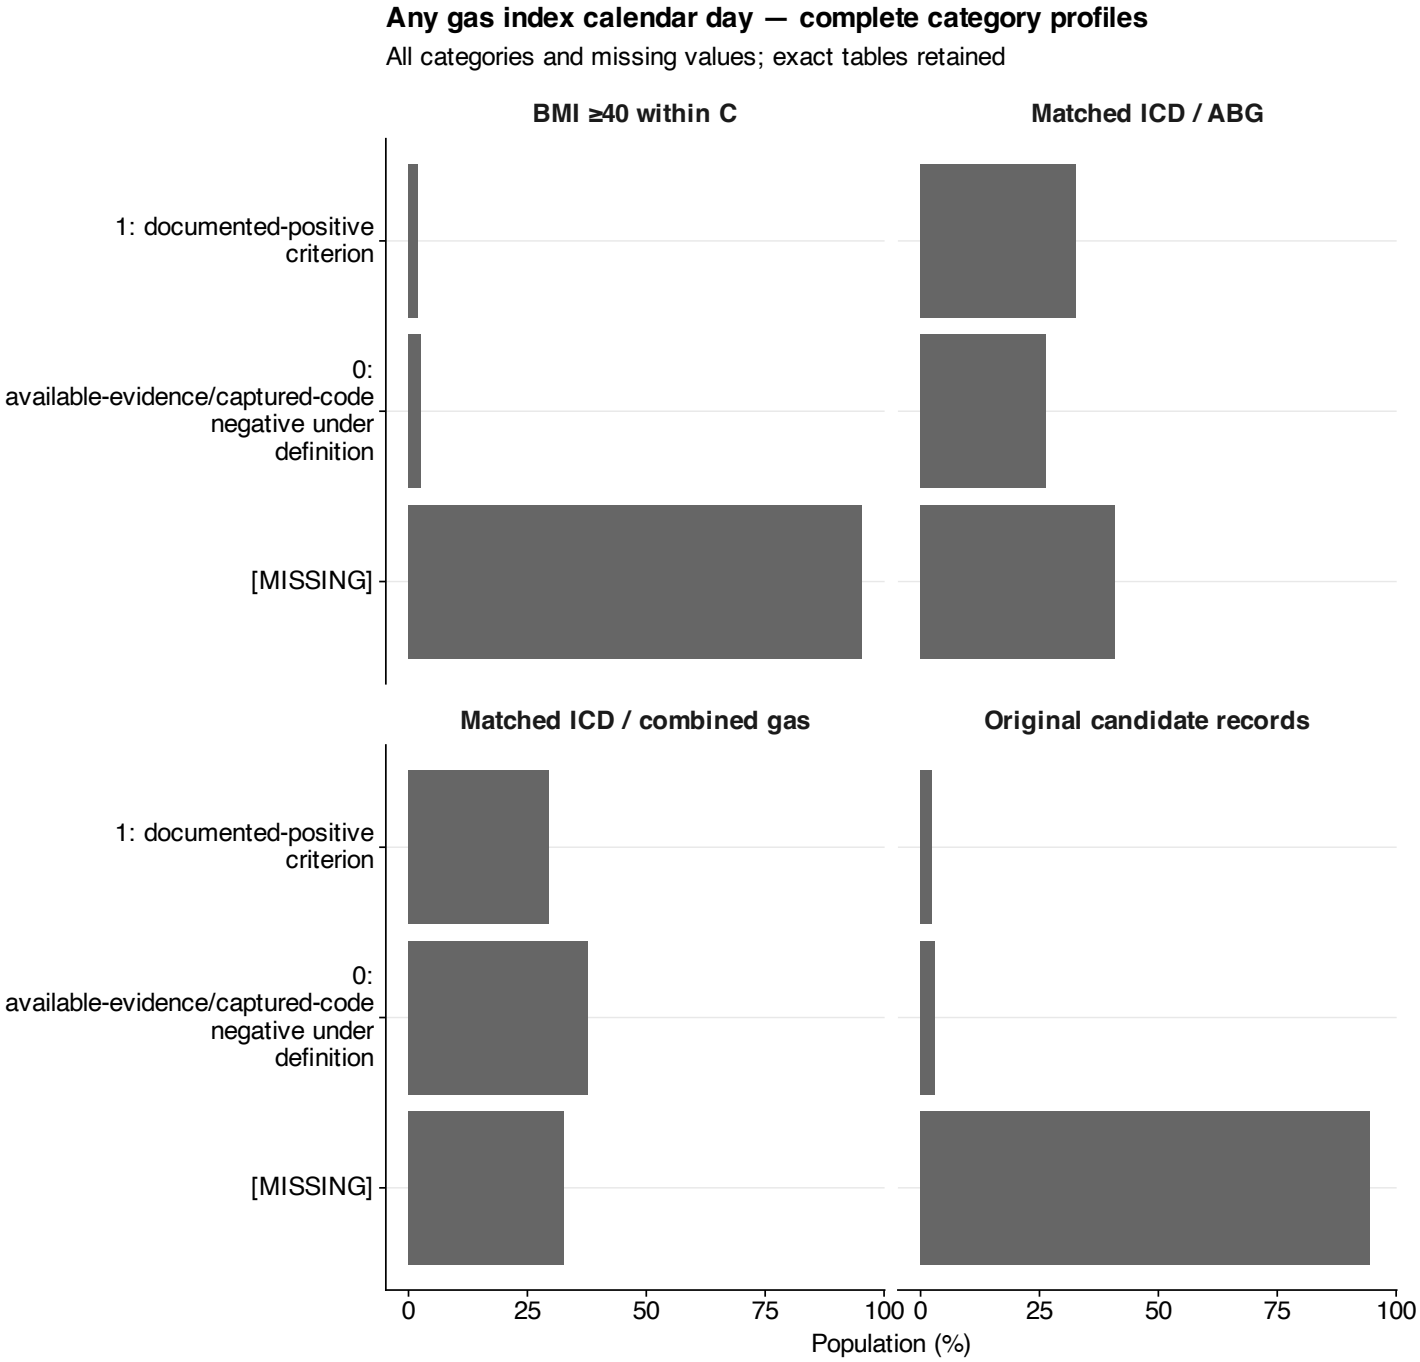

Figure 122: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete any_gas_index_calendar_day stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

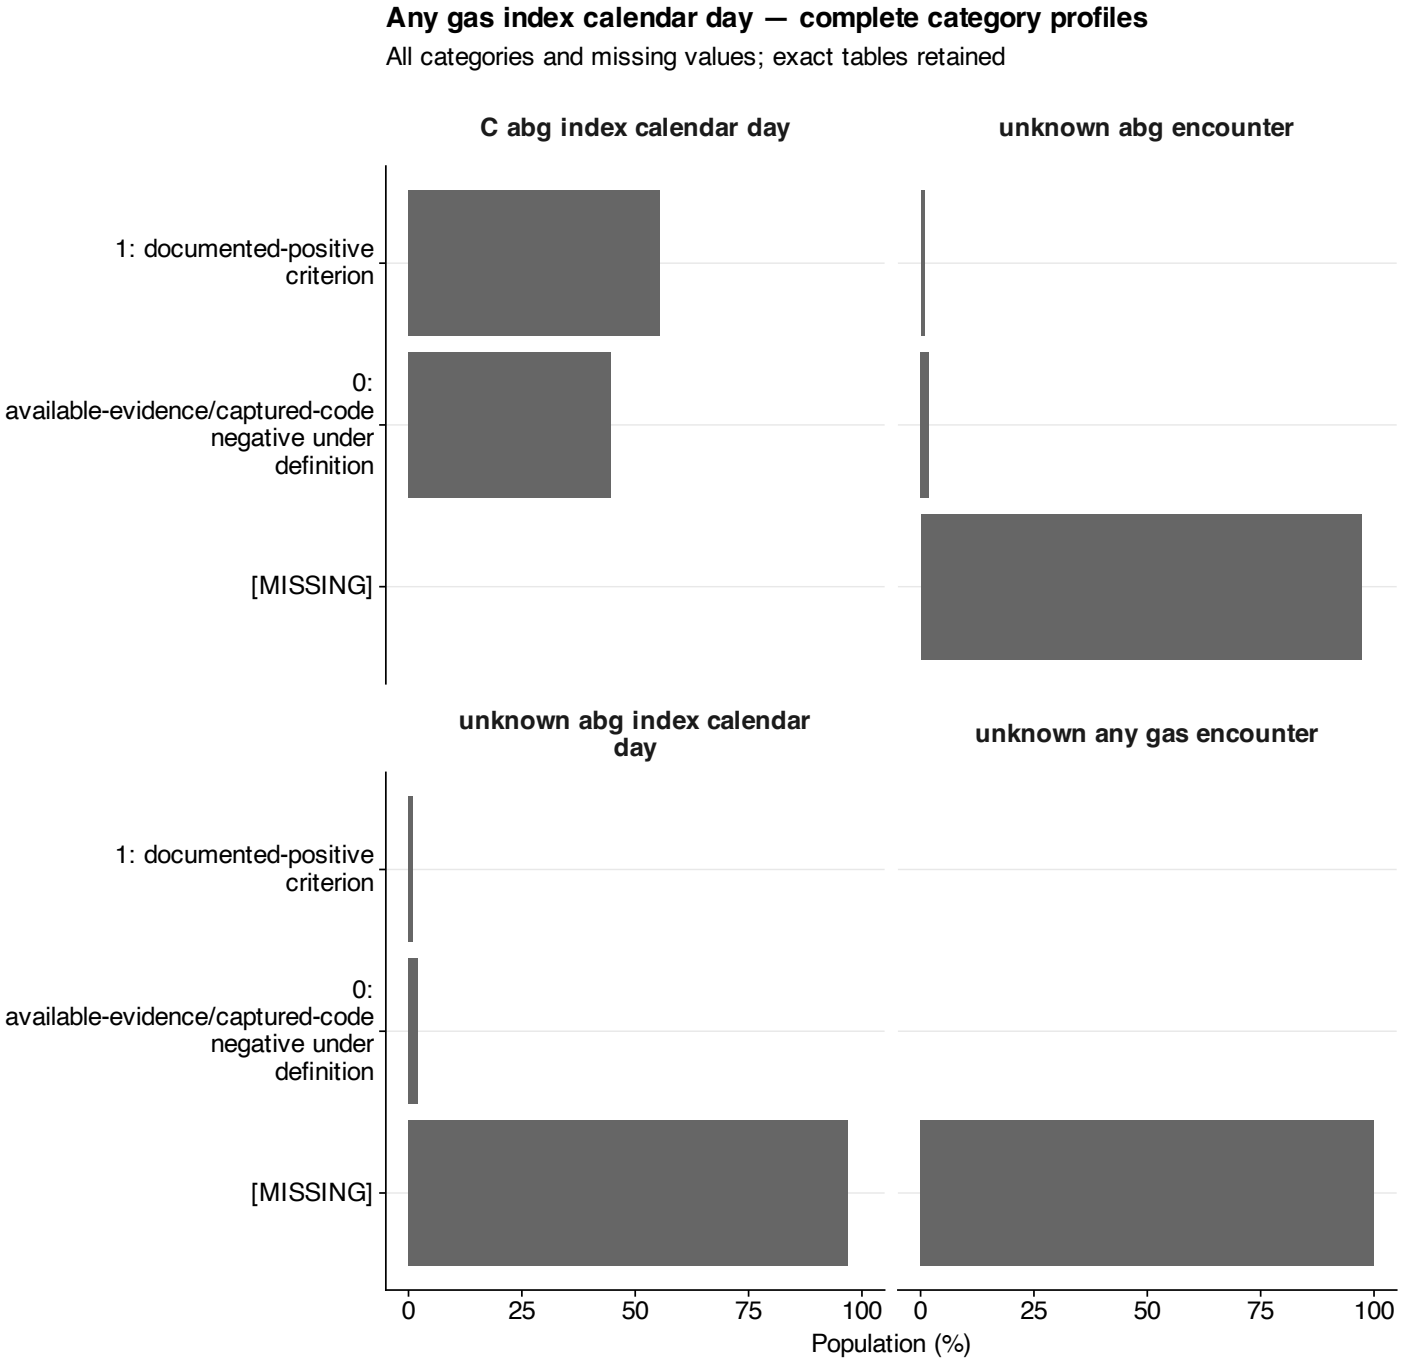

Figure 123: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete any_gas_index_calendar_day stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

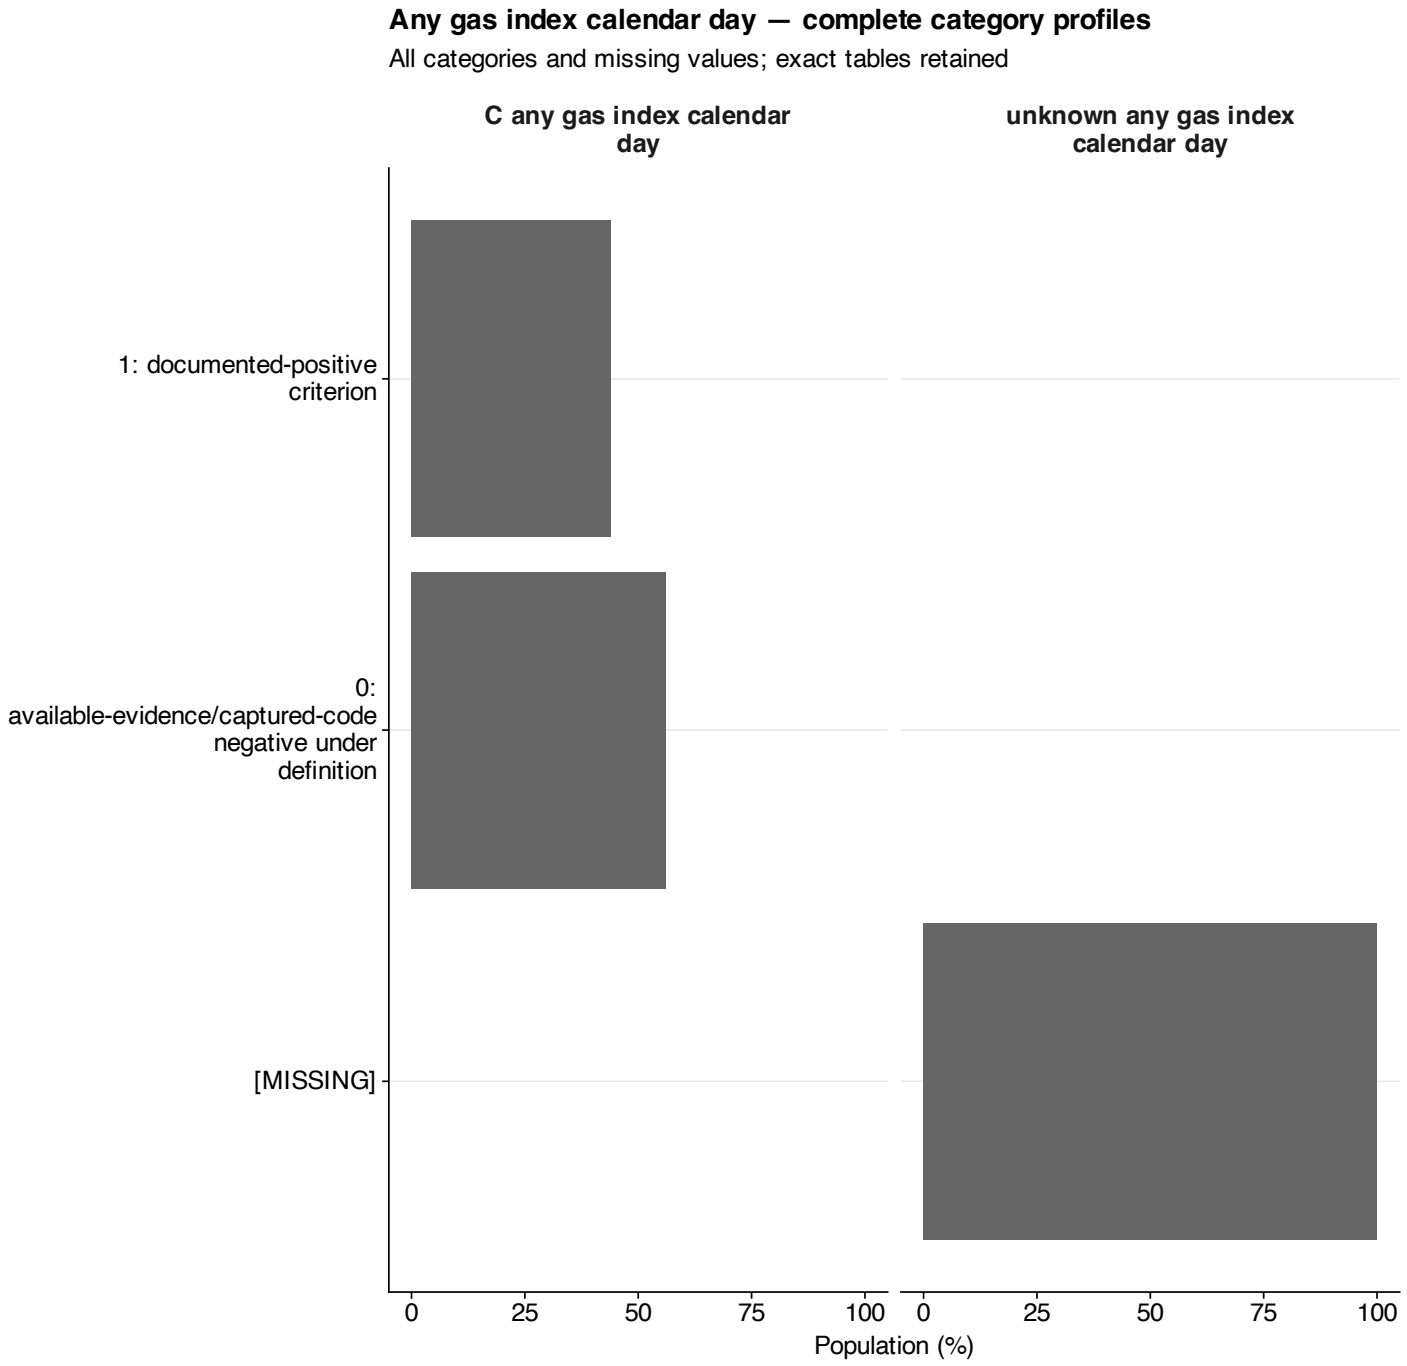

Figure 124: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete any_gas_index_calendar_day stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

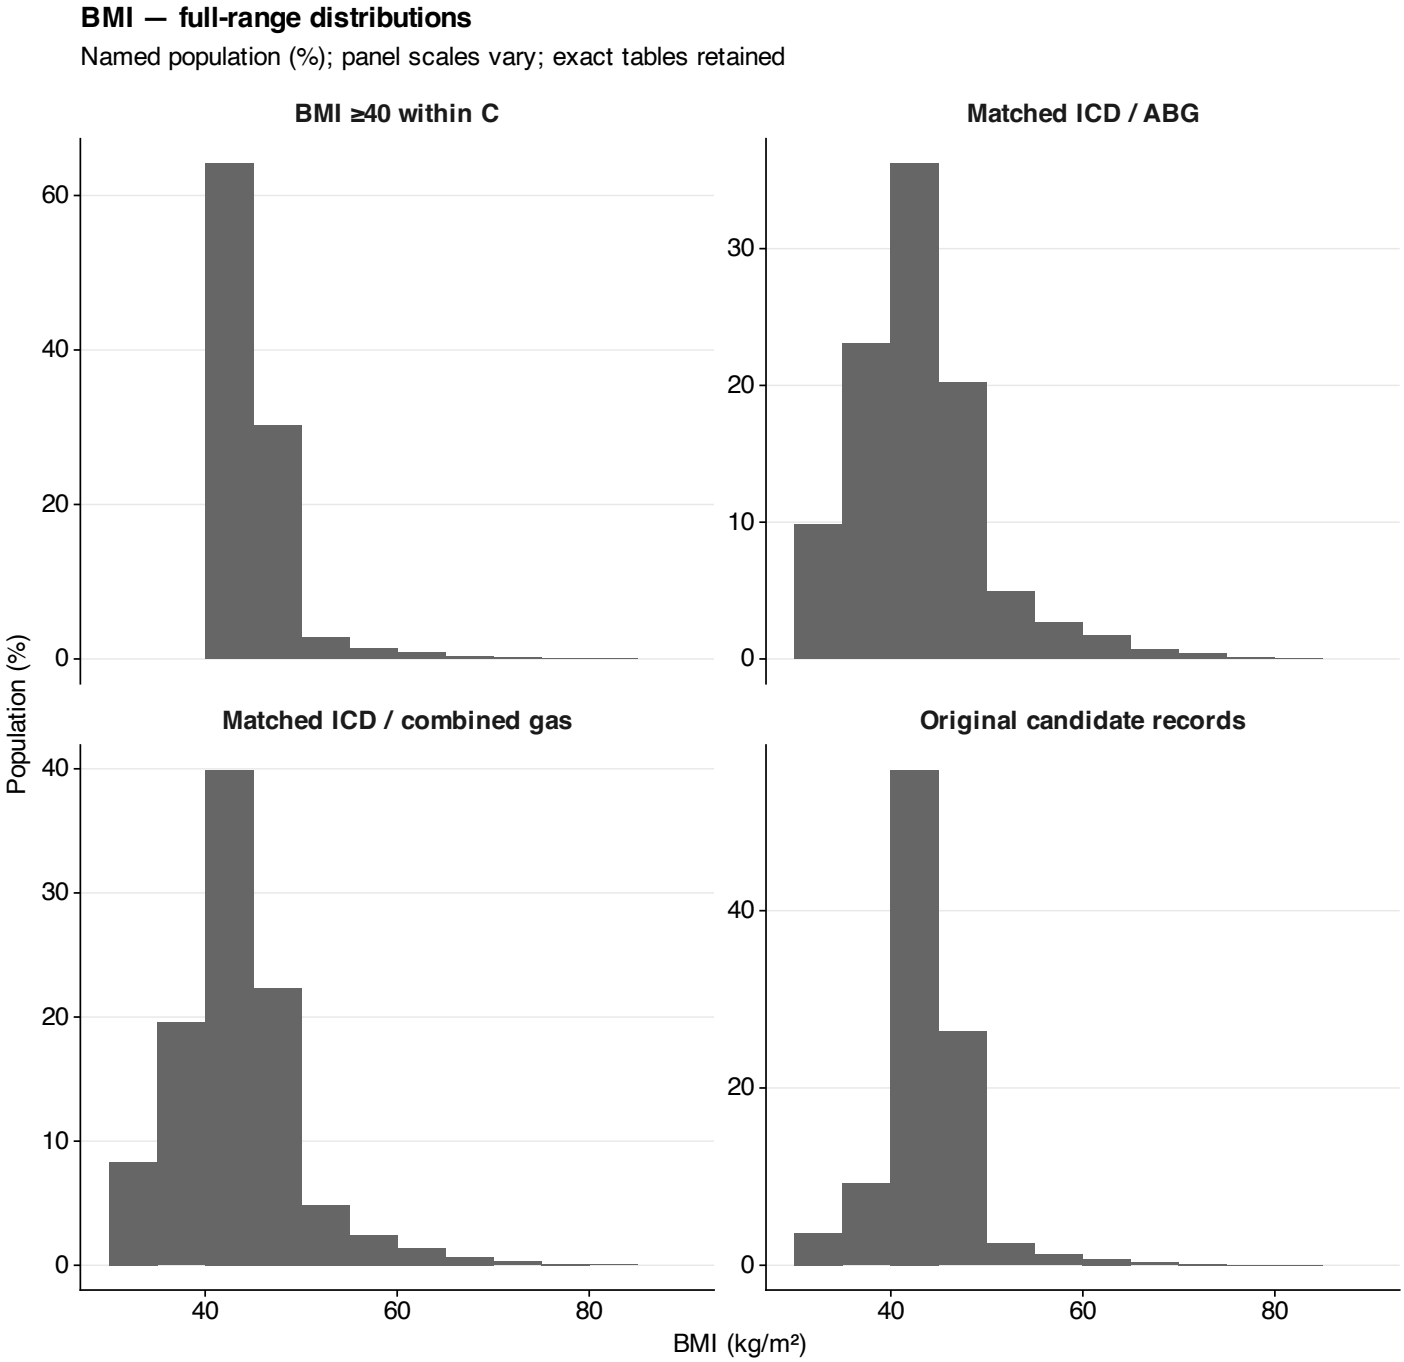

Figure 125: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete bmi stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

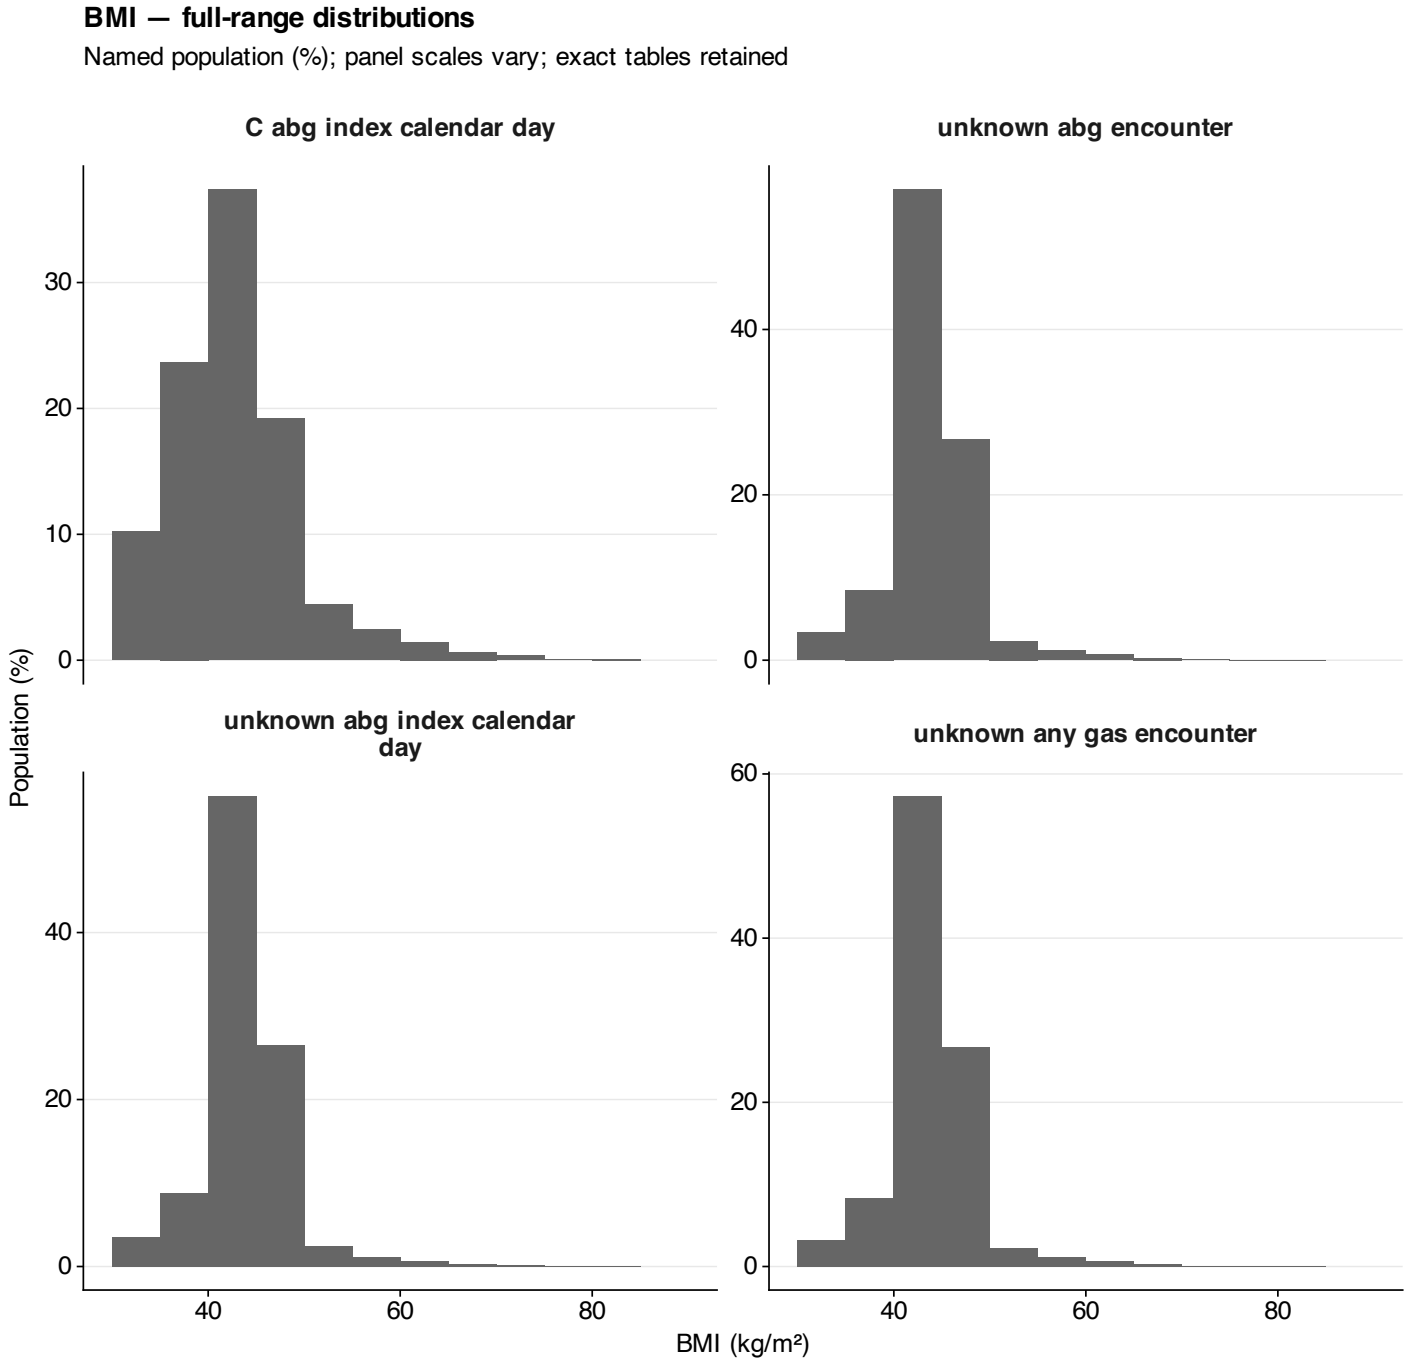

Figure 126: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete bmi stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

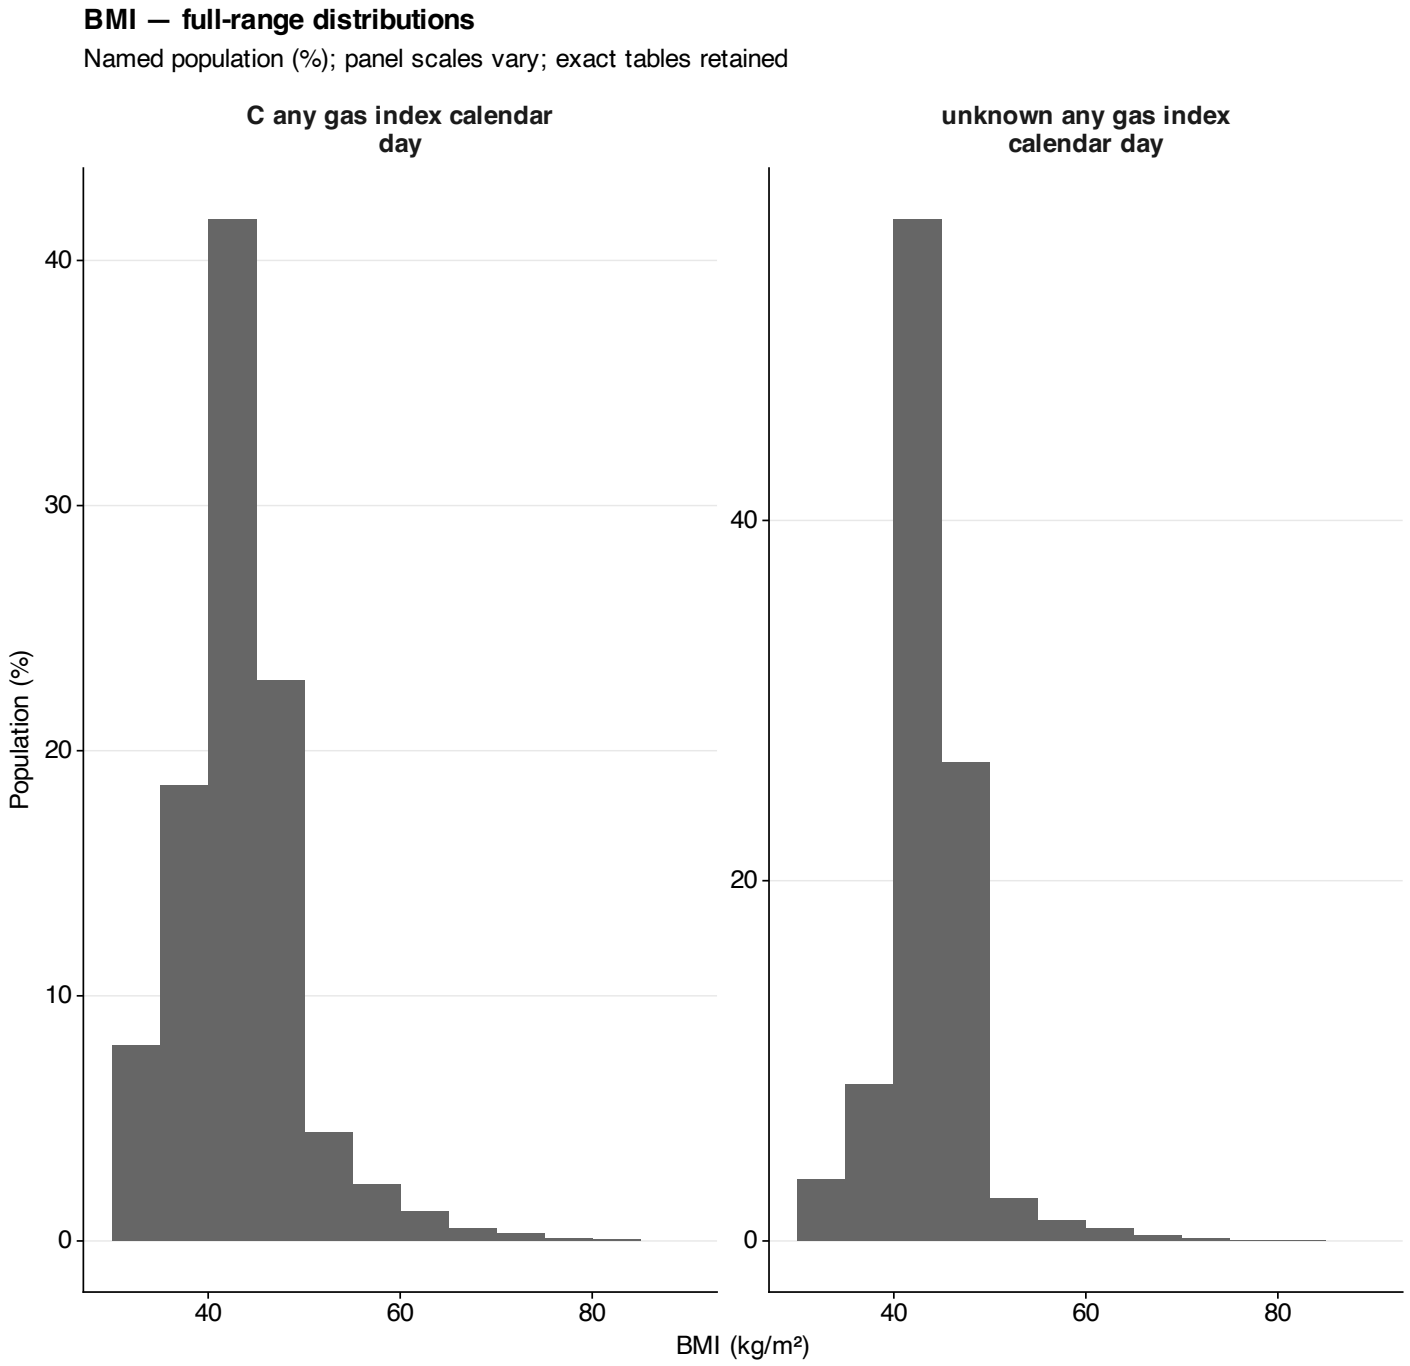

Figure 127: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete bmi stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

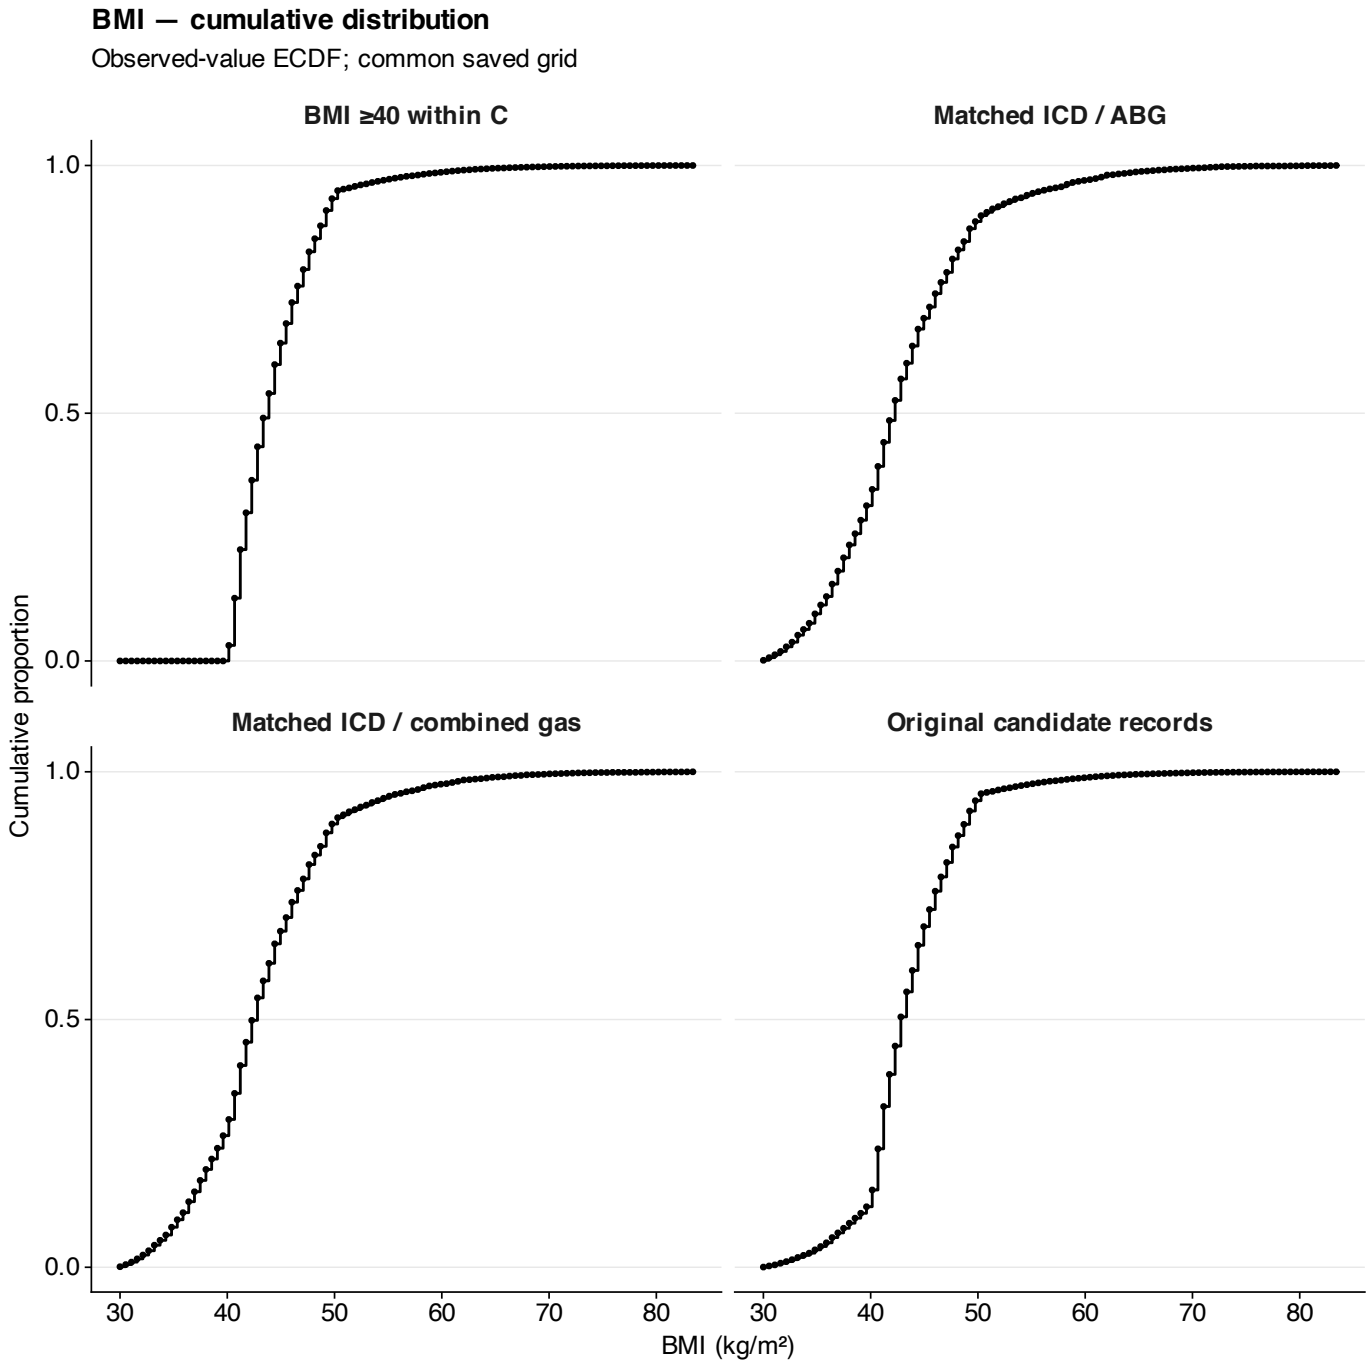

Figure 128: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. bmi ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

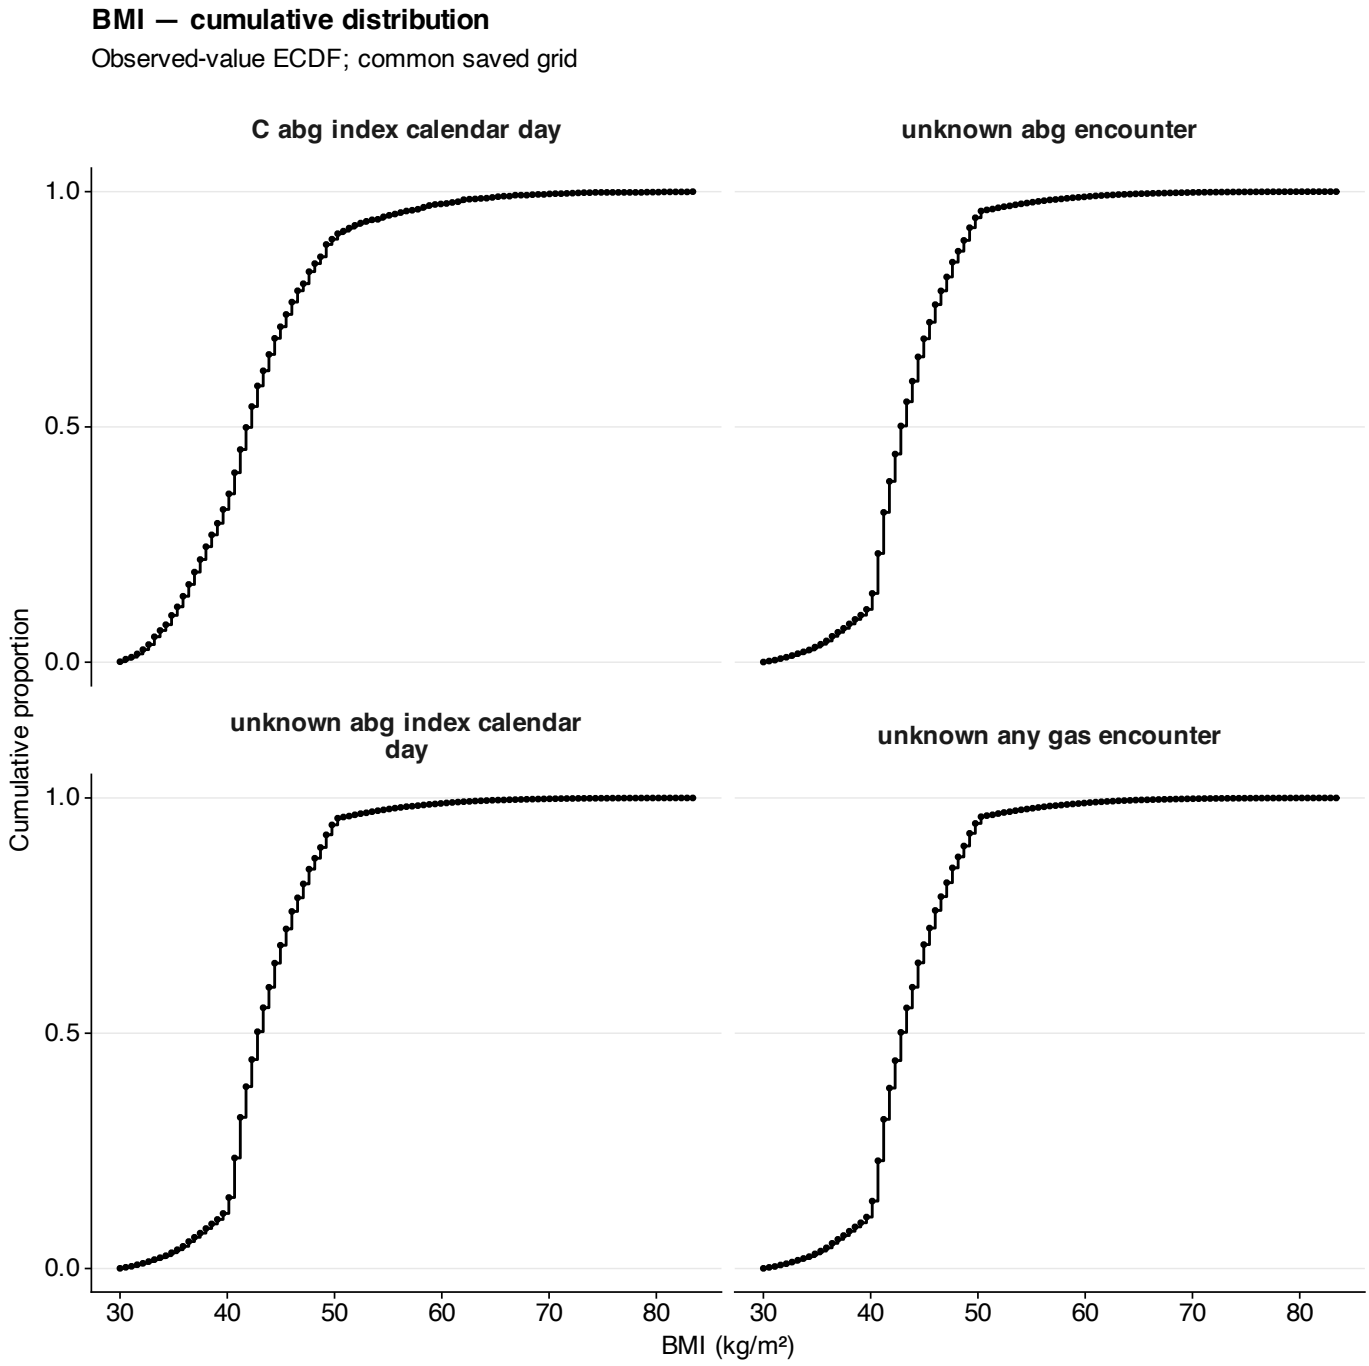

Figure 129: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. bmi ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

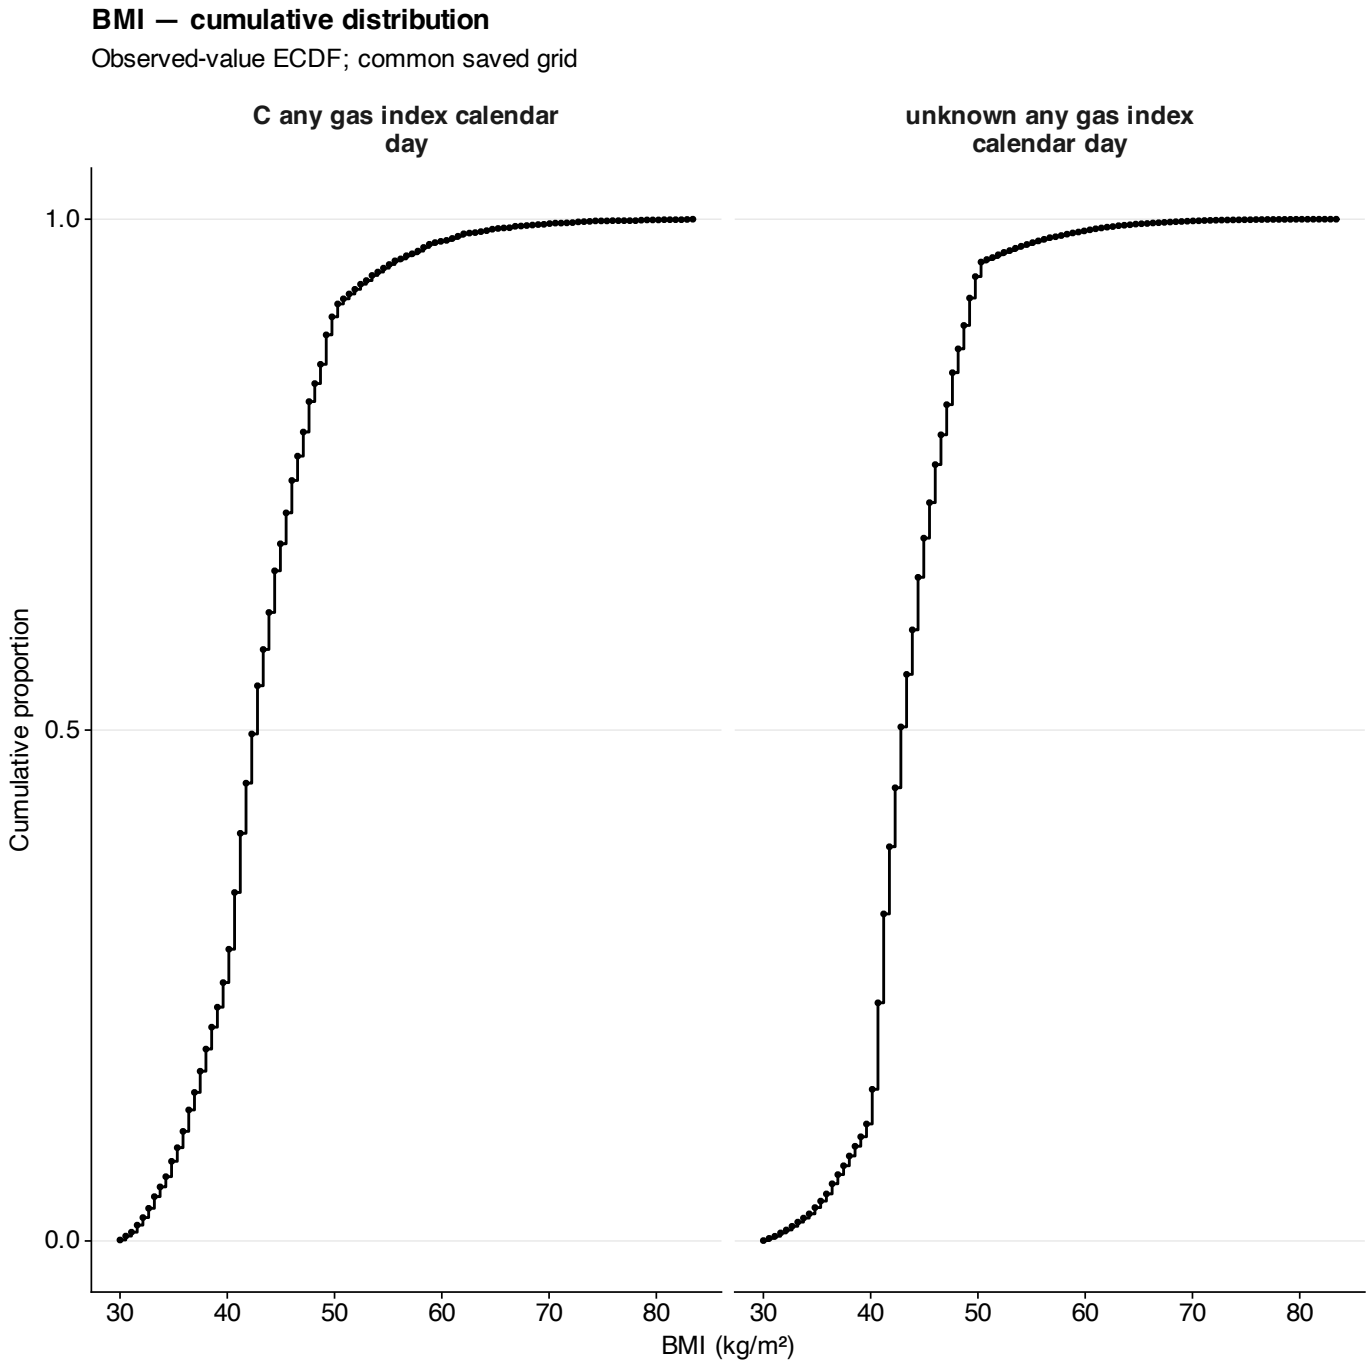

Figure 130: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. bmi ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

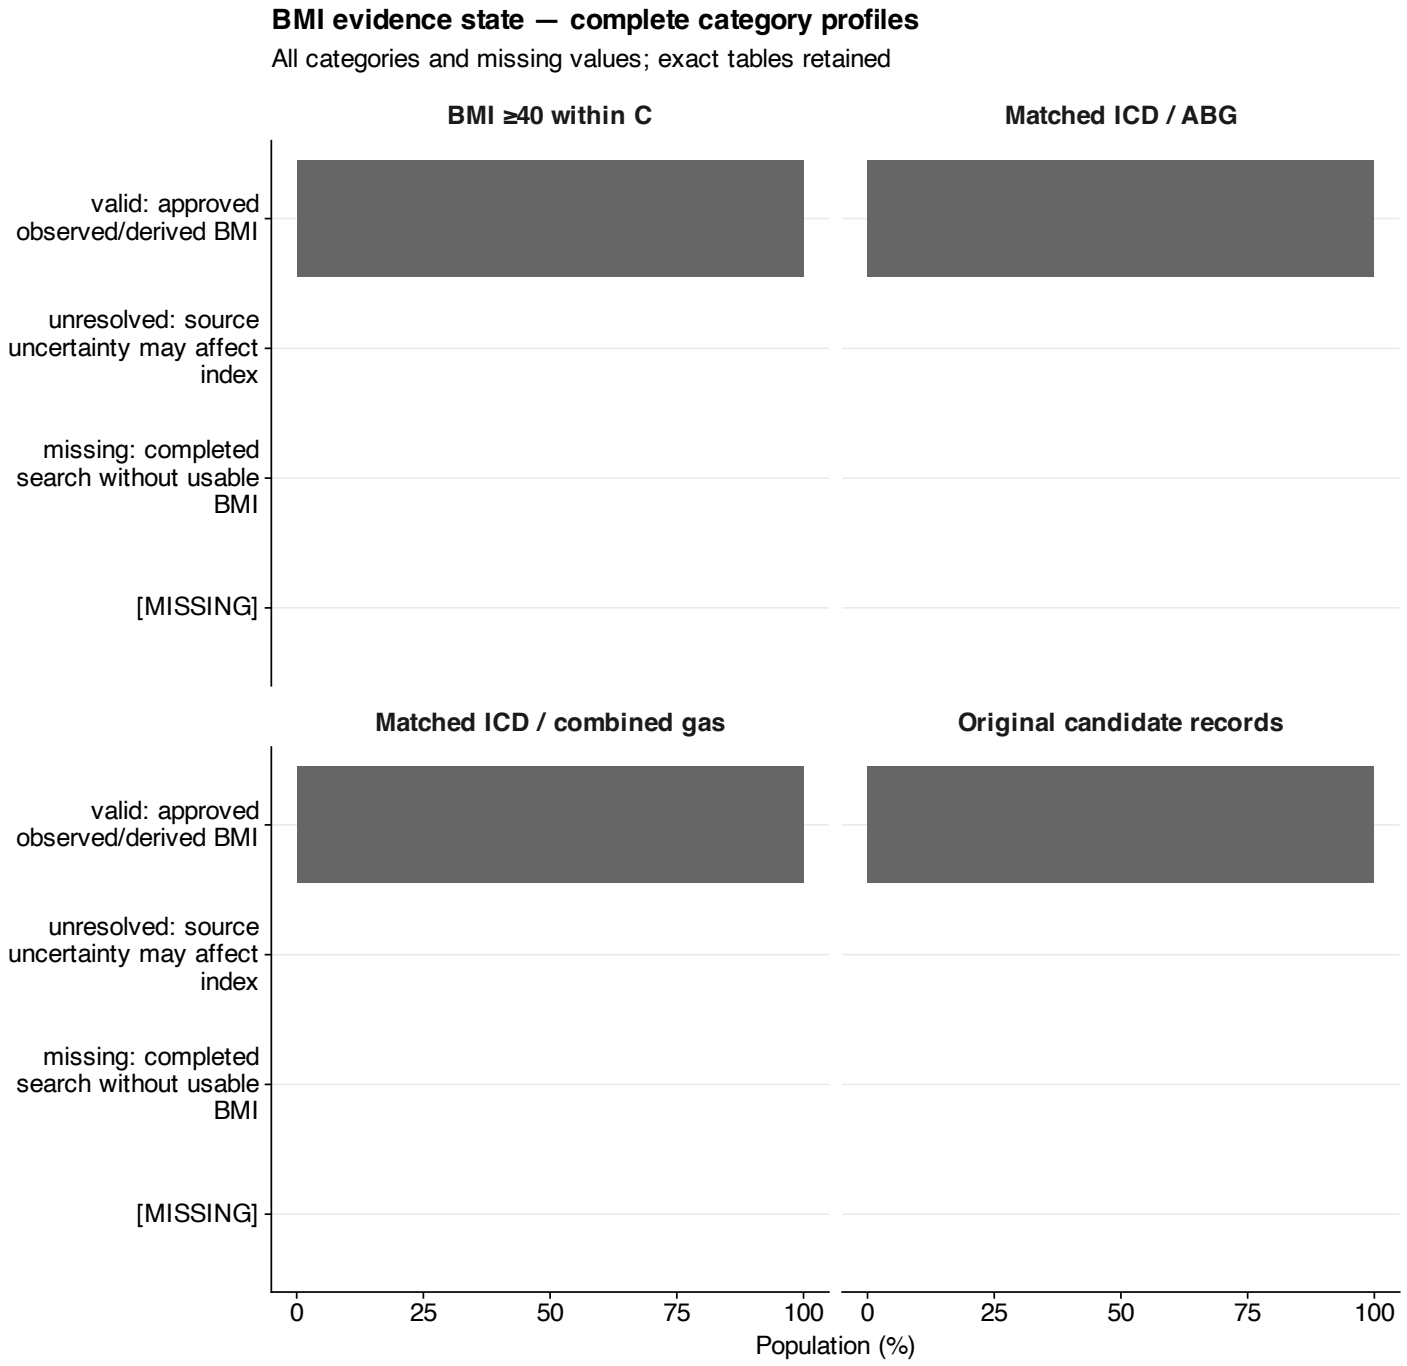

Figure 131: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete bmi_evidence_state stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

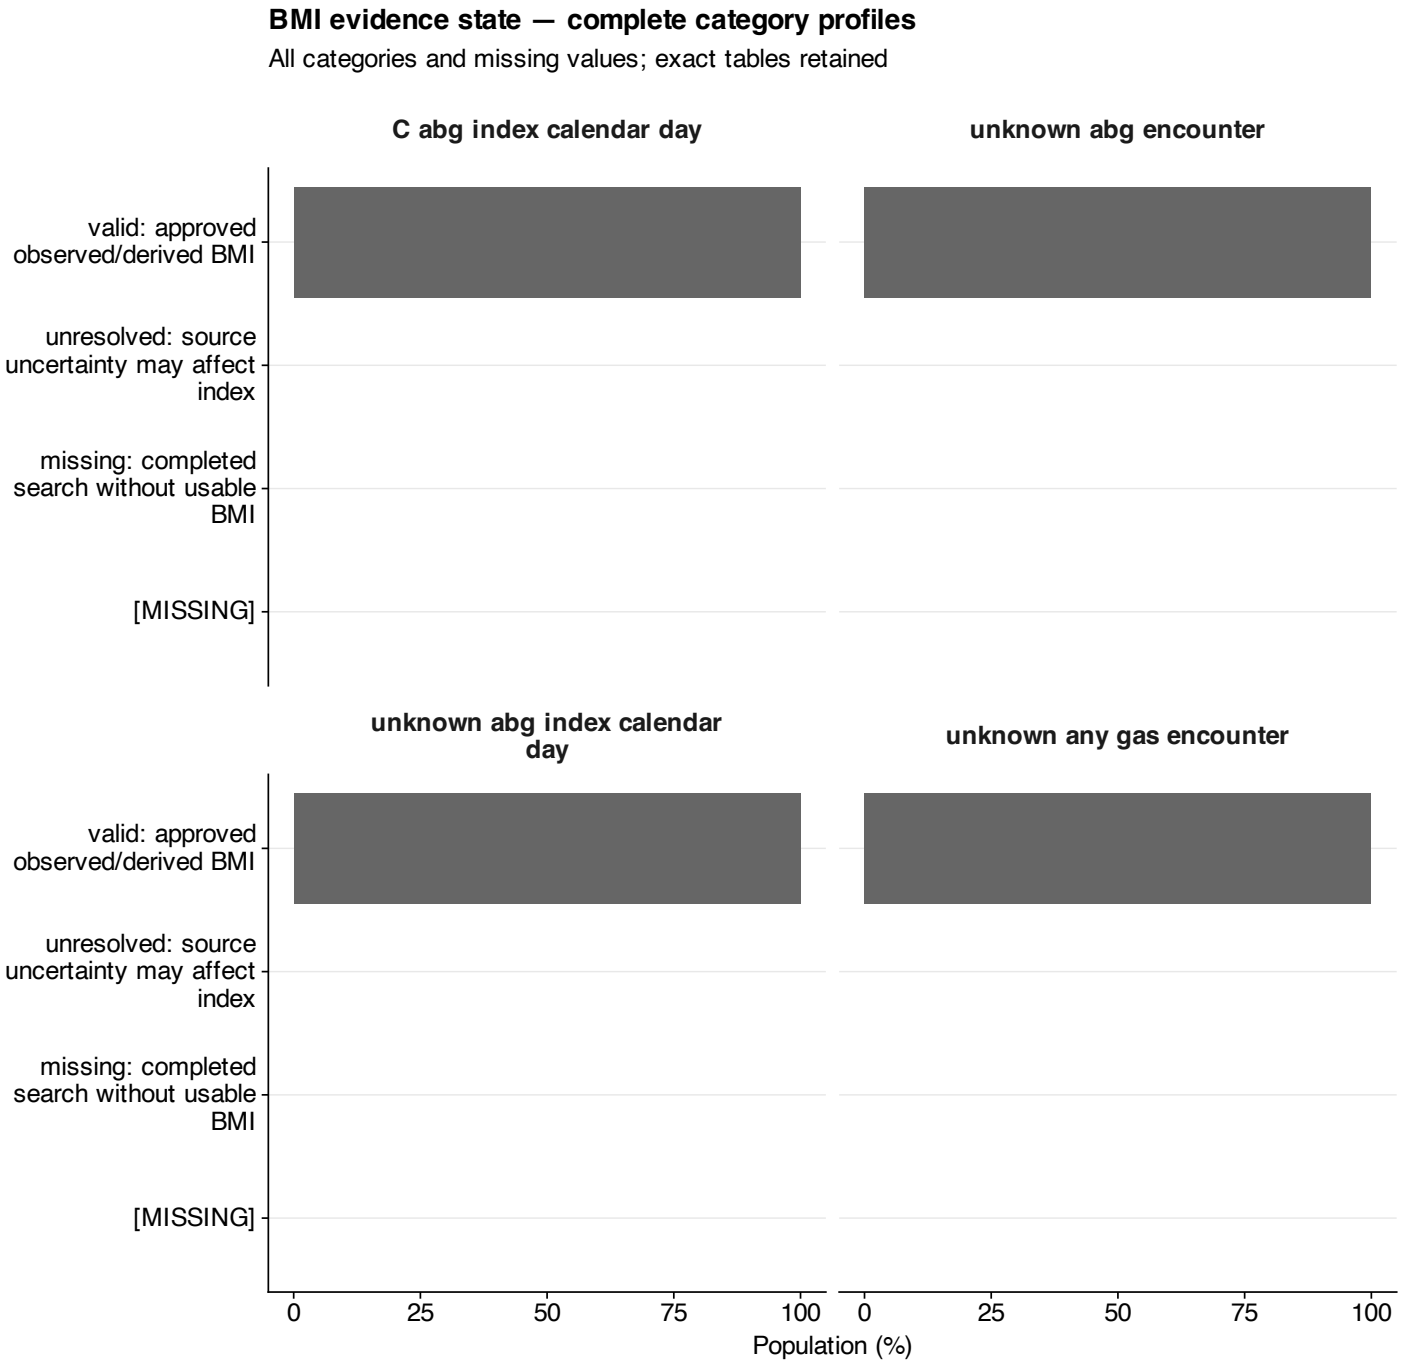

Figure 132: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete bmi_evidence_state stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

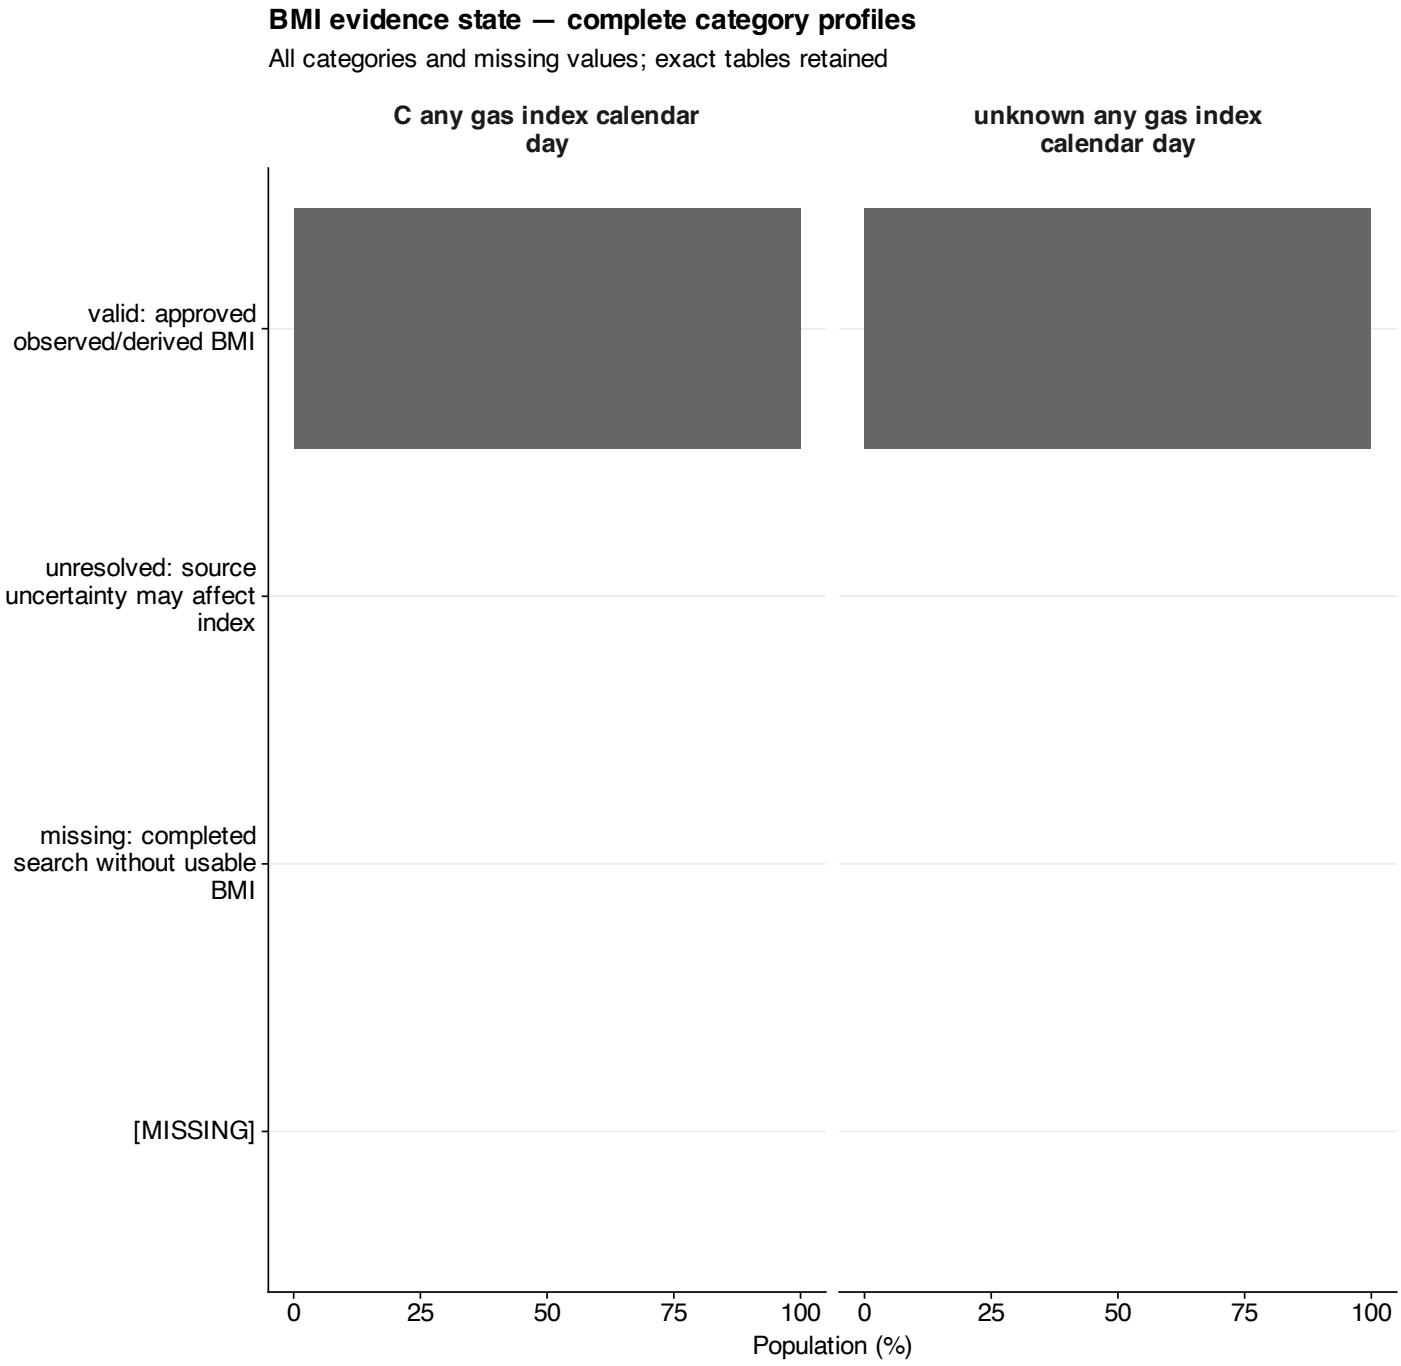

Figure 133: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete bmi_evidence_state stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

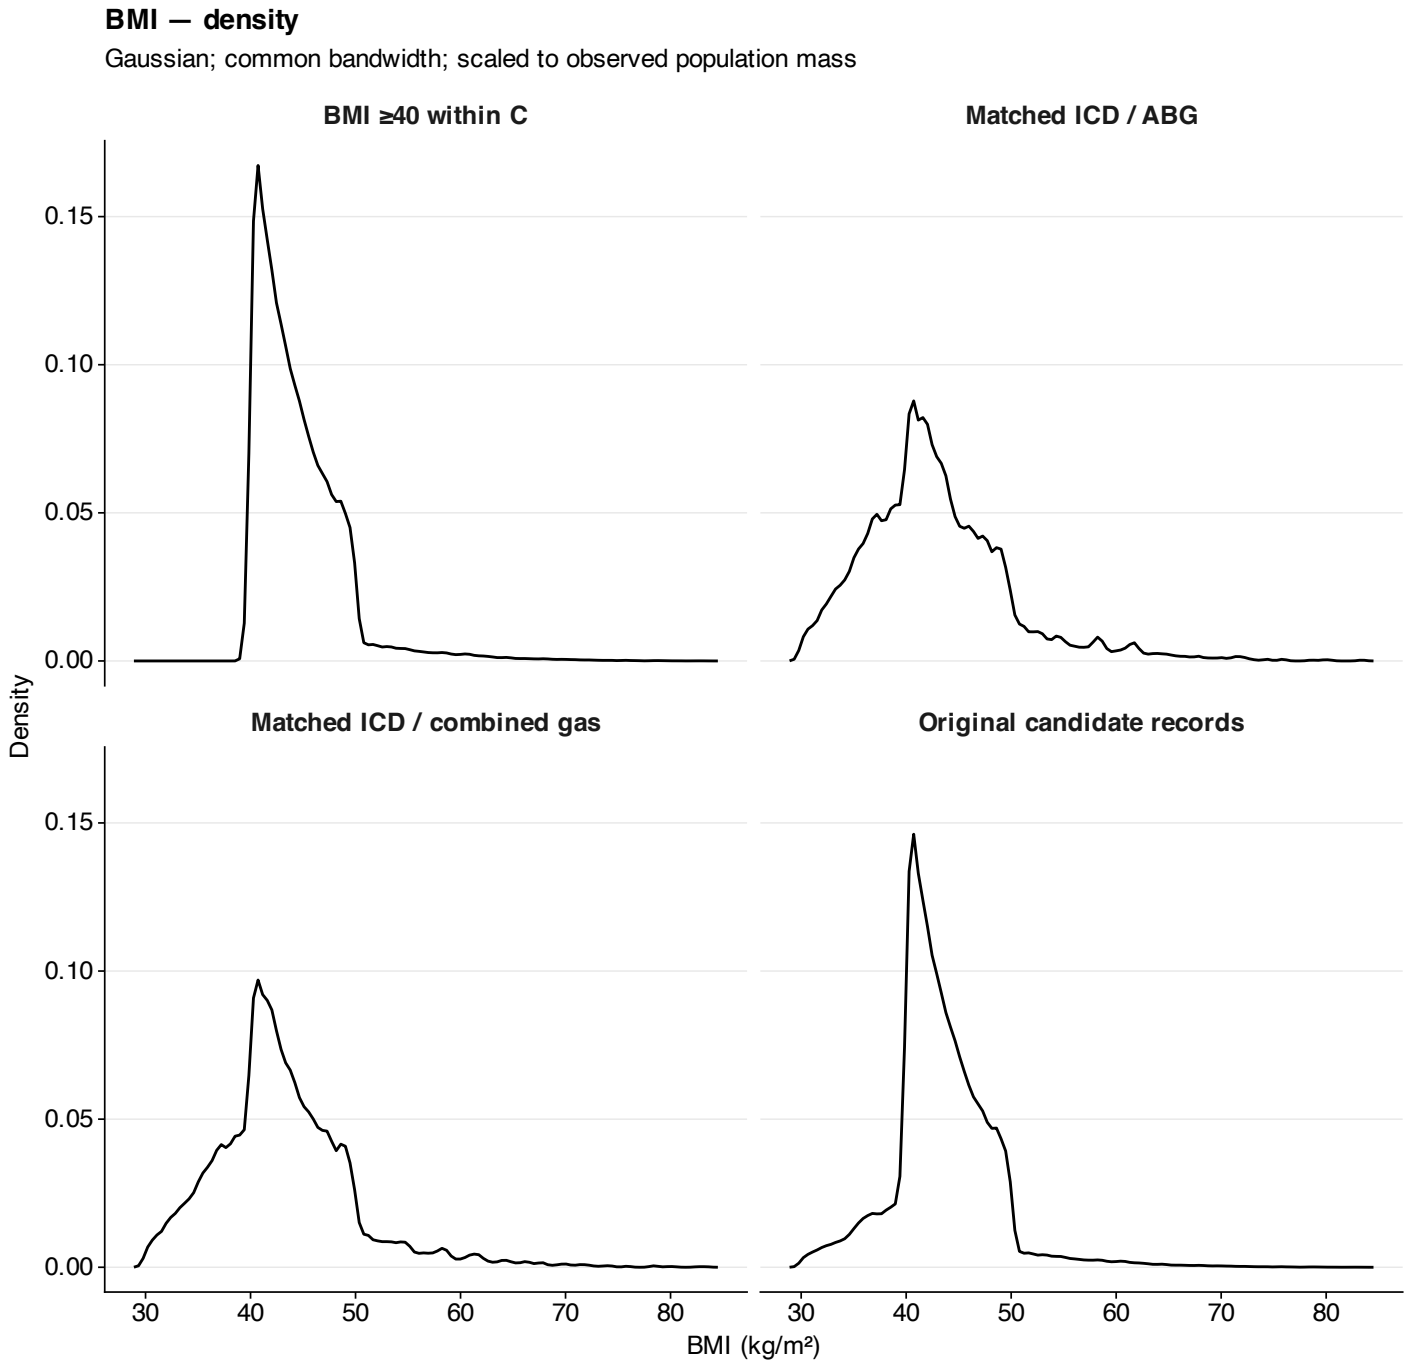

Figure 134: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. bmi kde across named stages; full coordinate export and normalization metadata in distribution_curves.

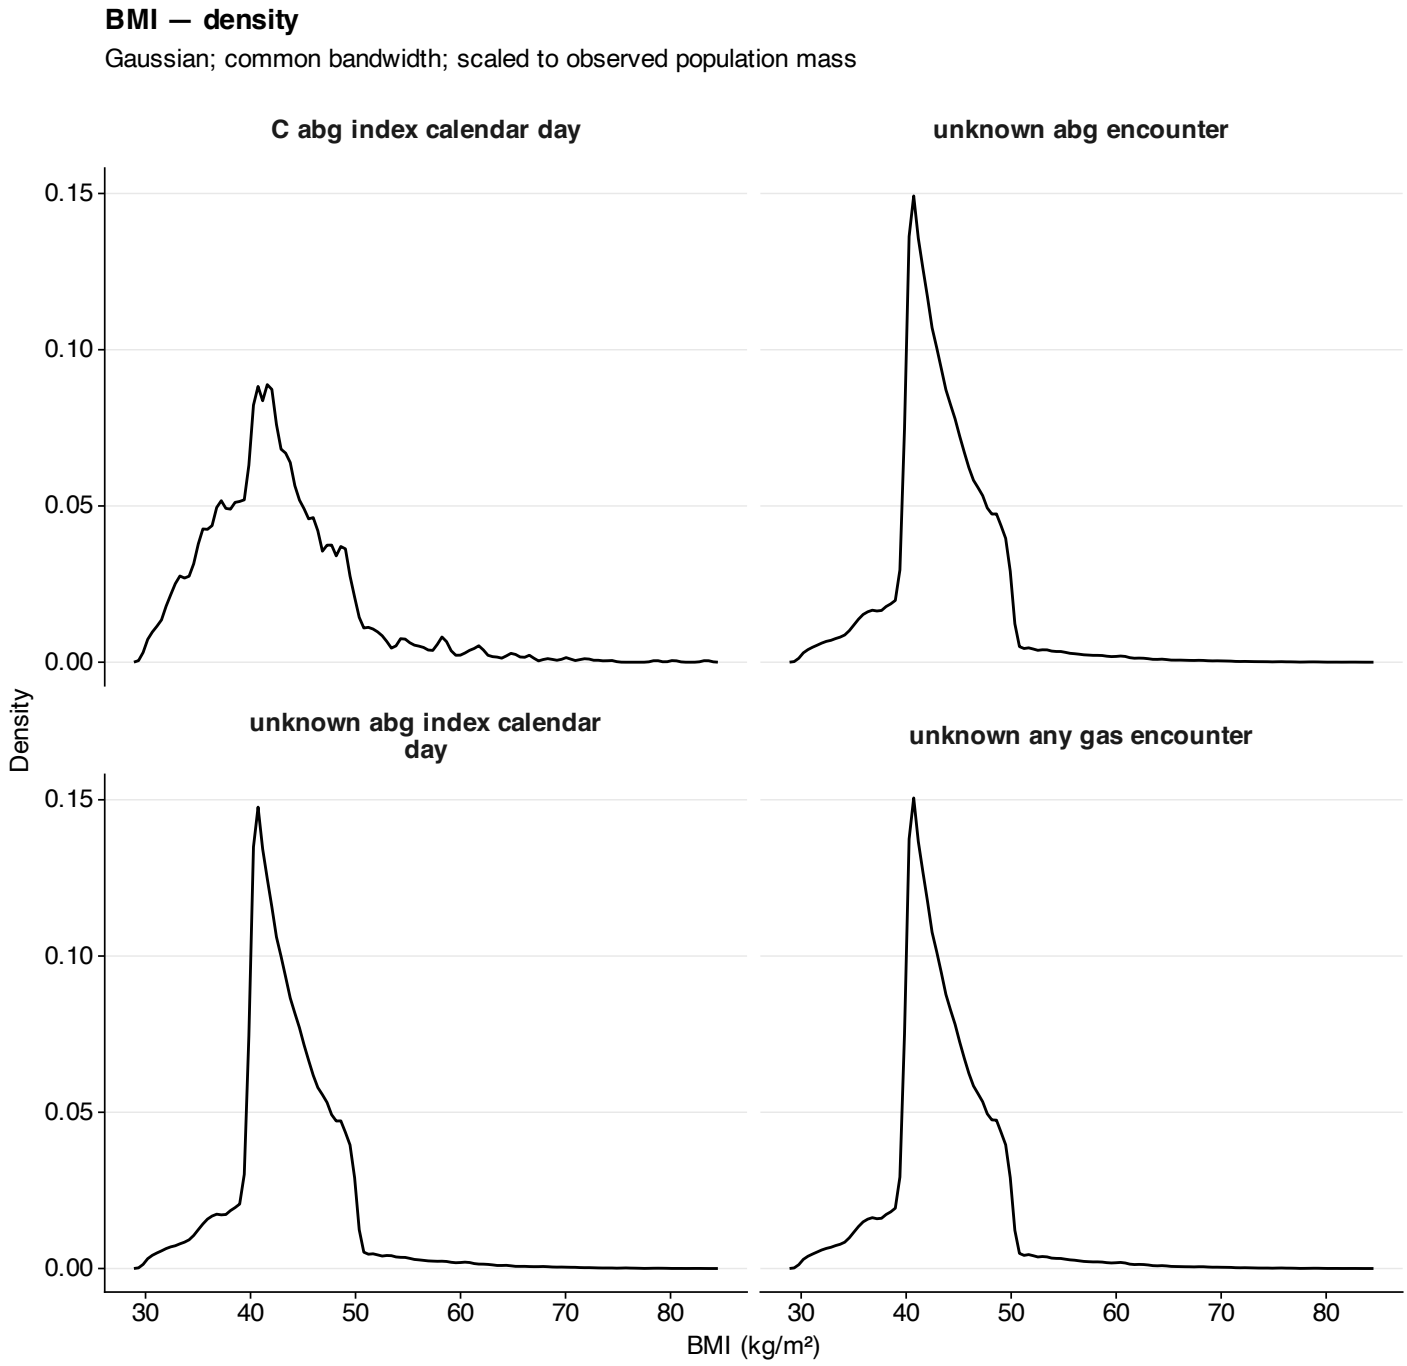

Figure 135: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. bmi kde across named stages; full coordinate export and normalization metadata in distribution_curves.

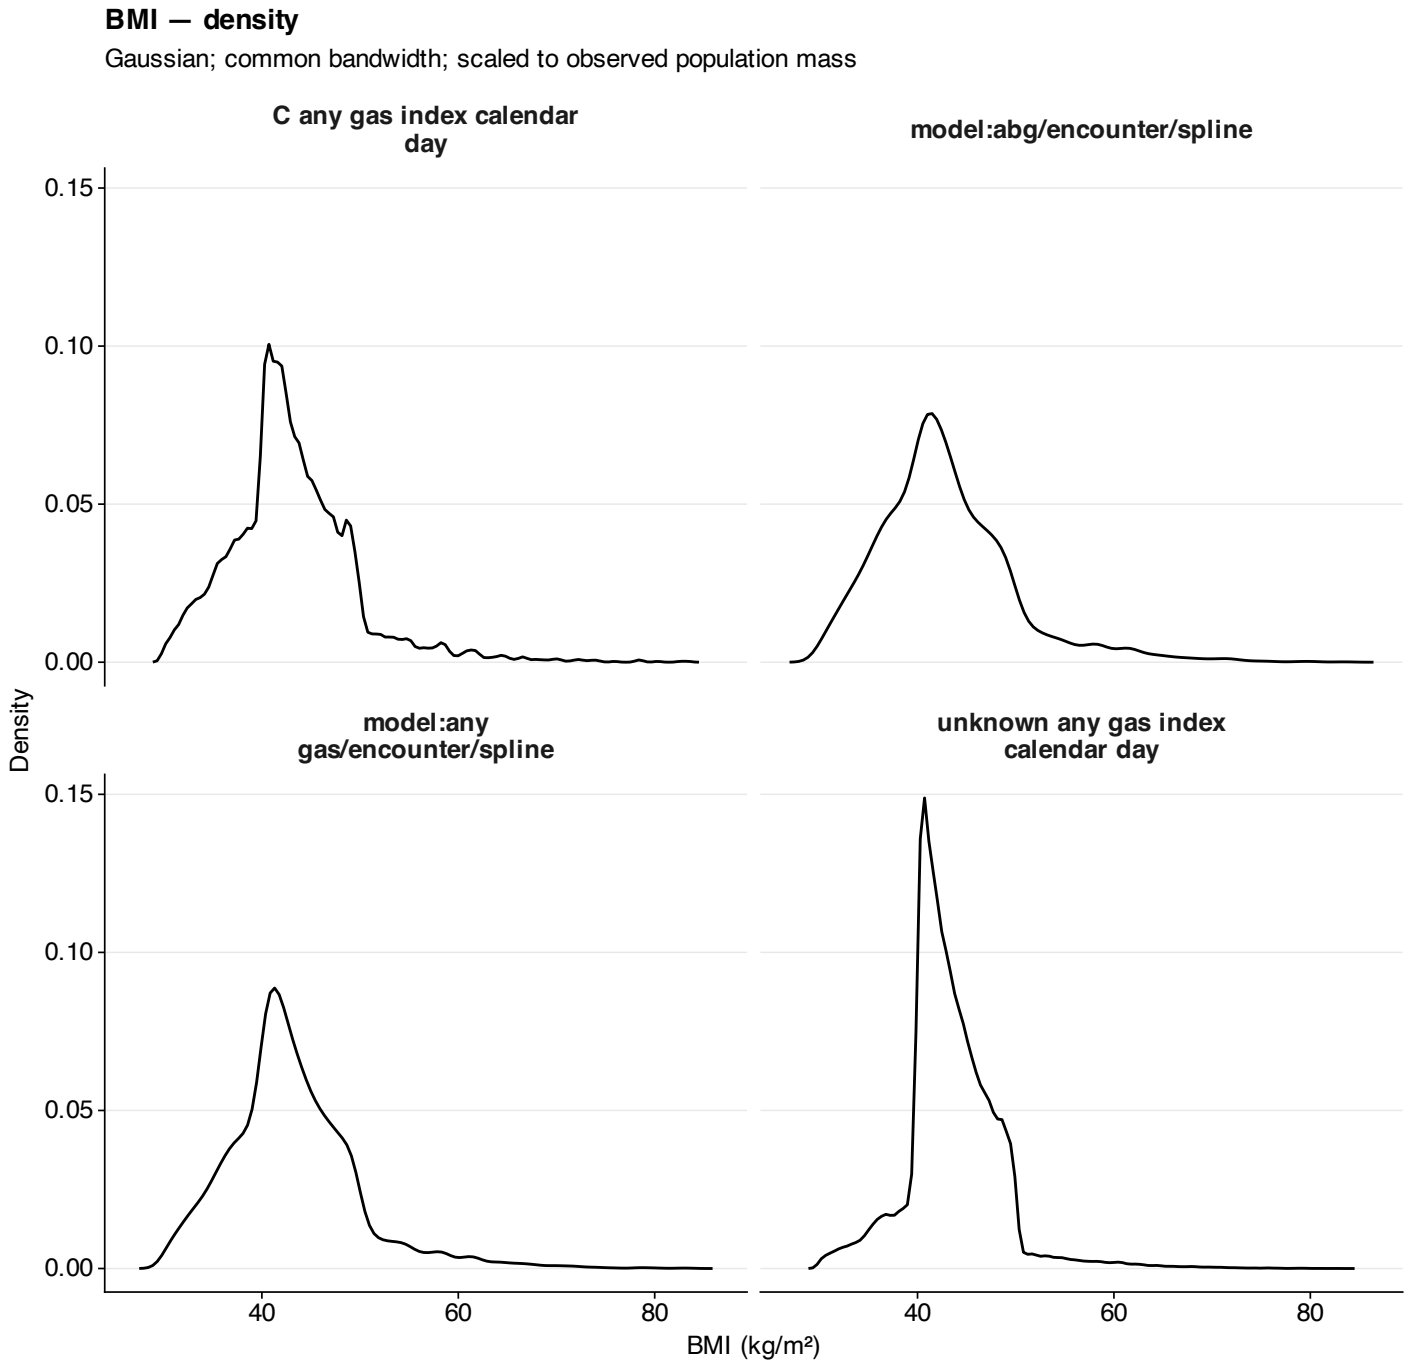

Figure 136: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. bmi kde across named stages; full coordinate export and normalization metadata in distribution_curves.

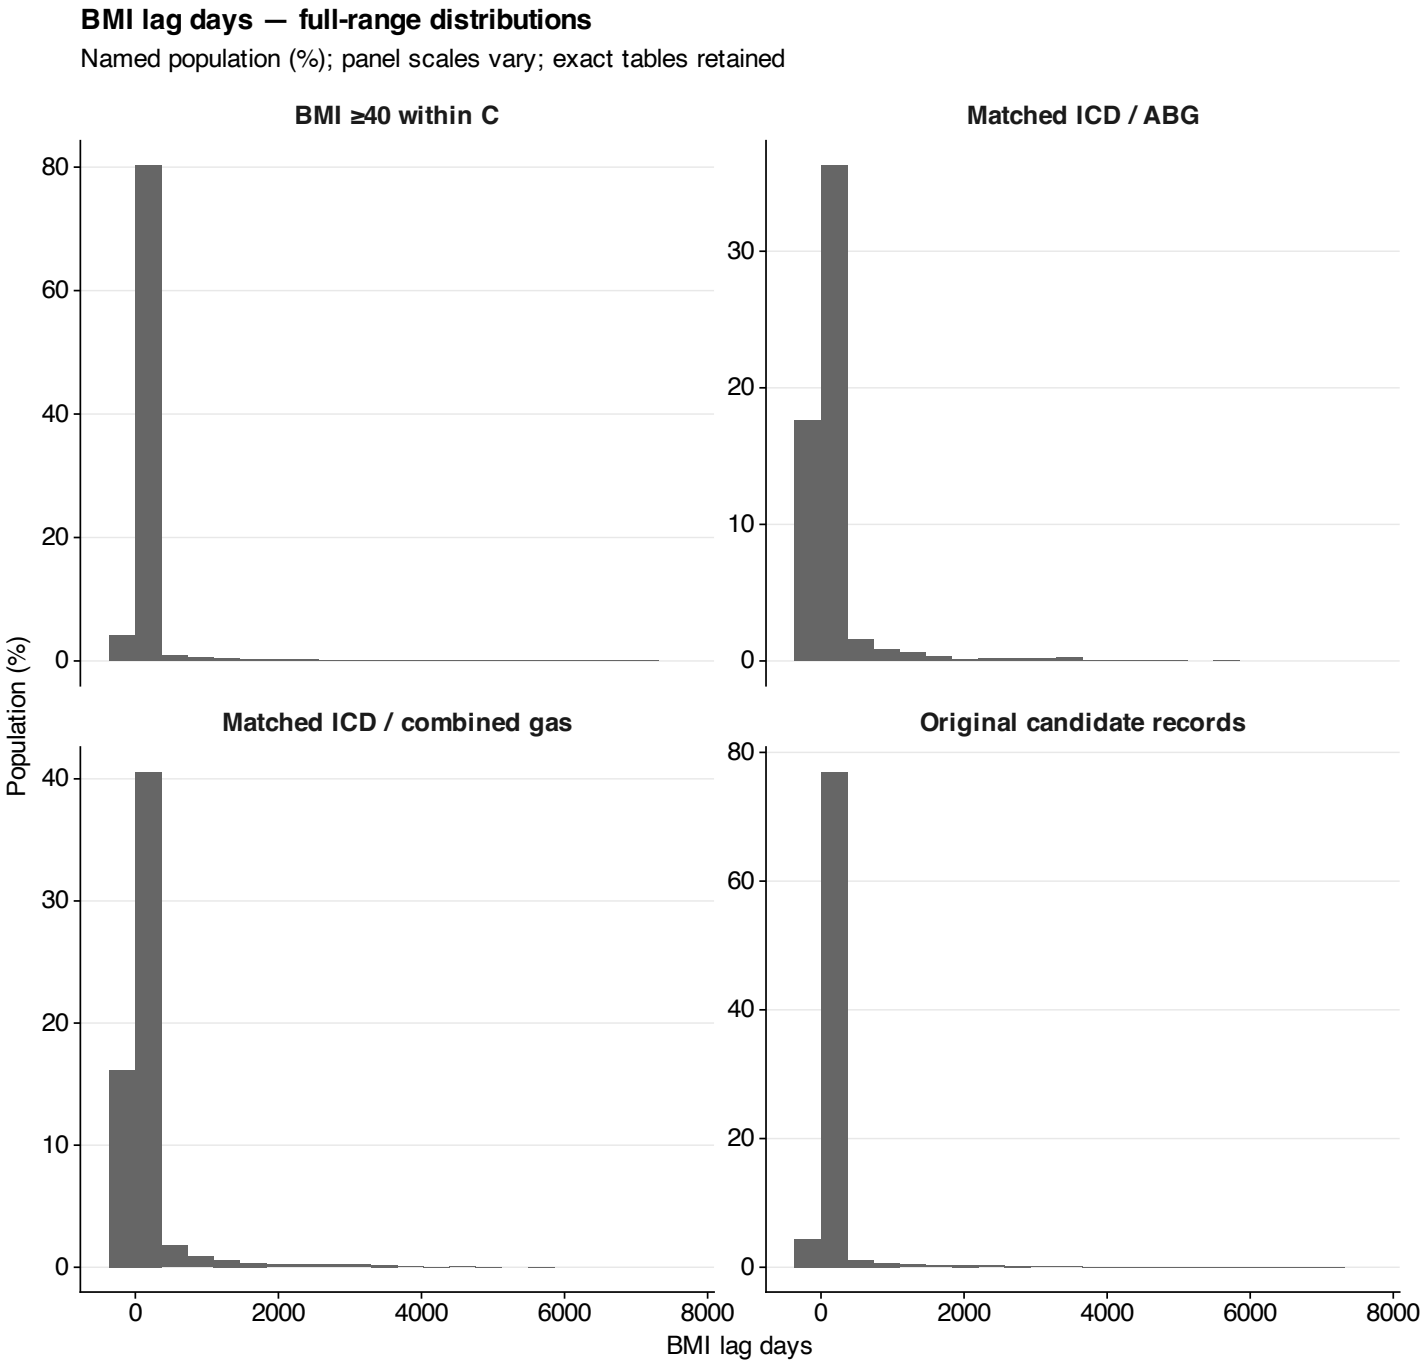

Figure 137: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete bmi_lag_days stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

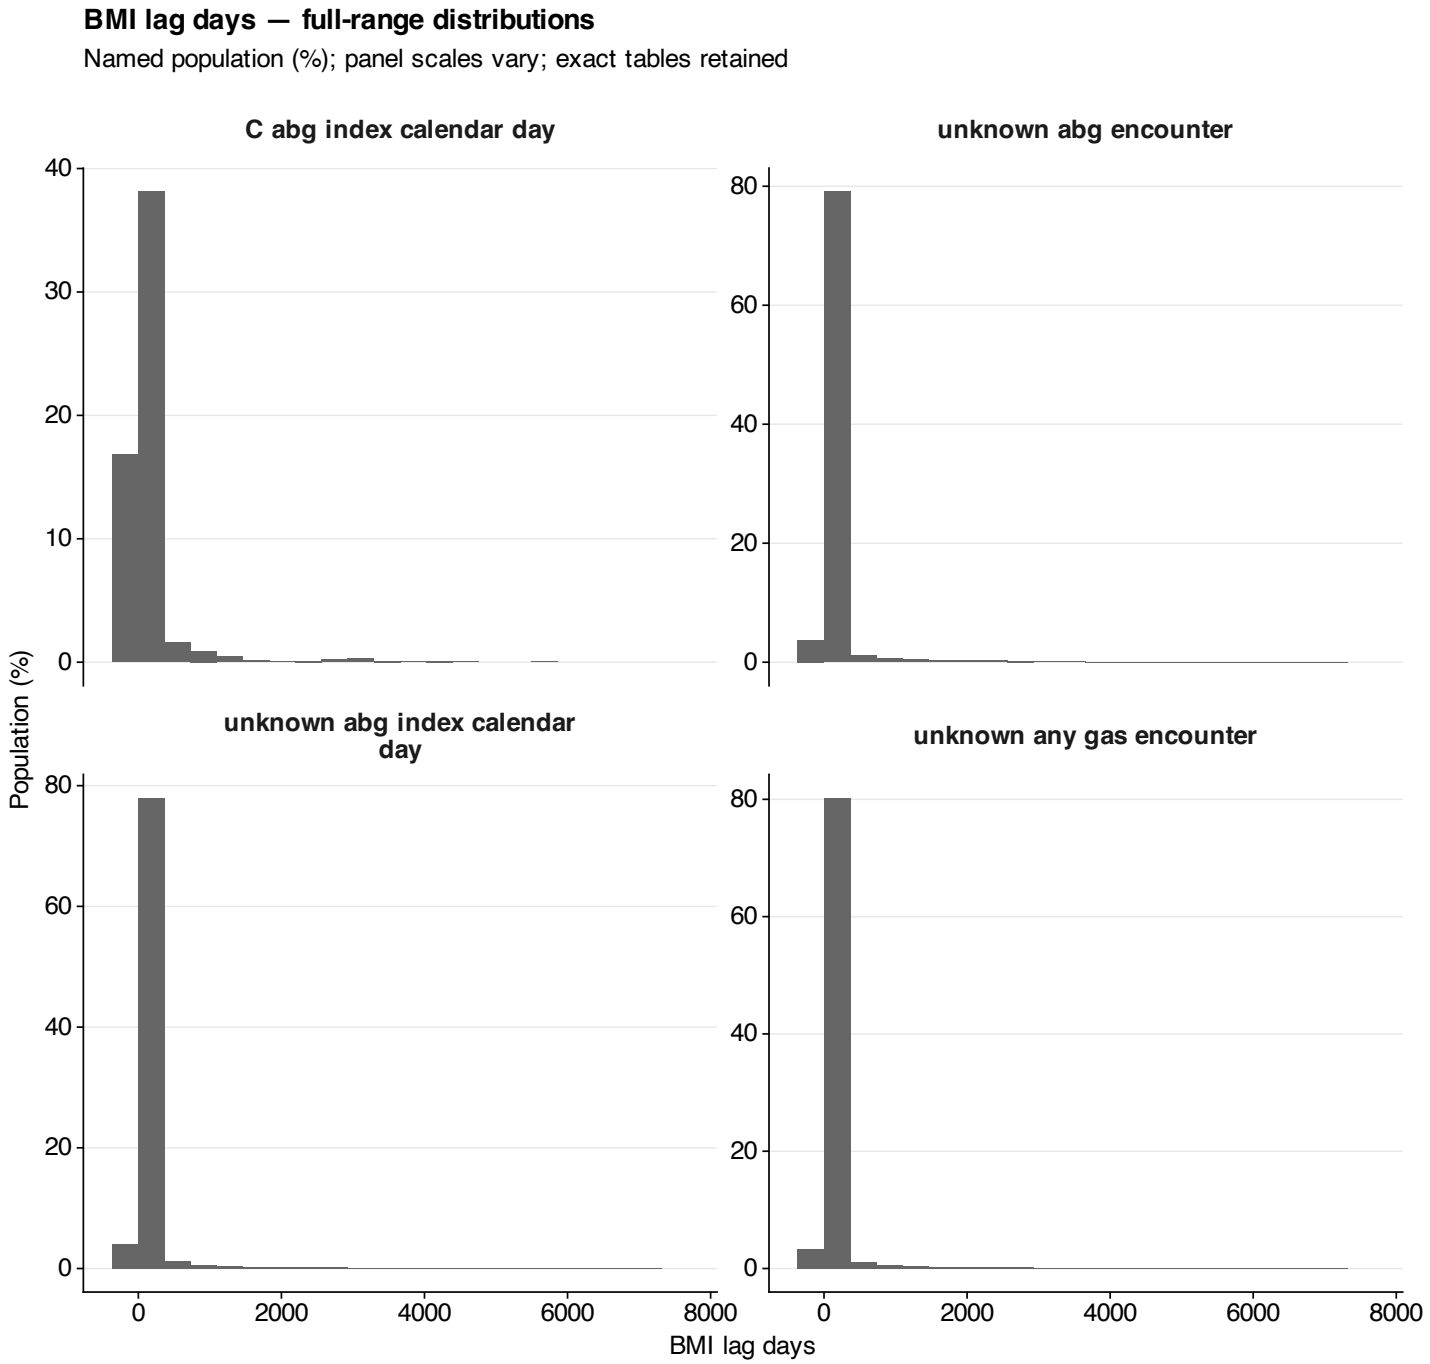

Figure 138: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete bmi_lag_days stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

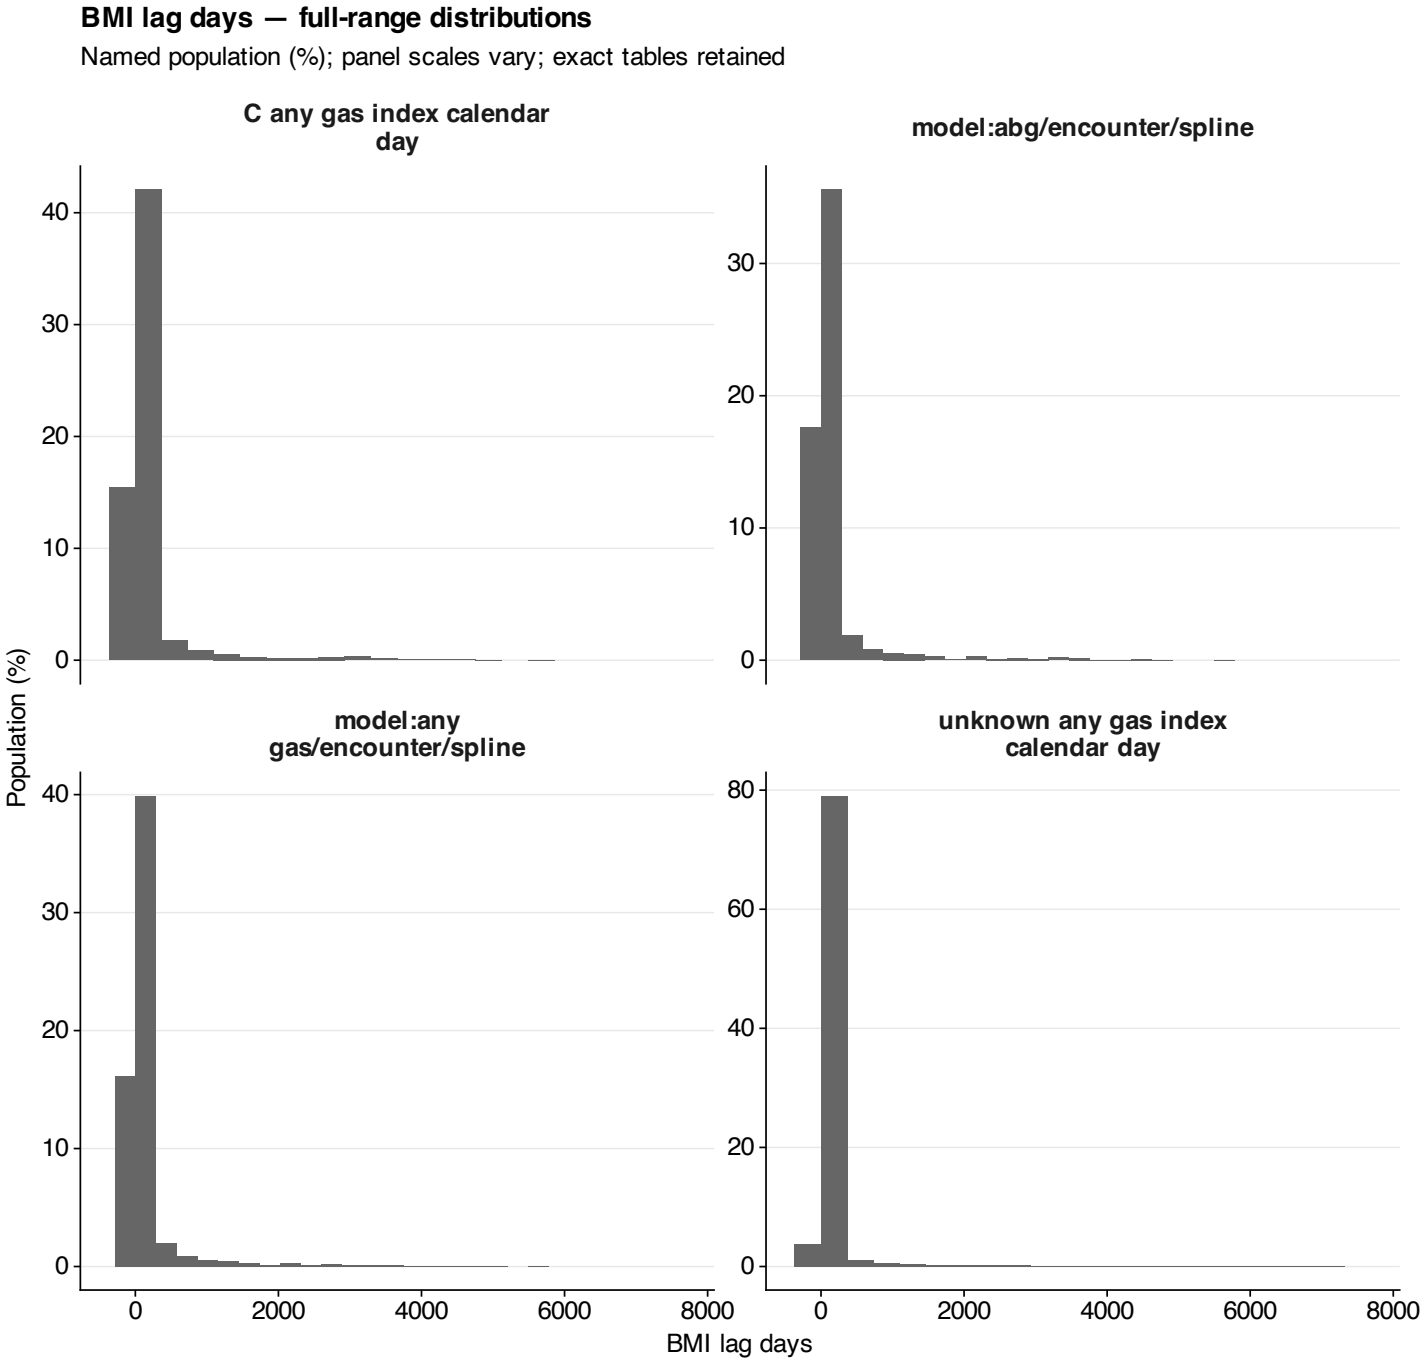

Figure 139: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete bmi_lag_days stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

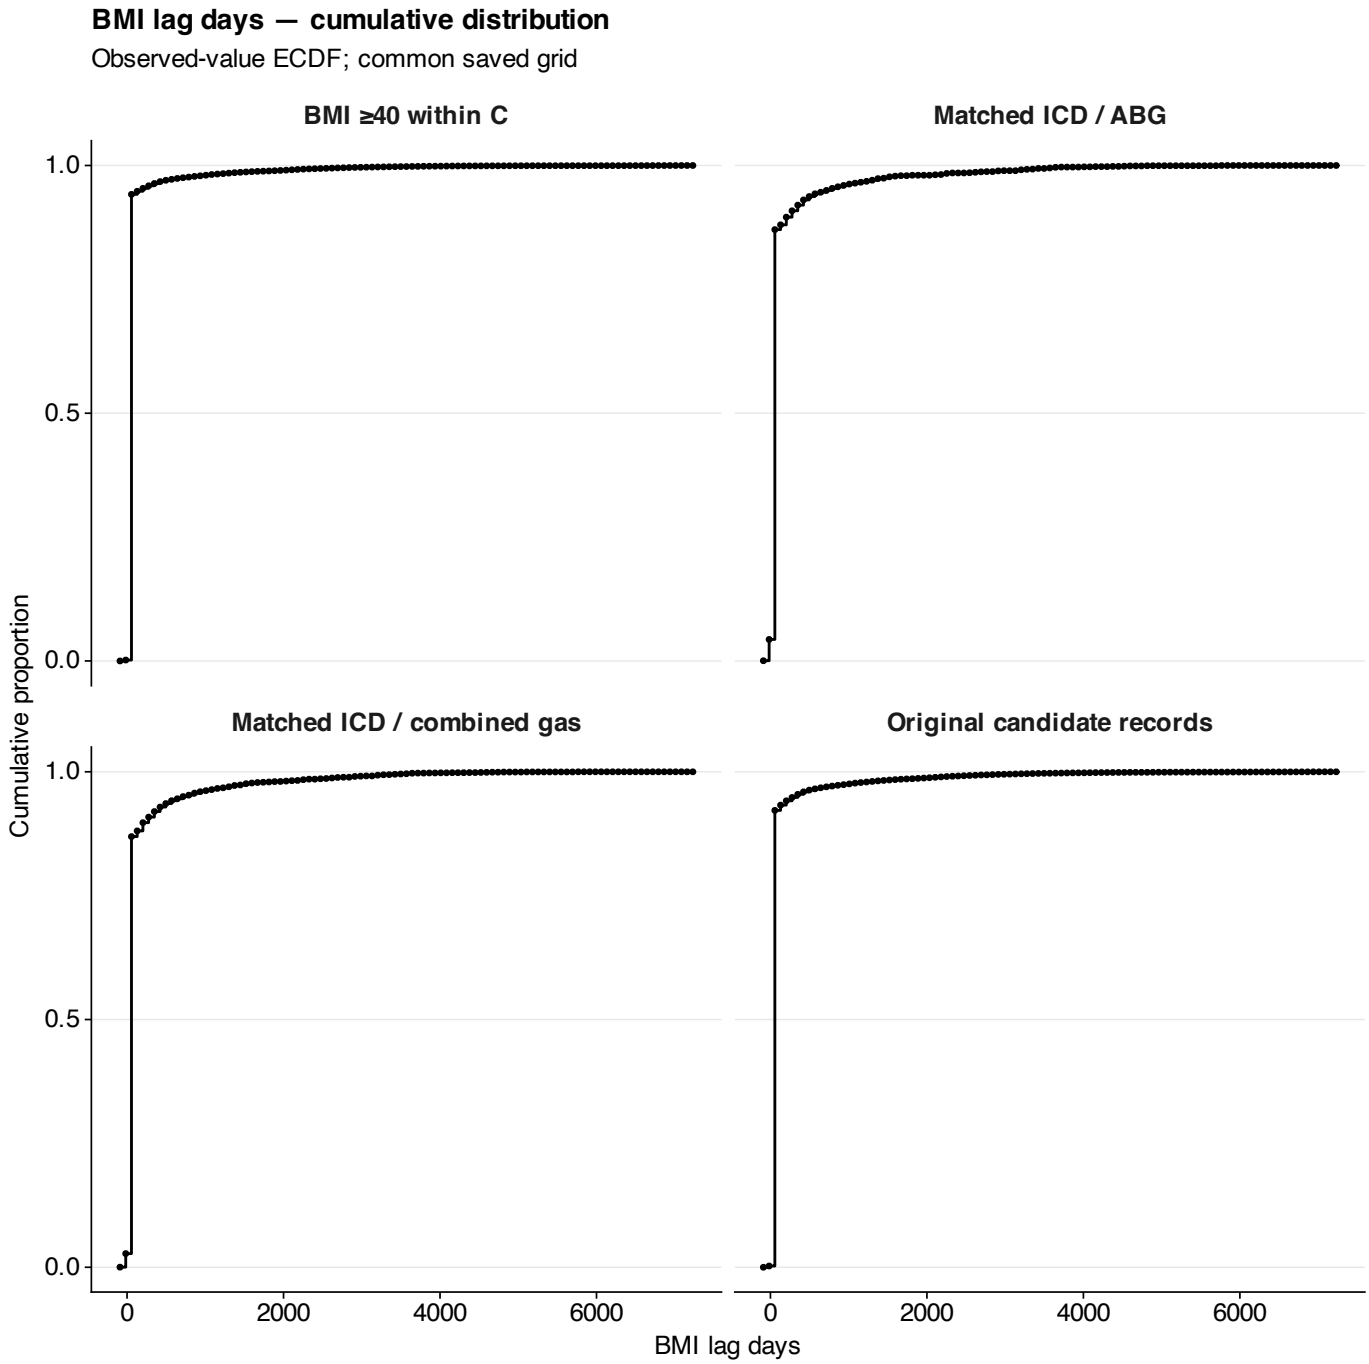

Figure 140: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. bmi_lag_days ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

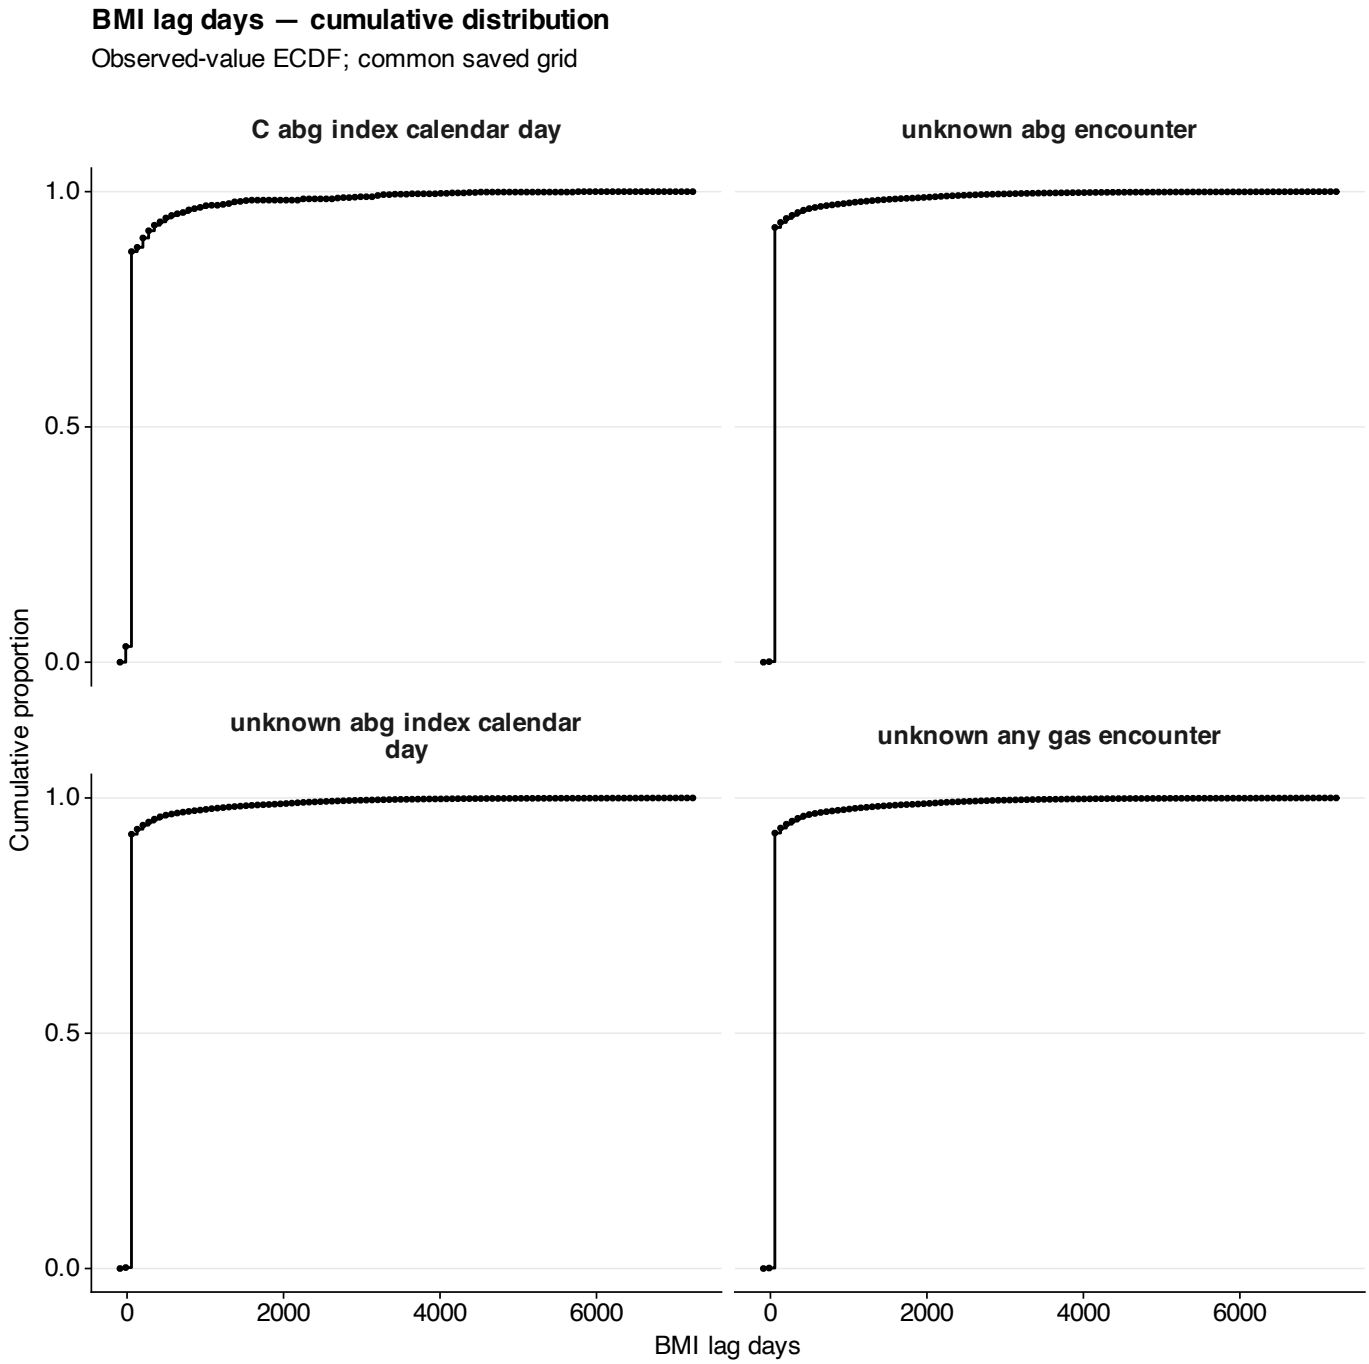

Figure 141: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. bmi_lag_days ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

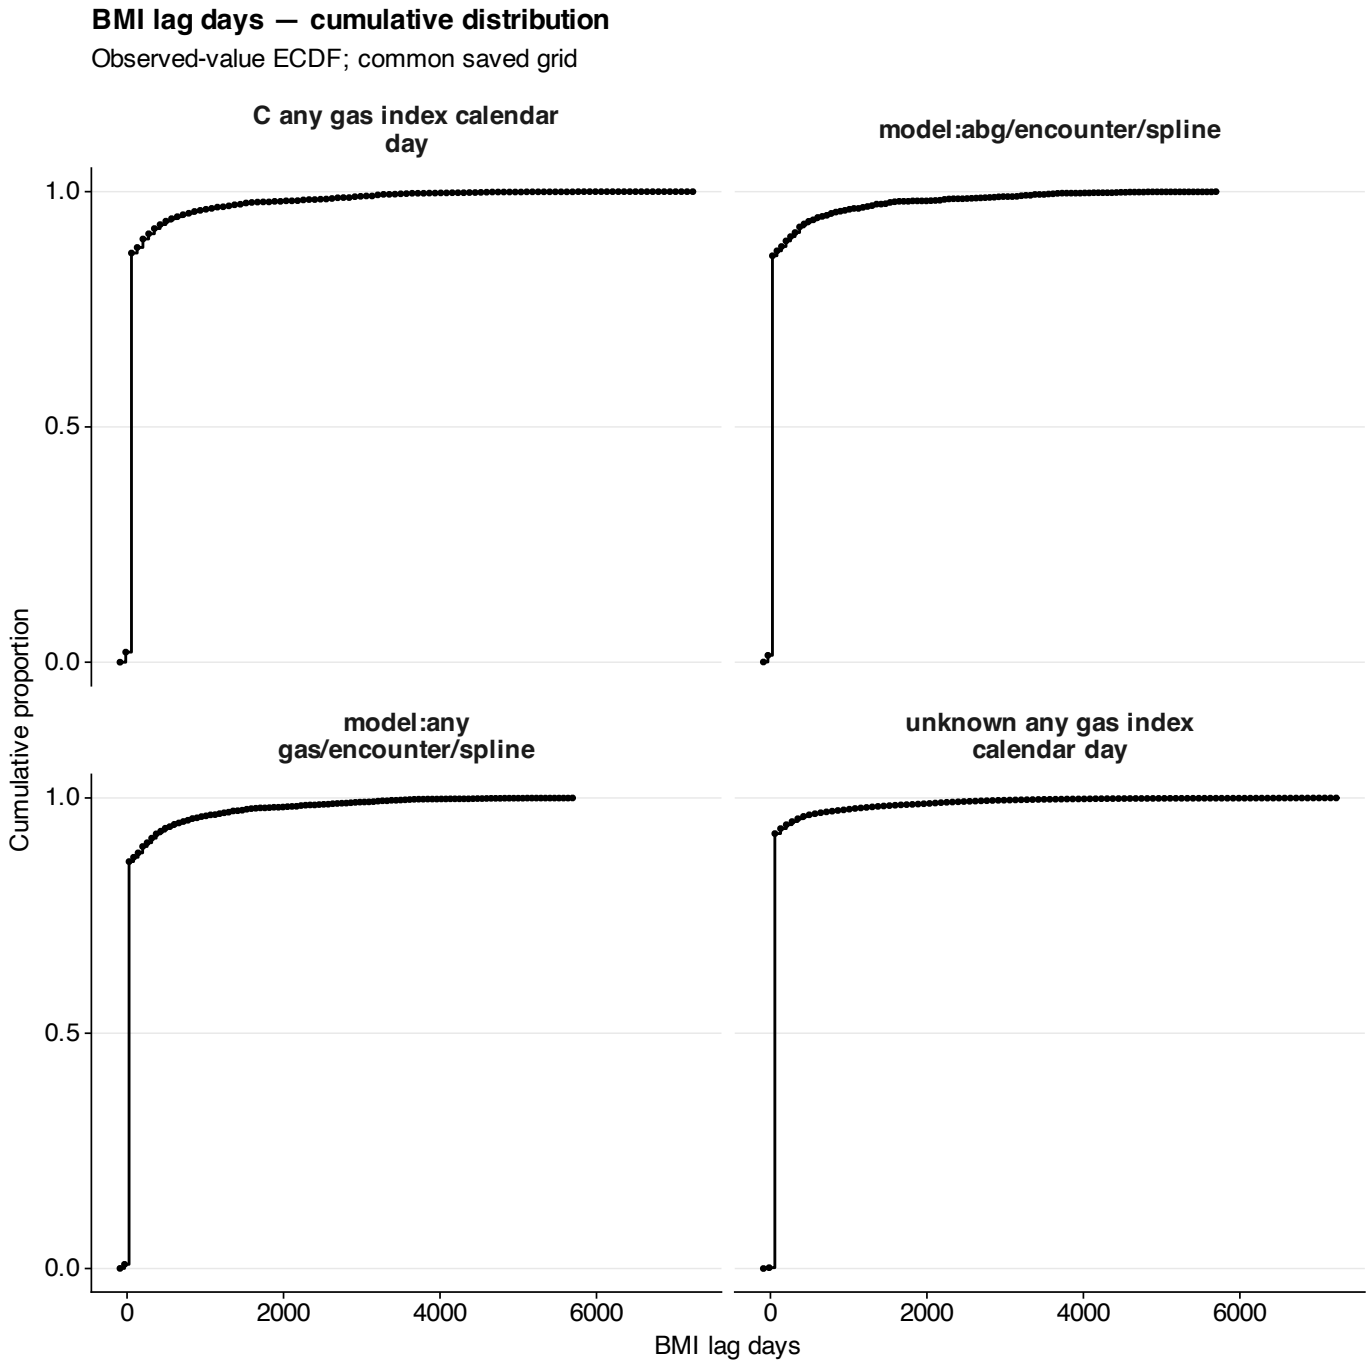

Figure 142: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. bmi_lag_days ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

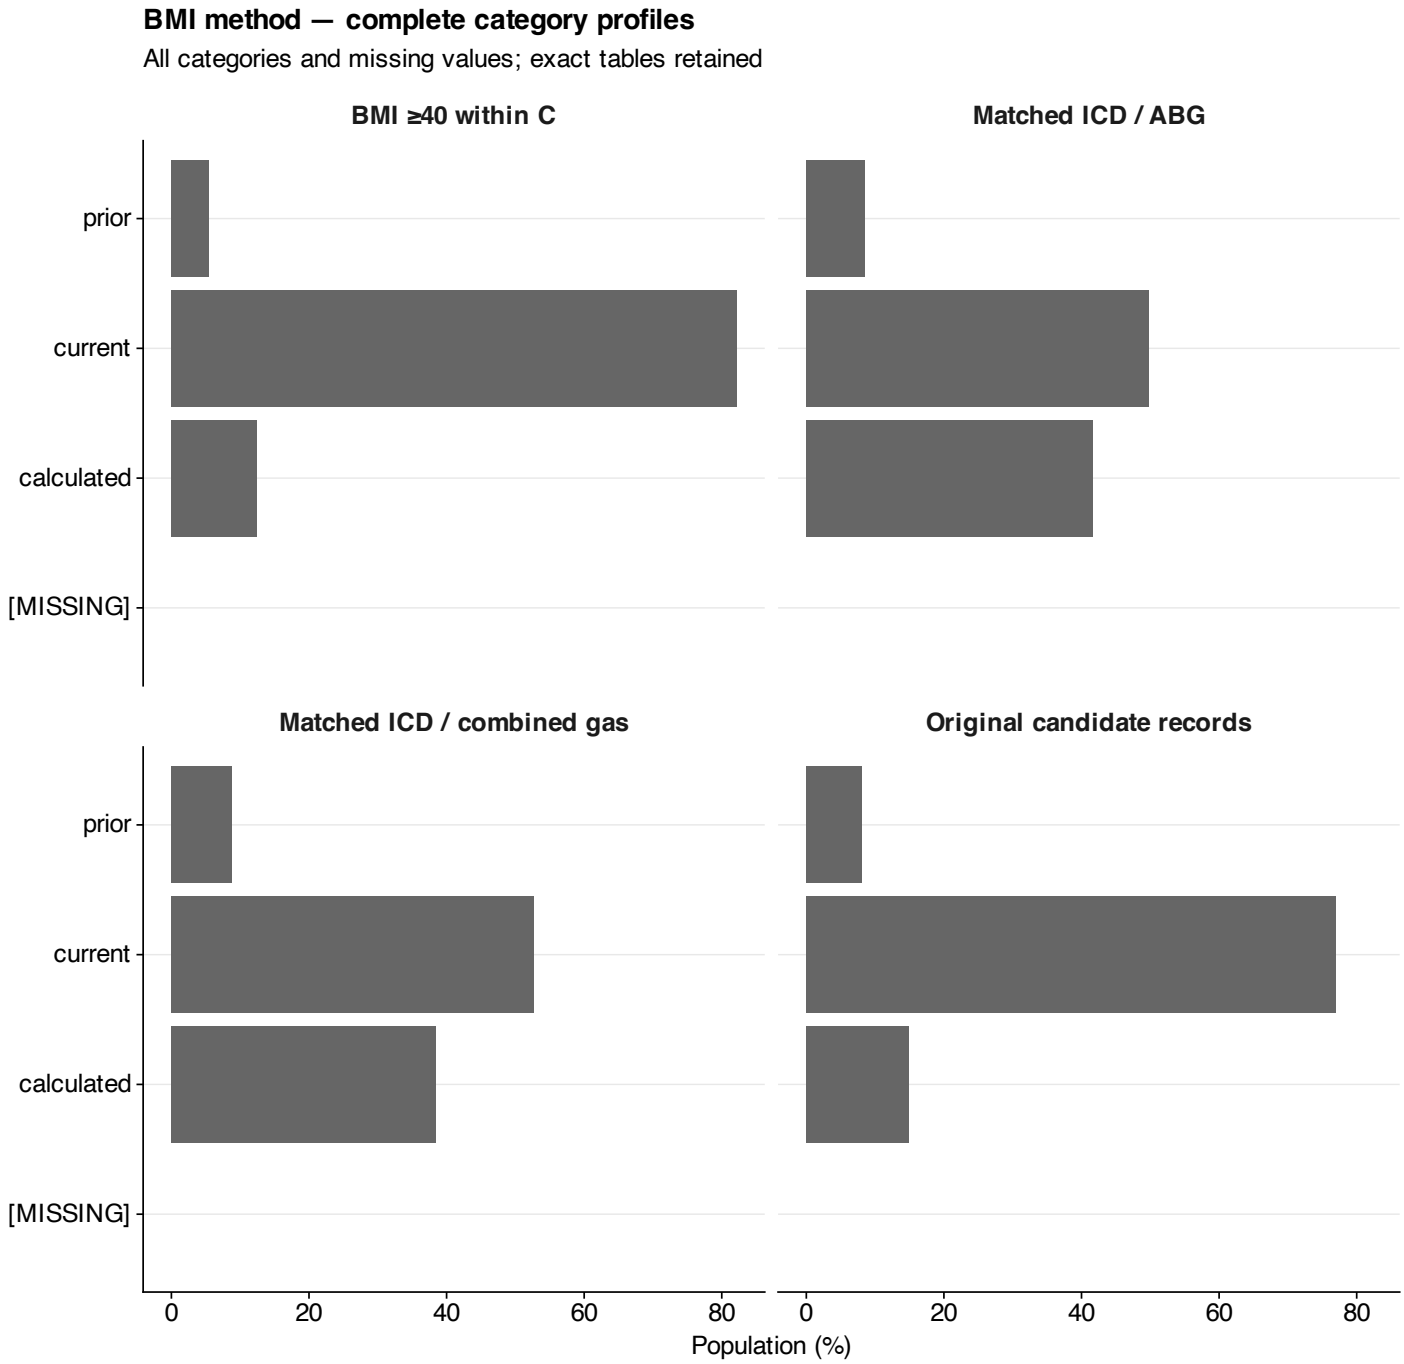

Figure 143: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete bmi_method stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

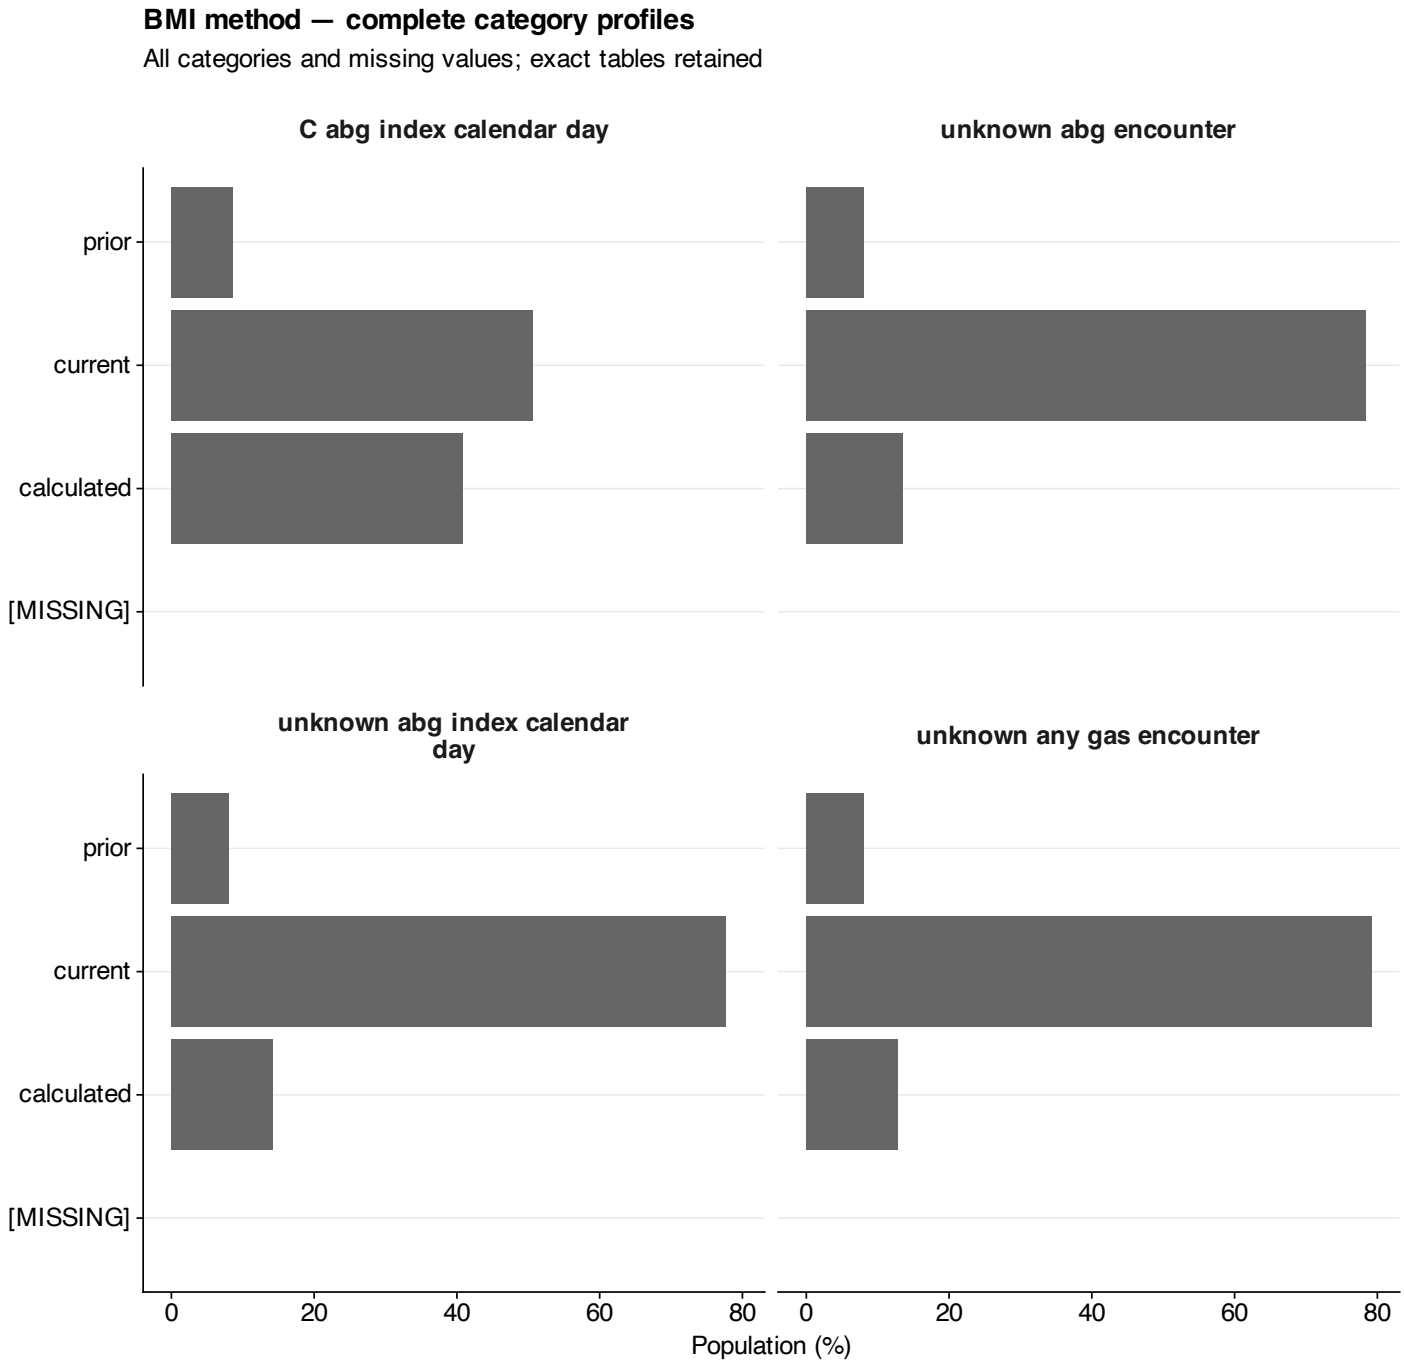

Figure 144: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete bmi_method stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

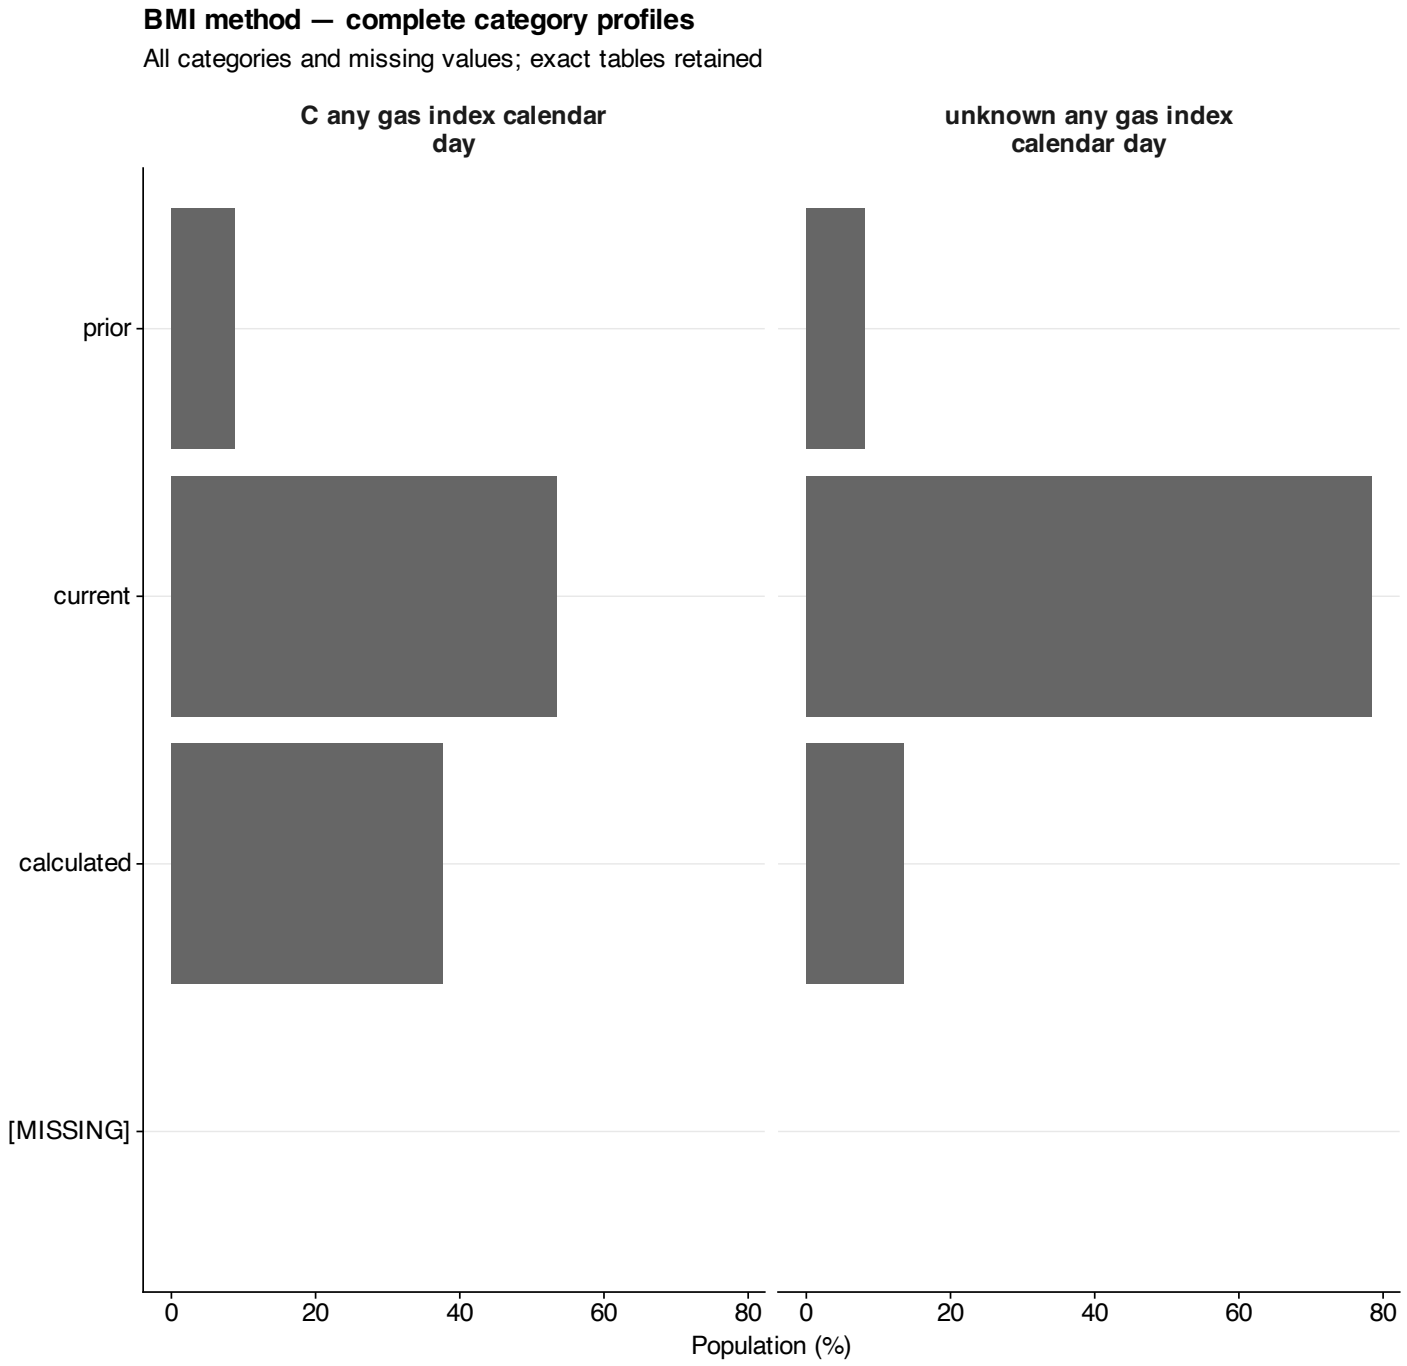

Figure 145: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete bmi_method stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

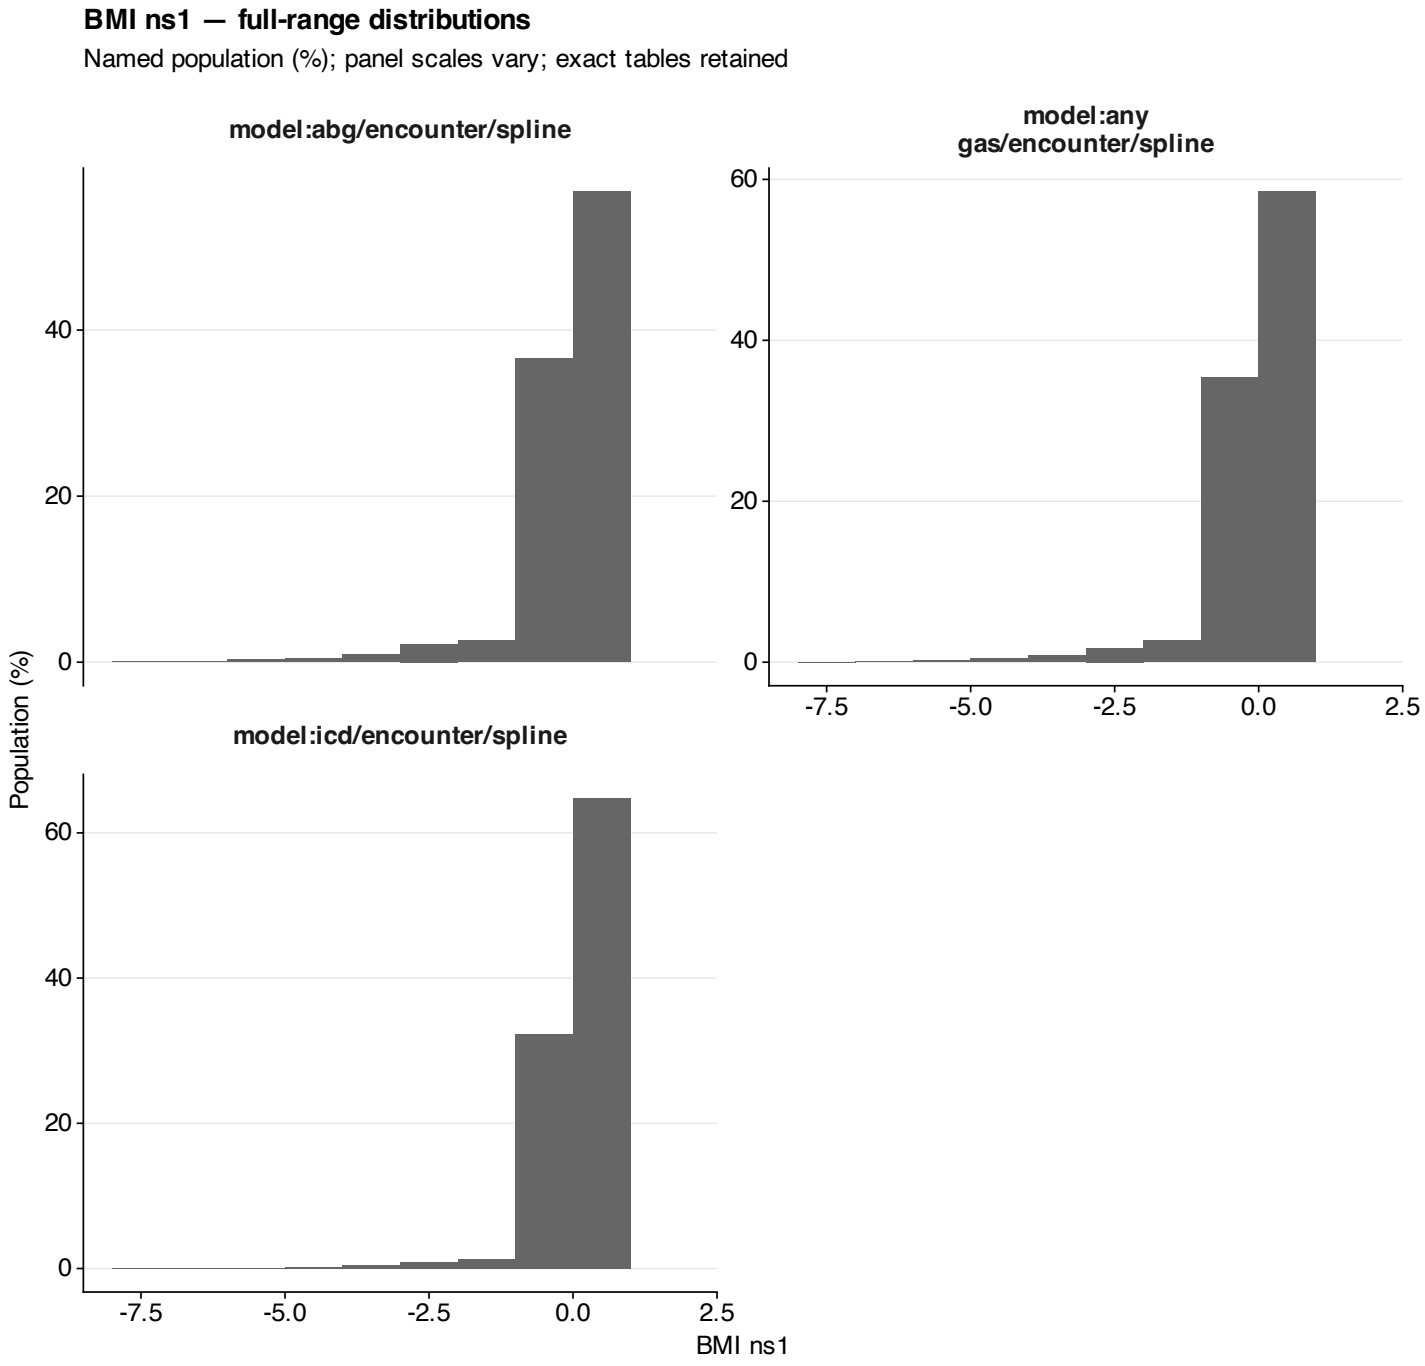

Figure 146: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete bmi_ns1 stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

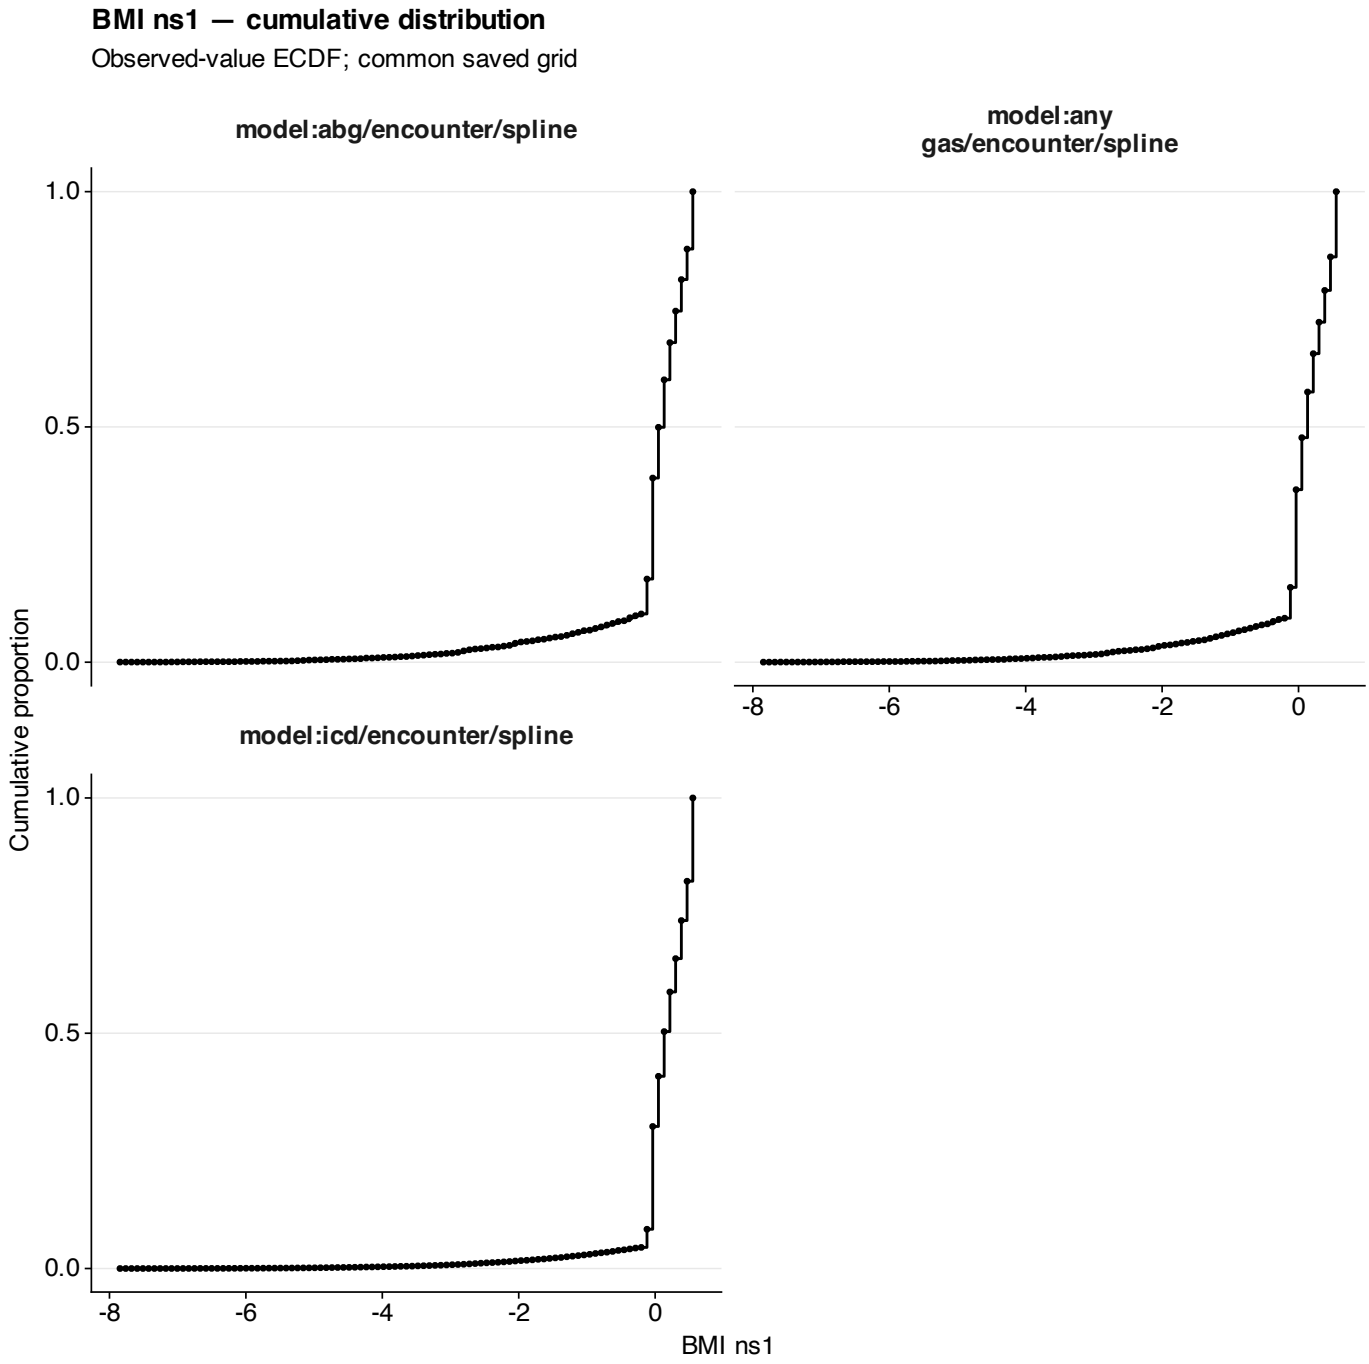

Figure 147: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. bmi_ns1 ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

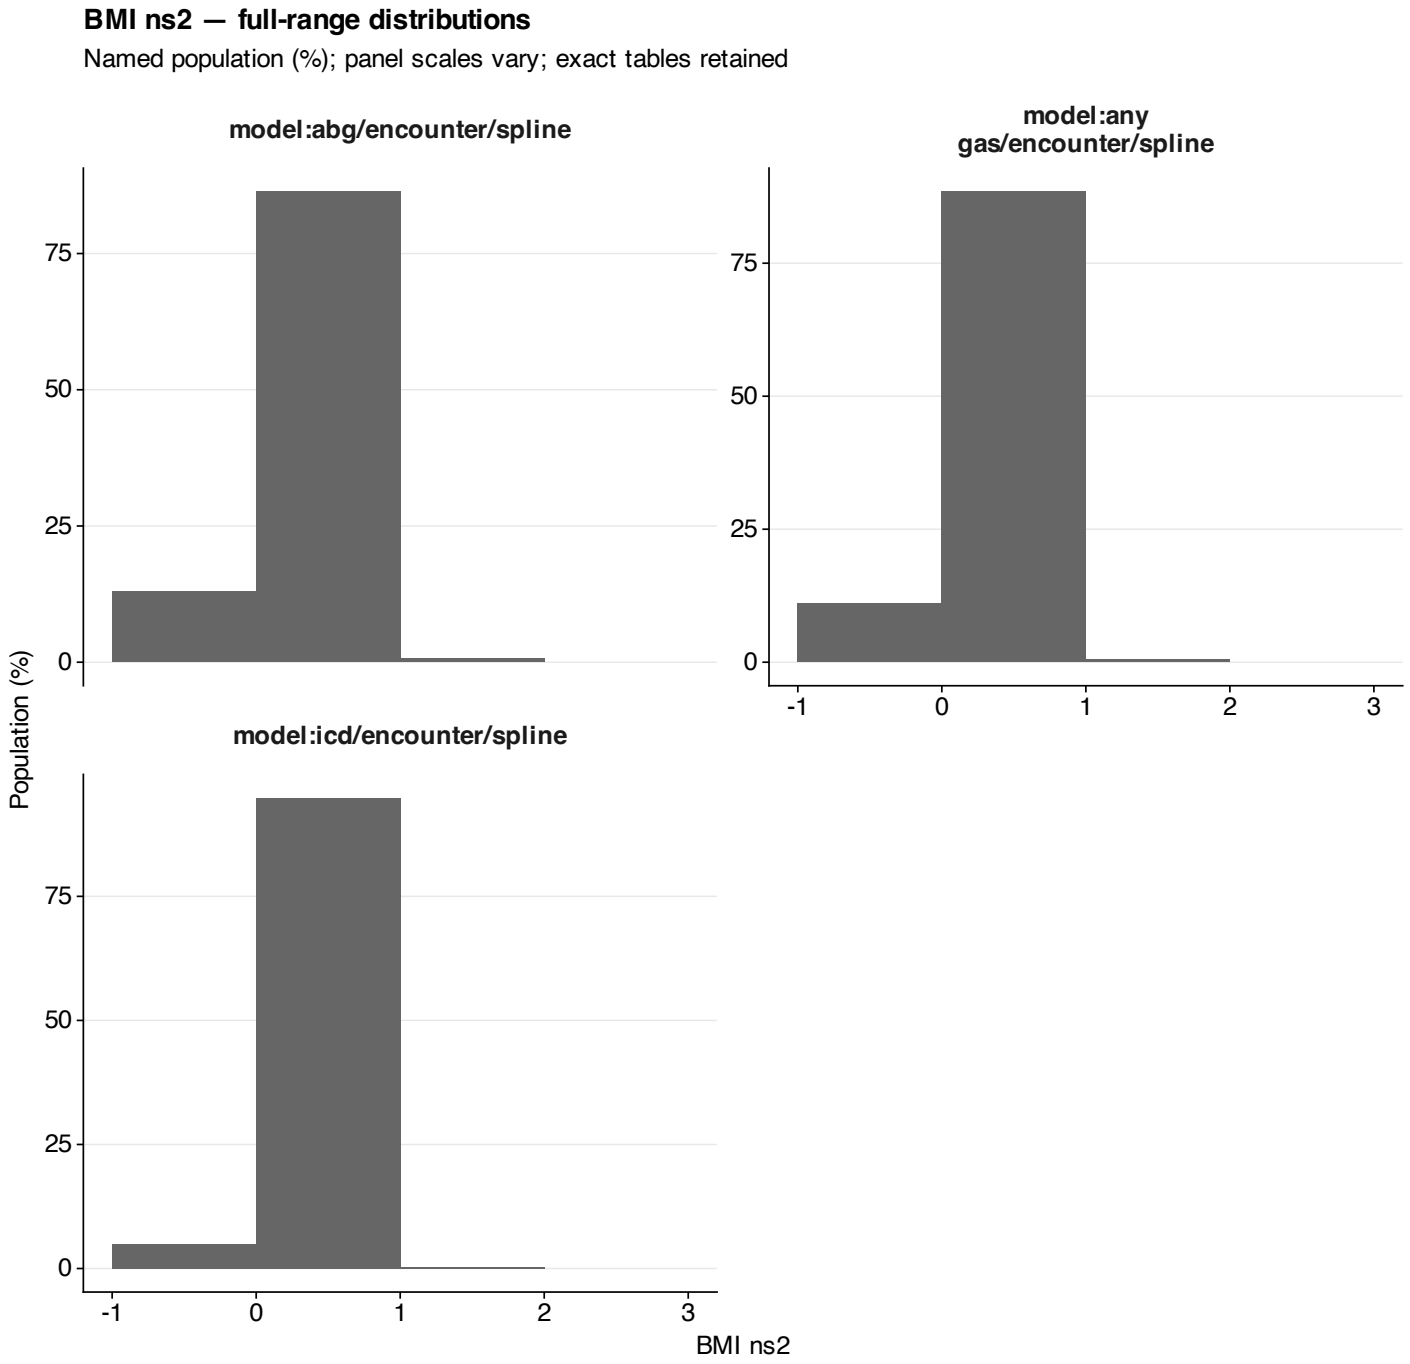

Figure 148: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete bmi_ns2 stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

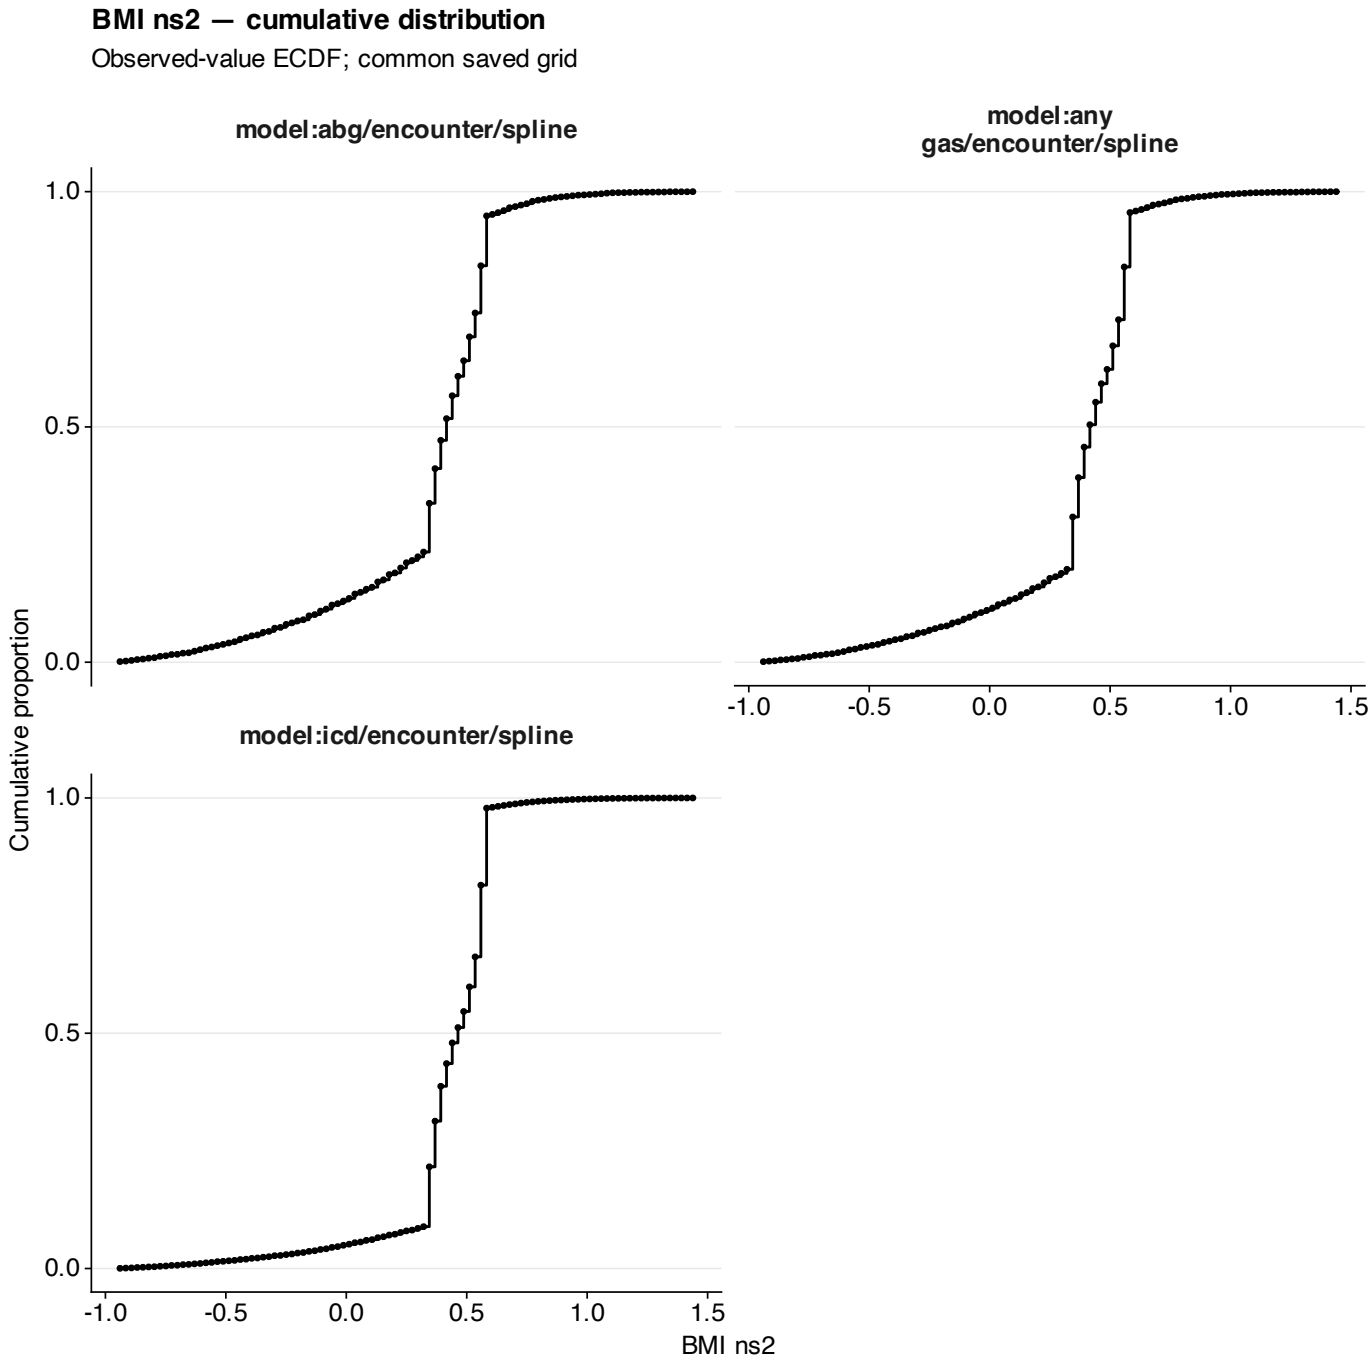

Figure 149: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. bmi_ns2 ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

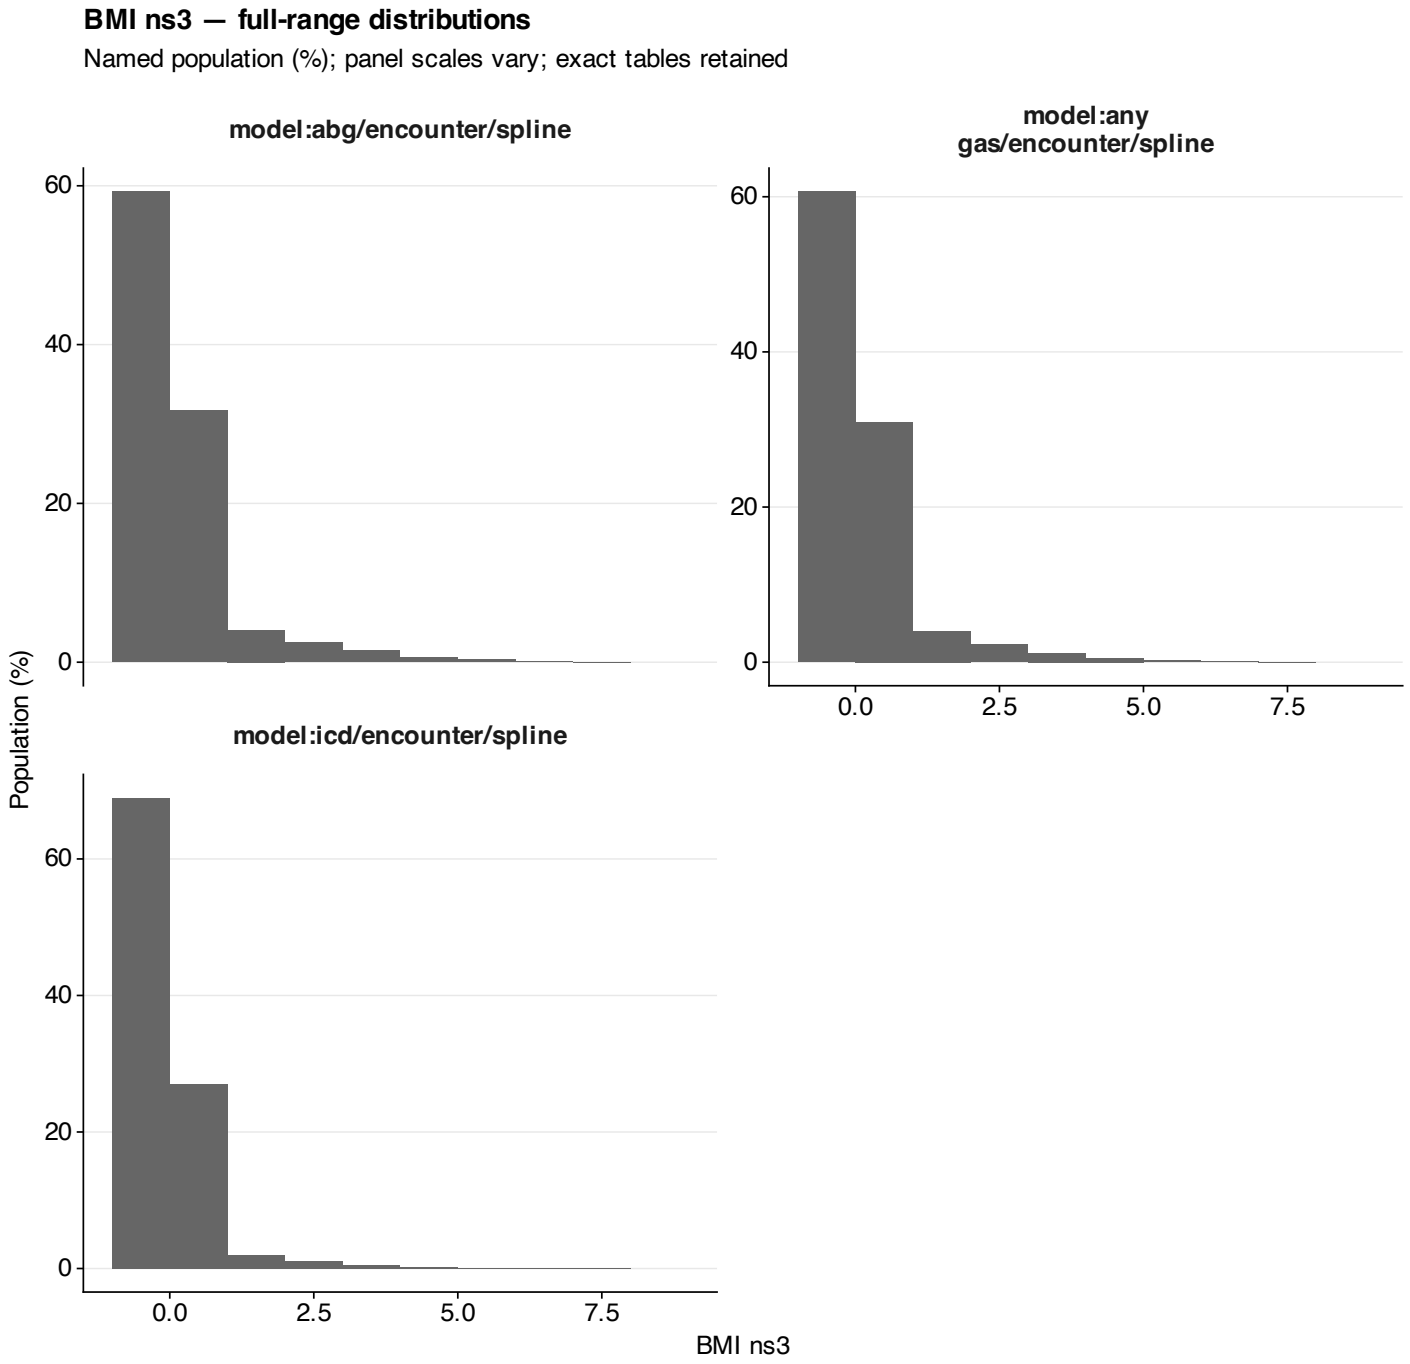

Figure 150: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete bmi_ns3 stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

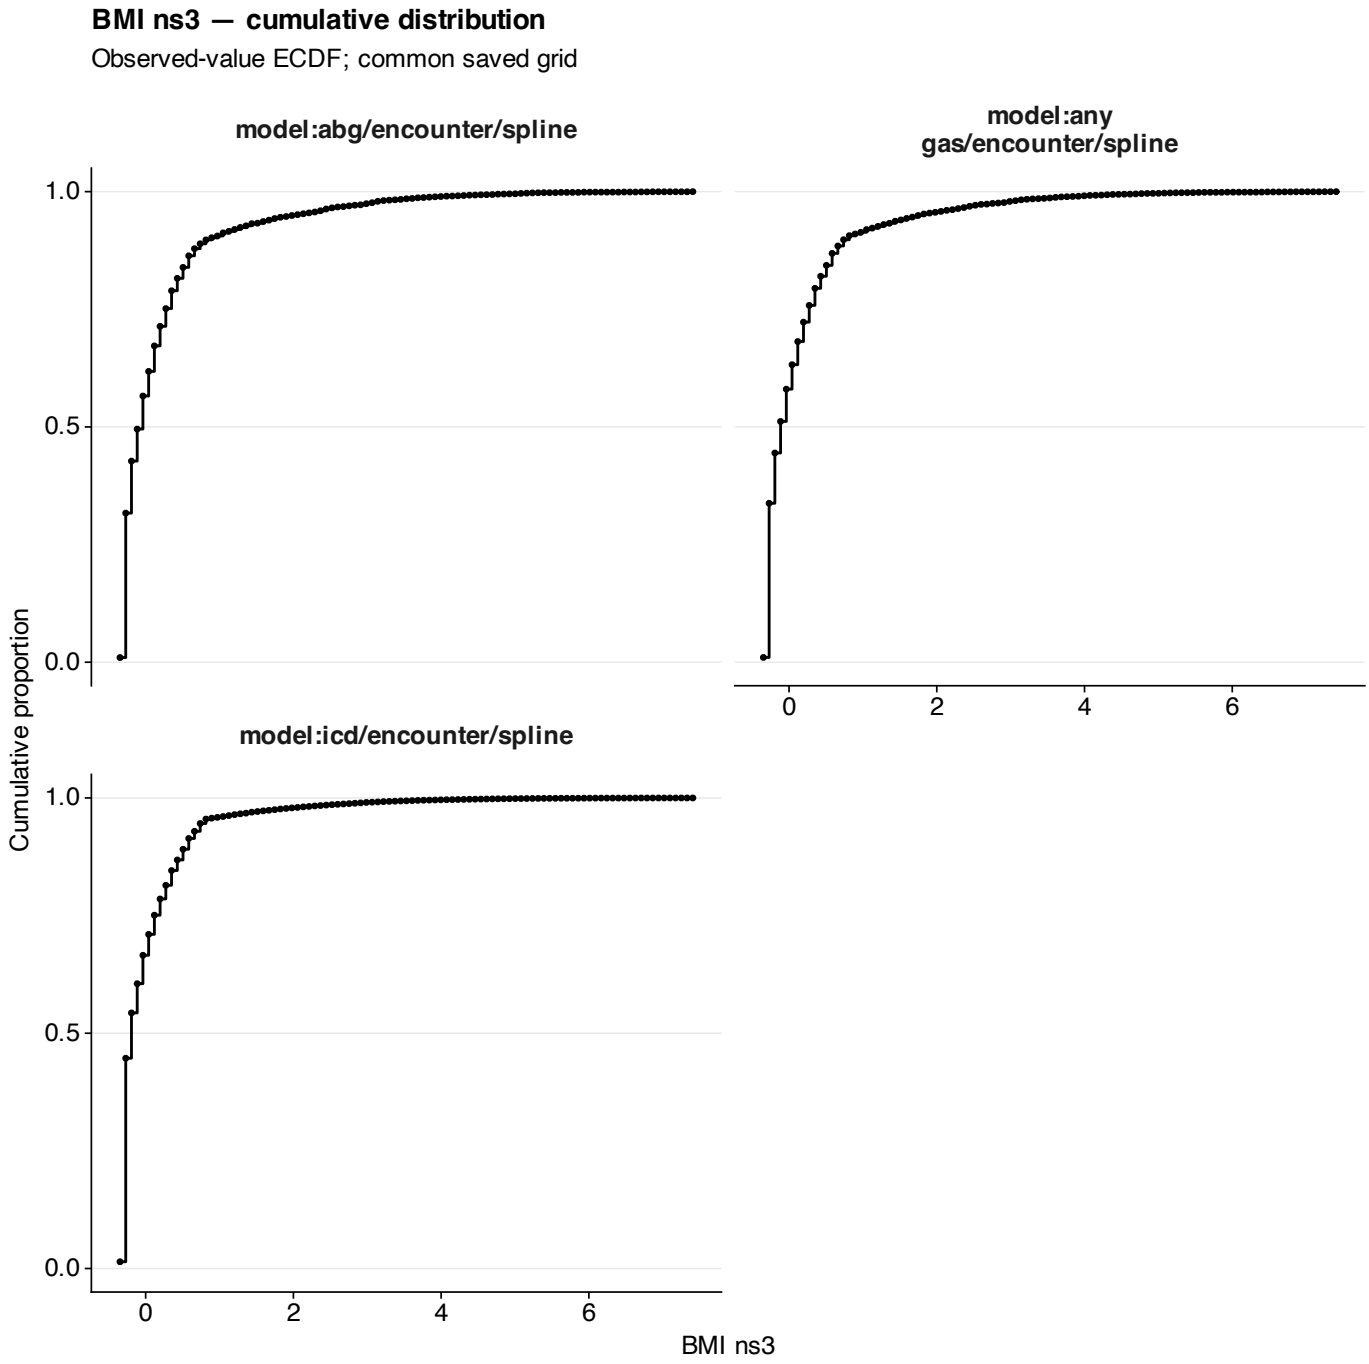

Figure 151: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. bmi_ns3 ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

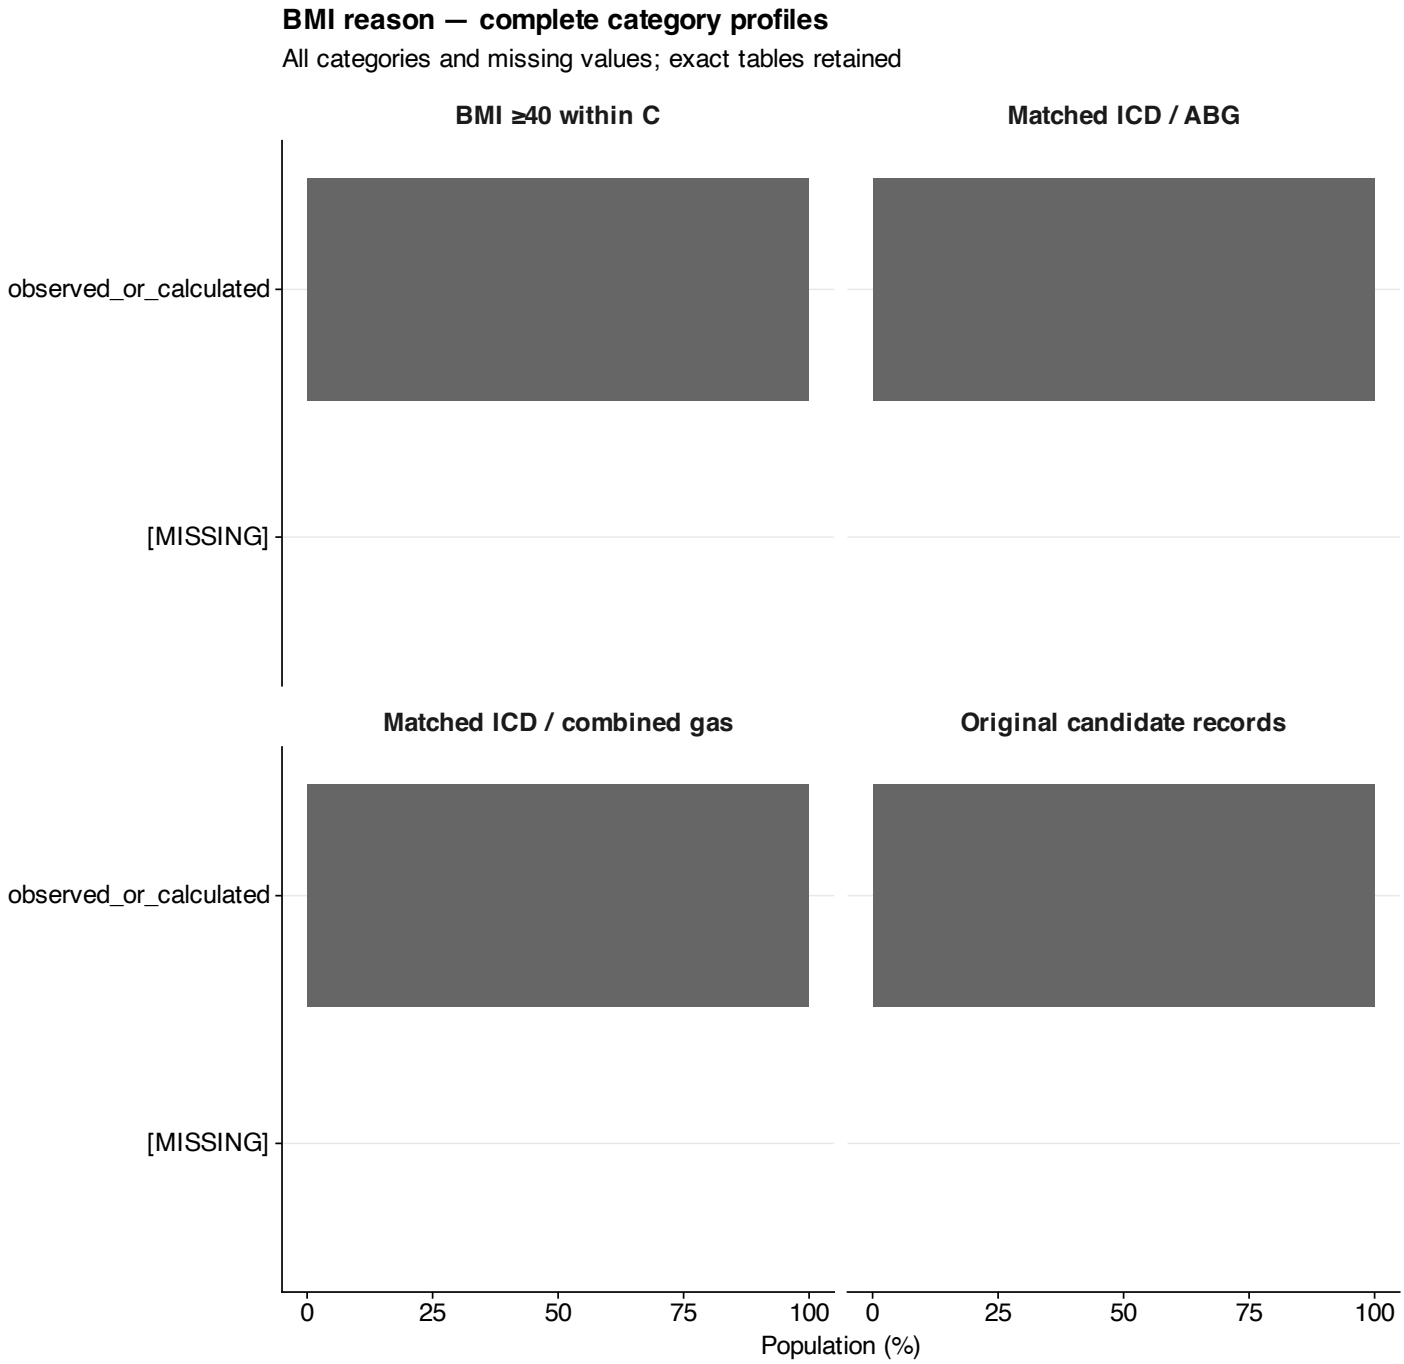

Figure 152: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete bmi_reason stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

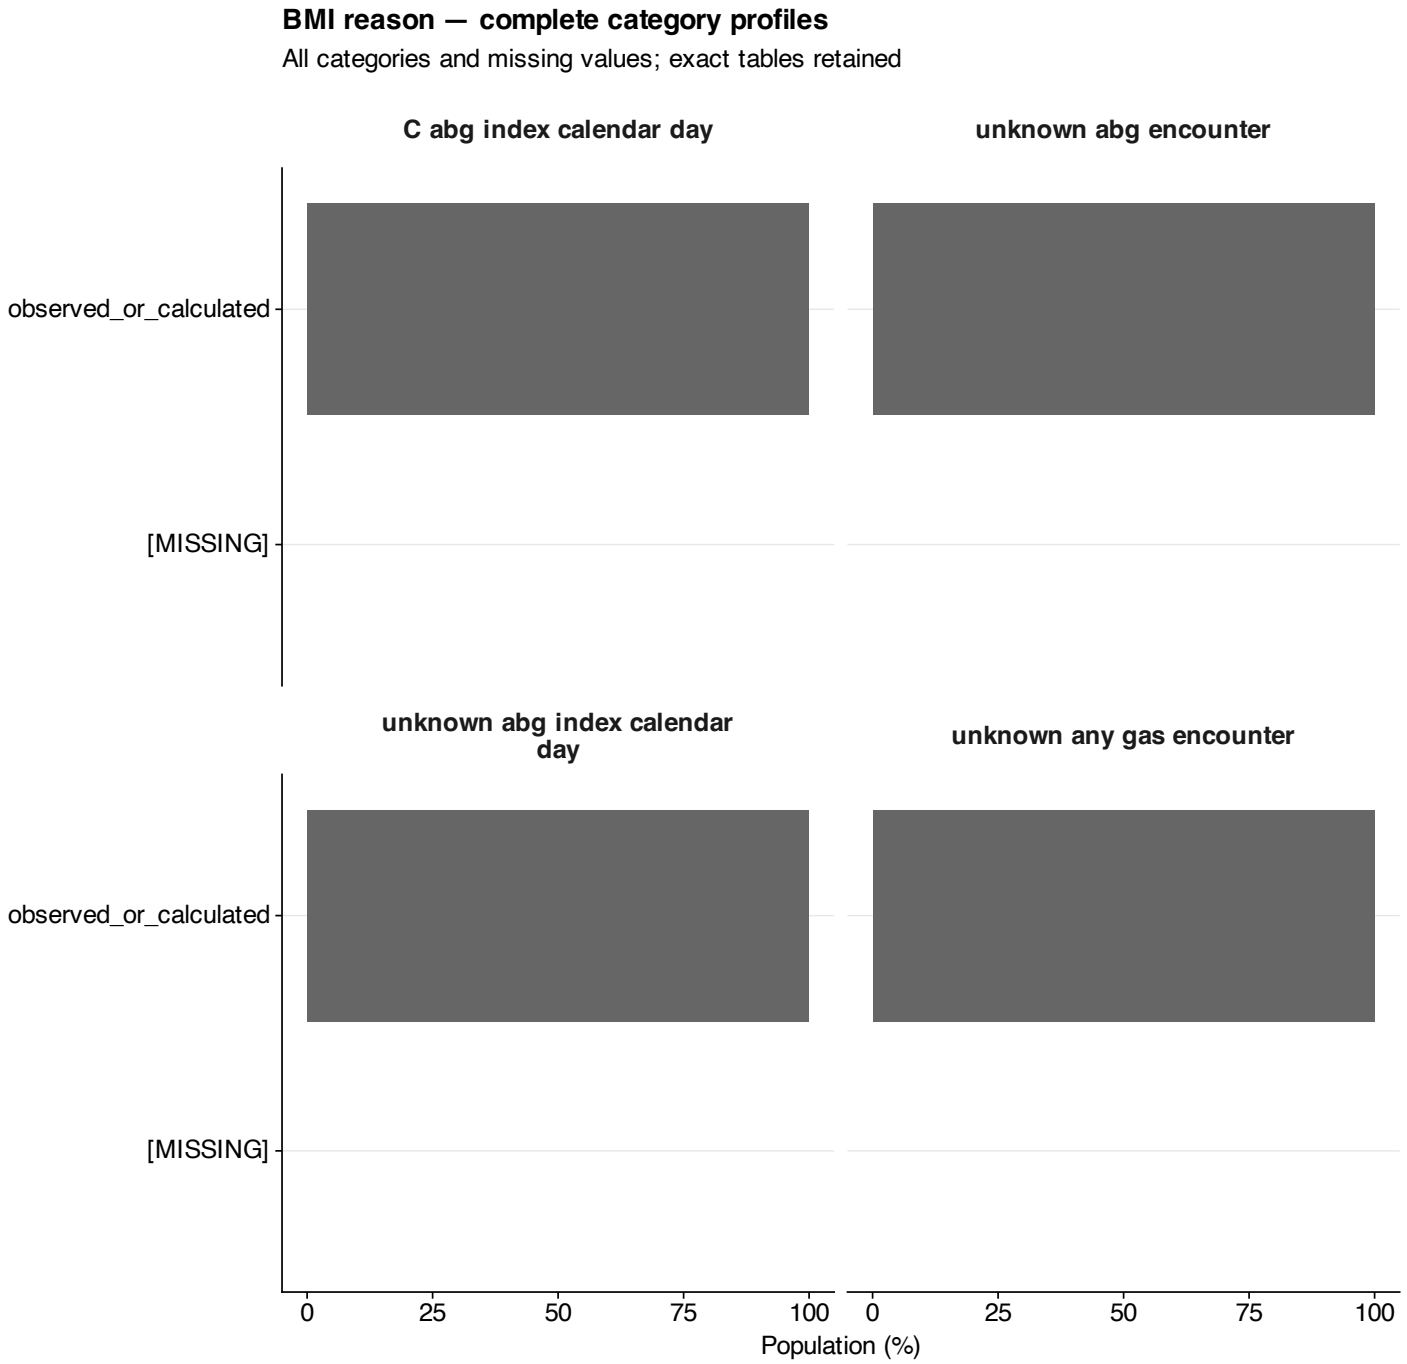

Figure 153: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete bmi_reason stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

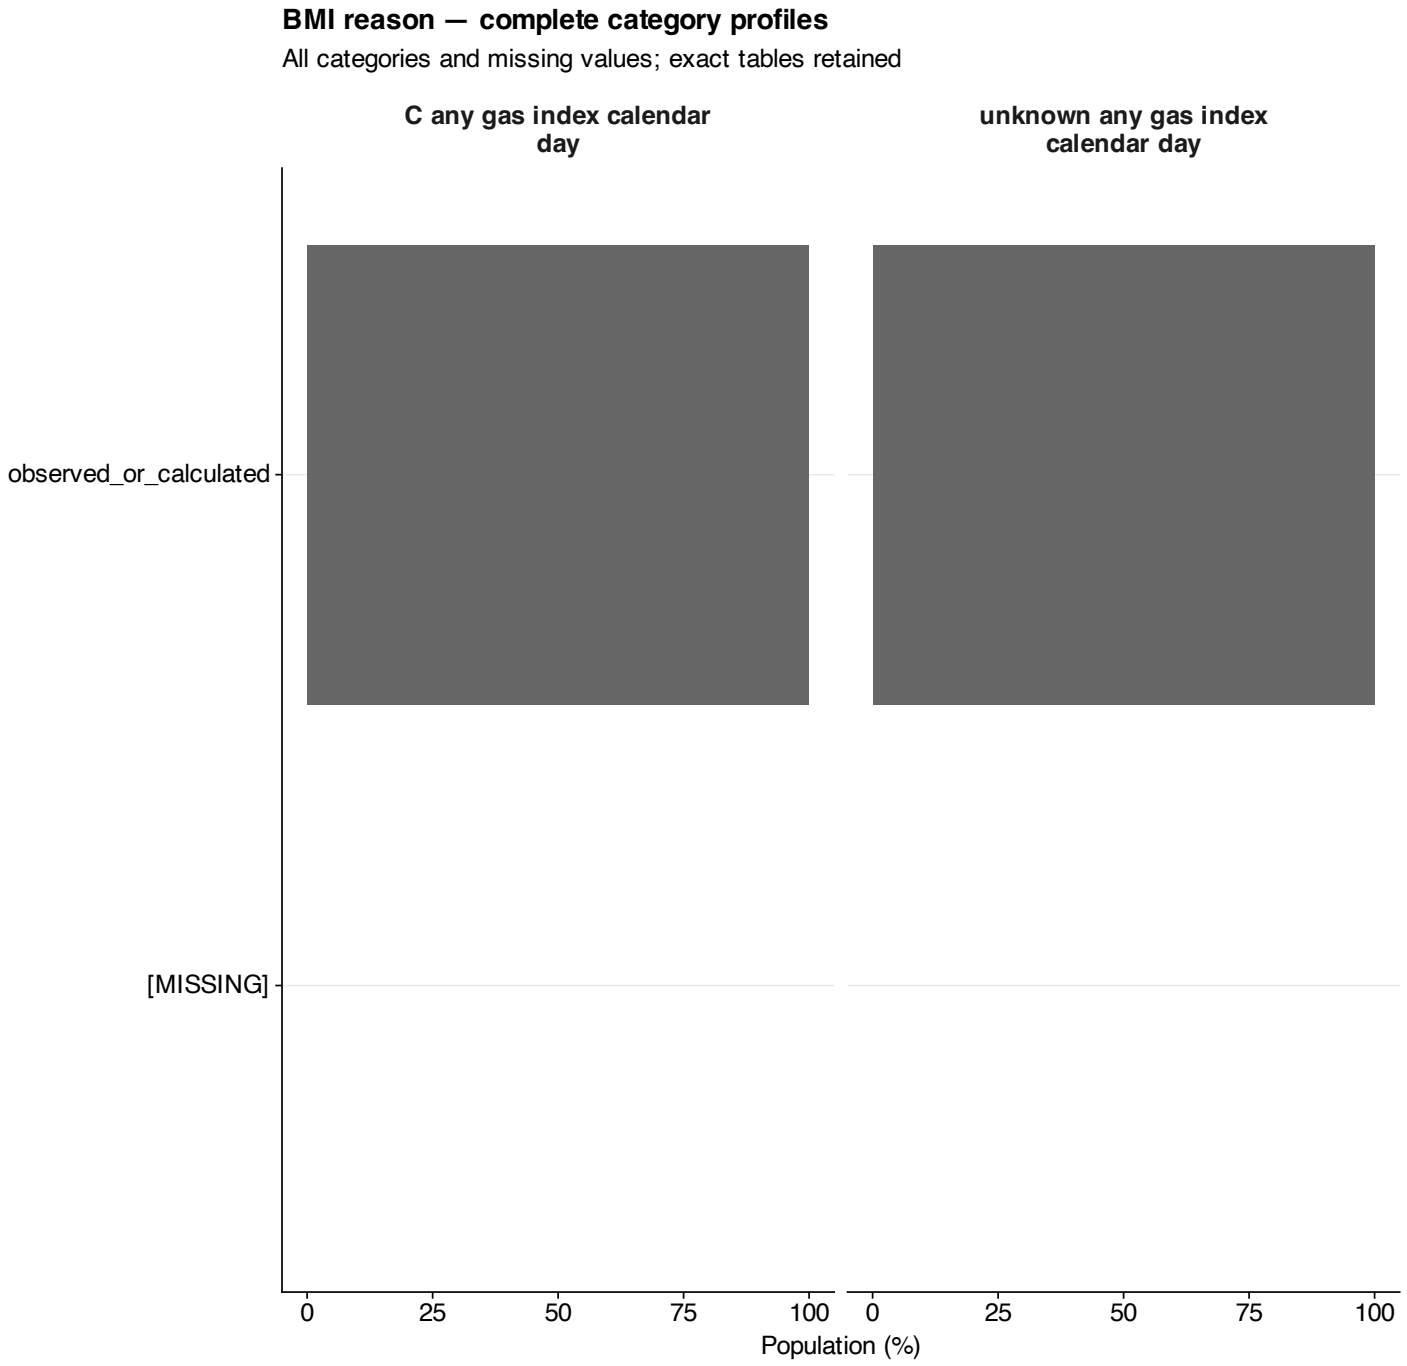

Figure 154: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete bmi_reason stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

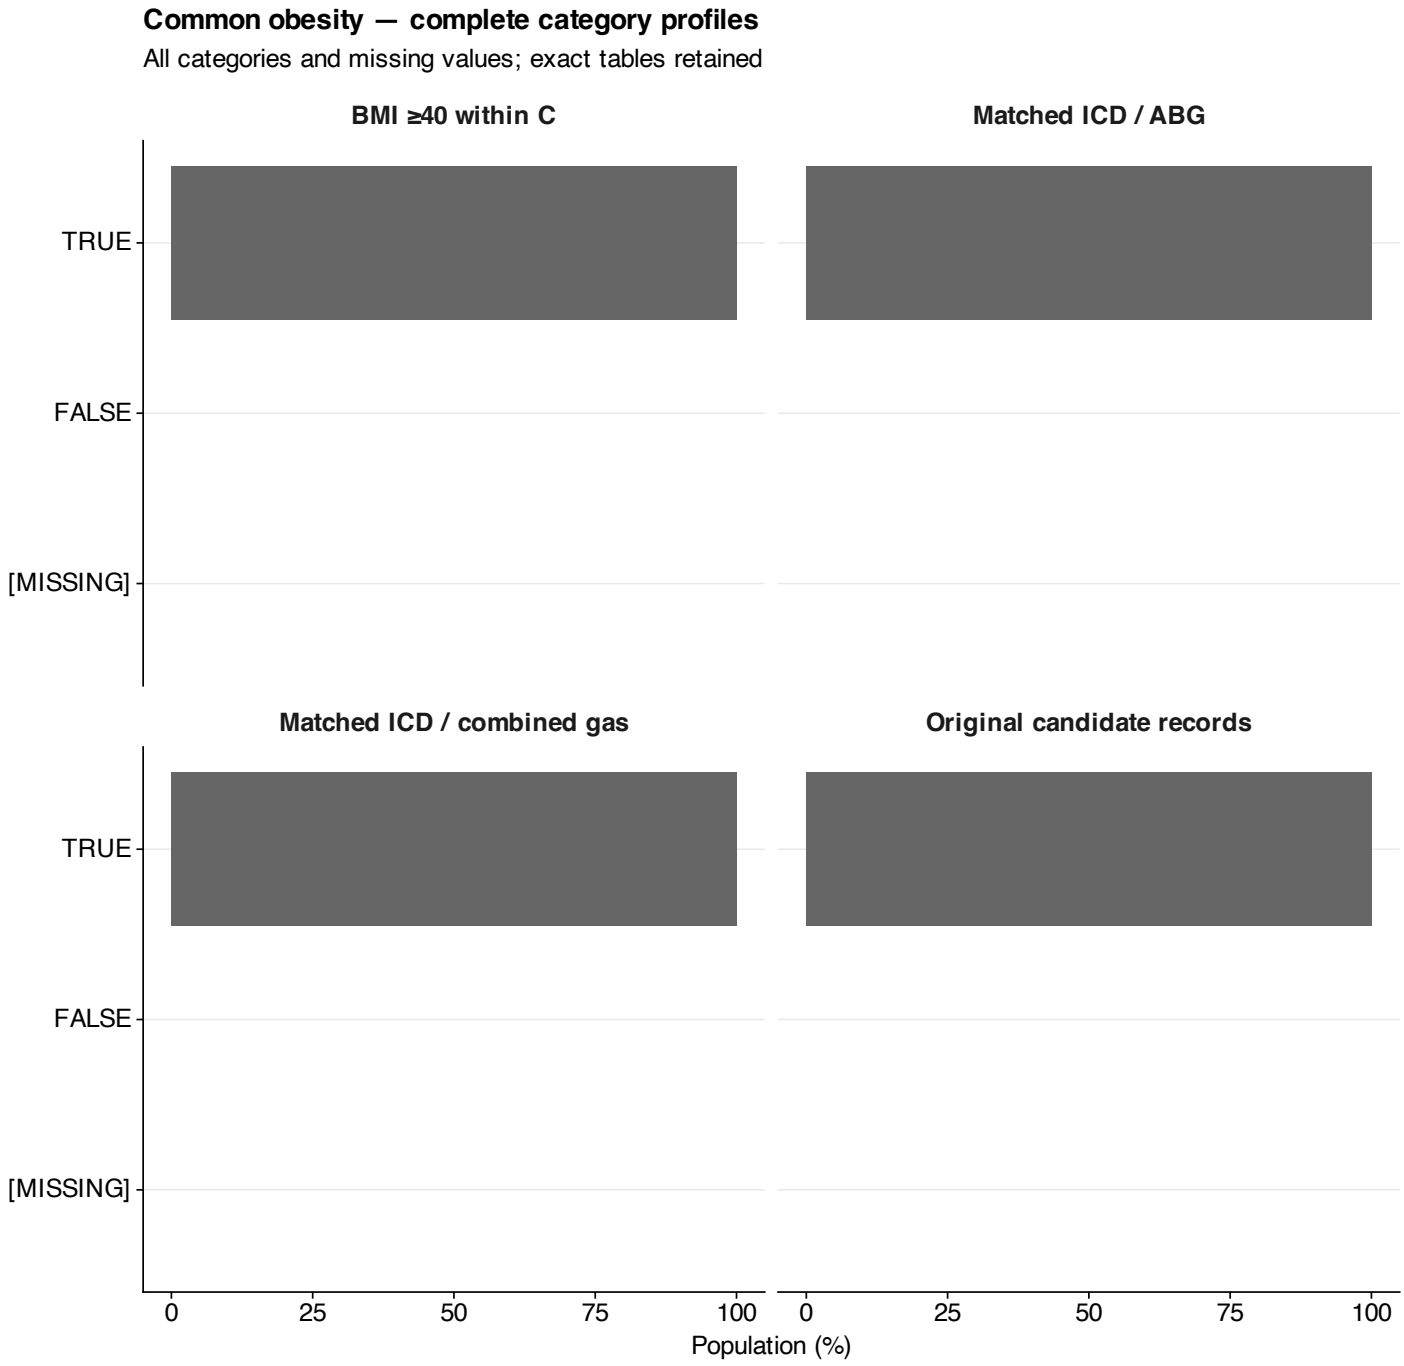

Figure 155: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete common_obesity stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

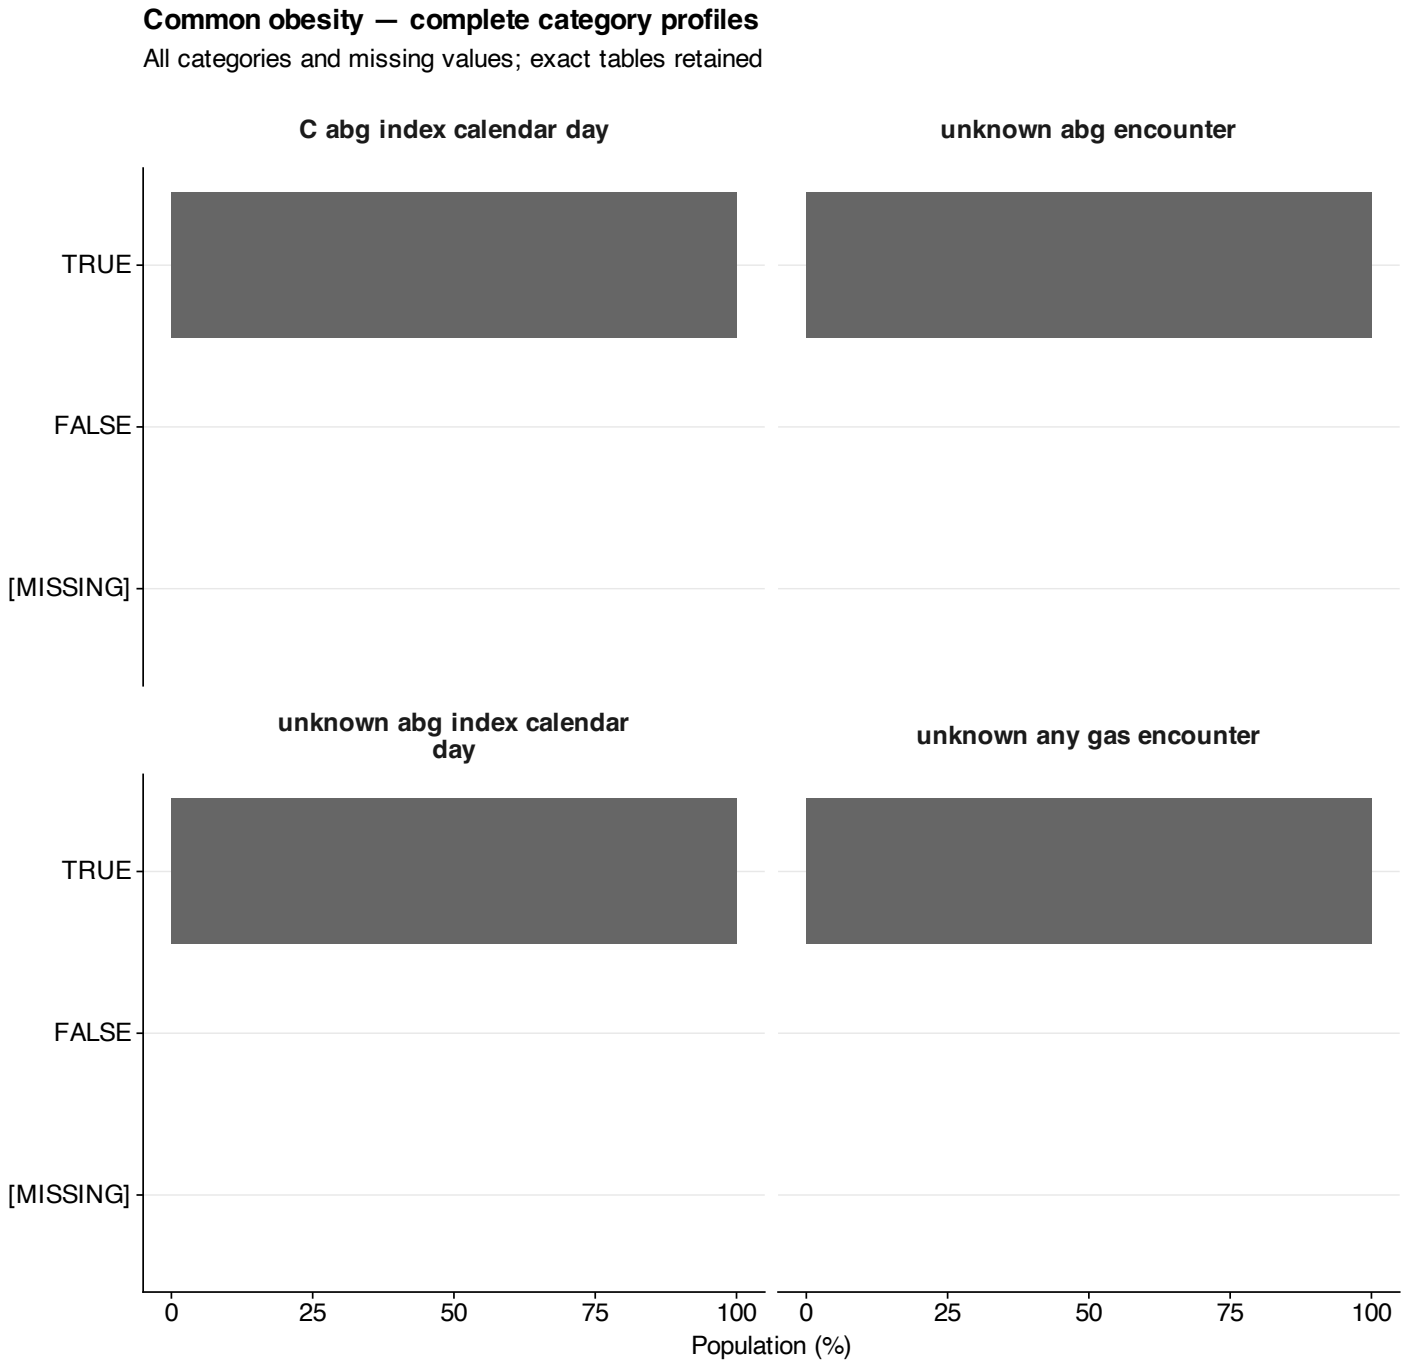

Figure 156: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete common_obesity stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

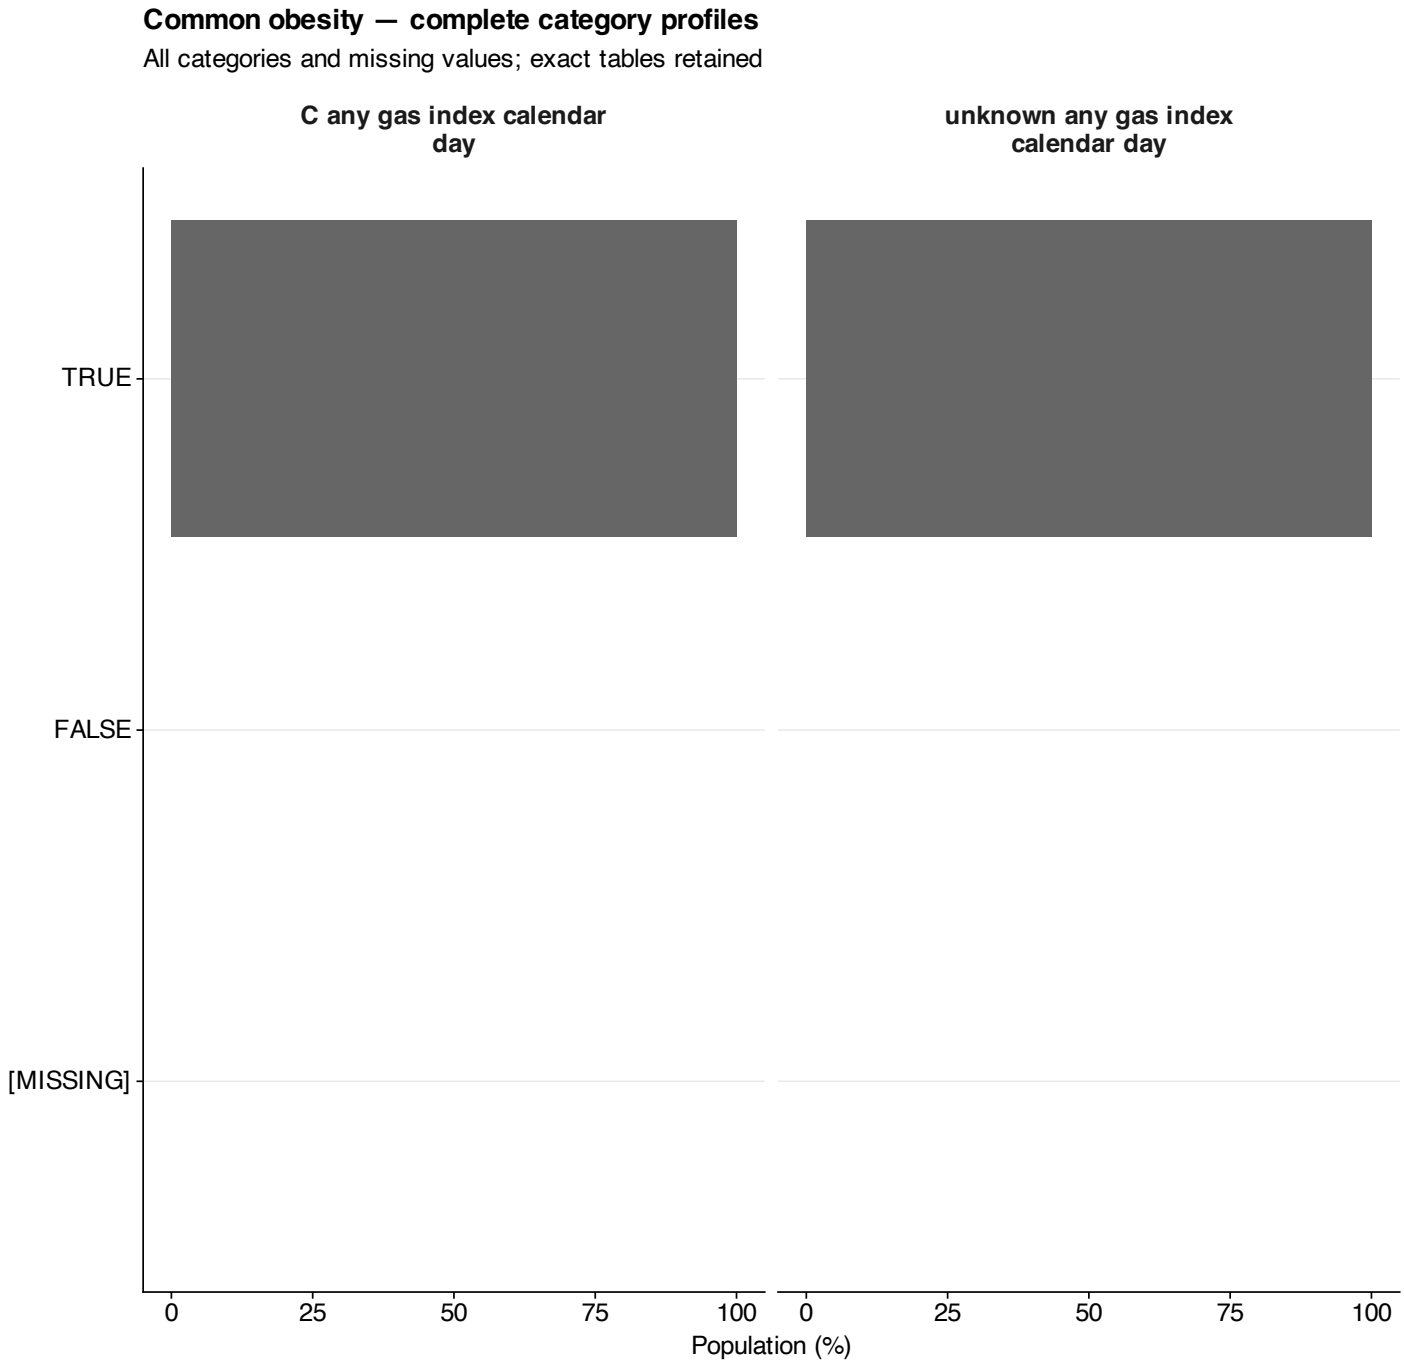

Figure 157: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete common_obesity stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

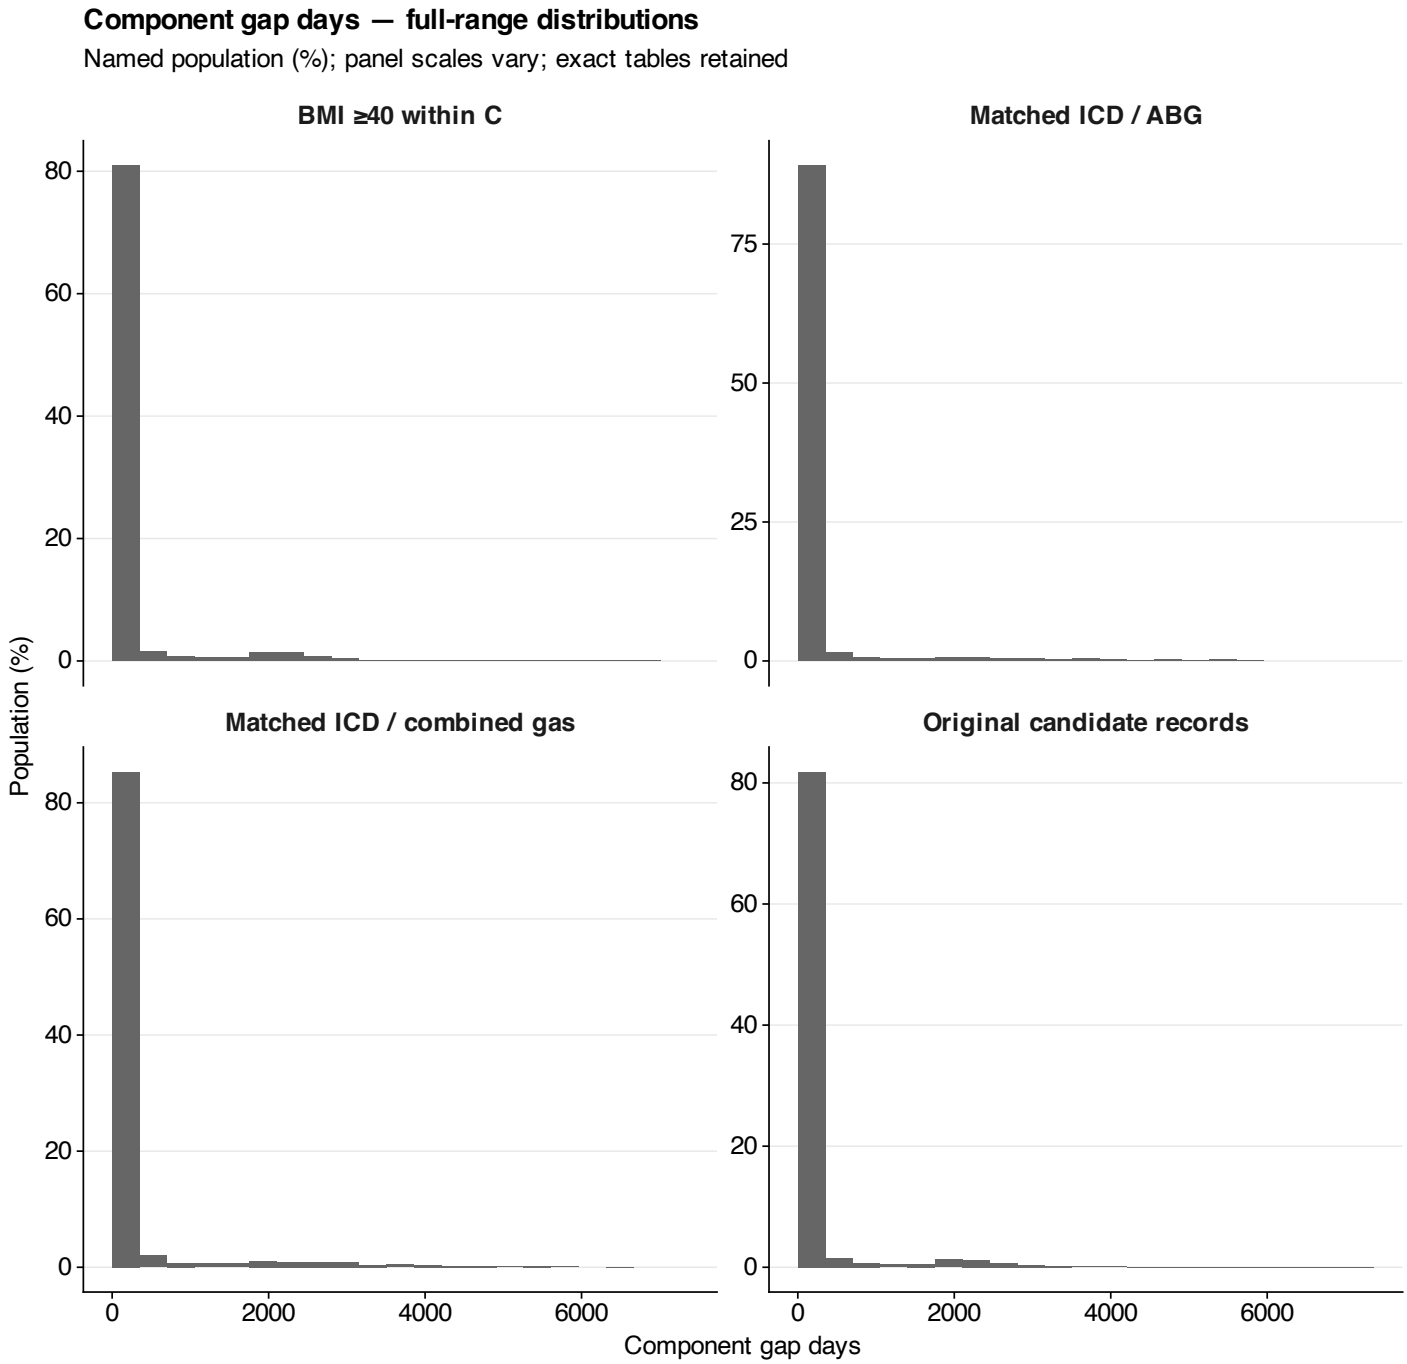

Figure 158: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete component_gap_days stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

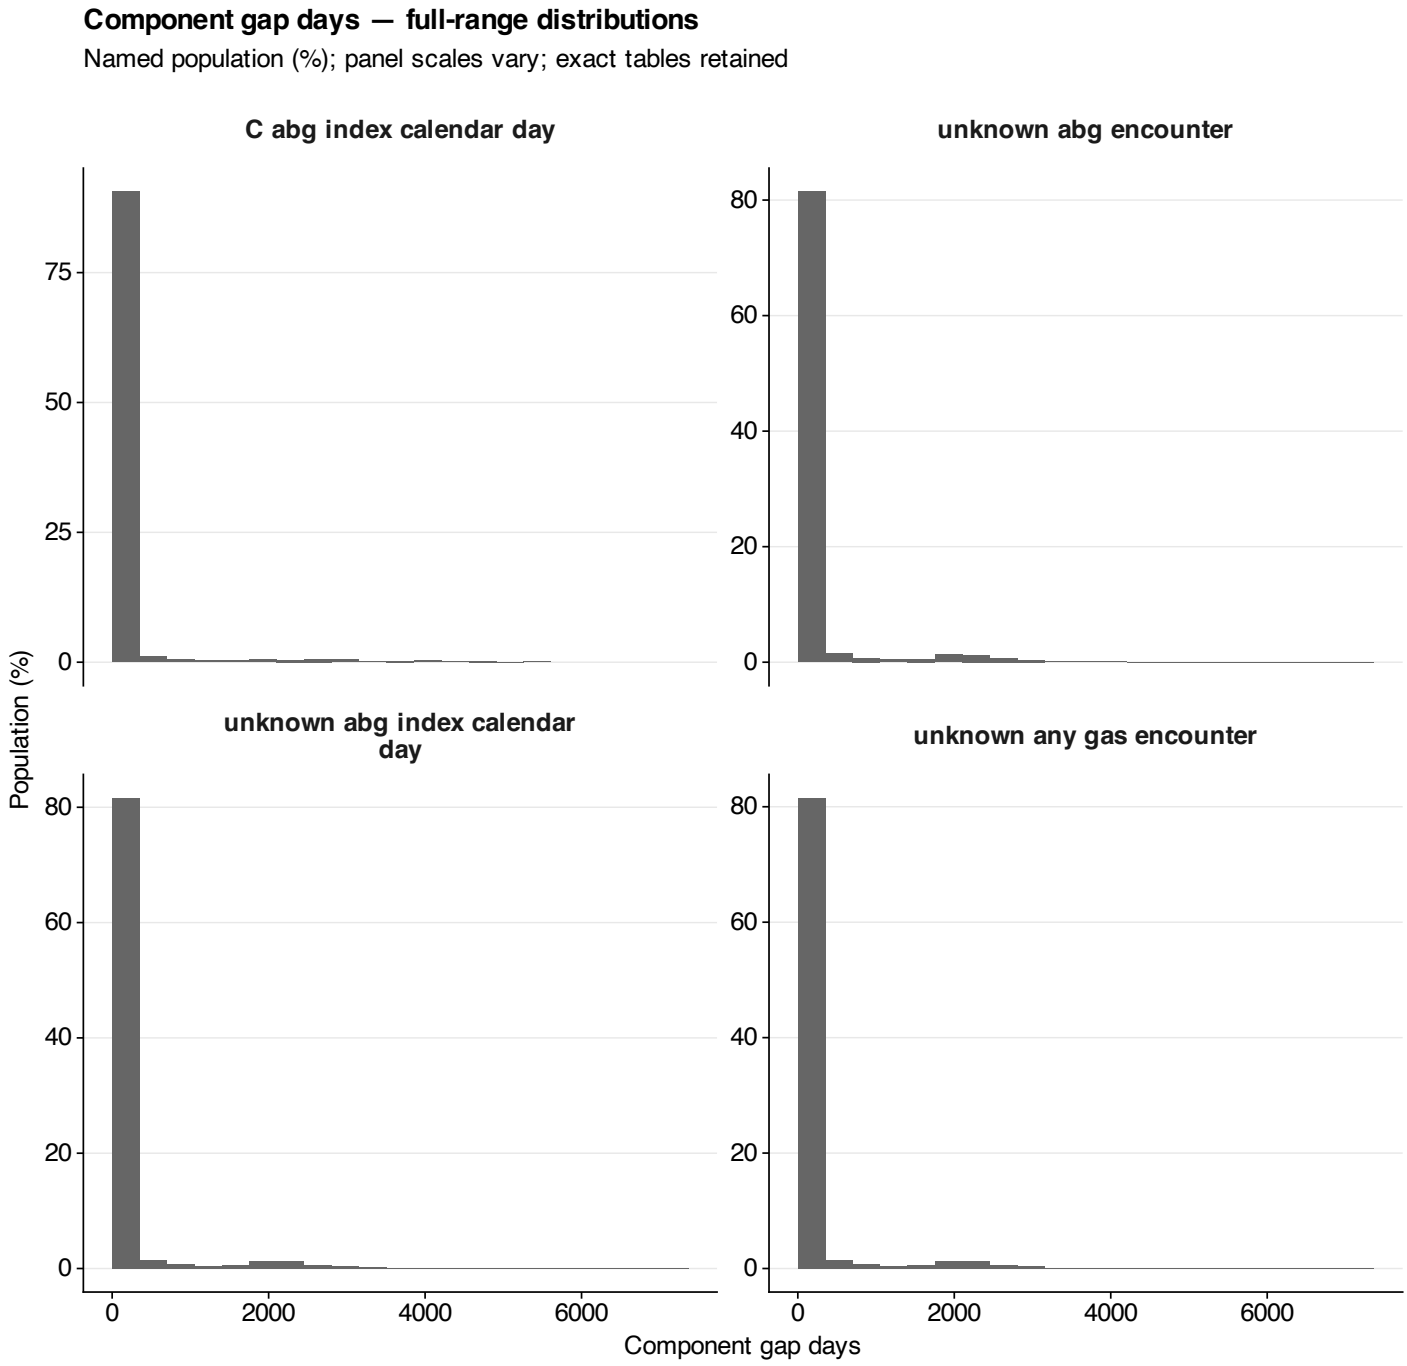

Figure 159: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete component_gap_days stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

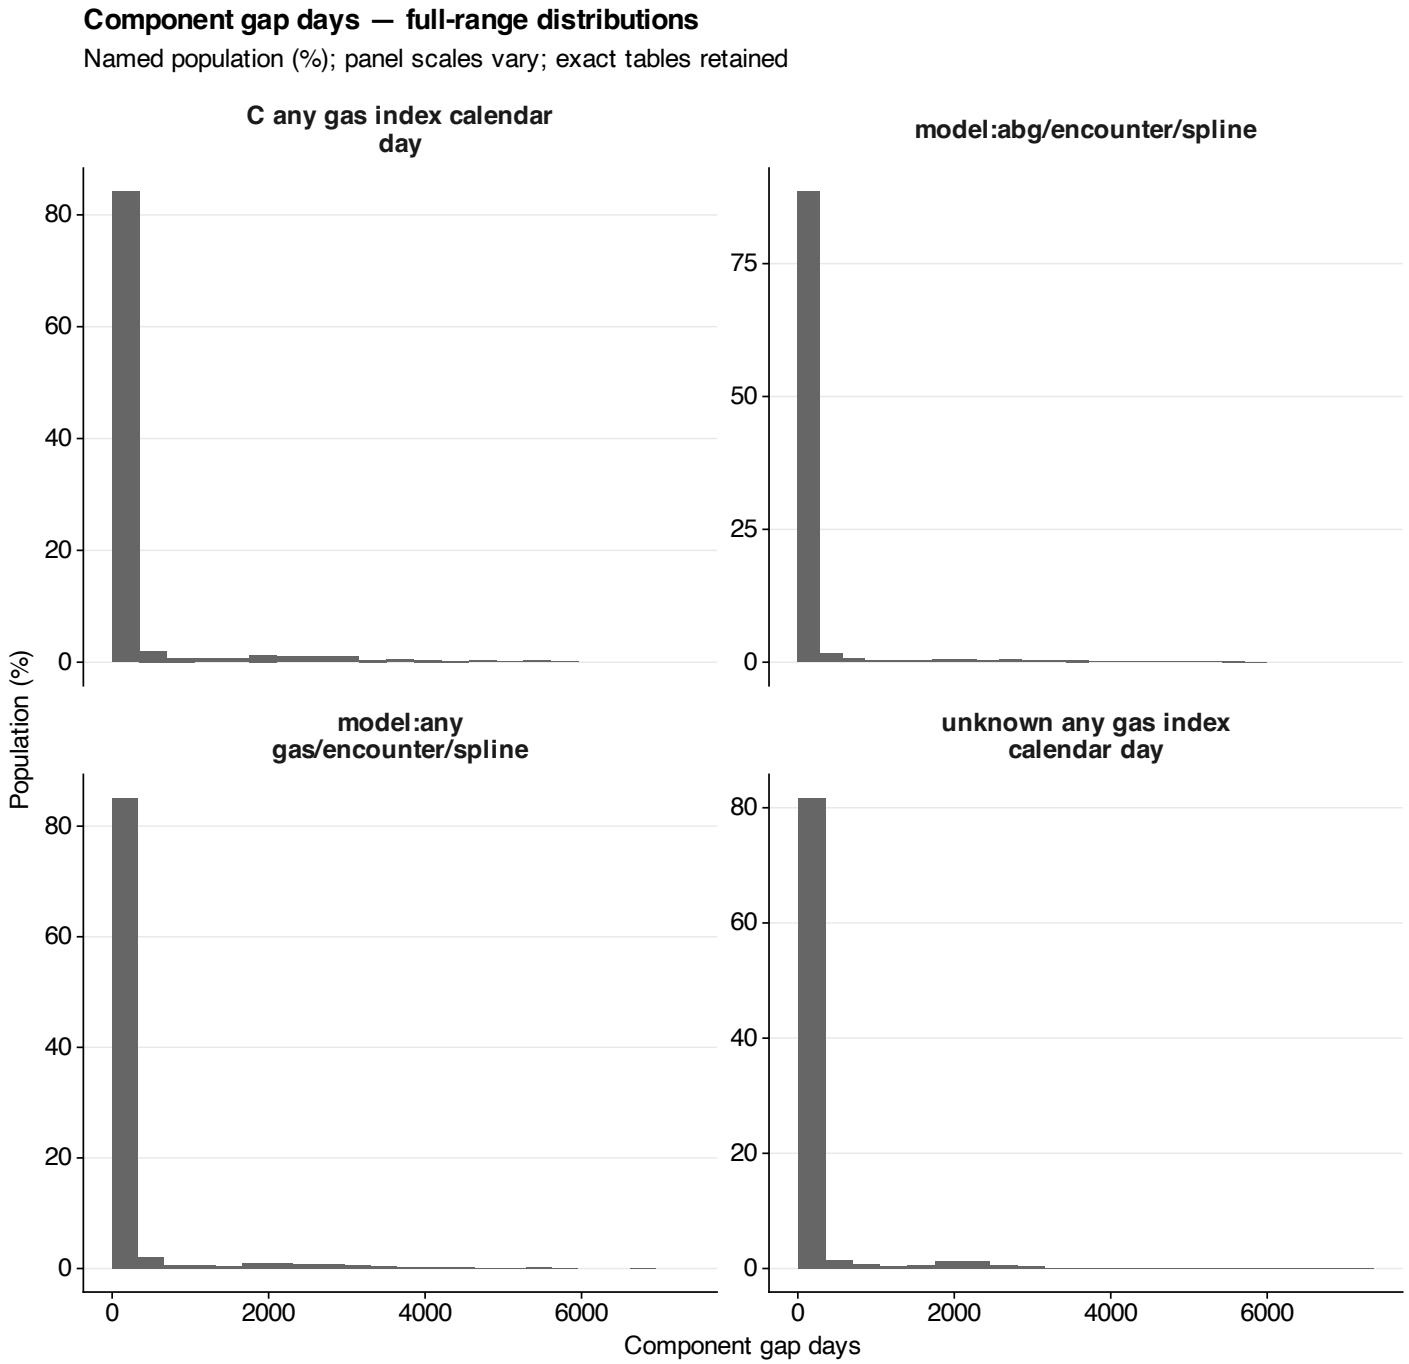

Figure 160: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete component_gap_days stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

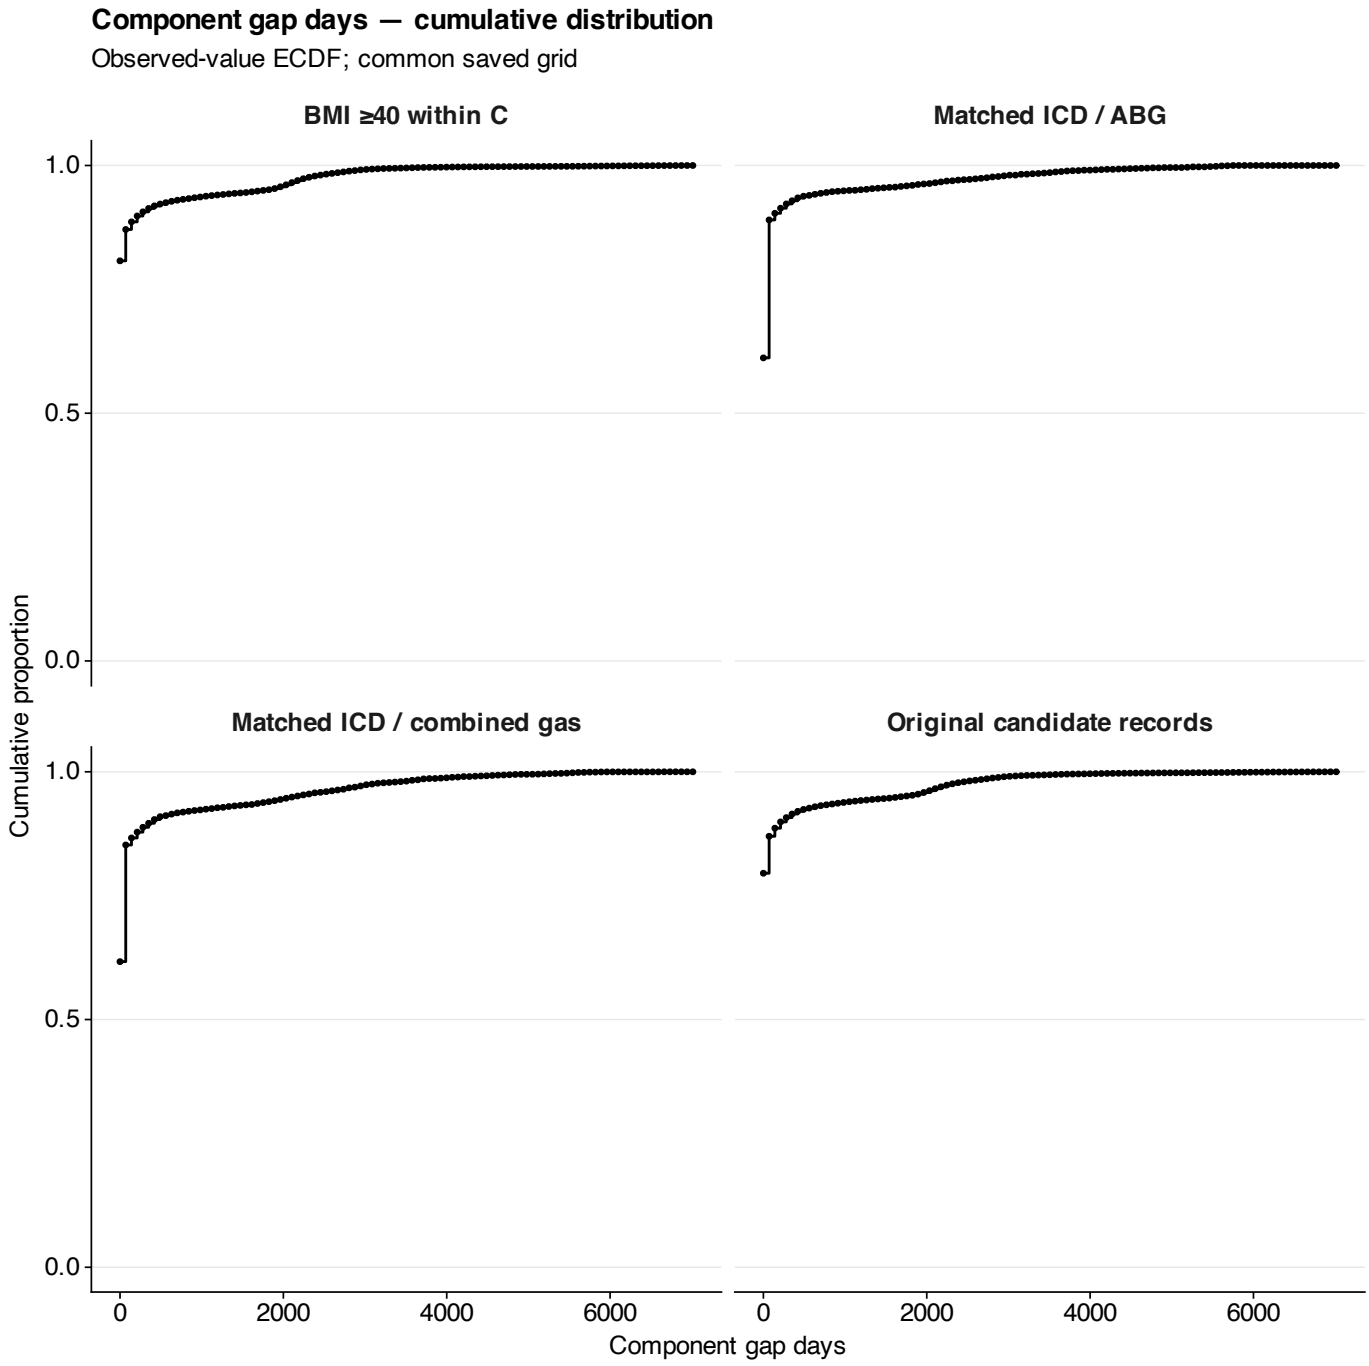

Figure 161: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. component_gap_days ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

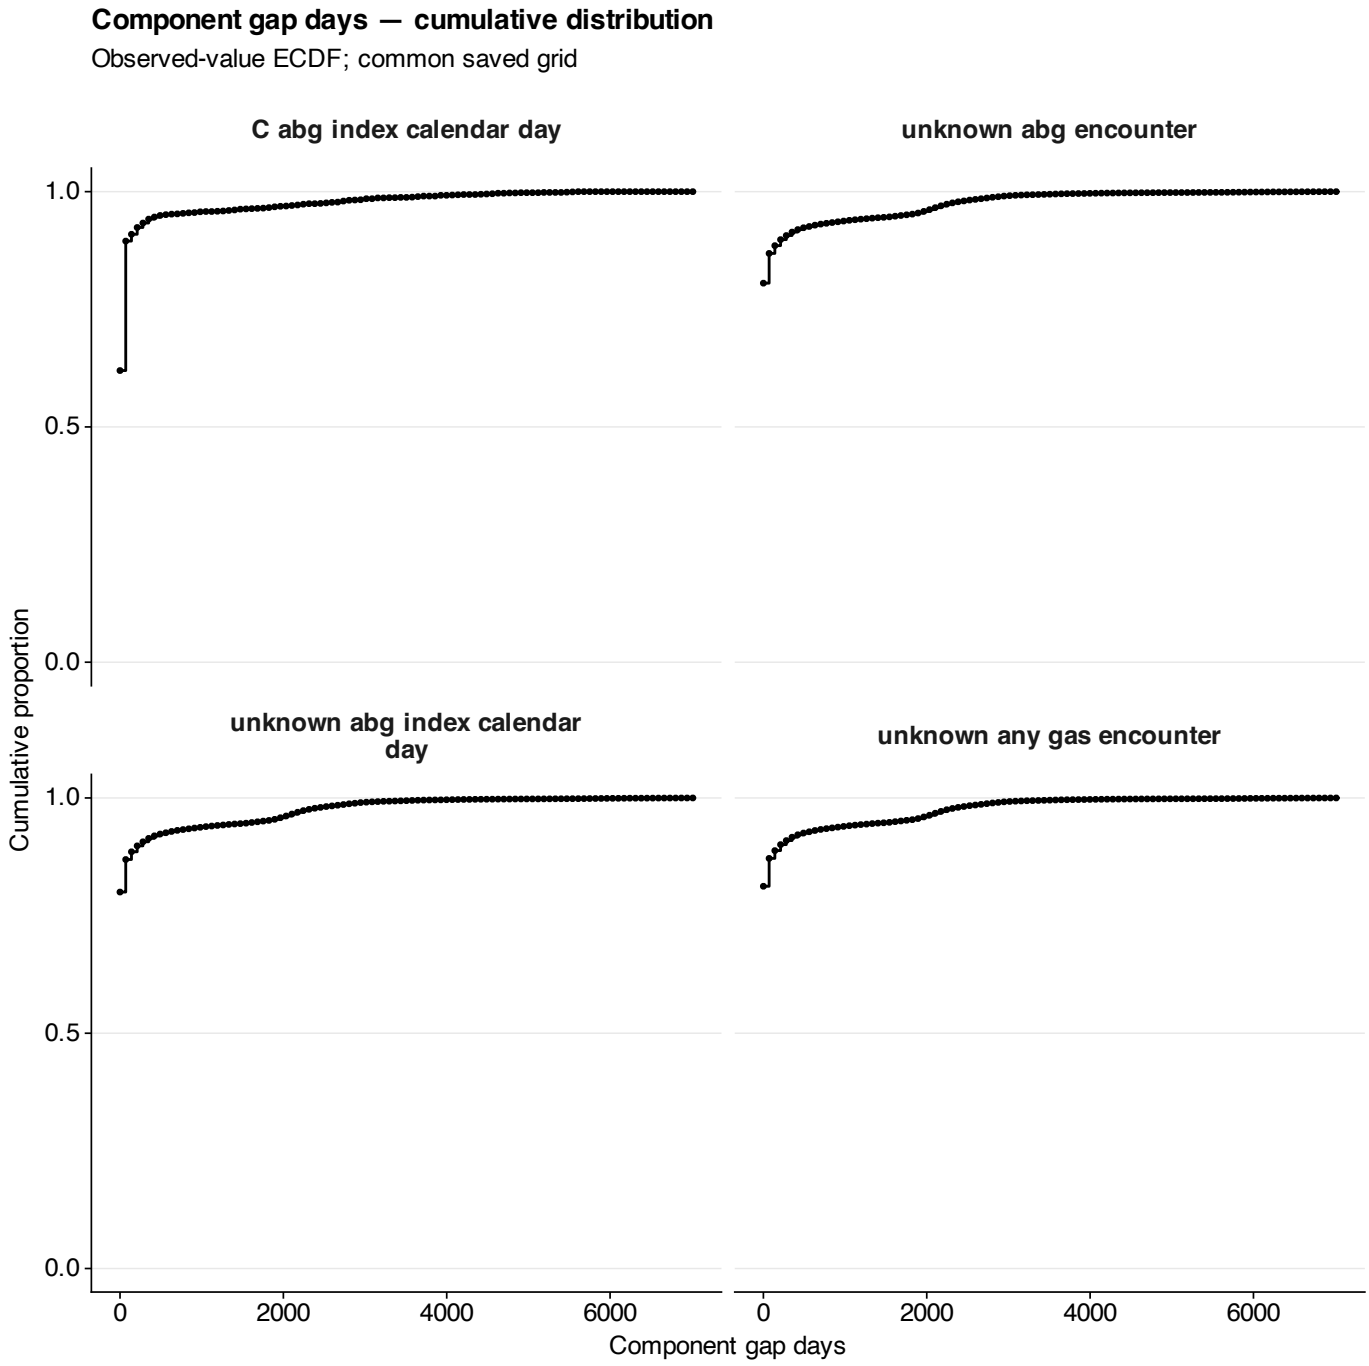

Figure 162: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. component_gap_days ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

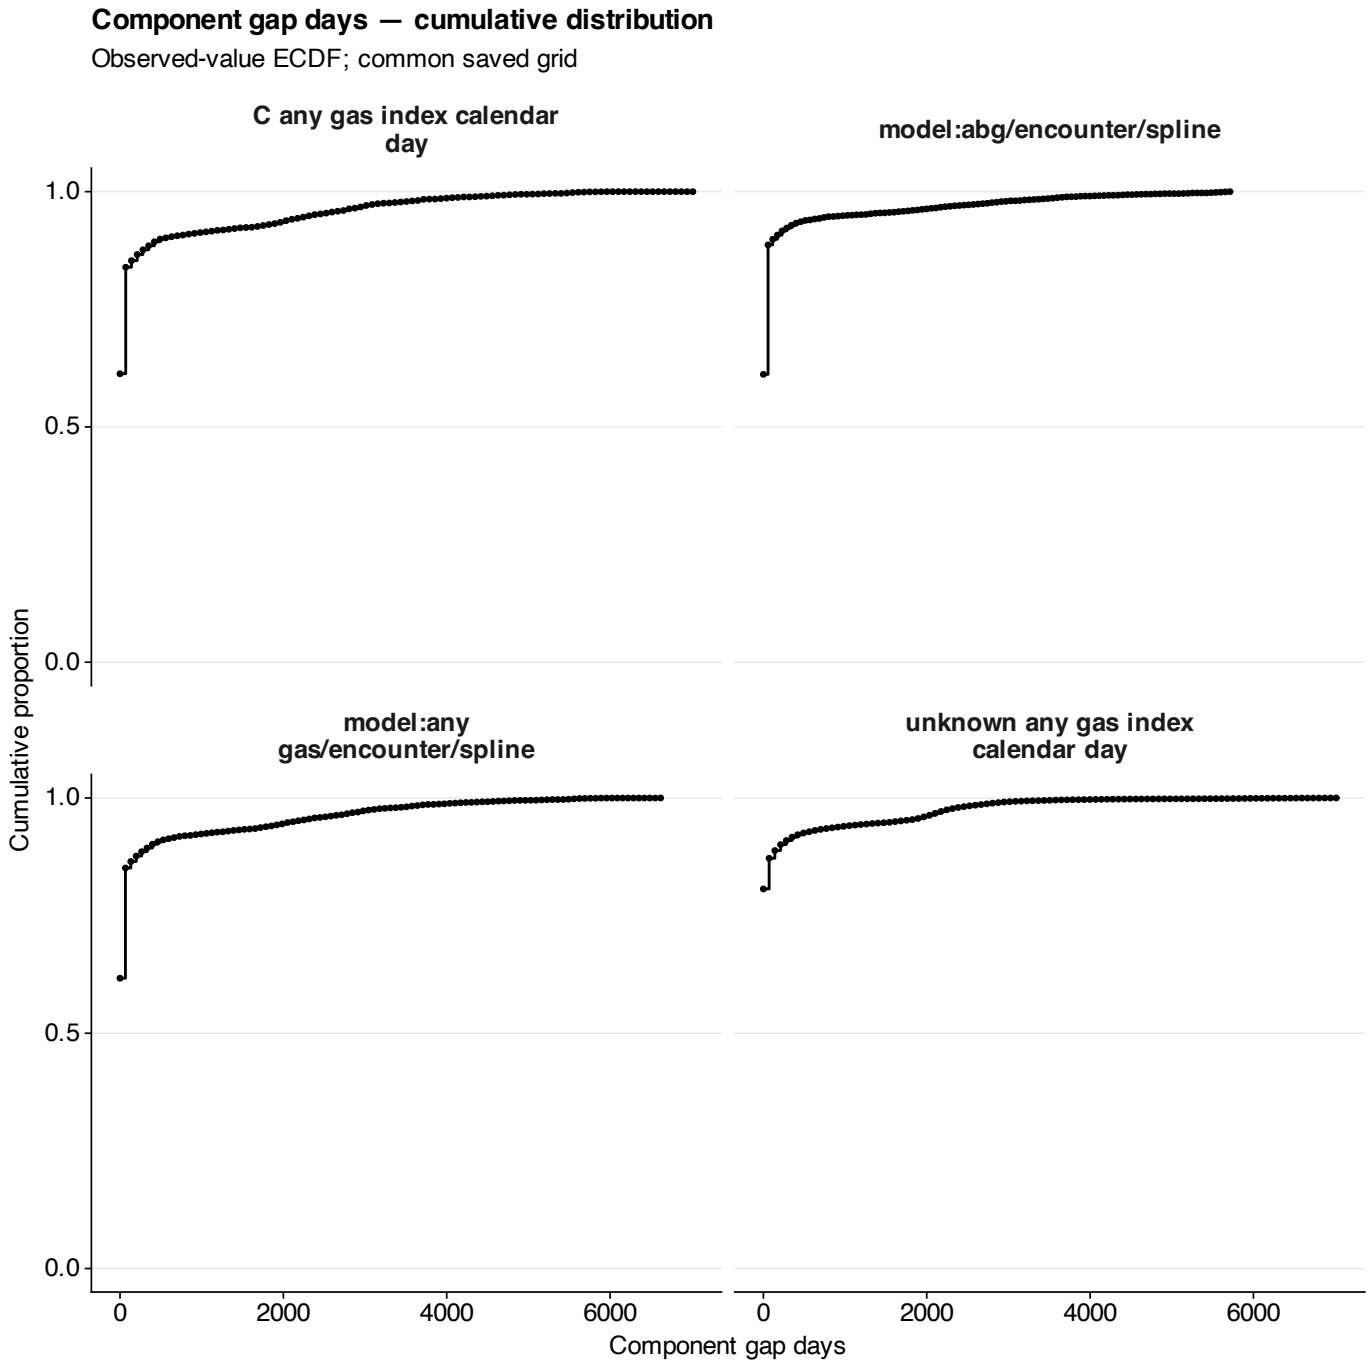

Figure 163: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. component_gap_days ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

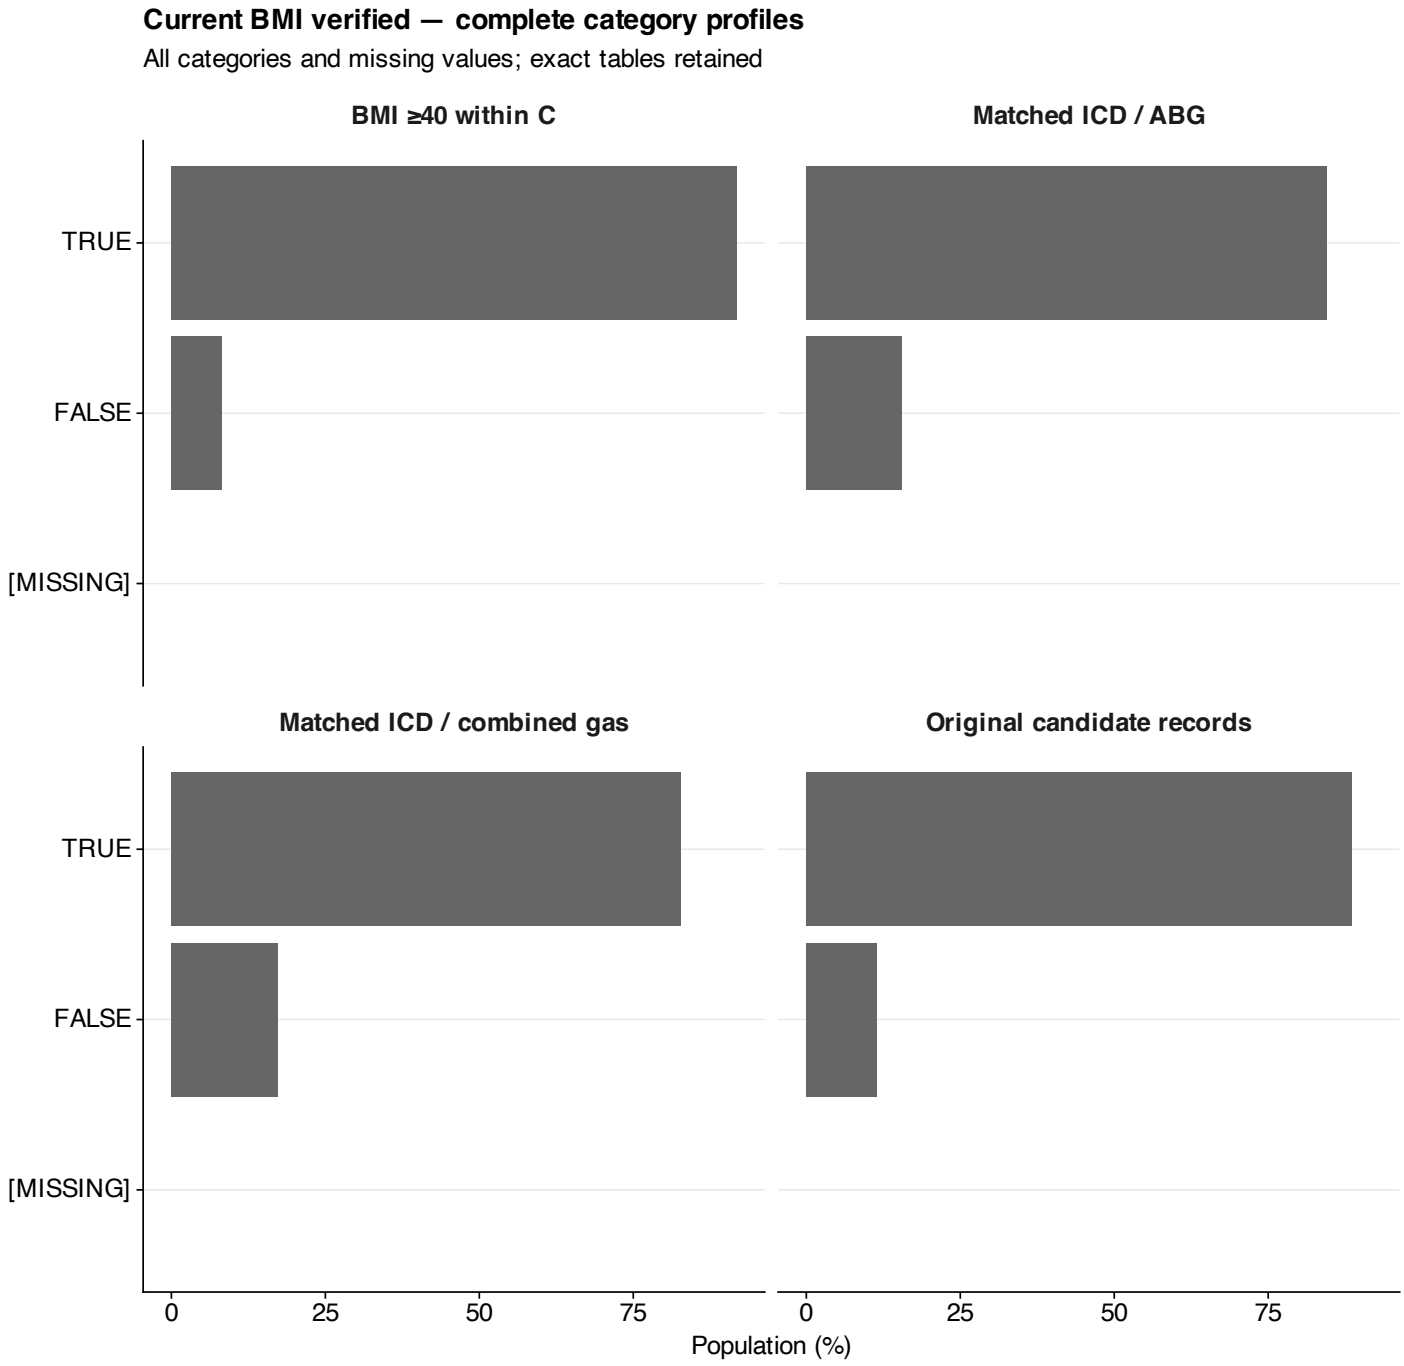

Figure 164: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete current_bmi_verified stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

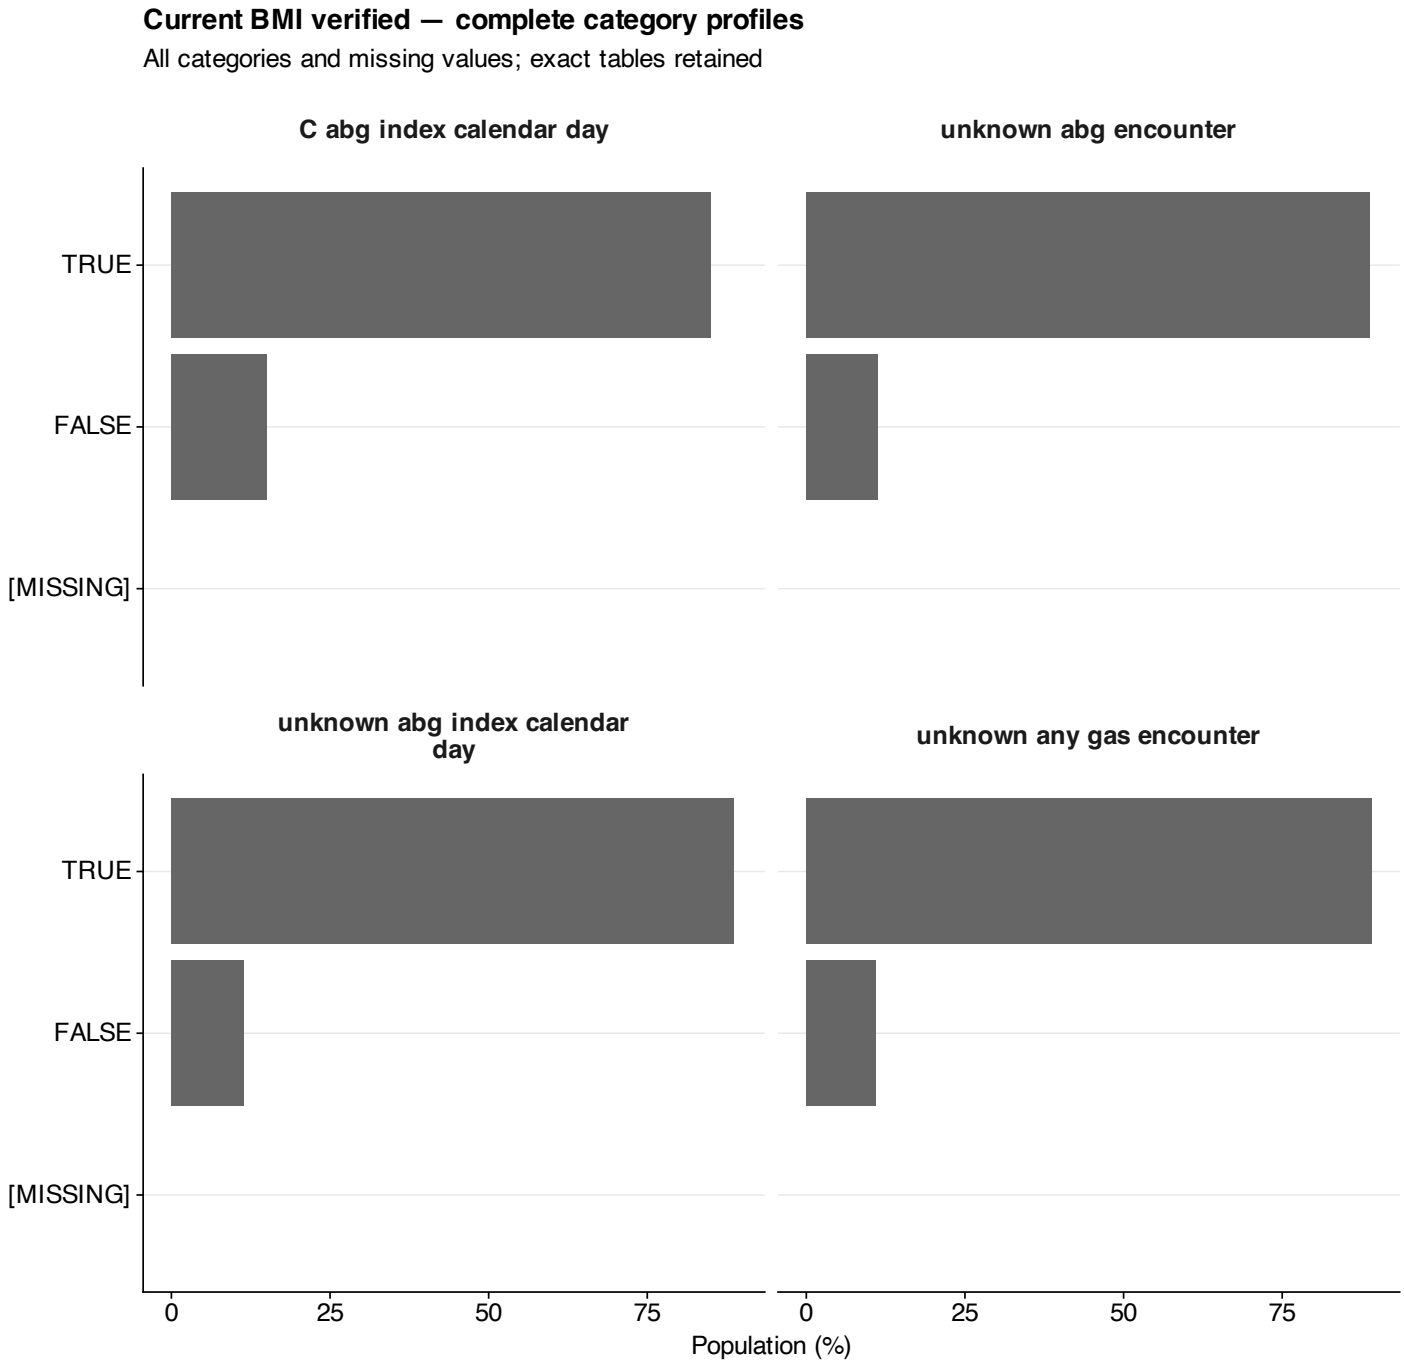

Figure 165: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete current_bmi_verified stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

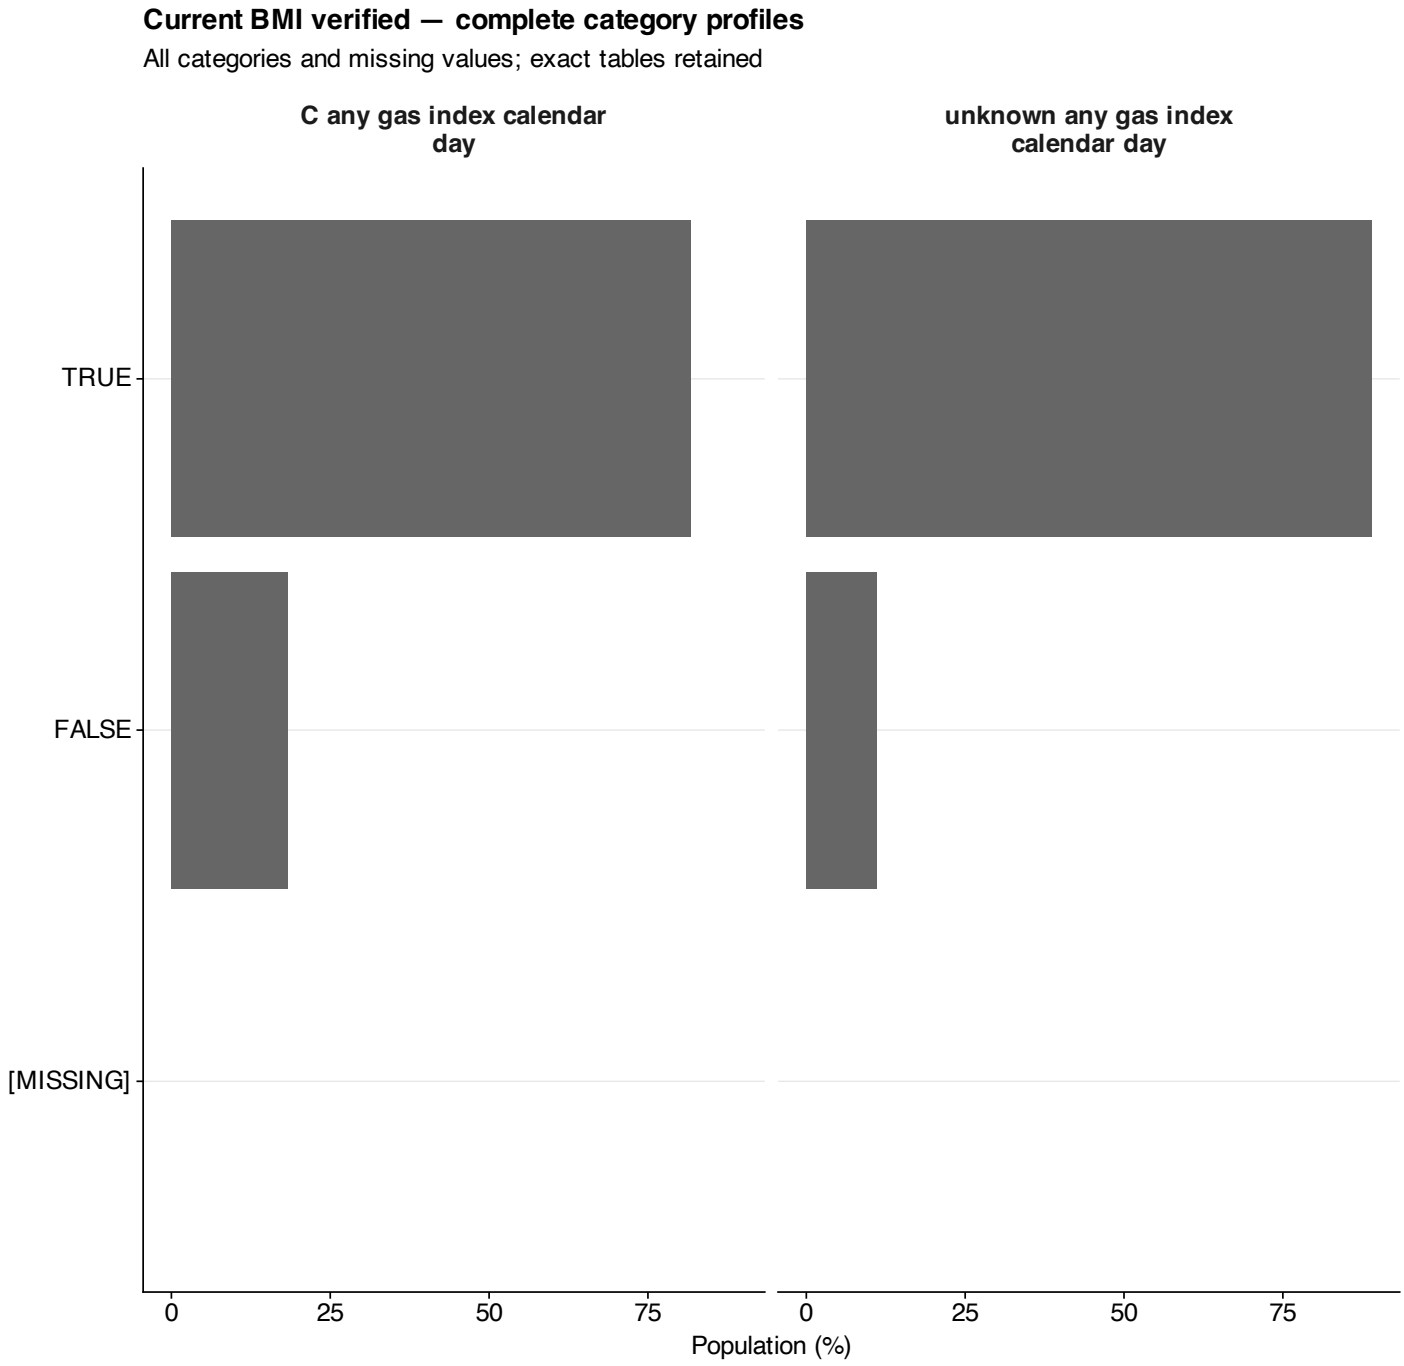

Figure 166: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete current_bmi_verified stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

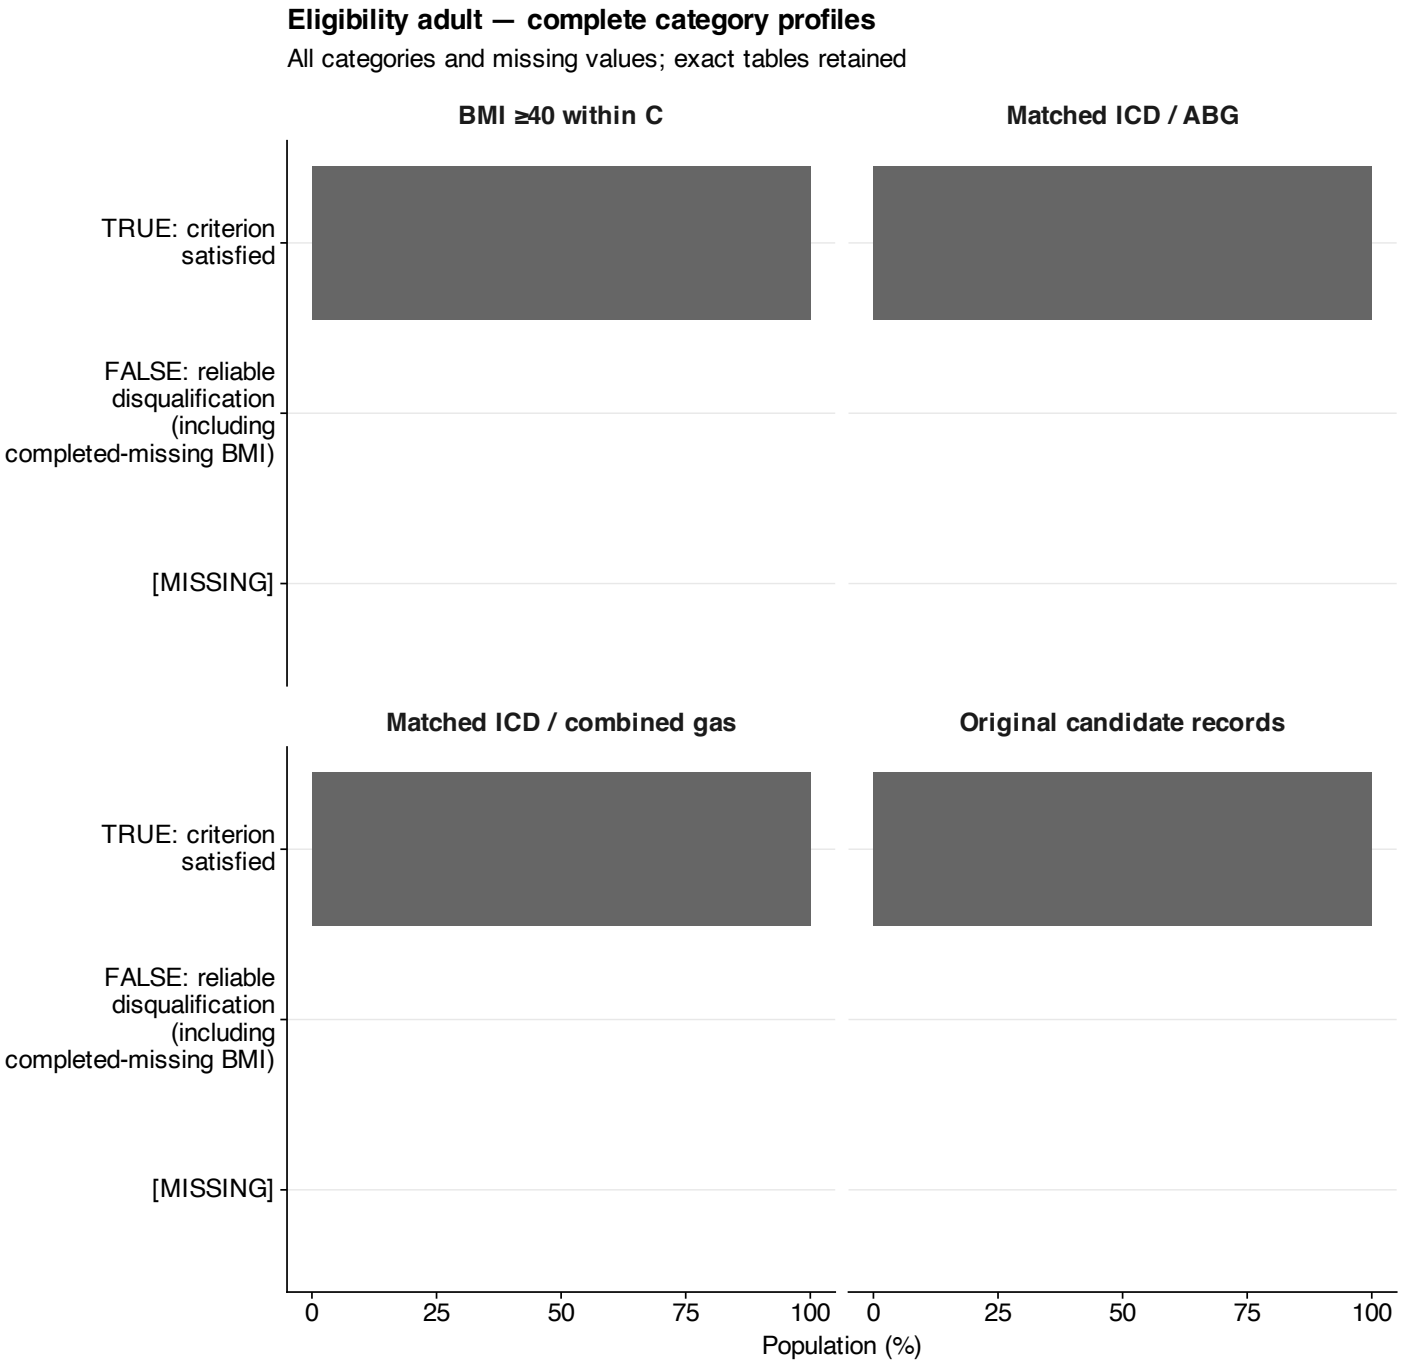

Figure 167: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete eligibility_adult stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

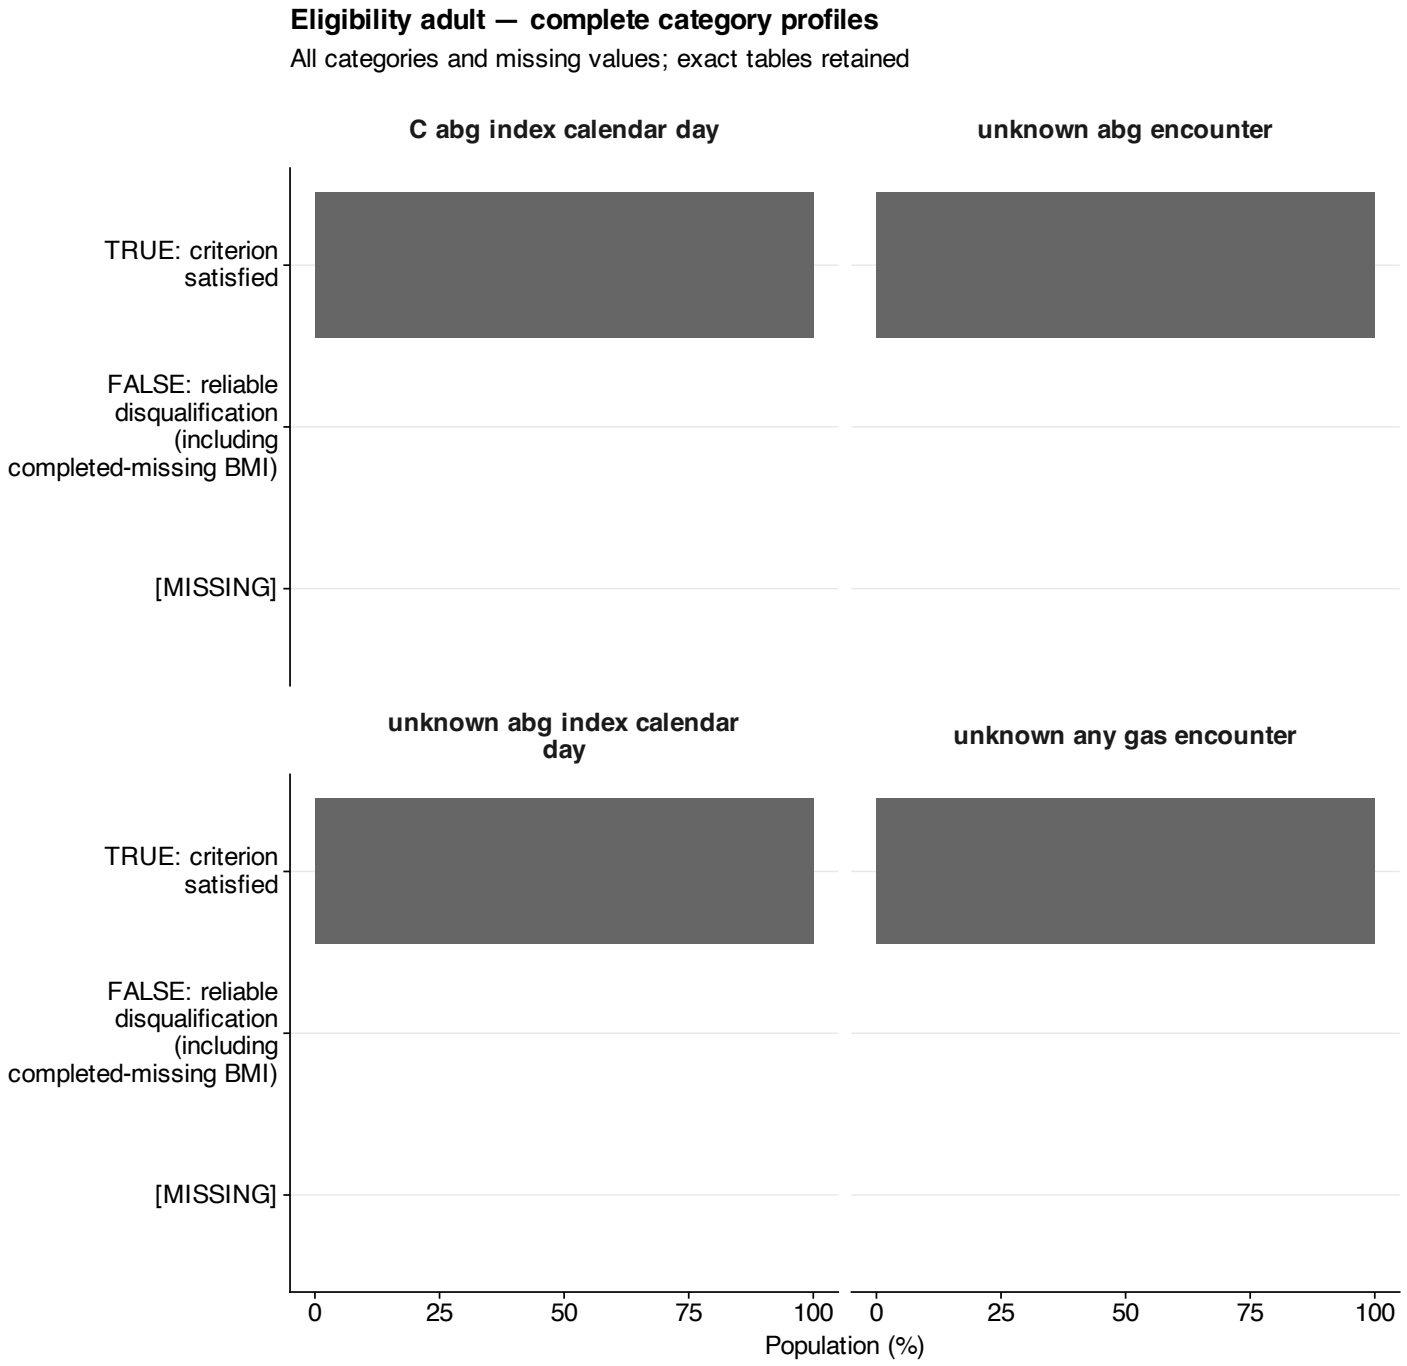

Figure 168: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete eligibility_adult stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

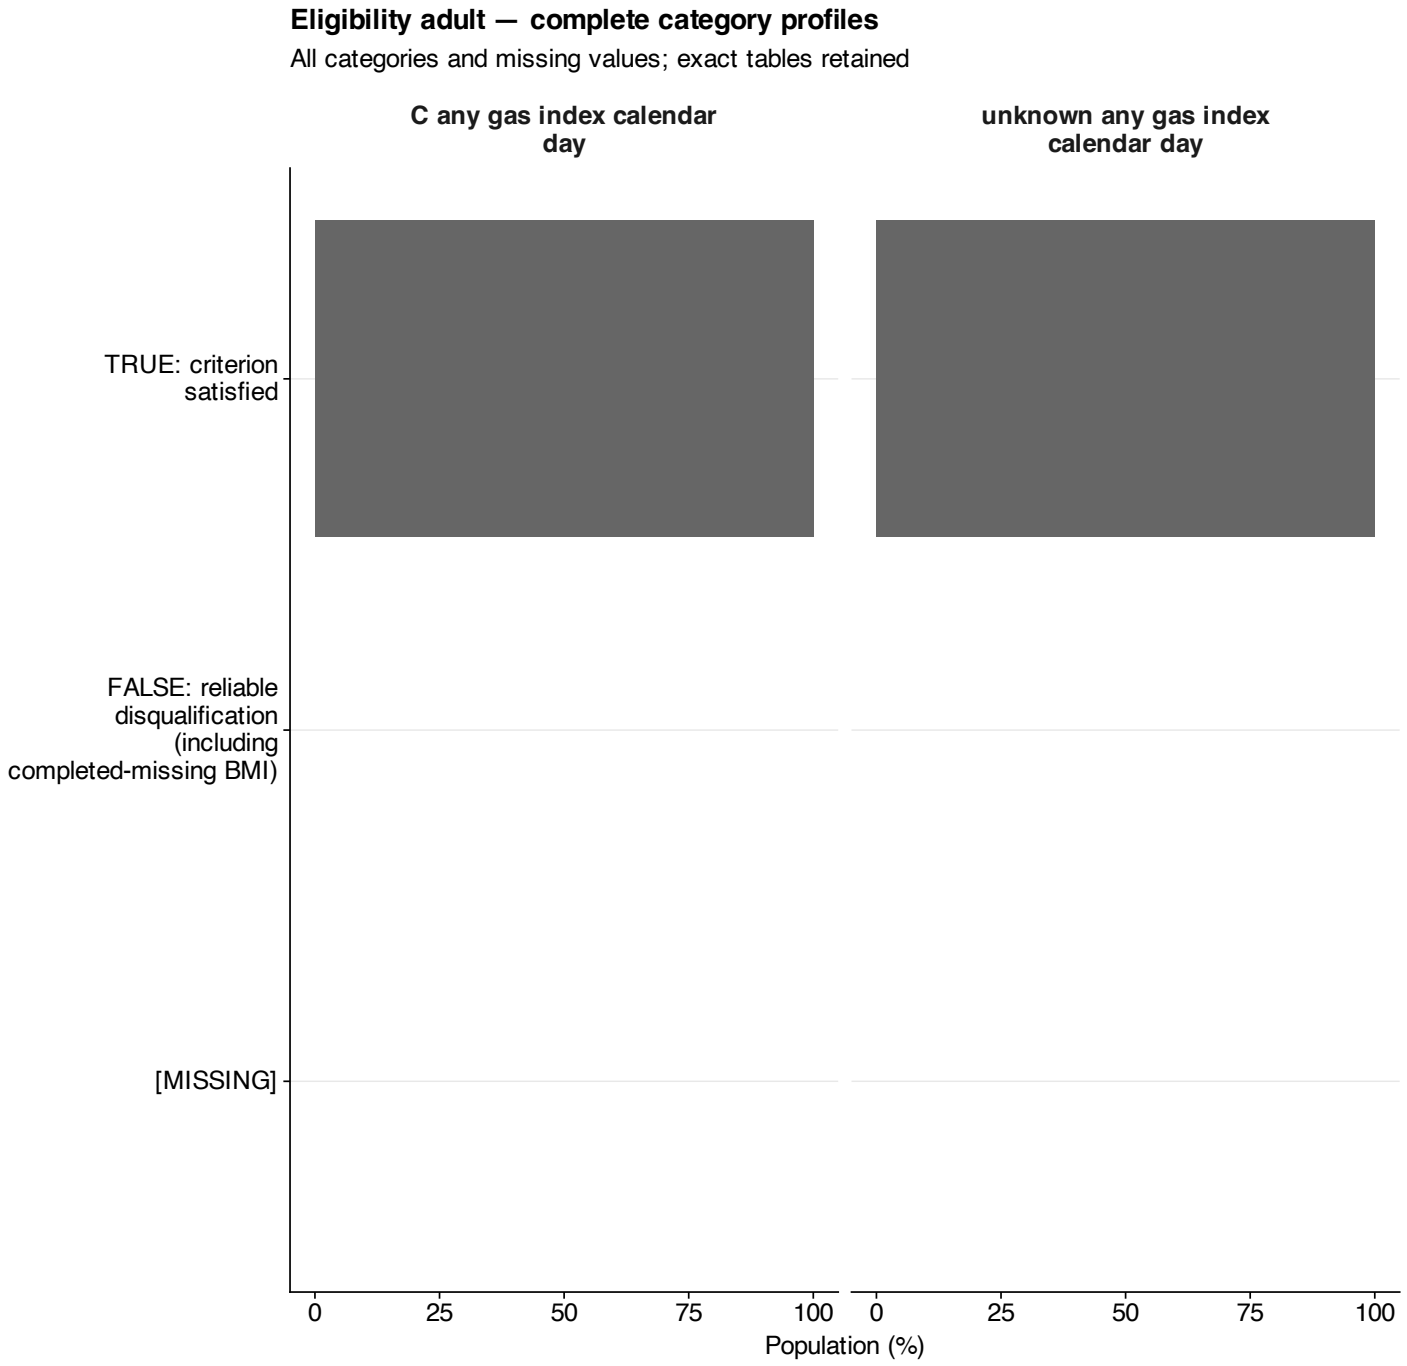

Figure 169: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete eligibility_adult stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

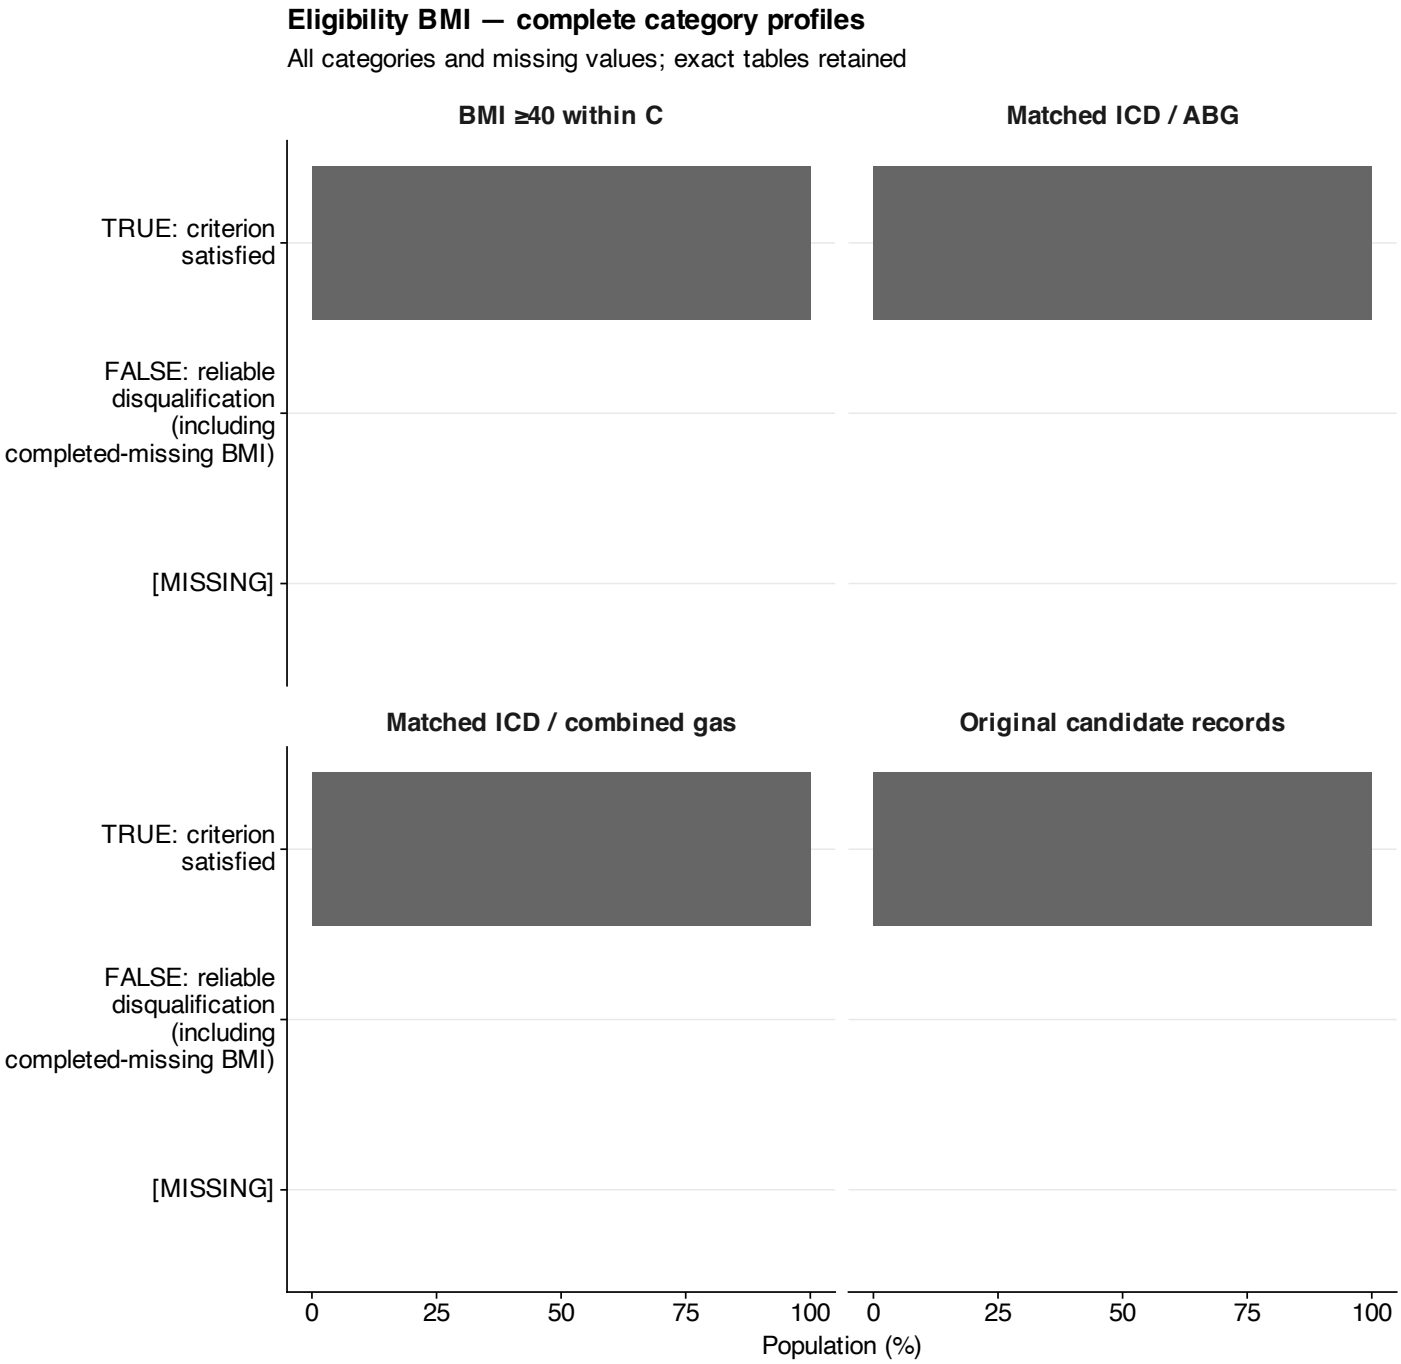

Figure 170: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete eligibility_bmi stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

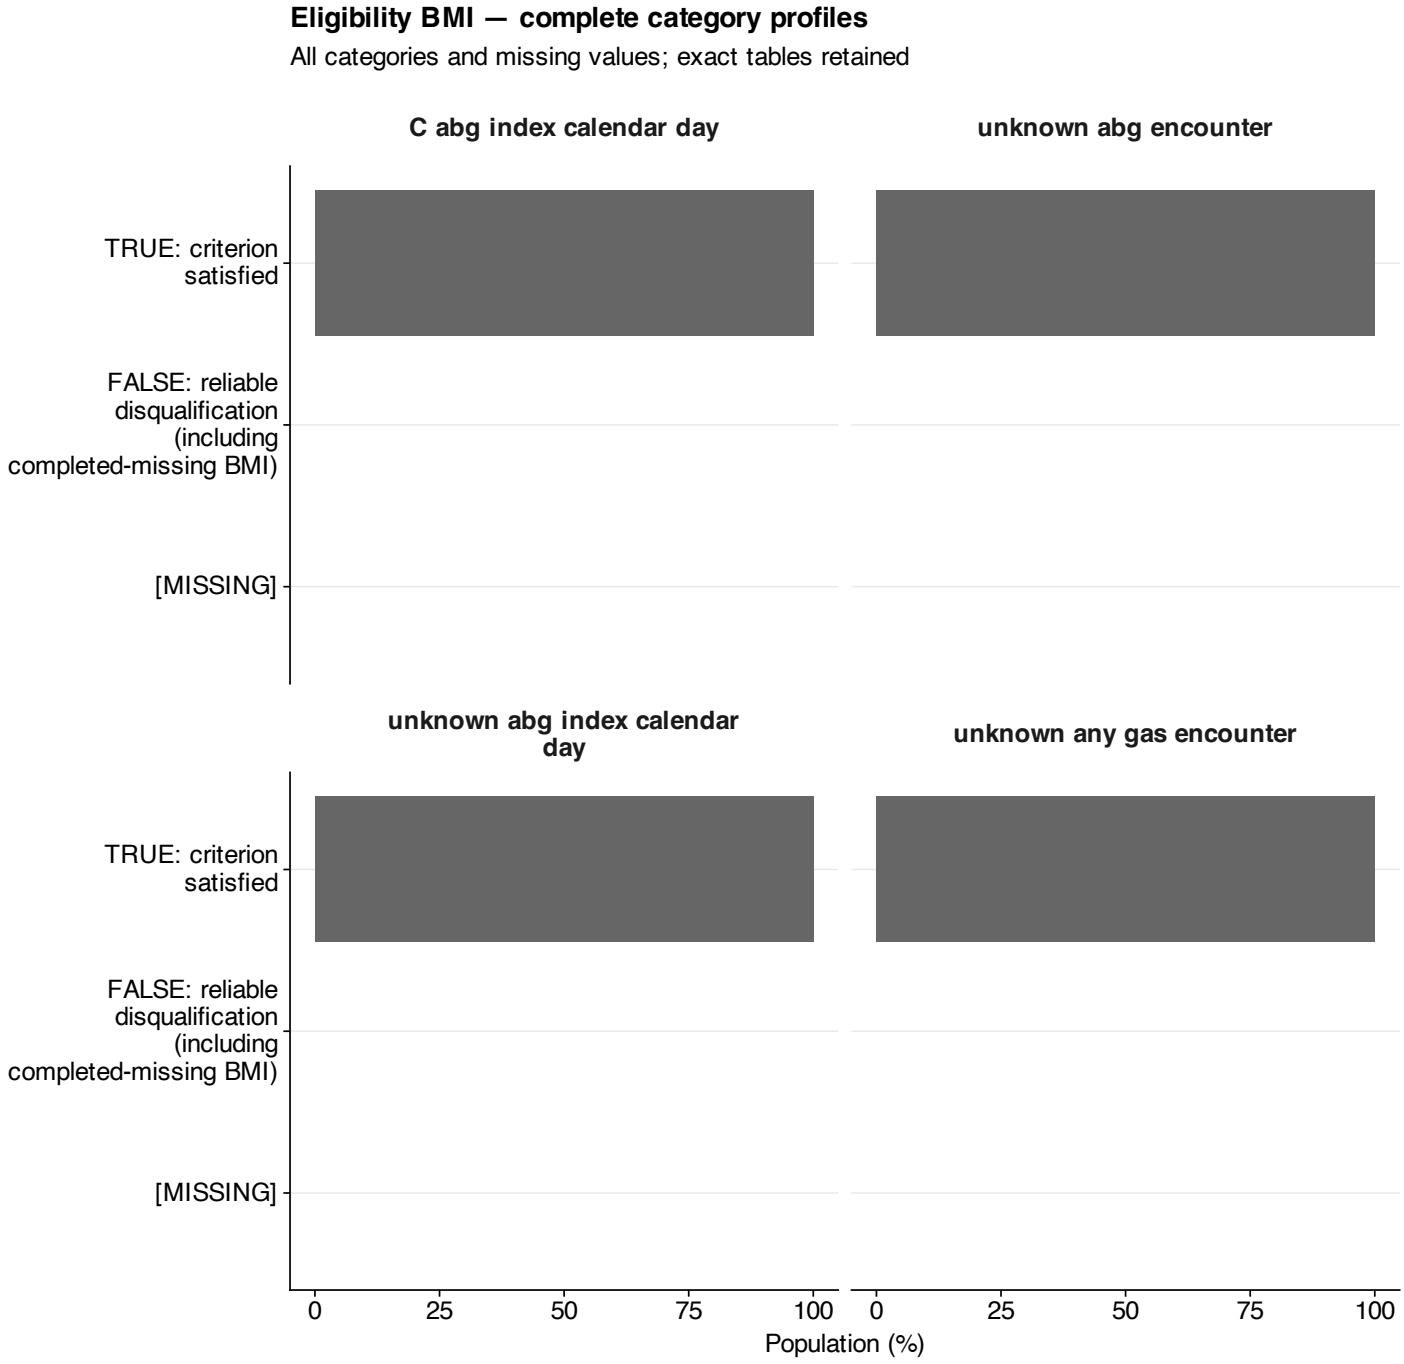

Figure 171: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete eligibility_bmi stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

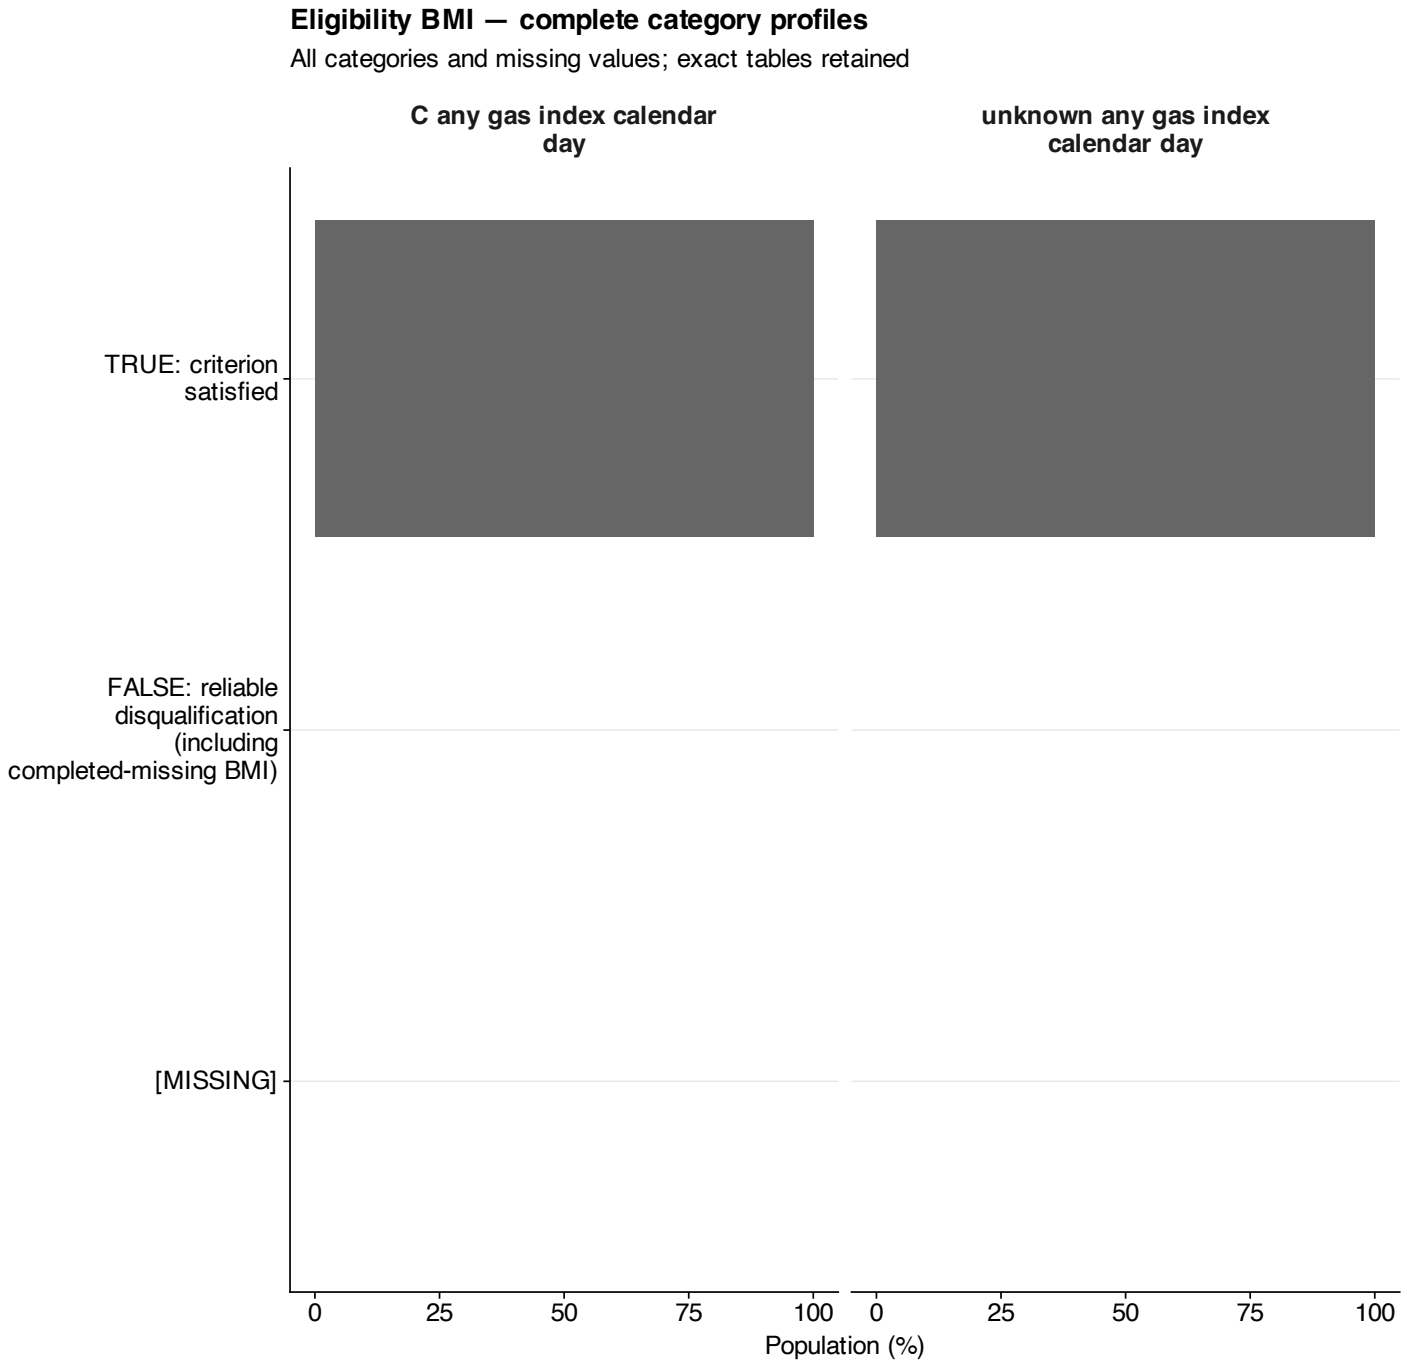

Figure 172: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete eligibility_bmi stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

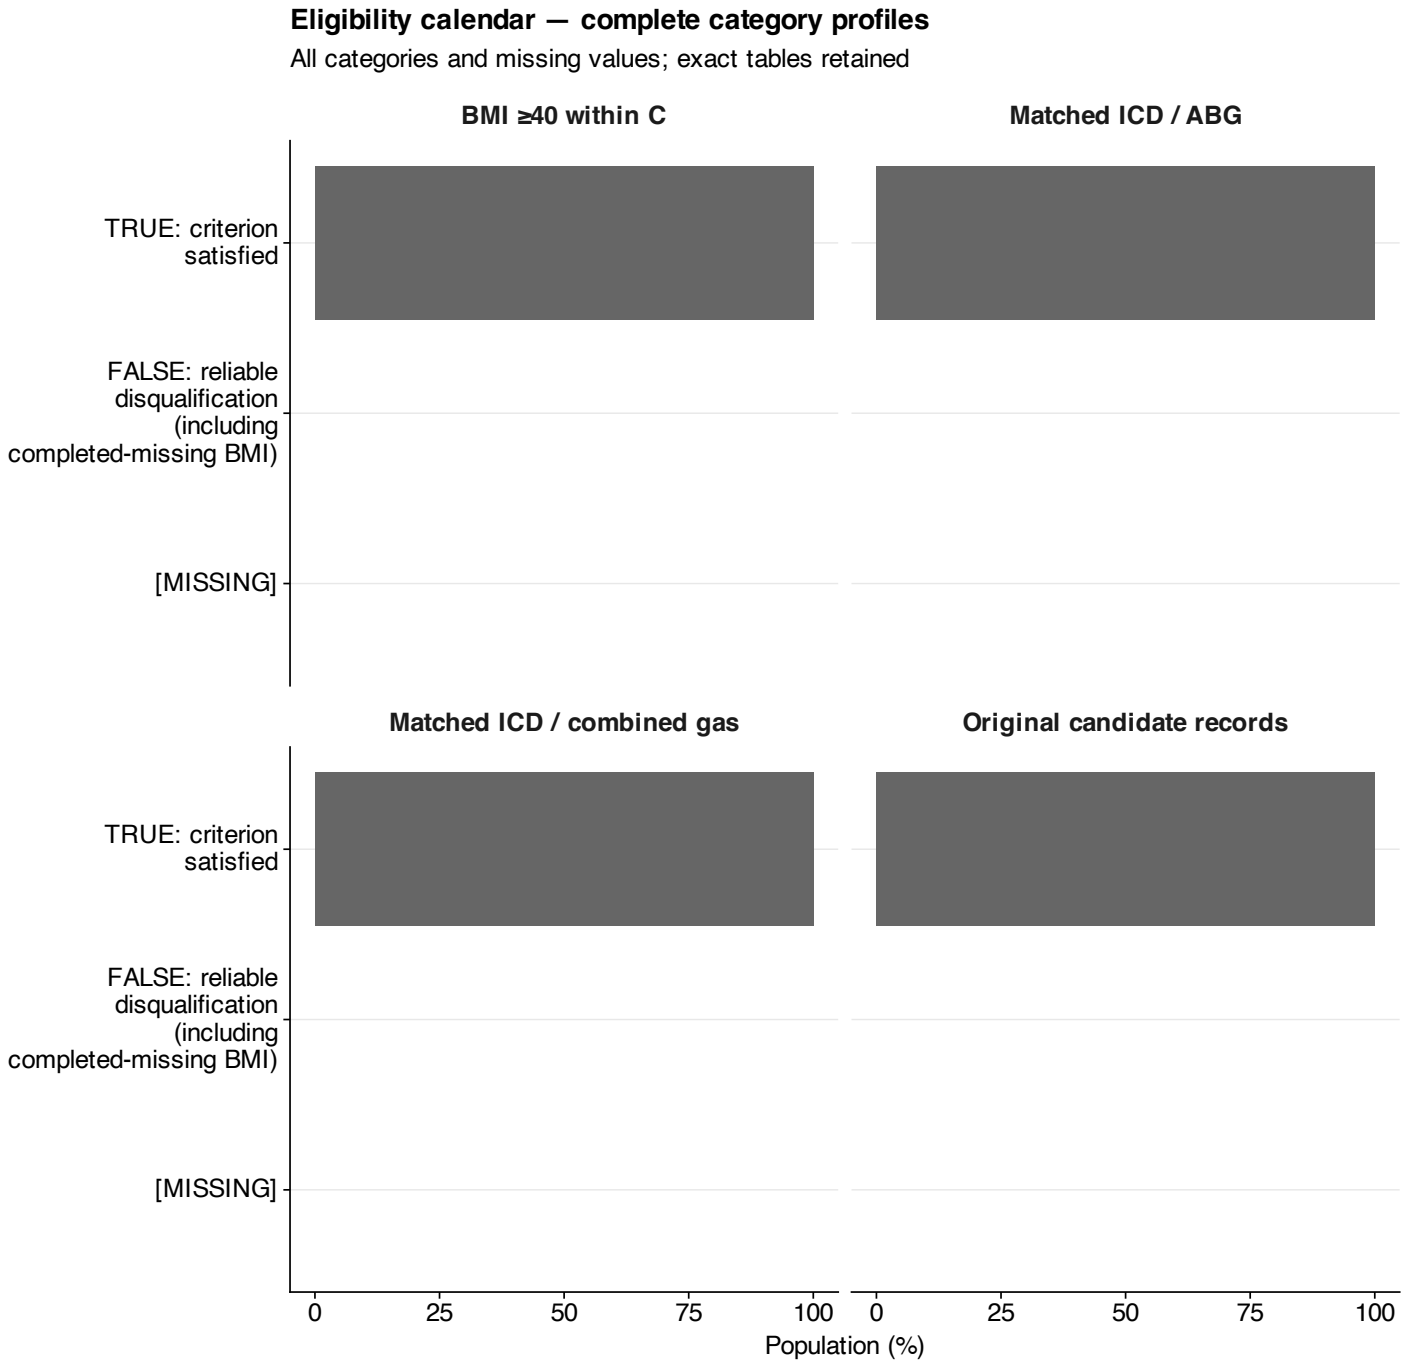

Figure 173: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete eligibility_calendar stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

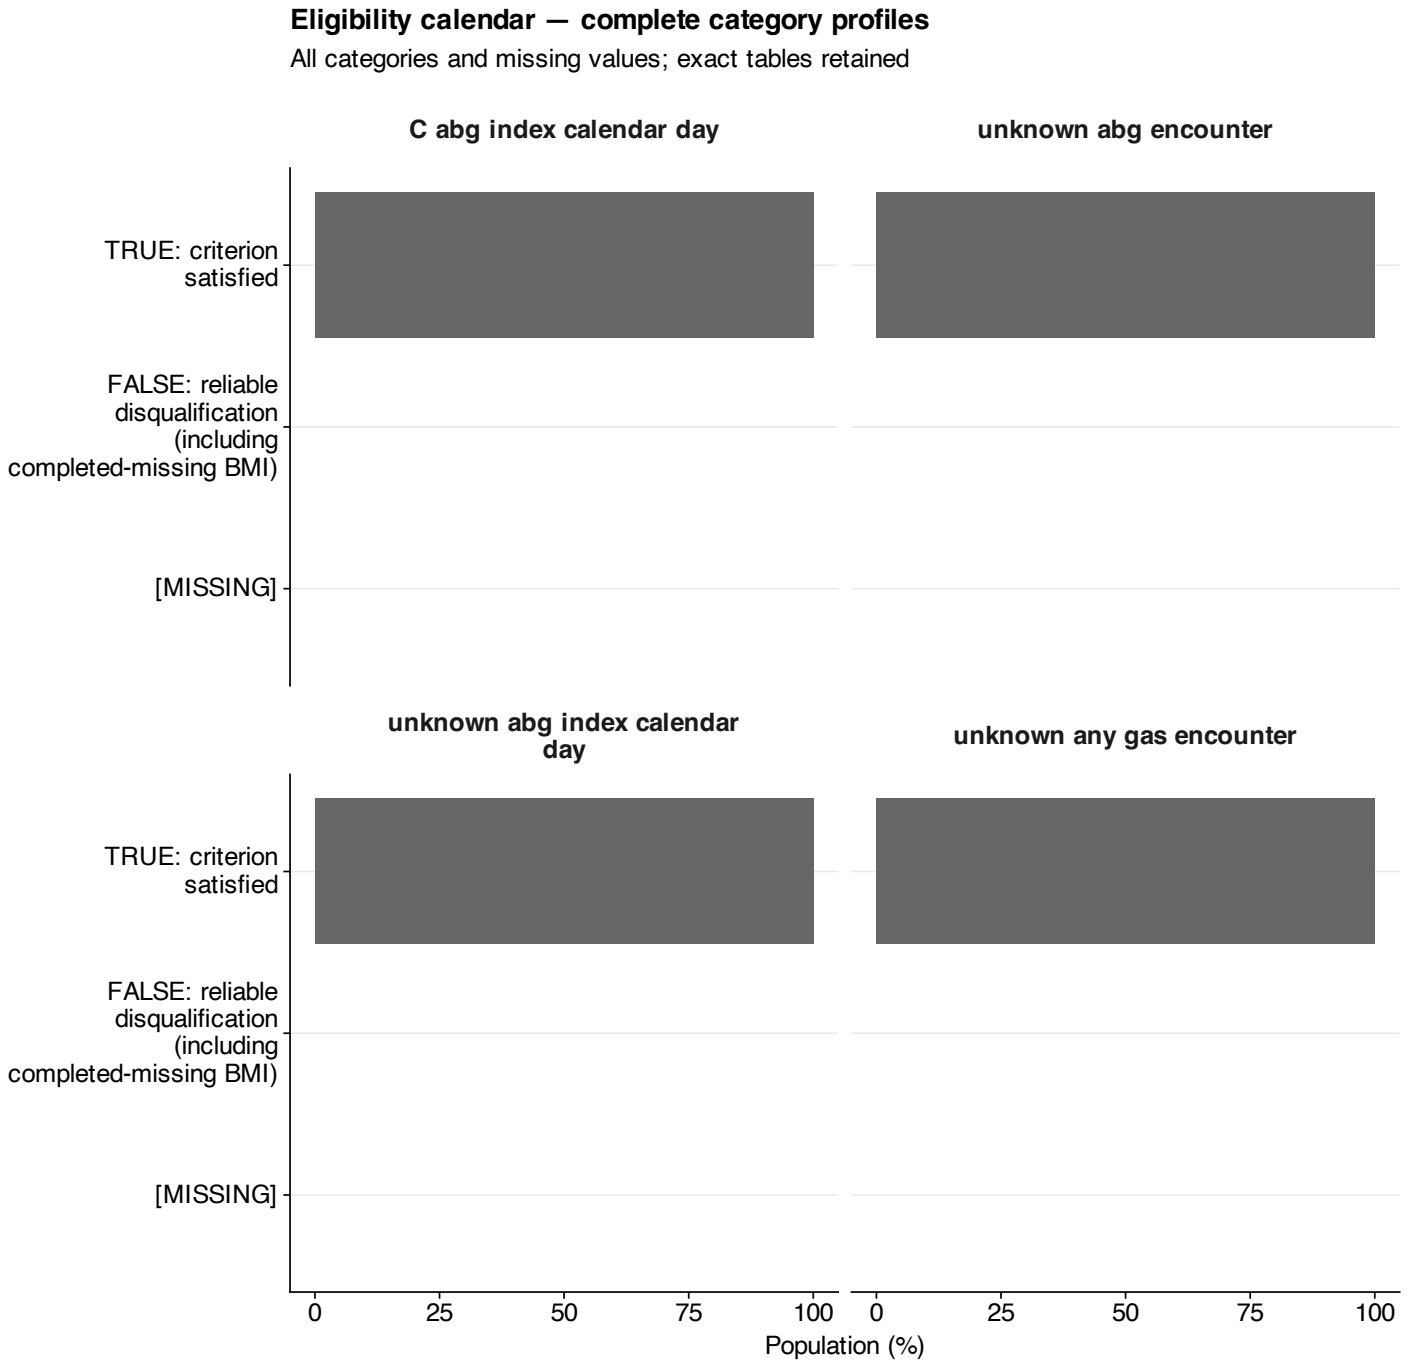

Figure 174: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete eligibility_calendar stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

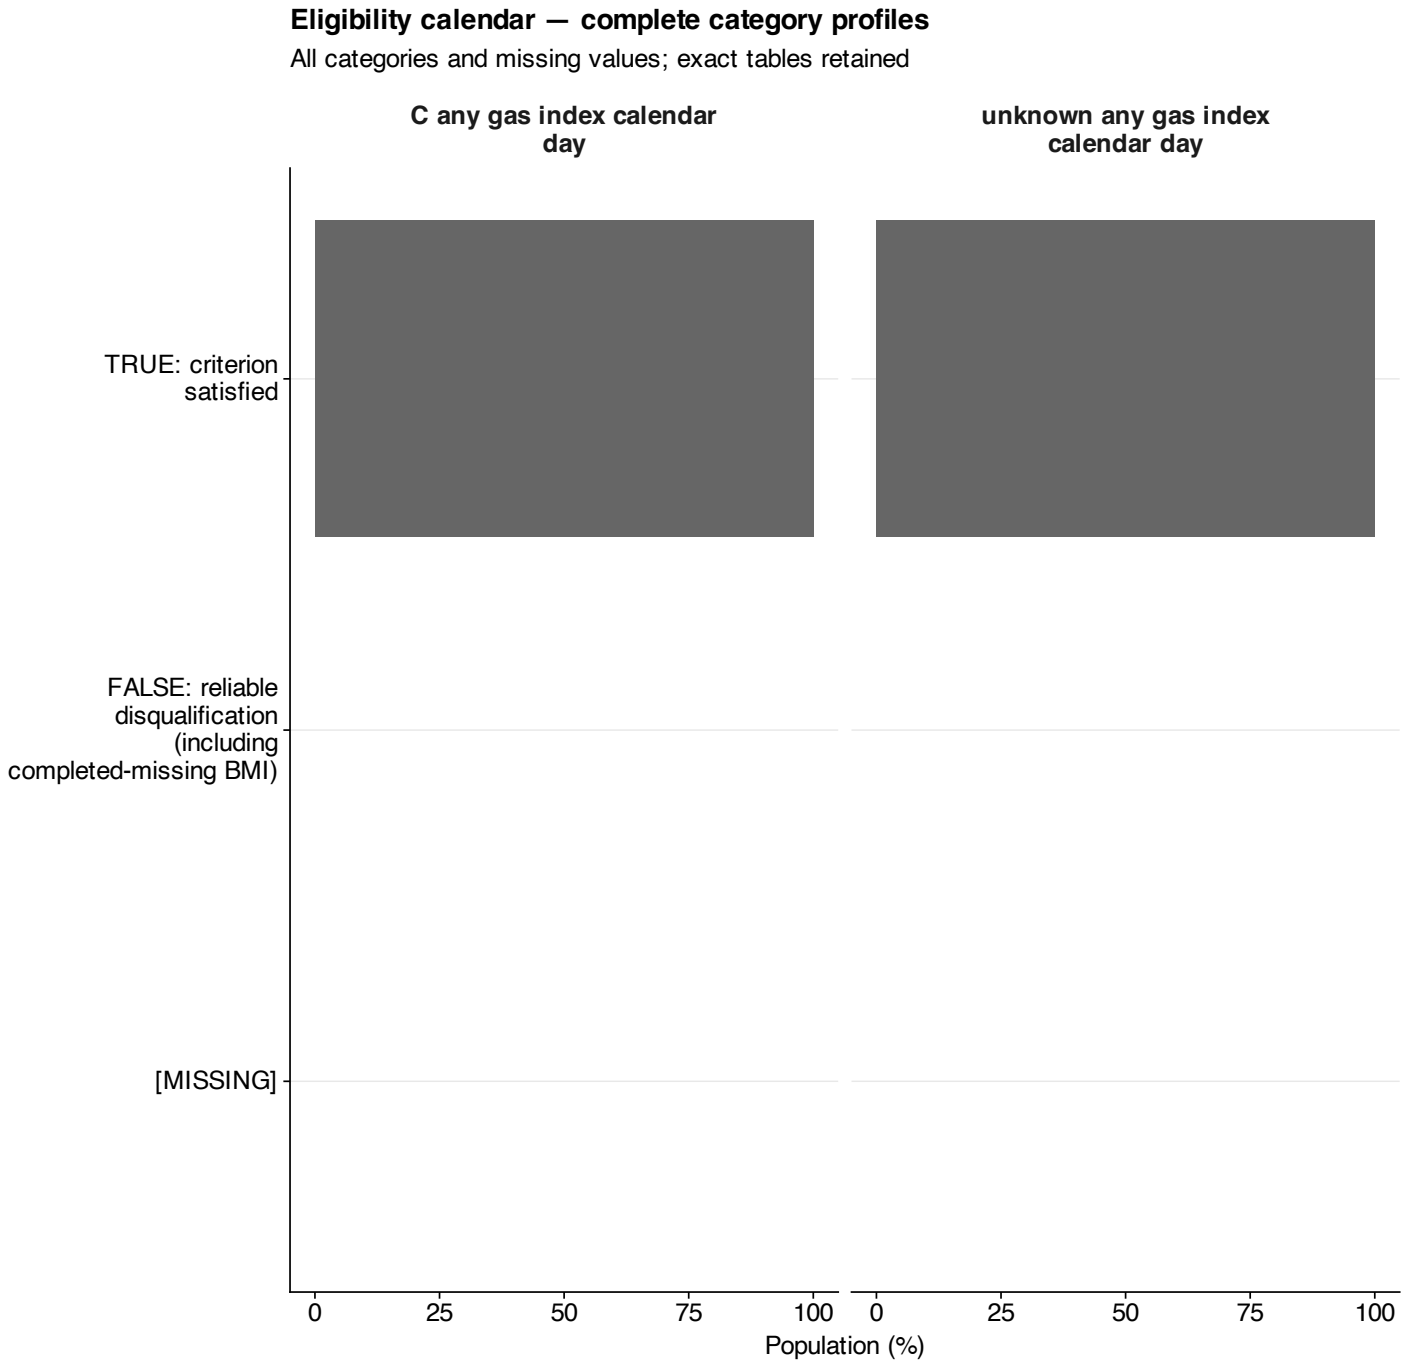

Figure 175: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete eligibility_calendar stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

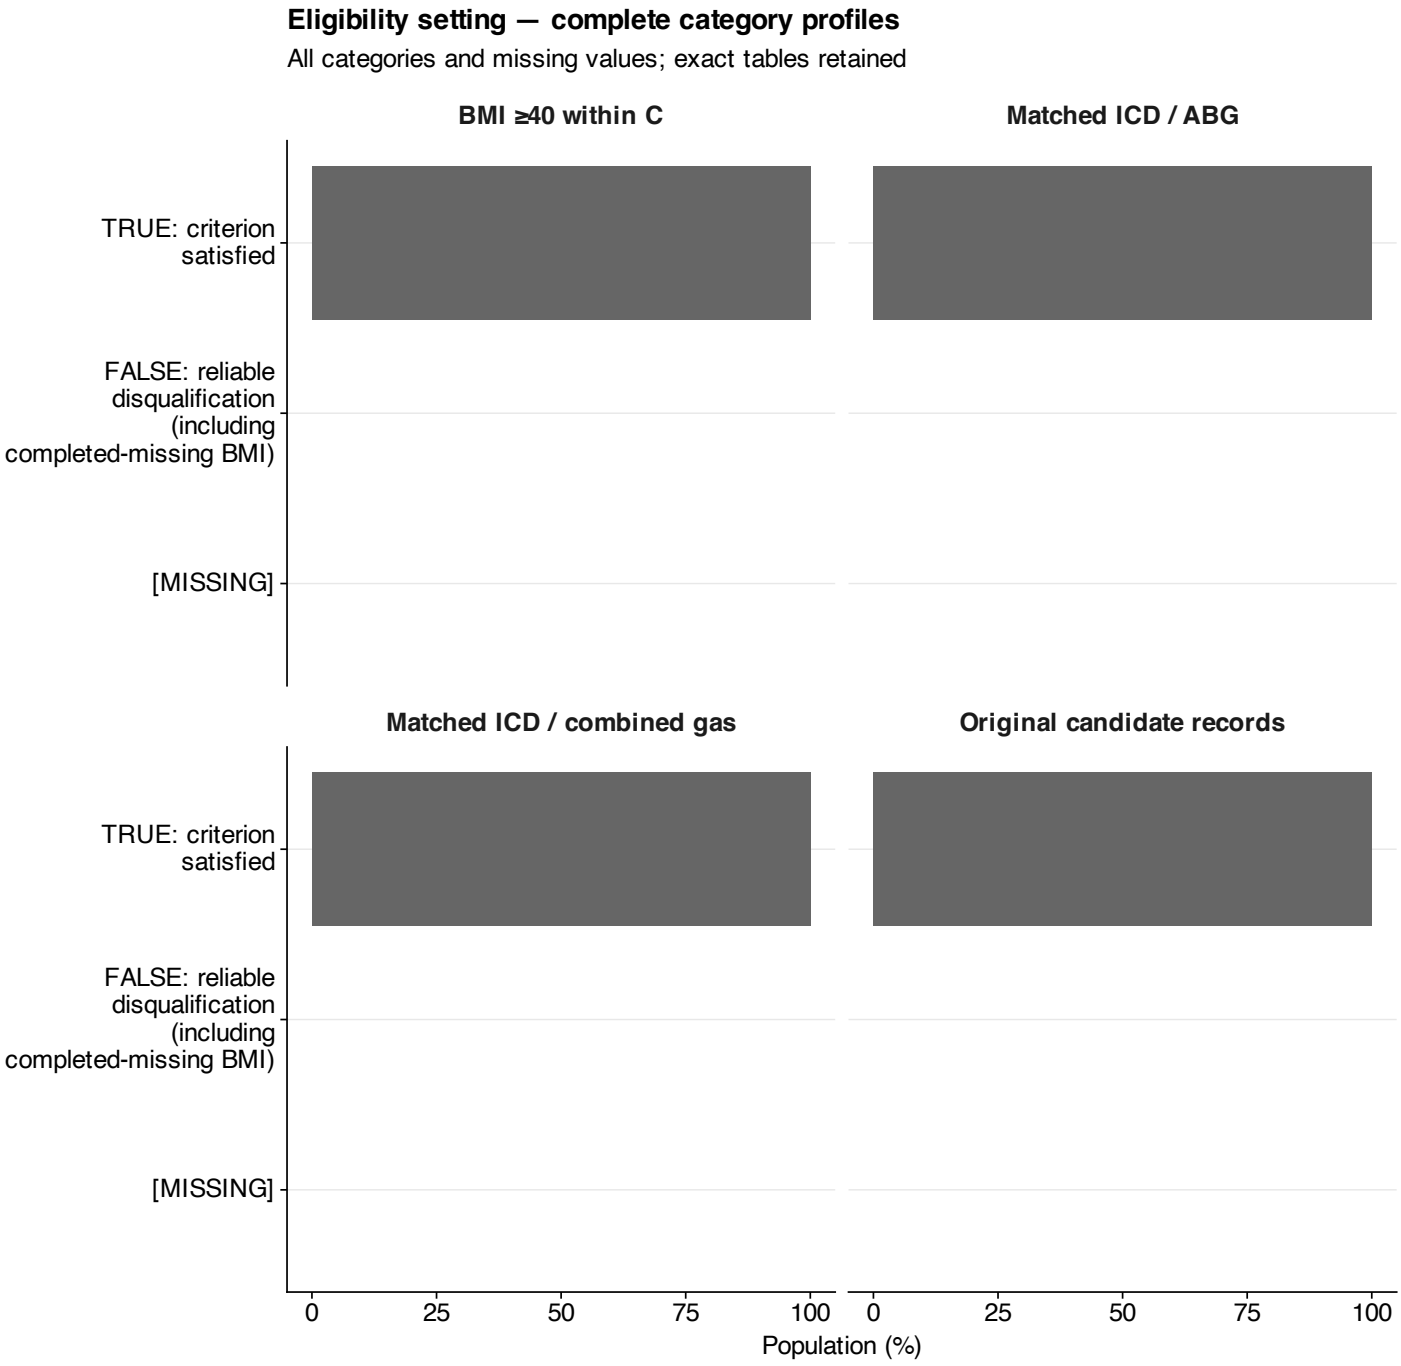

Figure 176: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete eligibility_setting stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

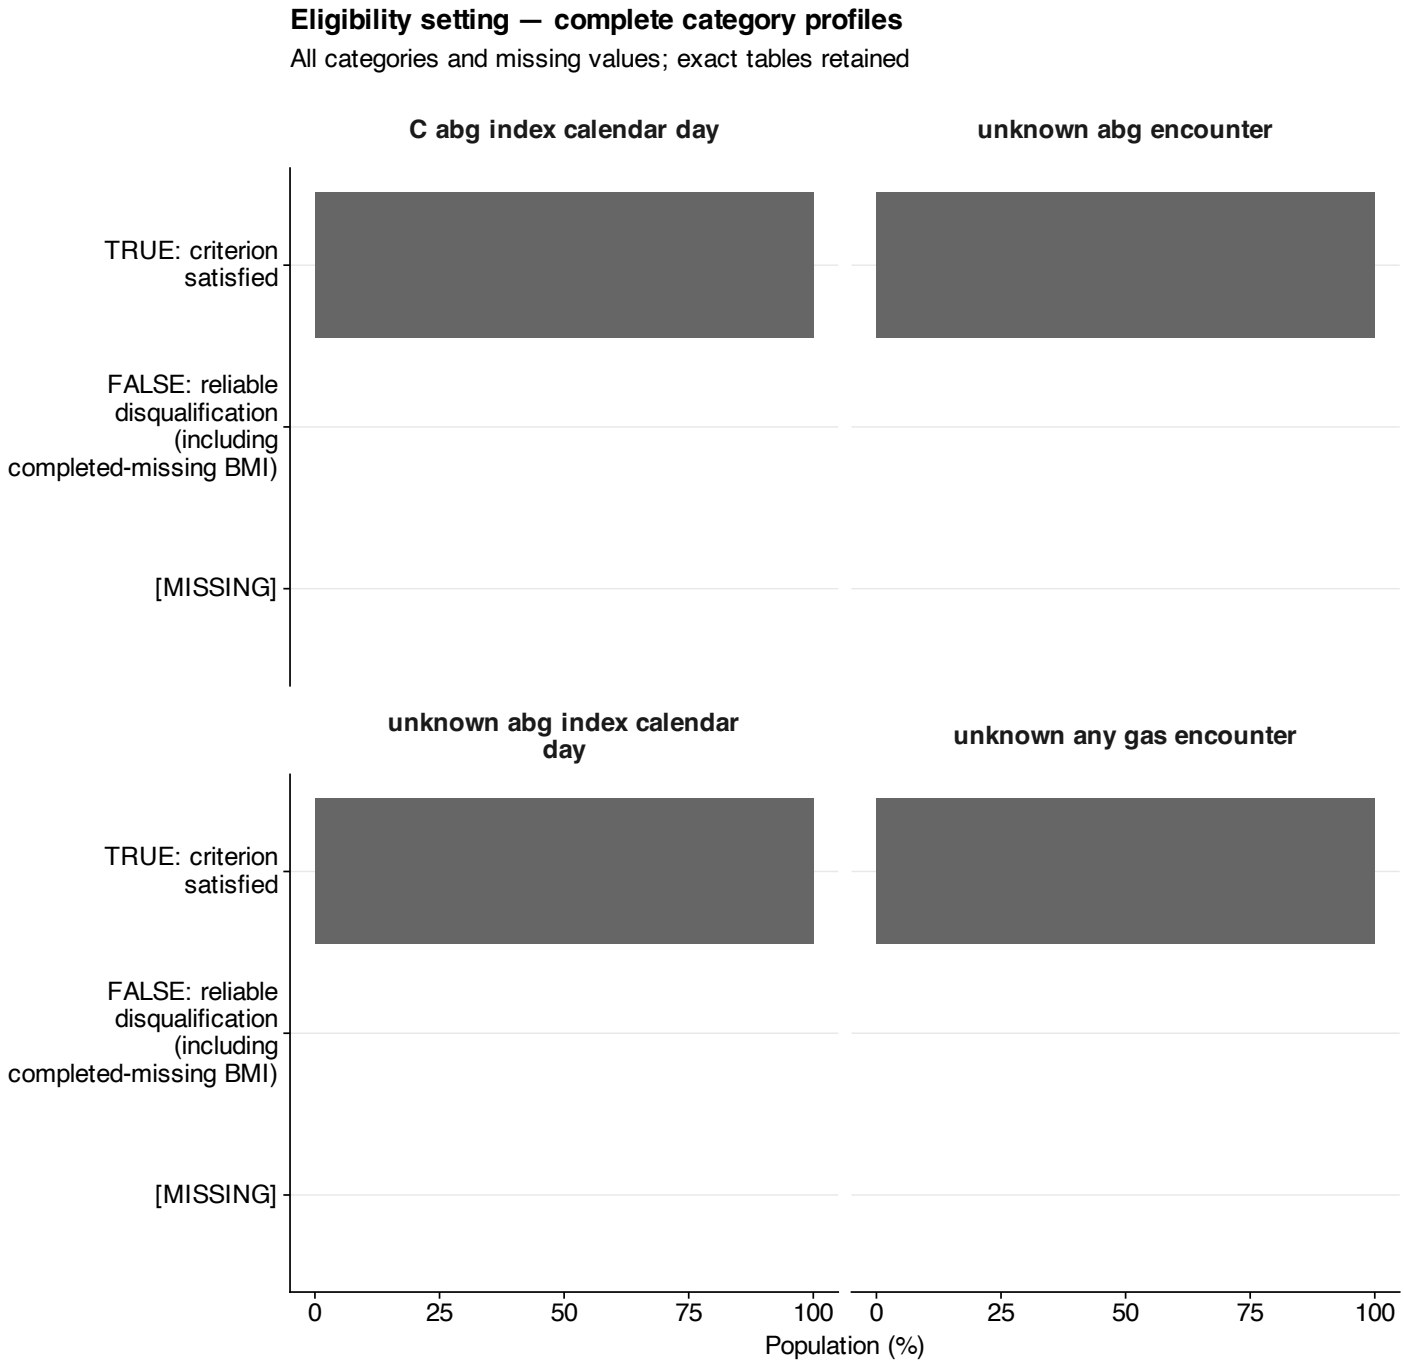

Figure 177: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete eligibility_setting stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

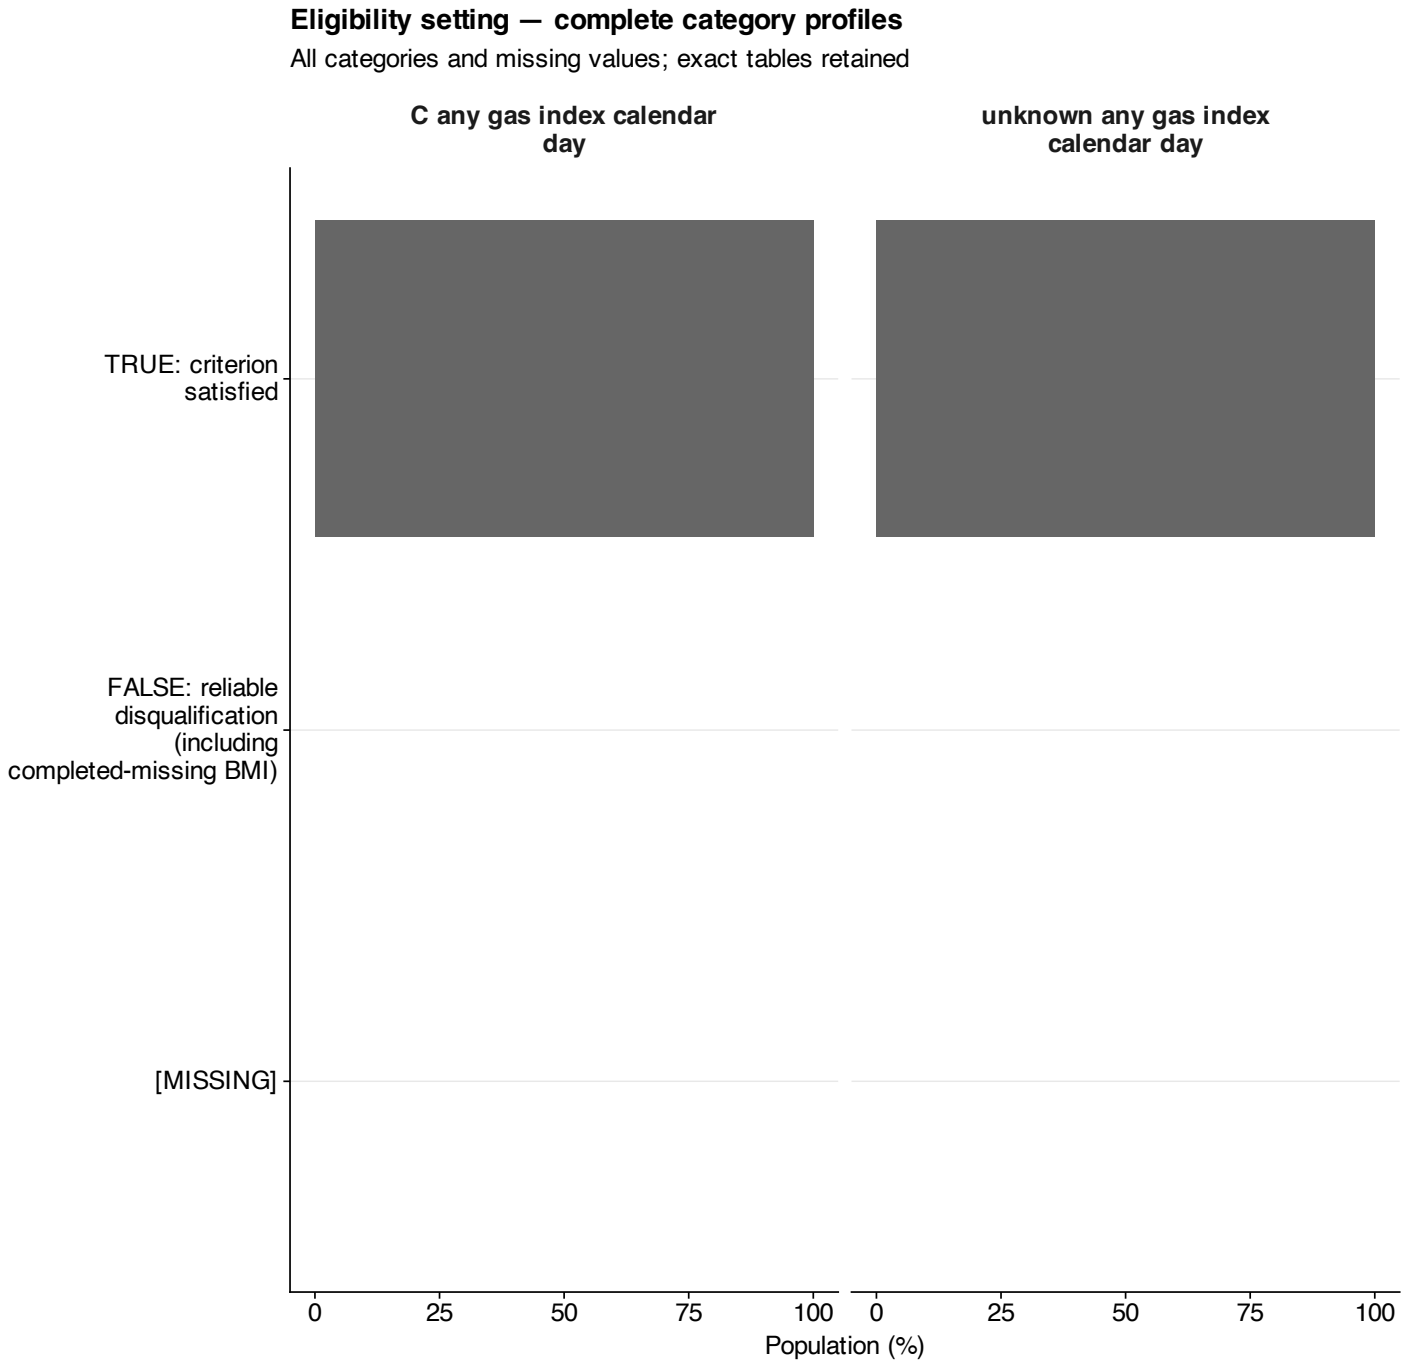

Figure 178: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete eligibility_setting stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

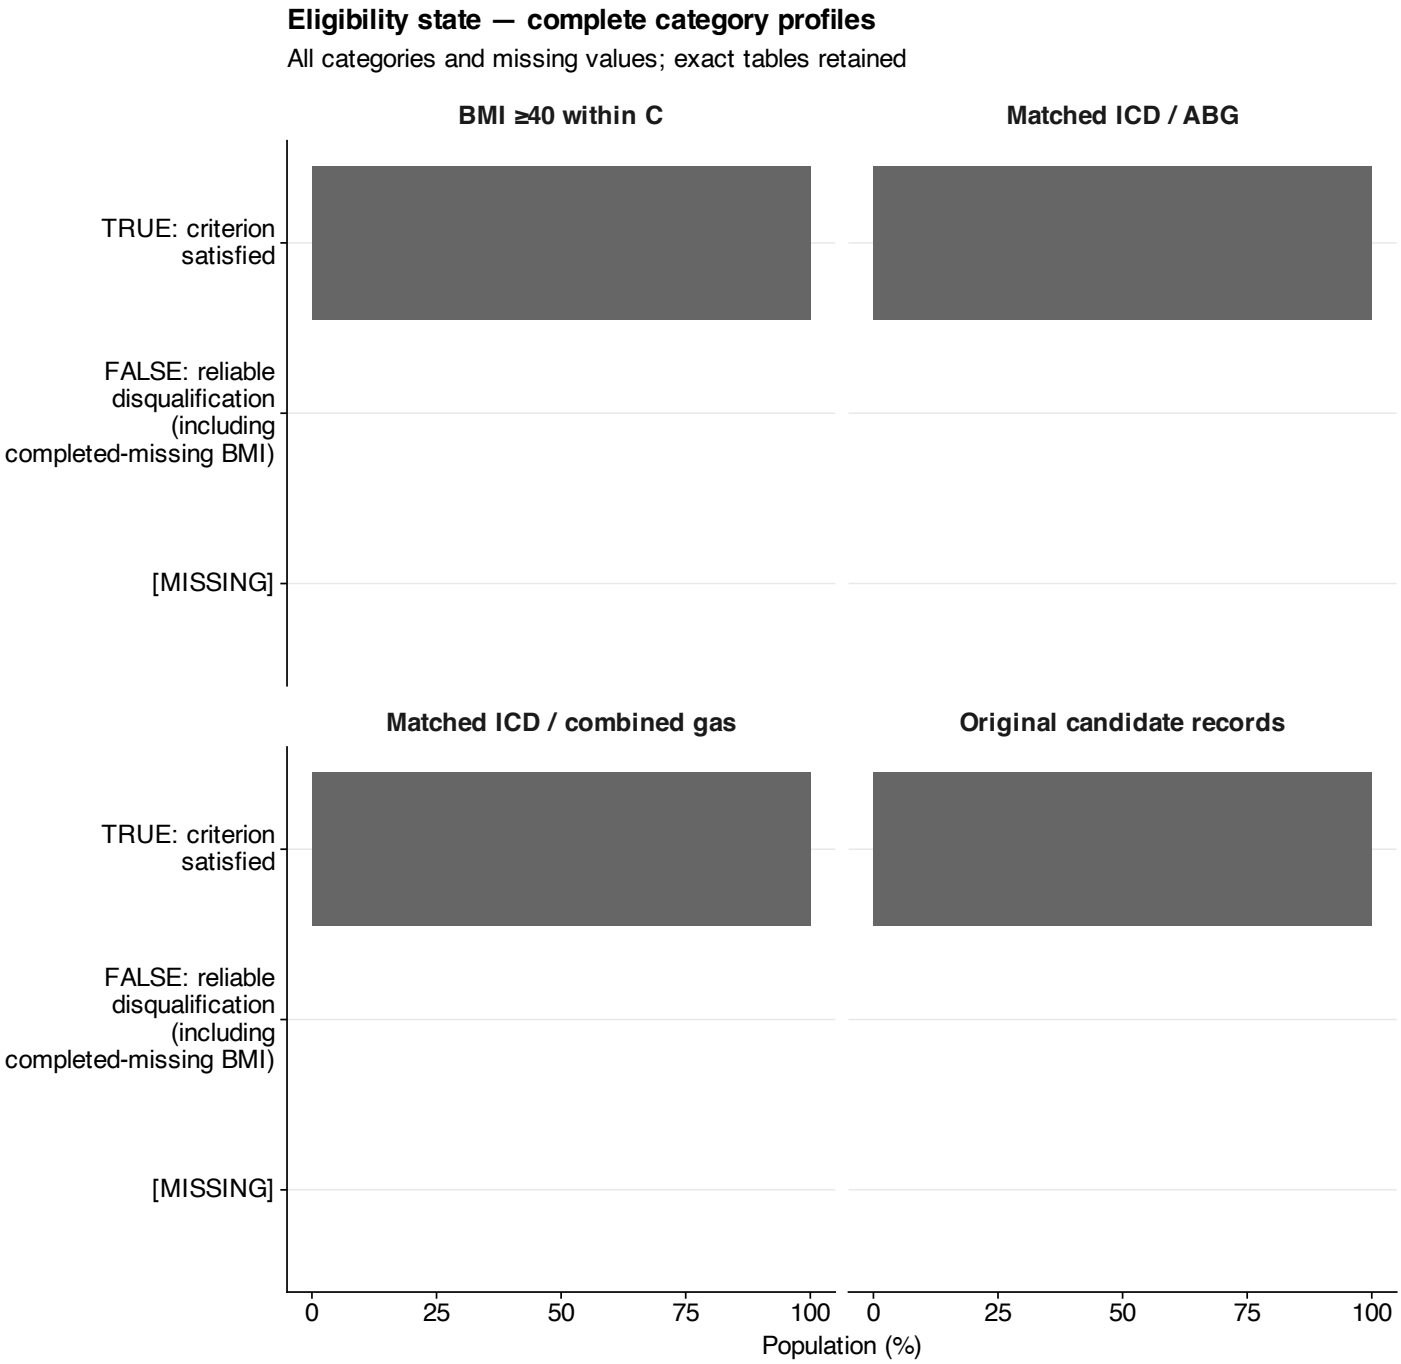

Figure 179: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete eligibility_state stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

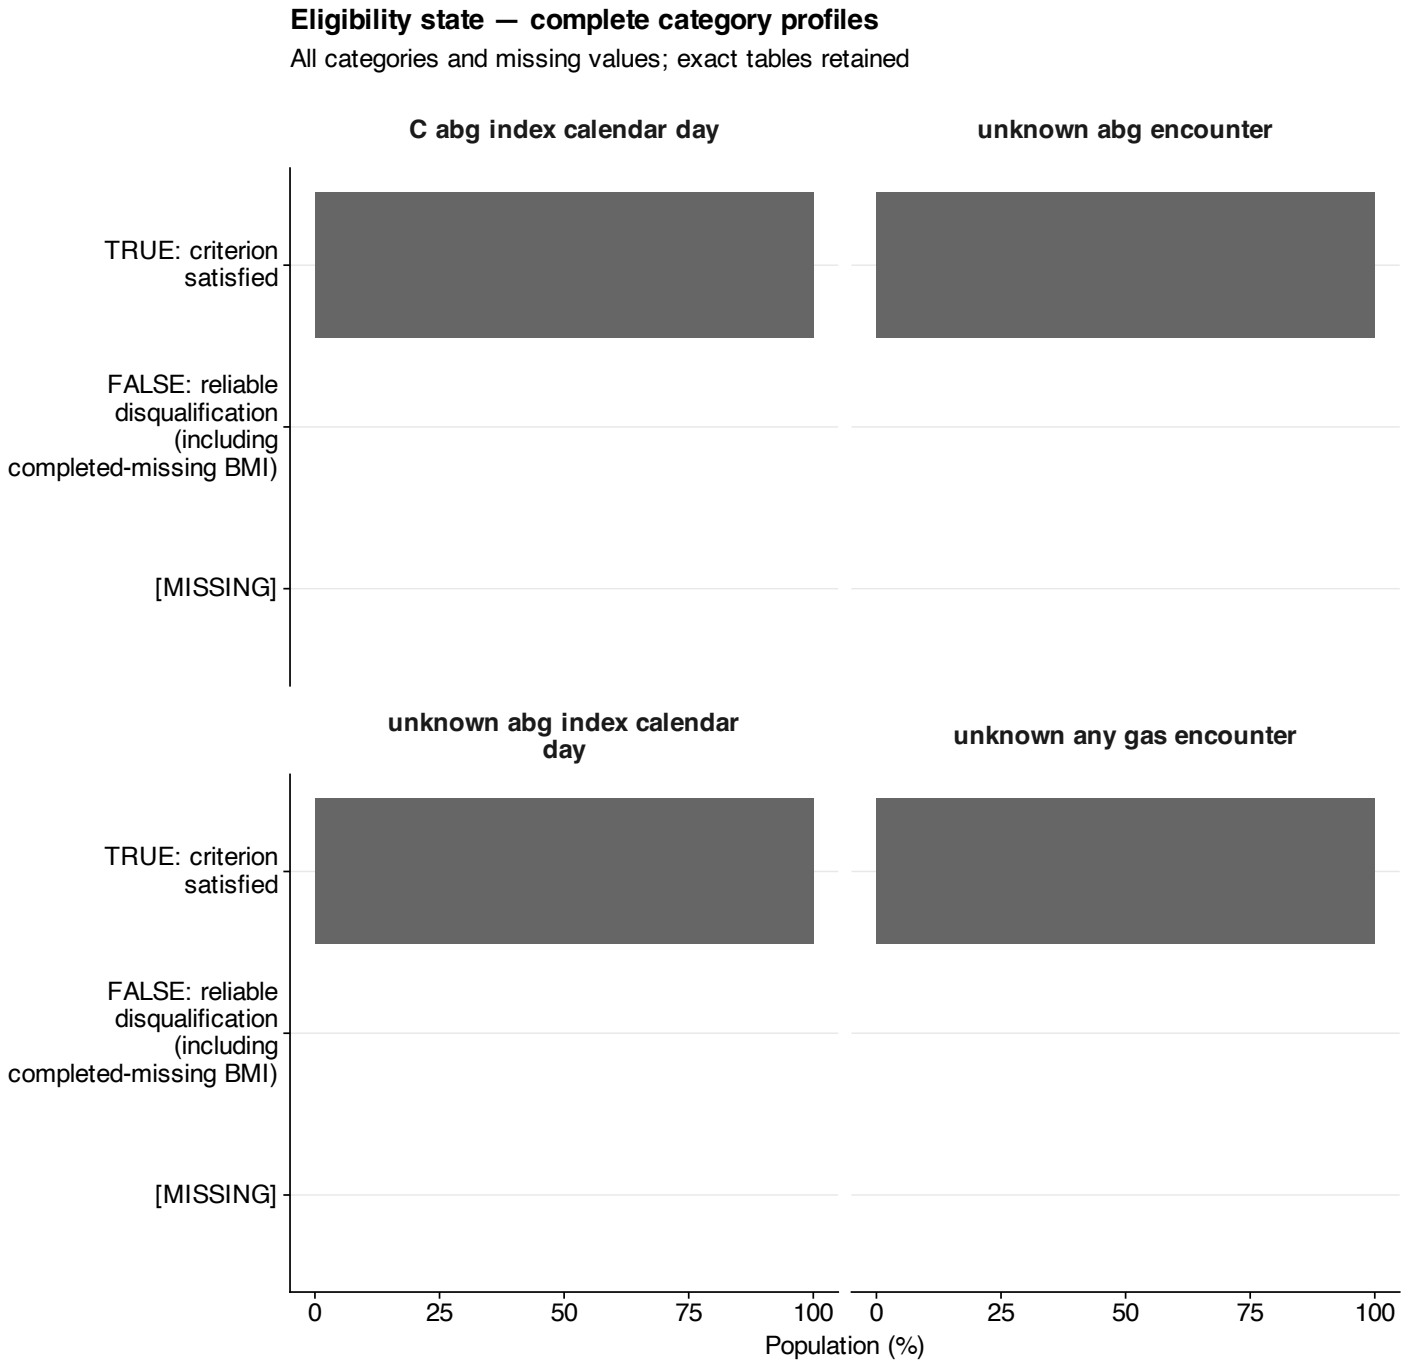

Figure 180: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete eligibility_state stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

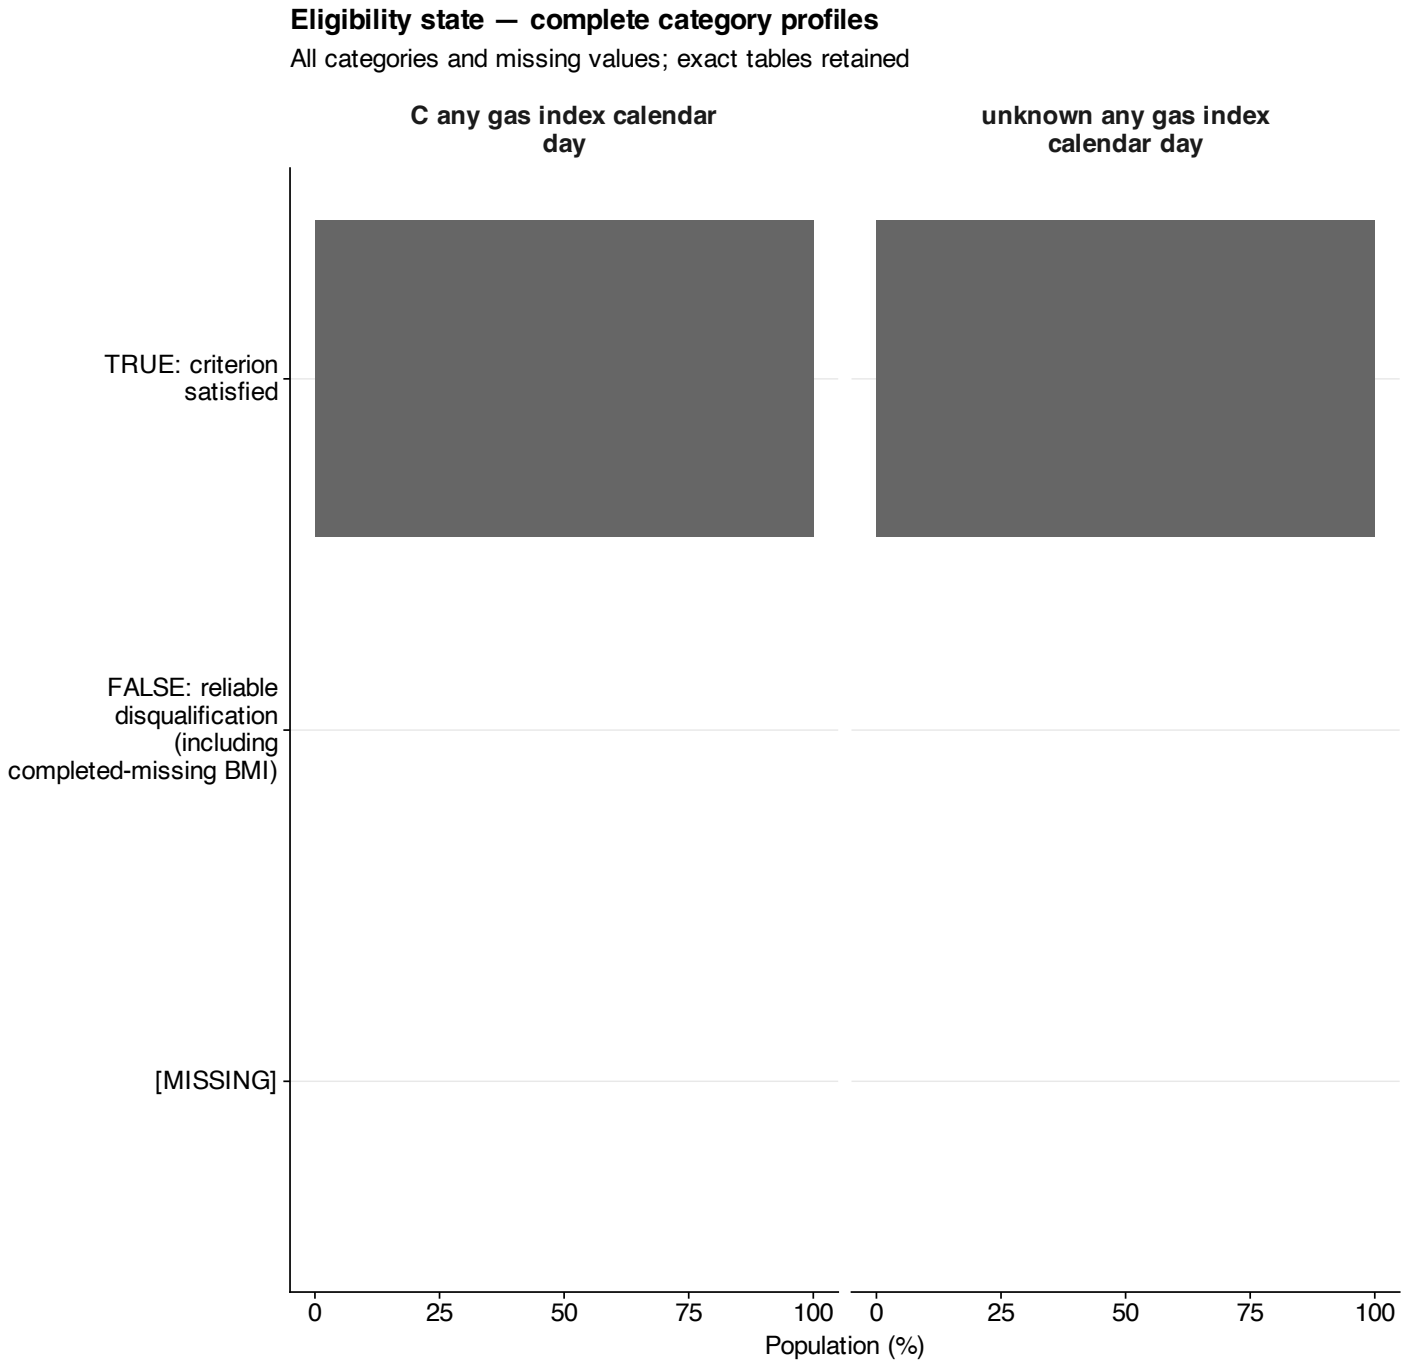

Figure 181: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete eligibility_state stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

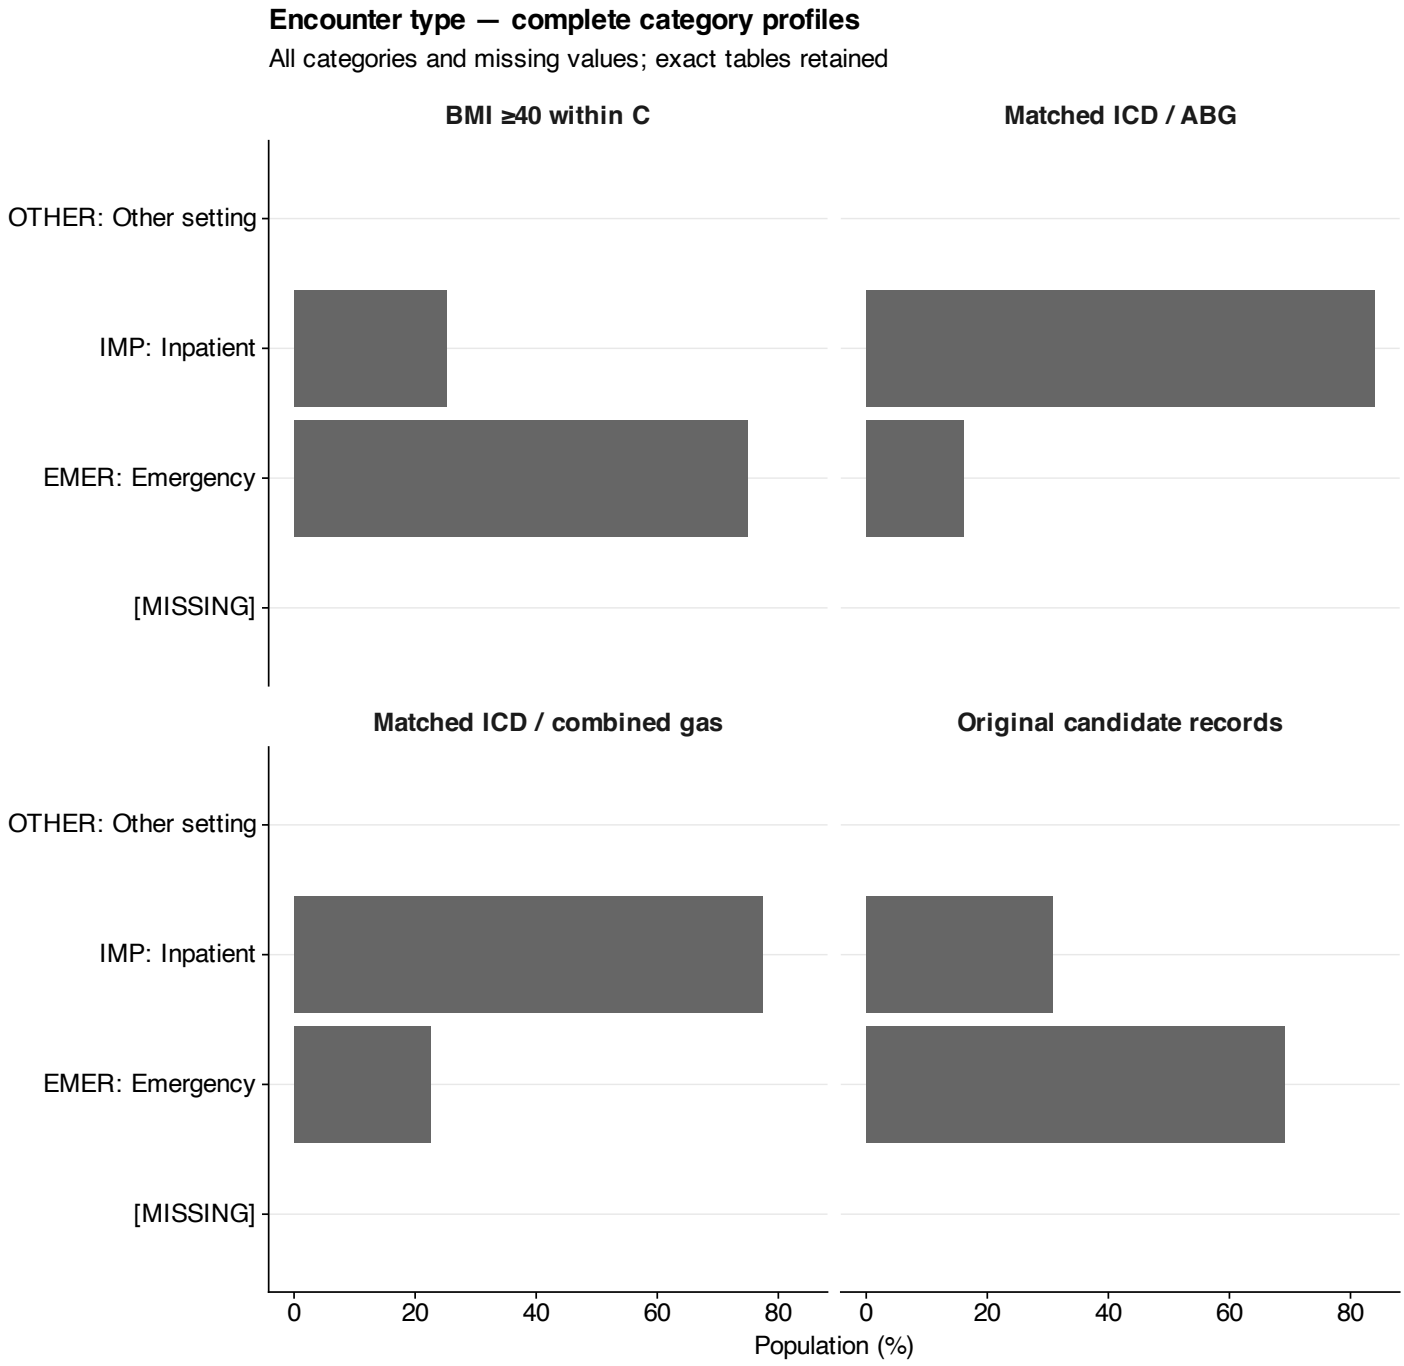

Figure 182: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete encounter_type stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

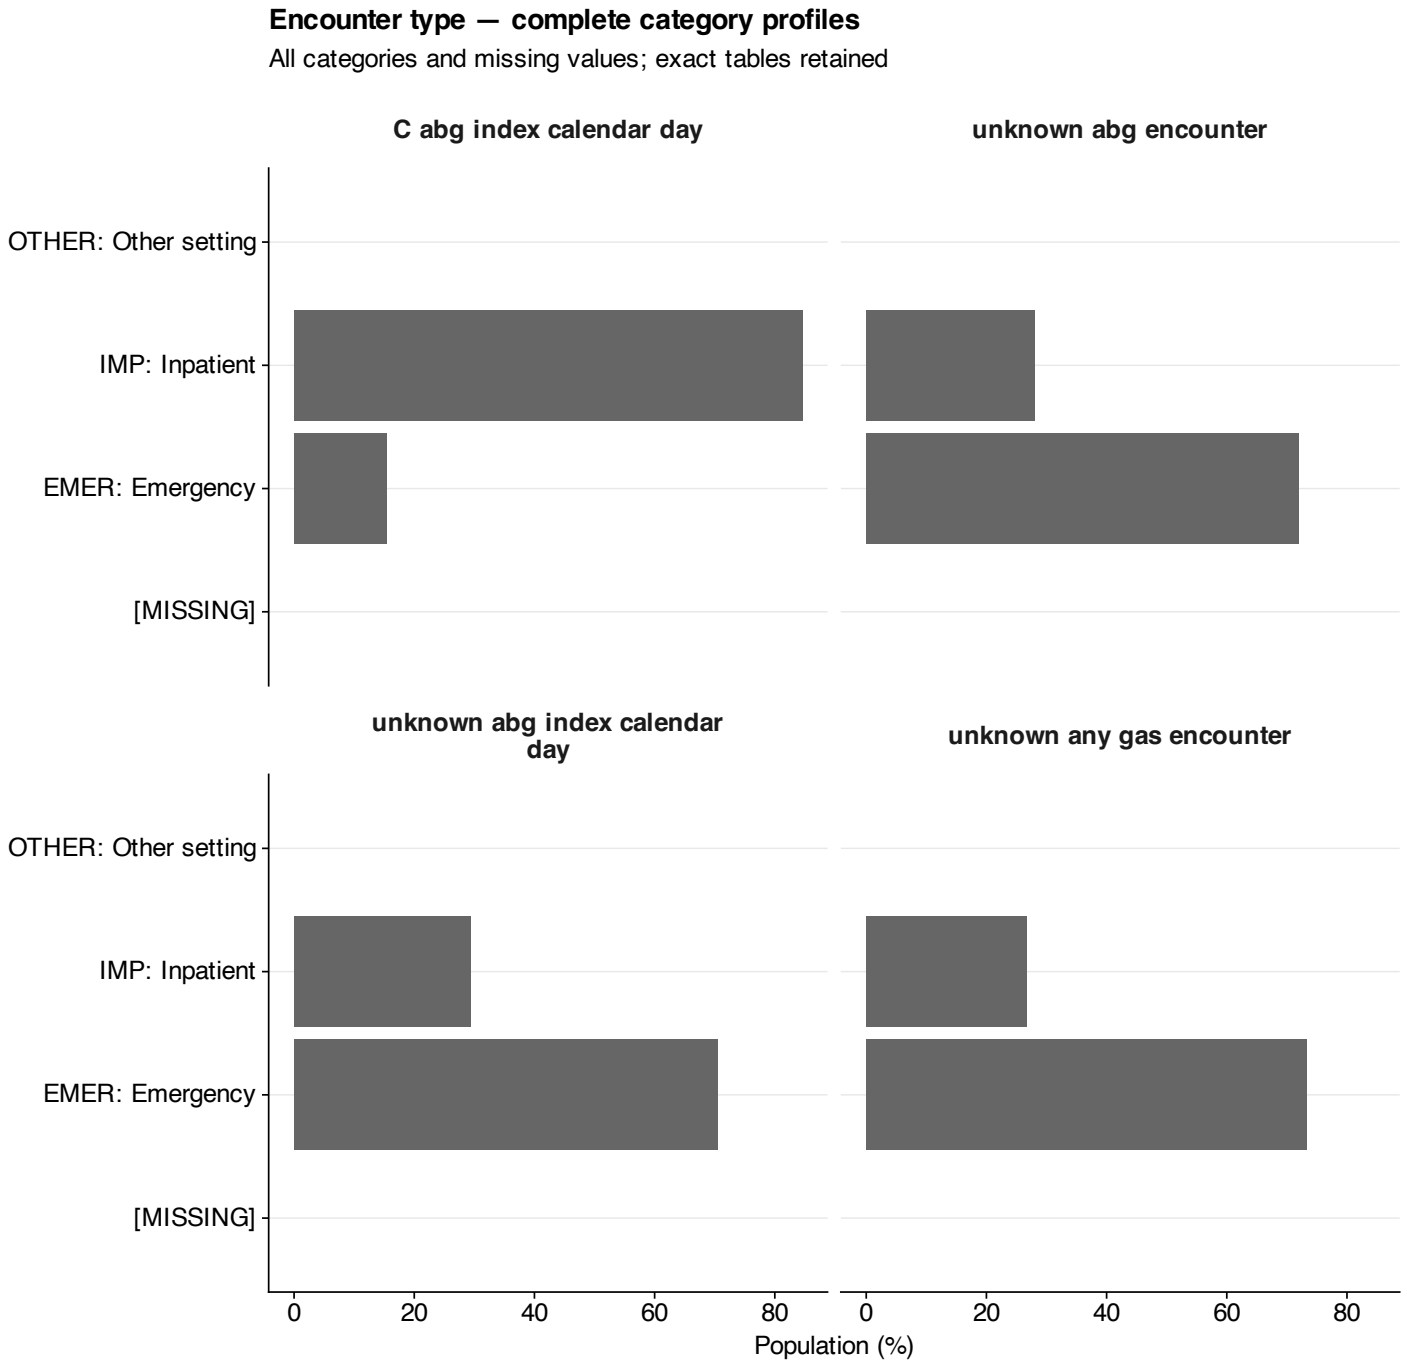

Figure 183: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete encounter_type stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

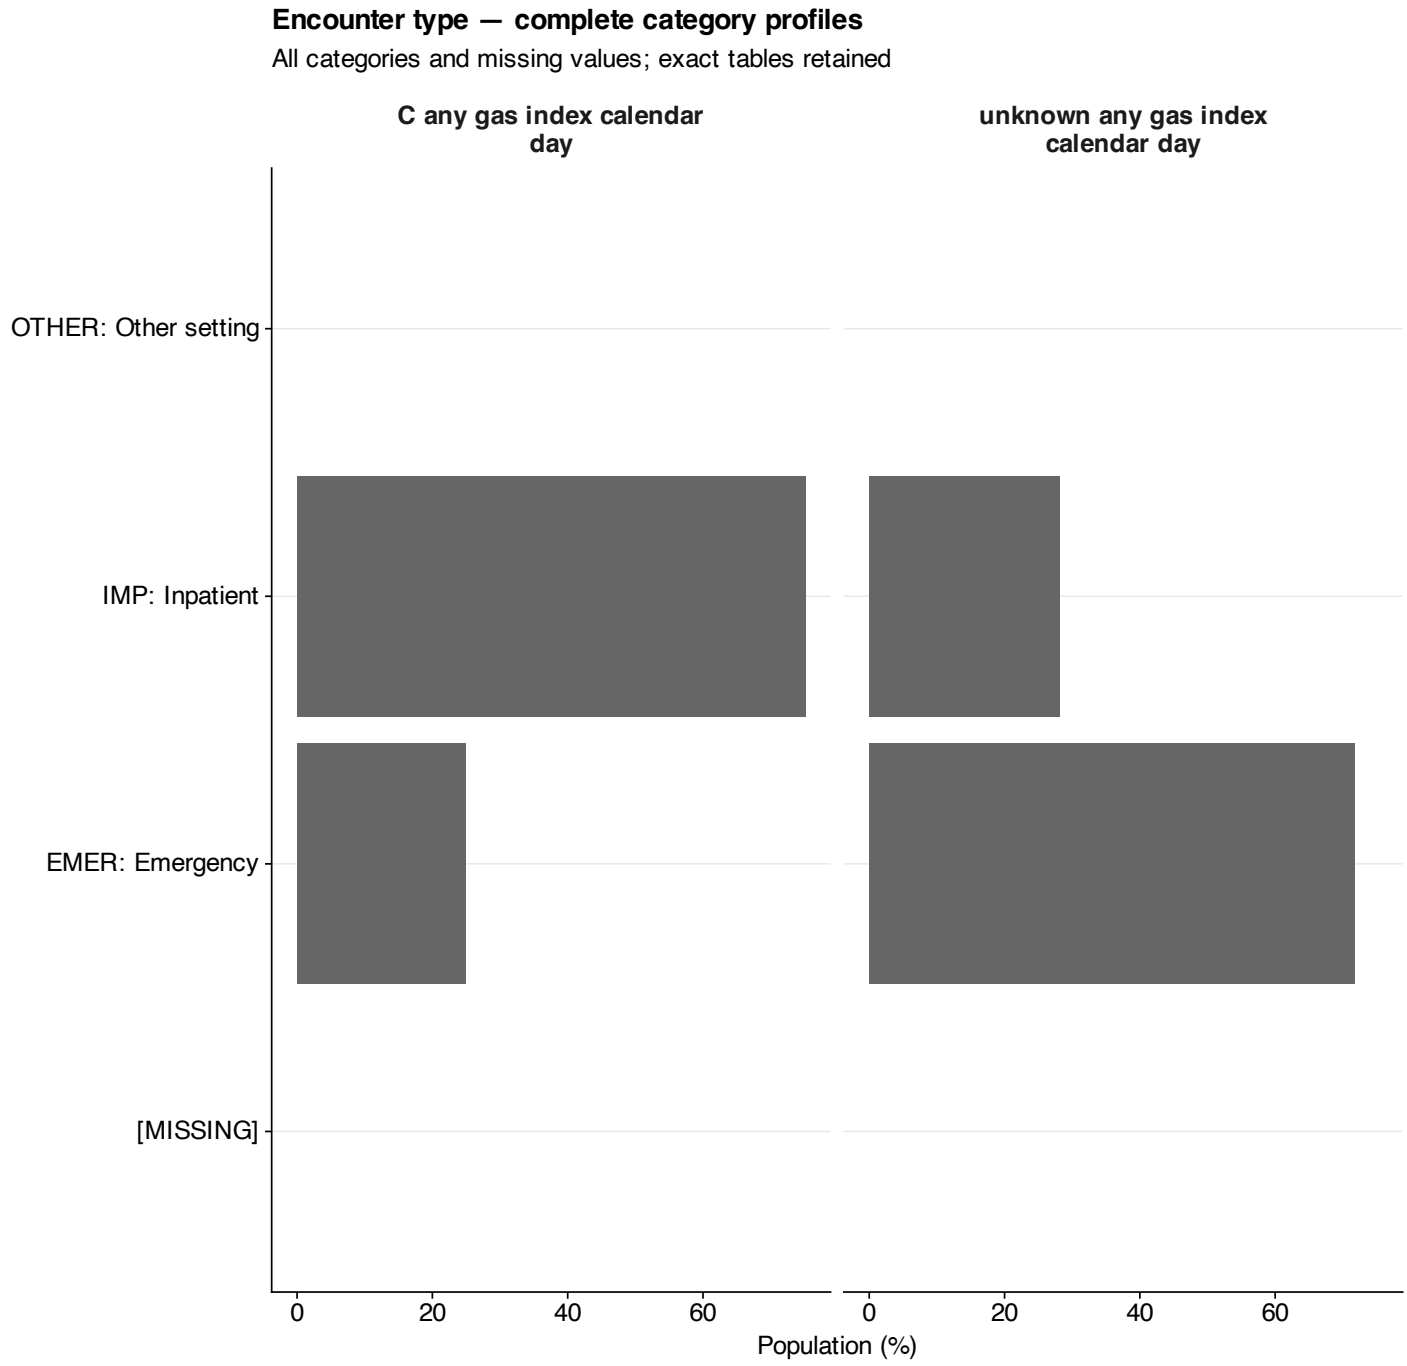

Figure 184: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete encounter_type stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

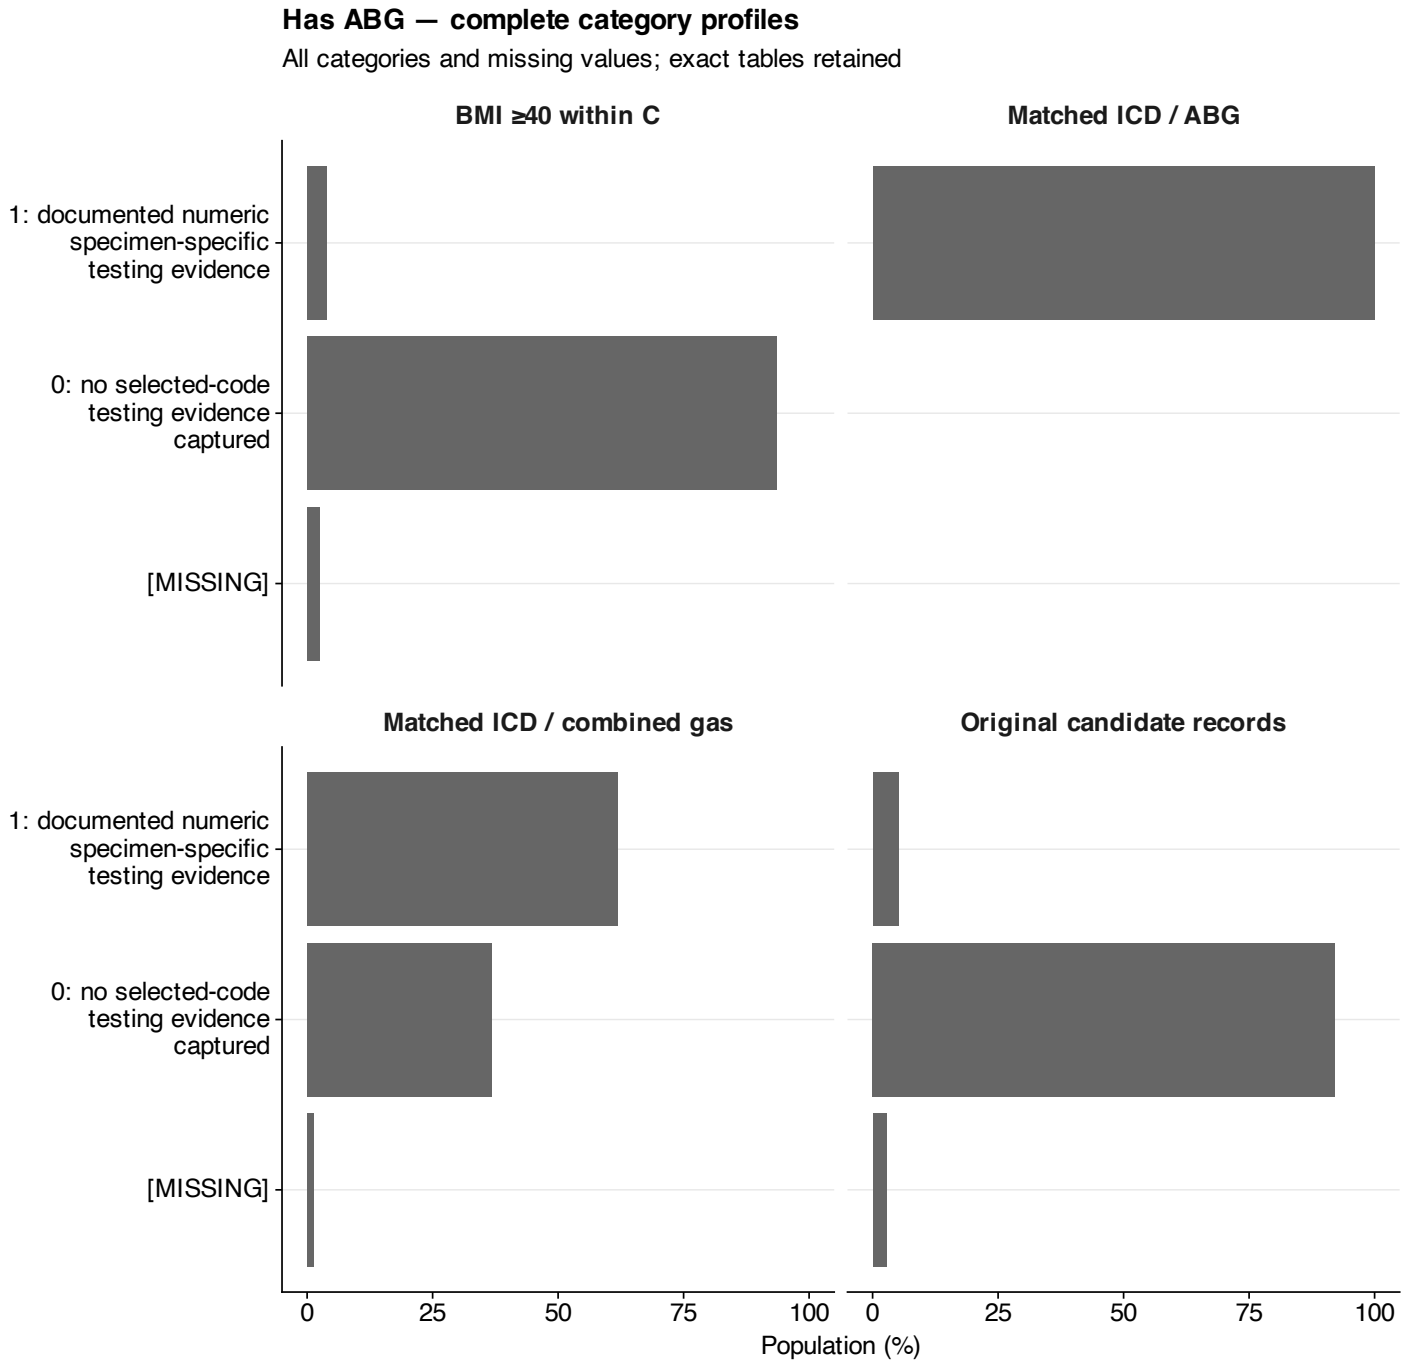

Figure 185: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete has_abg stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

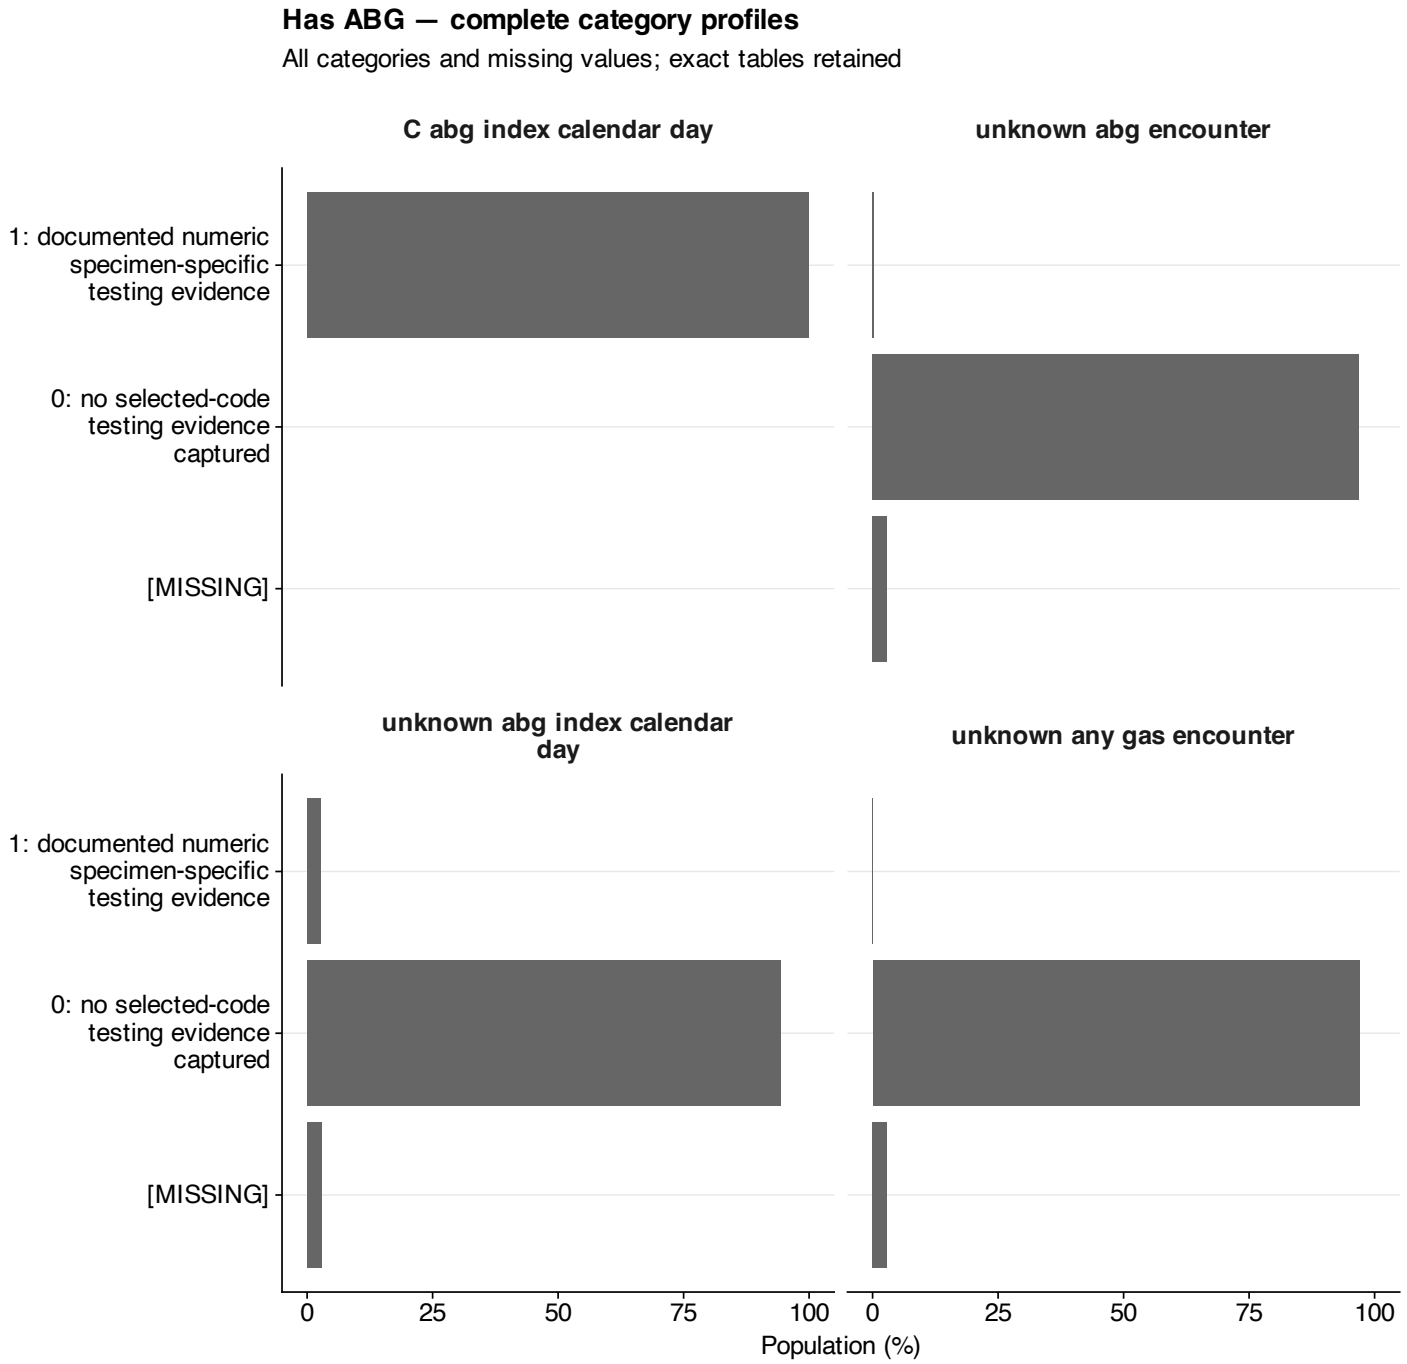

Figure 186: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete has_abg stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

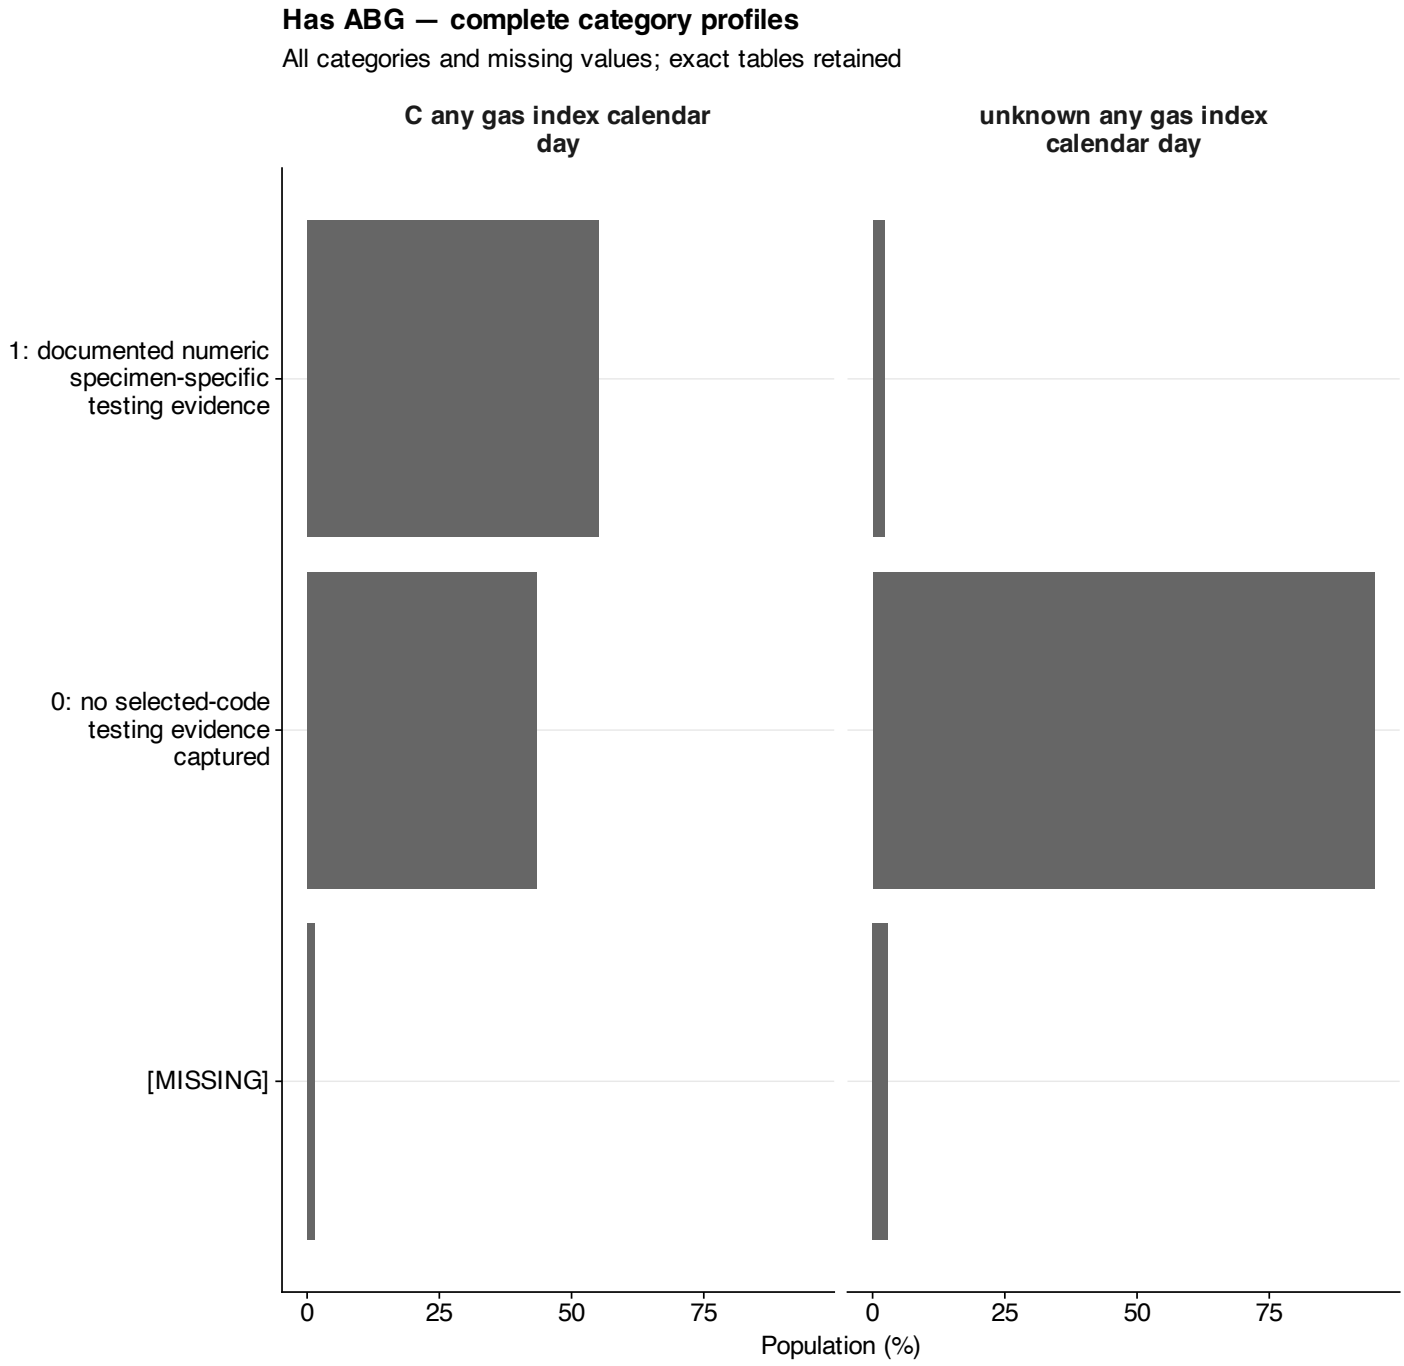

Figure 187: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete has_abg stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

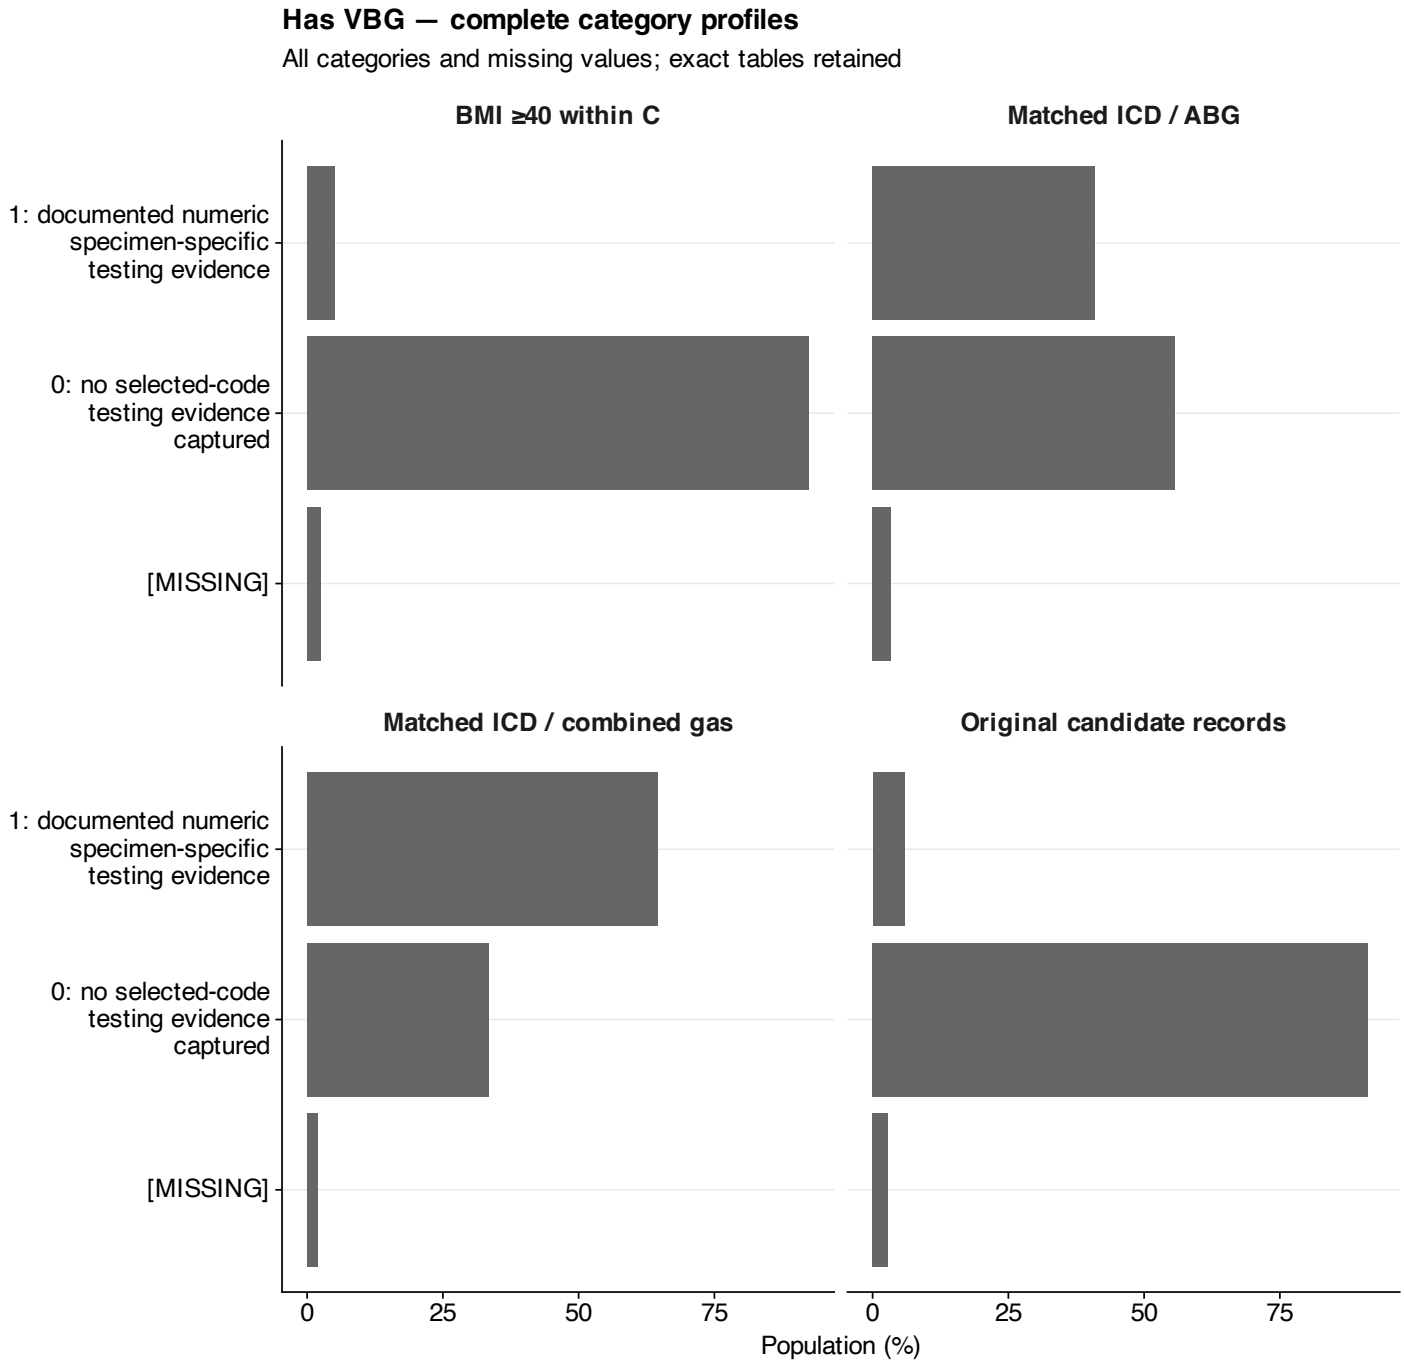

Figure 188: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete has_vbg stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

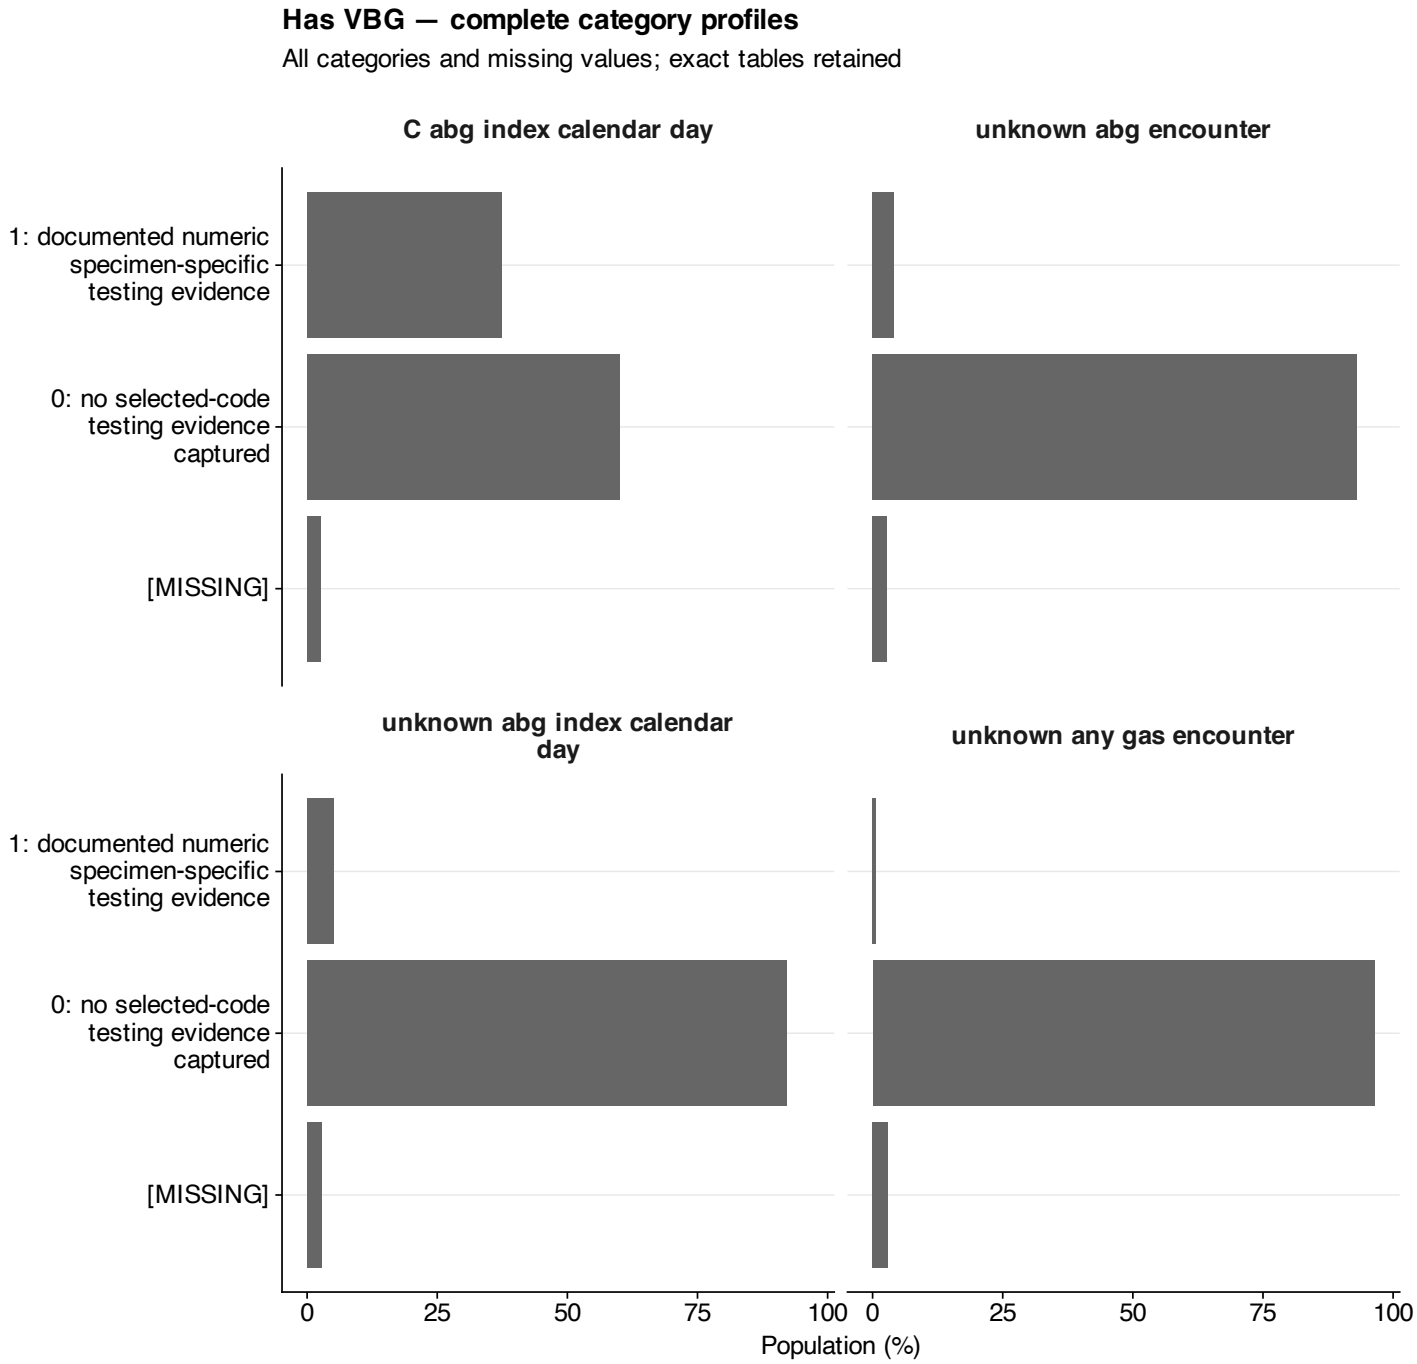

Figure 189: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete has_vbg stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

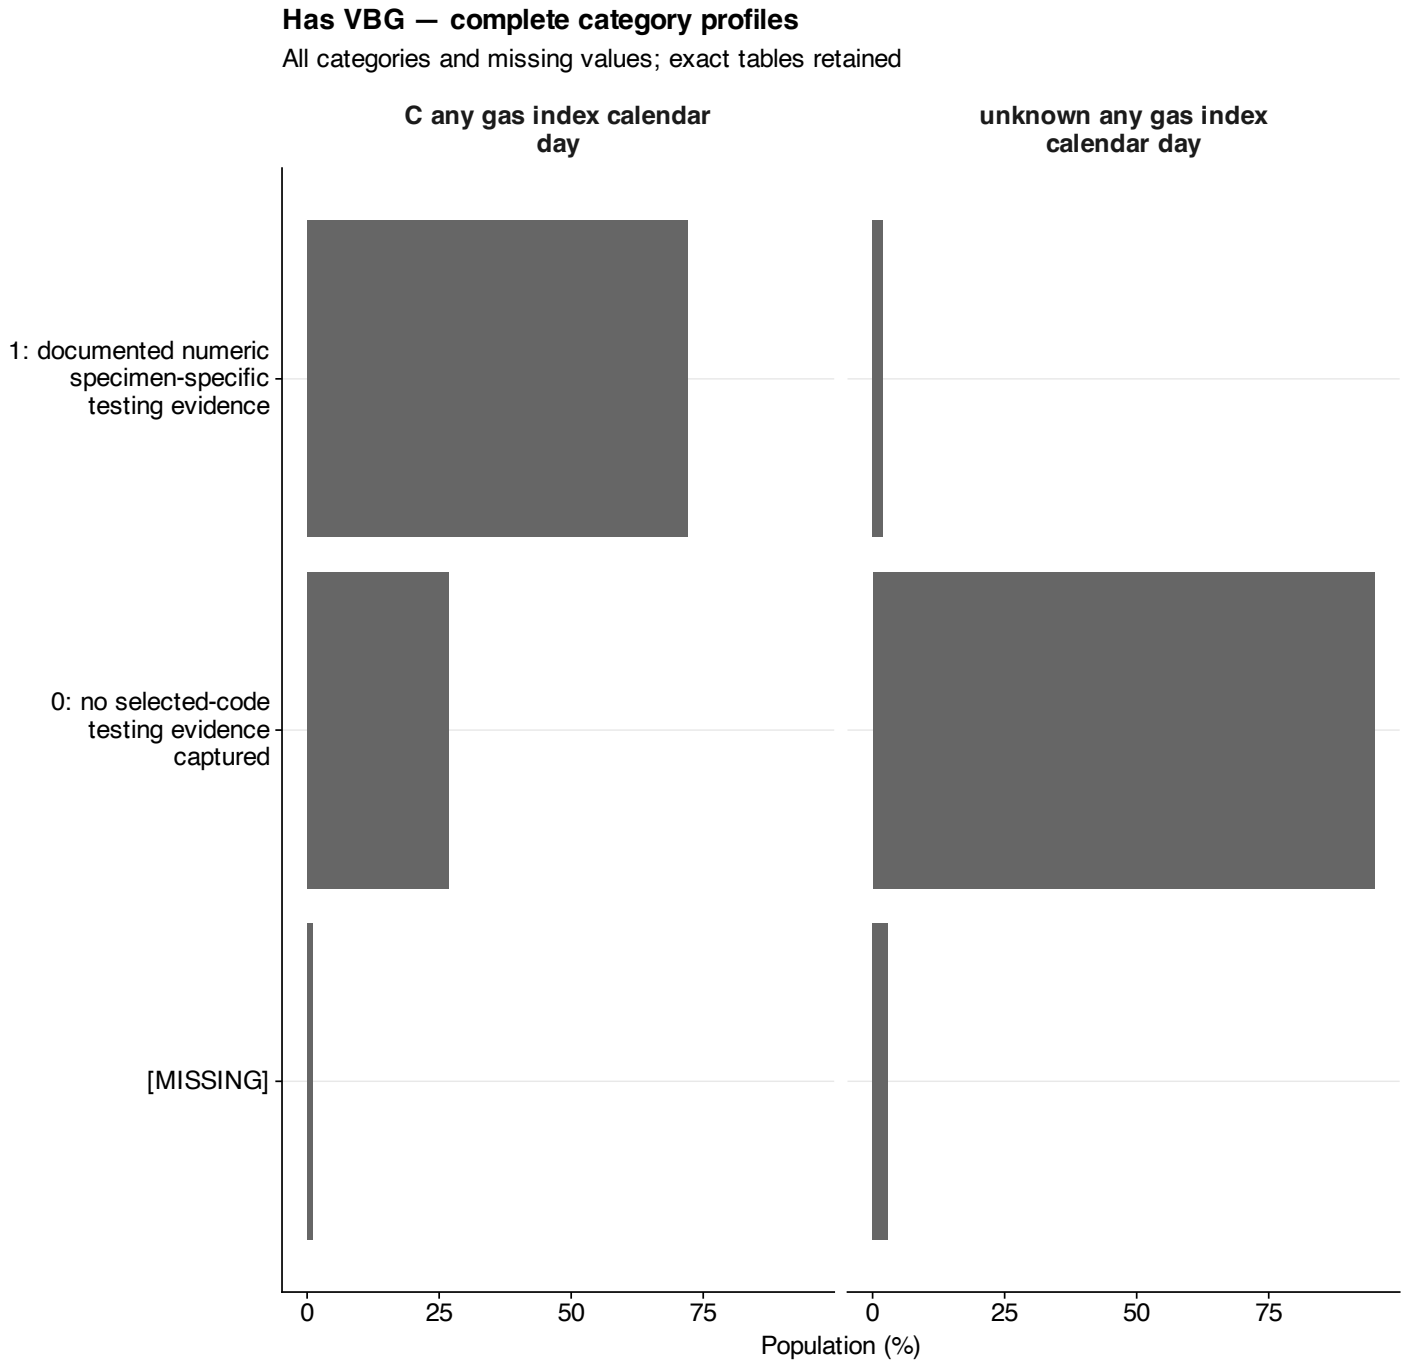

Figure 190: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete has_vbg stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

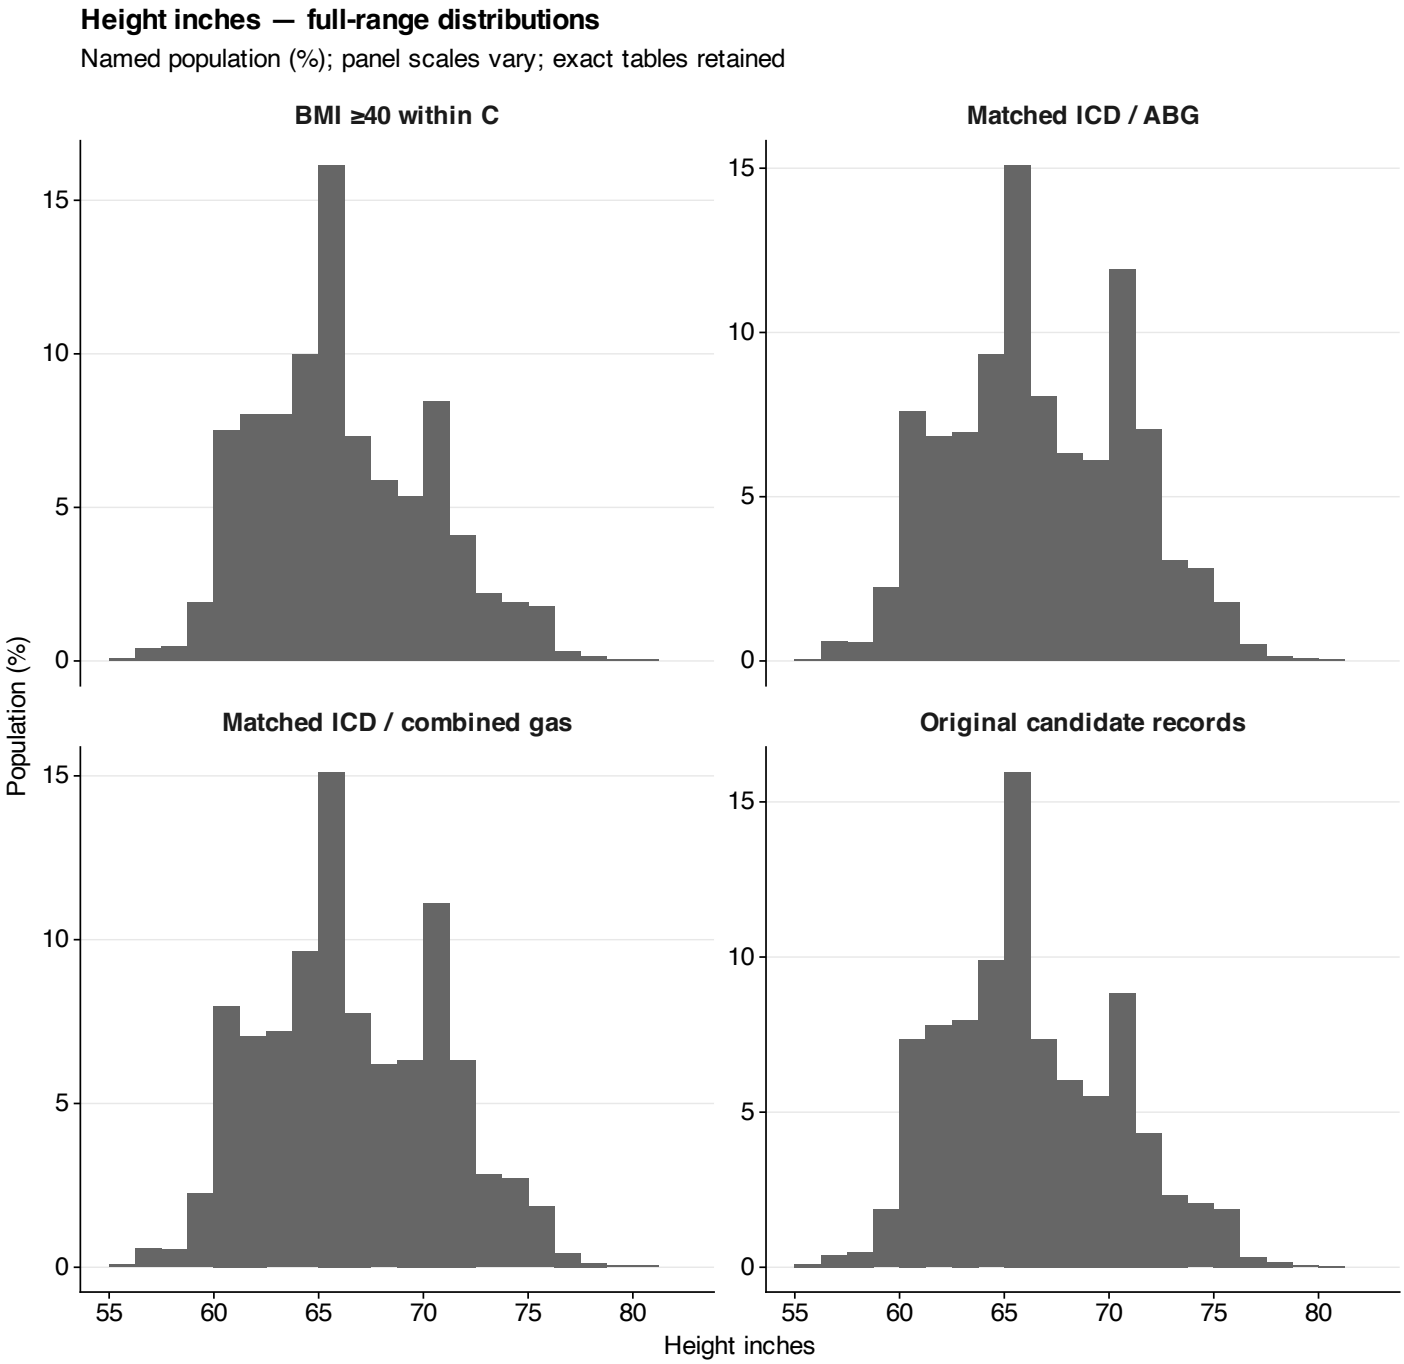

Figure 191: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete height_inches stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

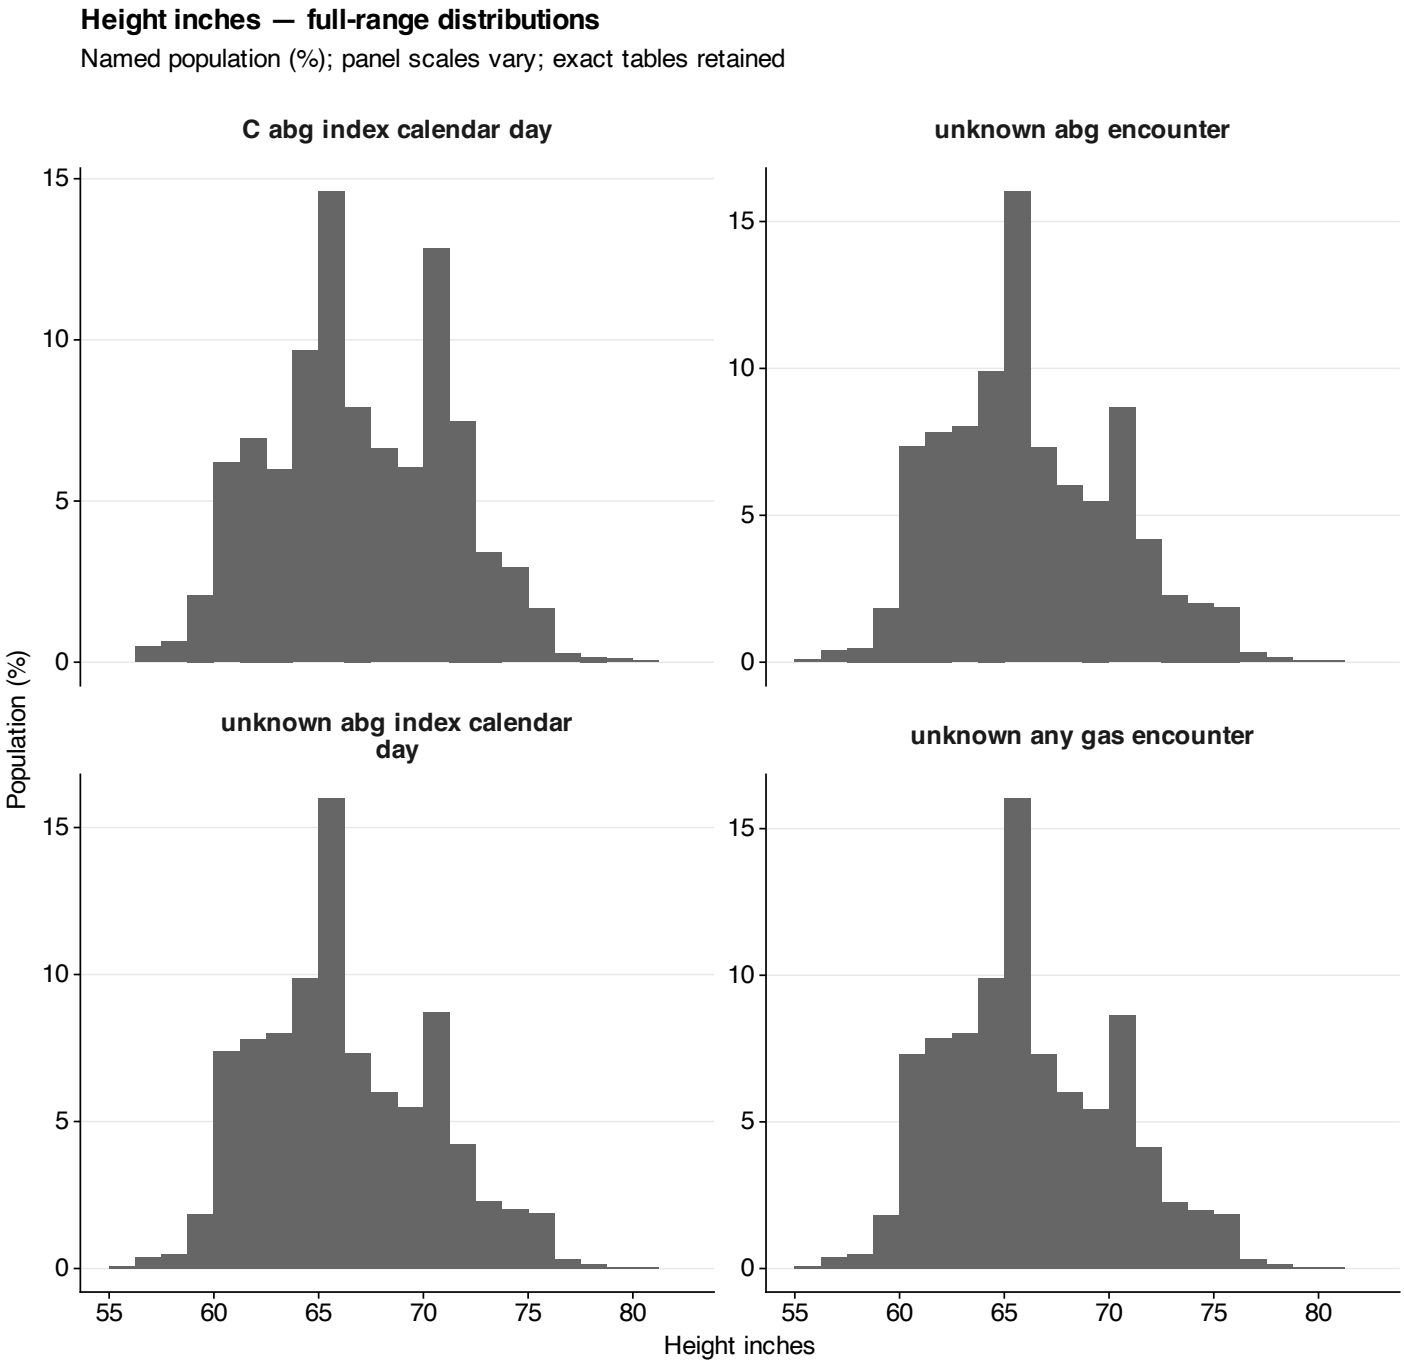

Figure 192: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete height_inches stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

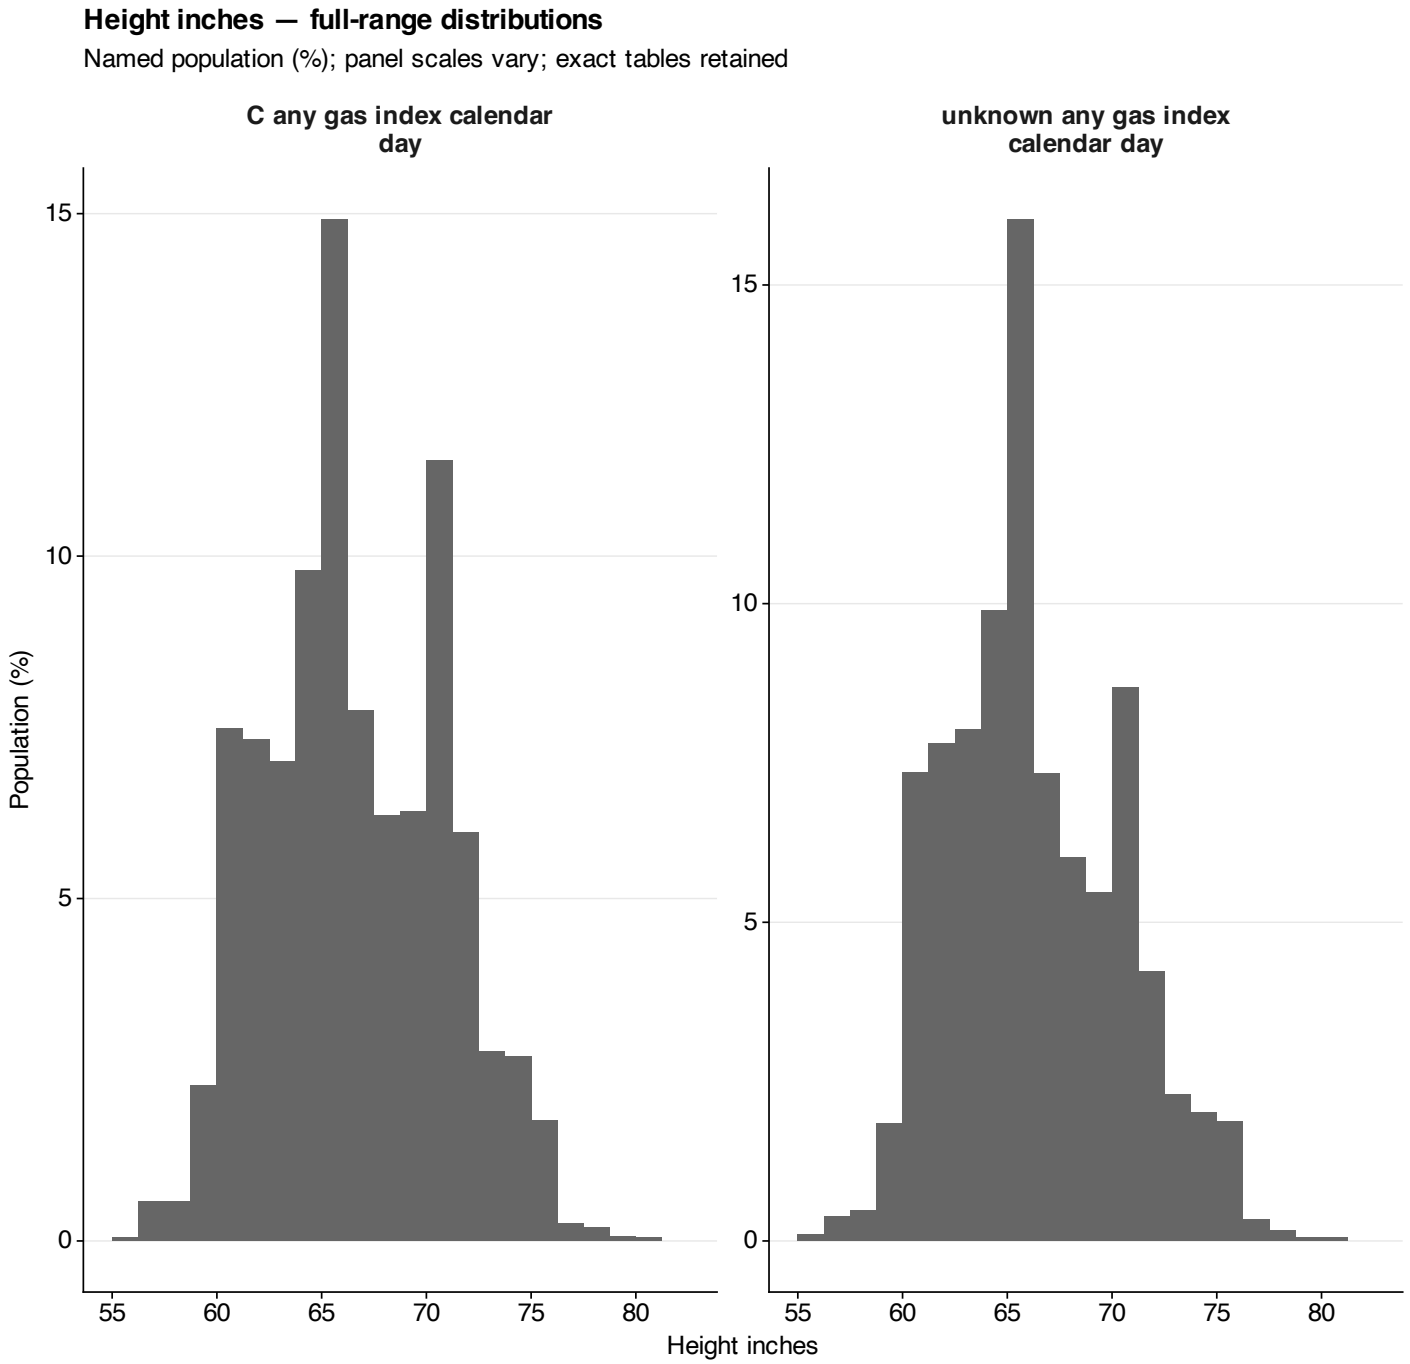

Figure 193: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete height_inches stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

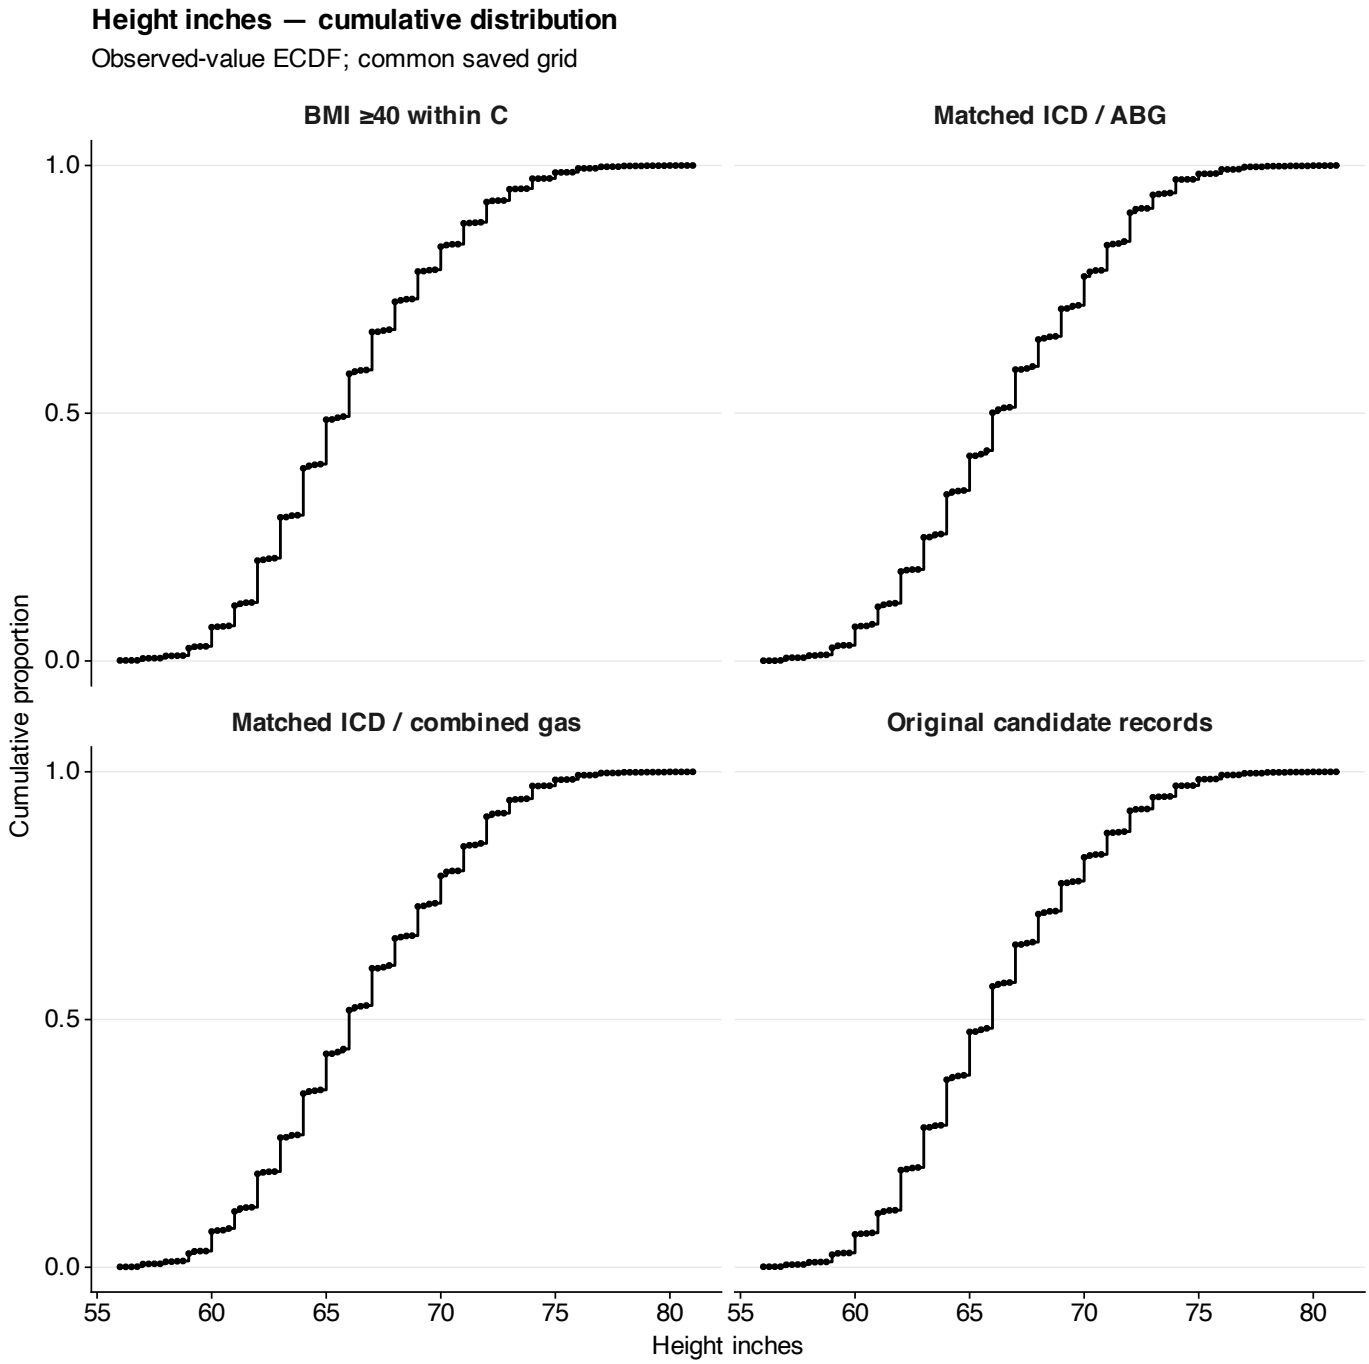

Figure 194: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. height_inches ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

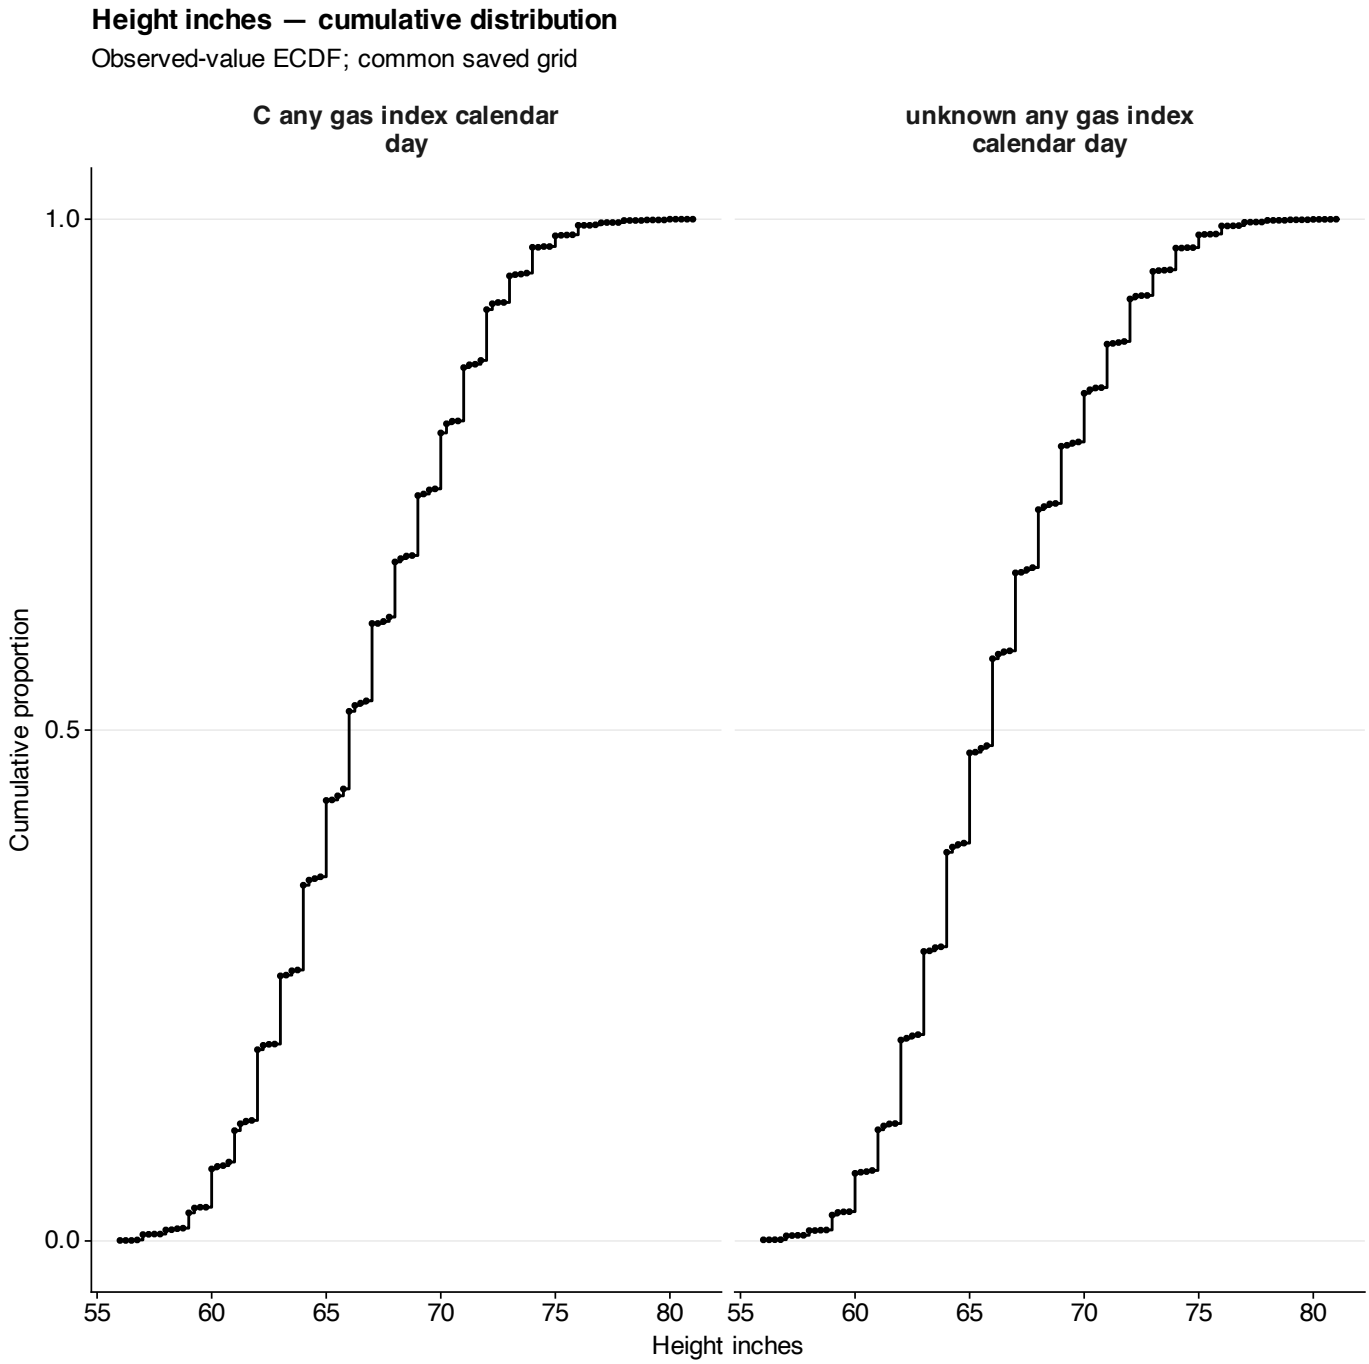

Figure 196: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. height_inches ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

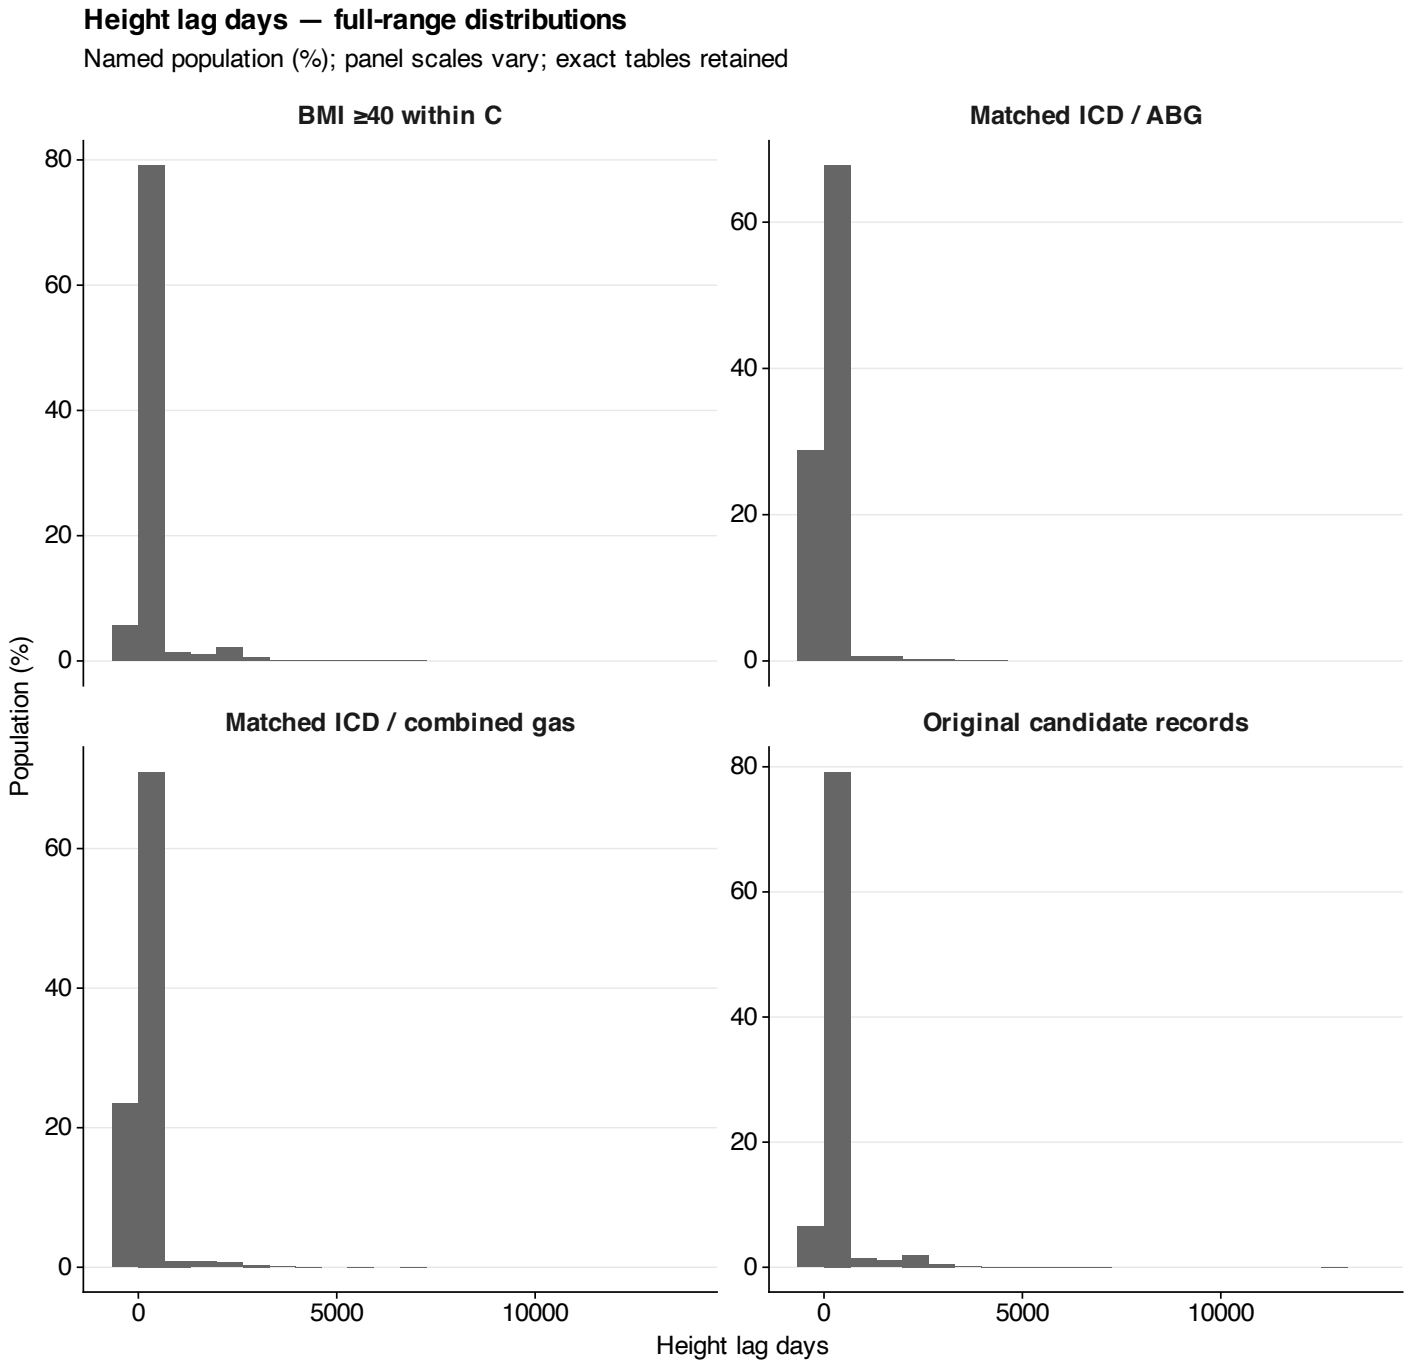

Figure 197: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete height_lag_days stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

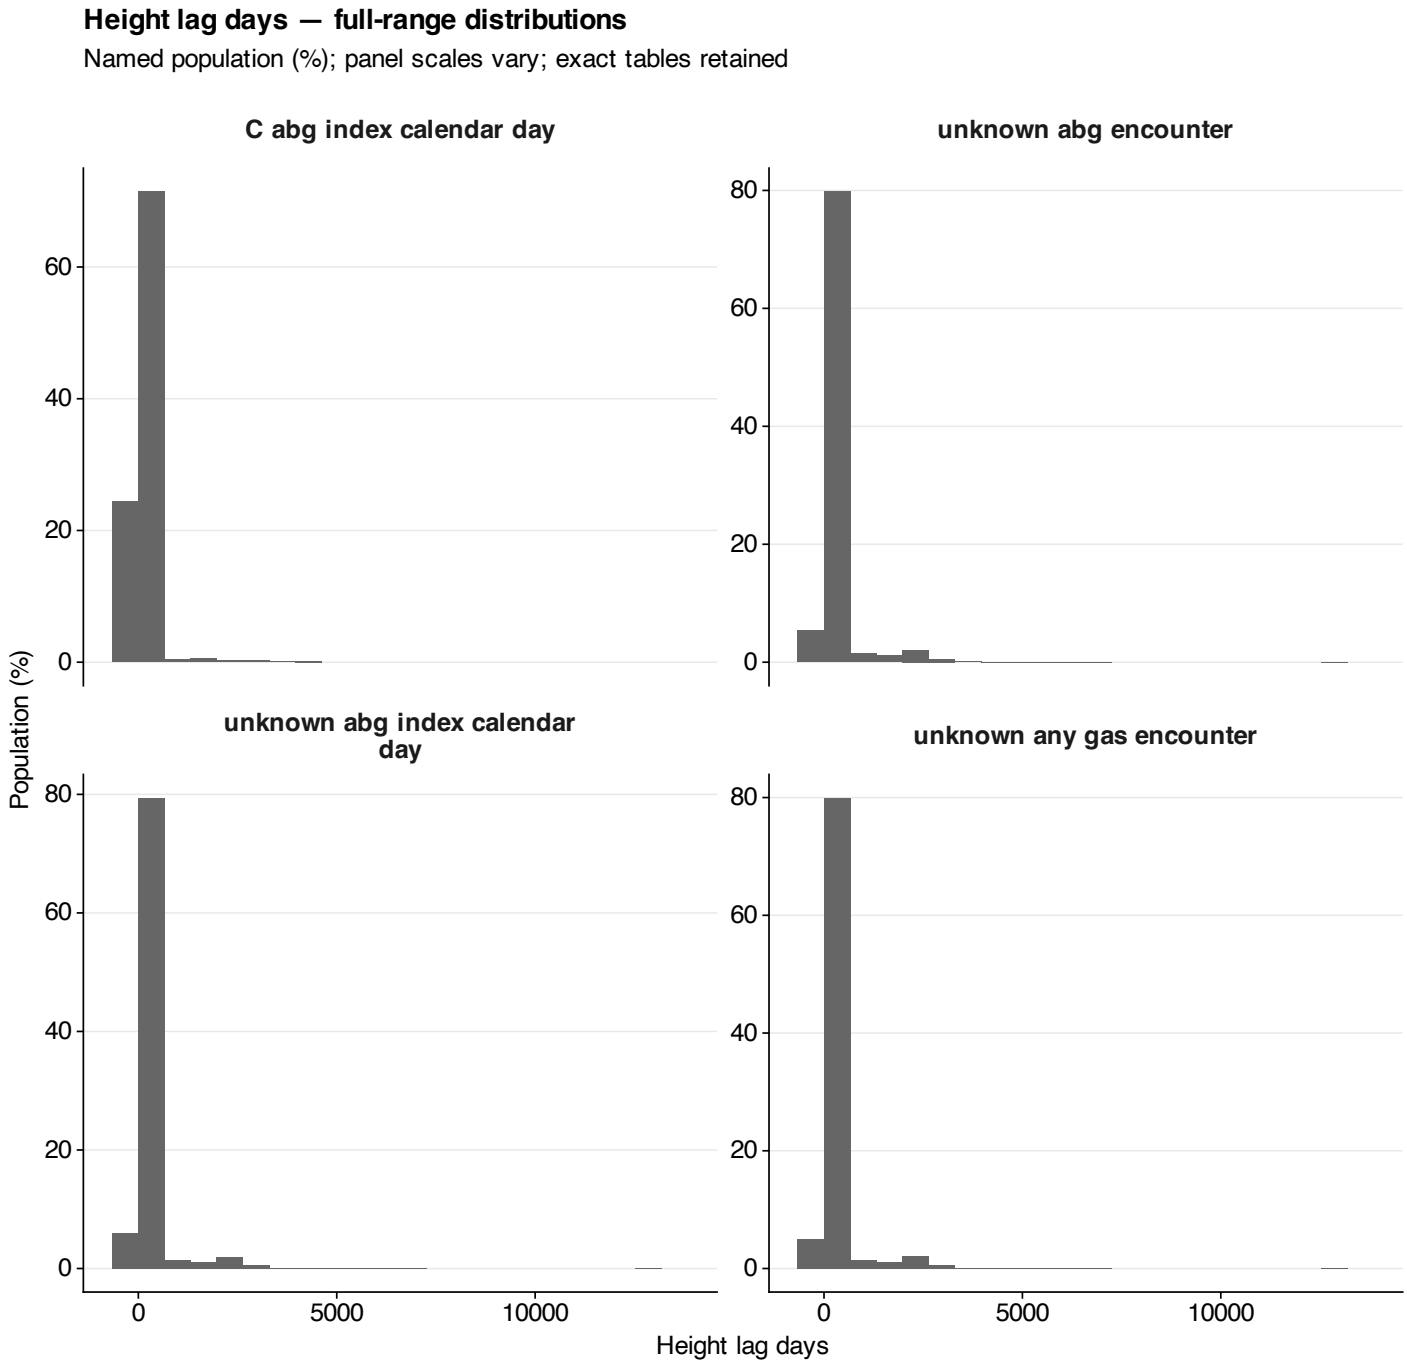

Figure 198: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete height_lag_days stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

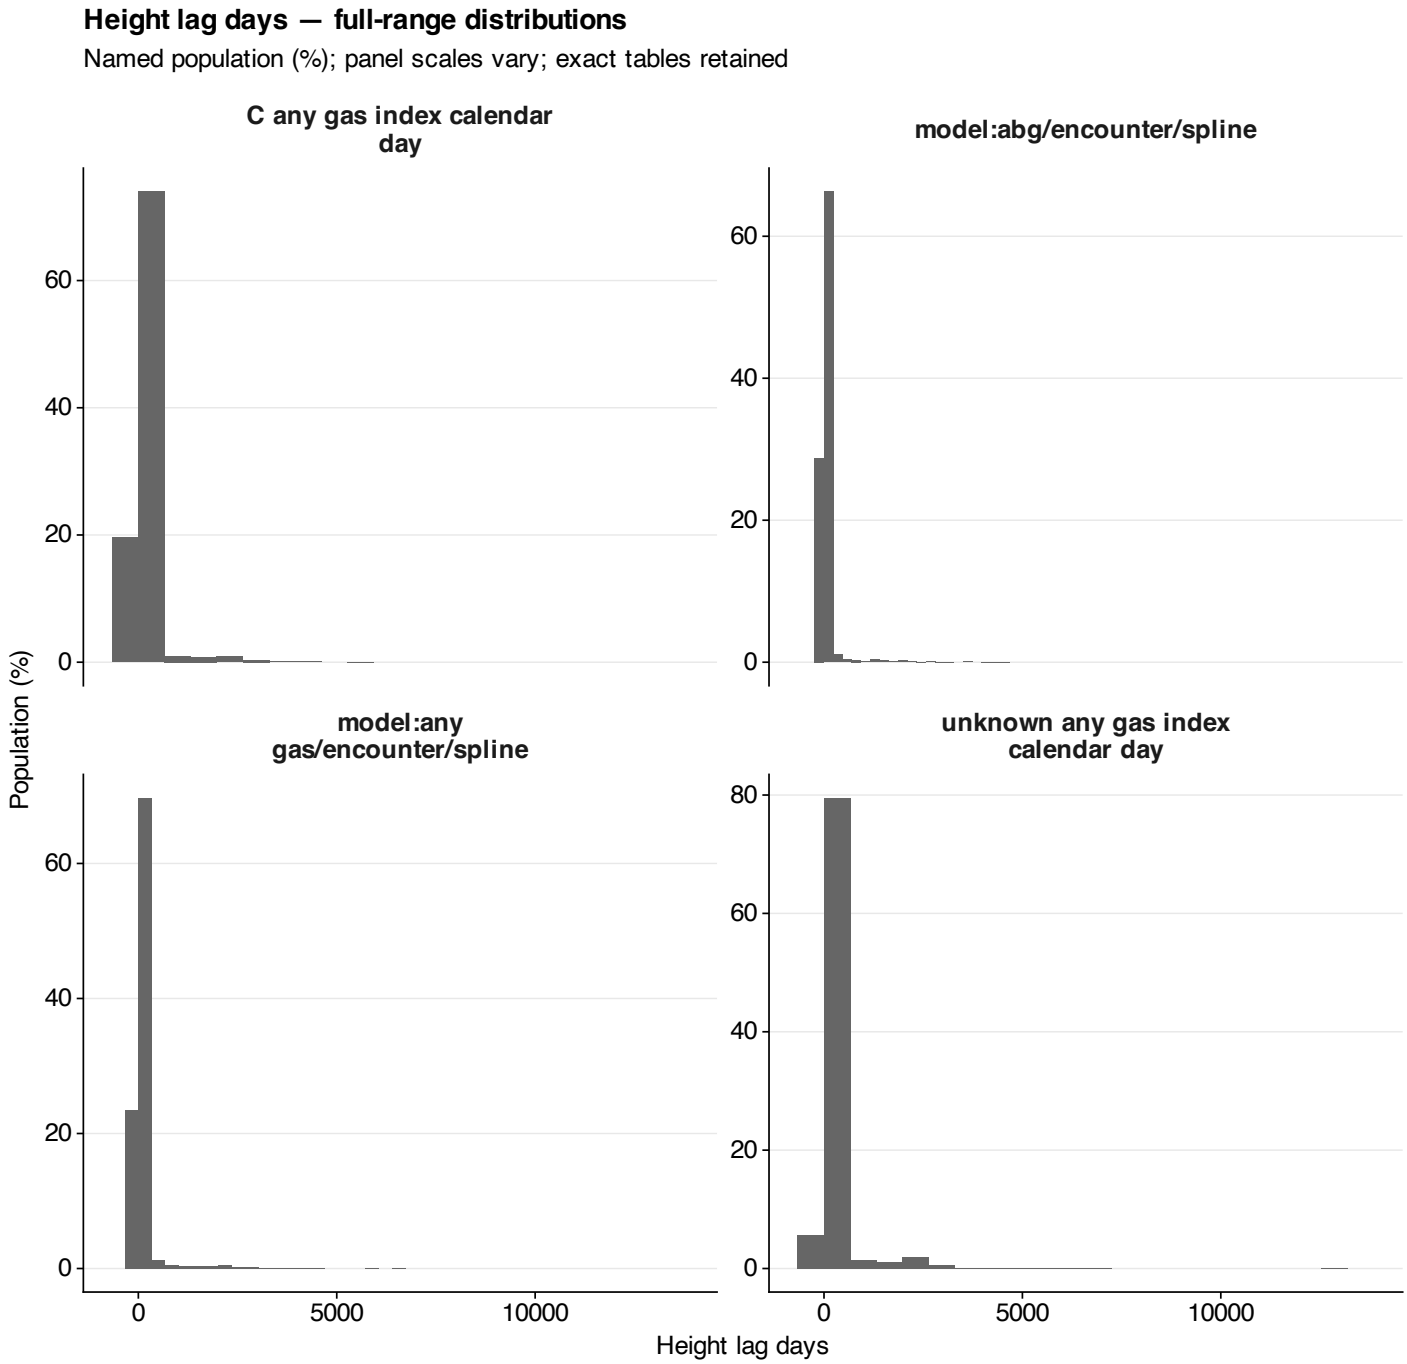

Figure 199: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete height_lag_days stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

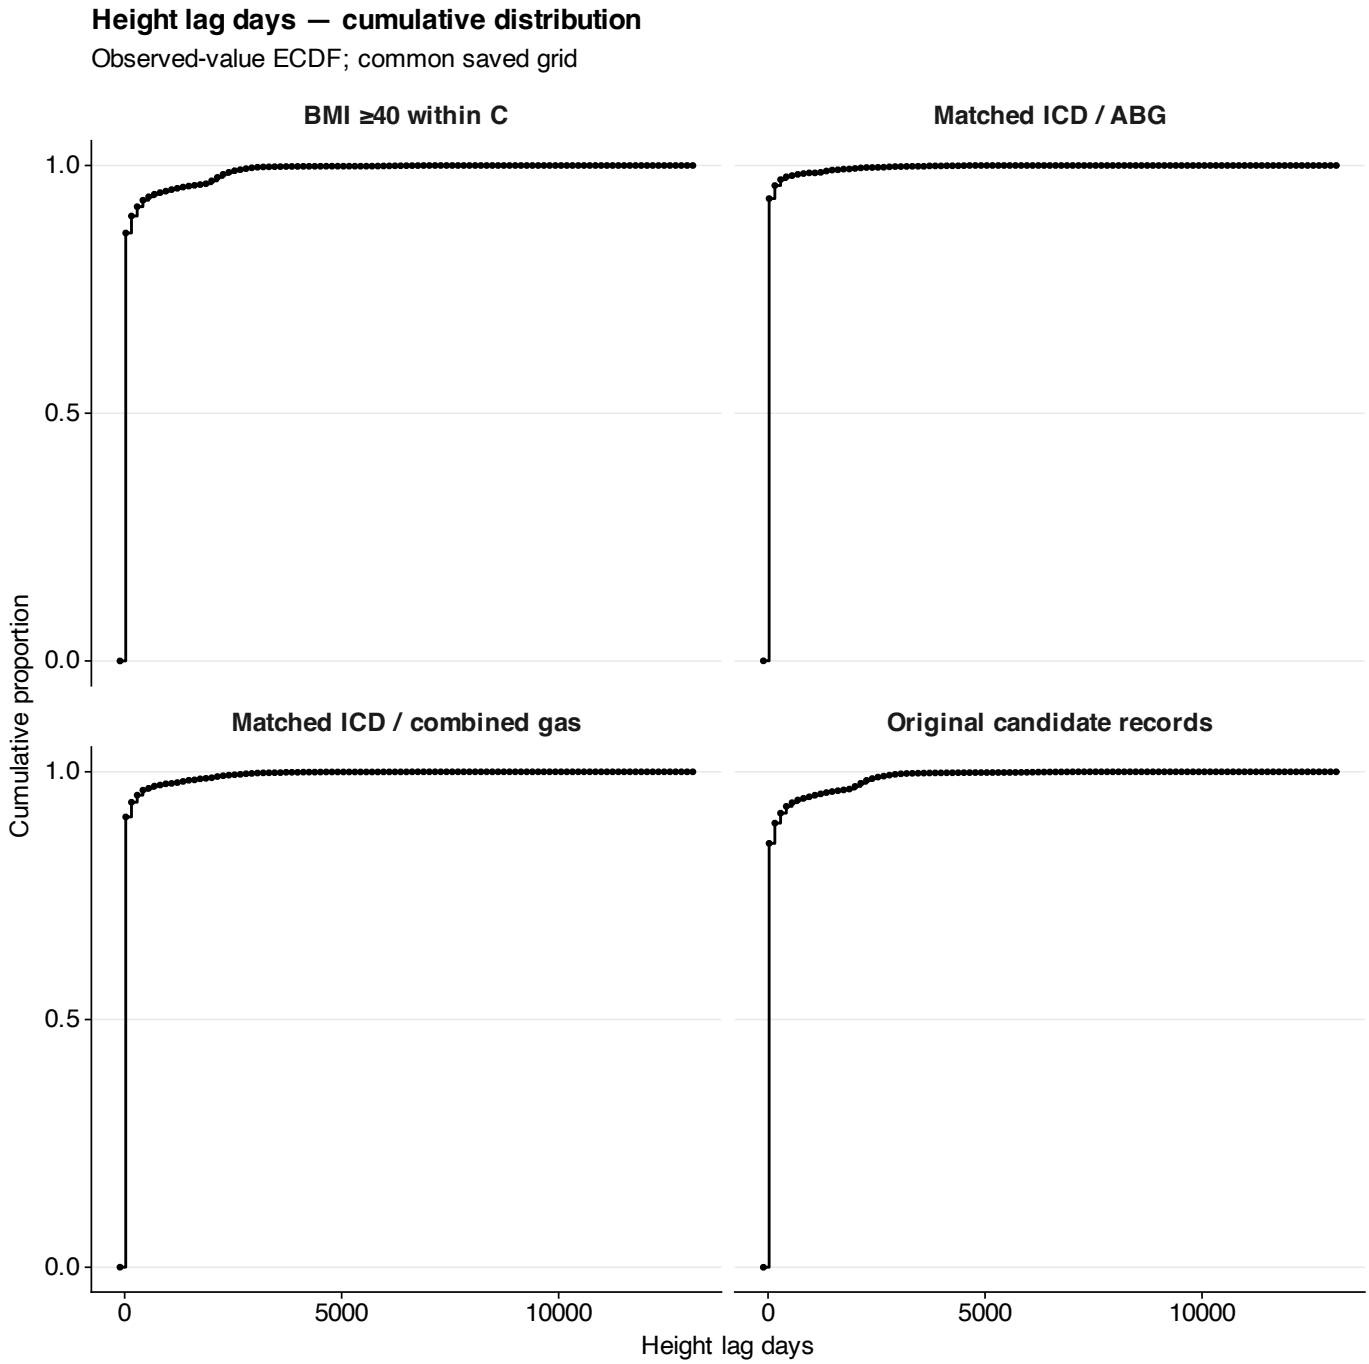

Figure 200: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. height_lag_days ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

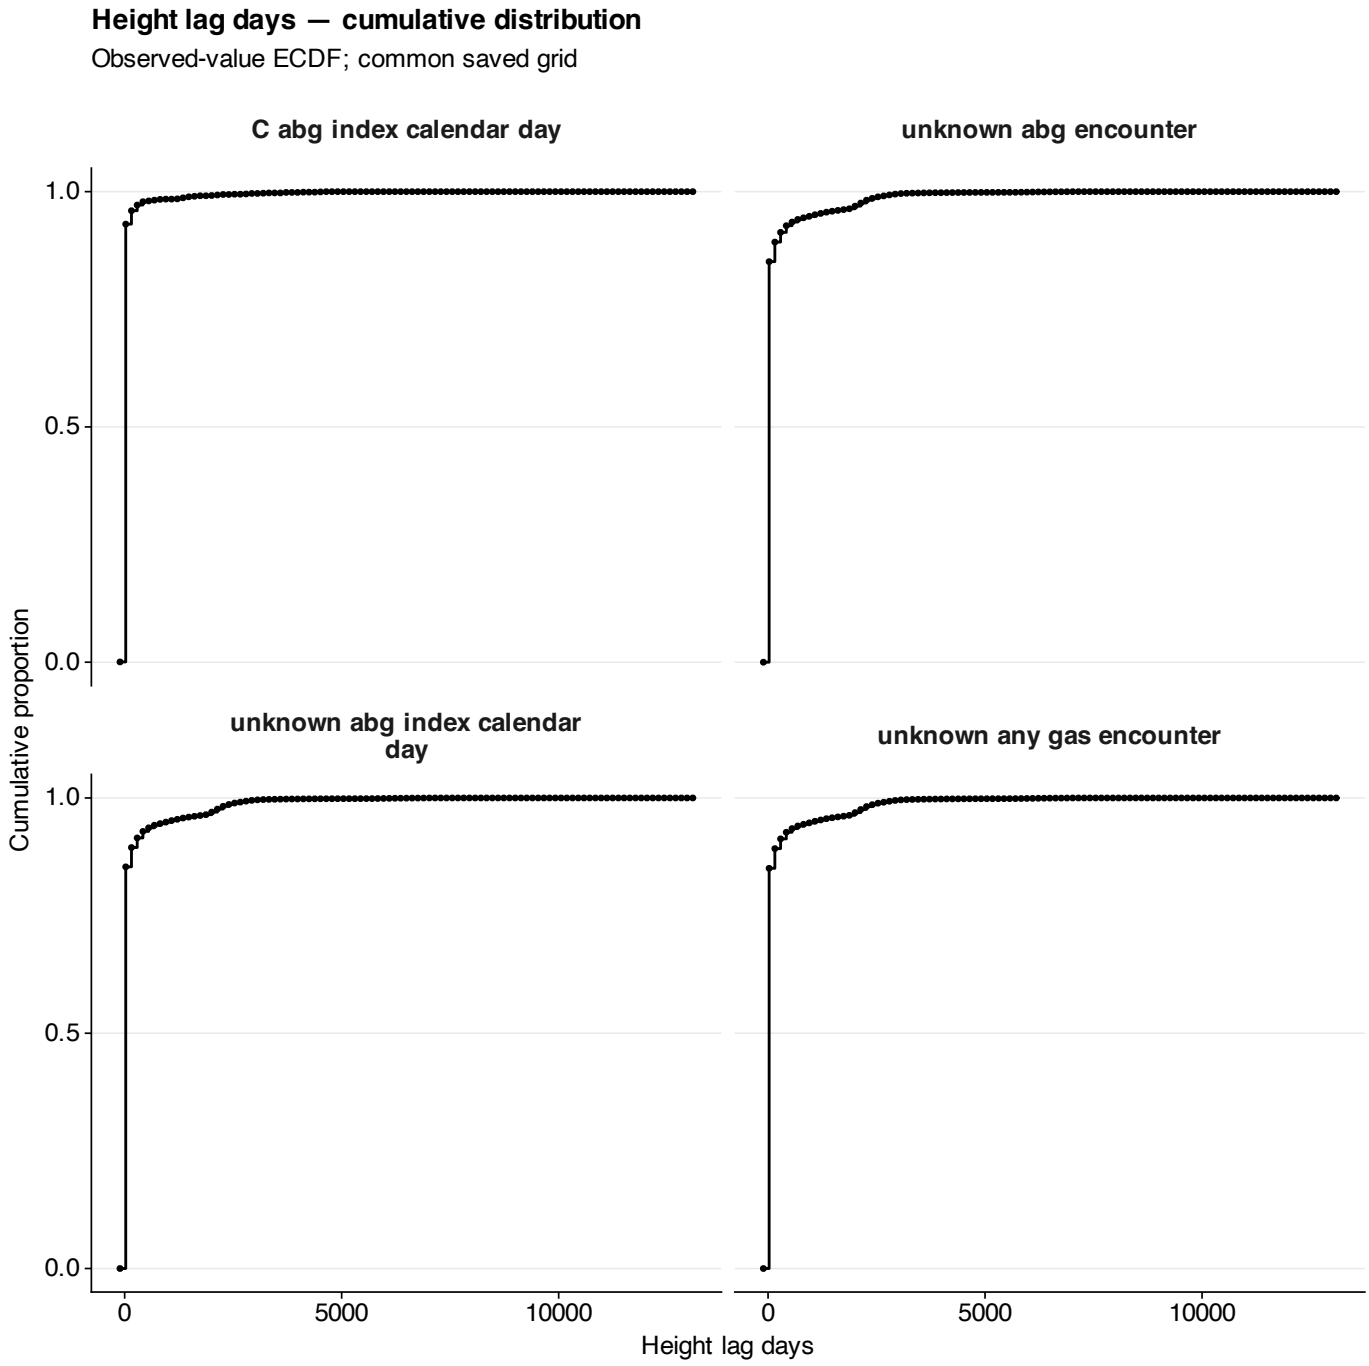

Figure 201: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. height_lag_days ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

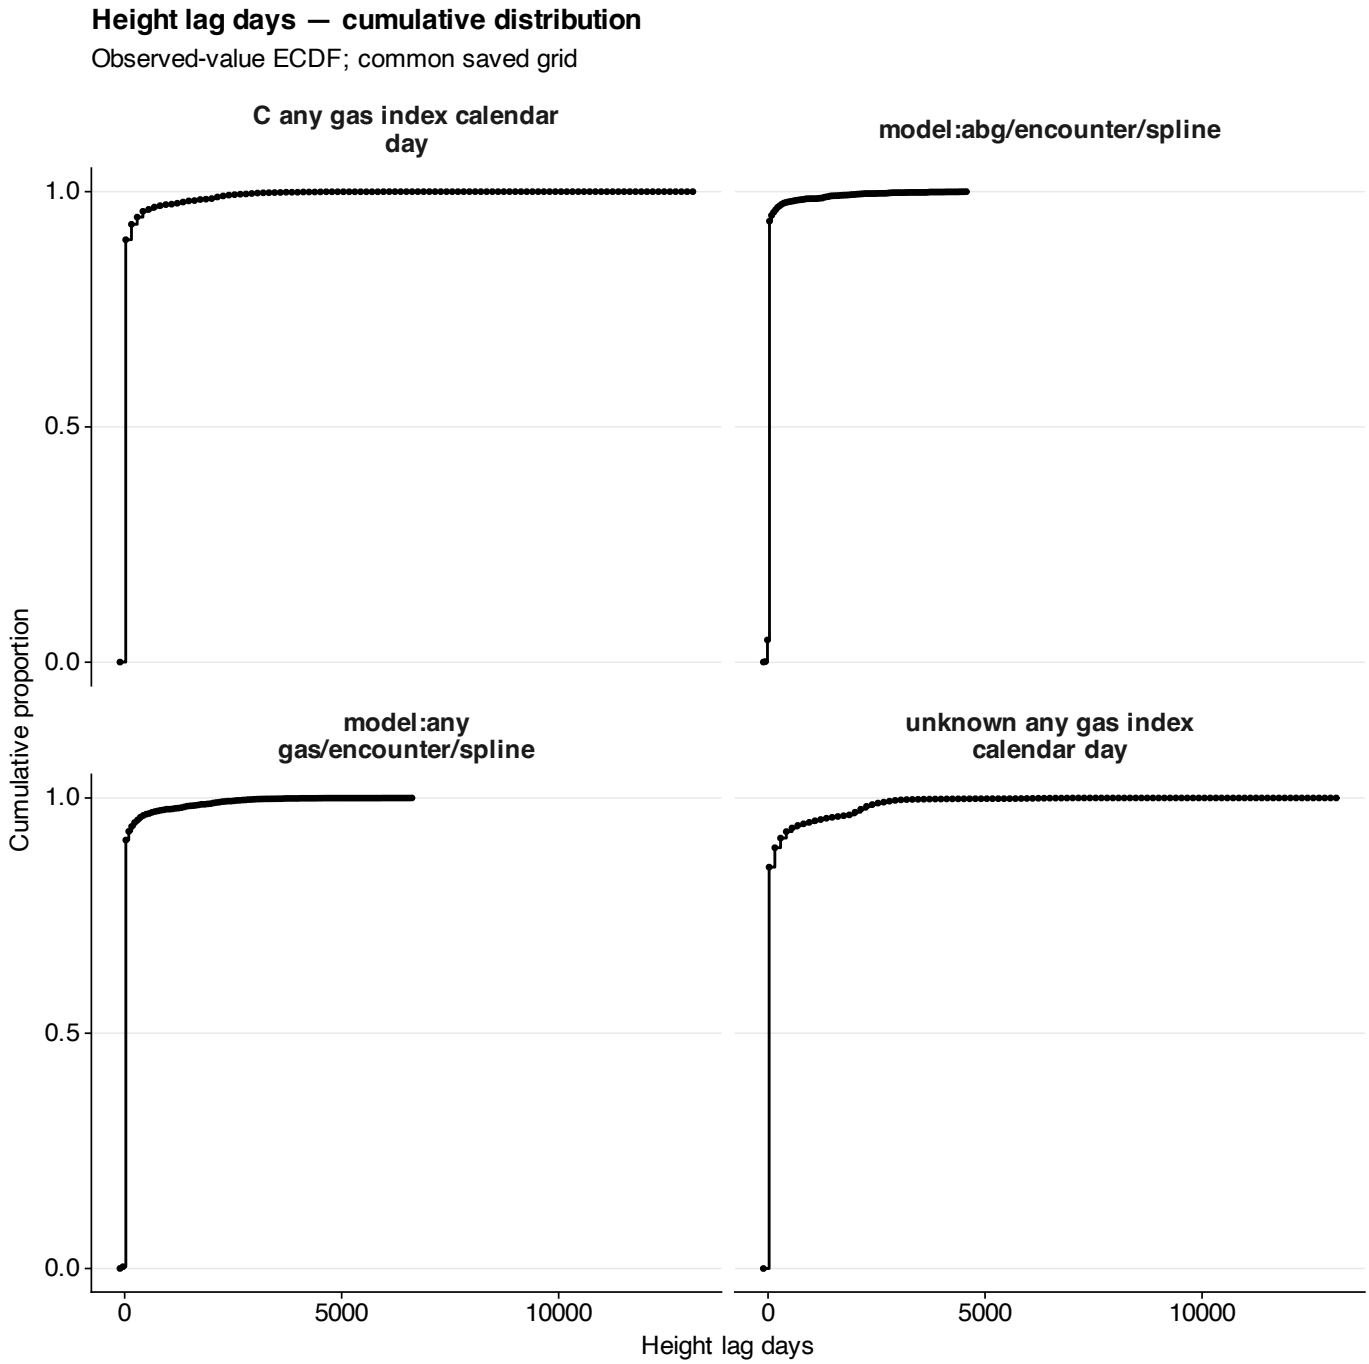

Figure 202: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. height_lag_days ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

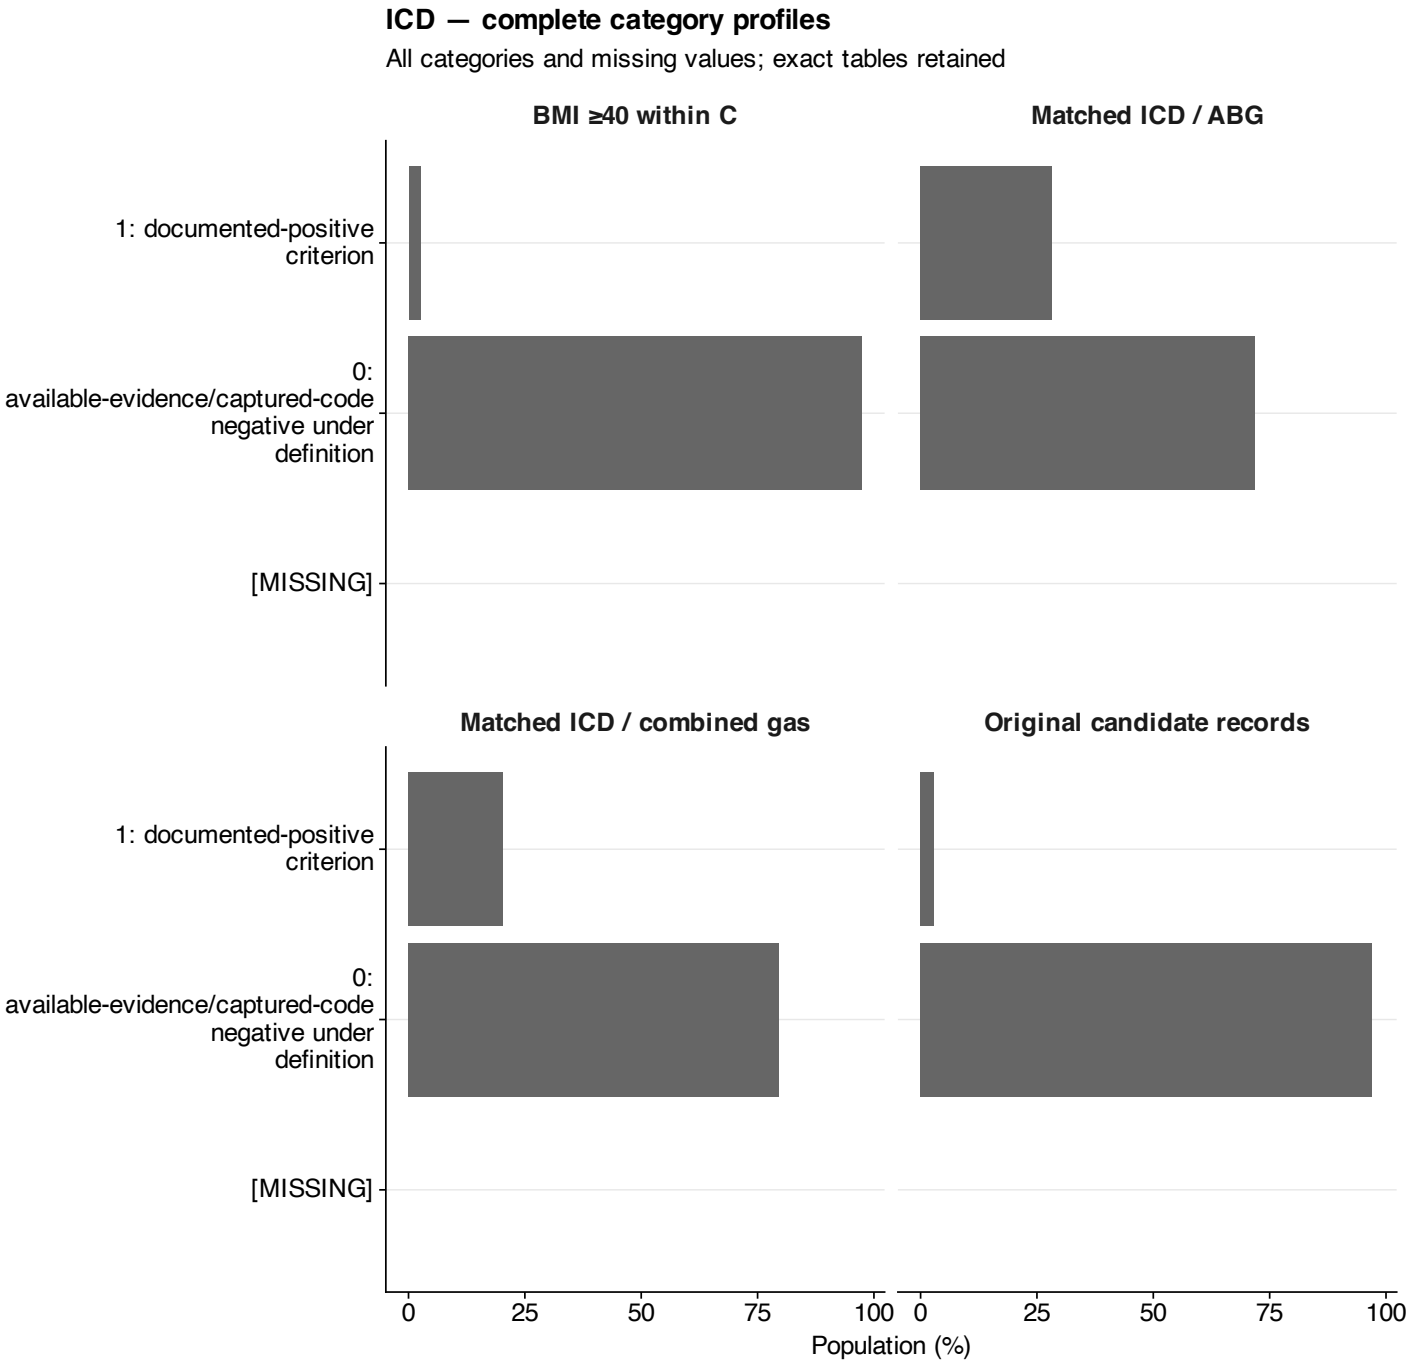

Figure 203: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete icd stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

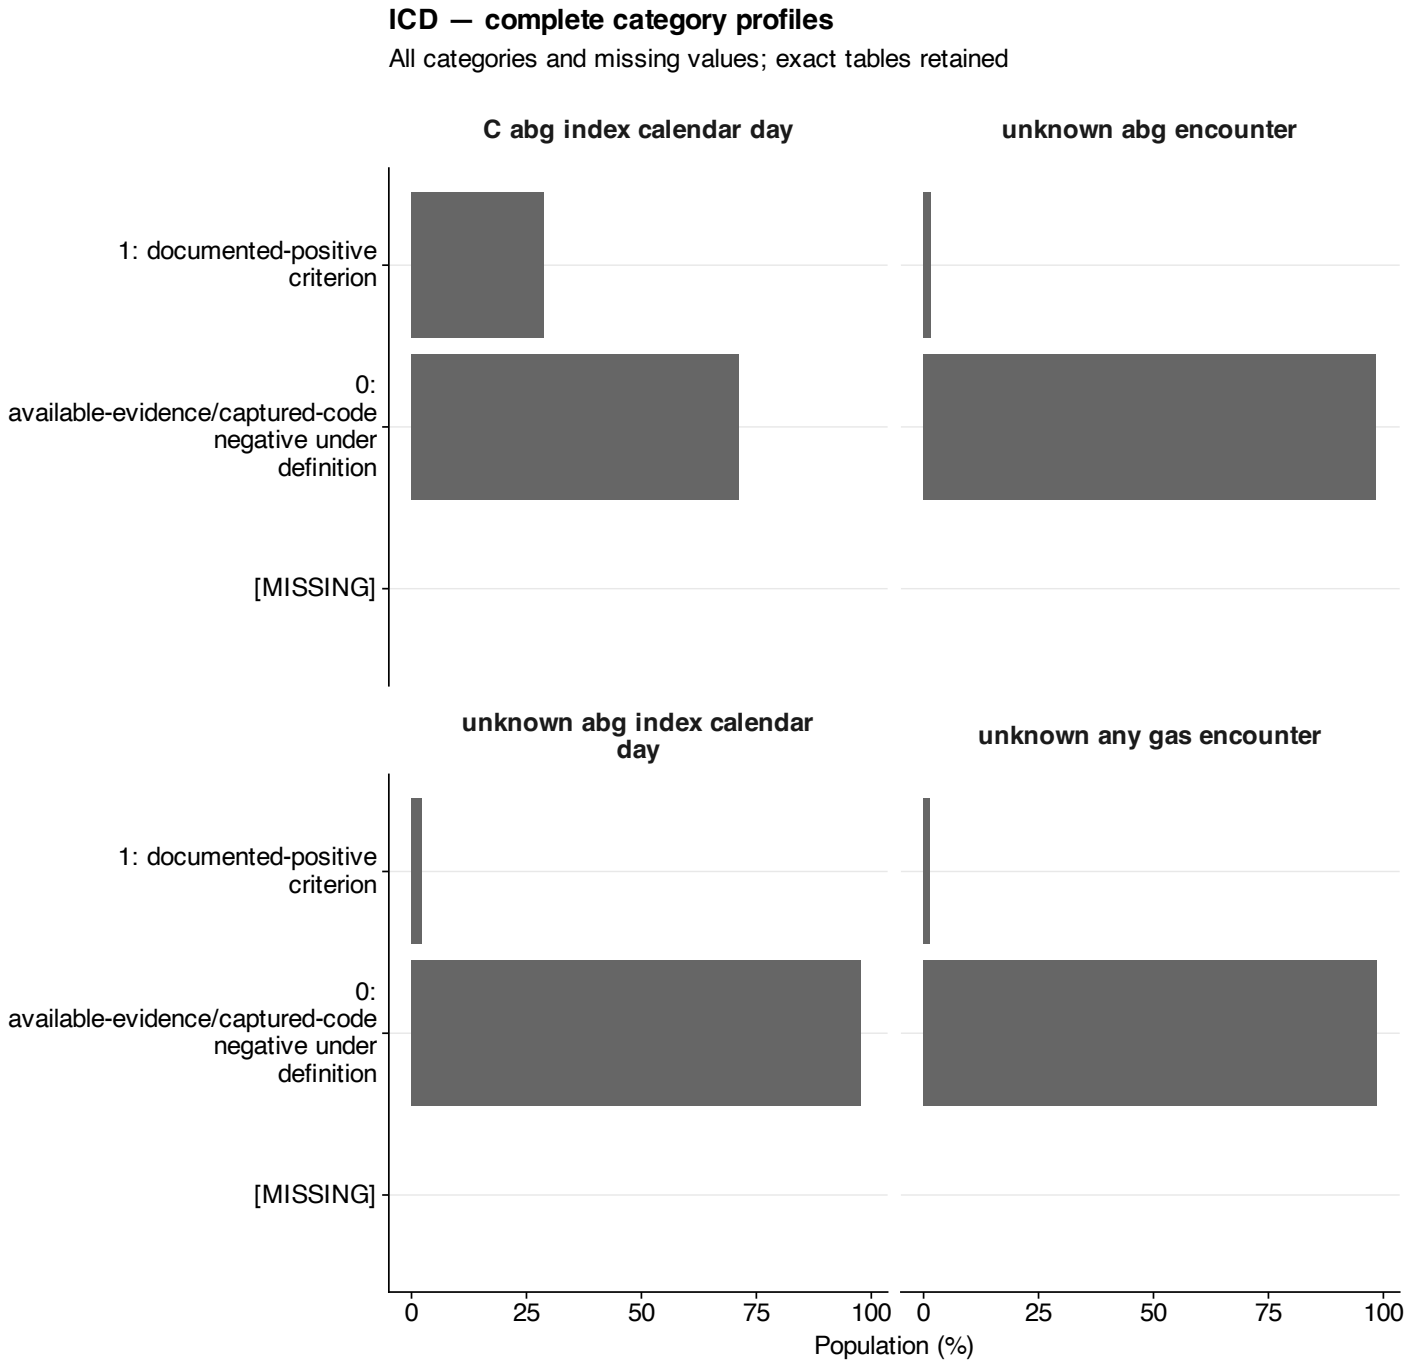

Figure 204: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete icd stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

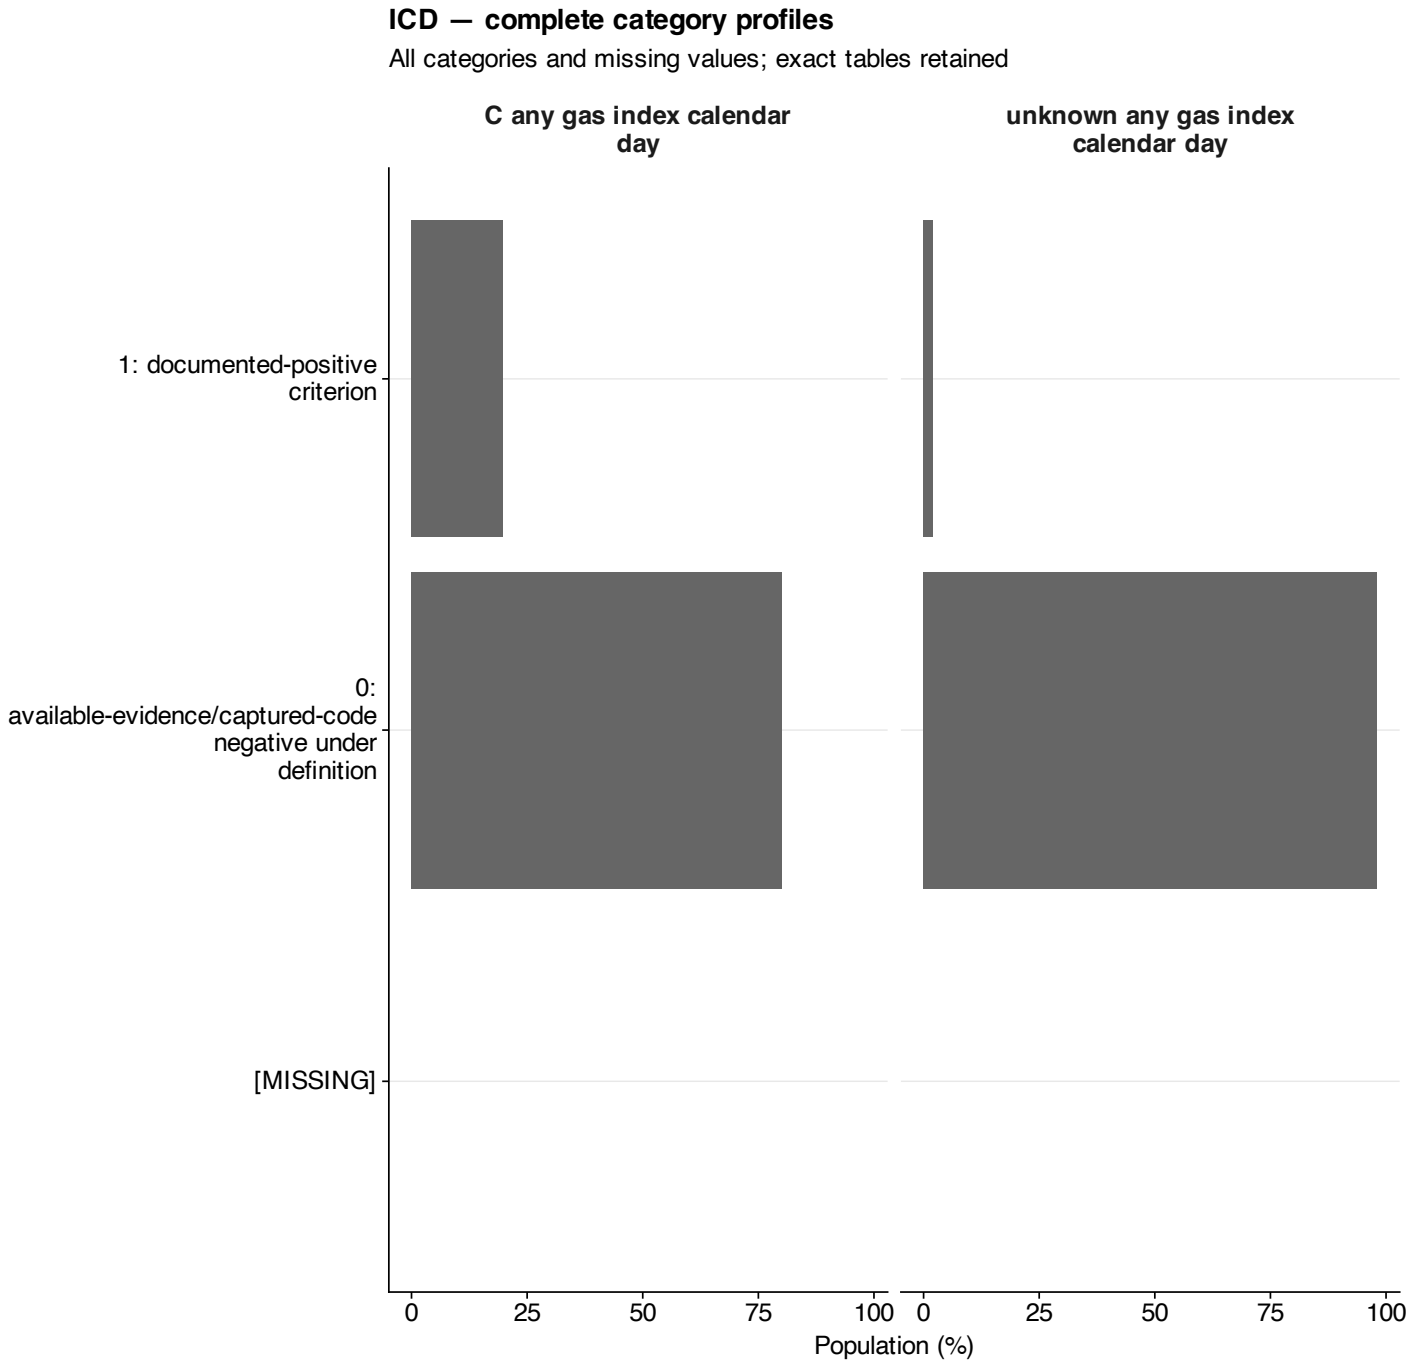

Figure 205: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete icd stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

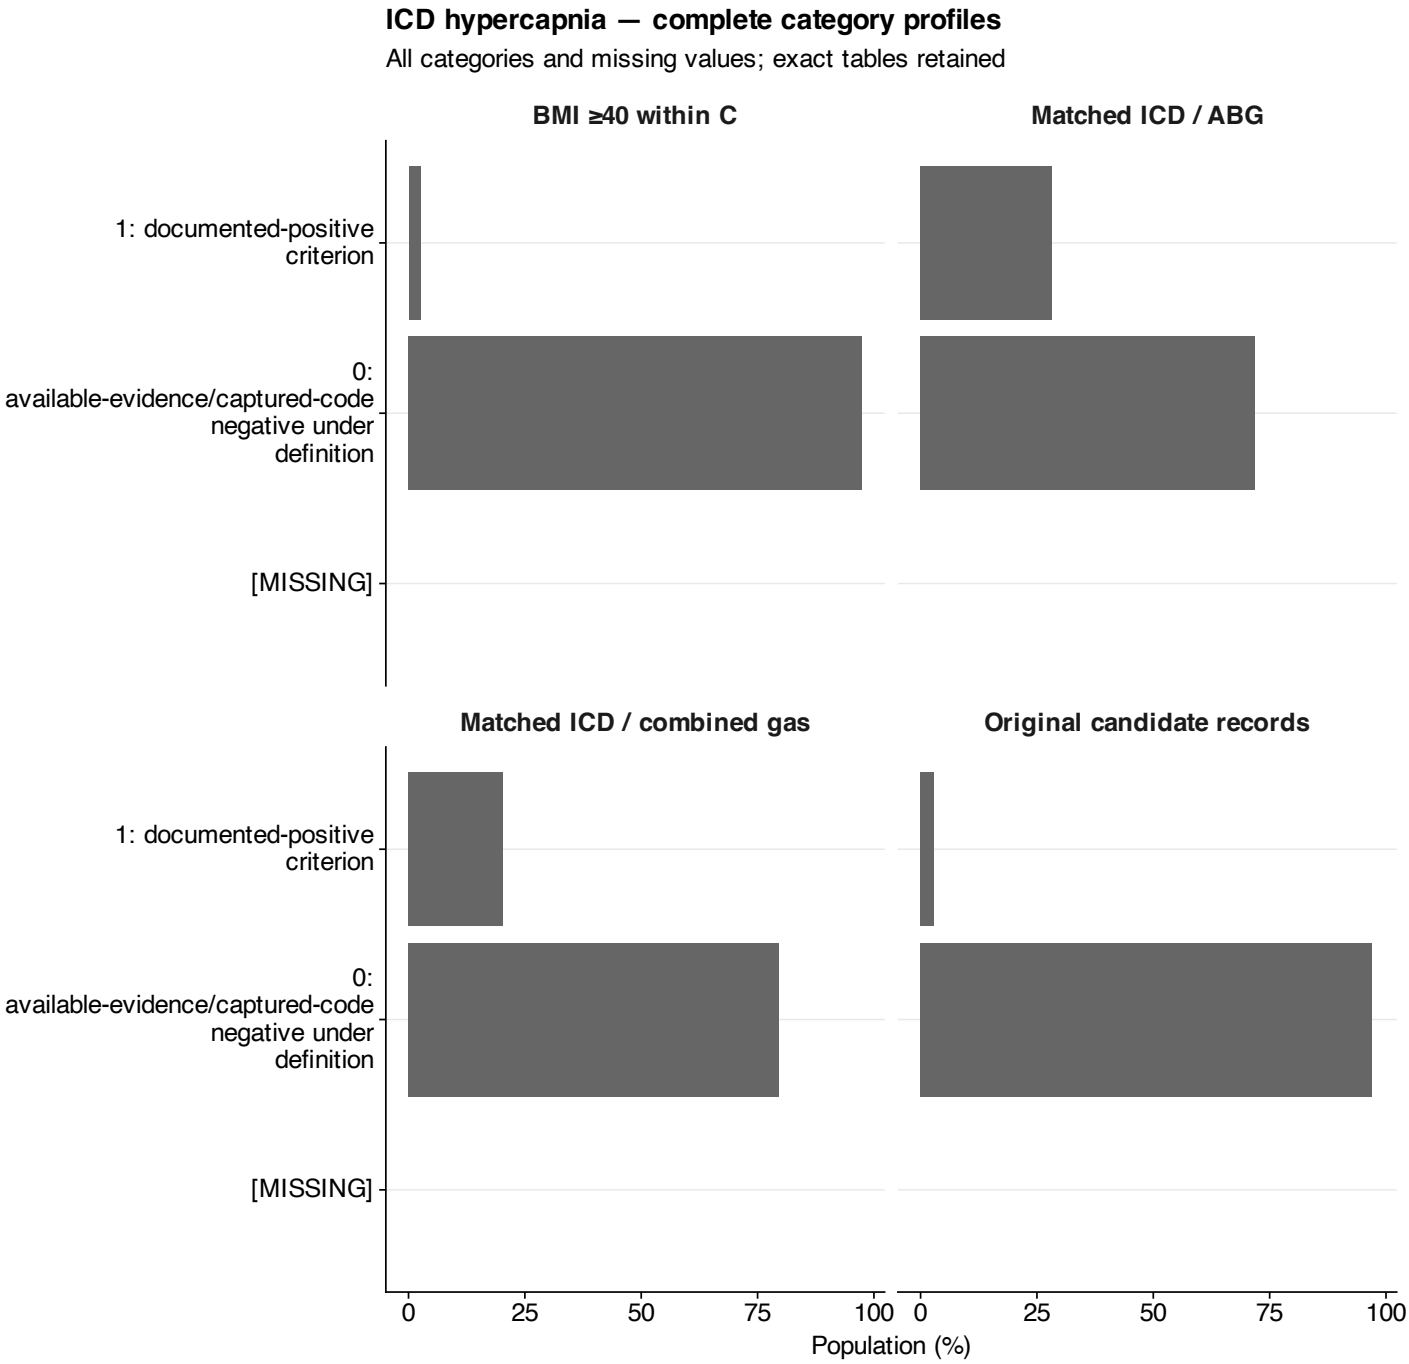

Figure 206: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete icd_hypercapnia stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

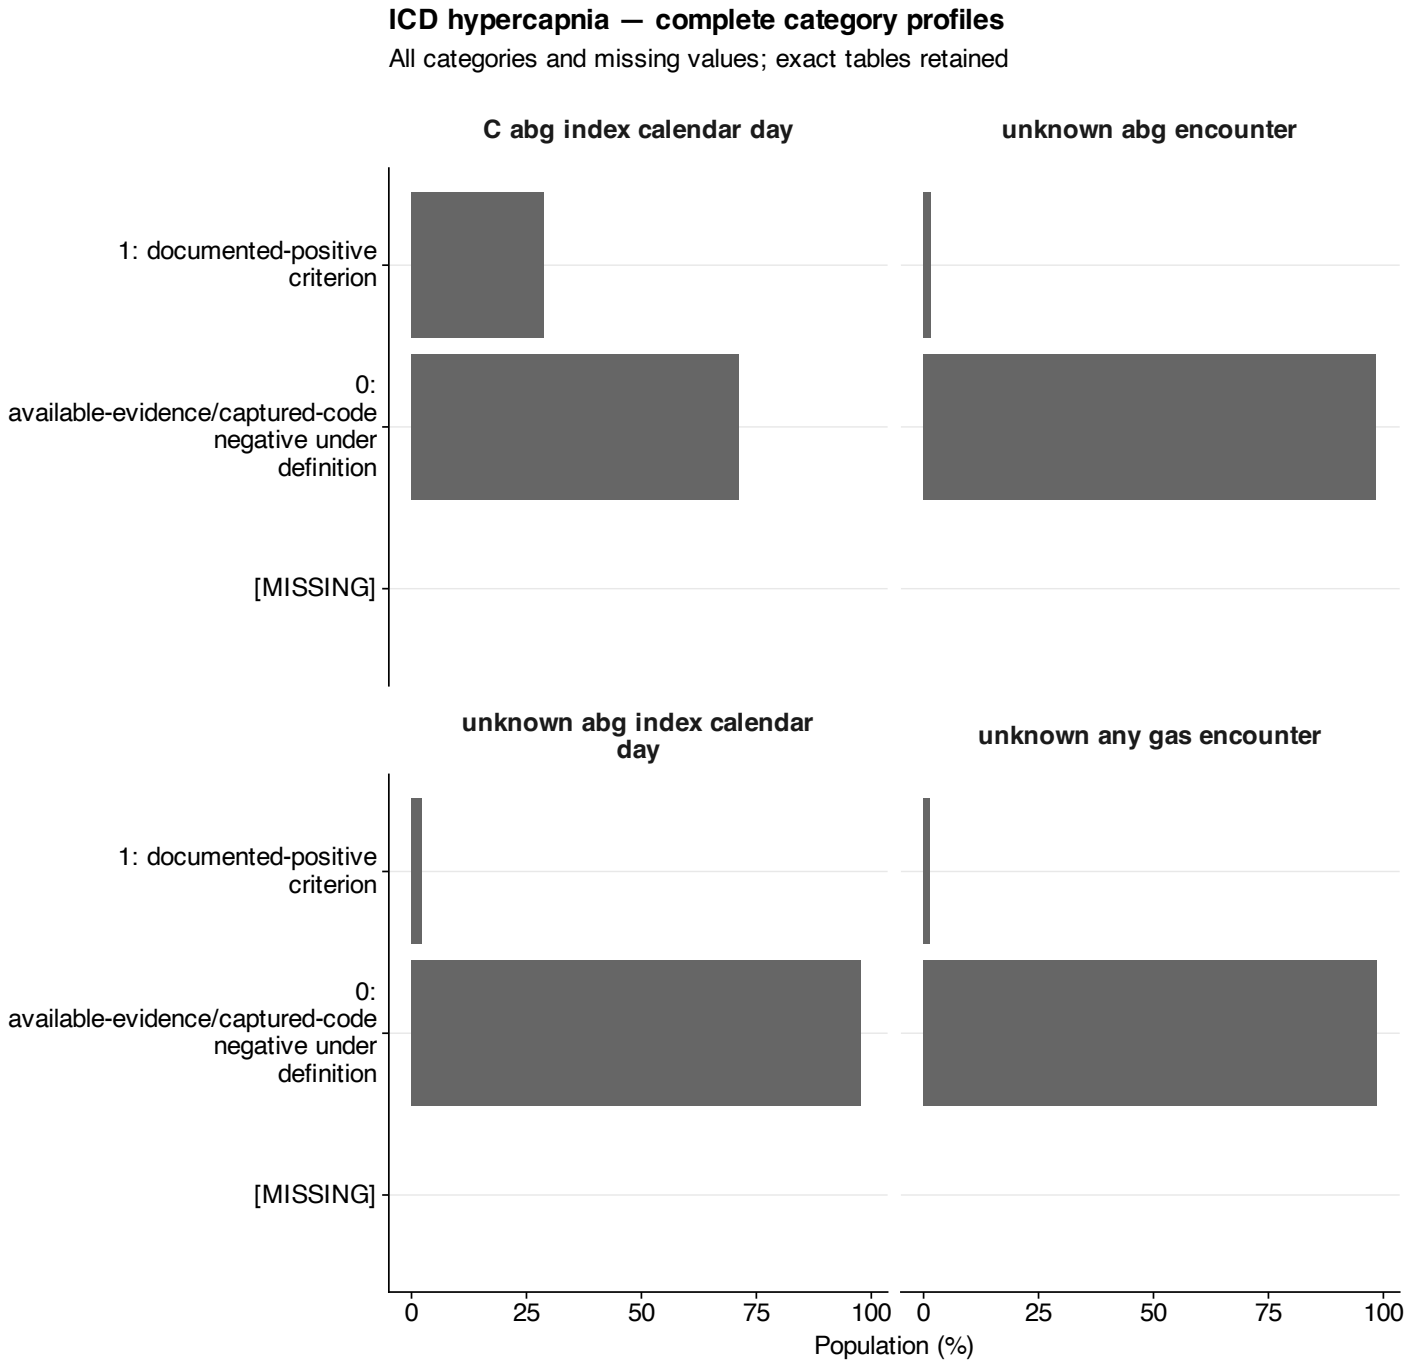

Figure 207: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete icd_hypercapnia stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

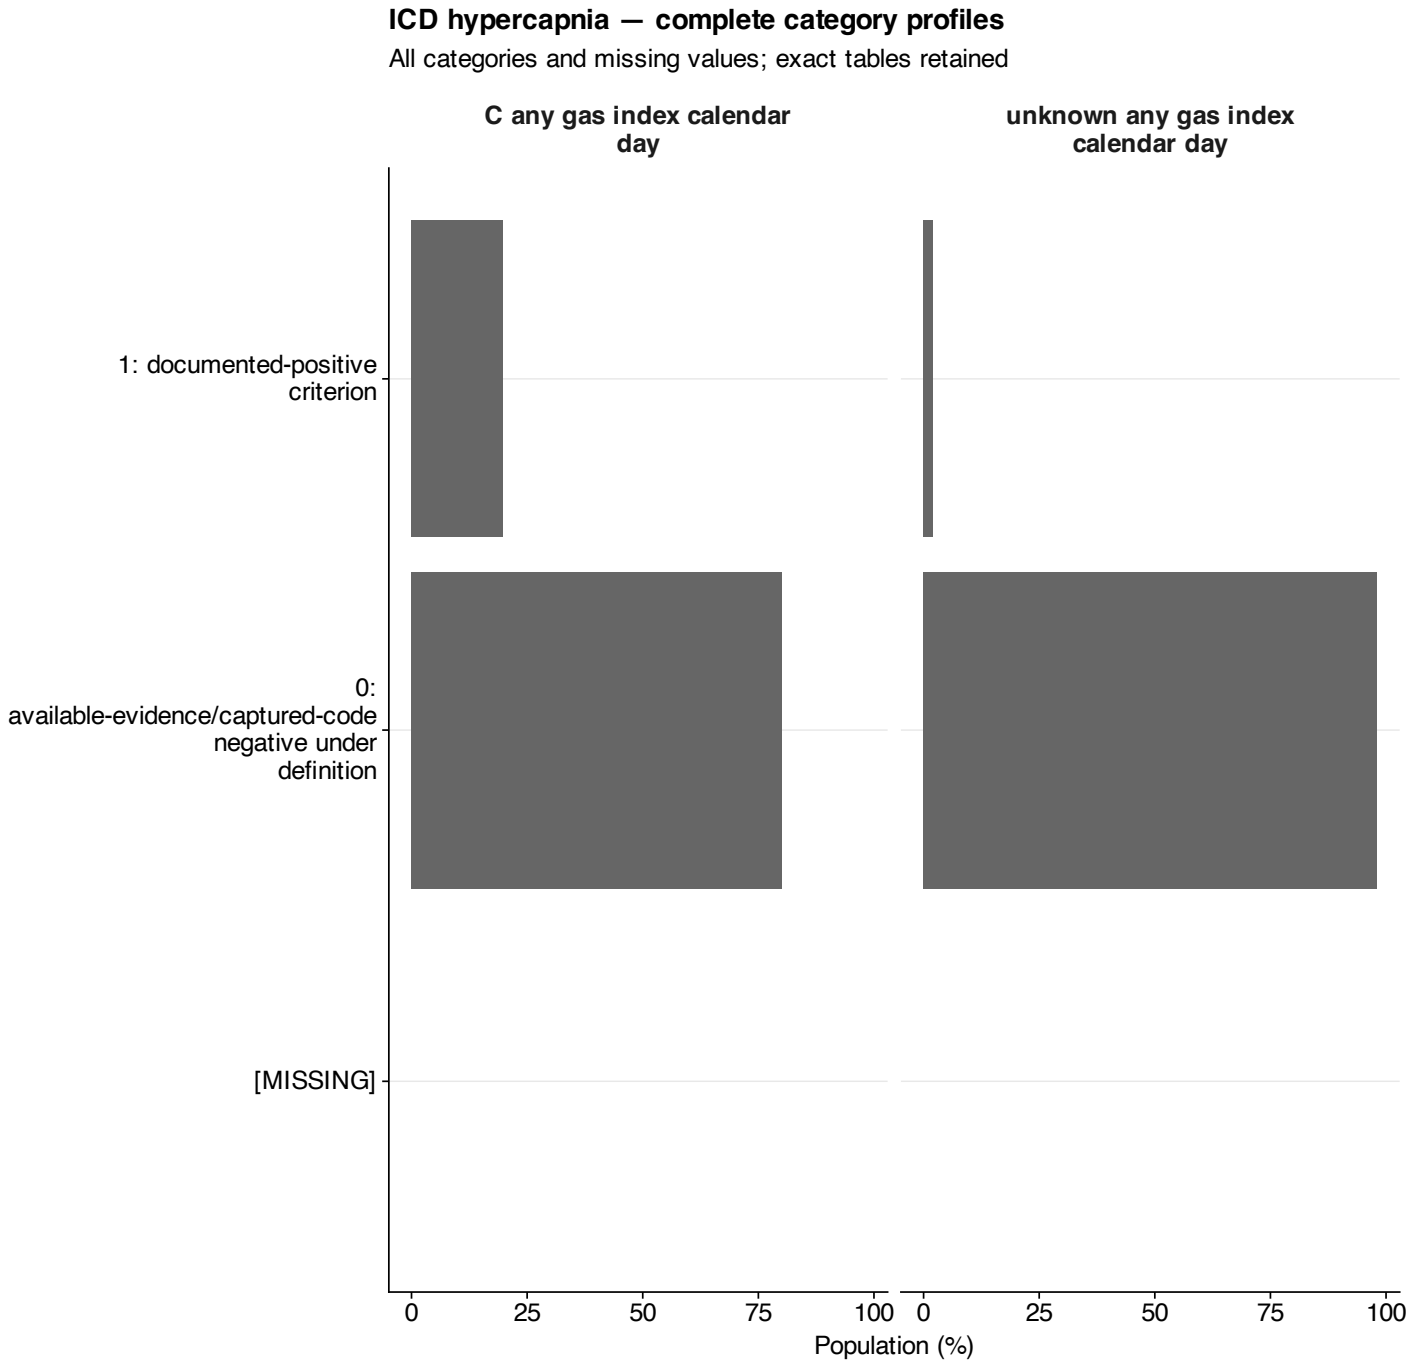

Figure 208: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete icd_hypercapnia stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

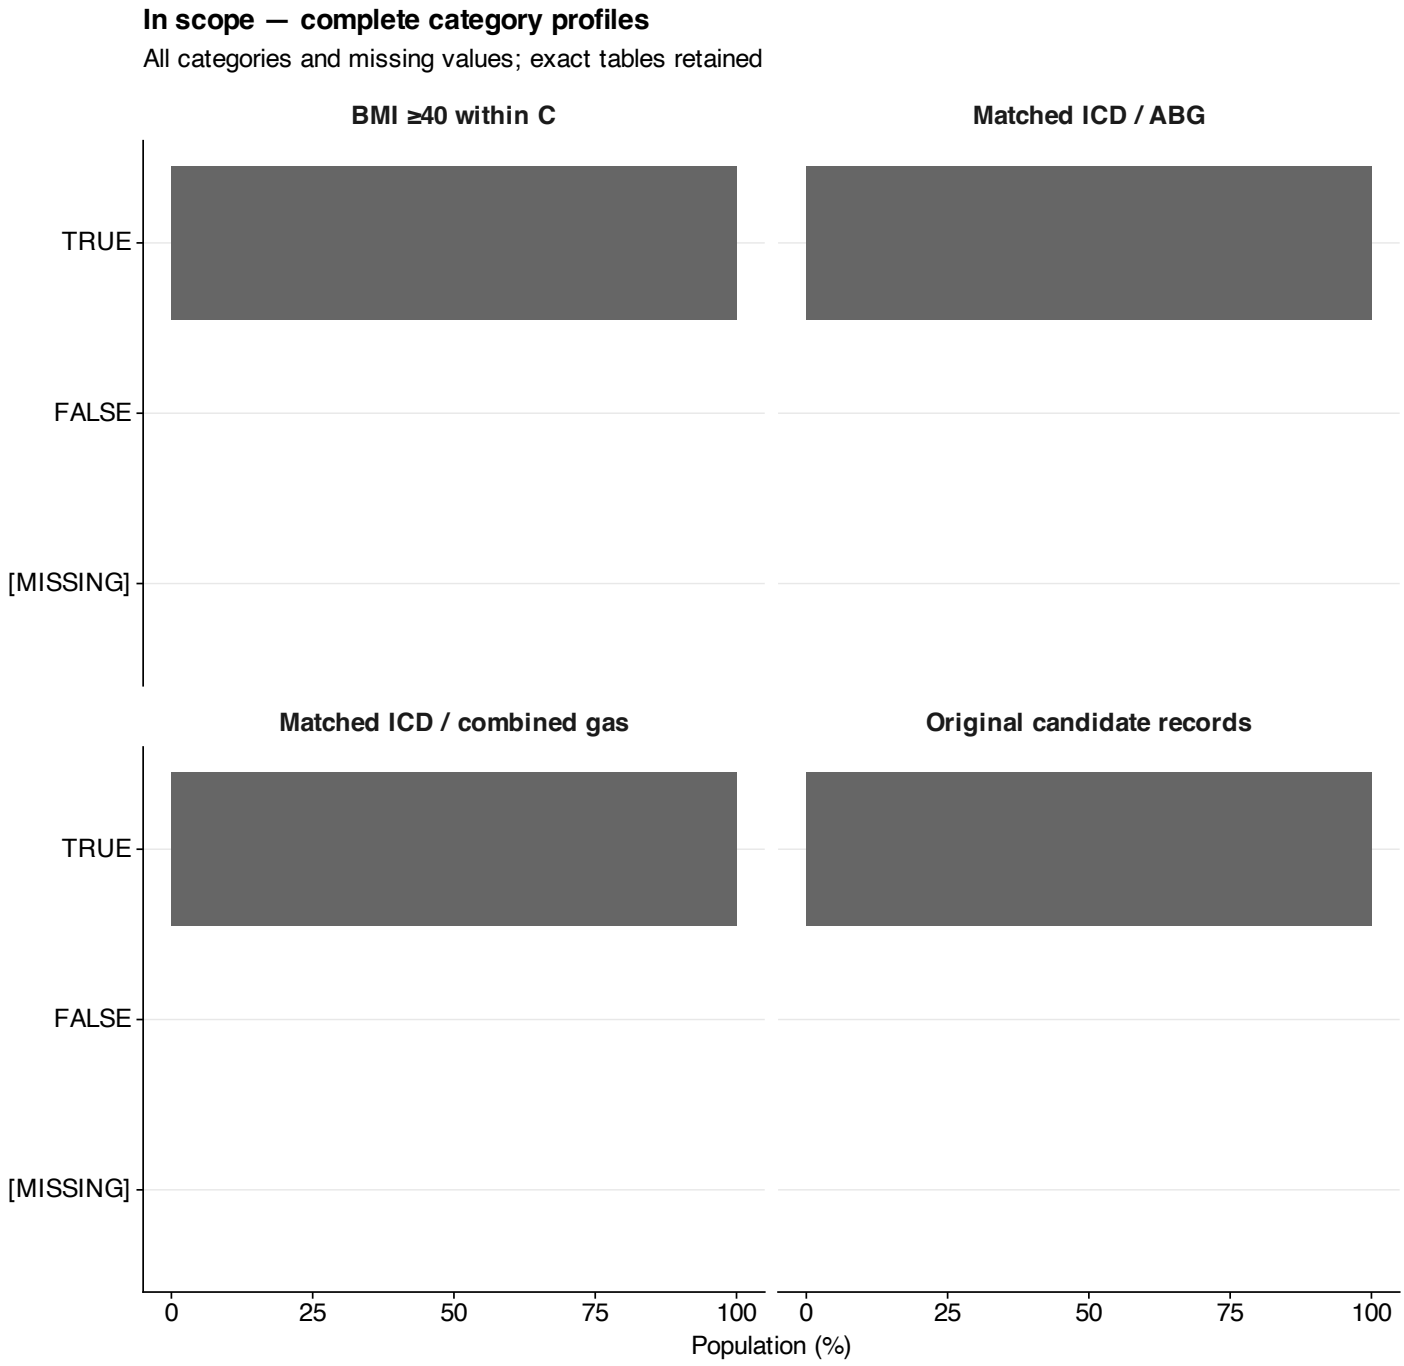

Figure 209: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete in_scope stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

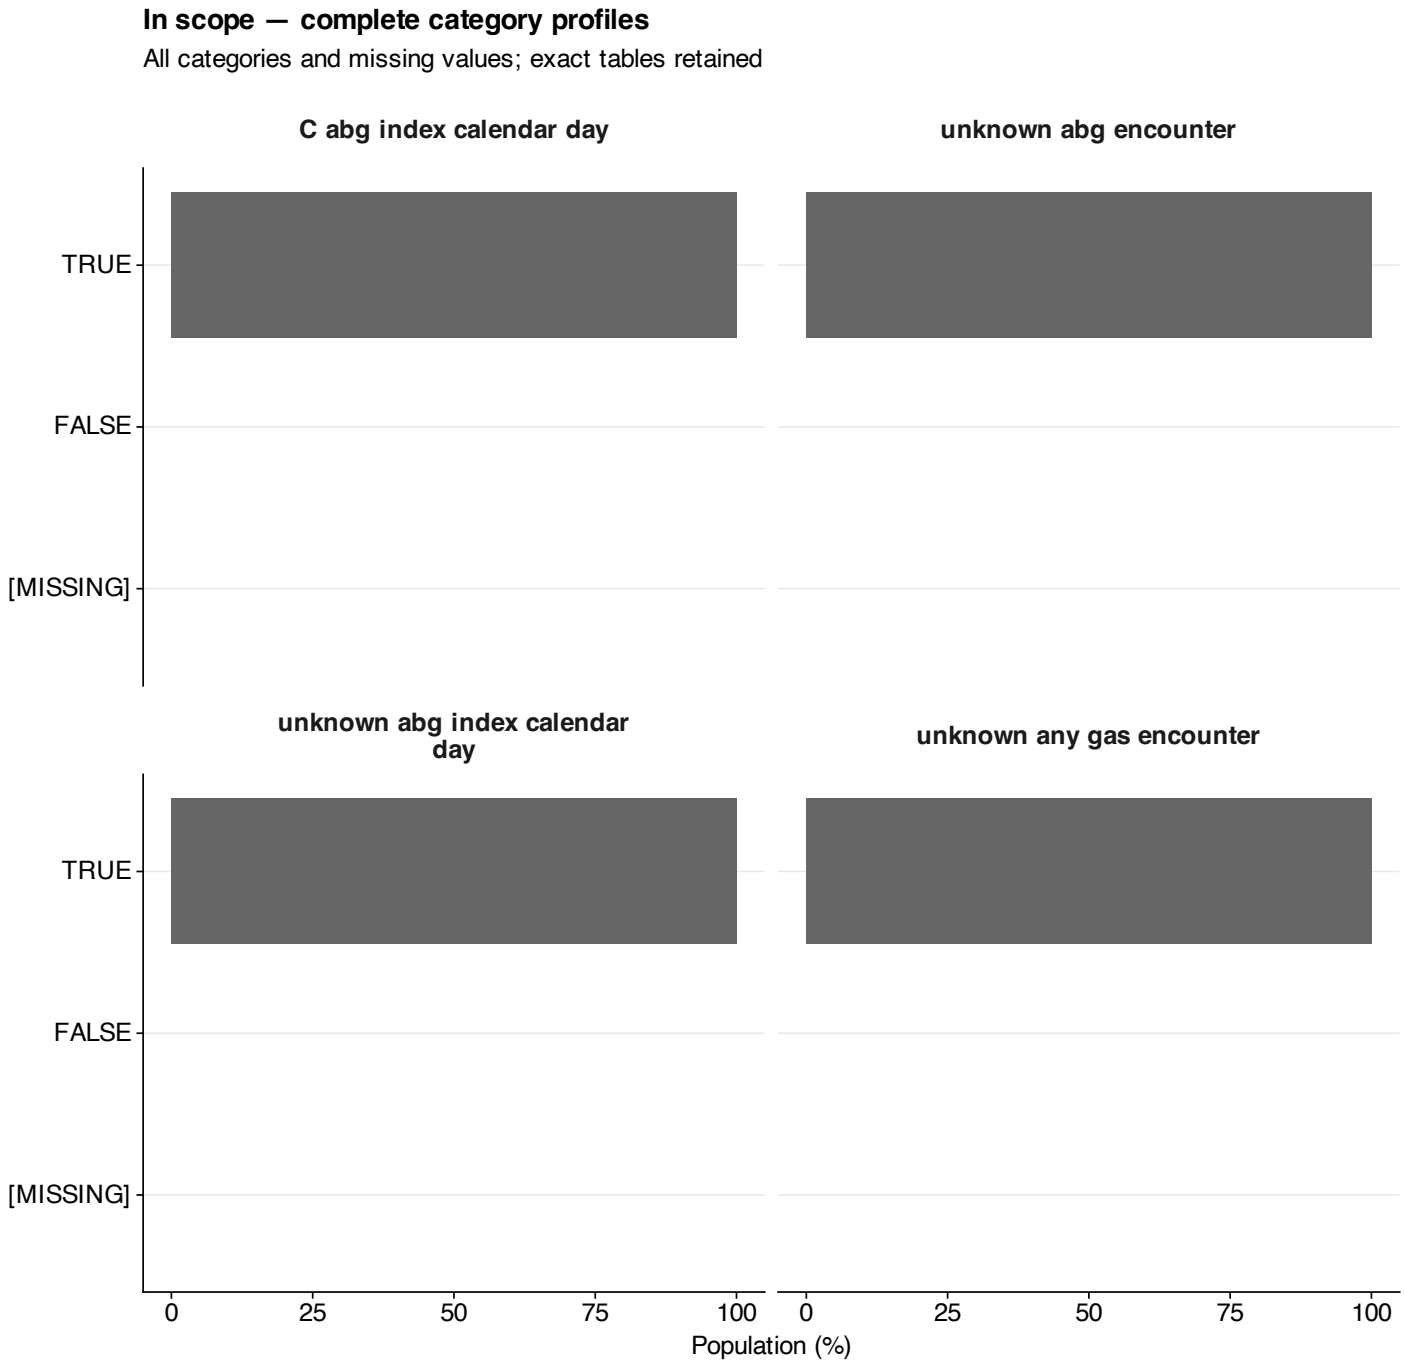

Figure 210: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete in_scope stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

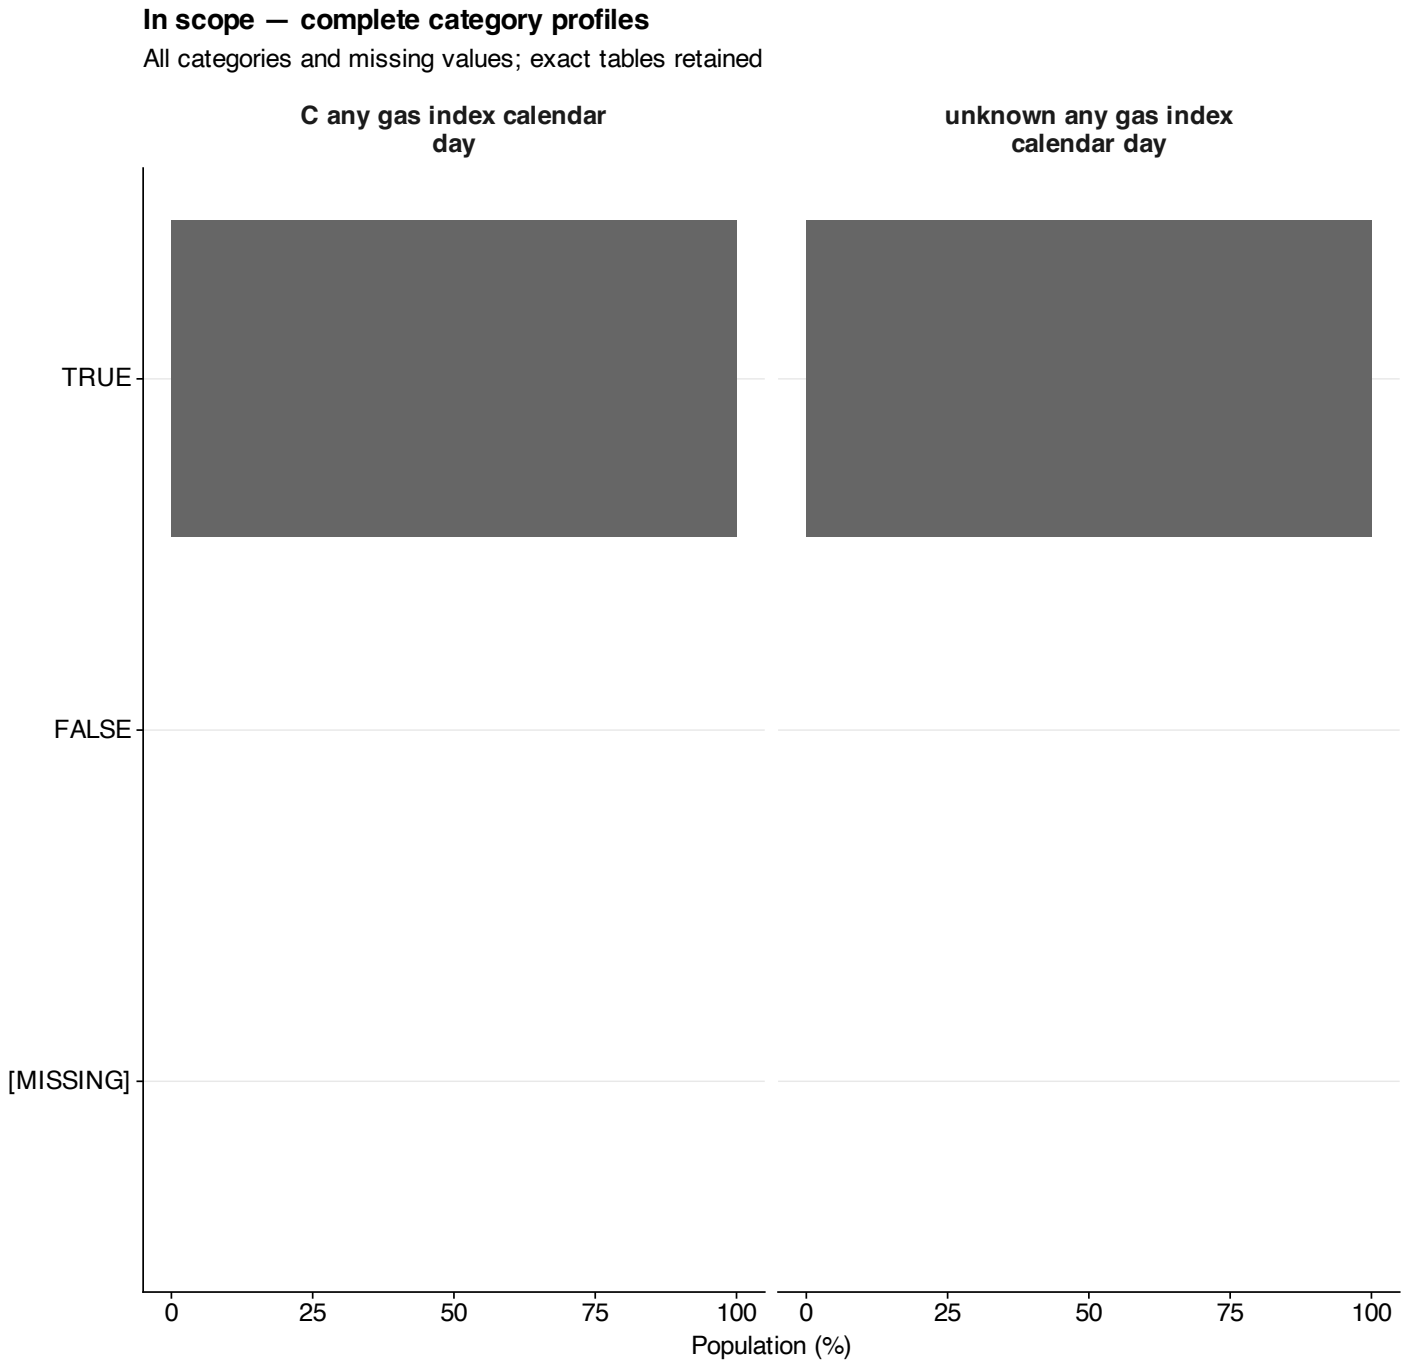

Figure 211: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete in_scope stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

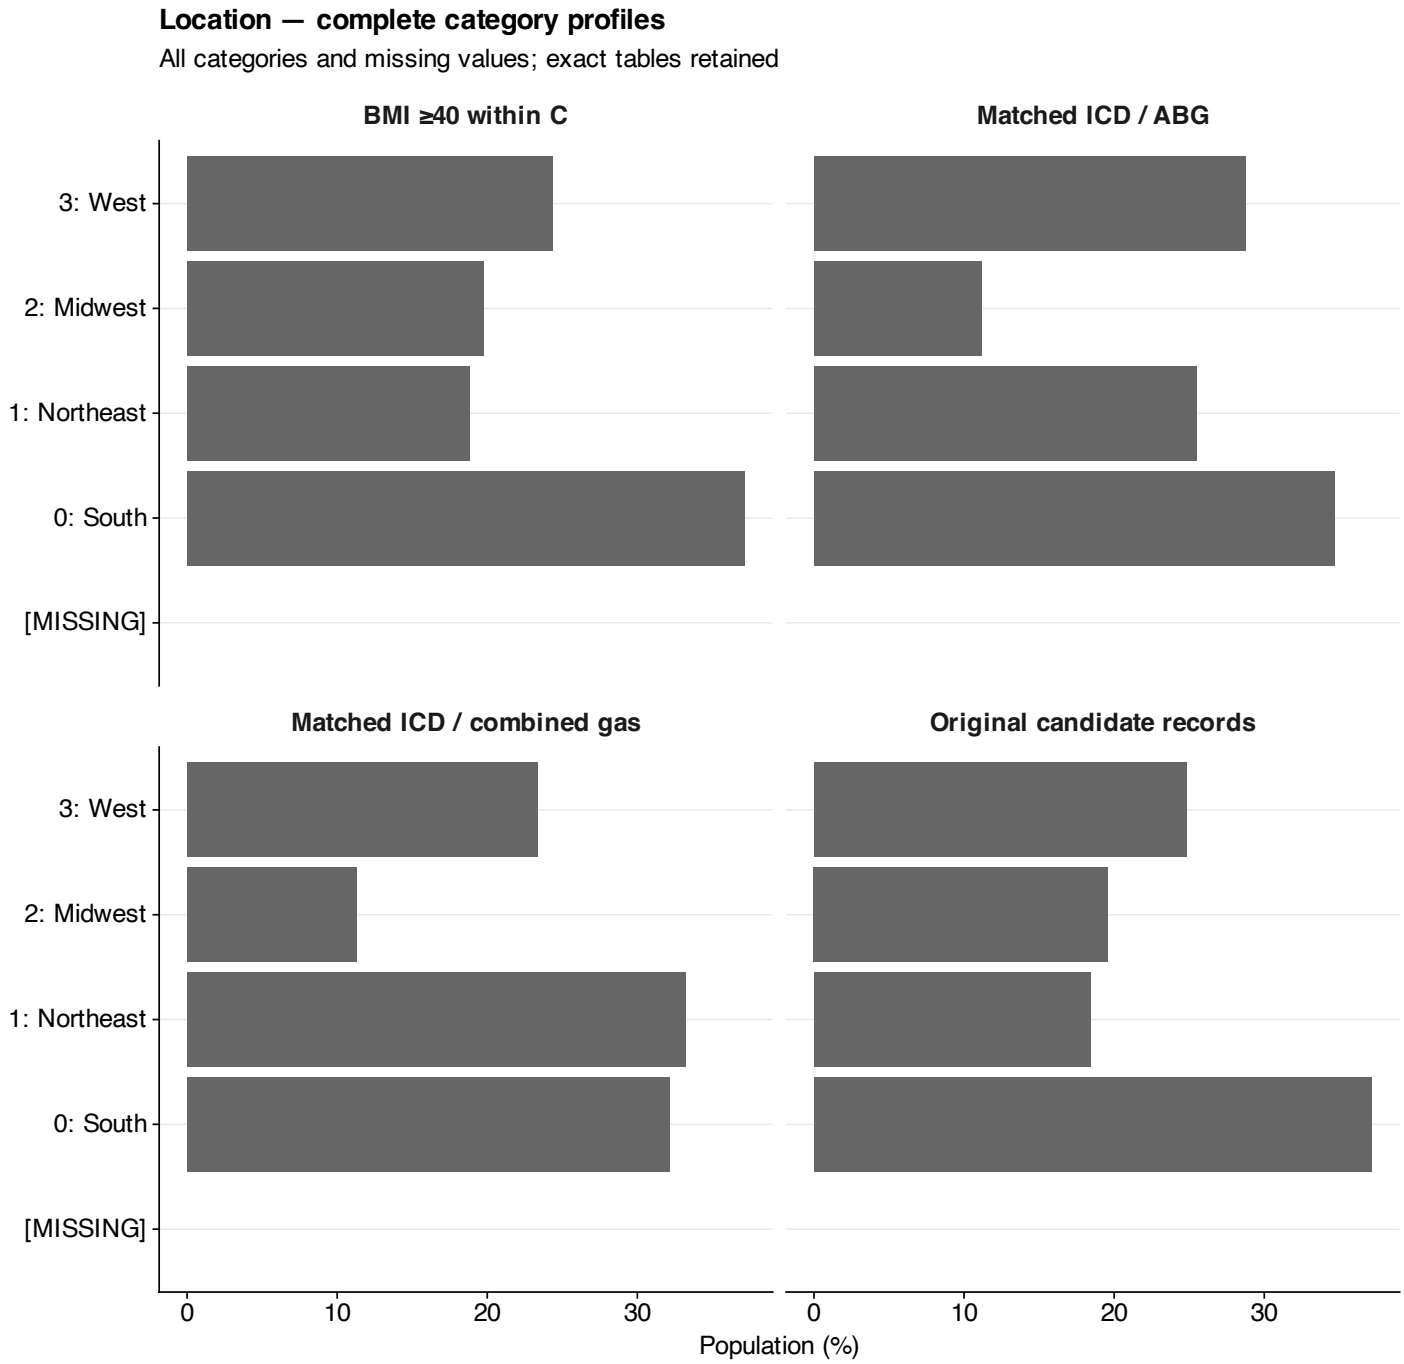

Figure 212: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete location stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

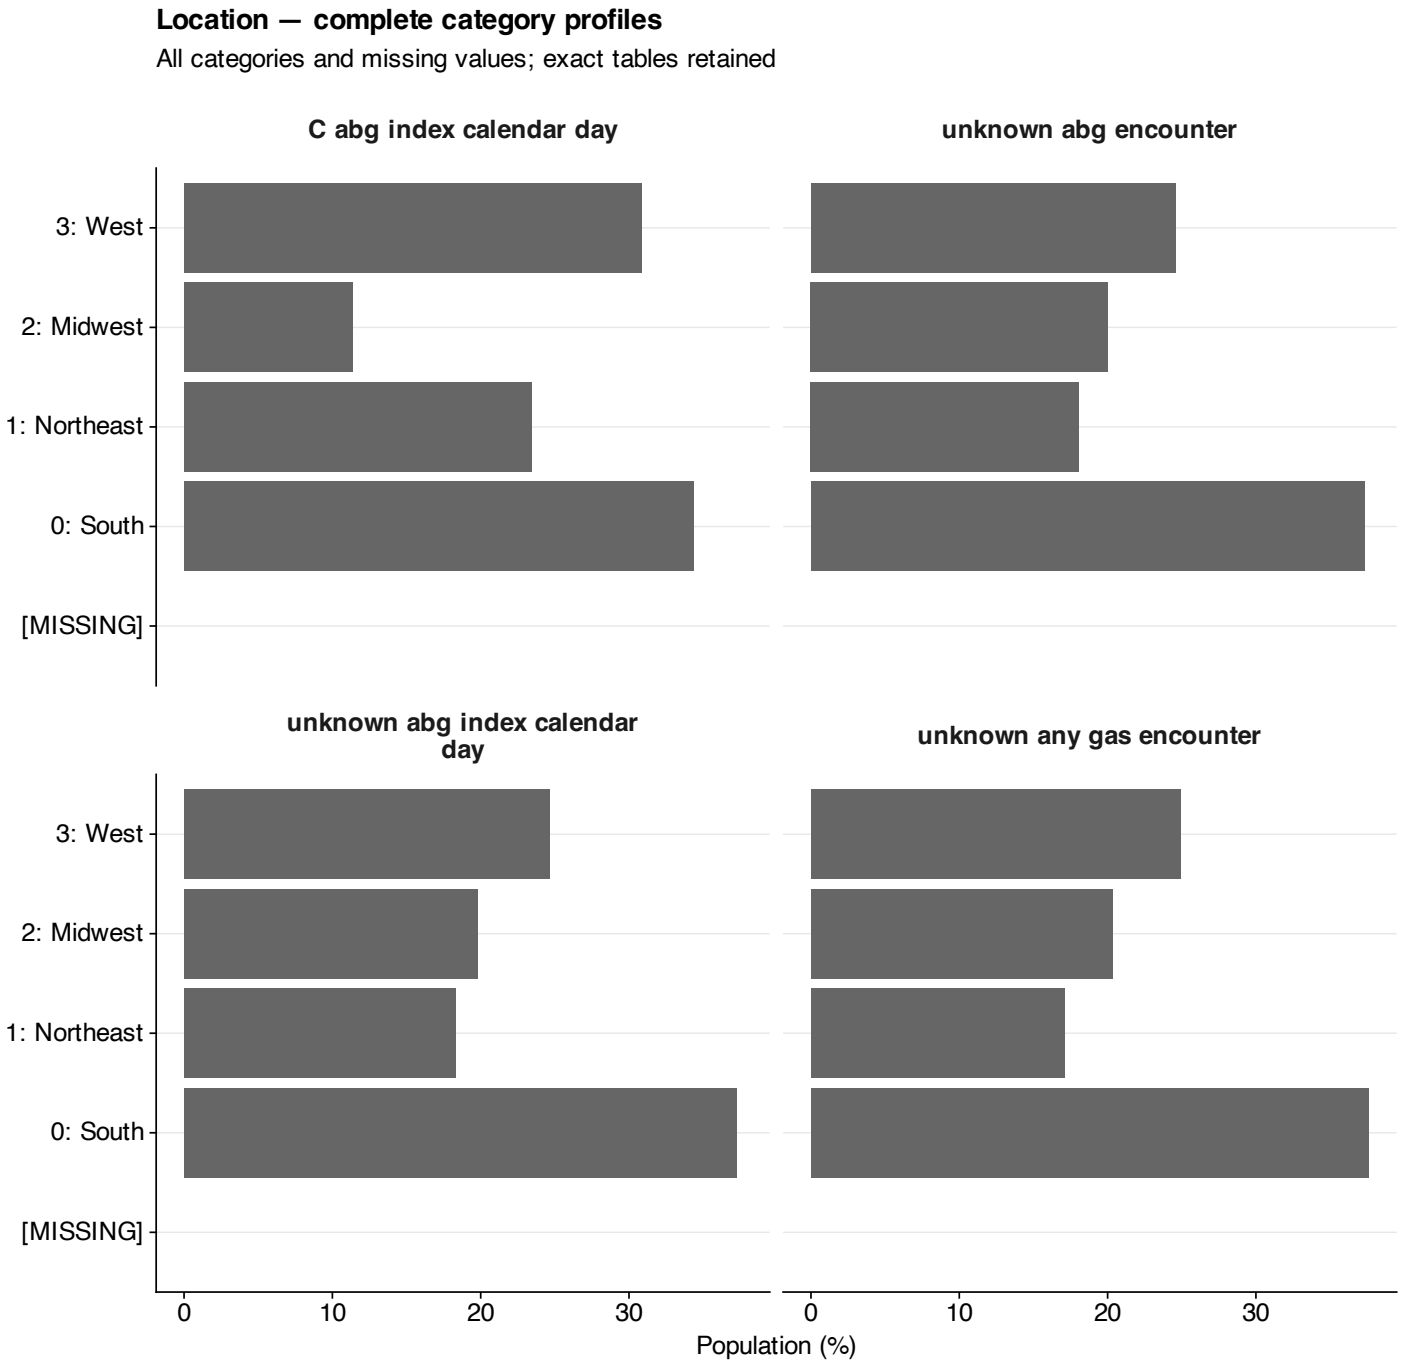

Figure 213: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete location stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

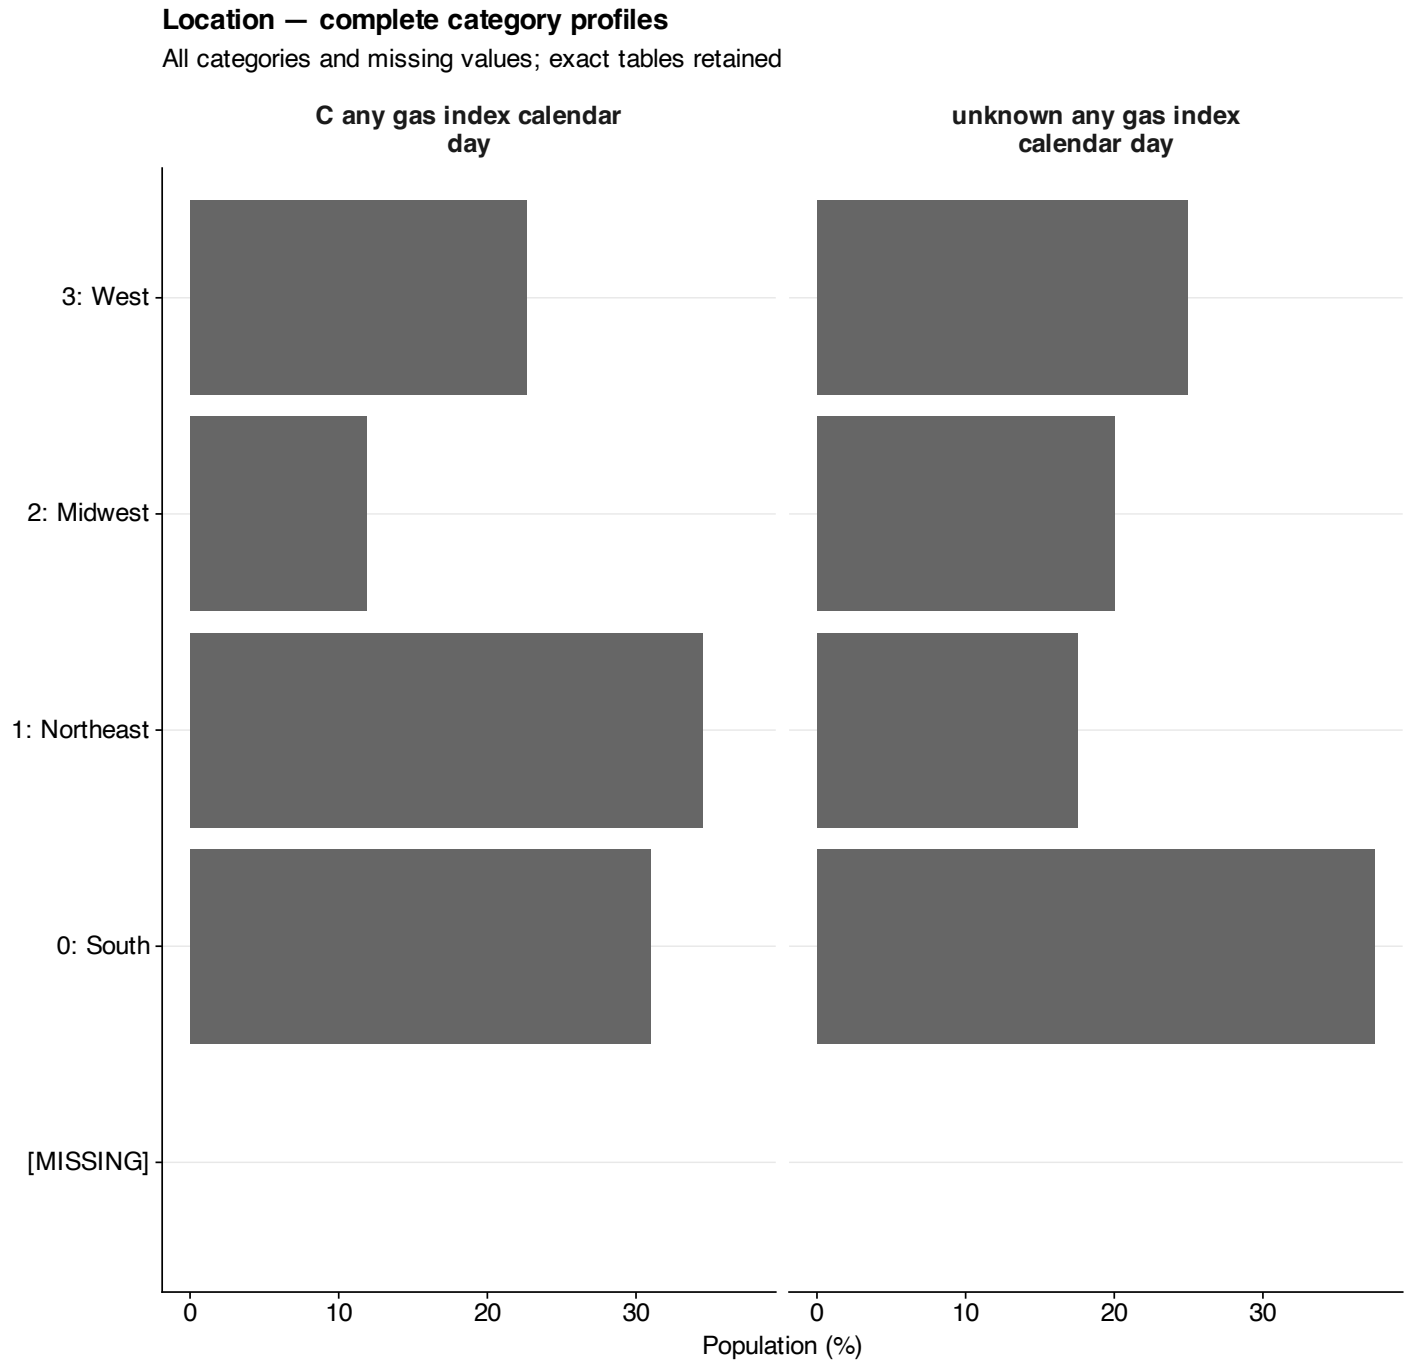

Figure 214: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete location stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

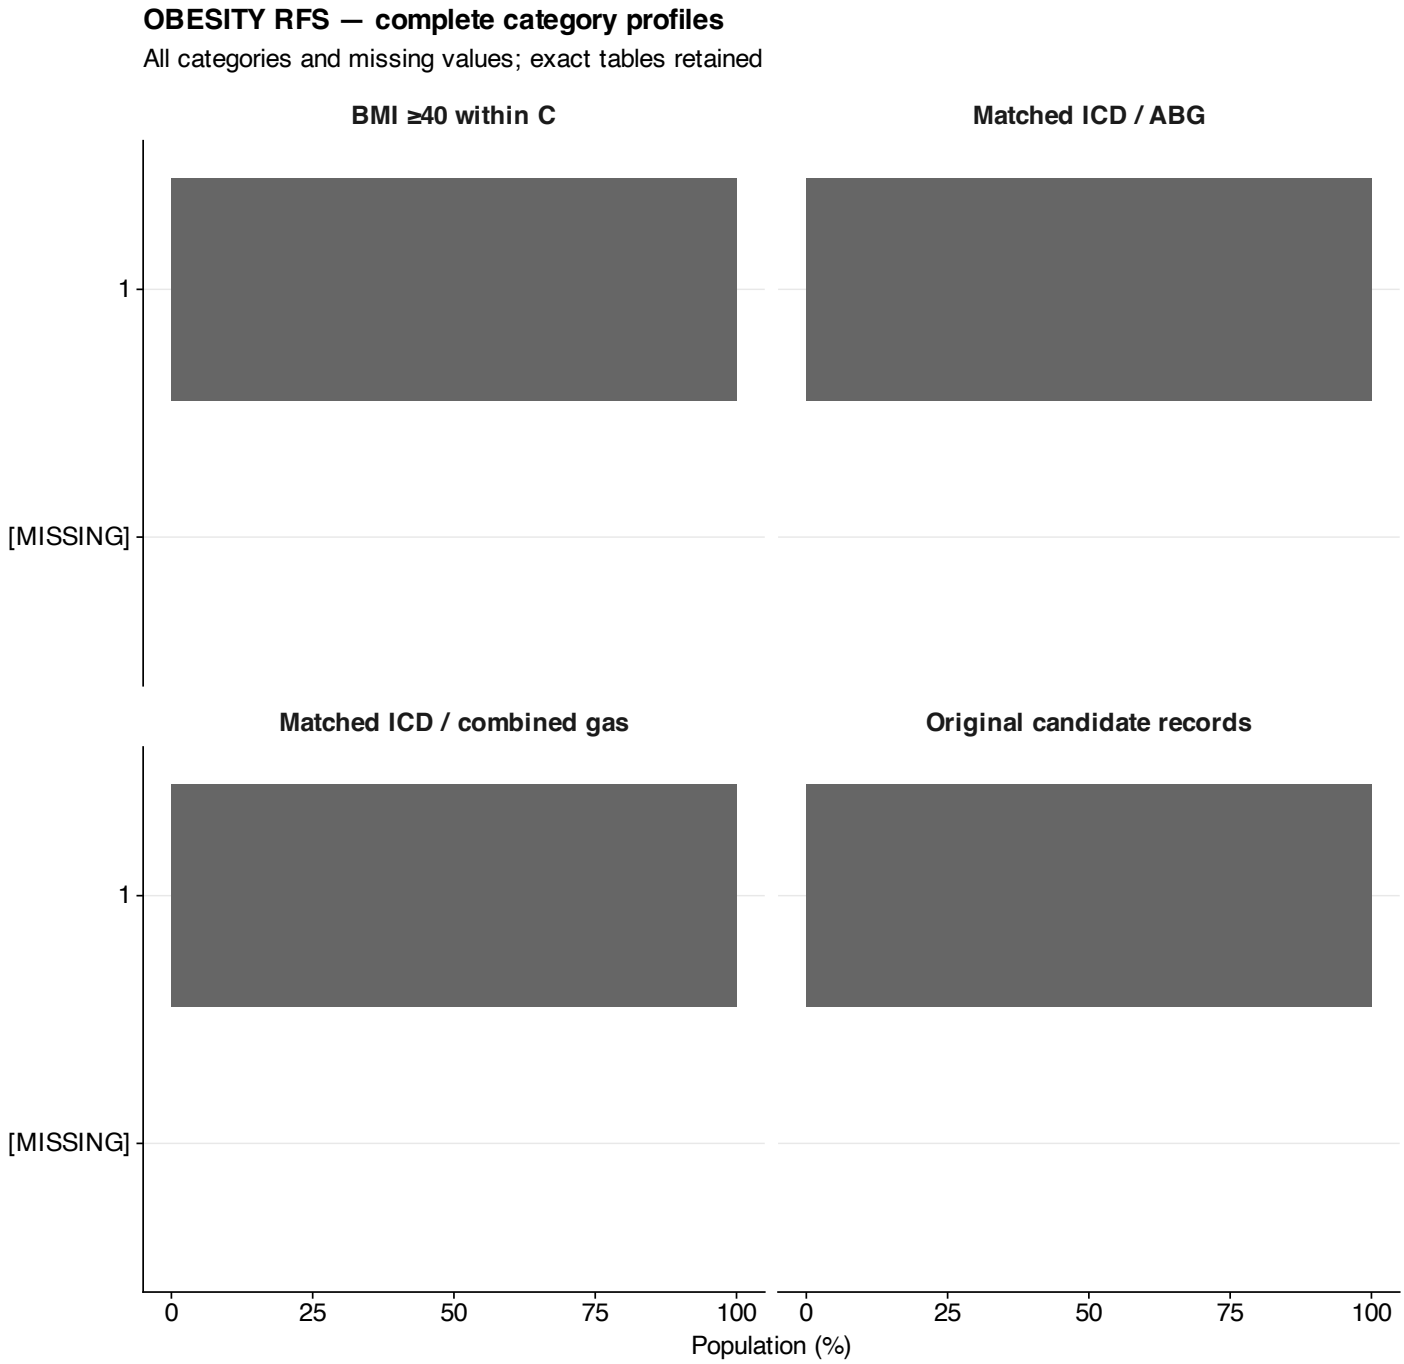

Figure 215: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete OBESITY_rfs stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

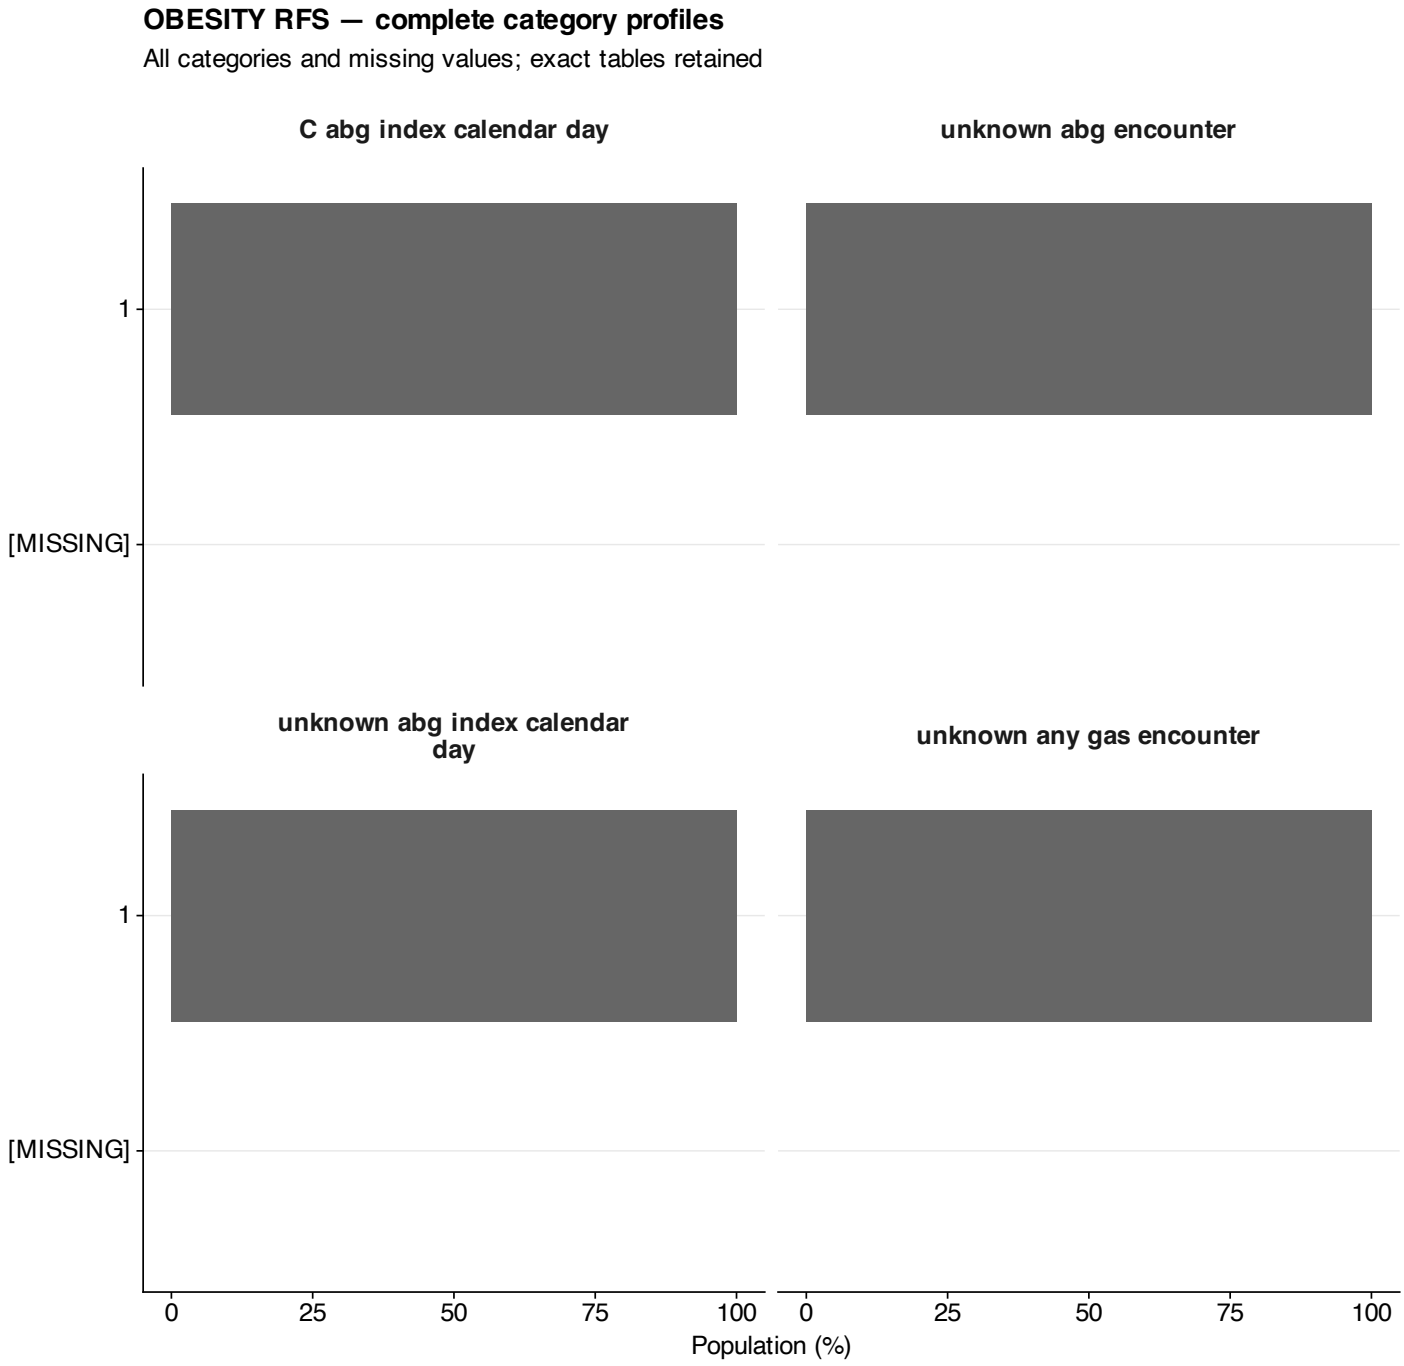

Figure 216: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete OBESITY_rfs stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

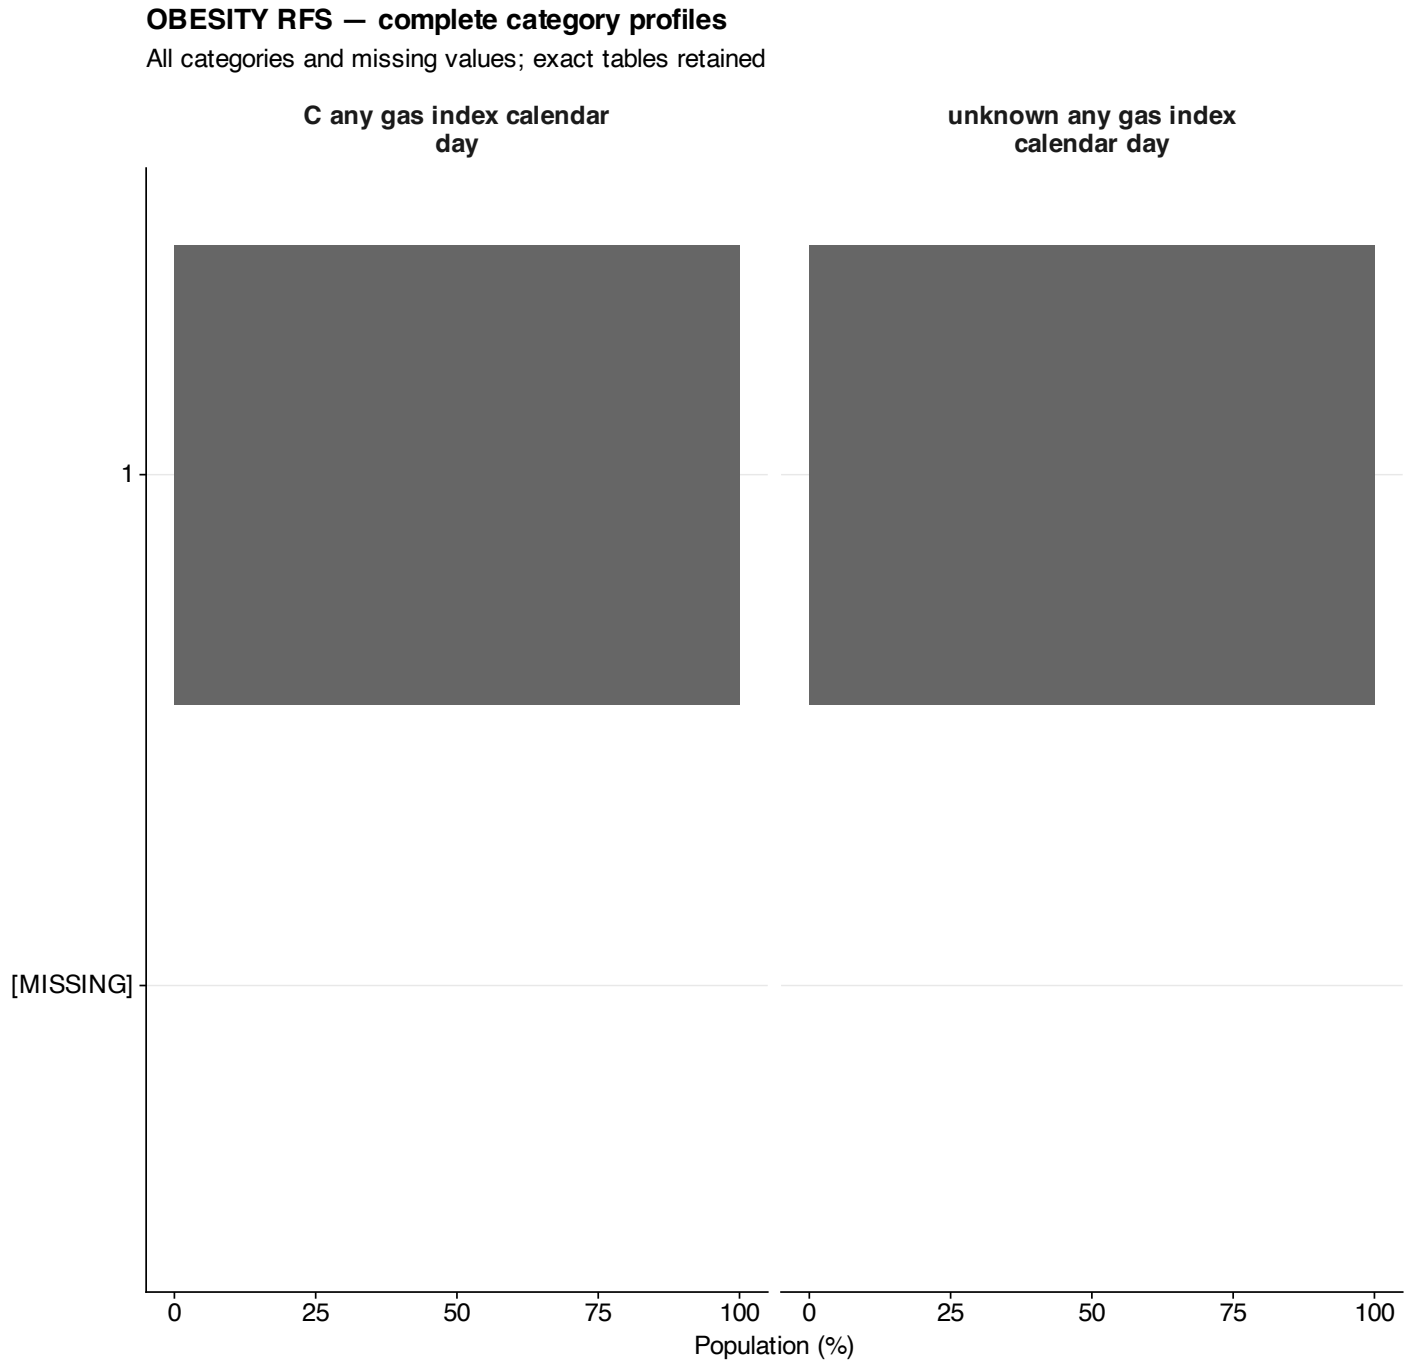

Figure 217: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete OBESITY_rfs stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

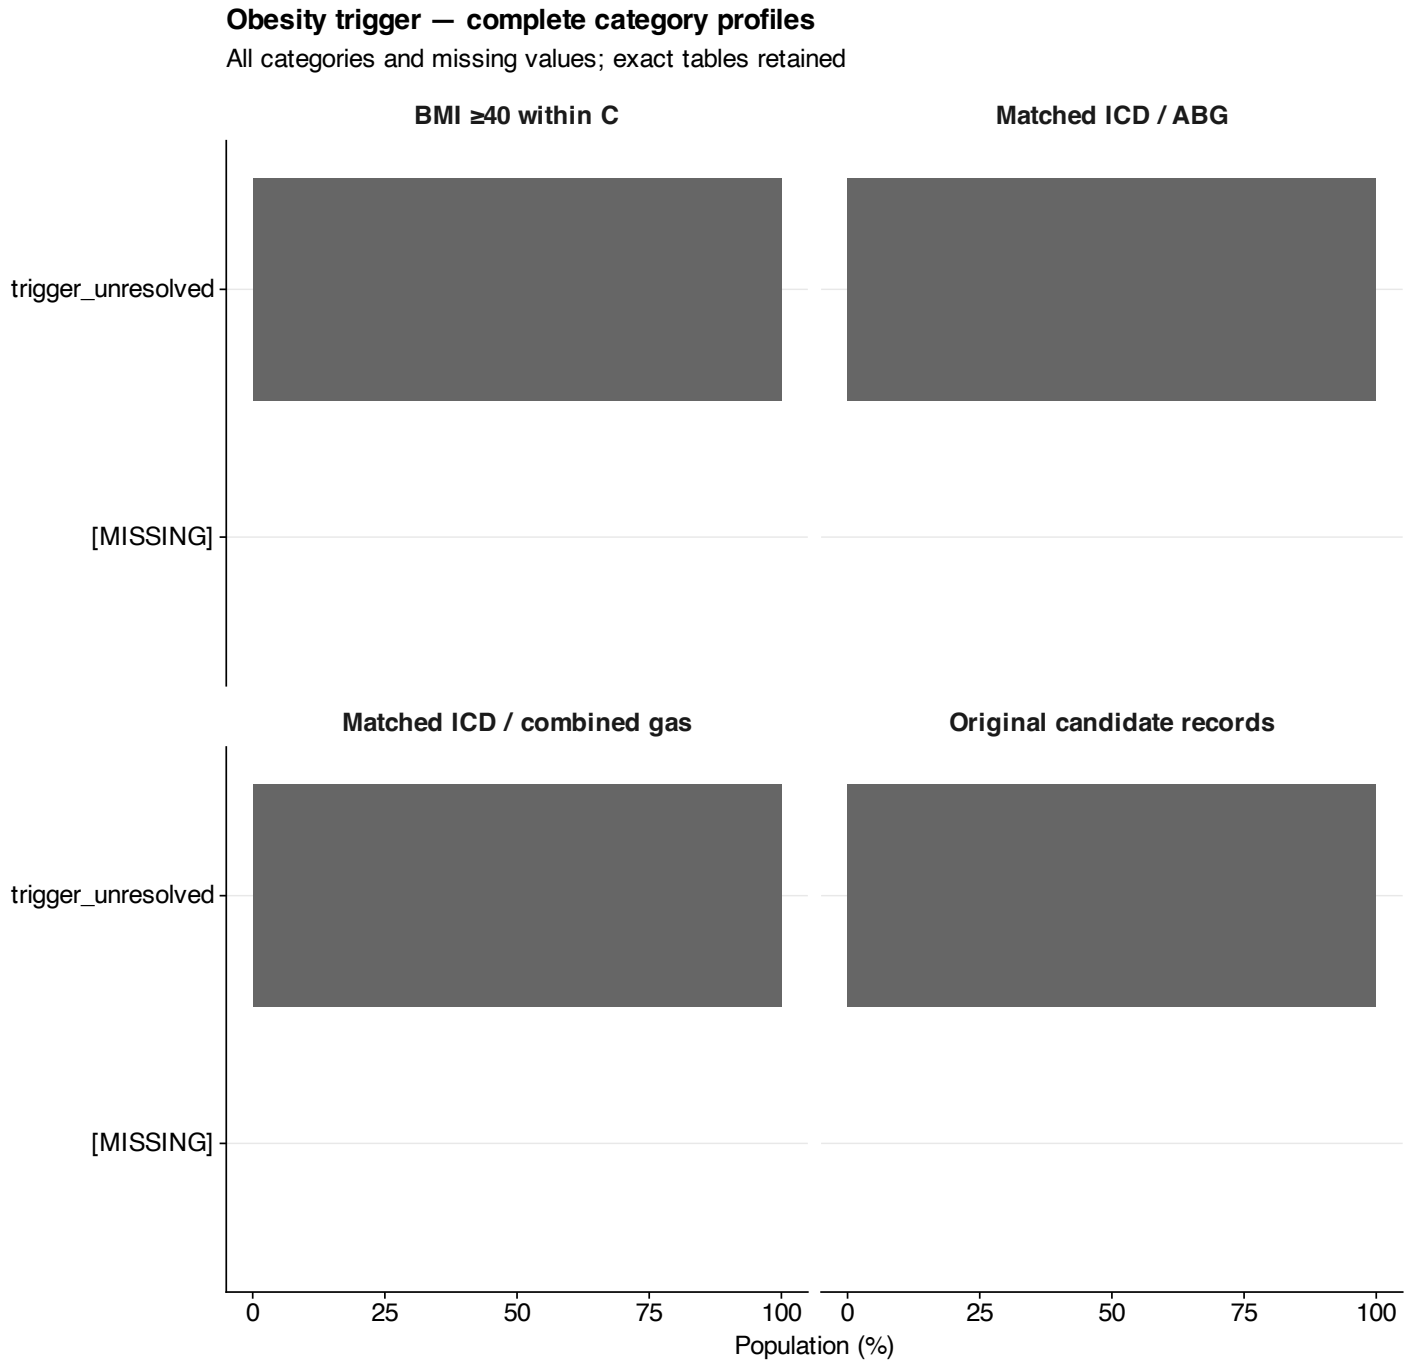

Figure 218: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete obesity_trigger stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

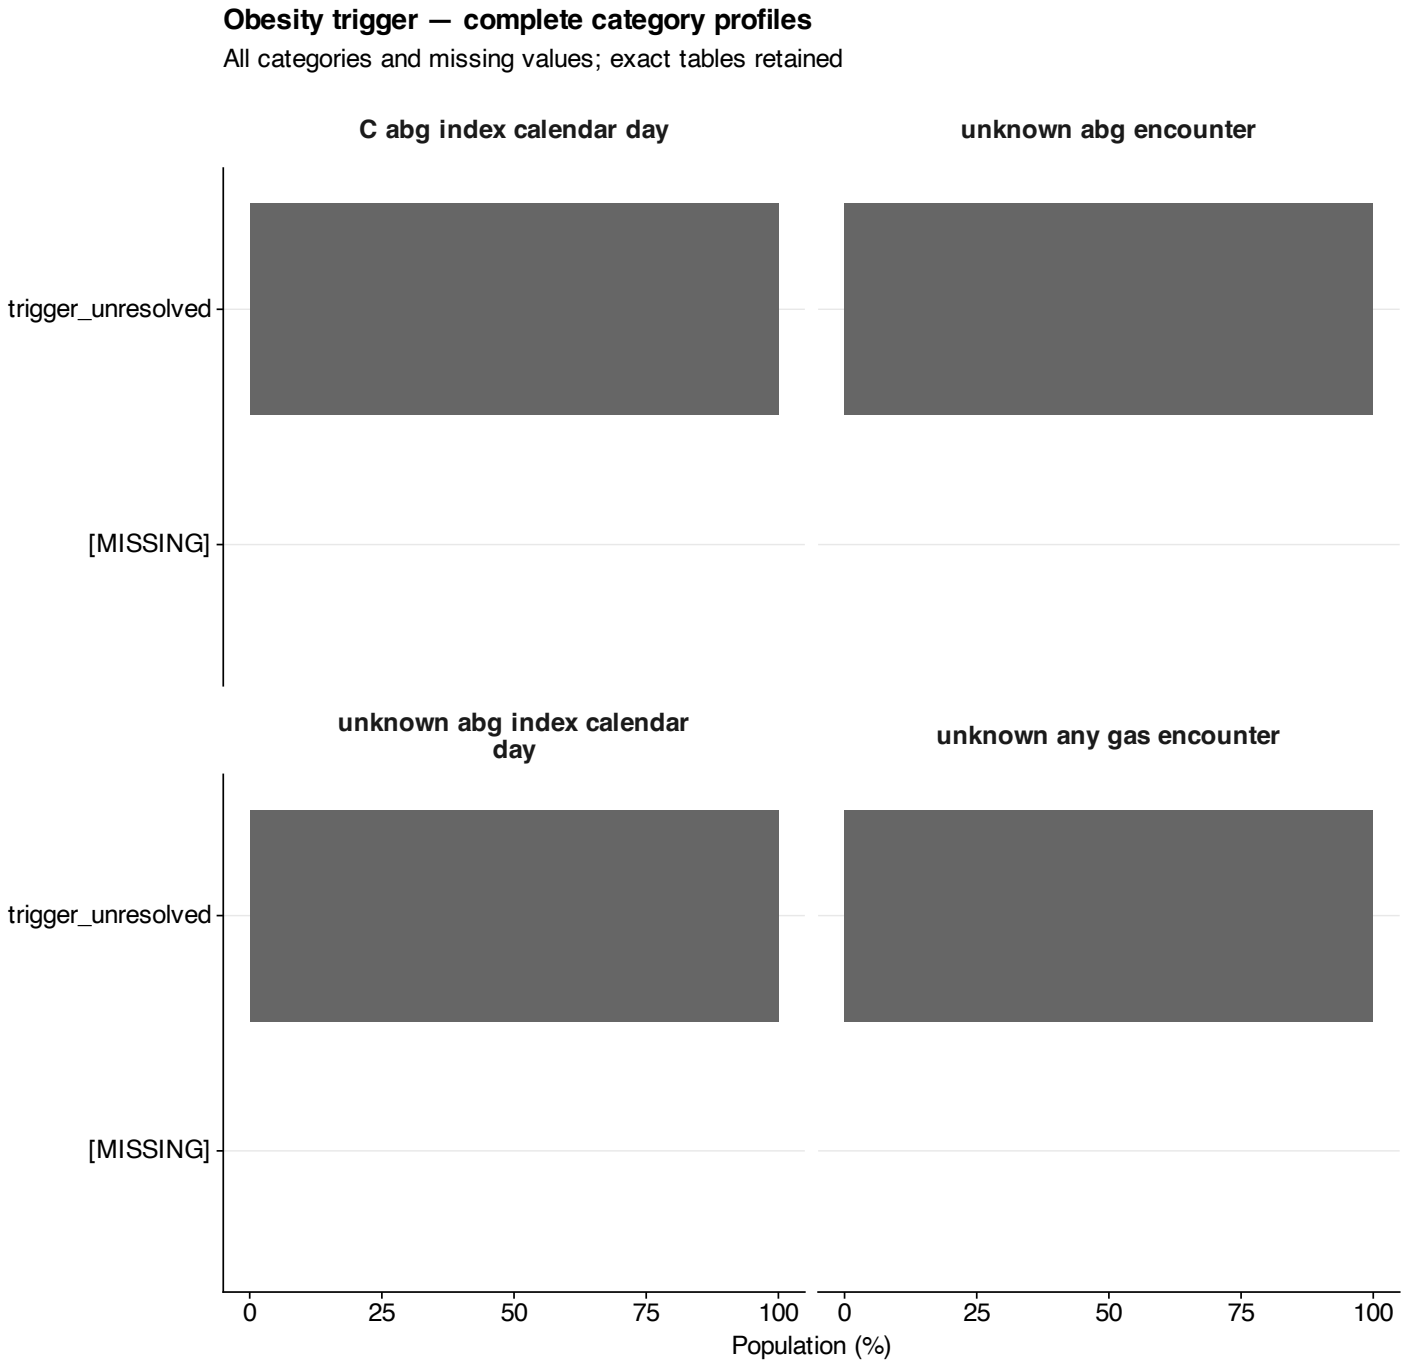

Figure 219: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete obesity_trigger stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

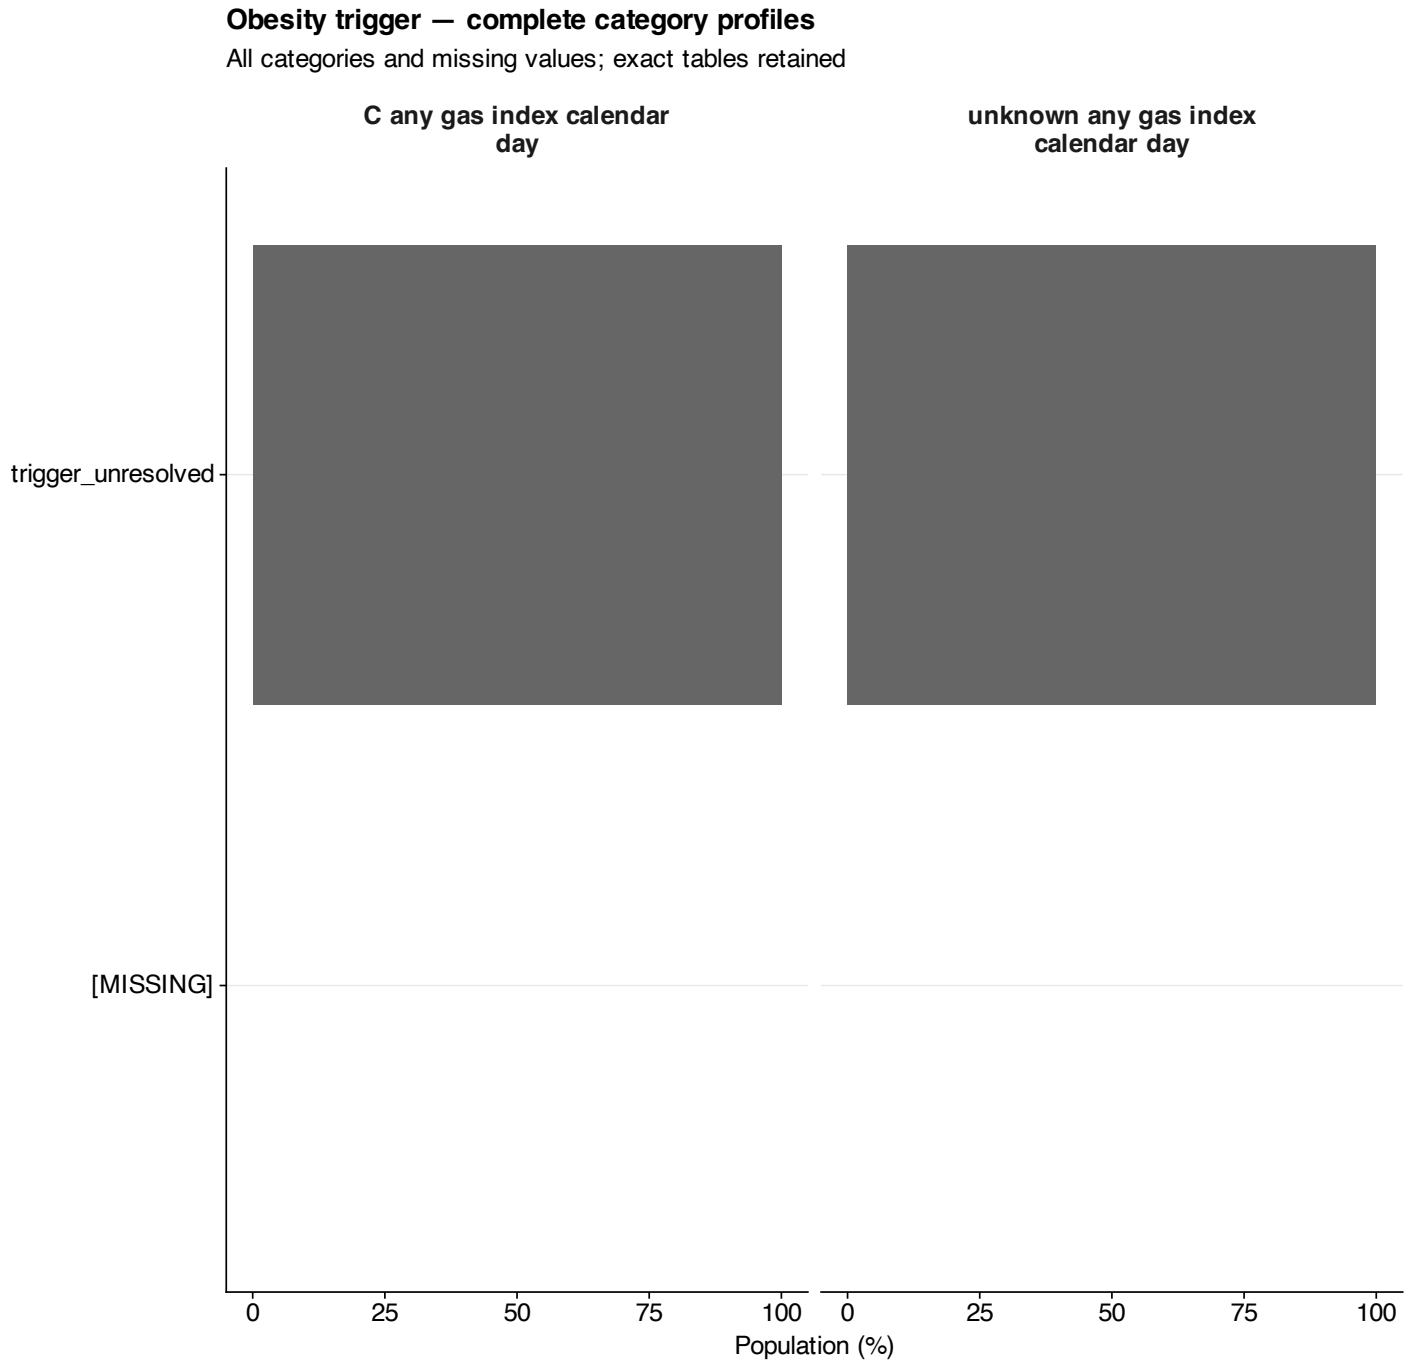

Figure 220: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete obesity_trigger stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

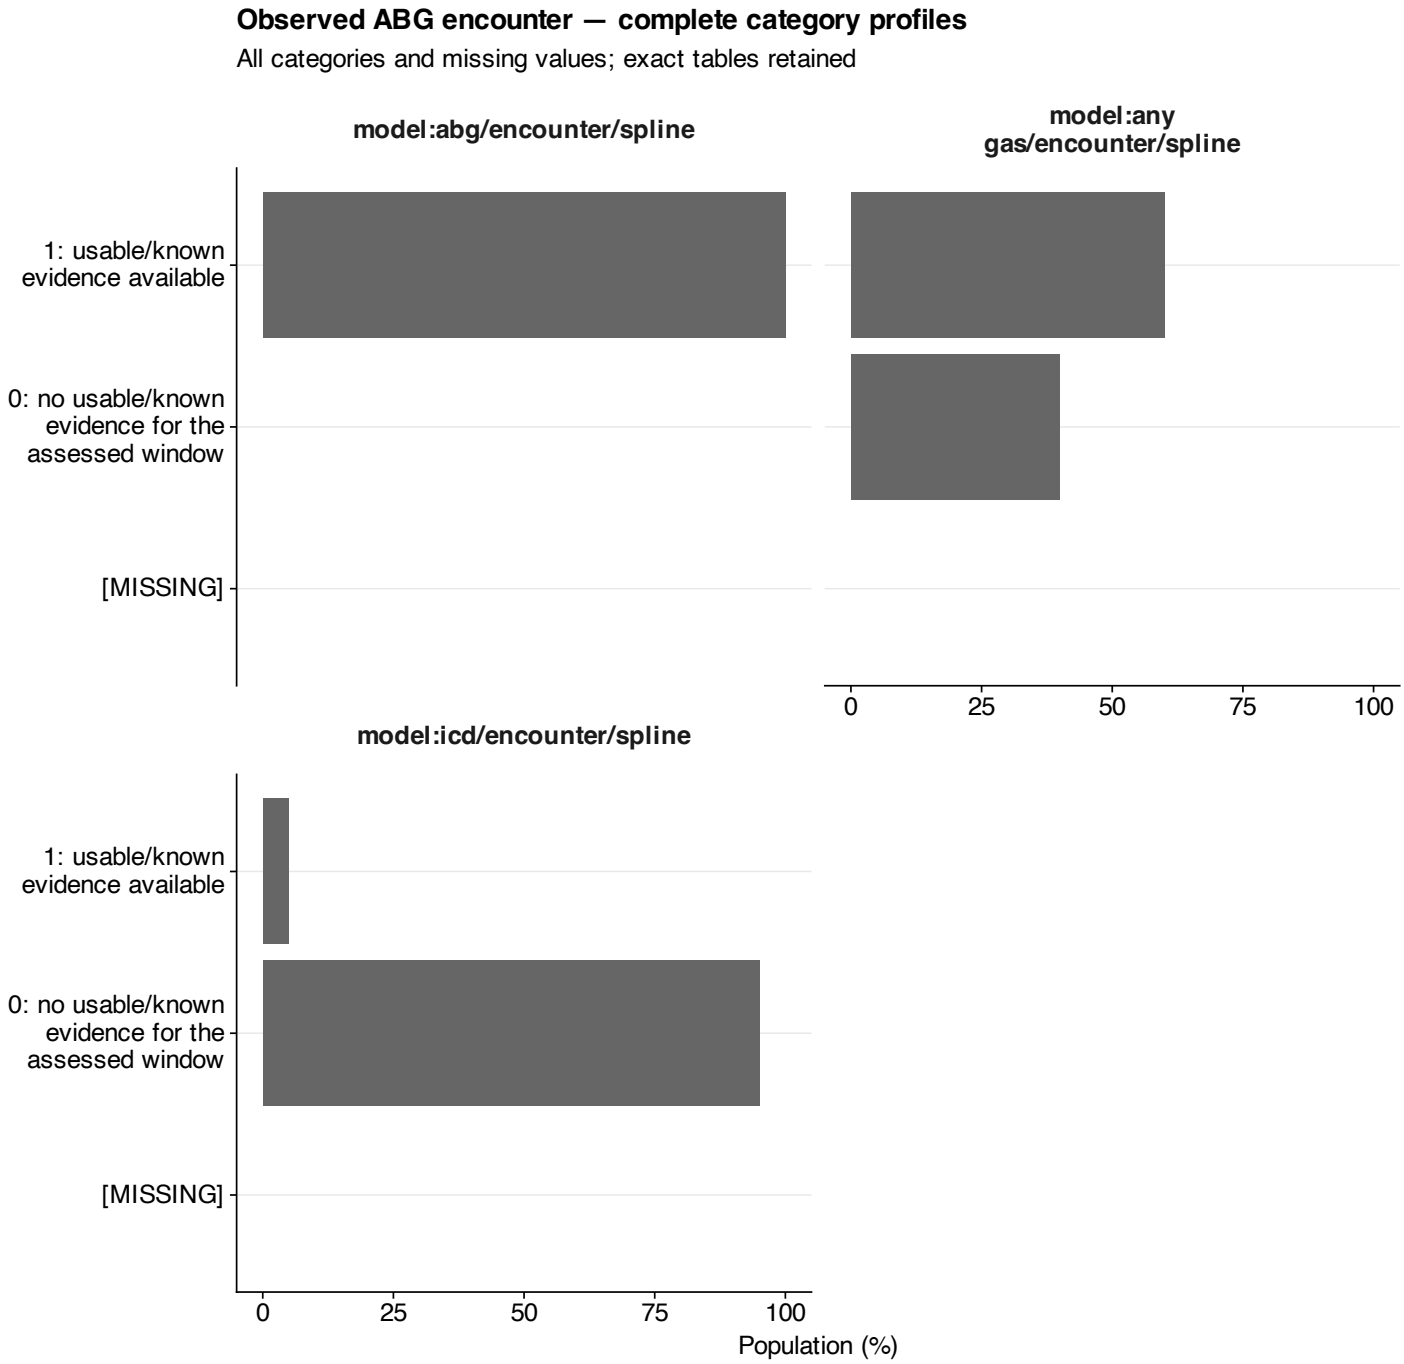

Figure 221: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete observed_abg_encounter stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

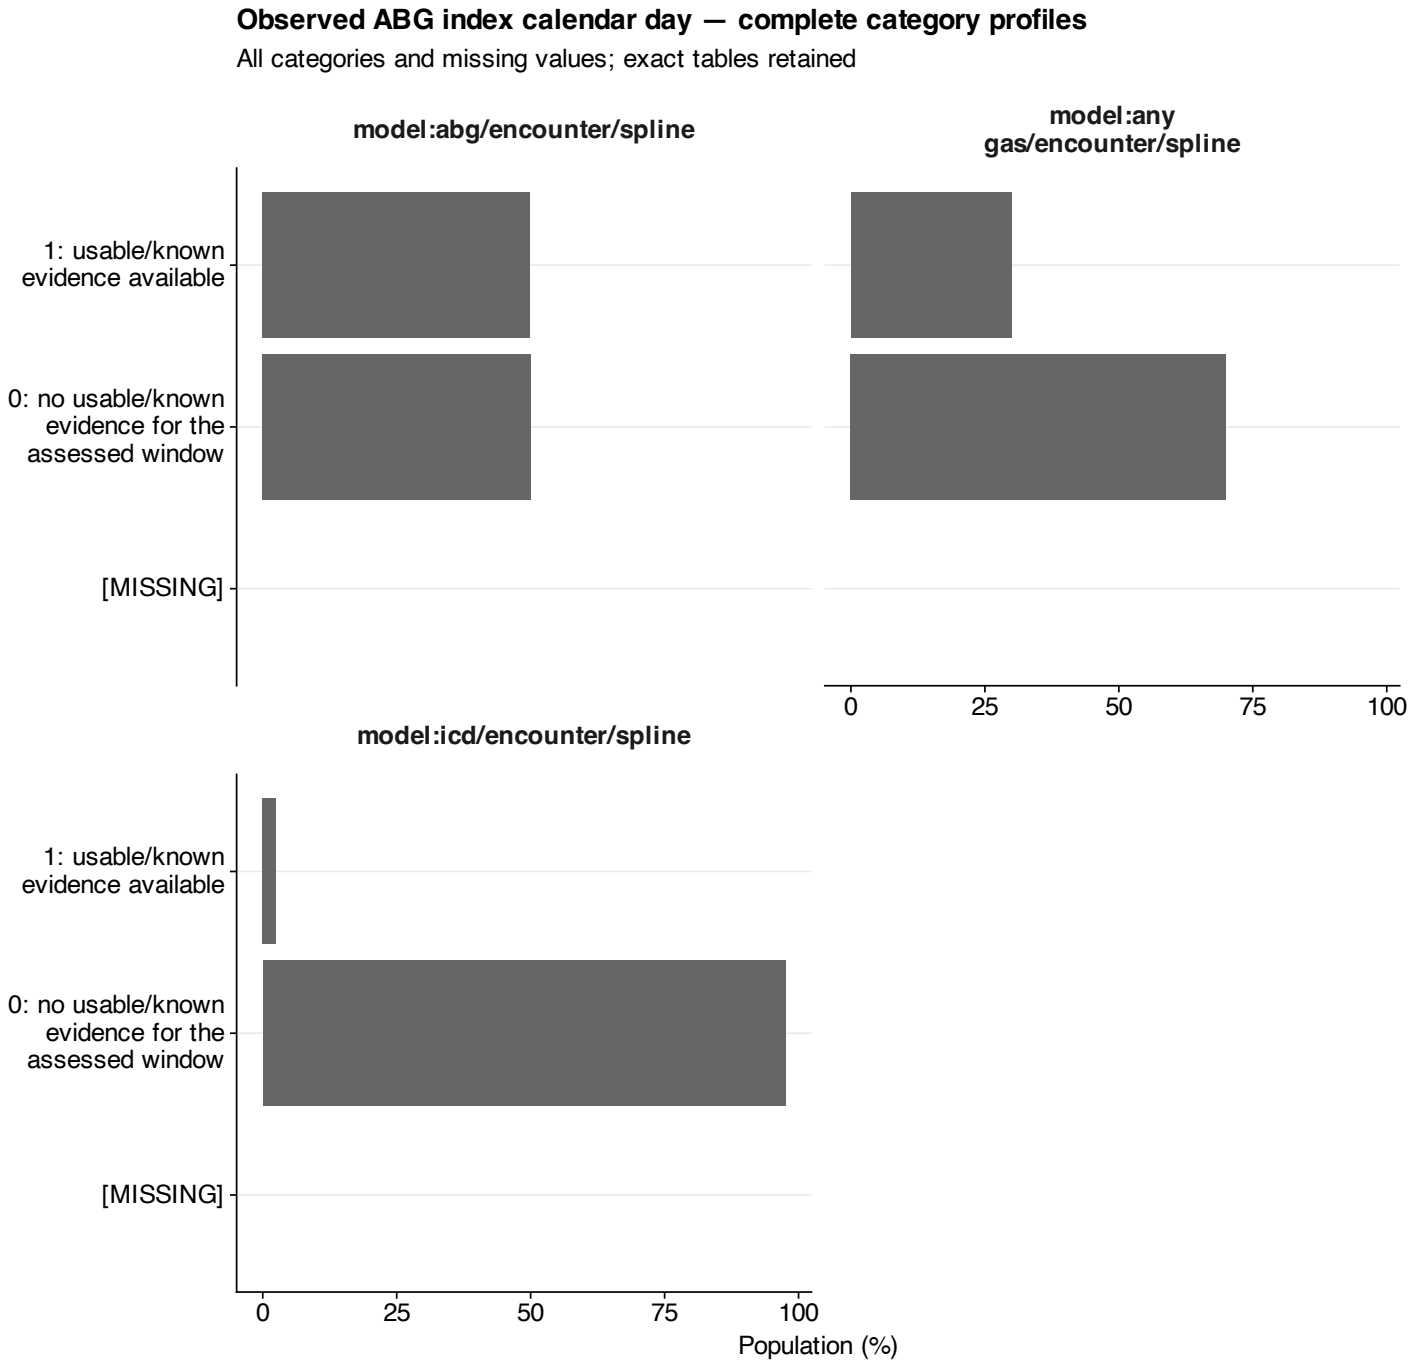

Figure 222: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete observed_abg_index_calendar_day stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

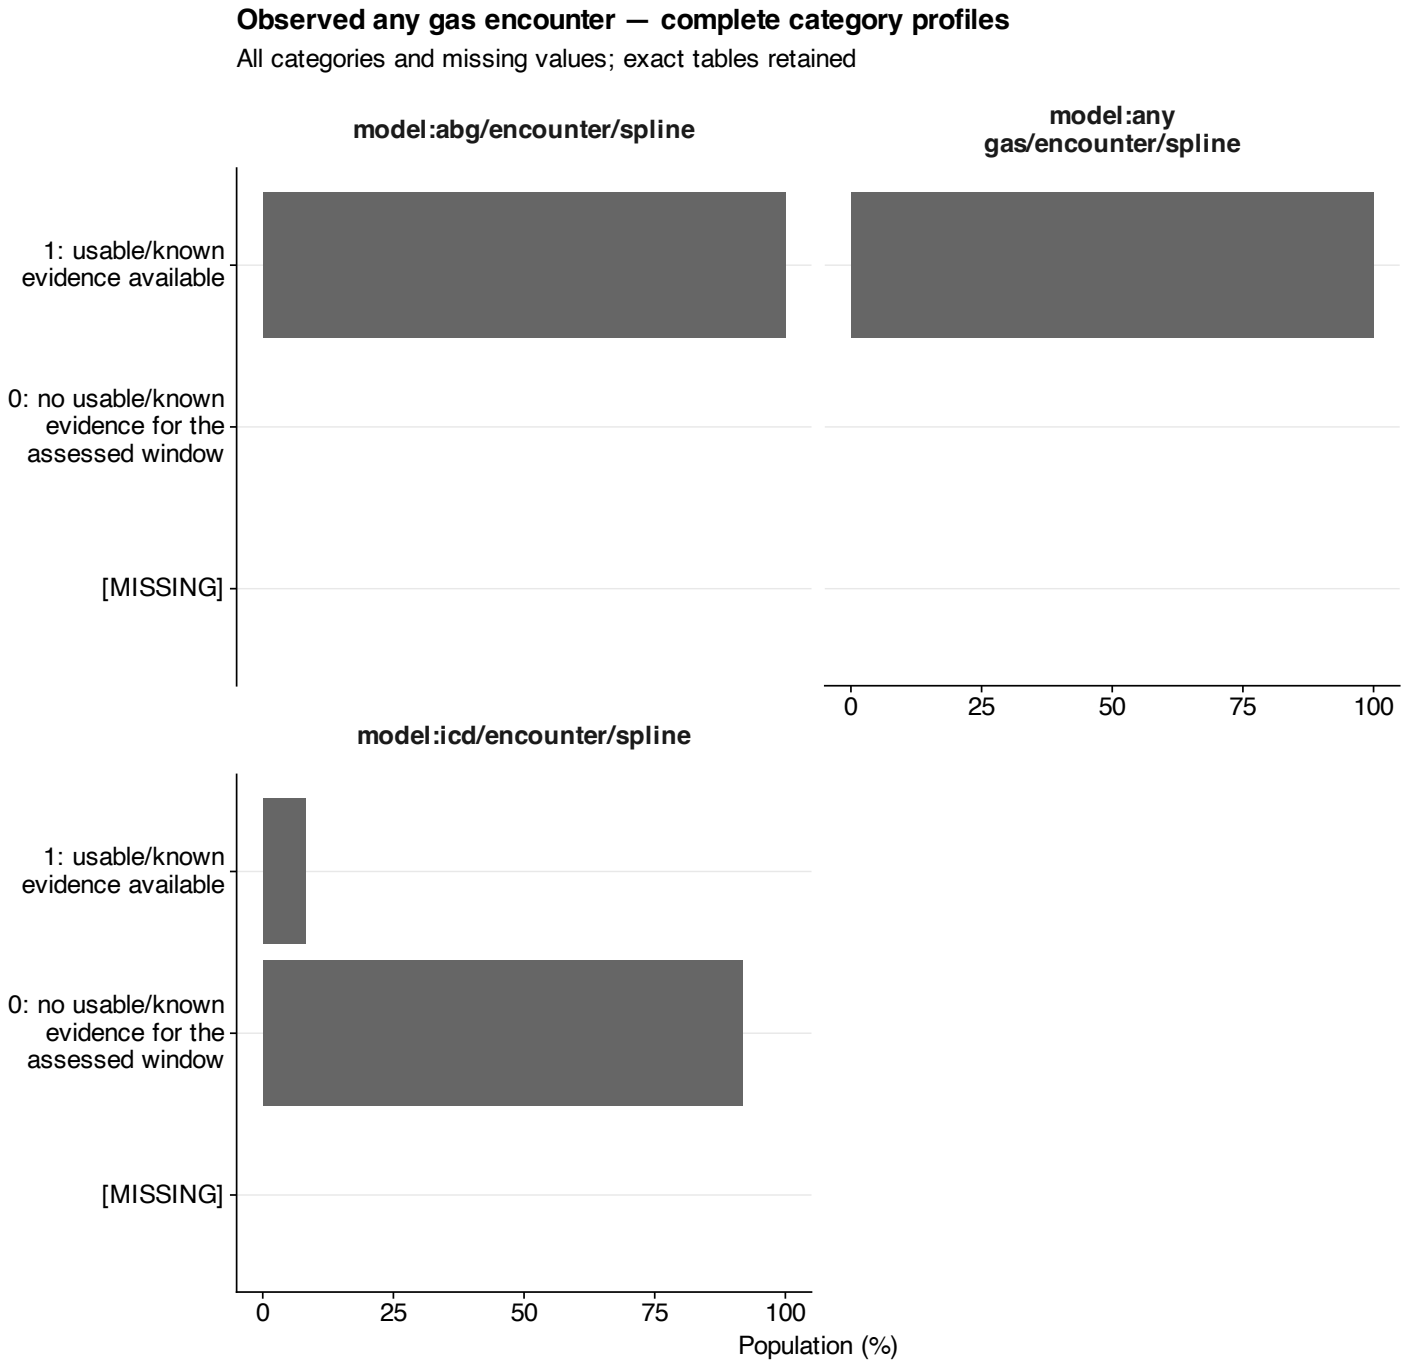

Figure 223: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete observed_any_gas_encounter stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

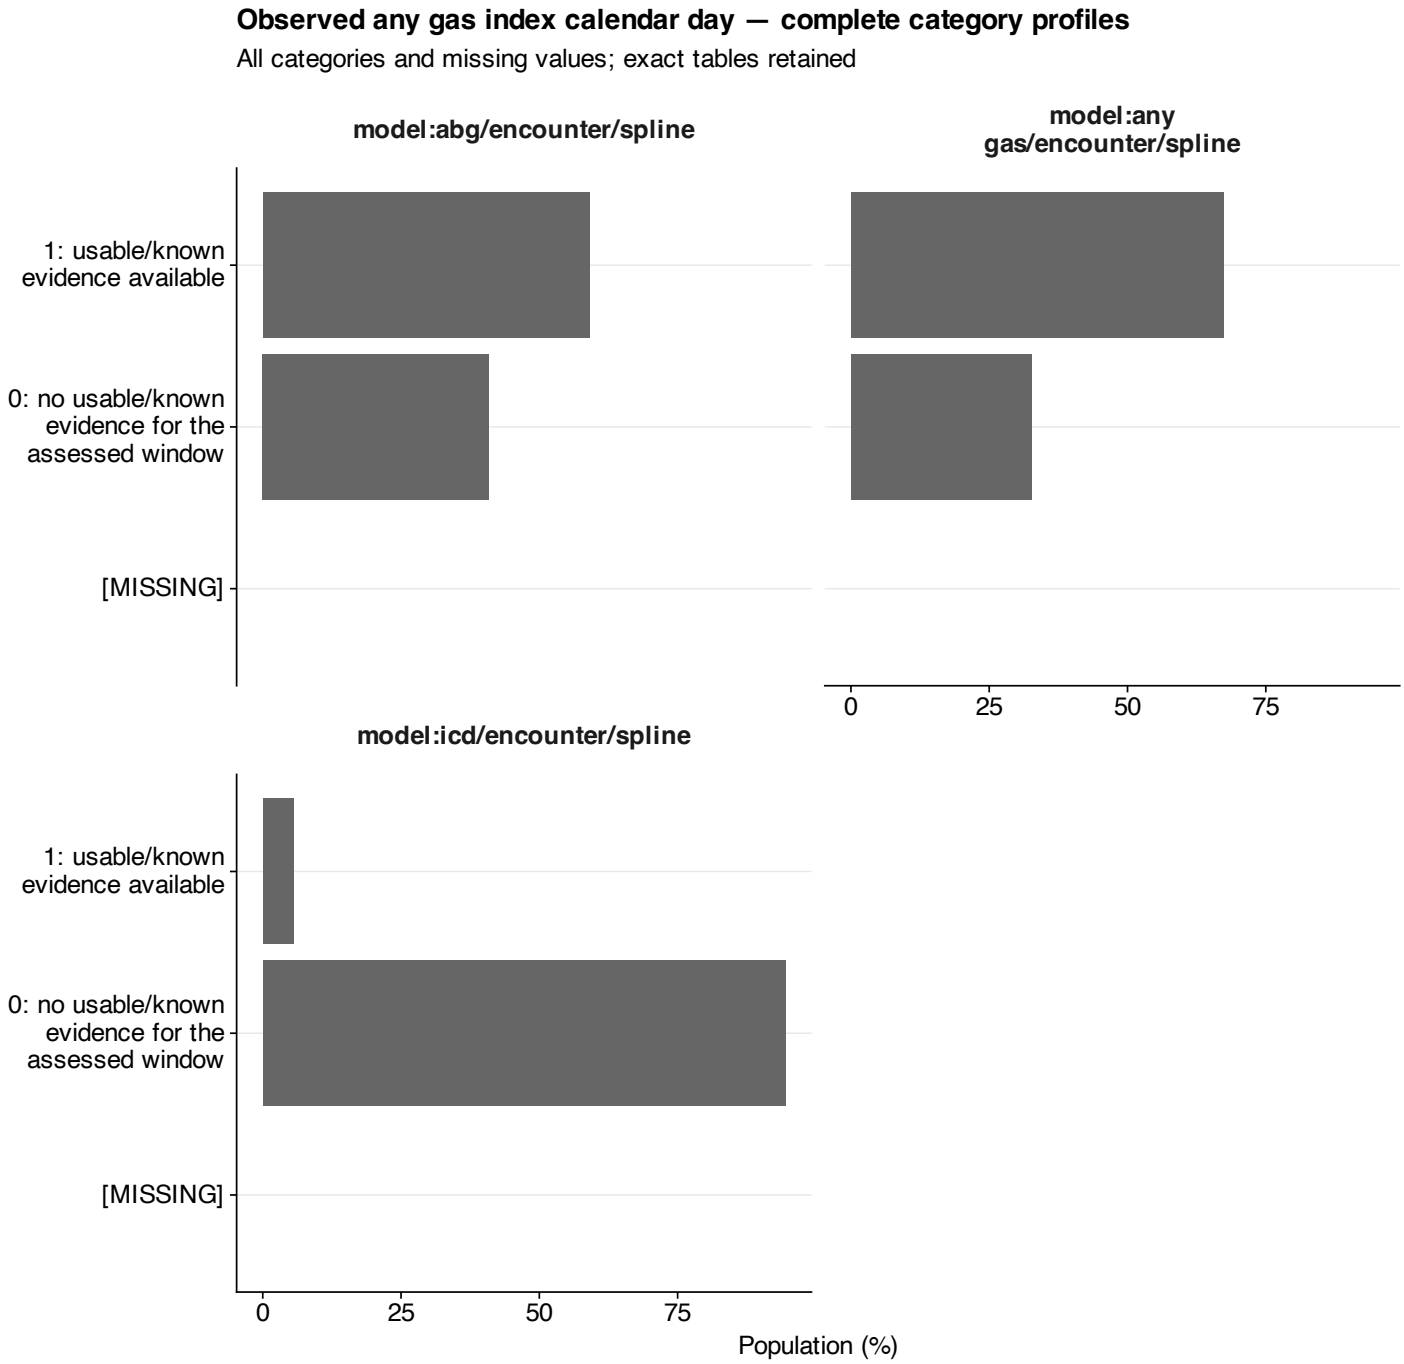

Figure 224: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete observed_any_gas_index_calendar_day stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

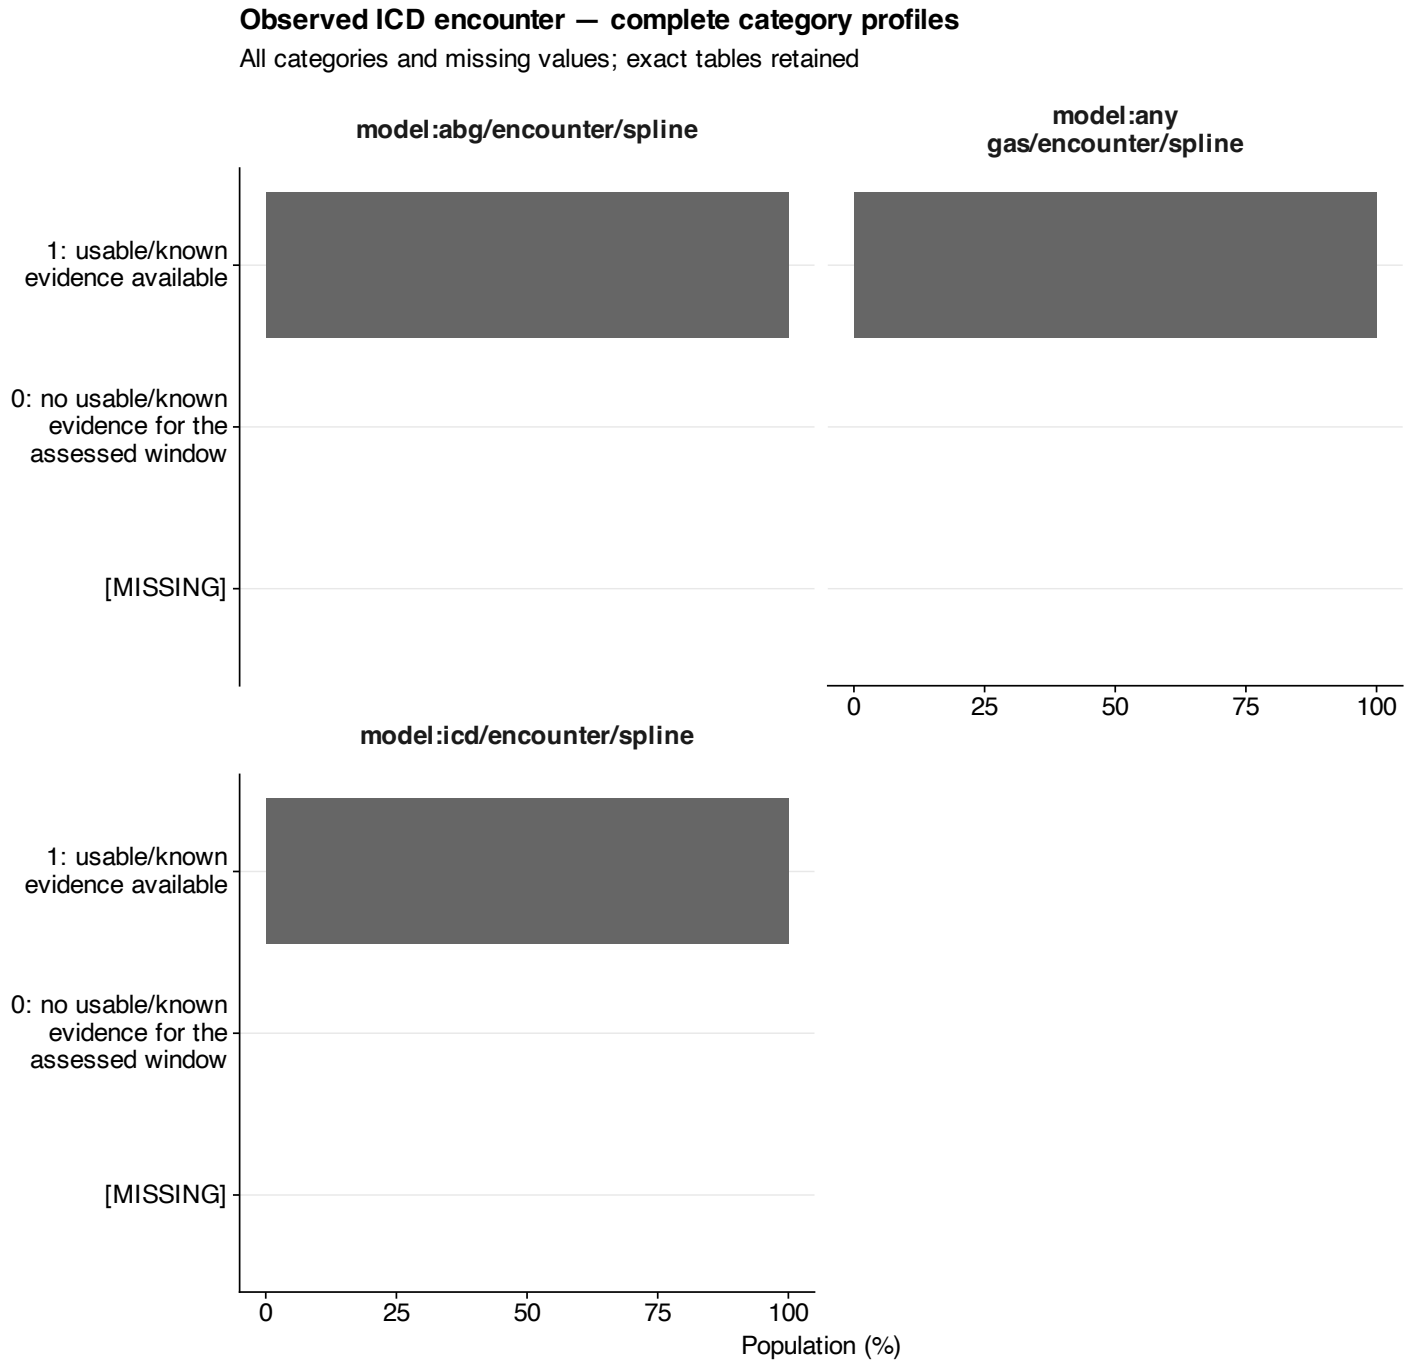

Figure 225: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete observed_icd_encounter stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

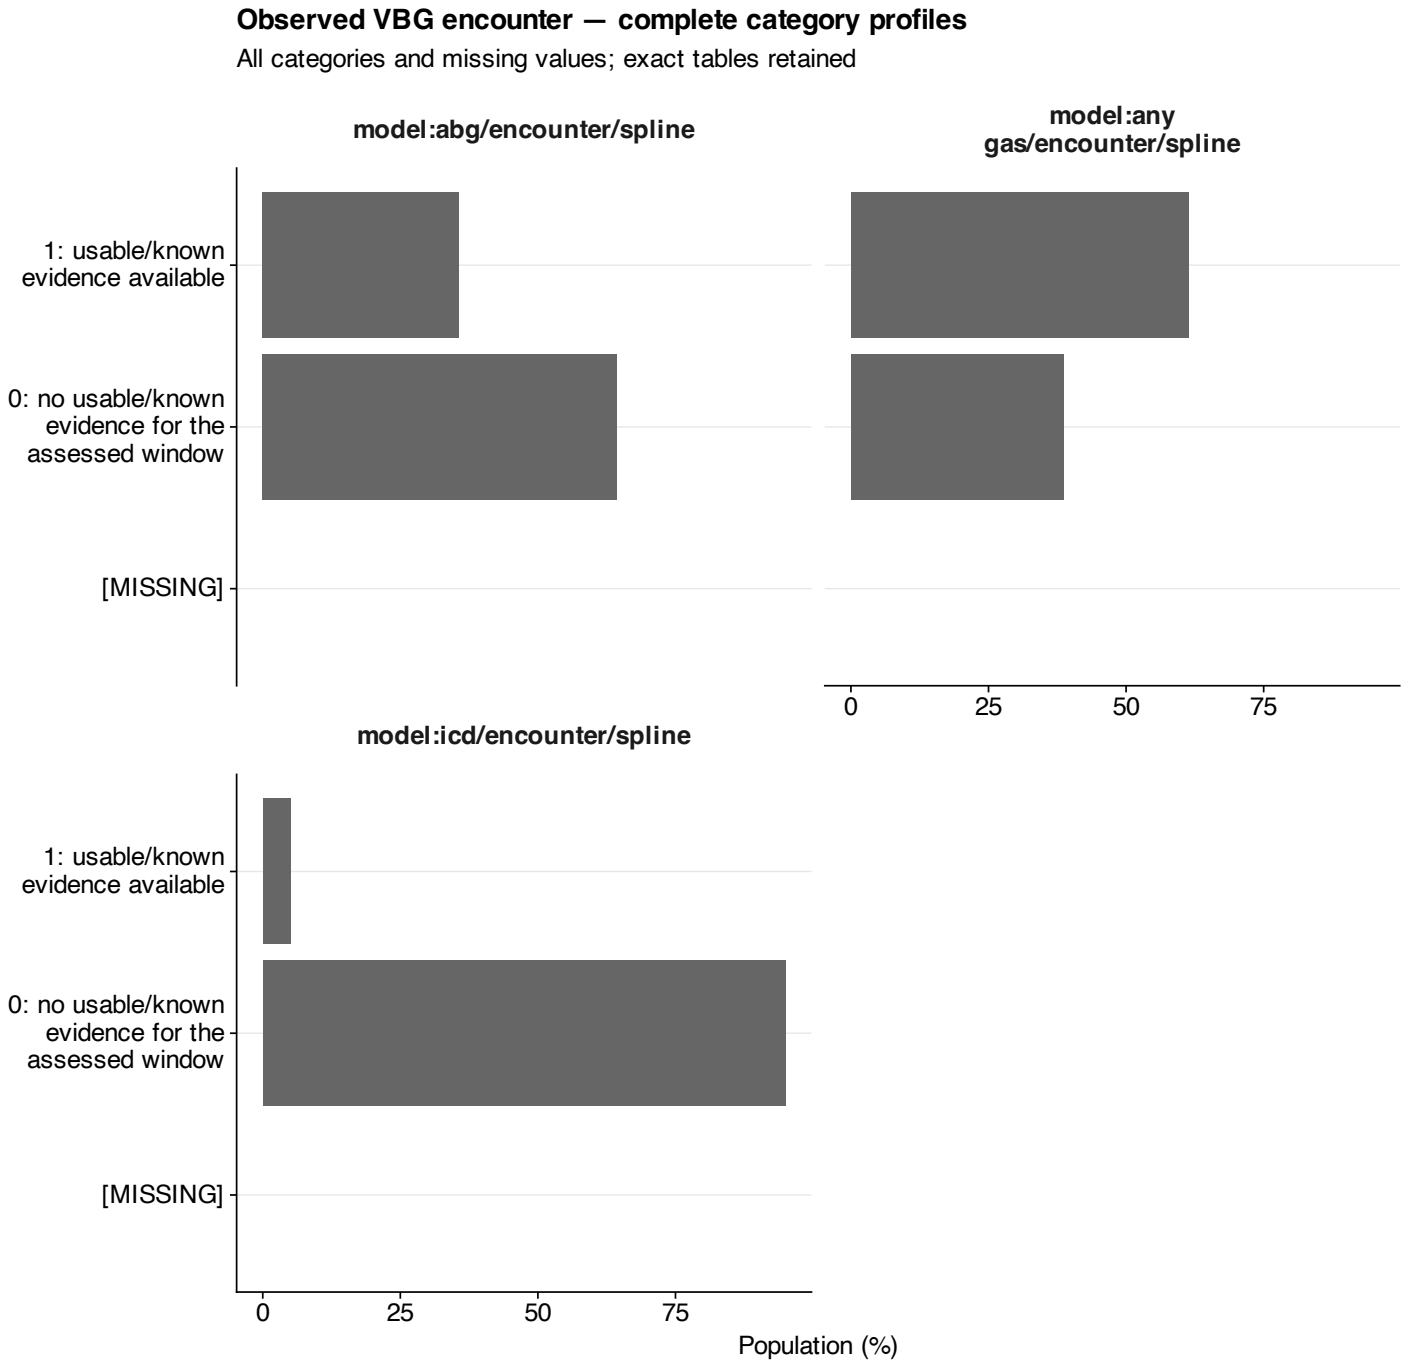

Figure 226: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete observed_vbg_encounter stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

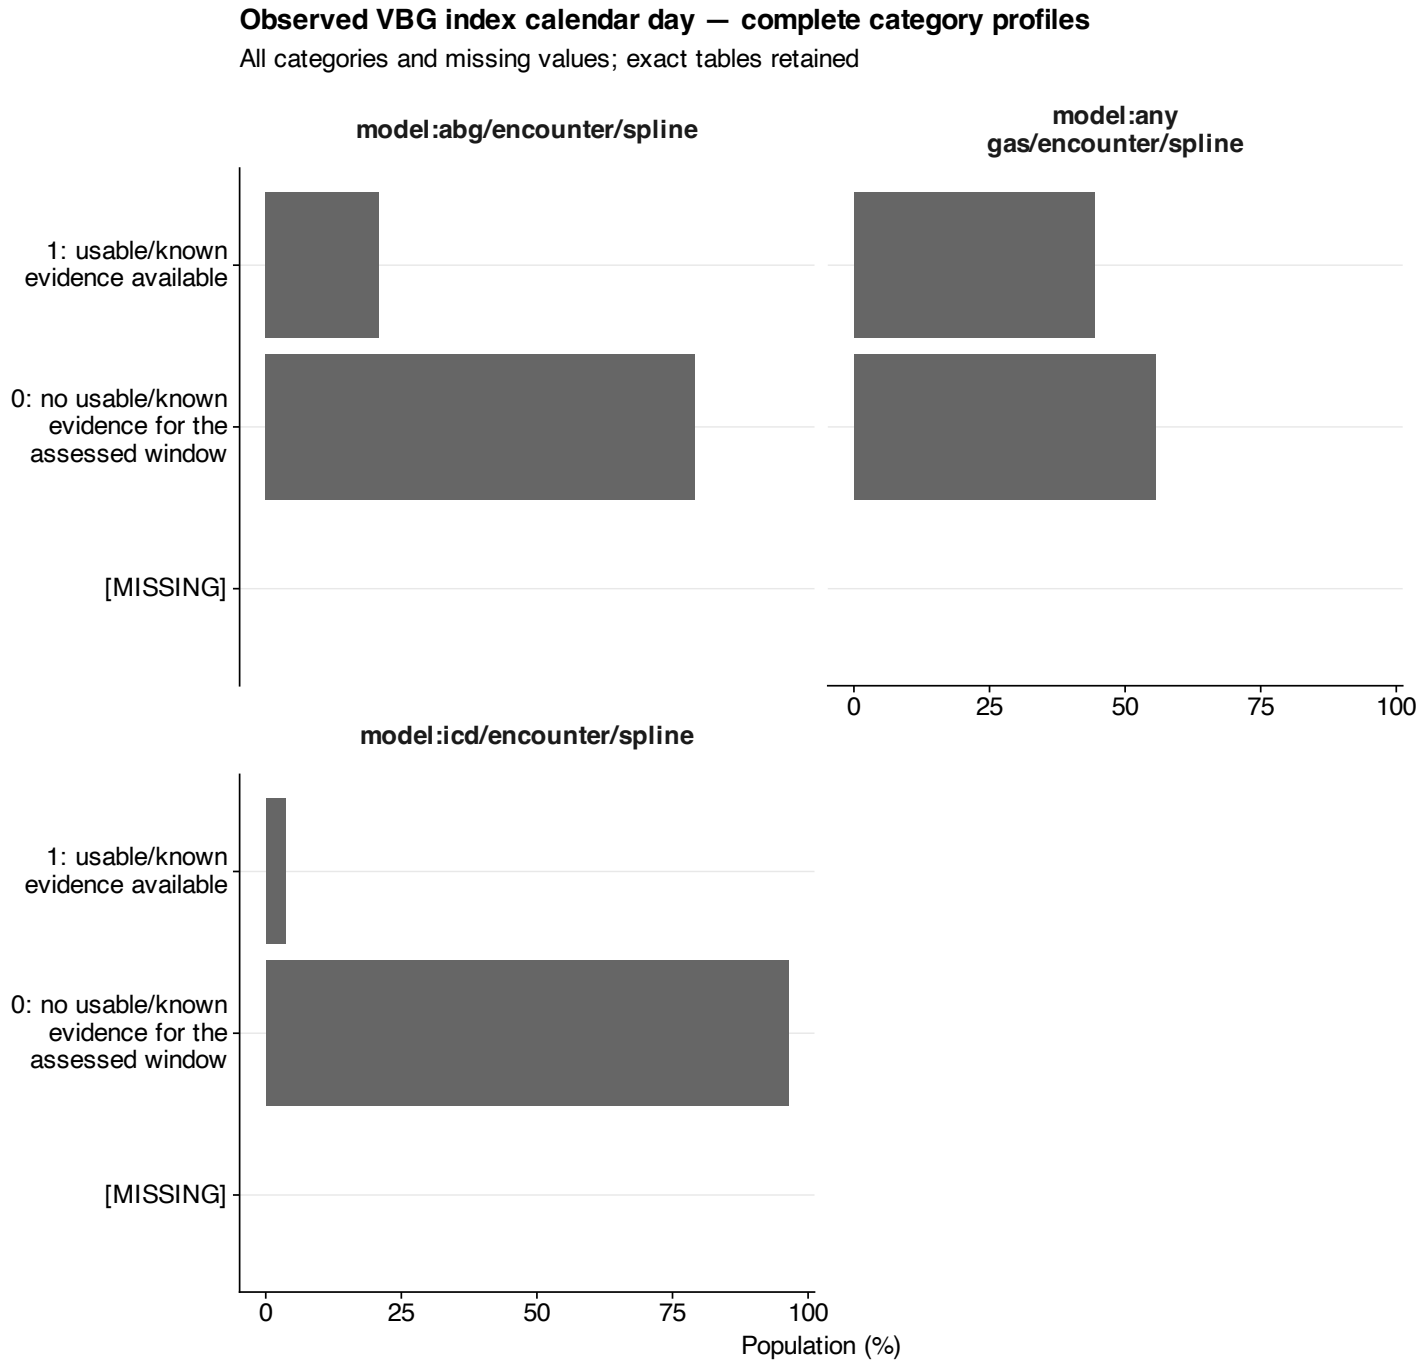

Figure 227: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete observed_vbg_index_calendar_day stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

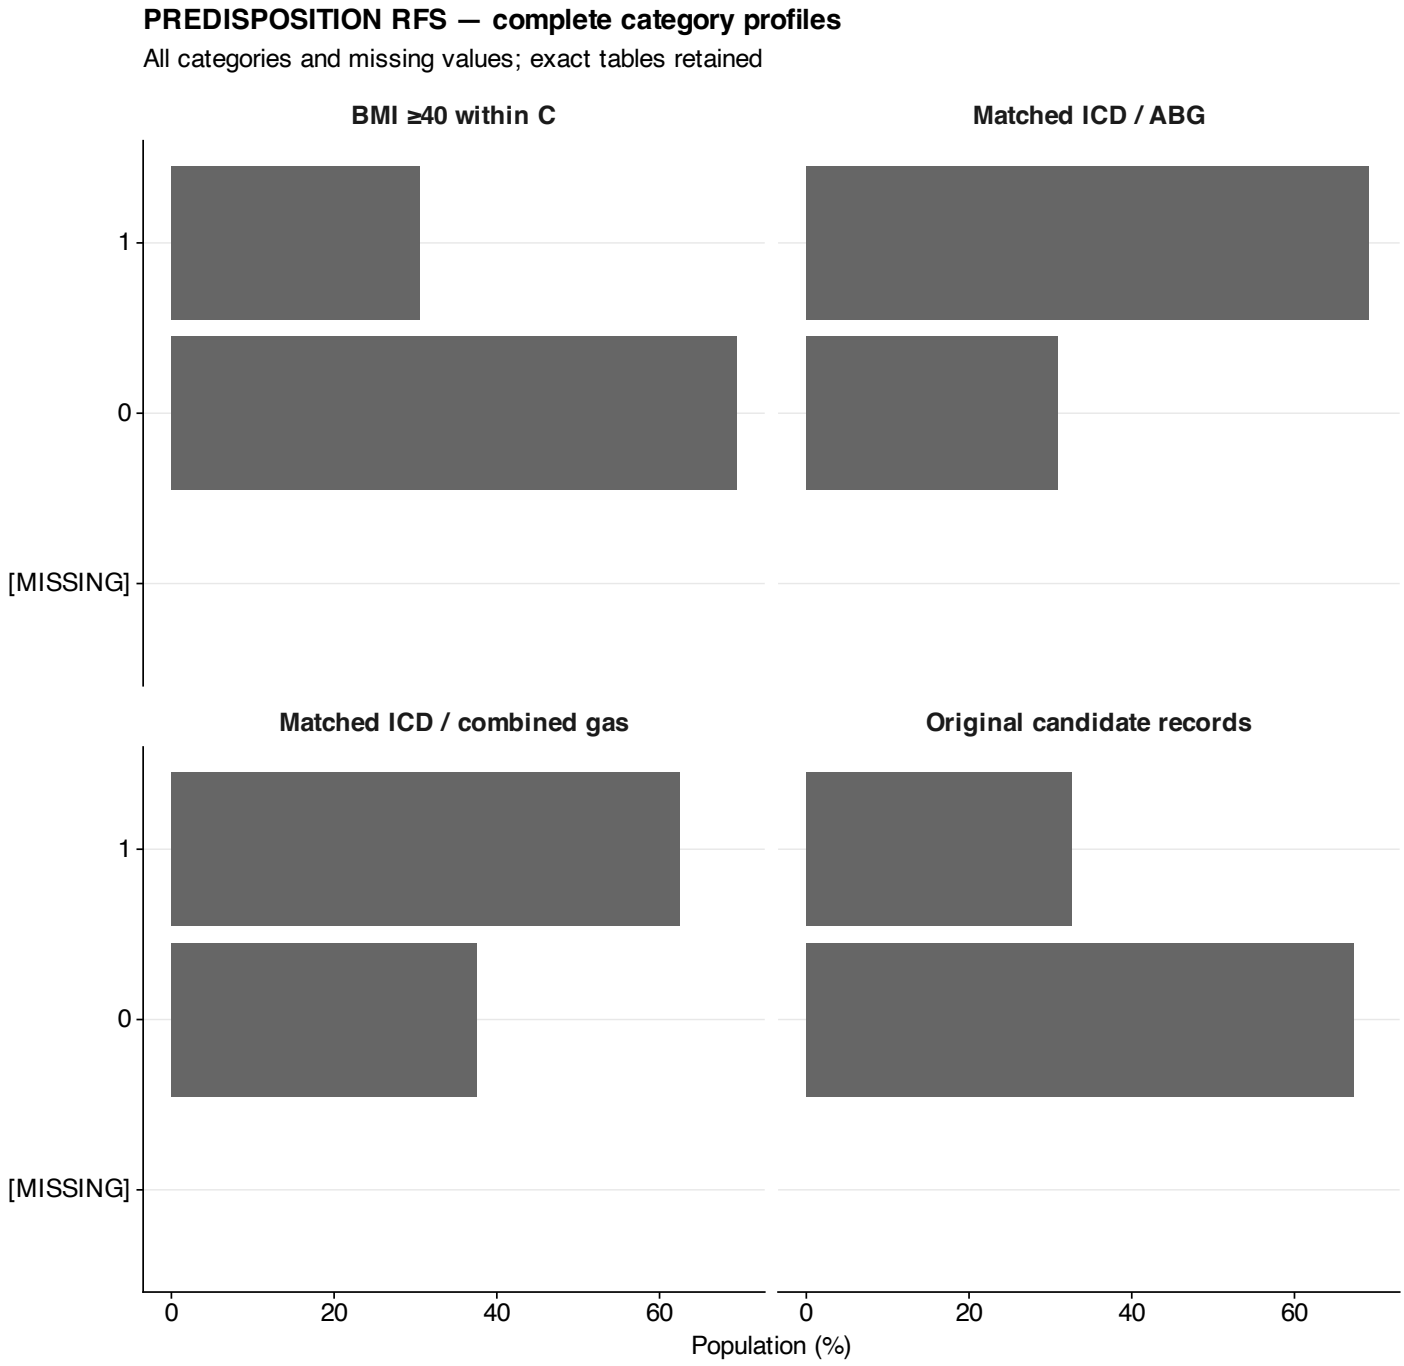

Figure 228: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete PREDISPOSITION_rfs stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

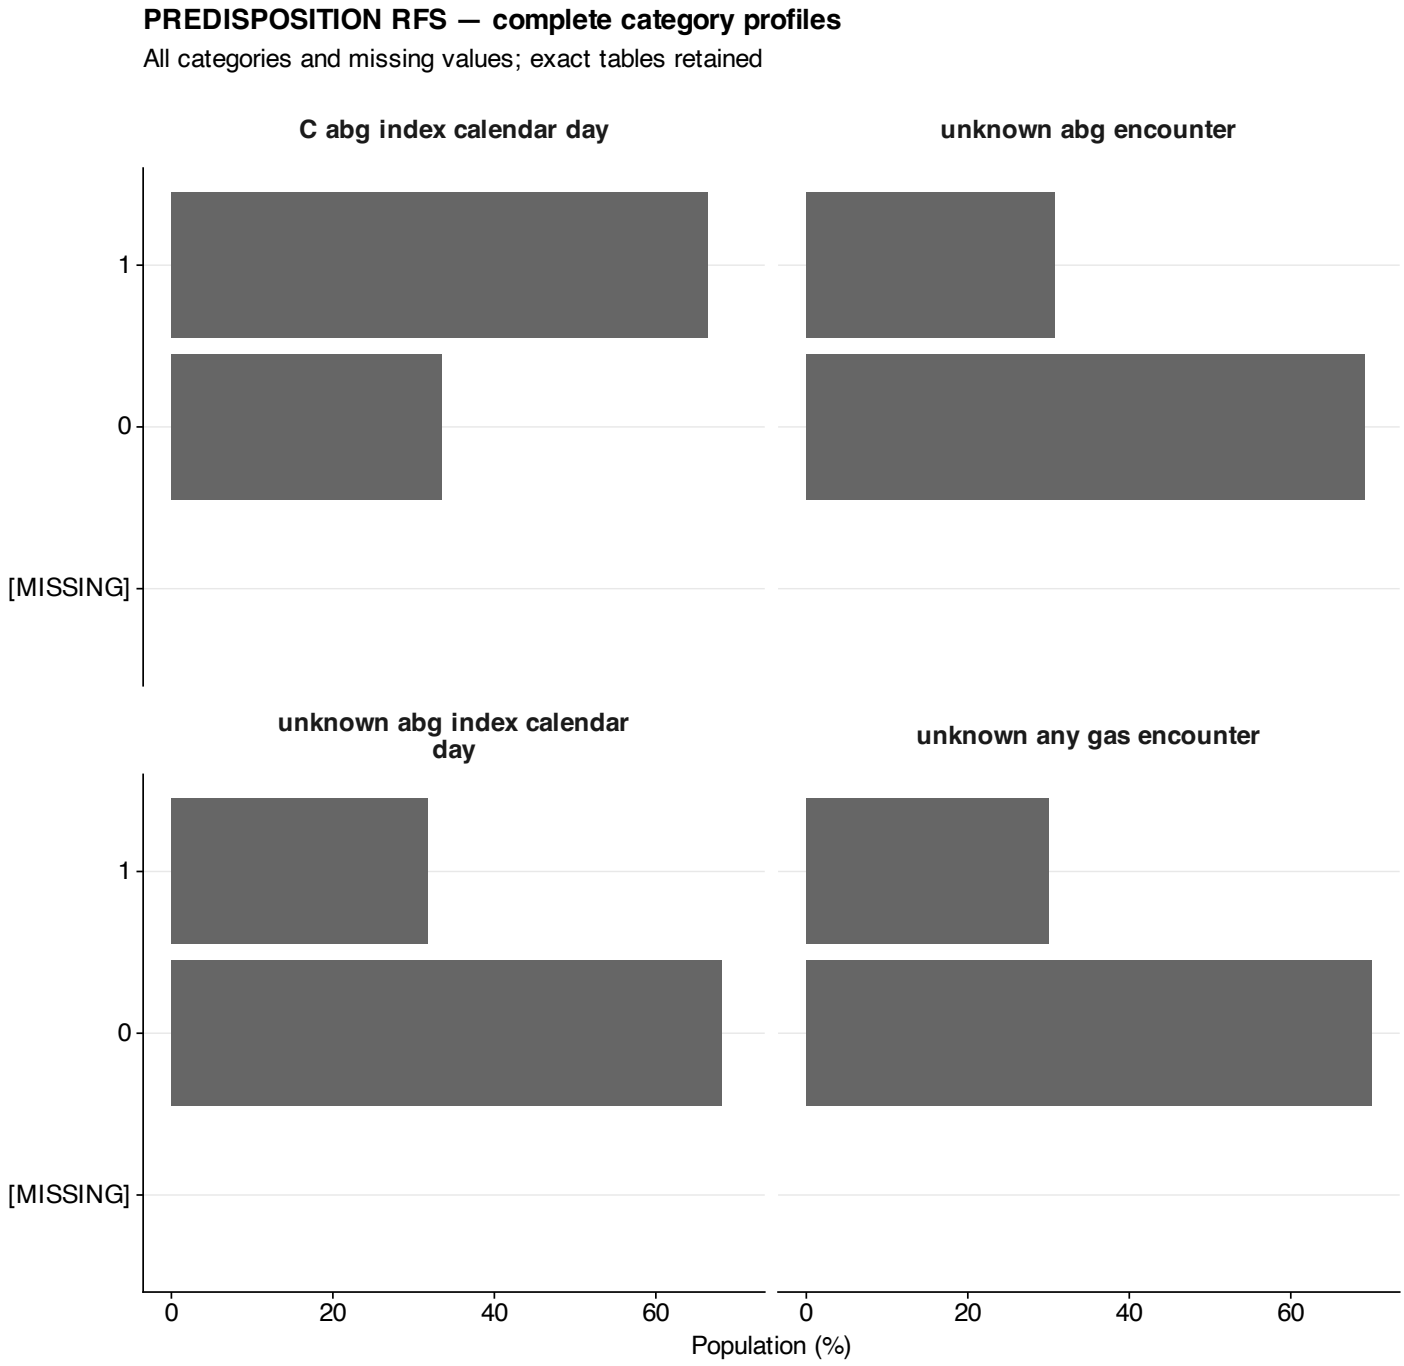

Figure 229: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete PREDISPOSITION_rfs stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

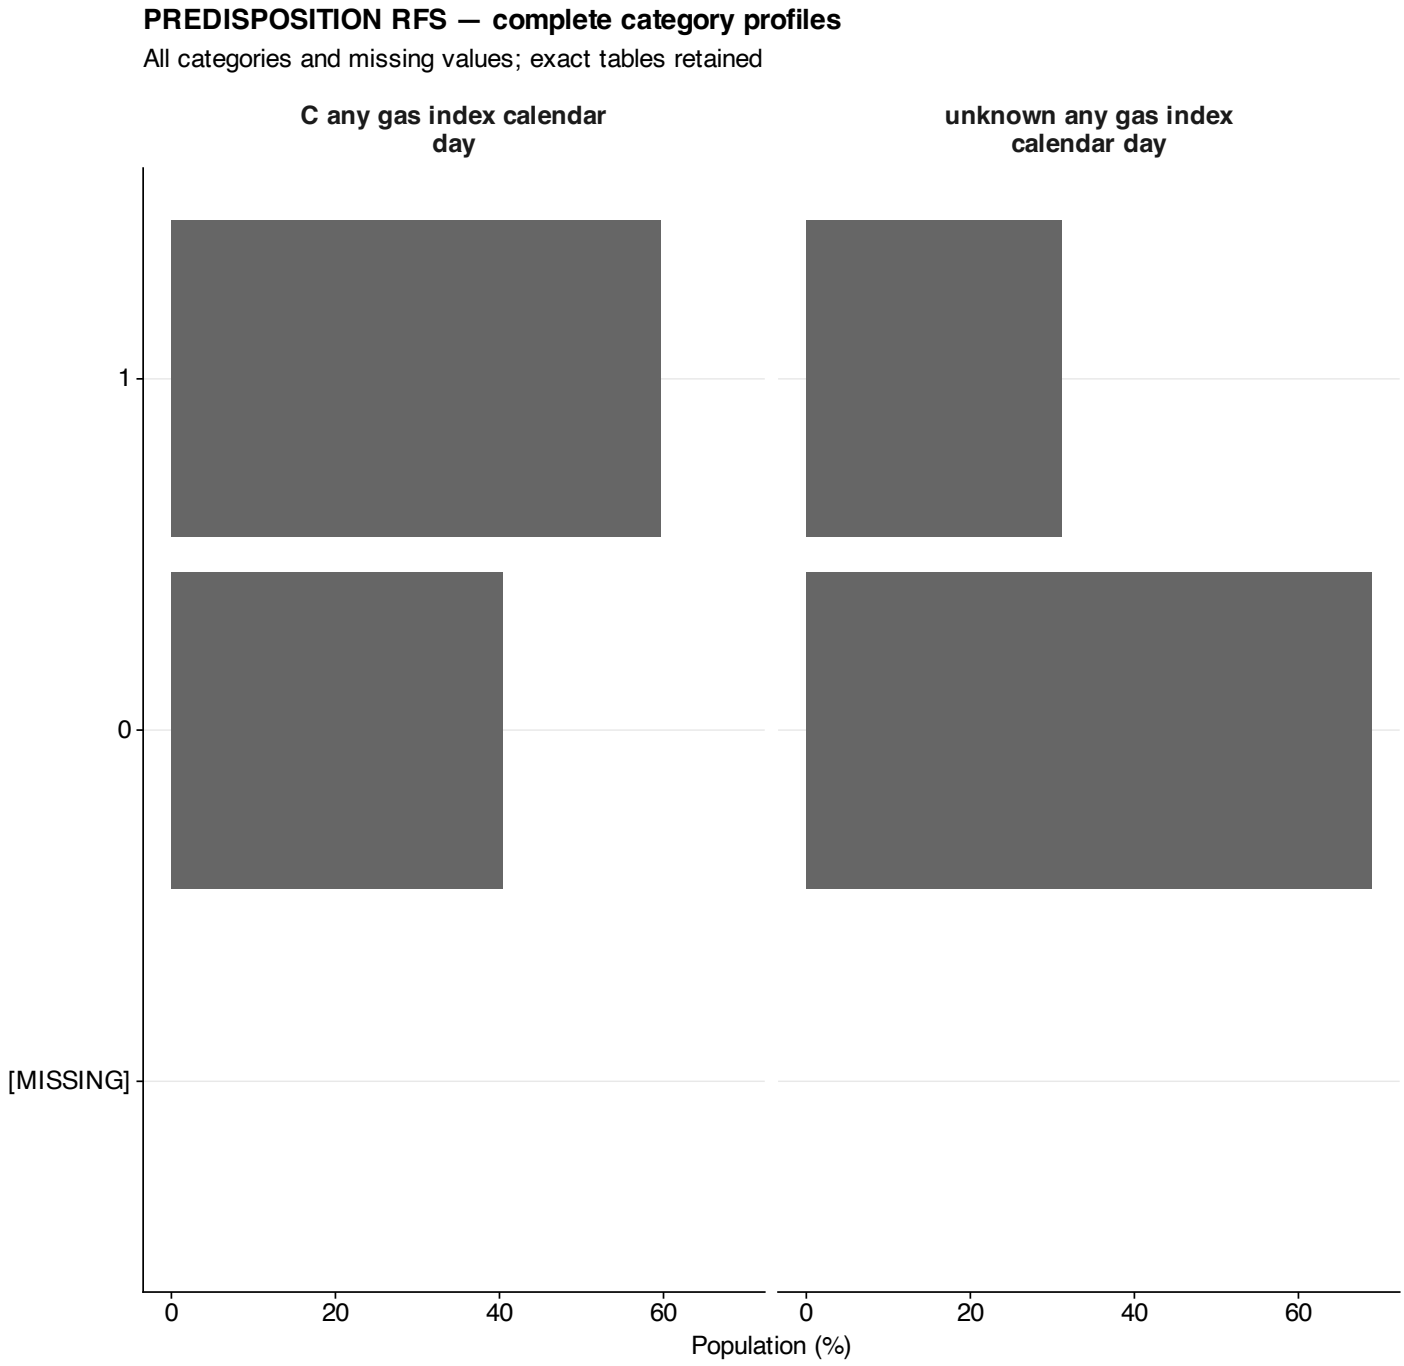

Figure 230: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete PREDISPOSITION_rfs stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

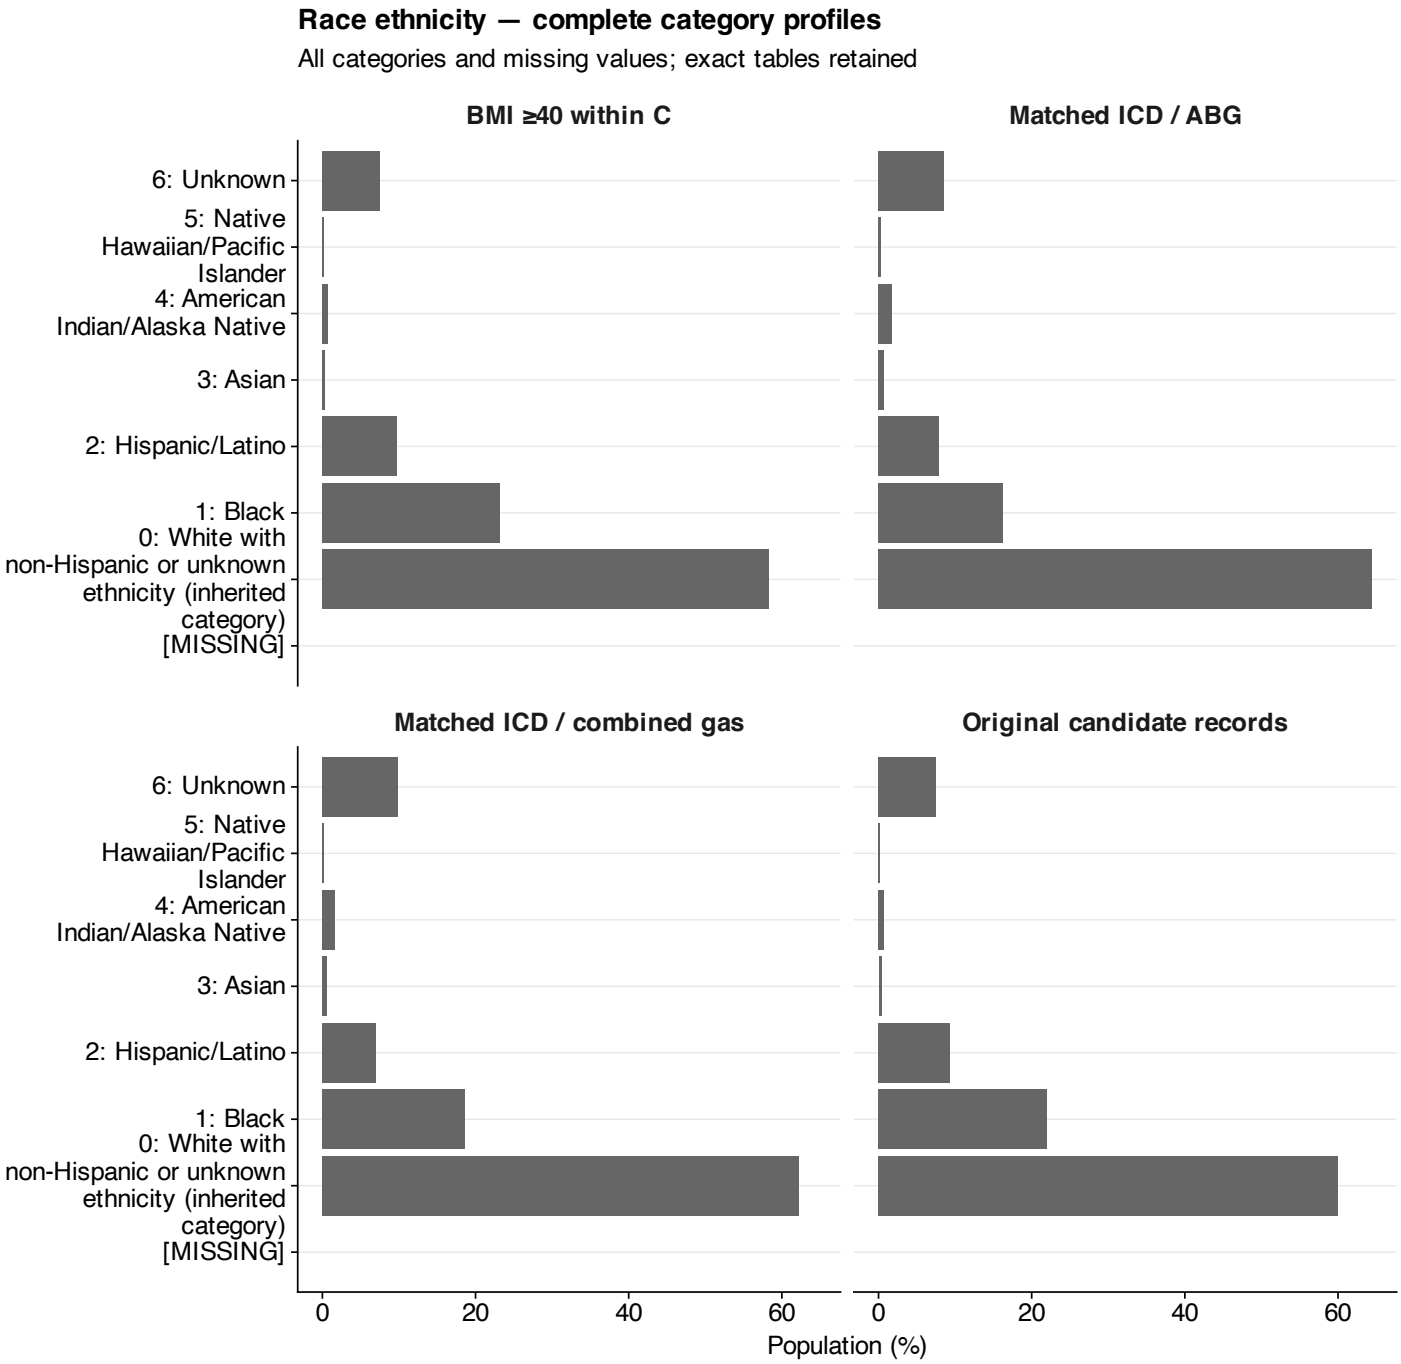

Figure 231: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete race_ethnicity stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

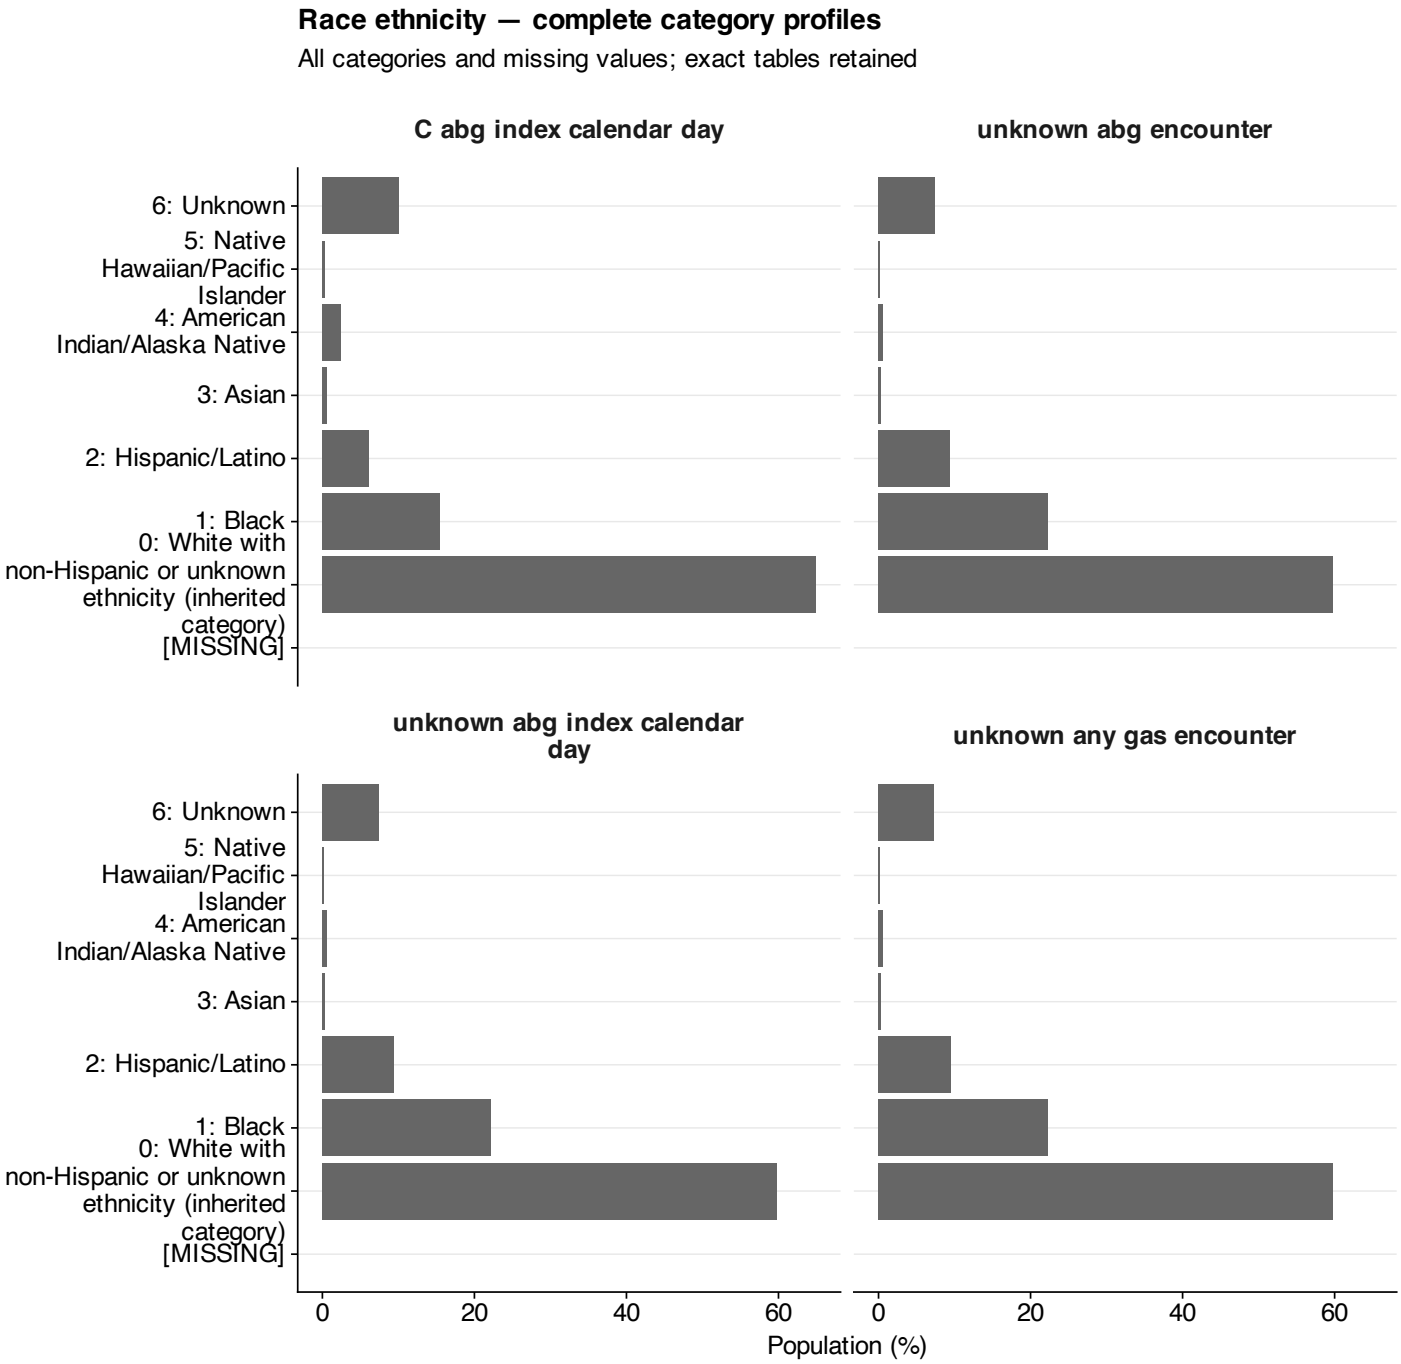

Figure 232: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete race_ethnicity stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

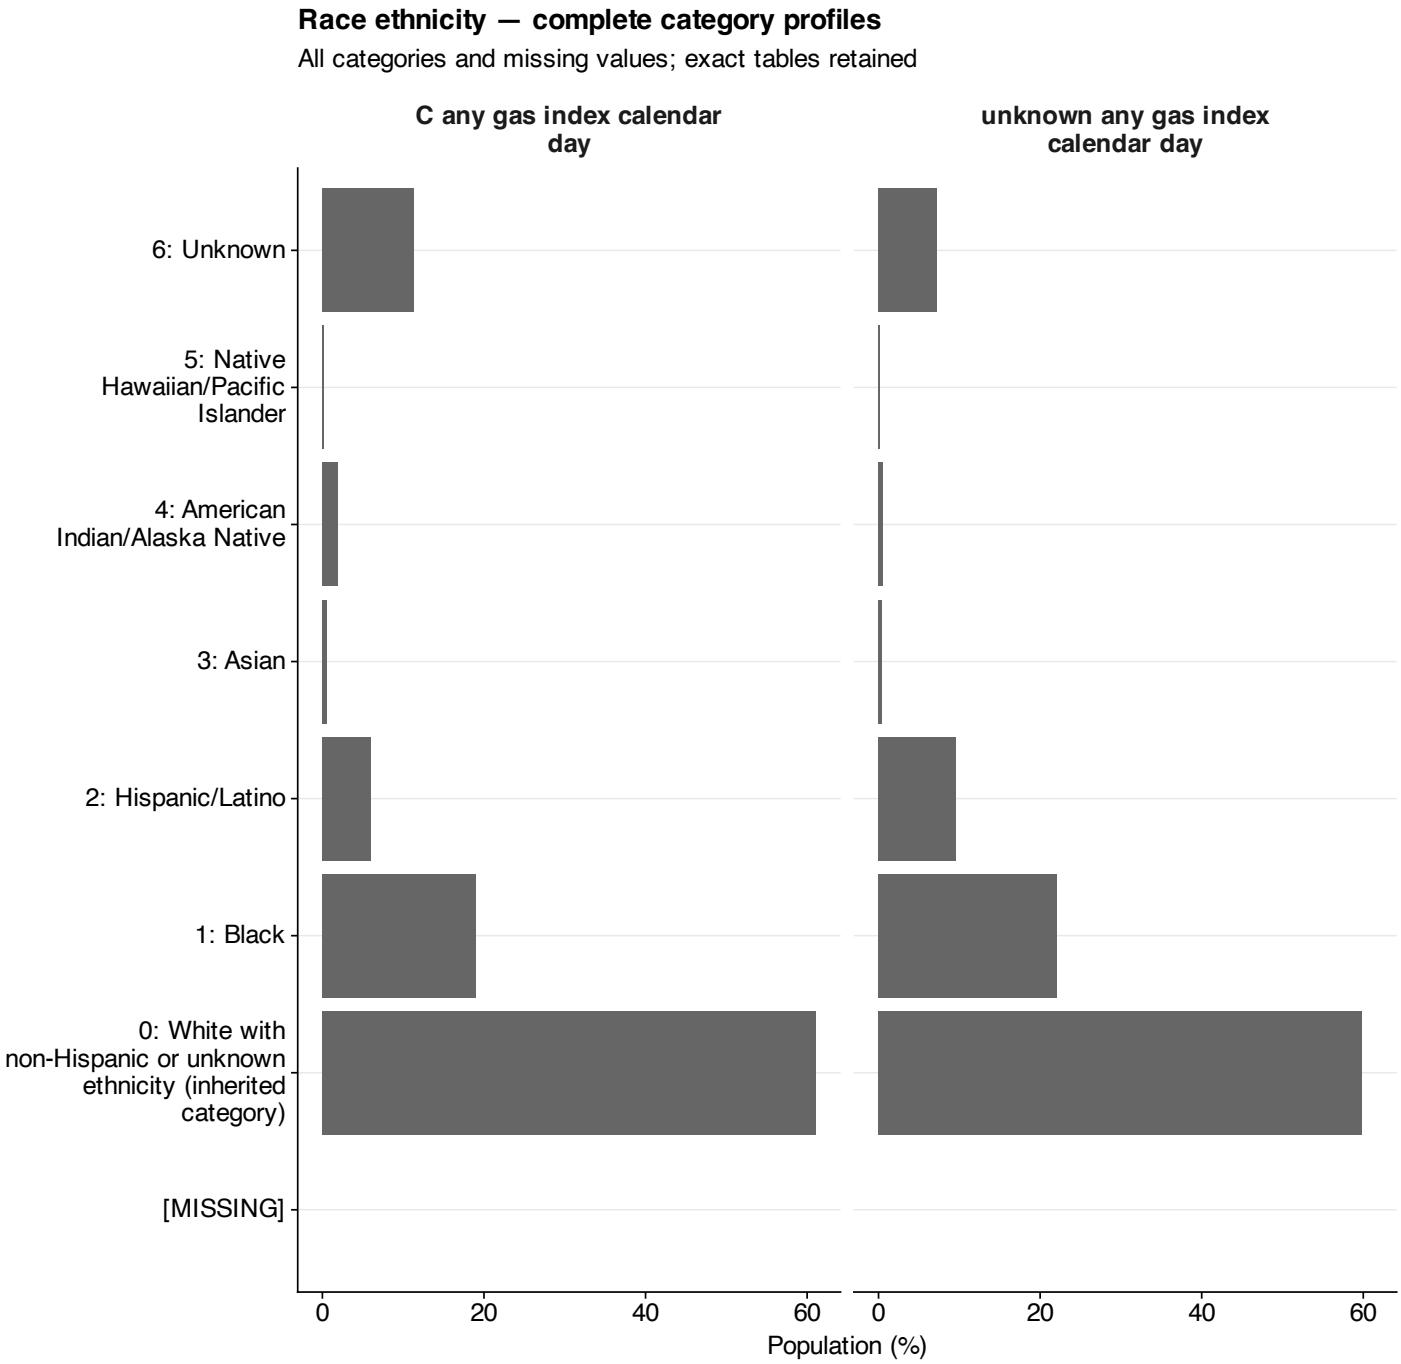

Figure 233: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete race_ethnicity stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

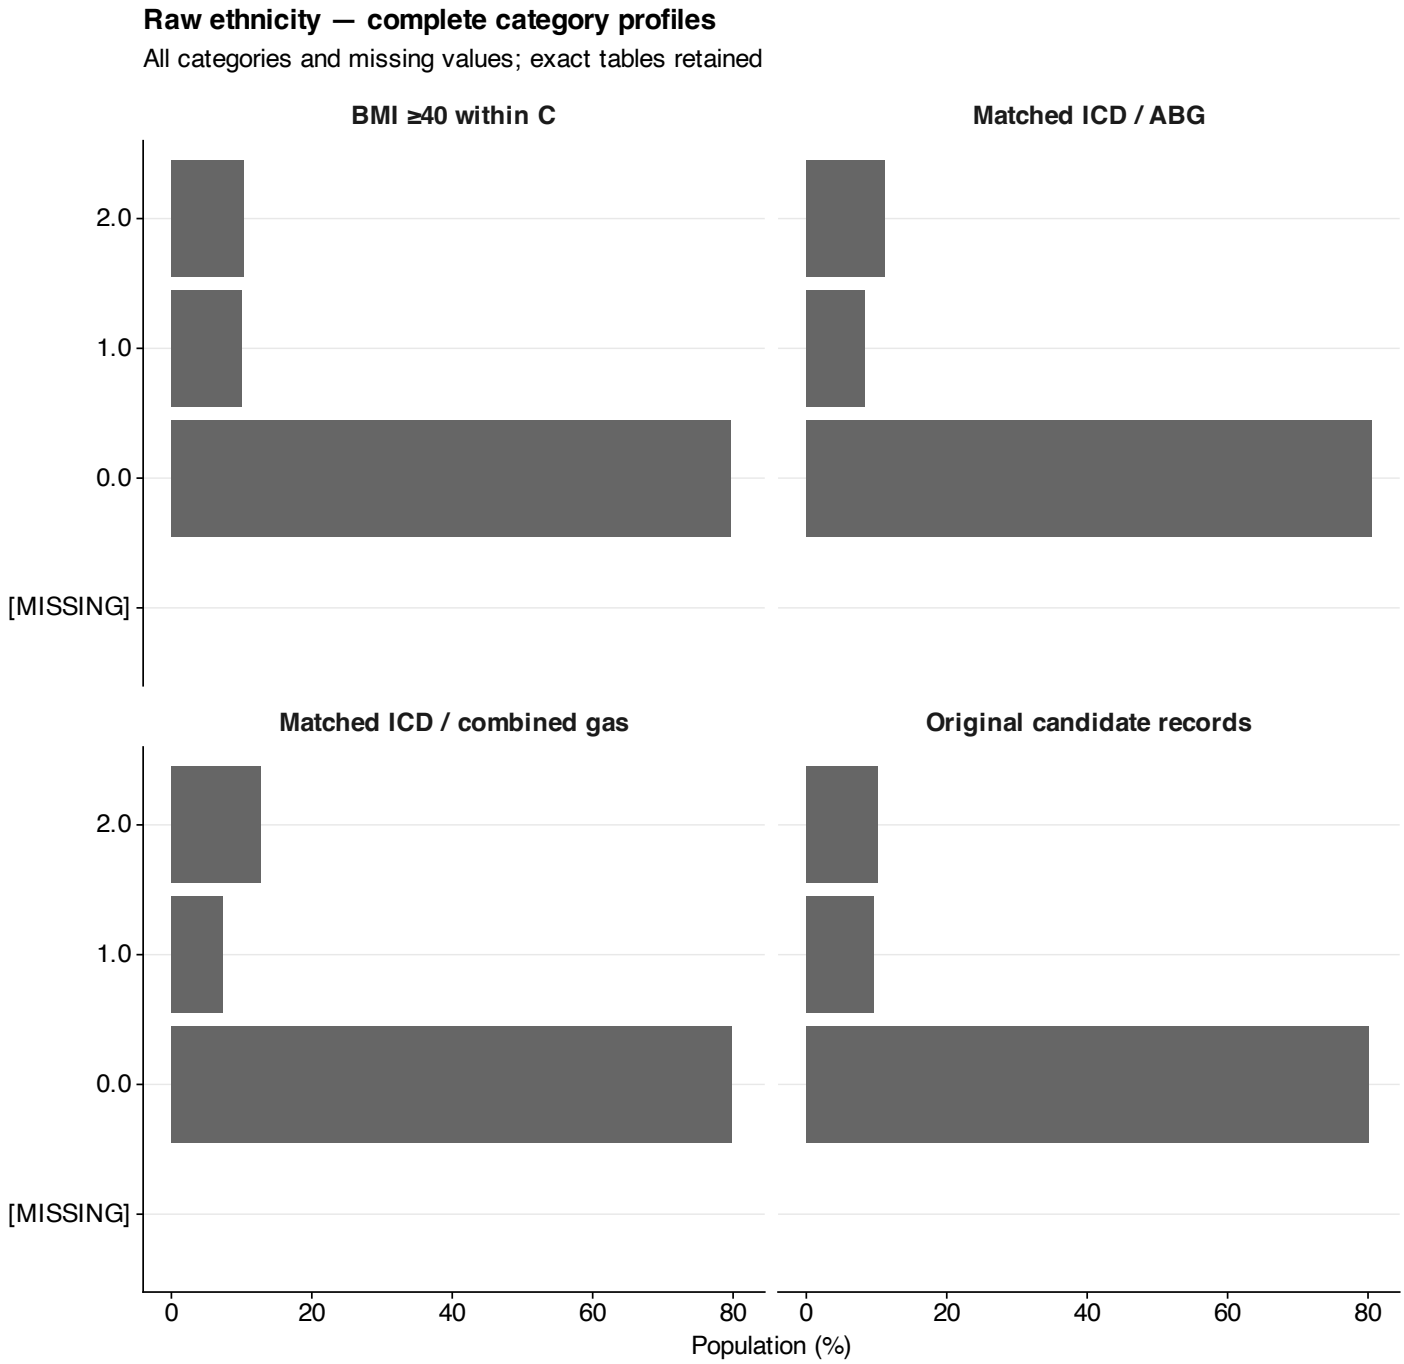

Figure 234: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete raw_ethnicity stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

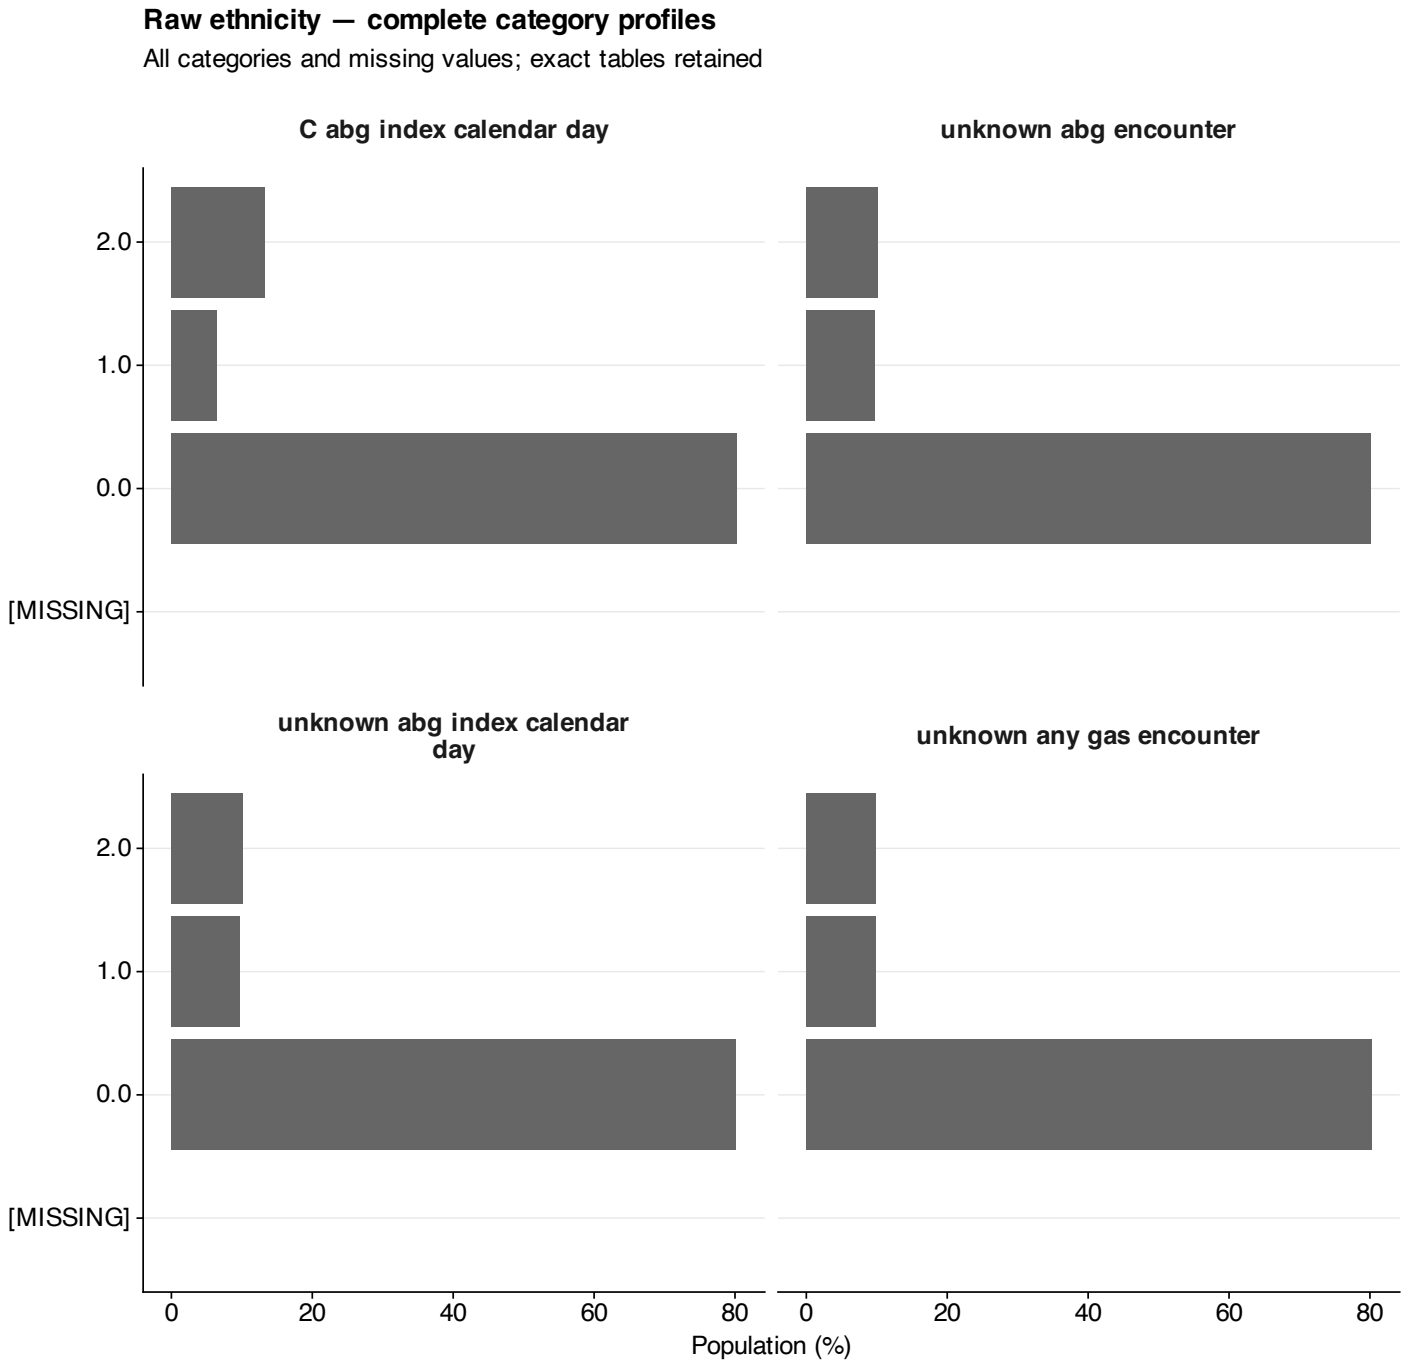

Figure 235: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete raw_ethnicity stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

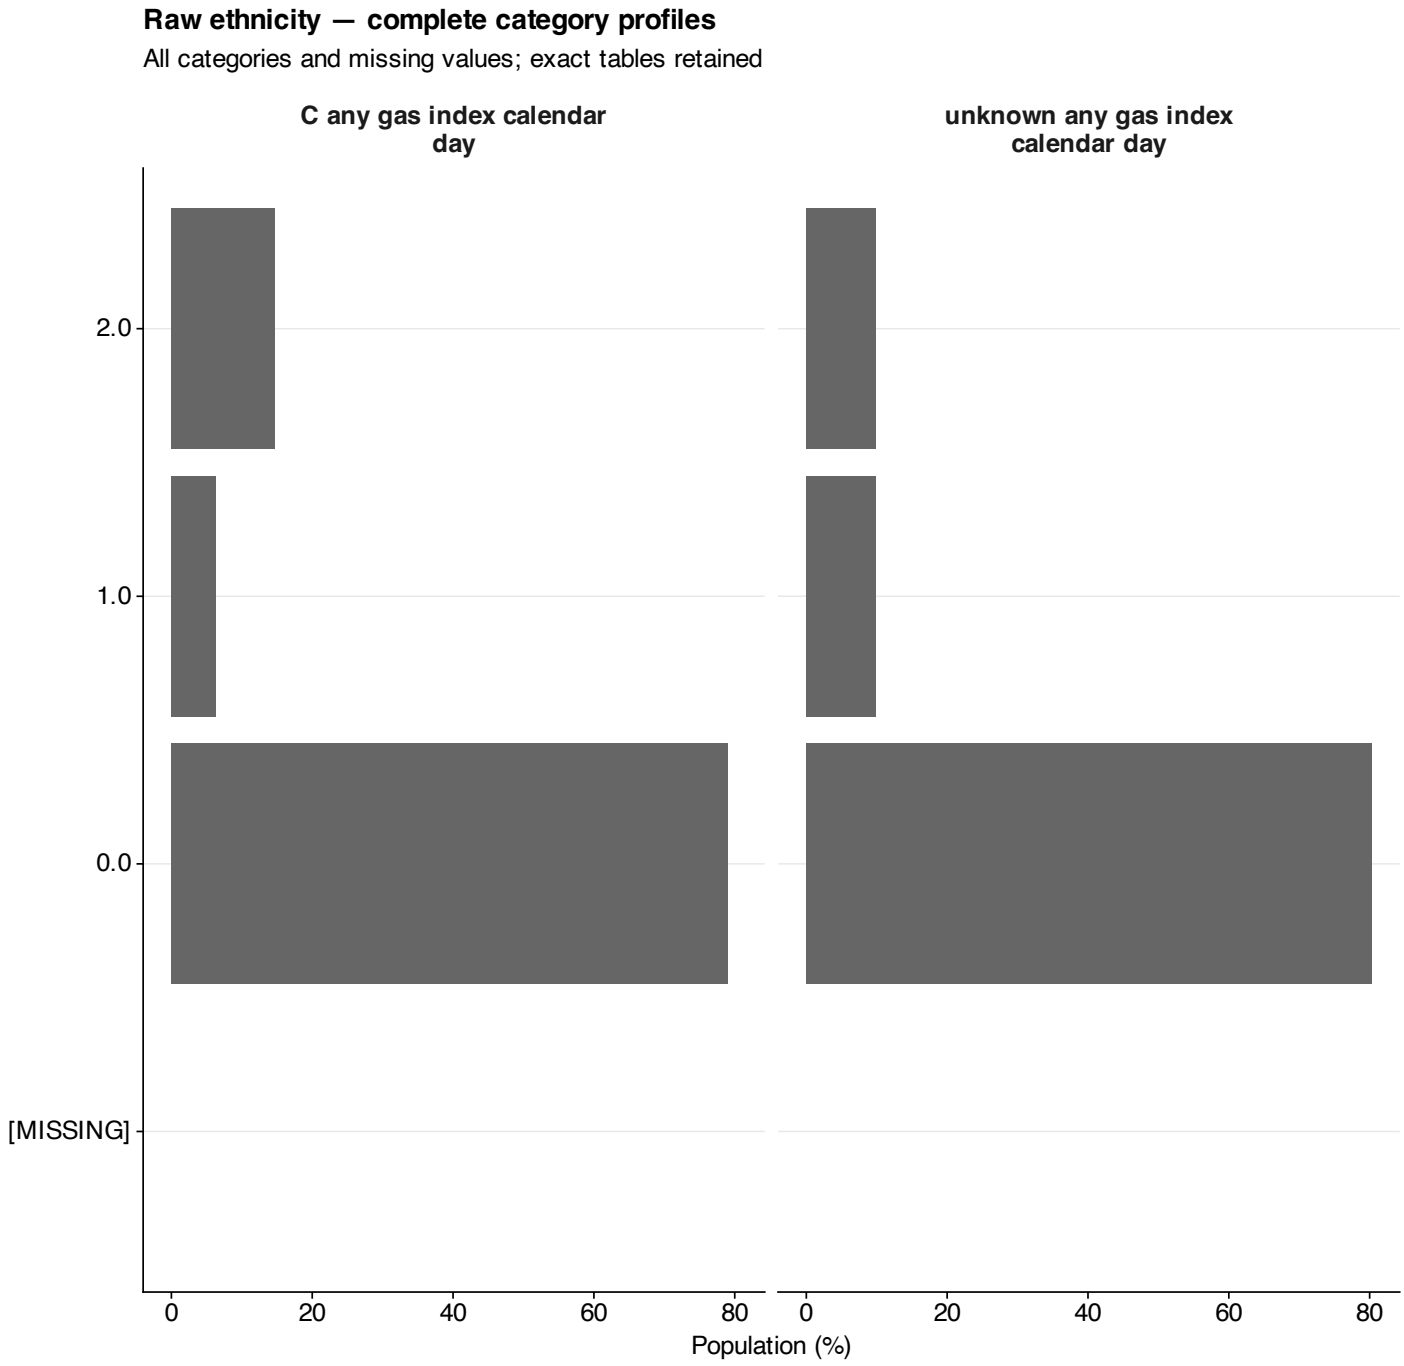

Figure 236: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete raw_ethnicity stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

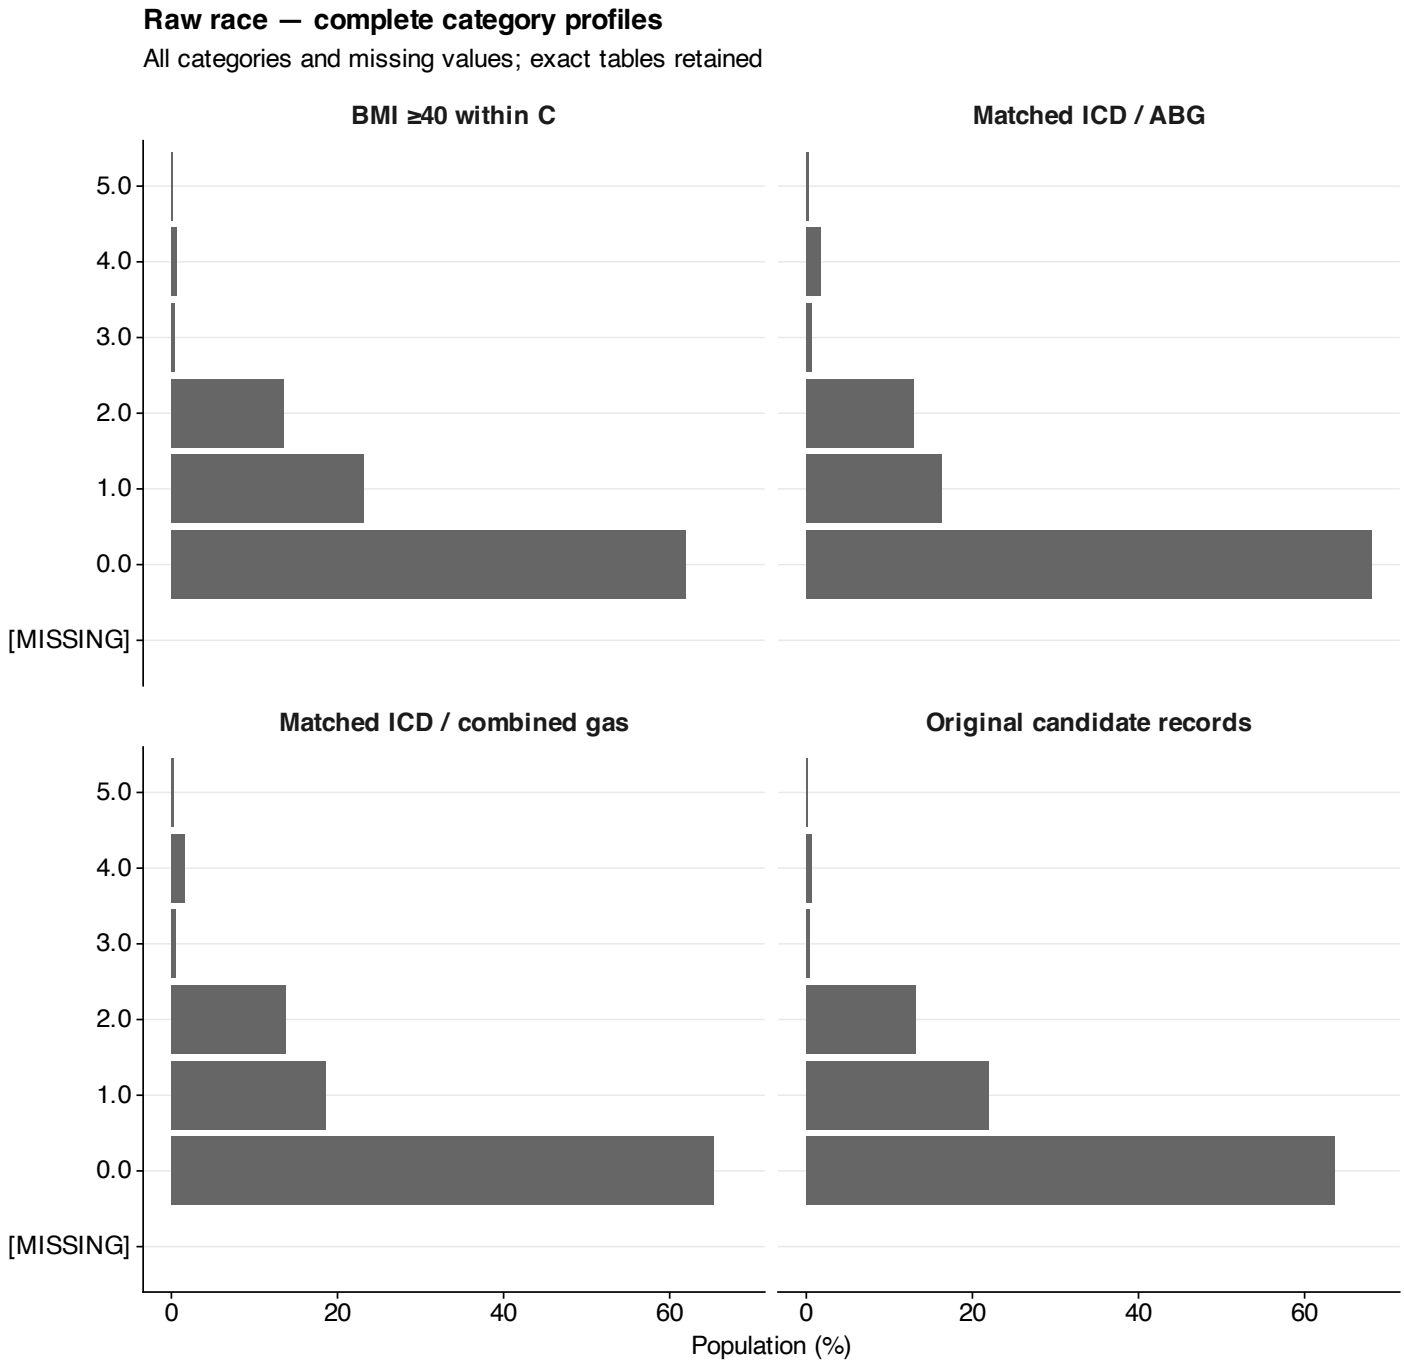

Figure 237: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete raw_race stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

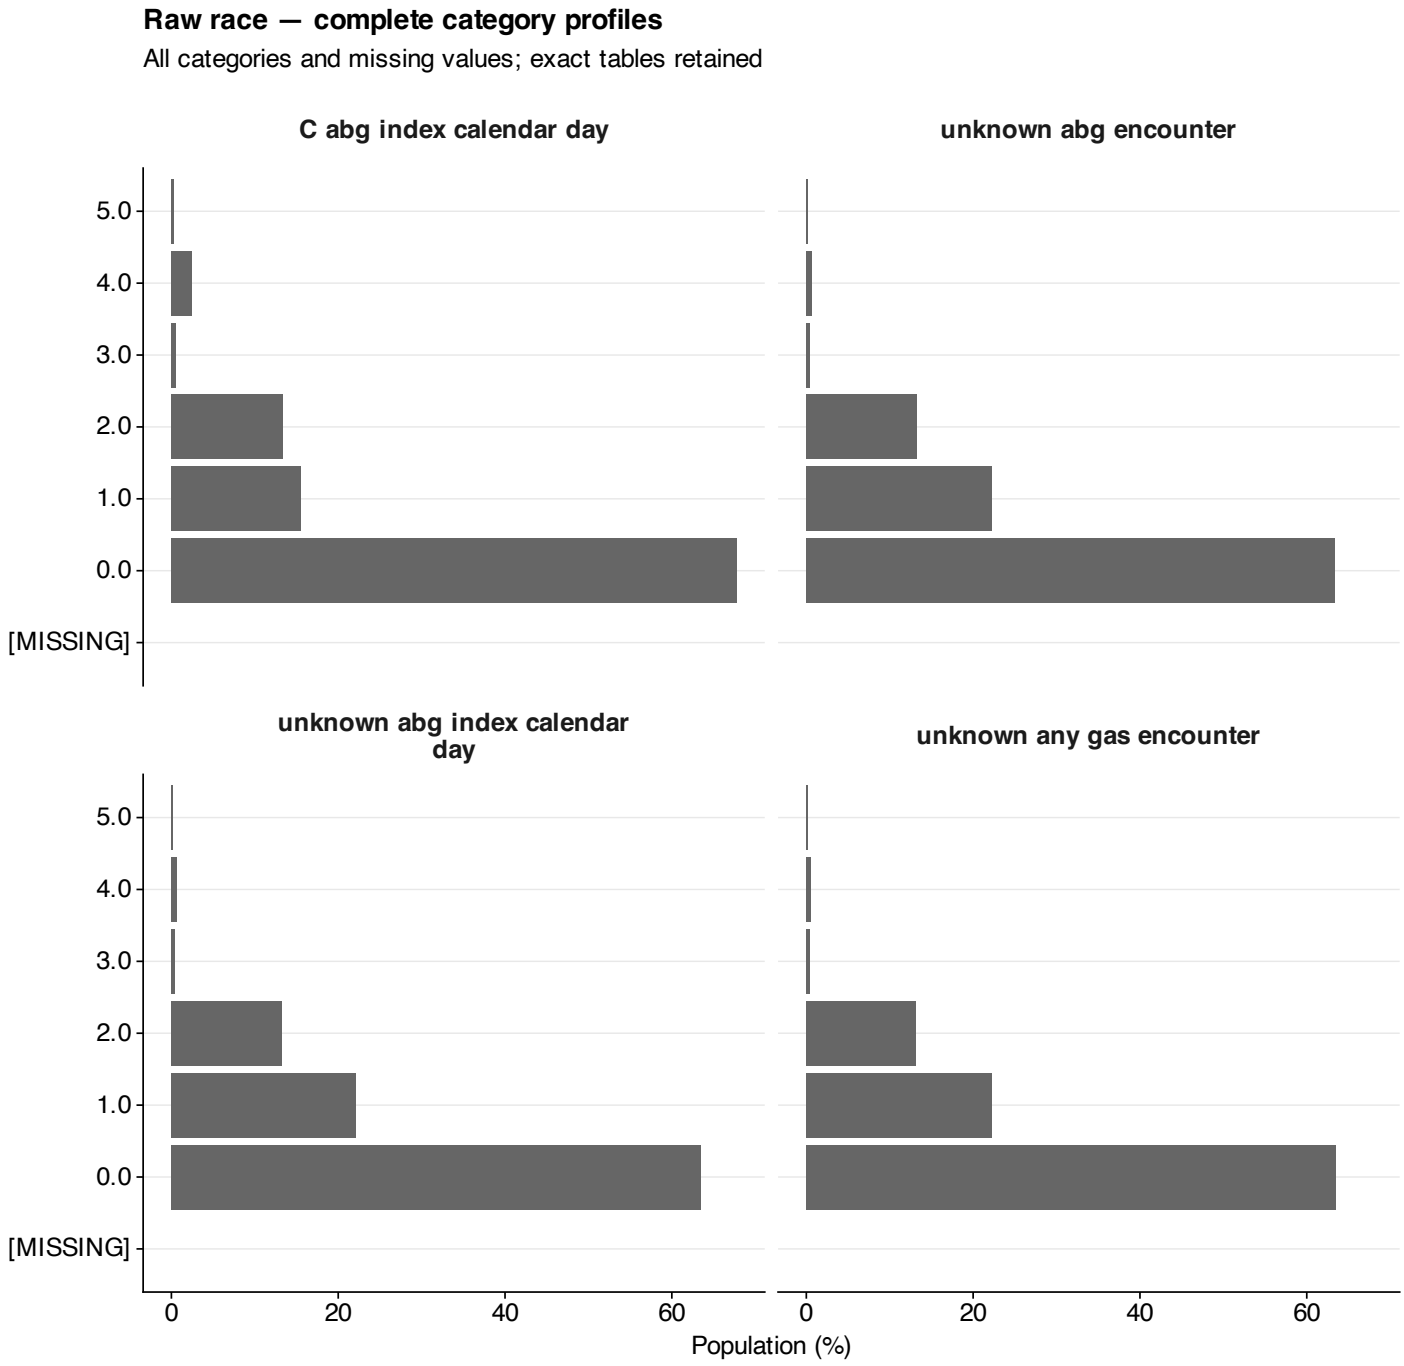

Figure 238: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete raw_race stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

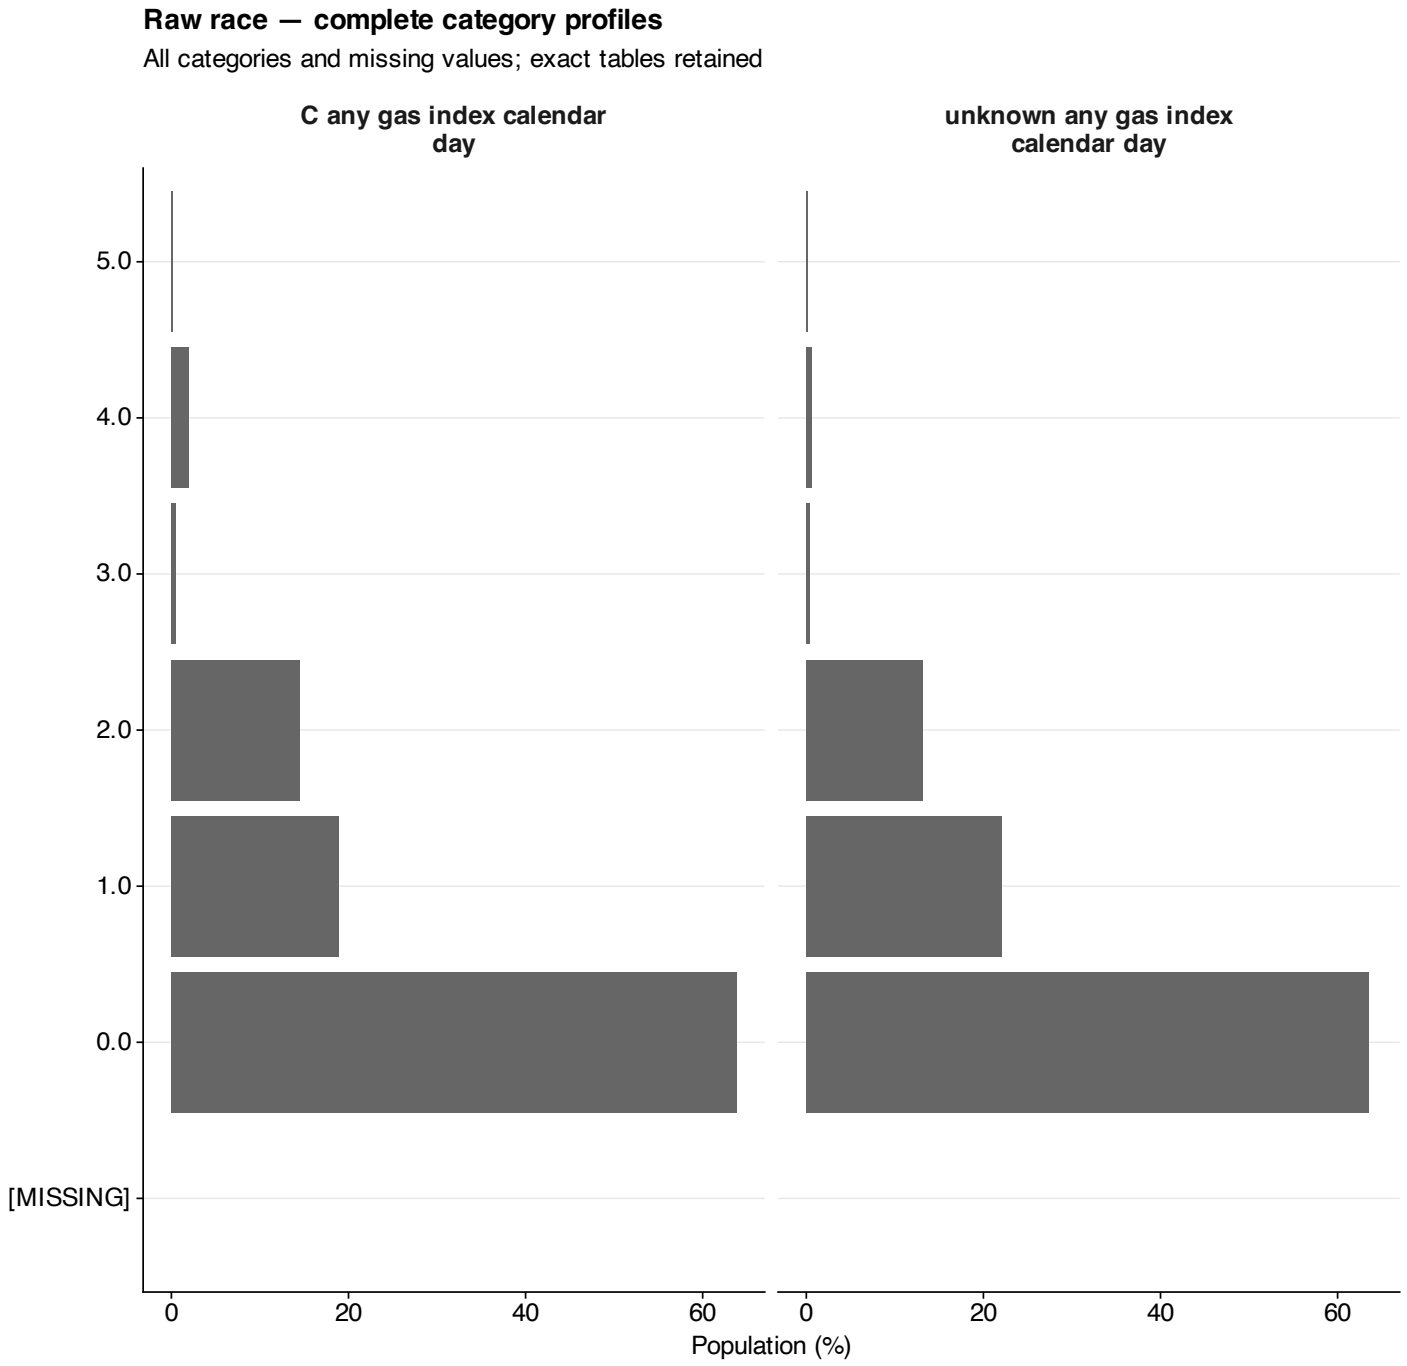

Figure 239: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete raw_race stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

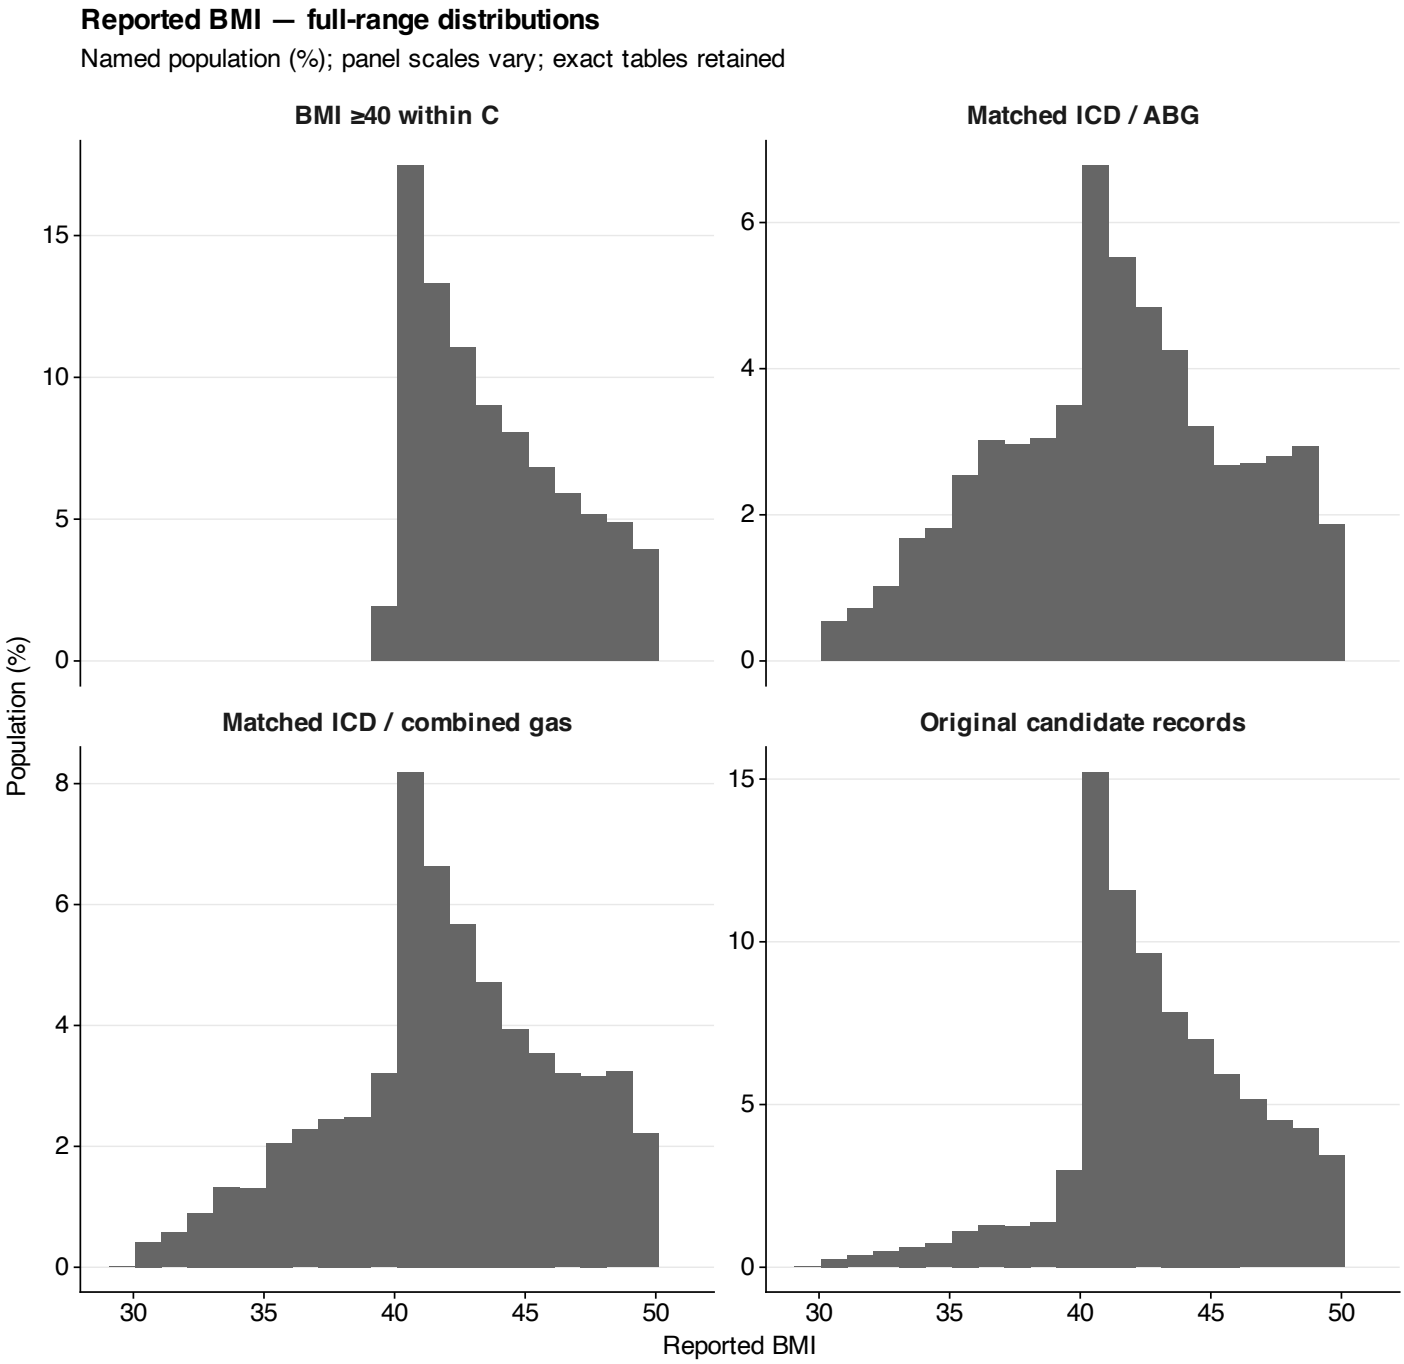

Figure 240: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete reported_bmi stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

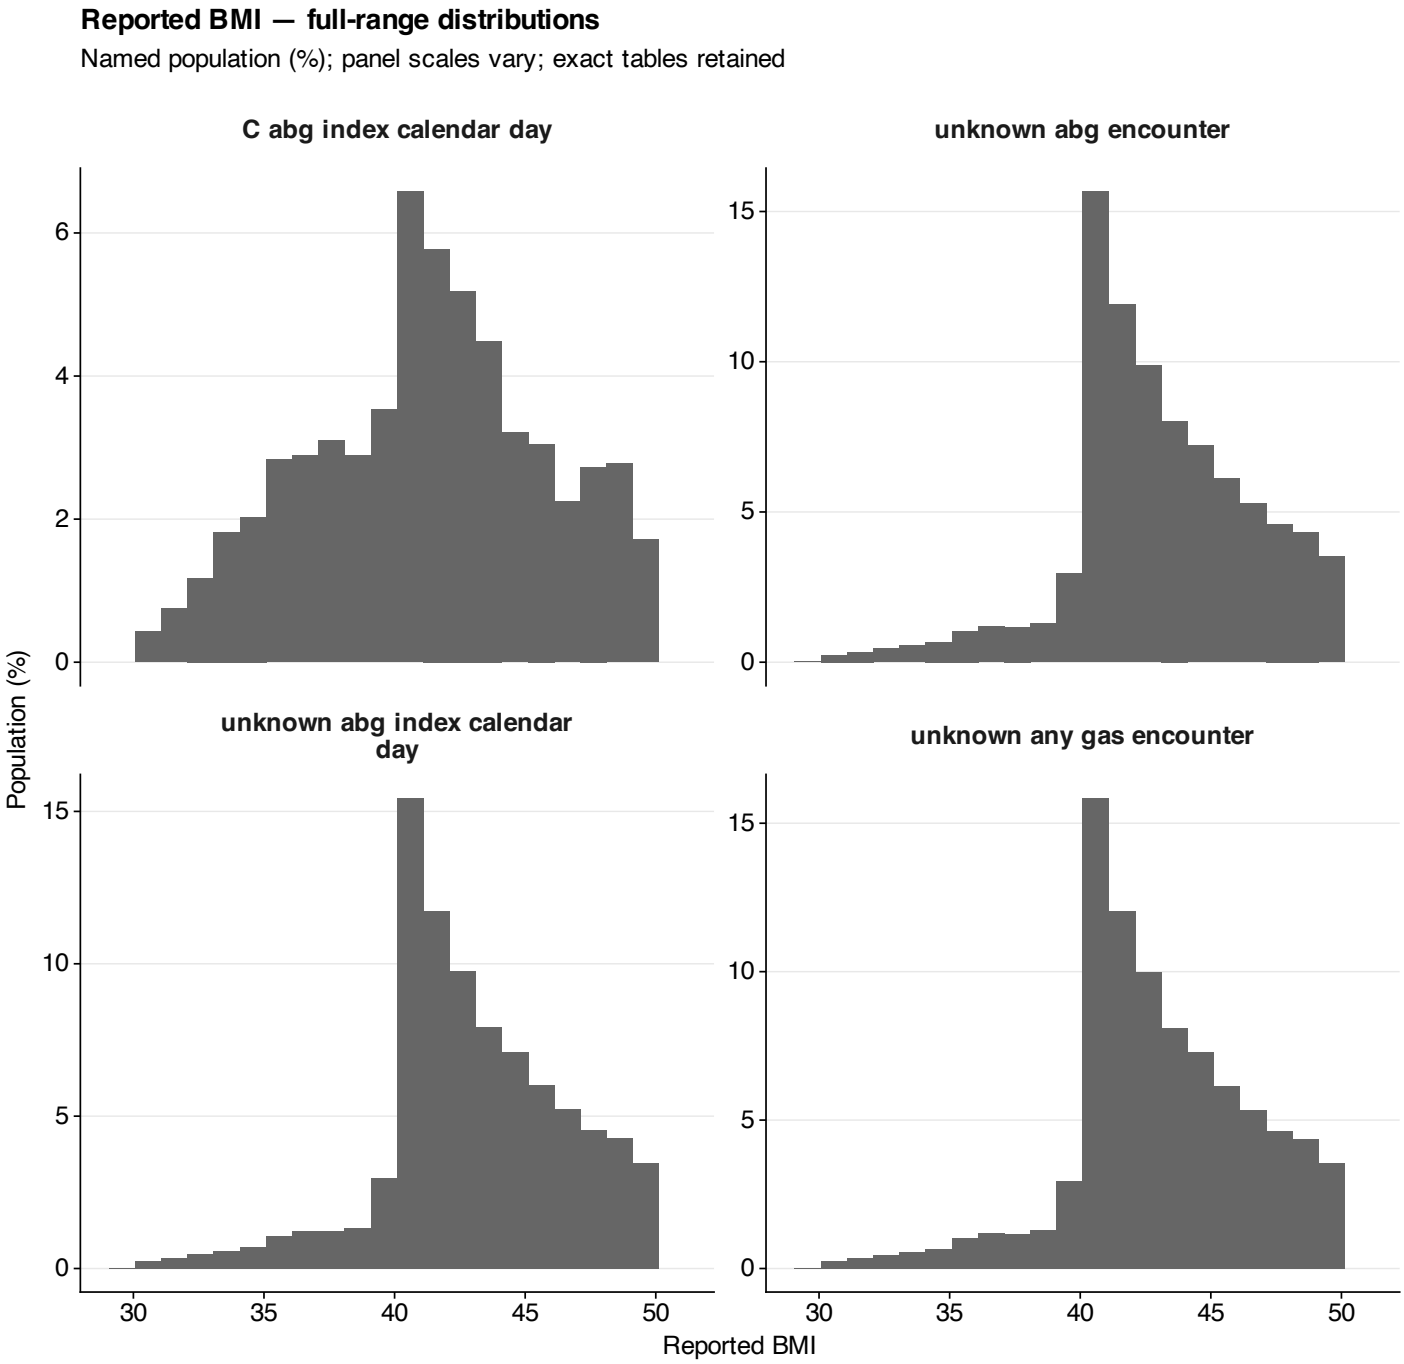

Figure 241: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete reported_bmi stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

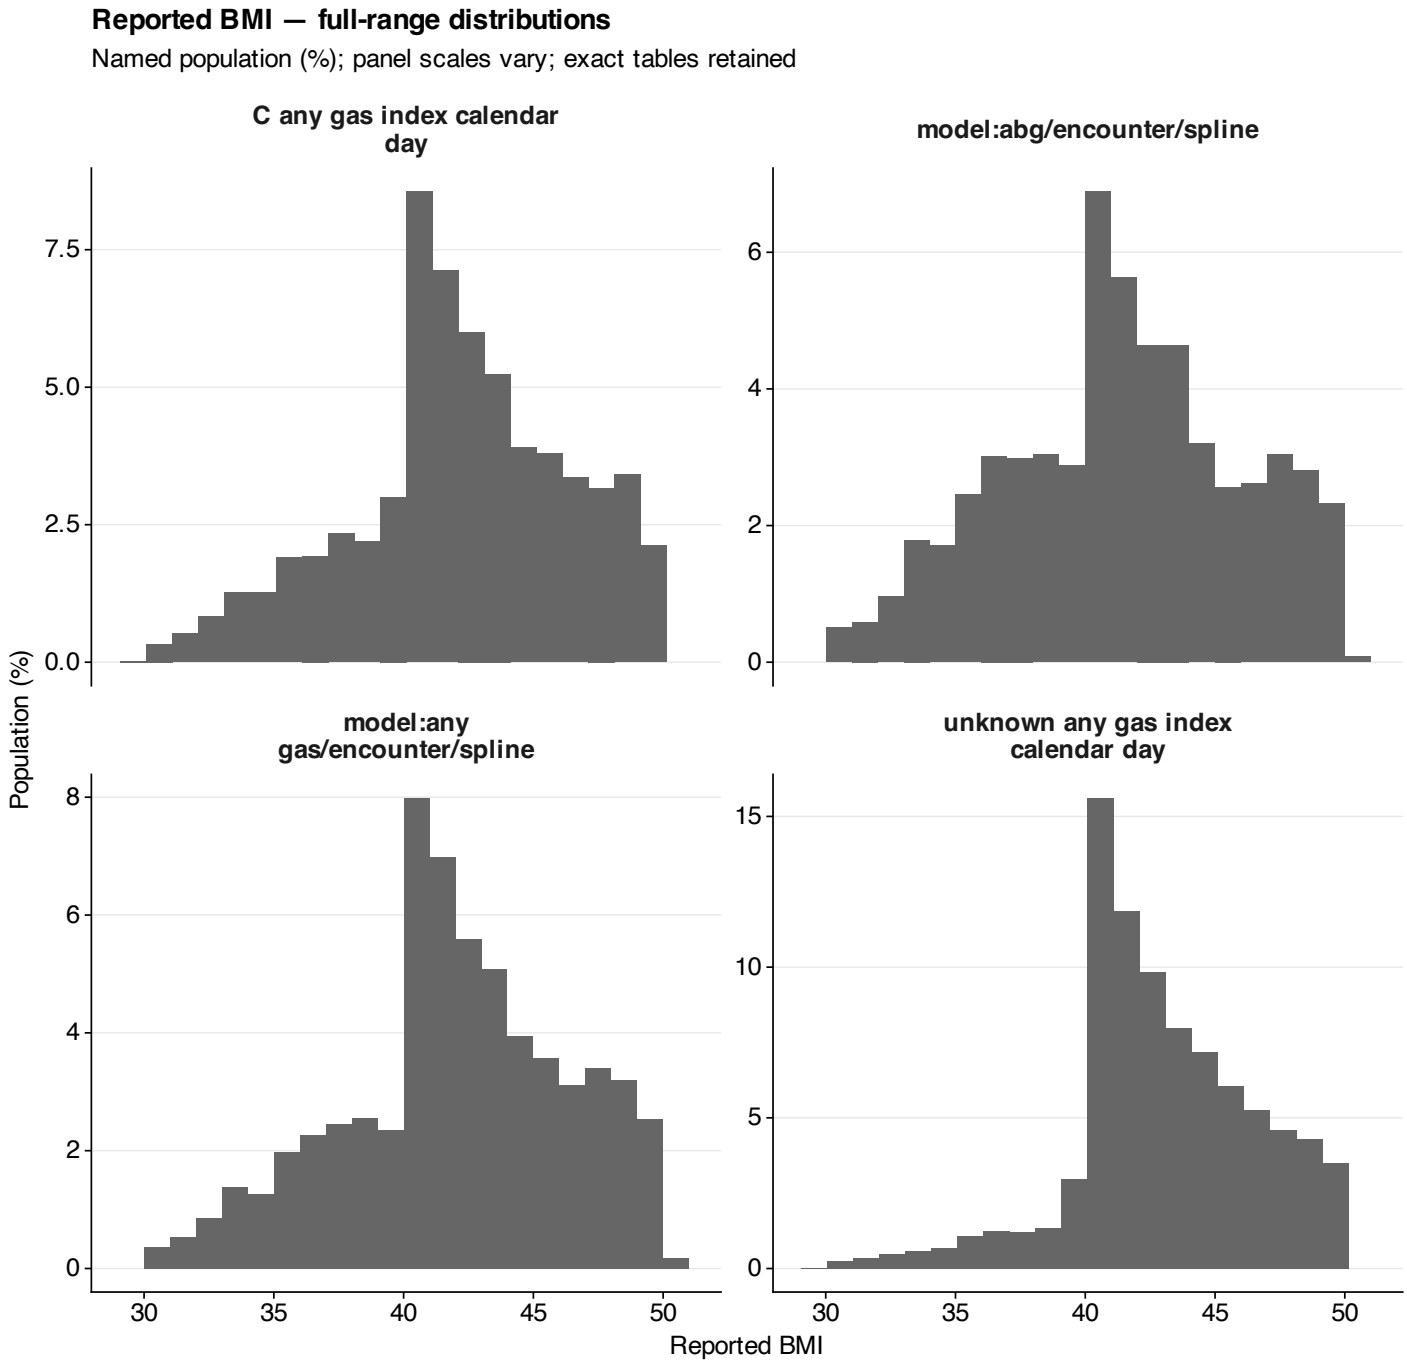

Figure 242: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete reported_bmi stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

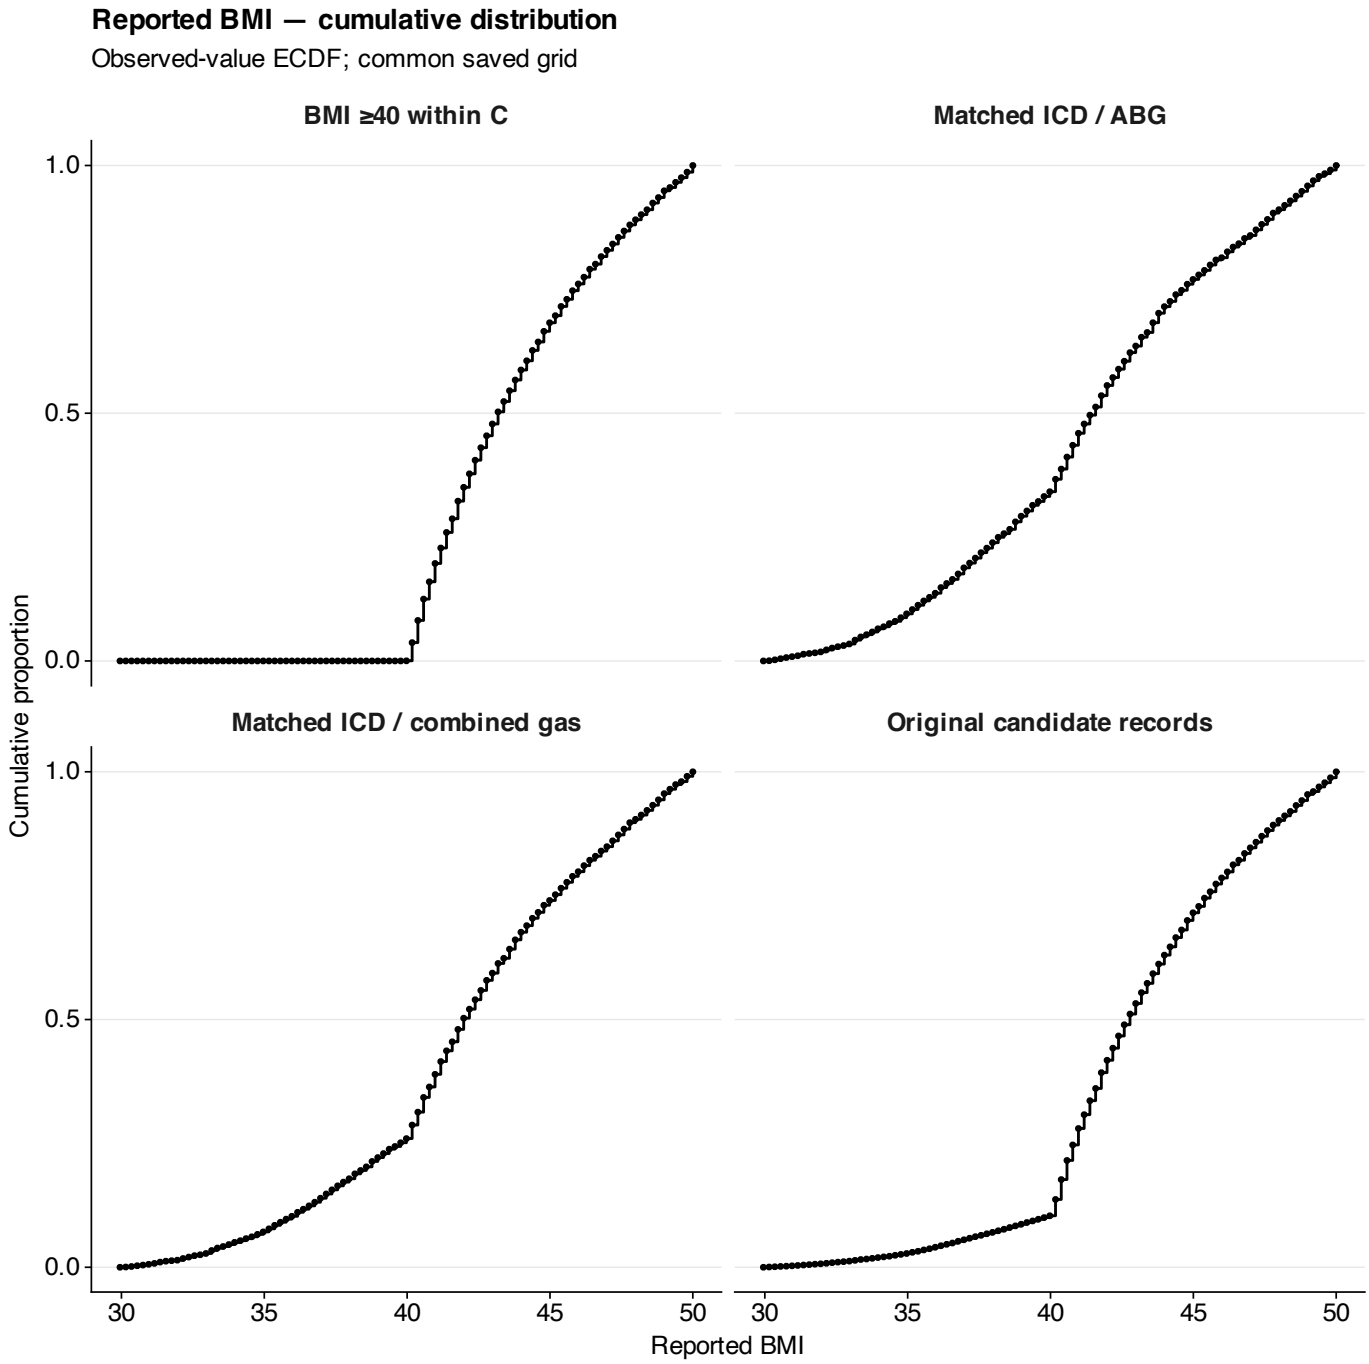

Figure 243: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. reported_bmi ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

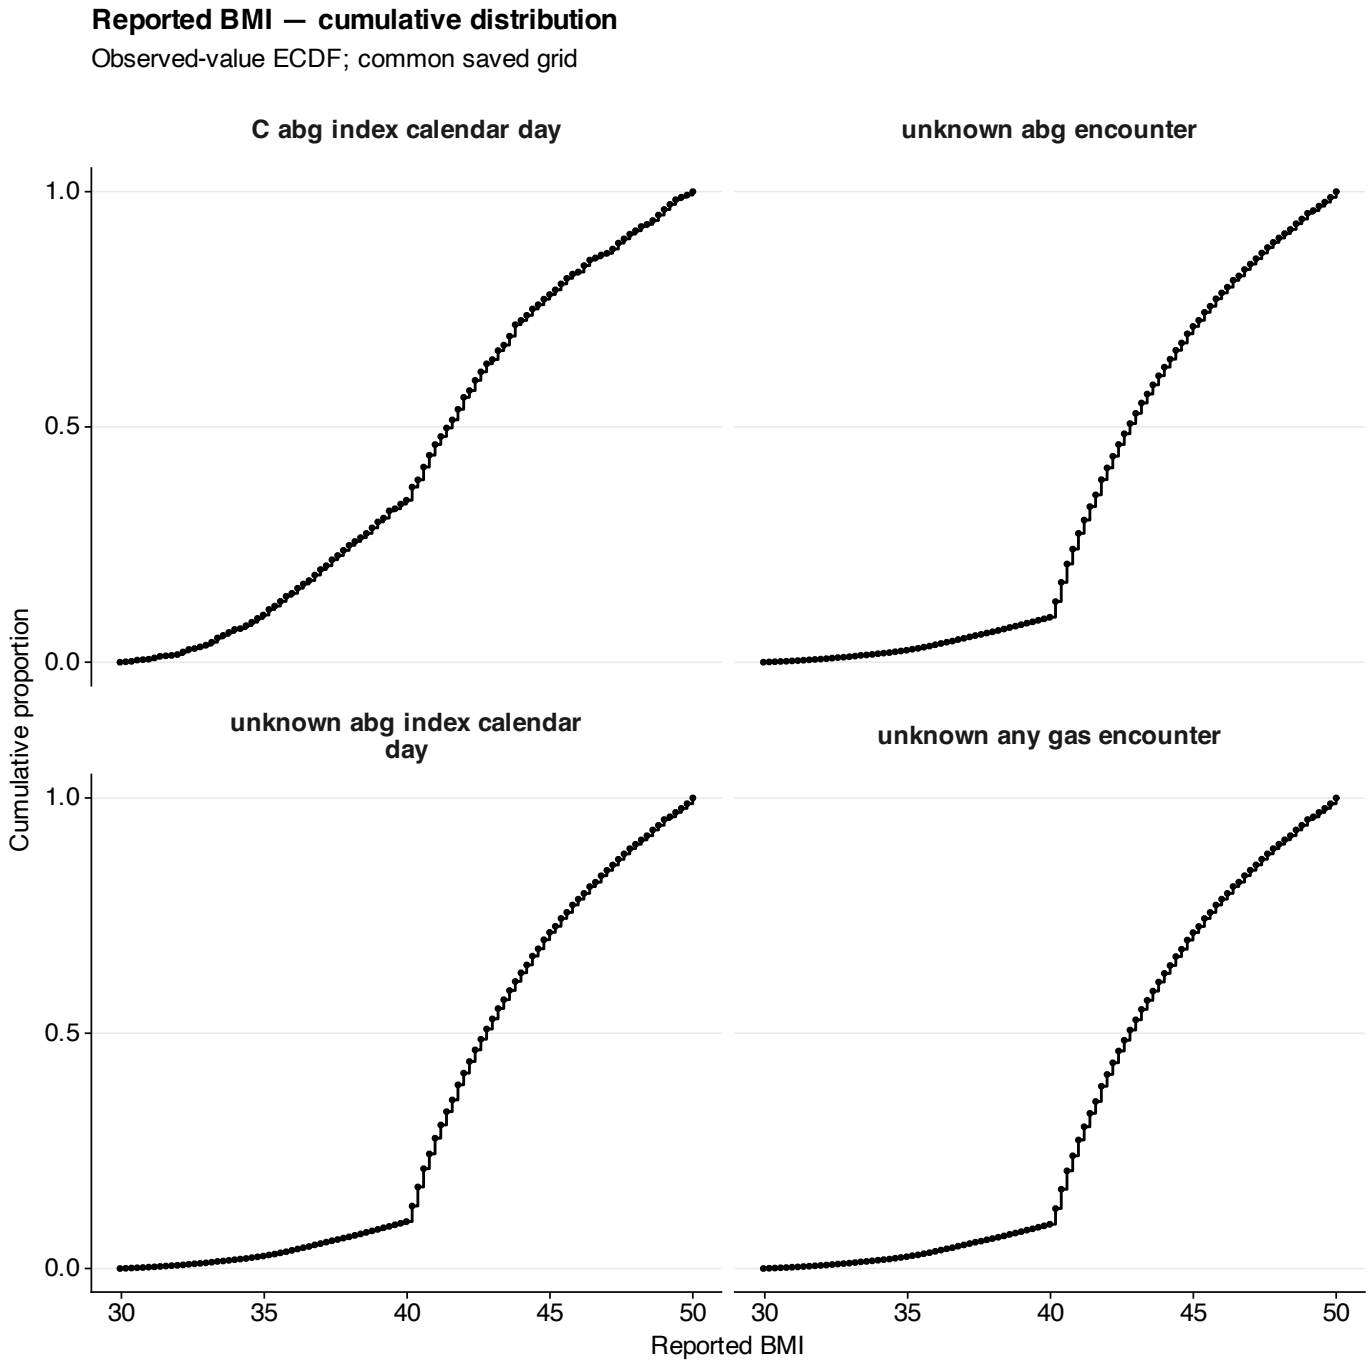

Figure 244: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. reported_bmi ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

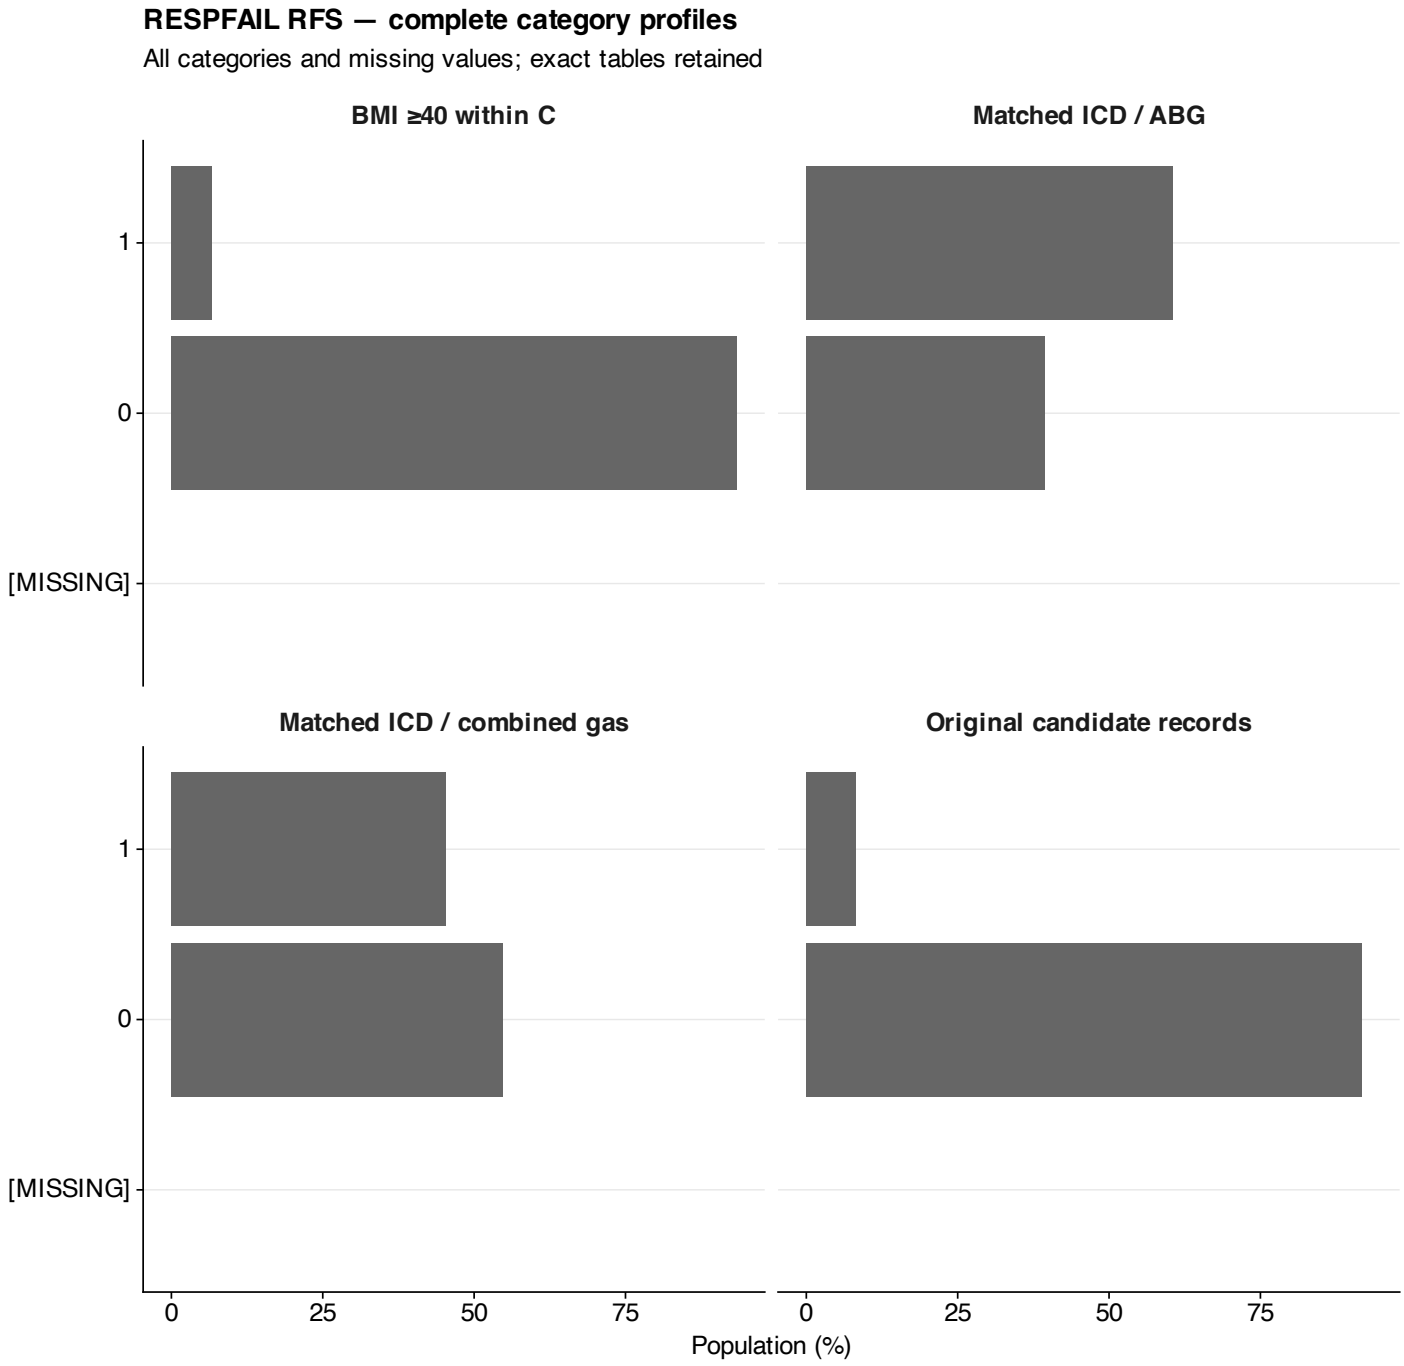

Figure 246: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete RESPFAIL_rfs stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

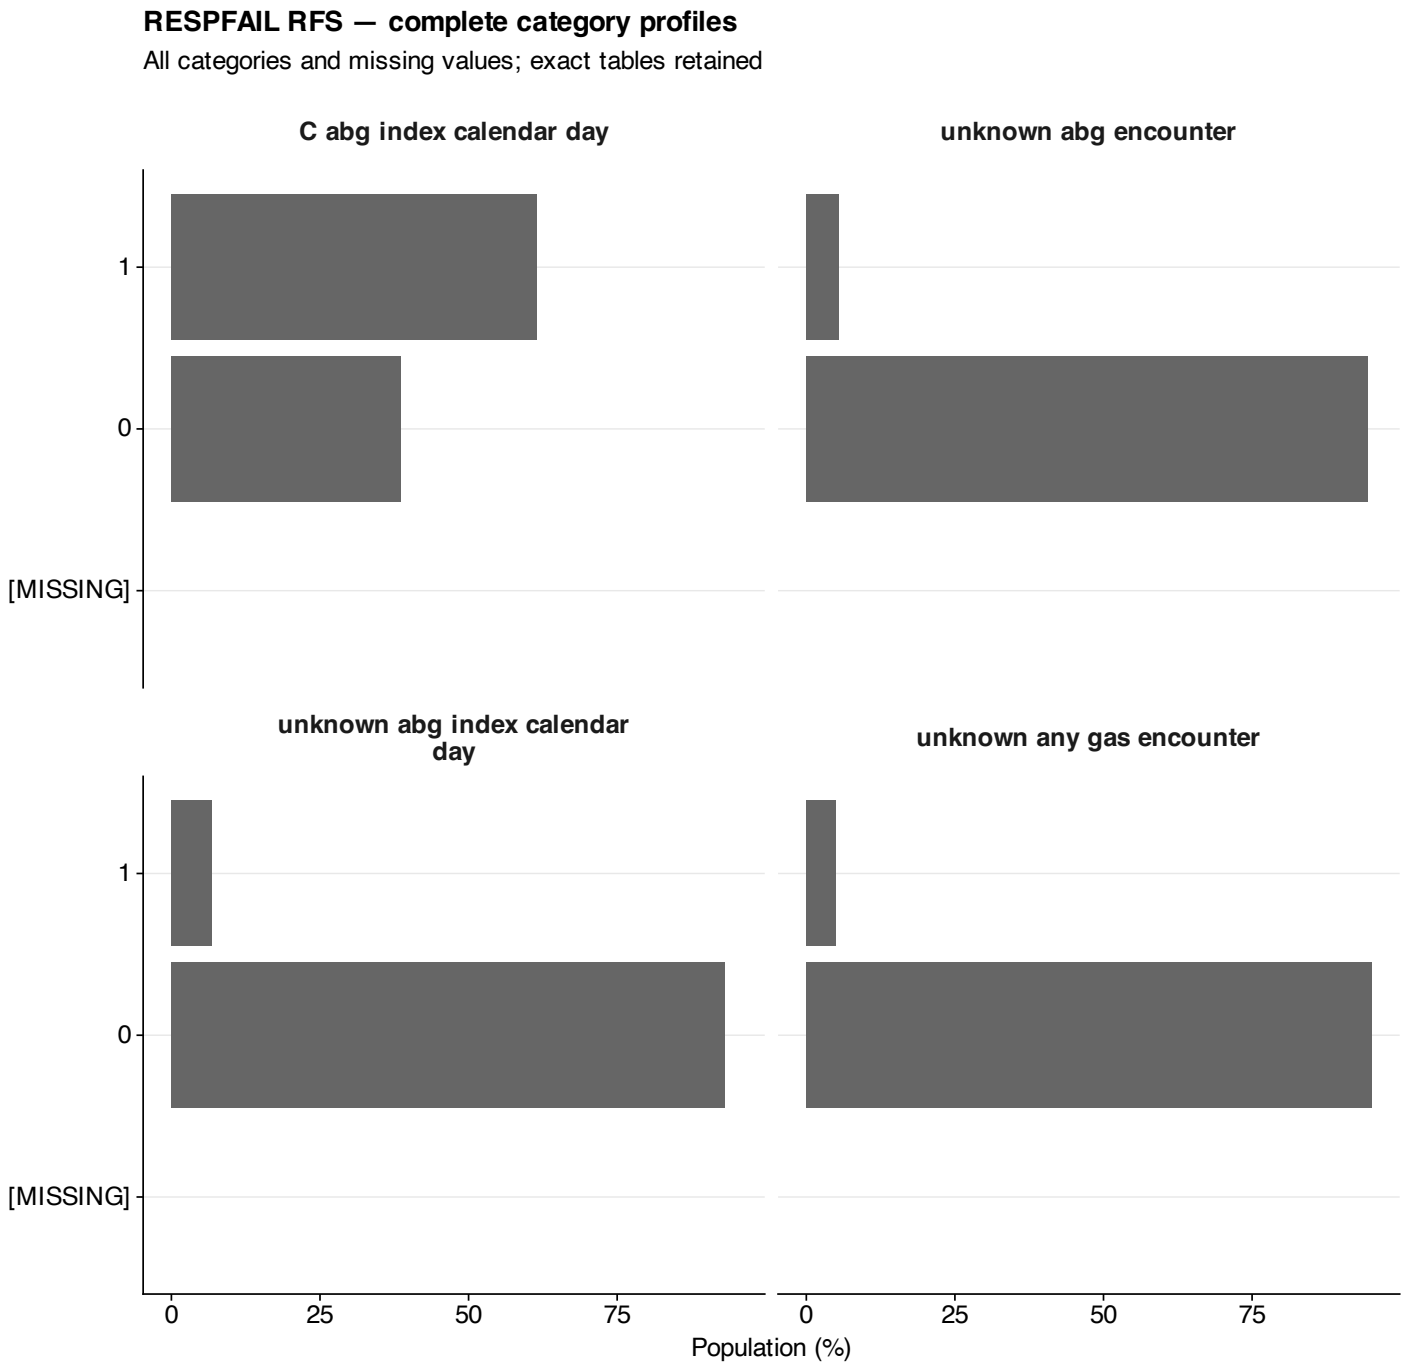

Figure 247: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete RESPFAIL_rfs stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

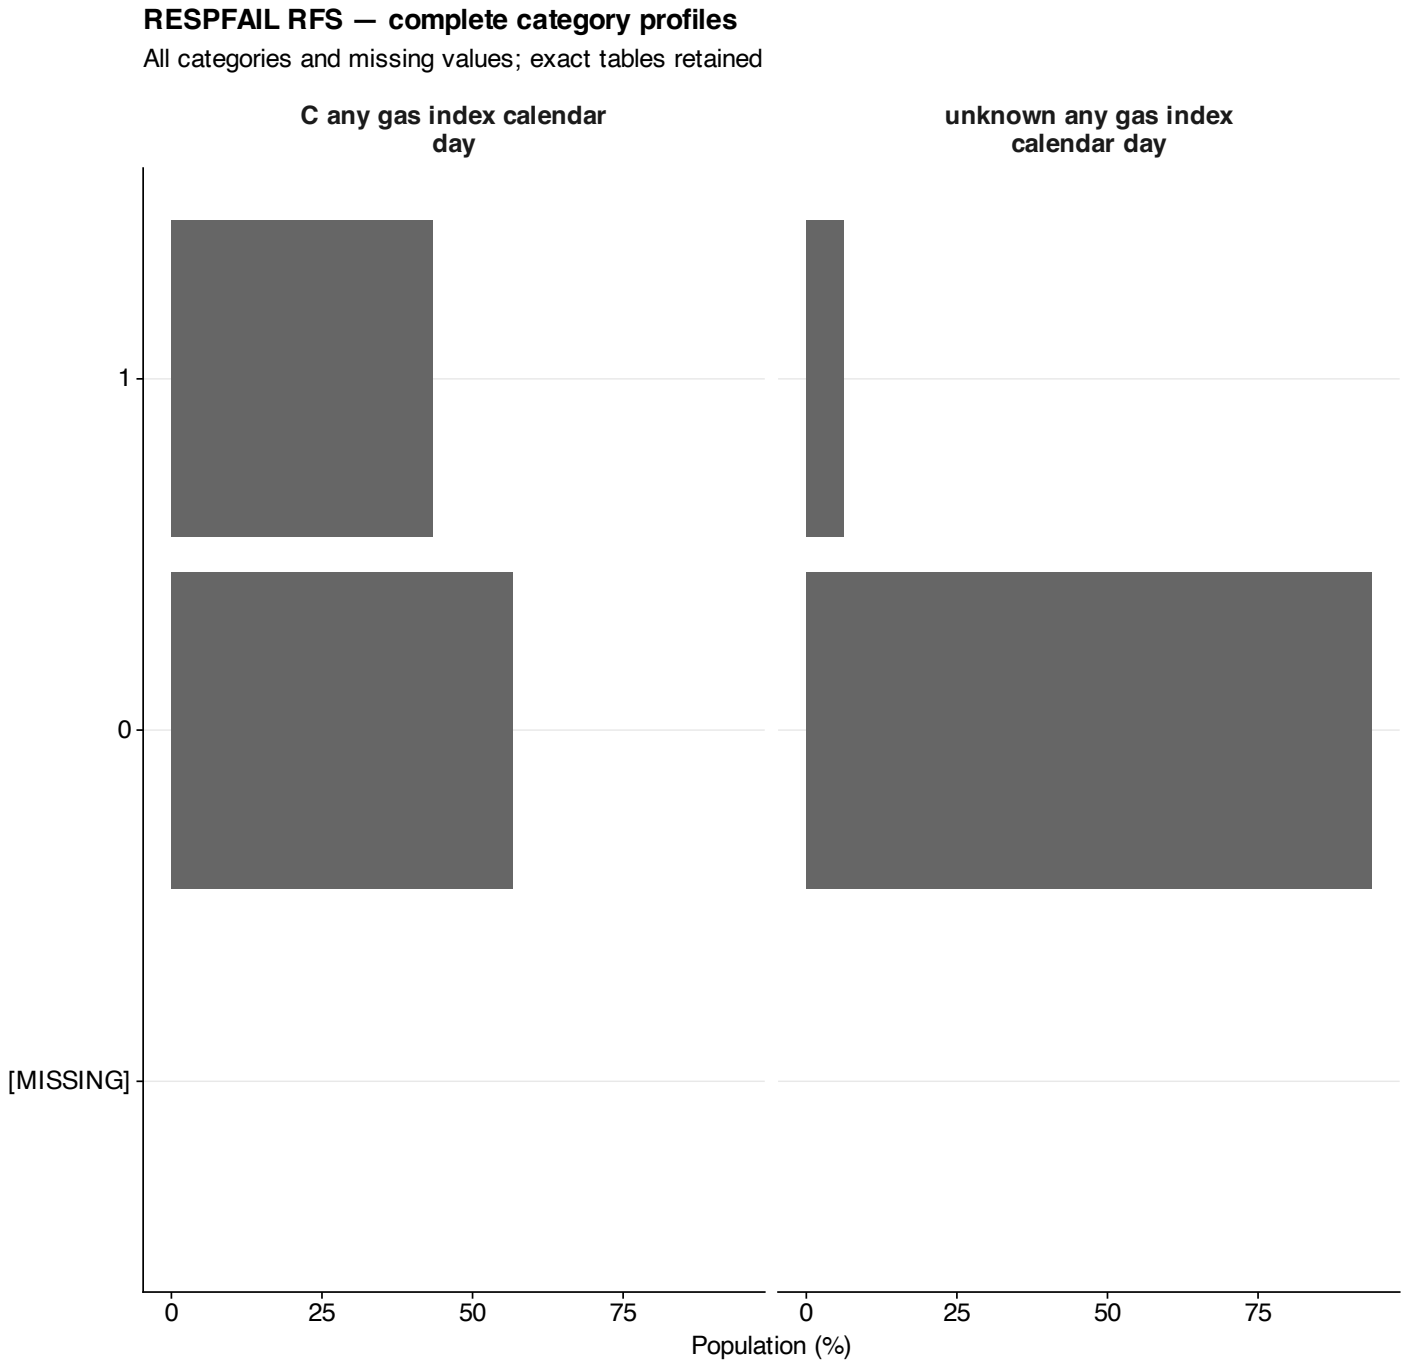

Figure 248: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete RESPFAIL_rfs stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

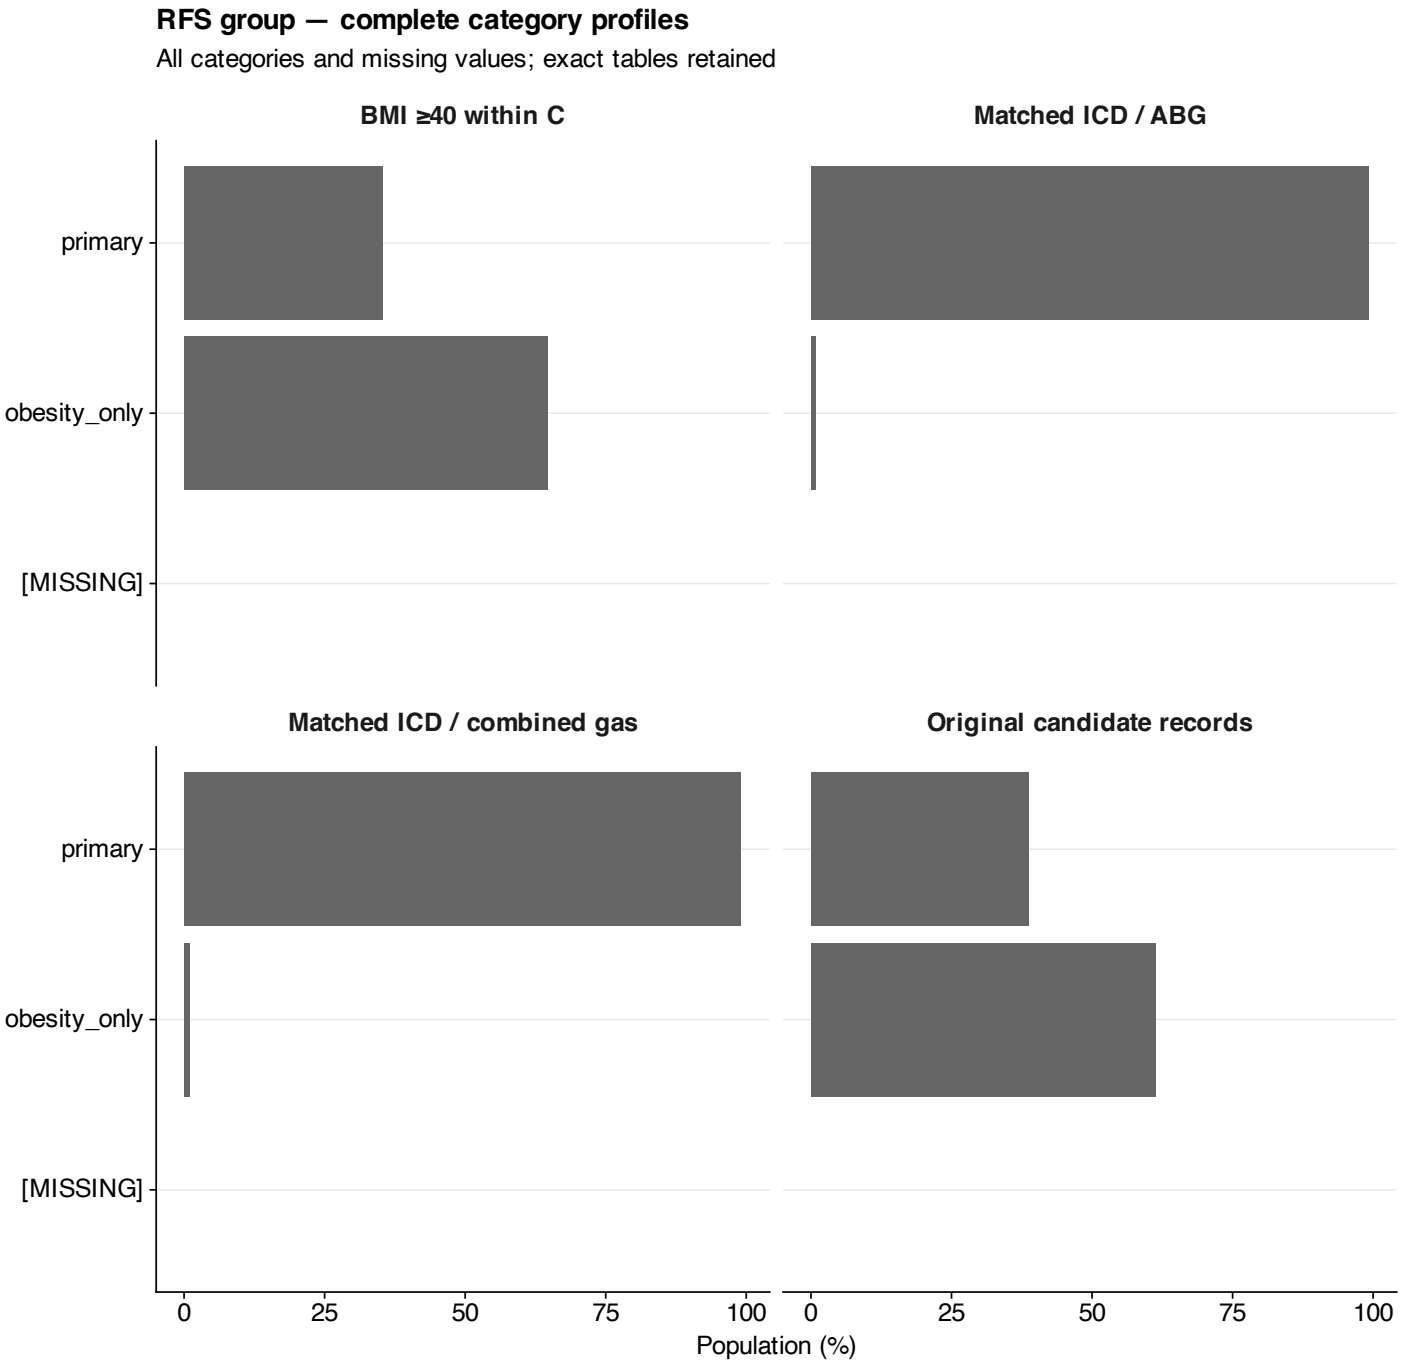

Figure 249: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete rfs_group stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

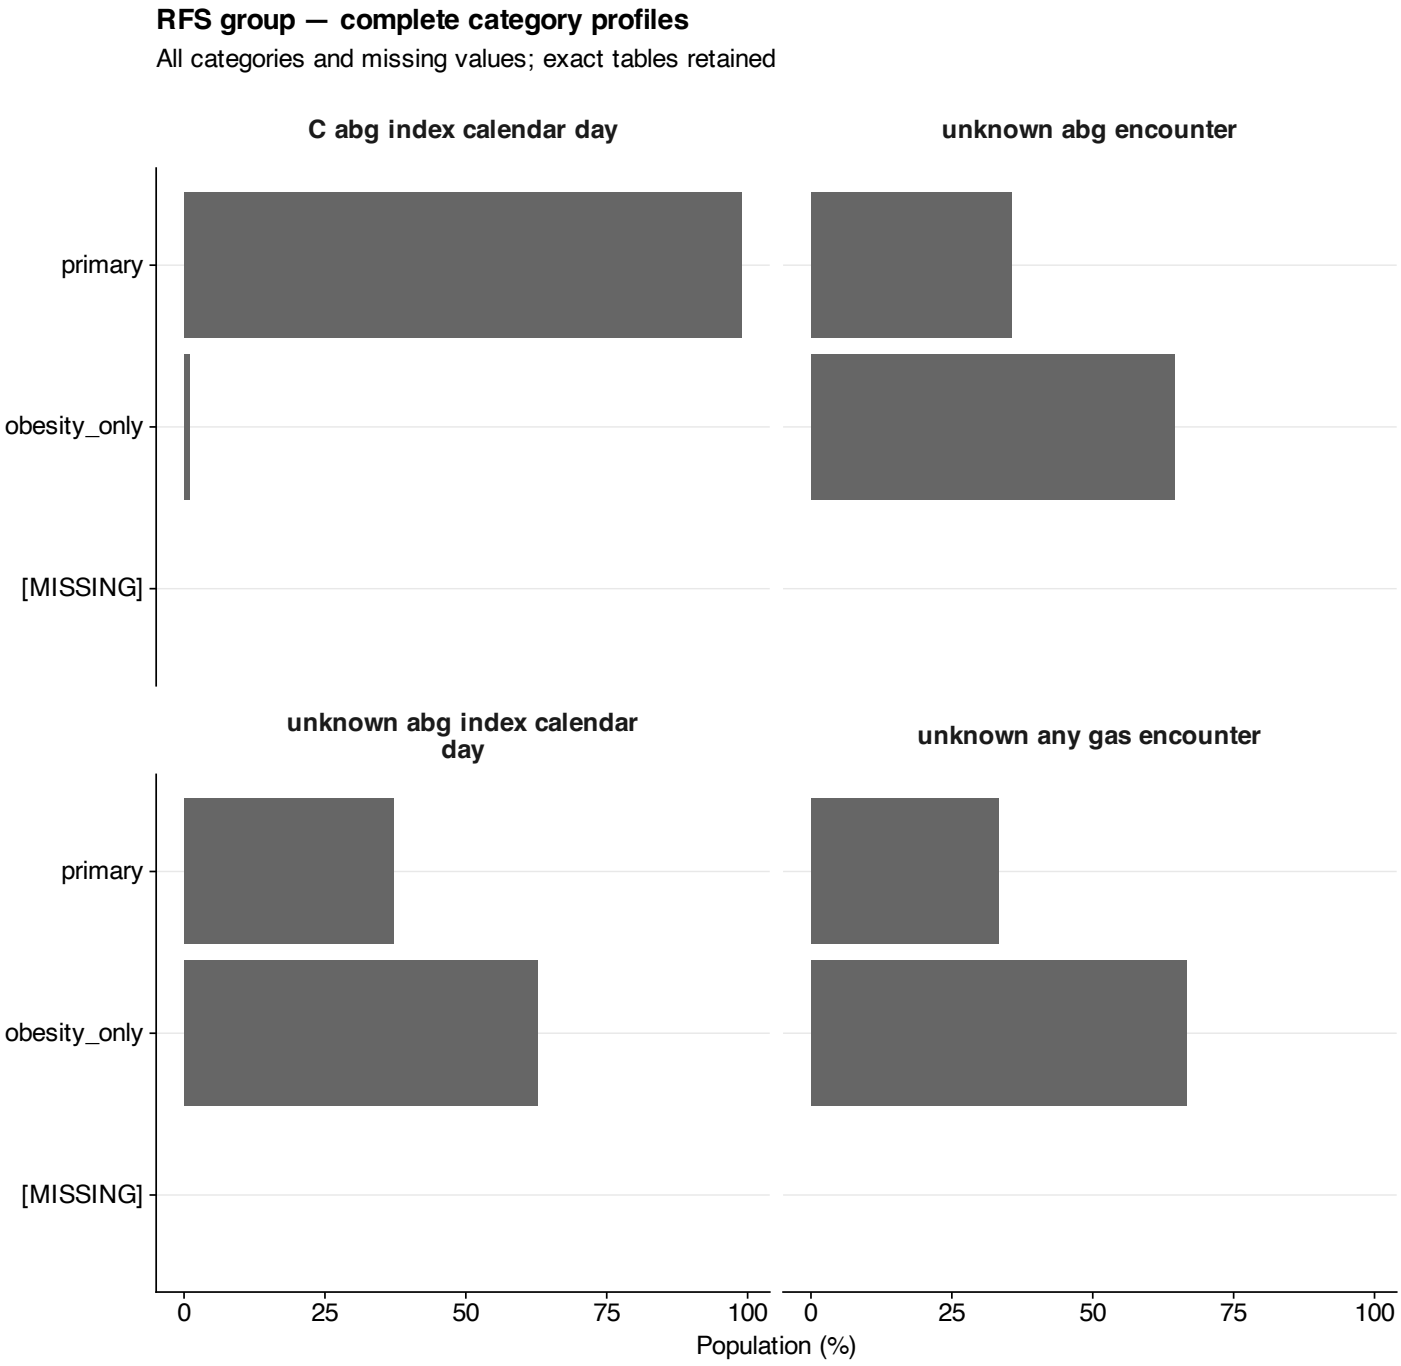

Figure 250: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete rfs_group stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

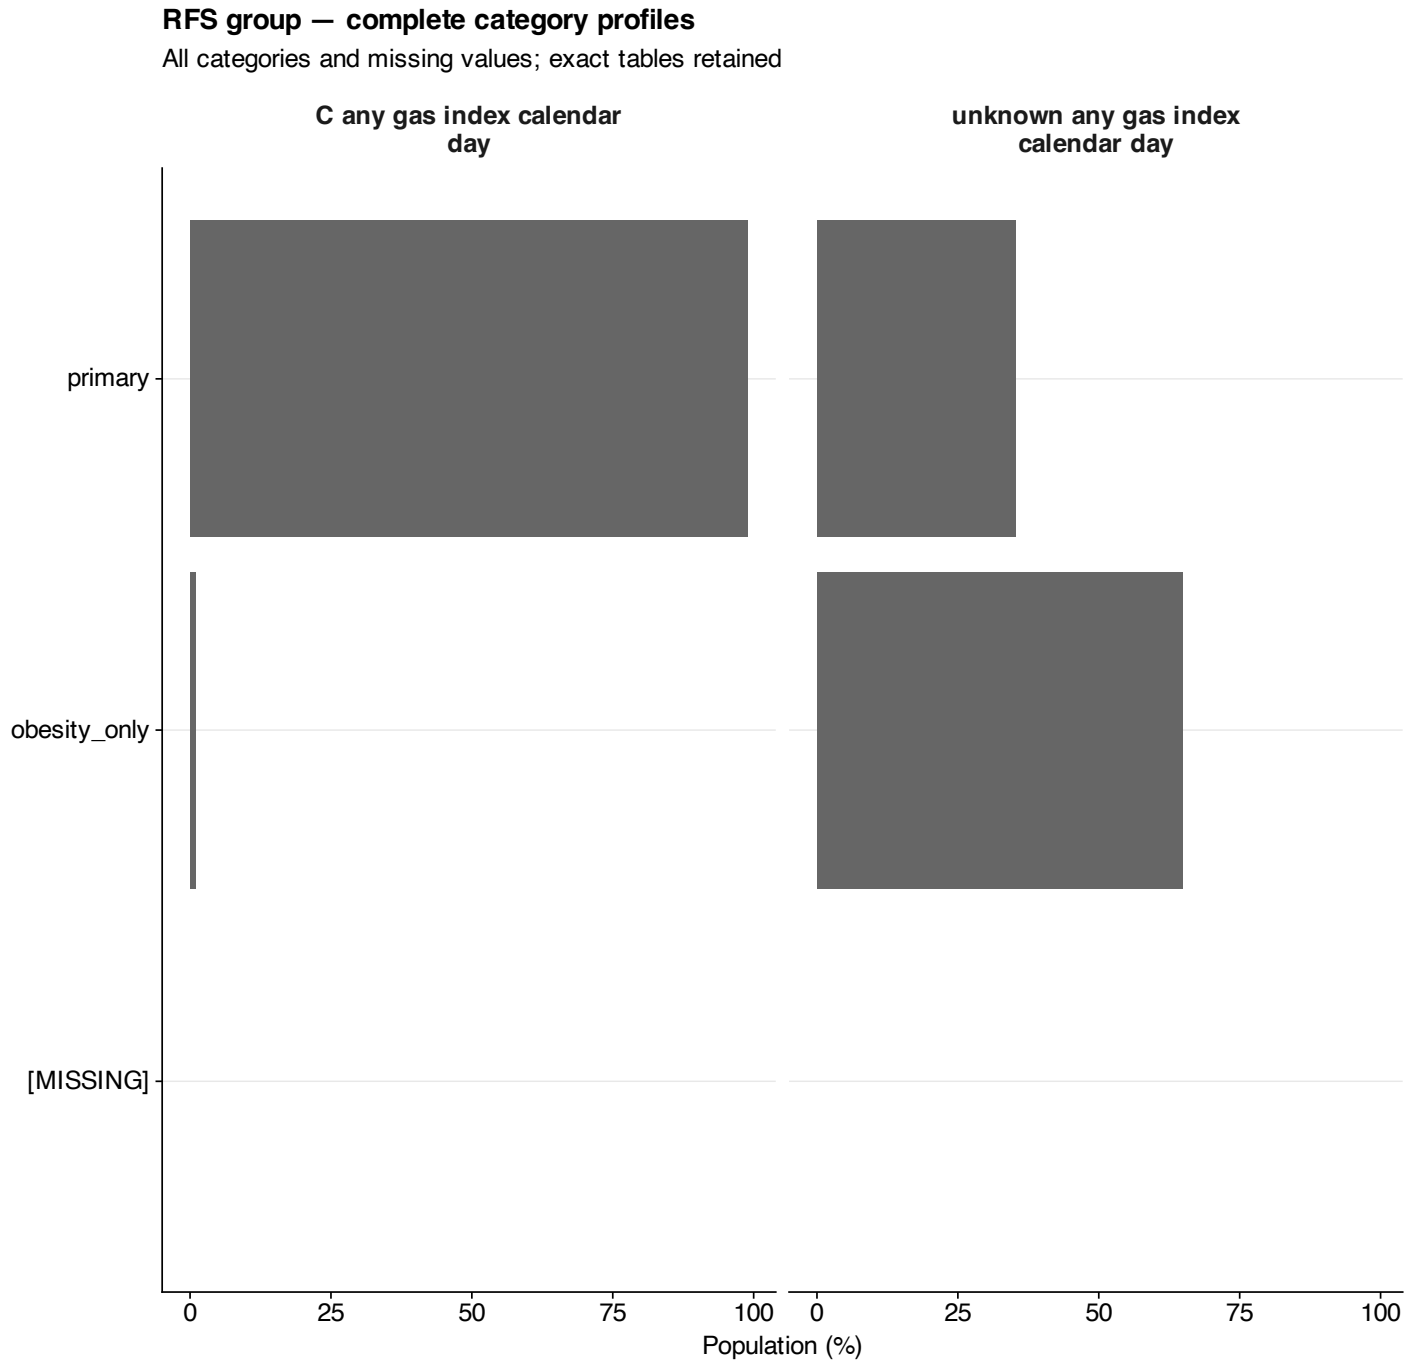

Figure 251: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete rfs_group stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

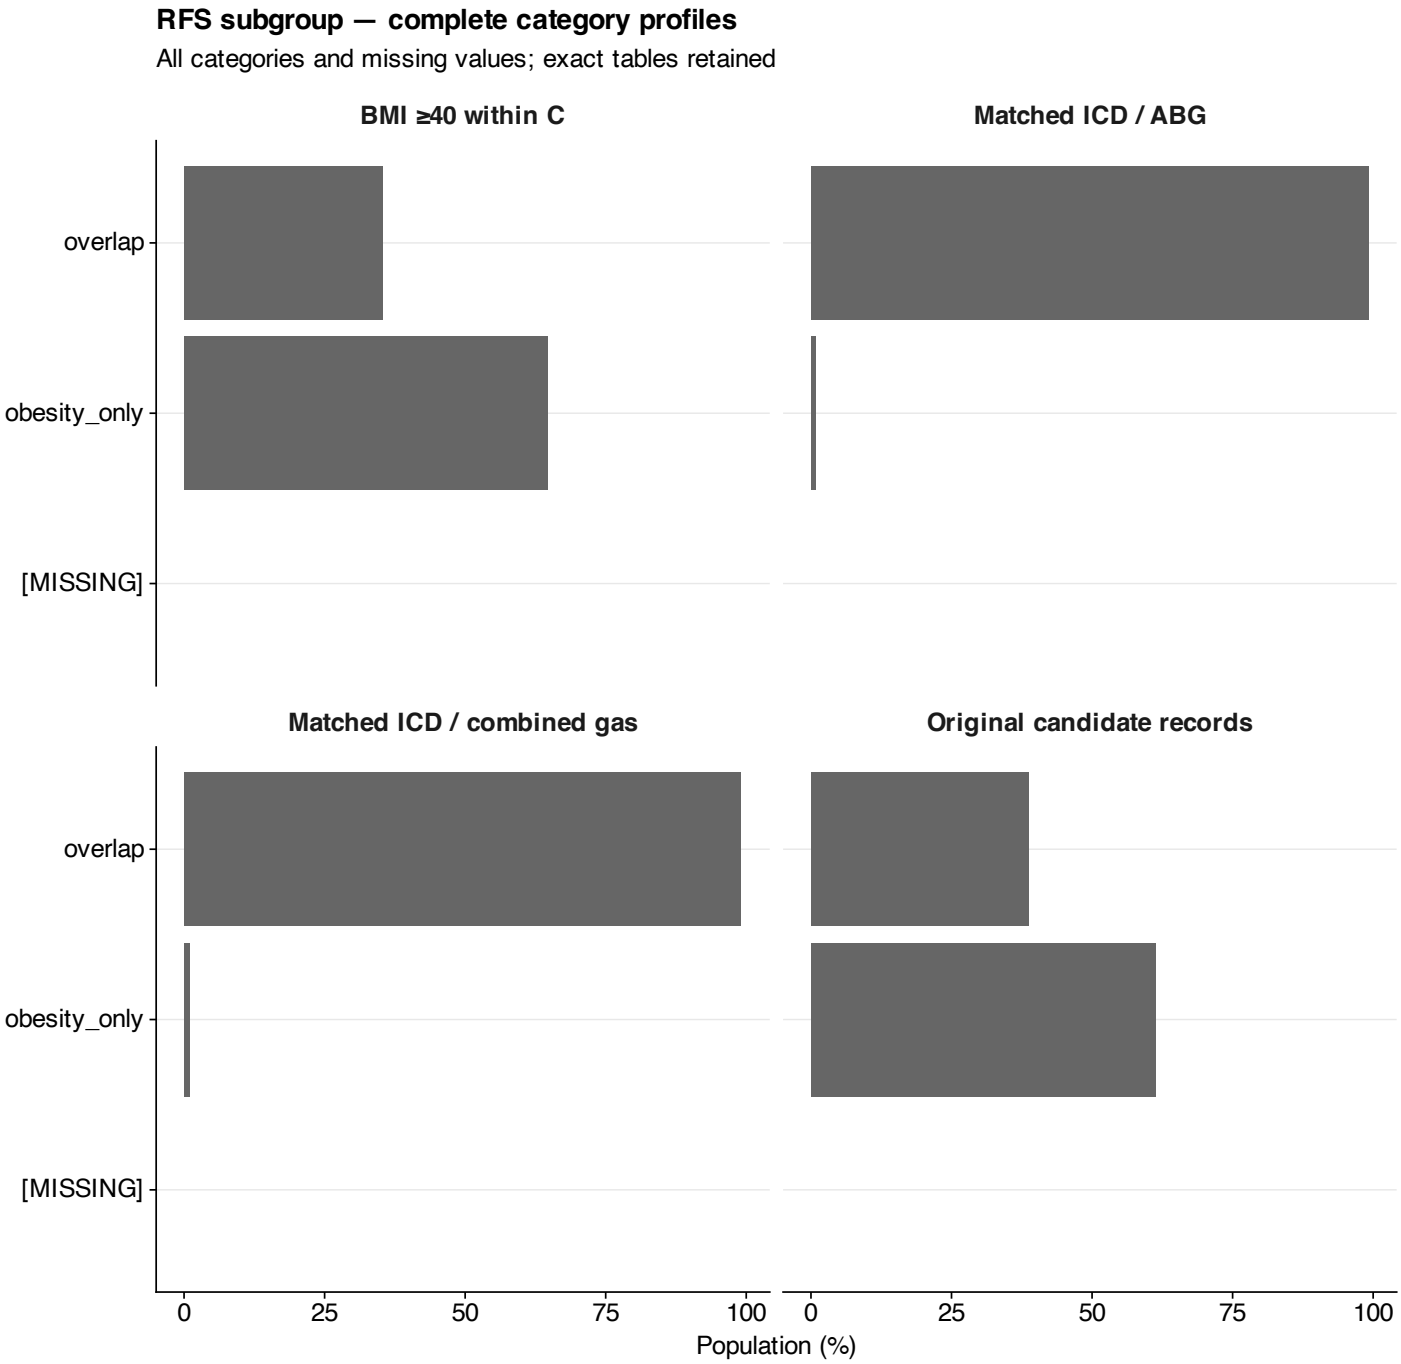

Figure 252: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete rfs_subgroup stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

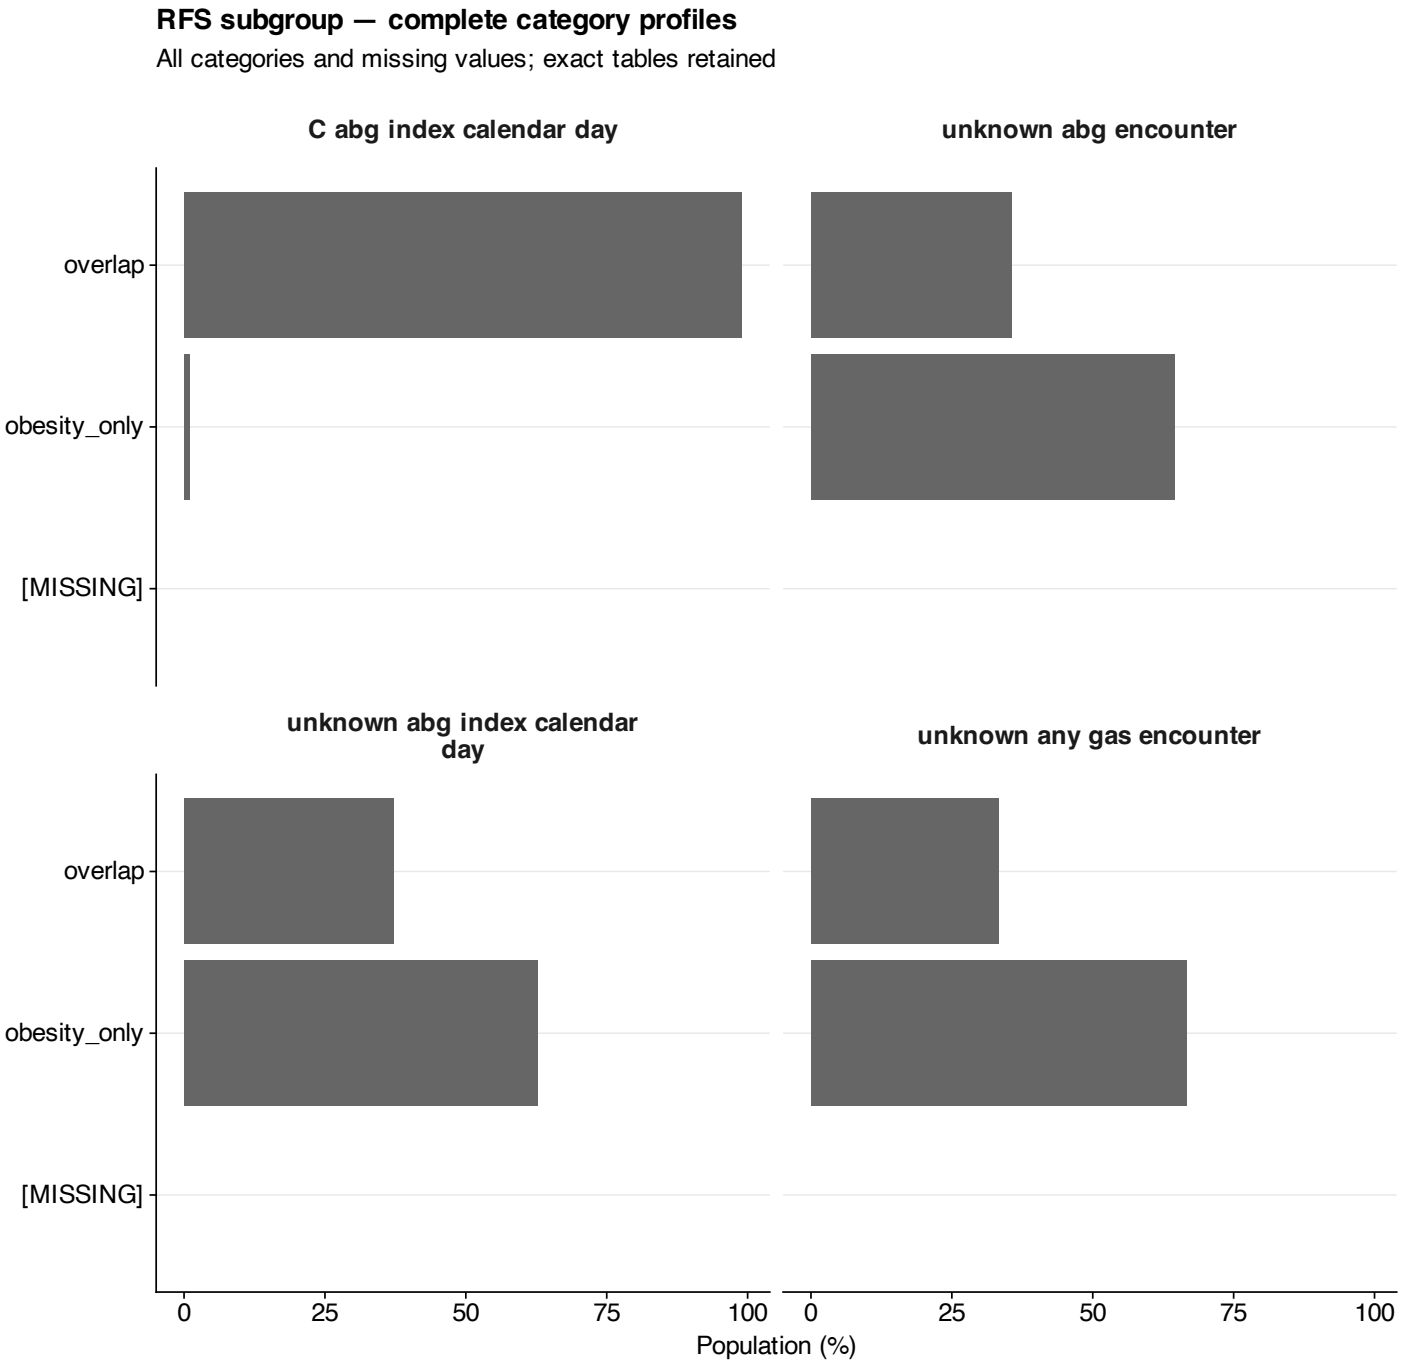

Figure 253: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete rfs_subgroup stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

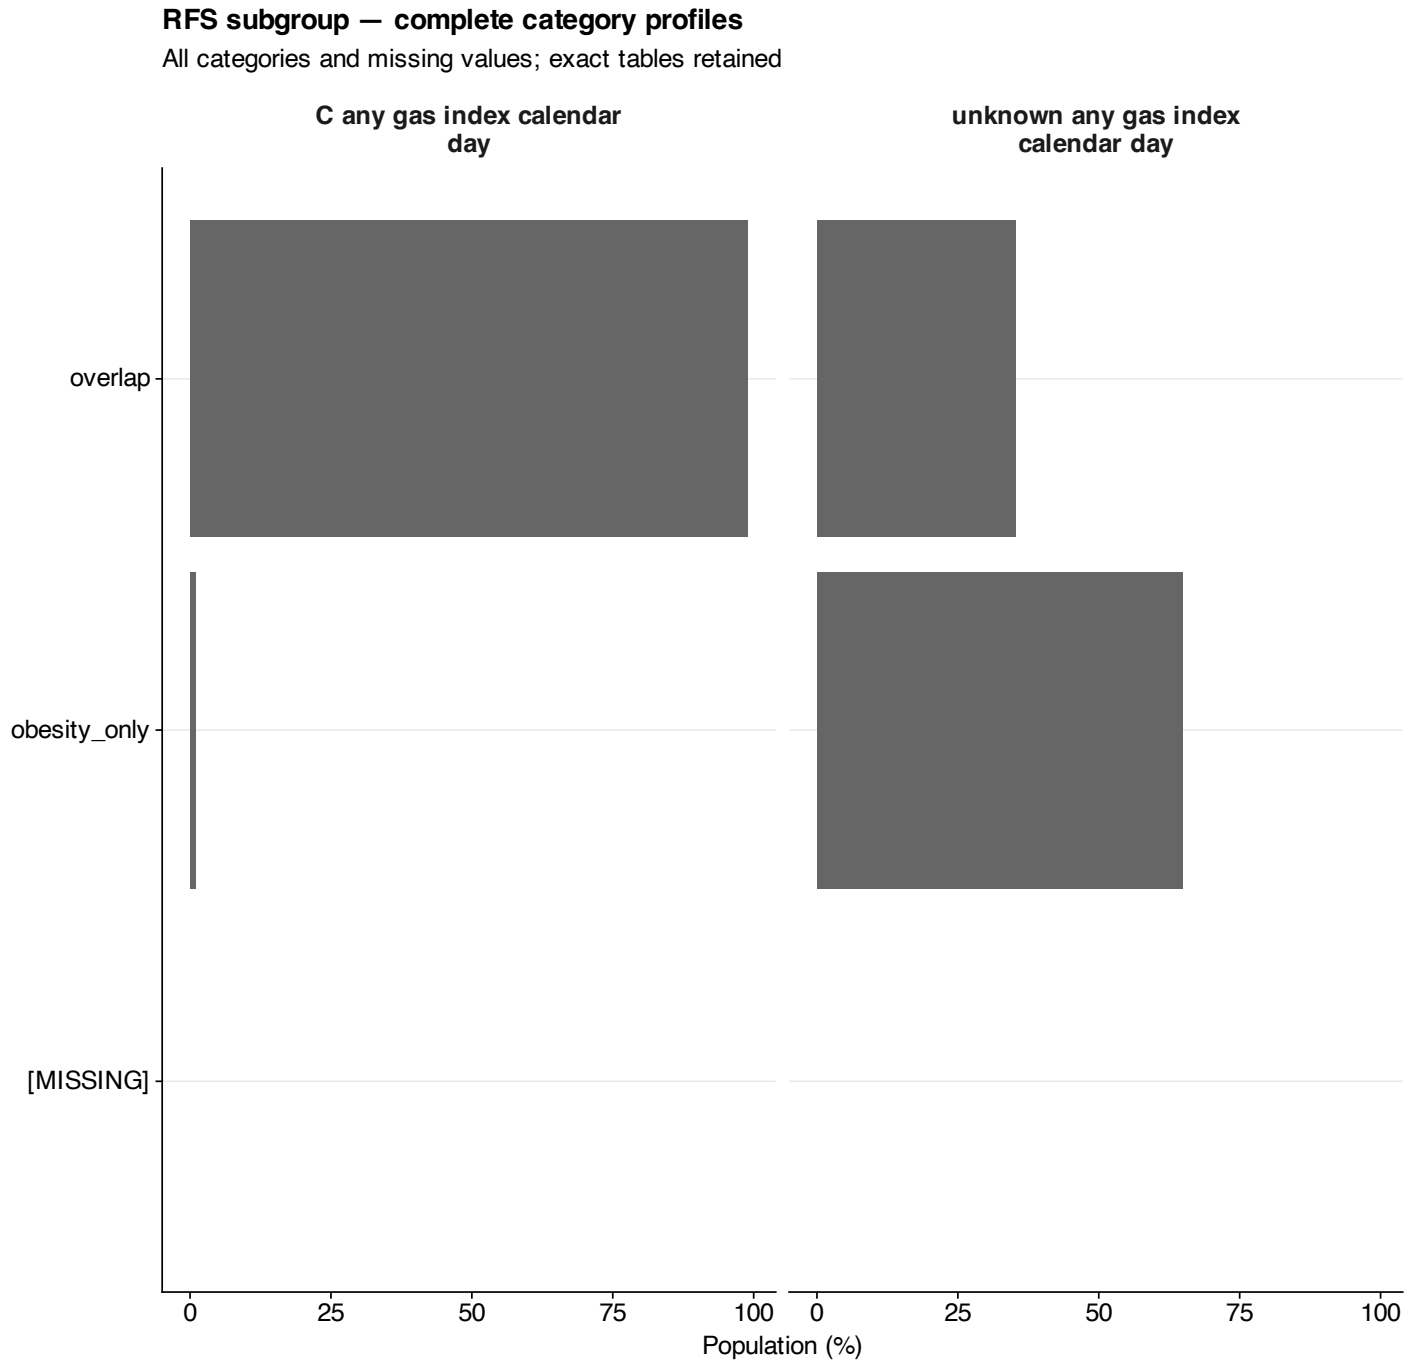

Figure 254: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete rfs_subgroup stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

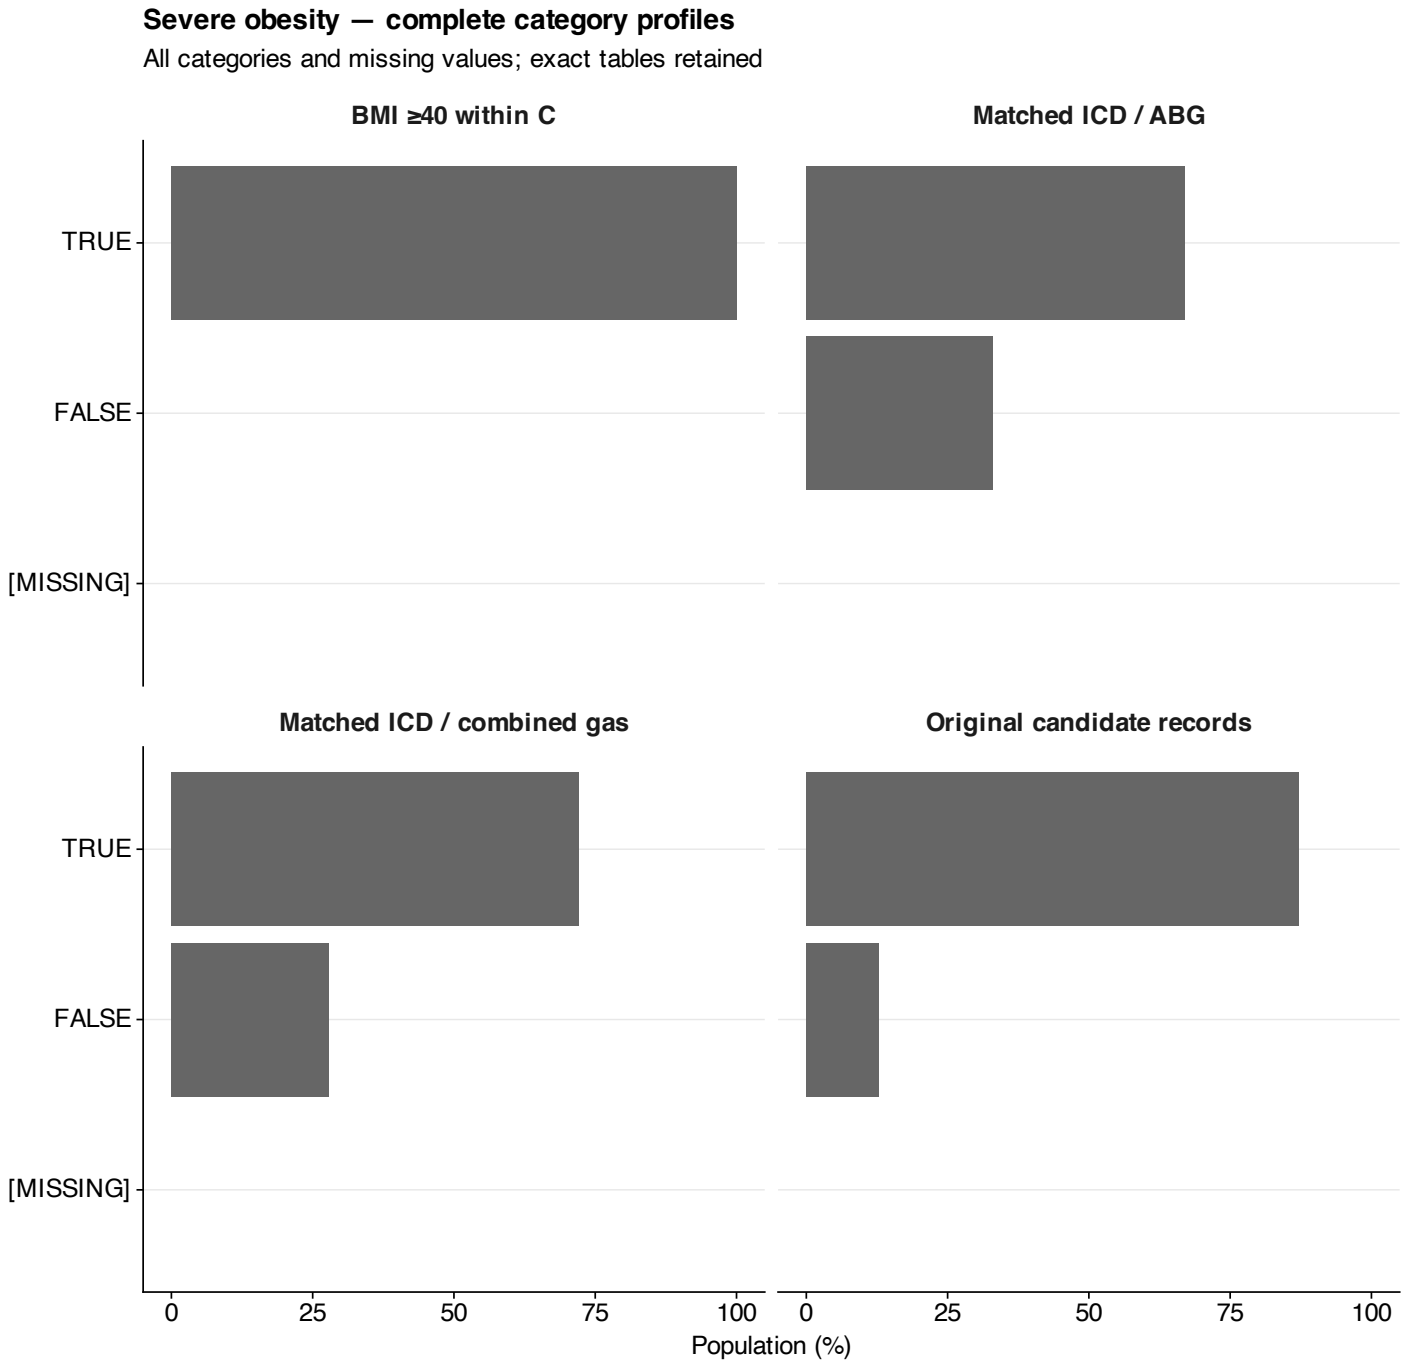

Figure 255: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete severe_obesity stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

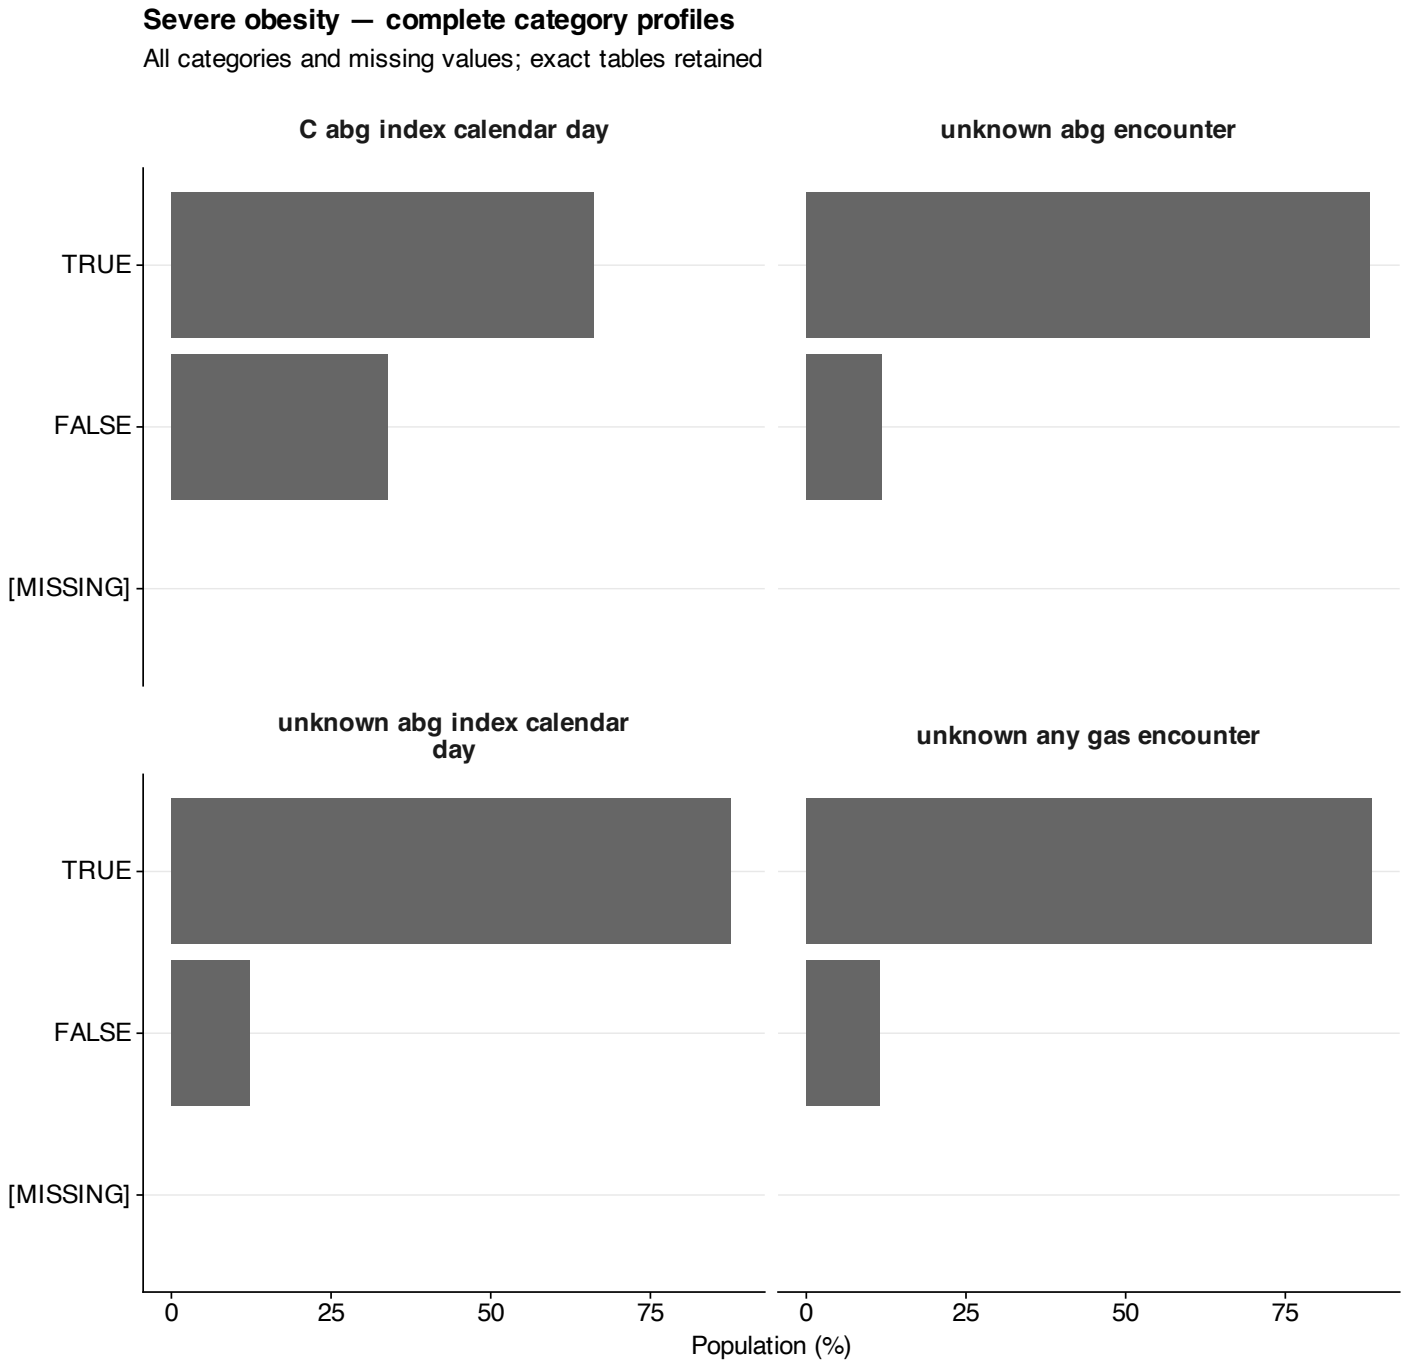

Figure 256: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete severe_obesity stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

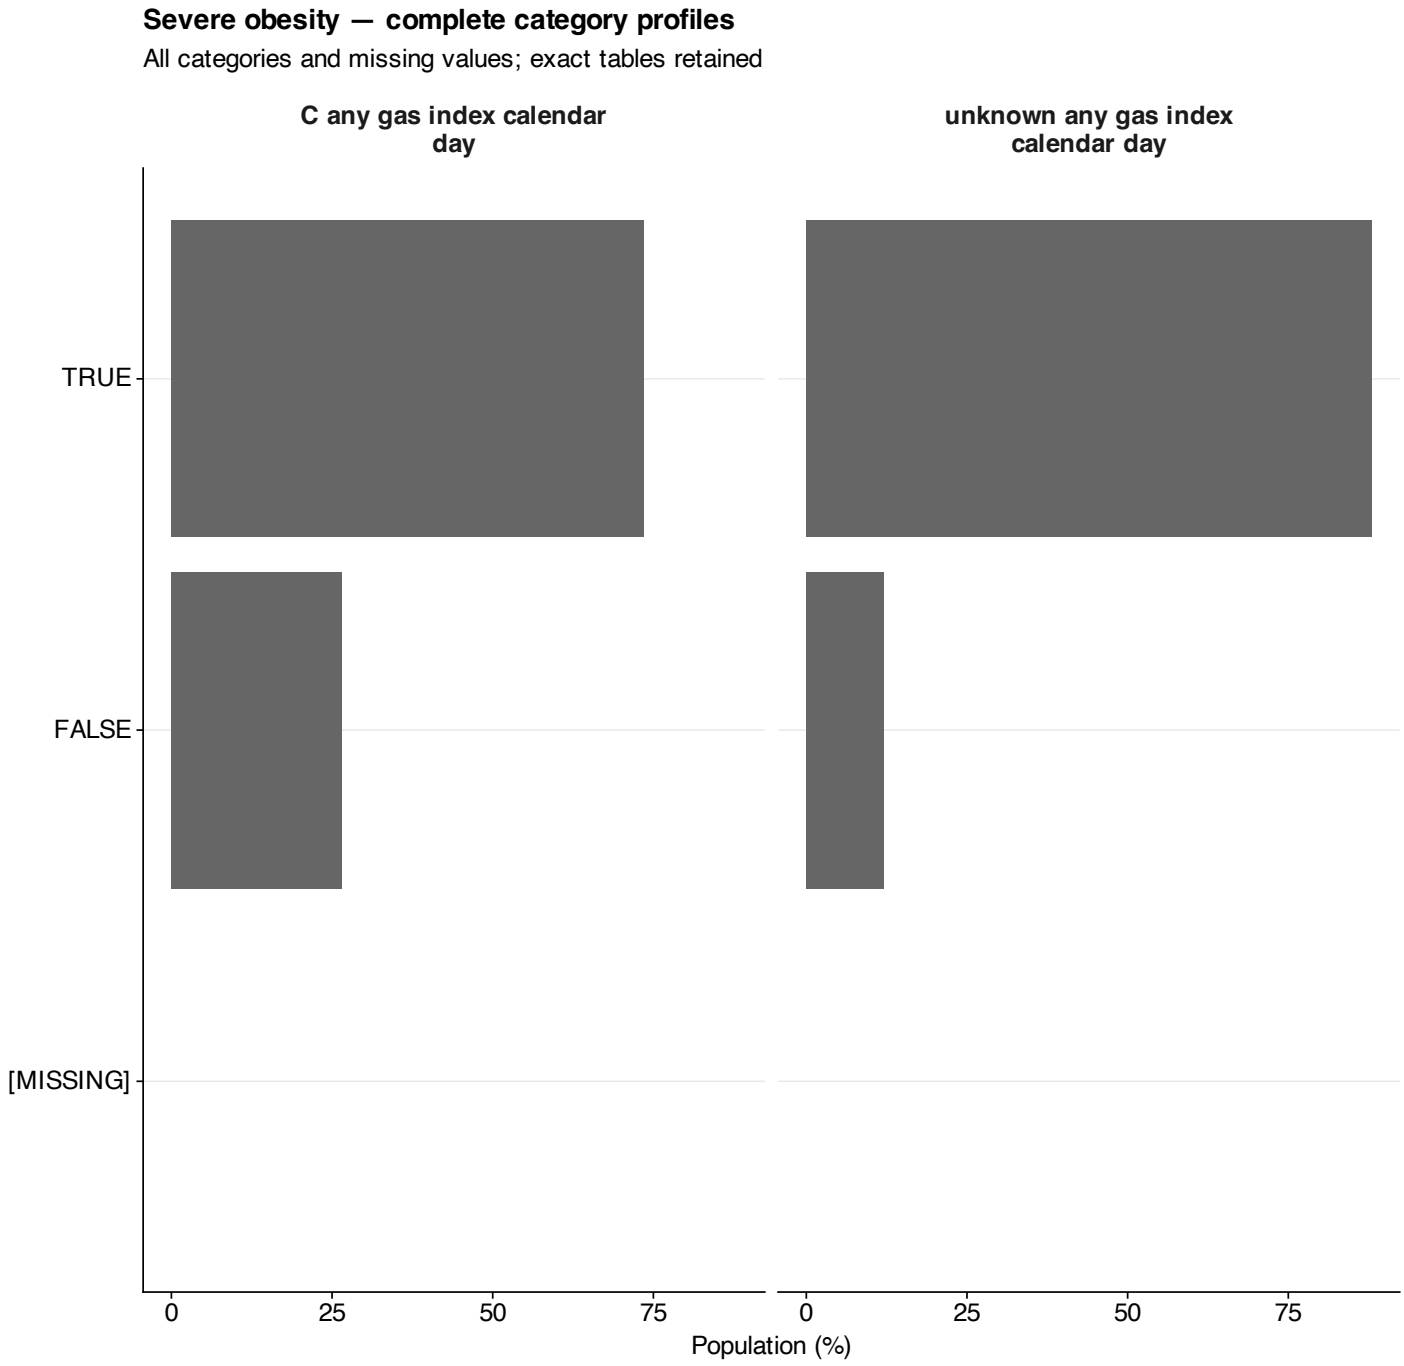

Figure 257: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete severe_obesity stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

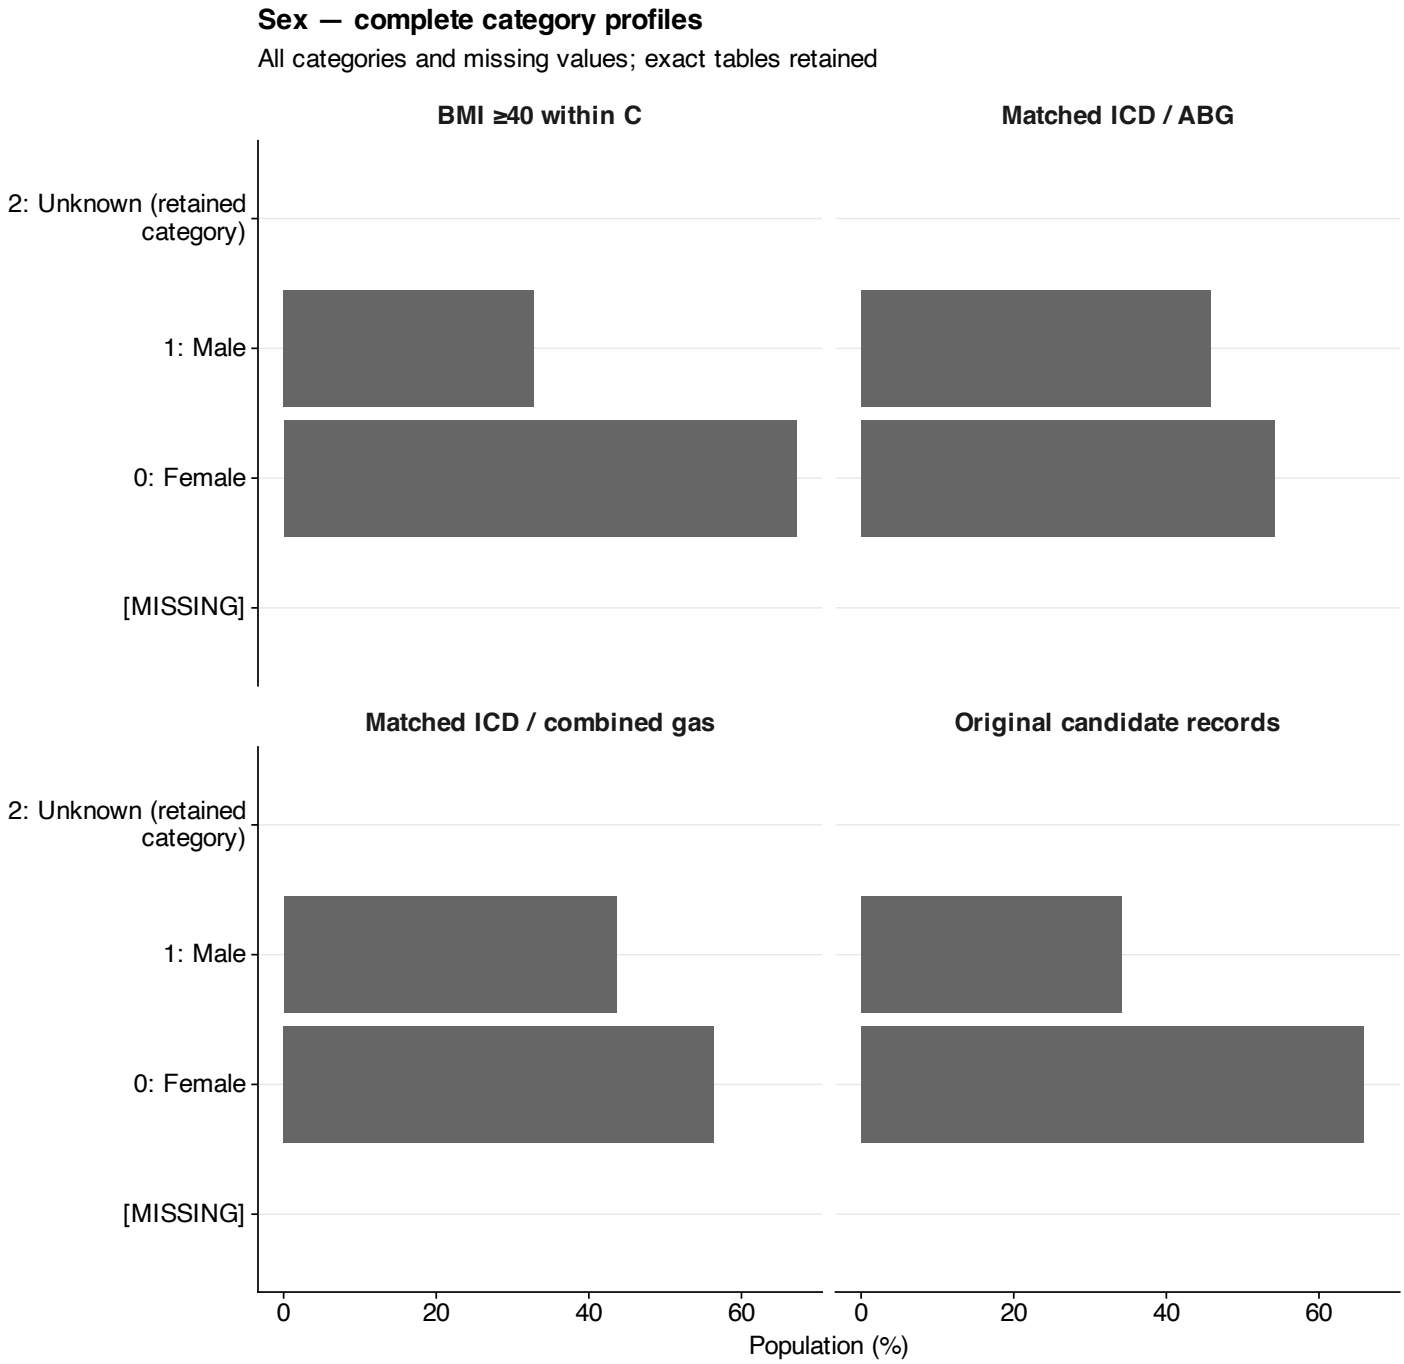

Figure 258: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete sex stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

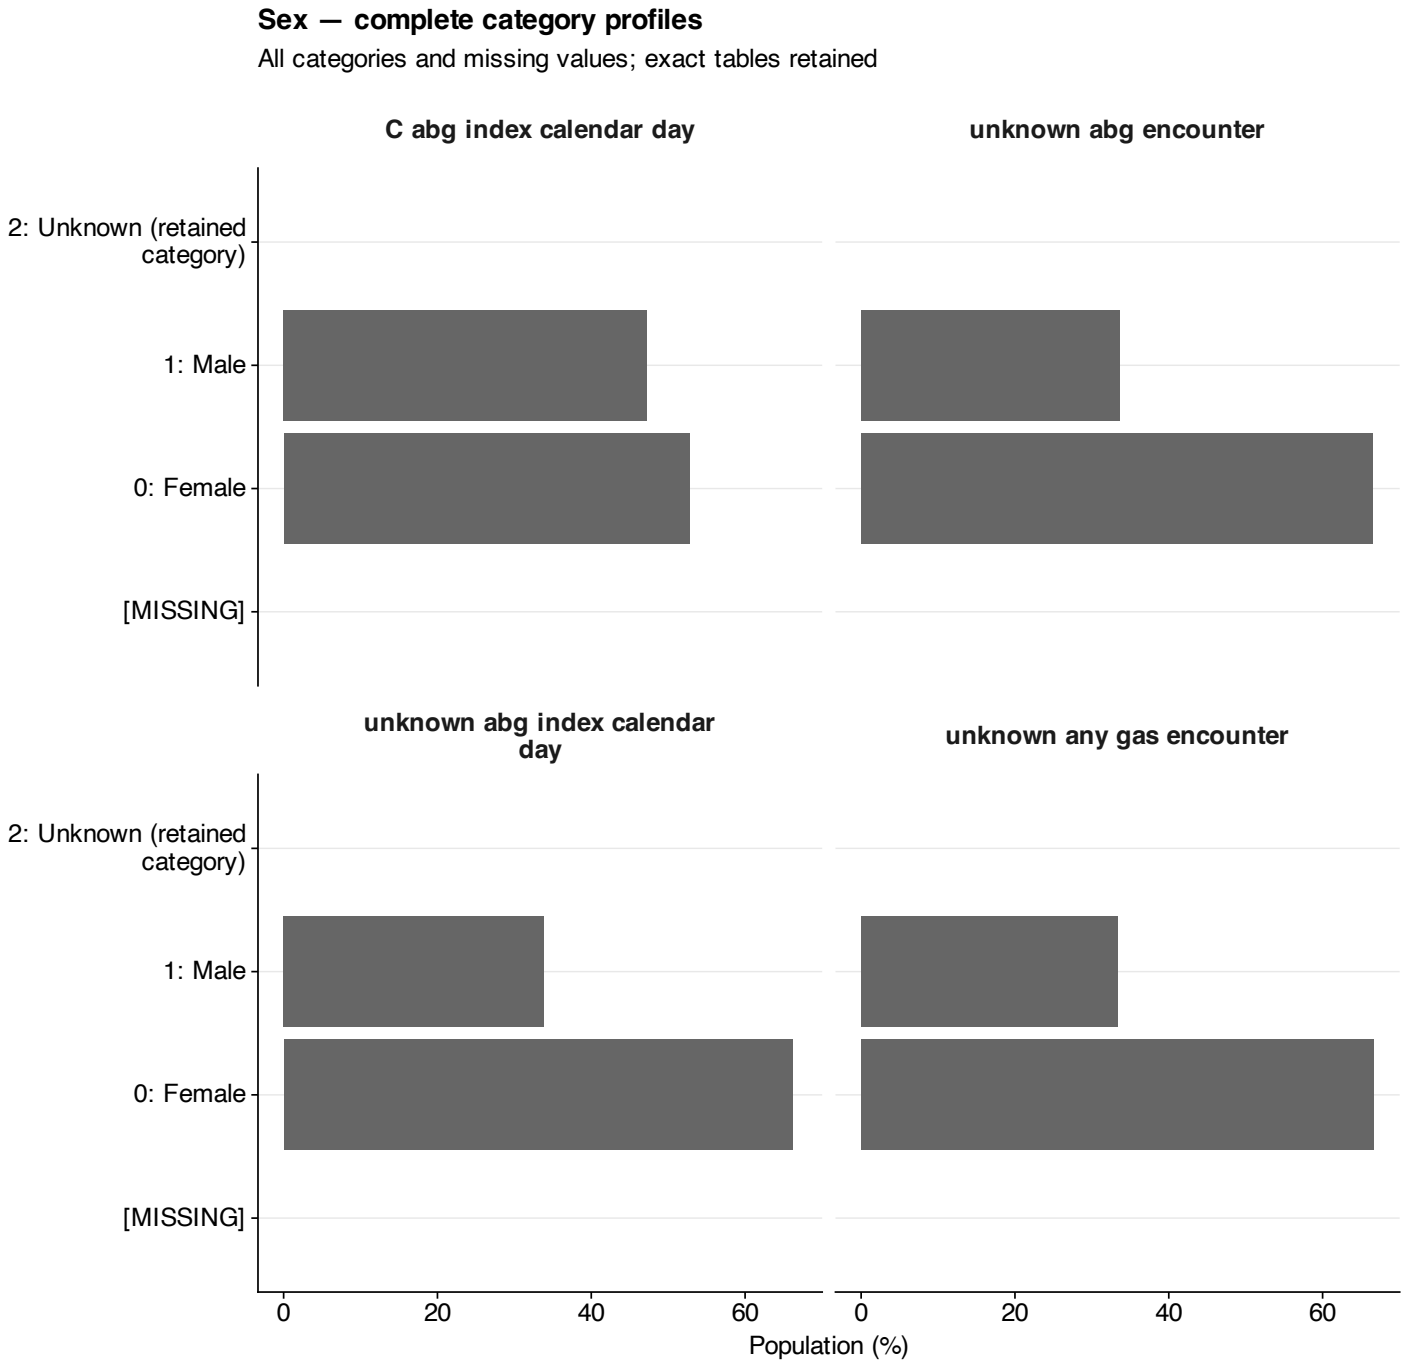

Figure 259: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete sex stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

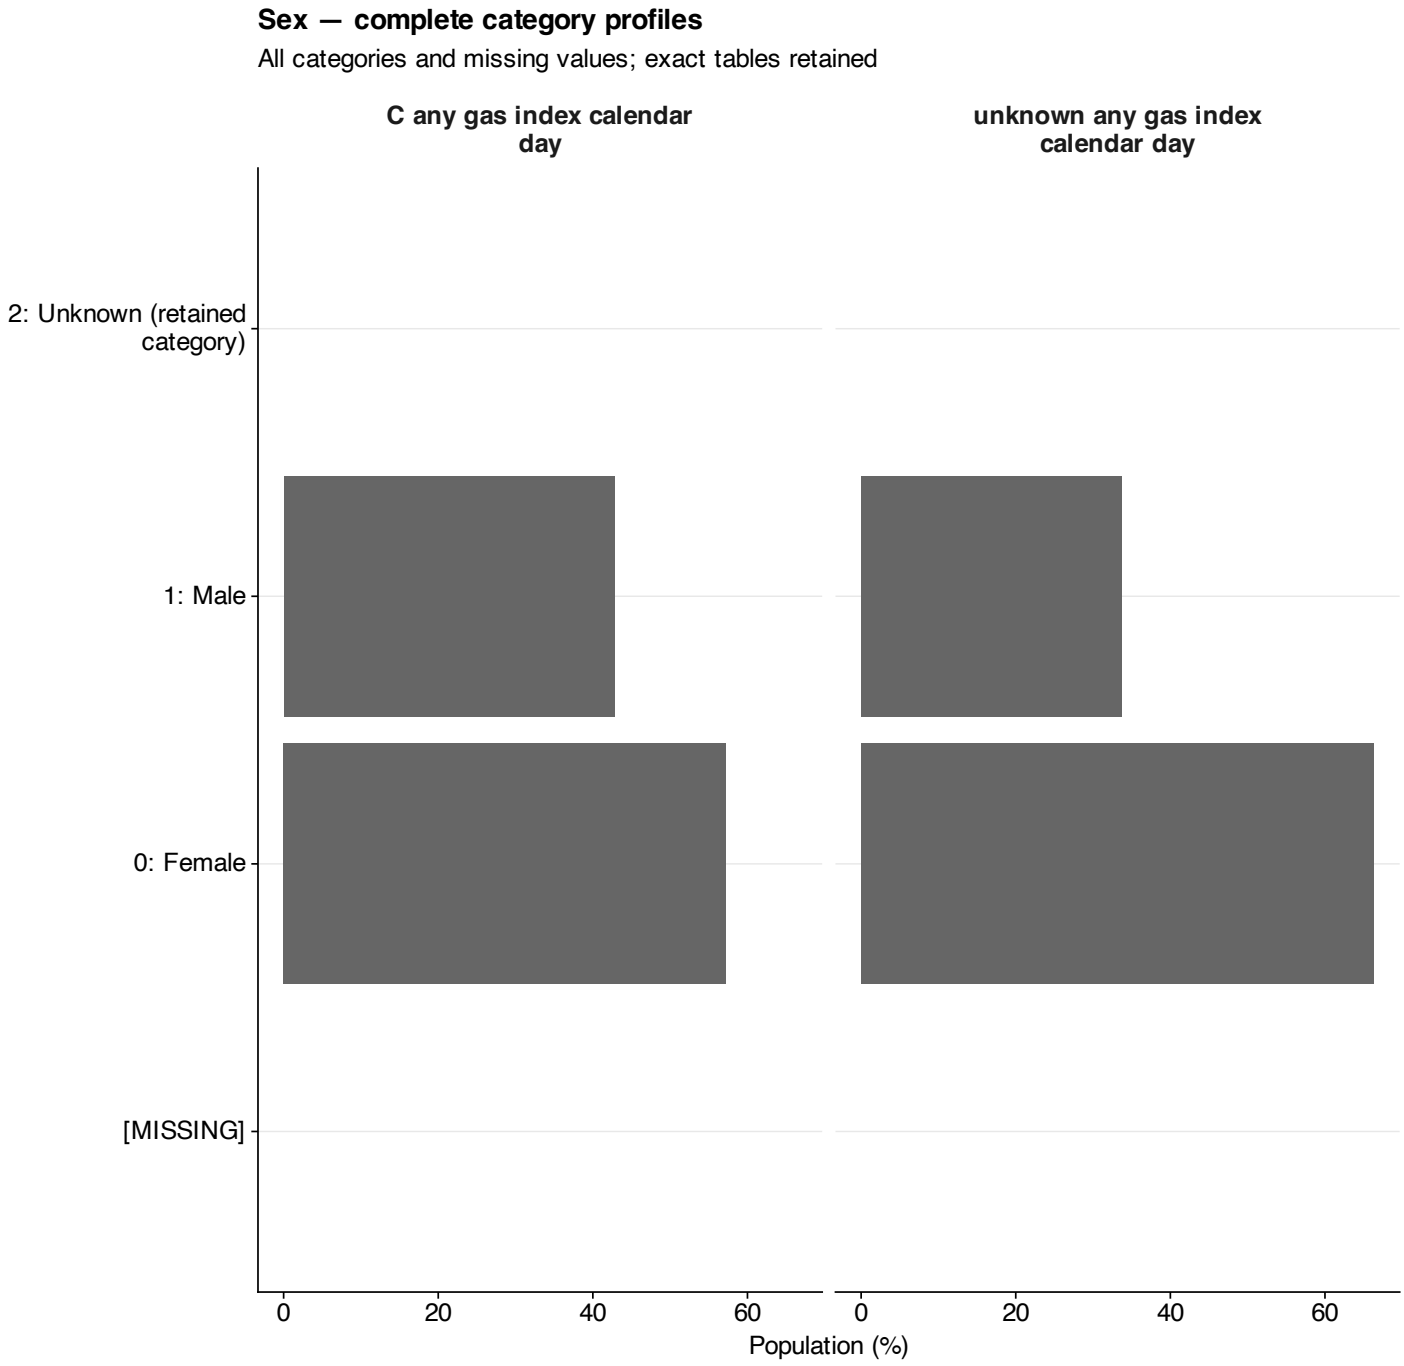

Figure 260: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete sex stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

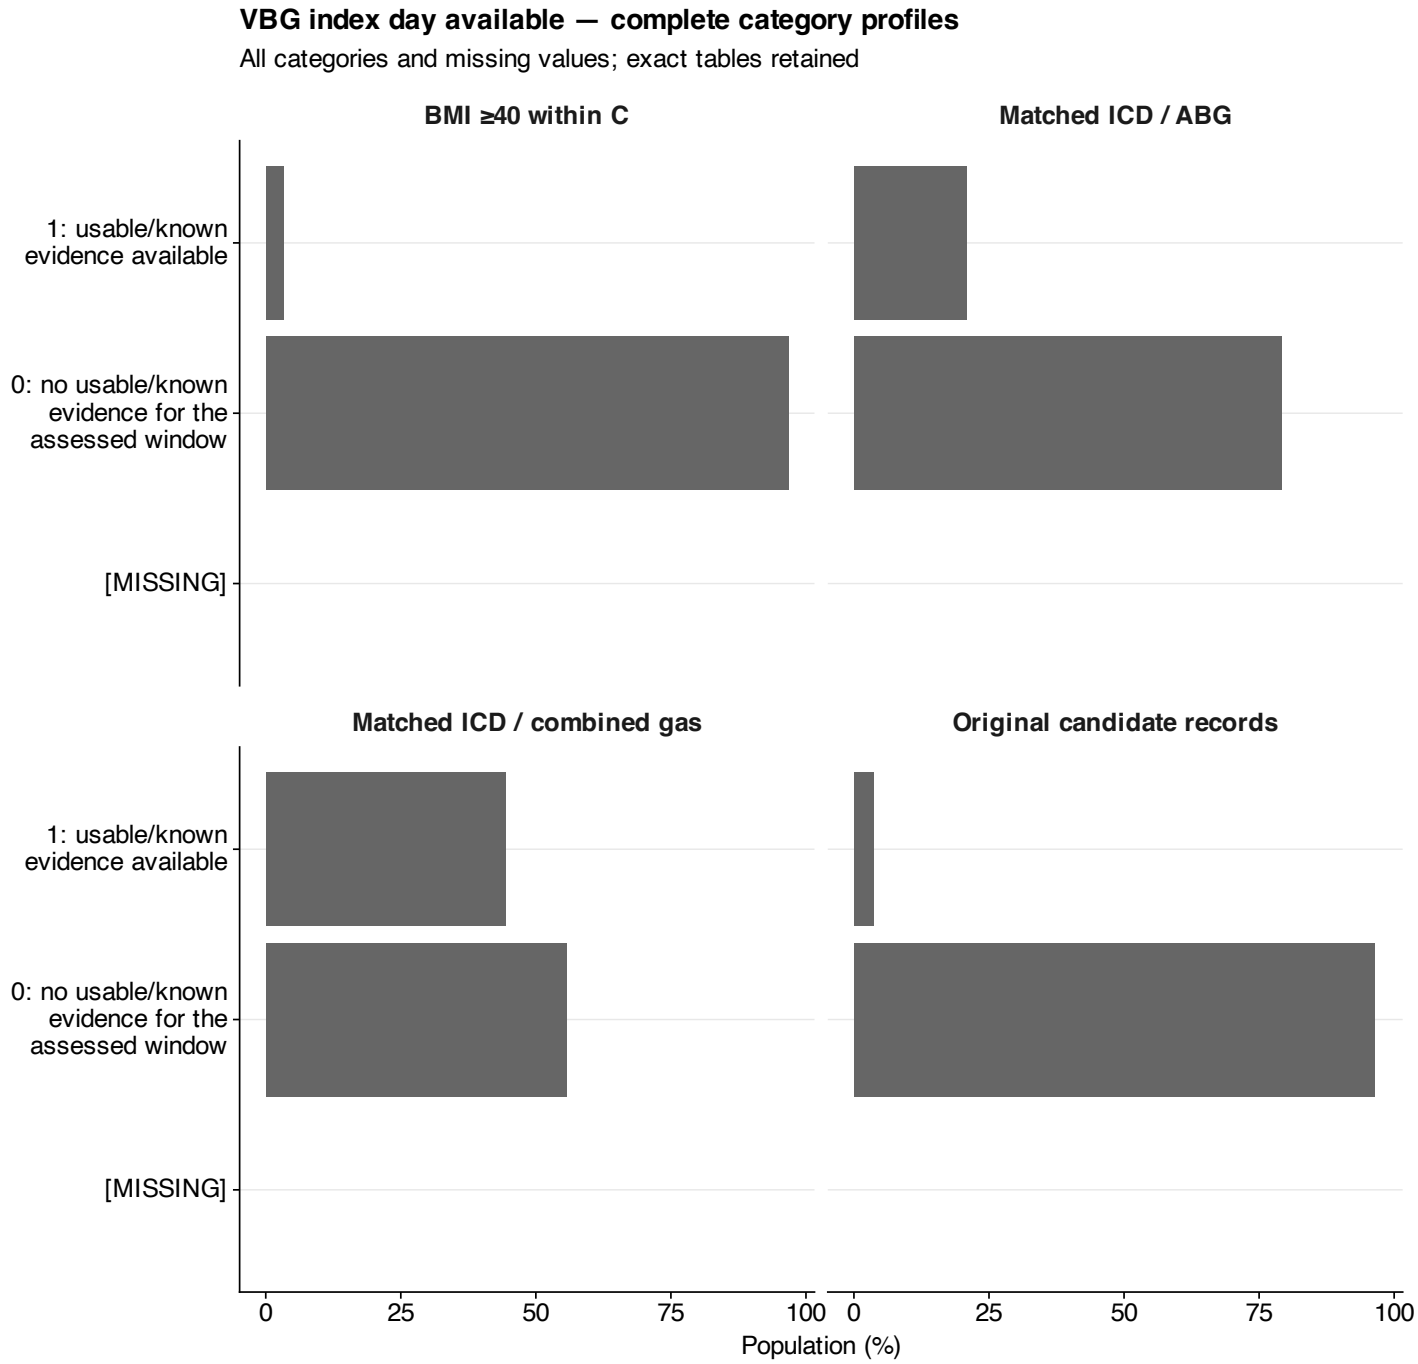

Figure 261: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete vbg_index_day_available stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

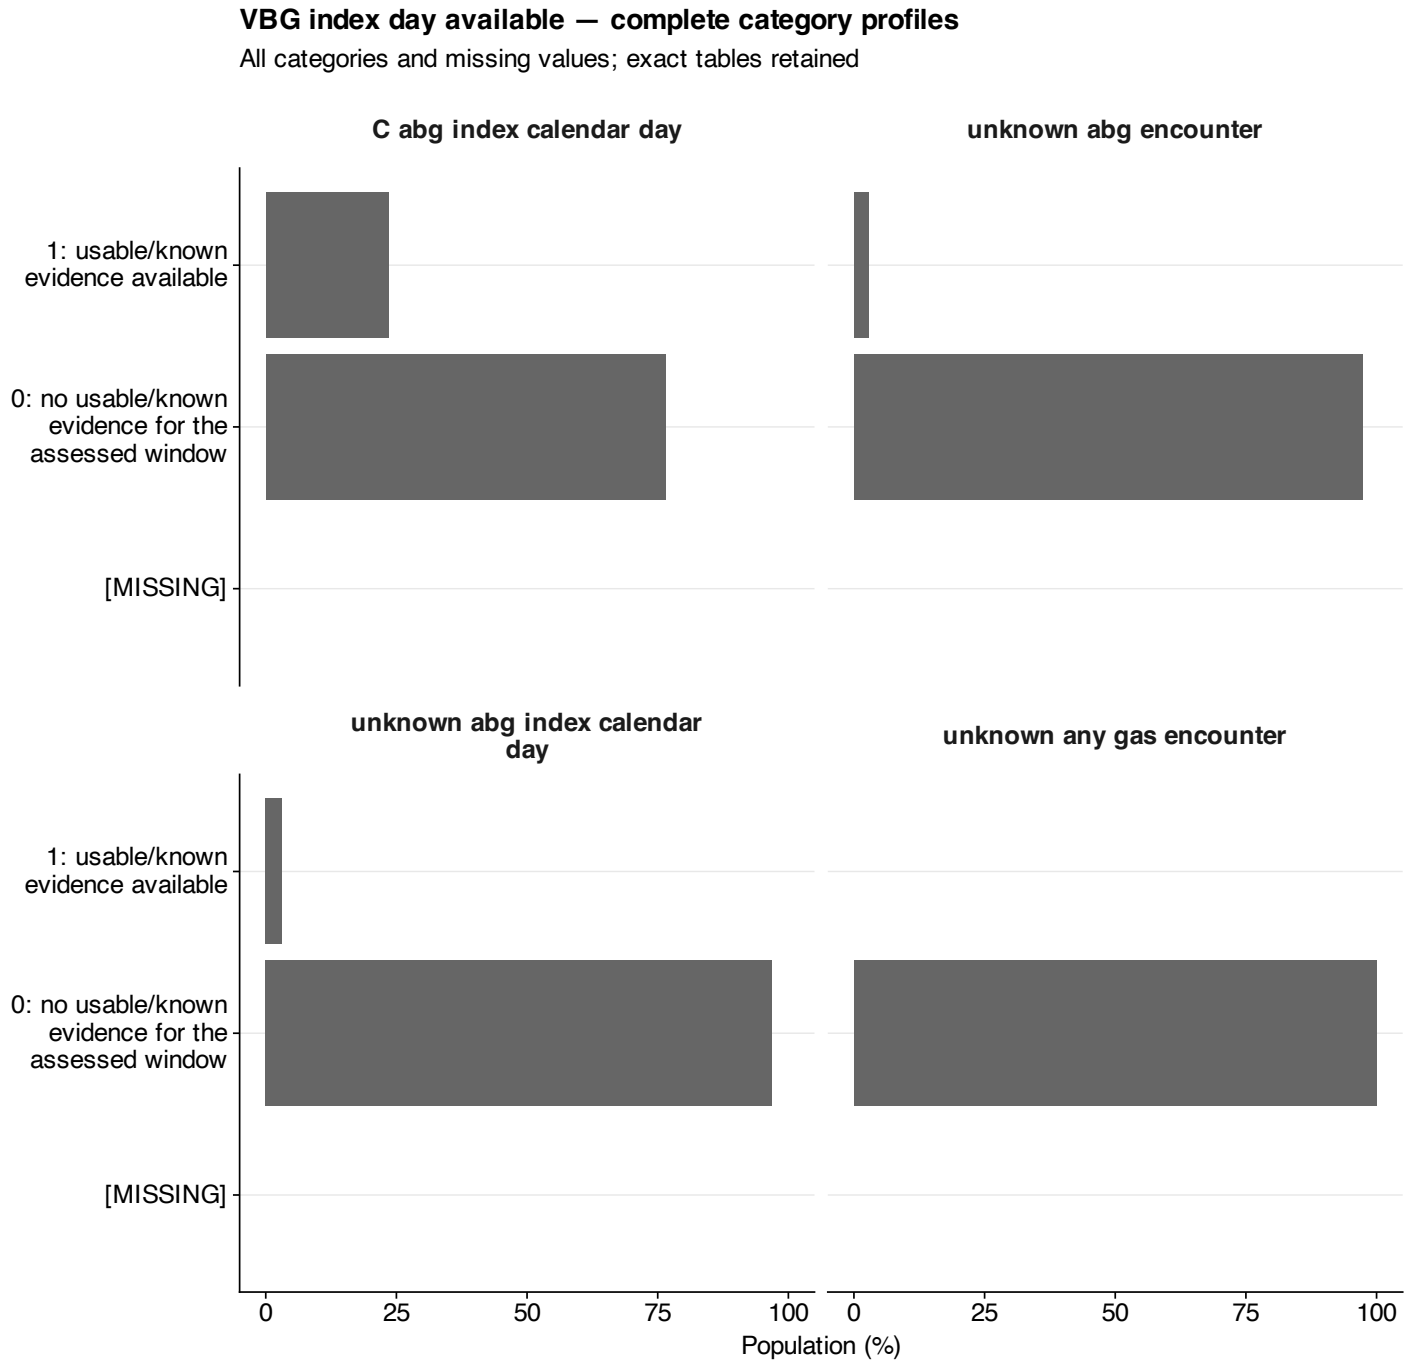

Figure 262: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete vbg_index_day_available stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

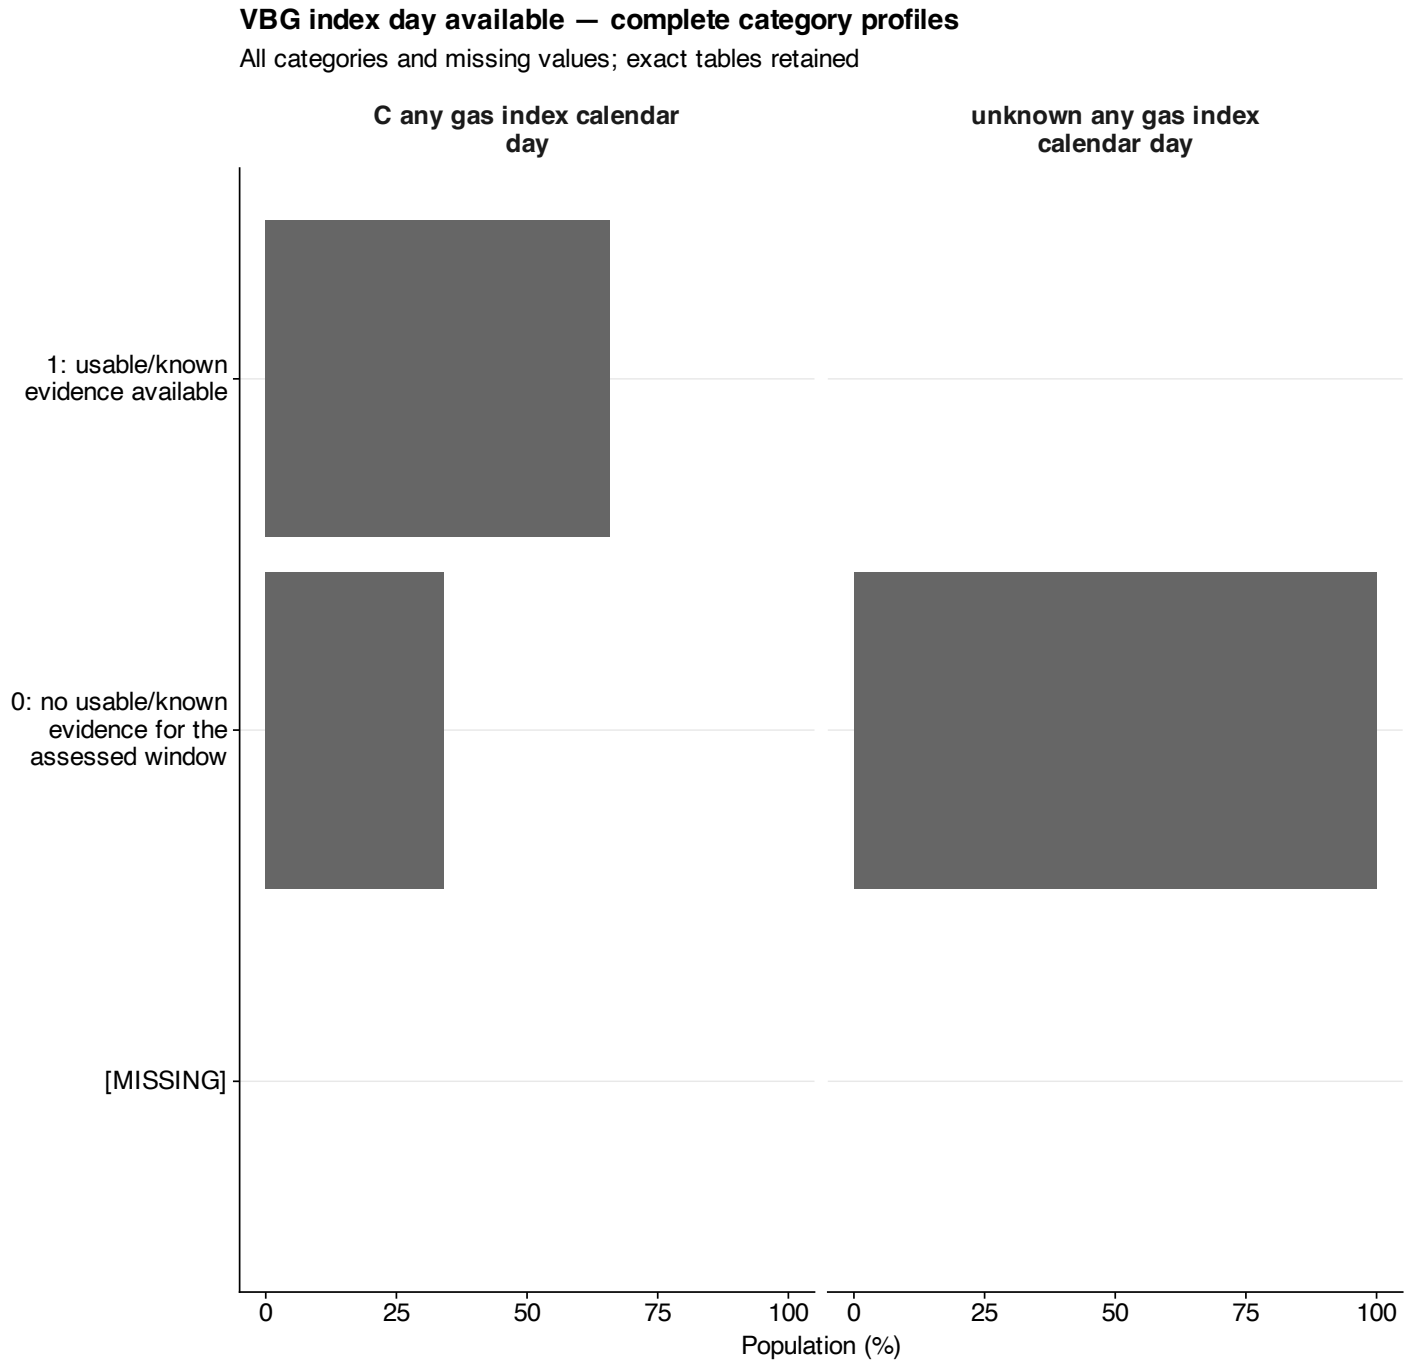

Figure 263: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete vbg_index_day_available stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

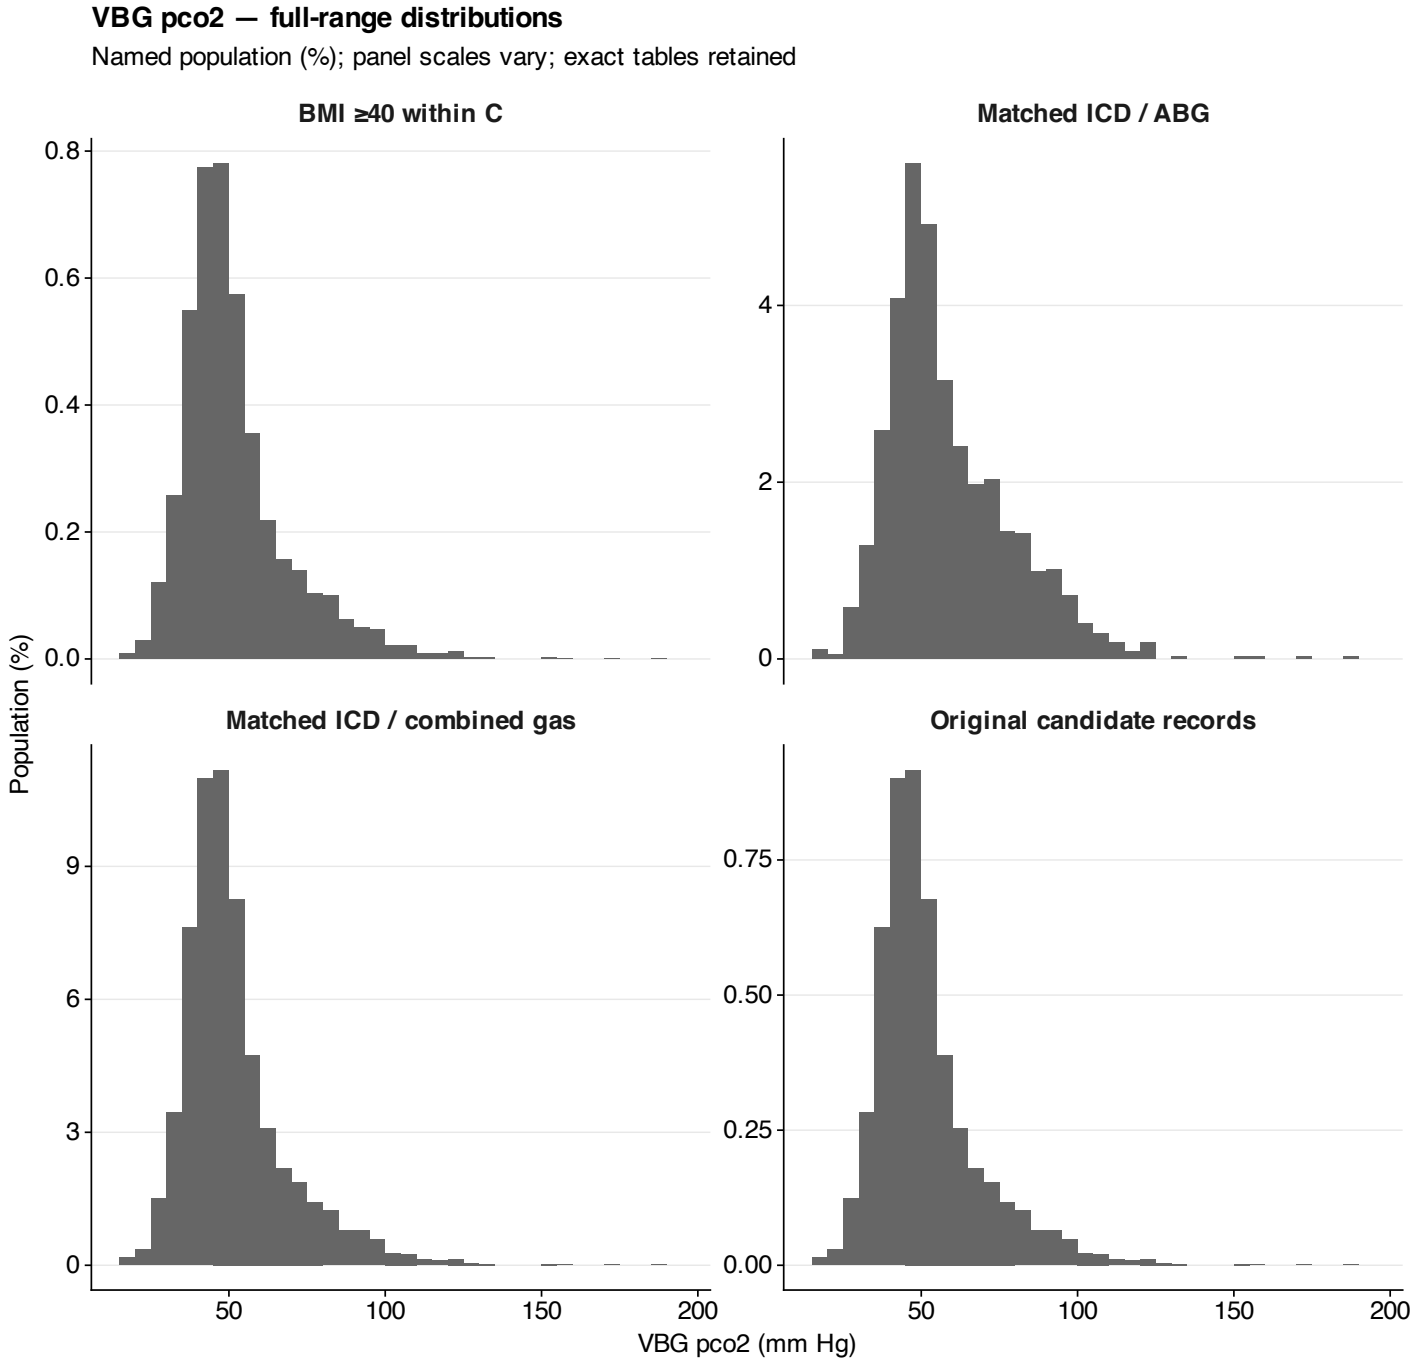

Figure 264: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete vbg_pco2 stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

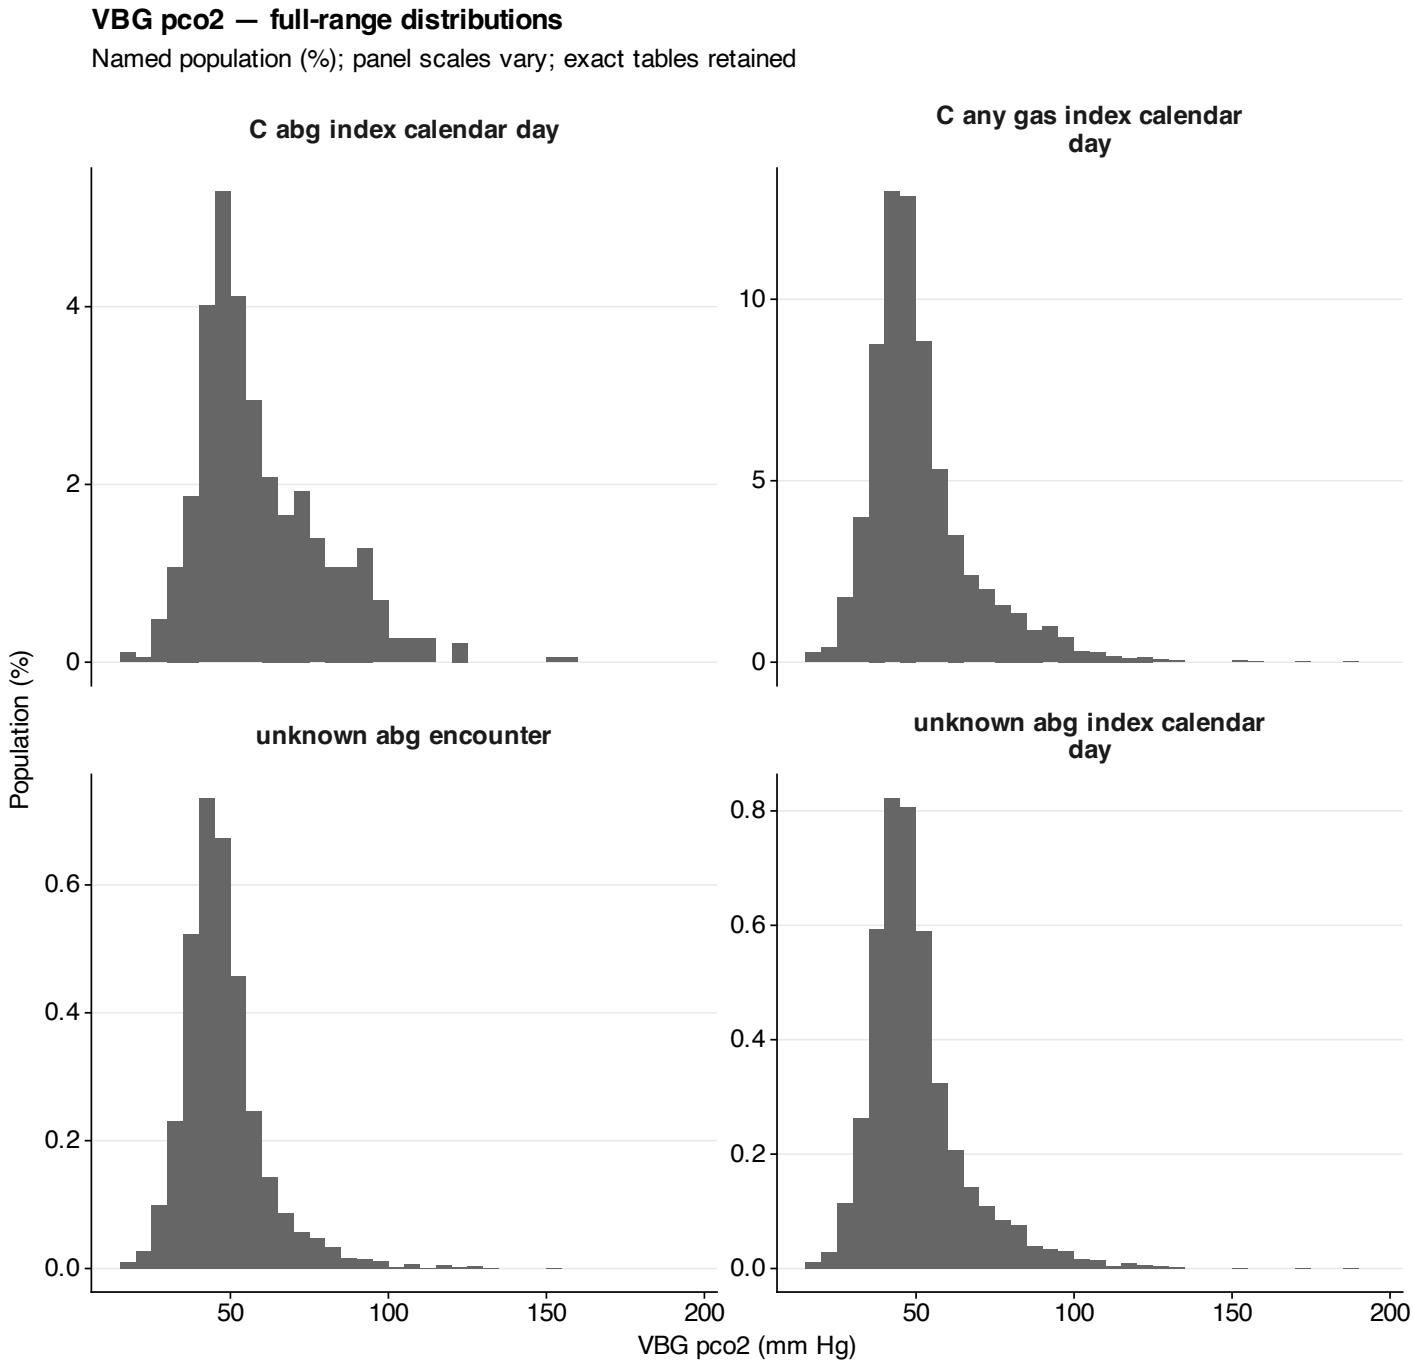

Figure 265: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete vbg_pco2 stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

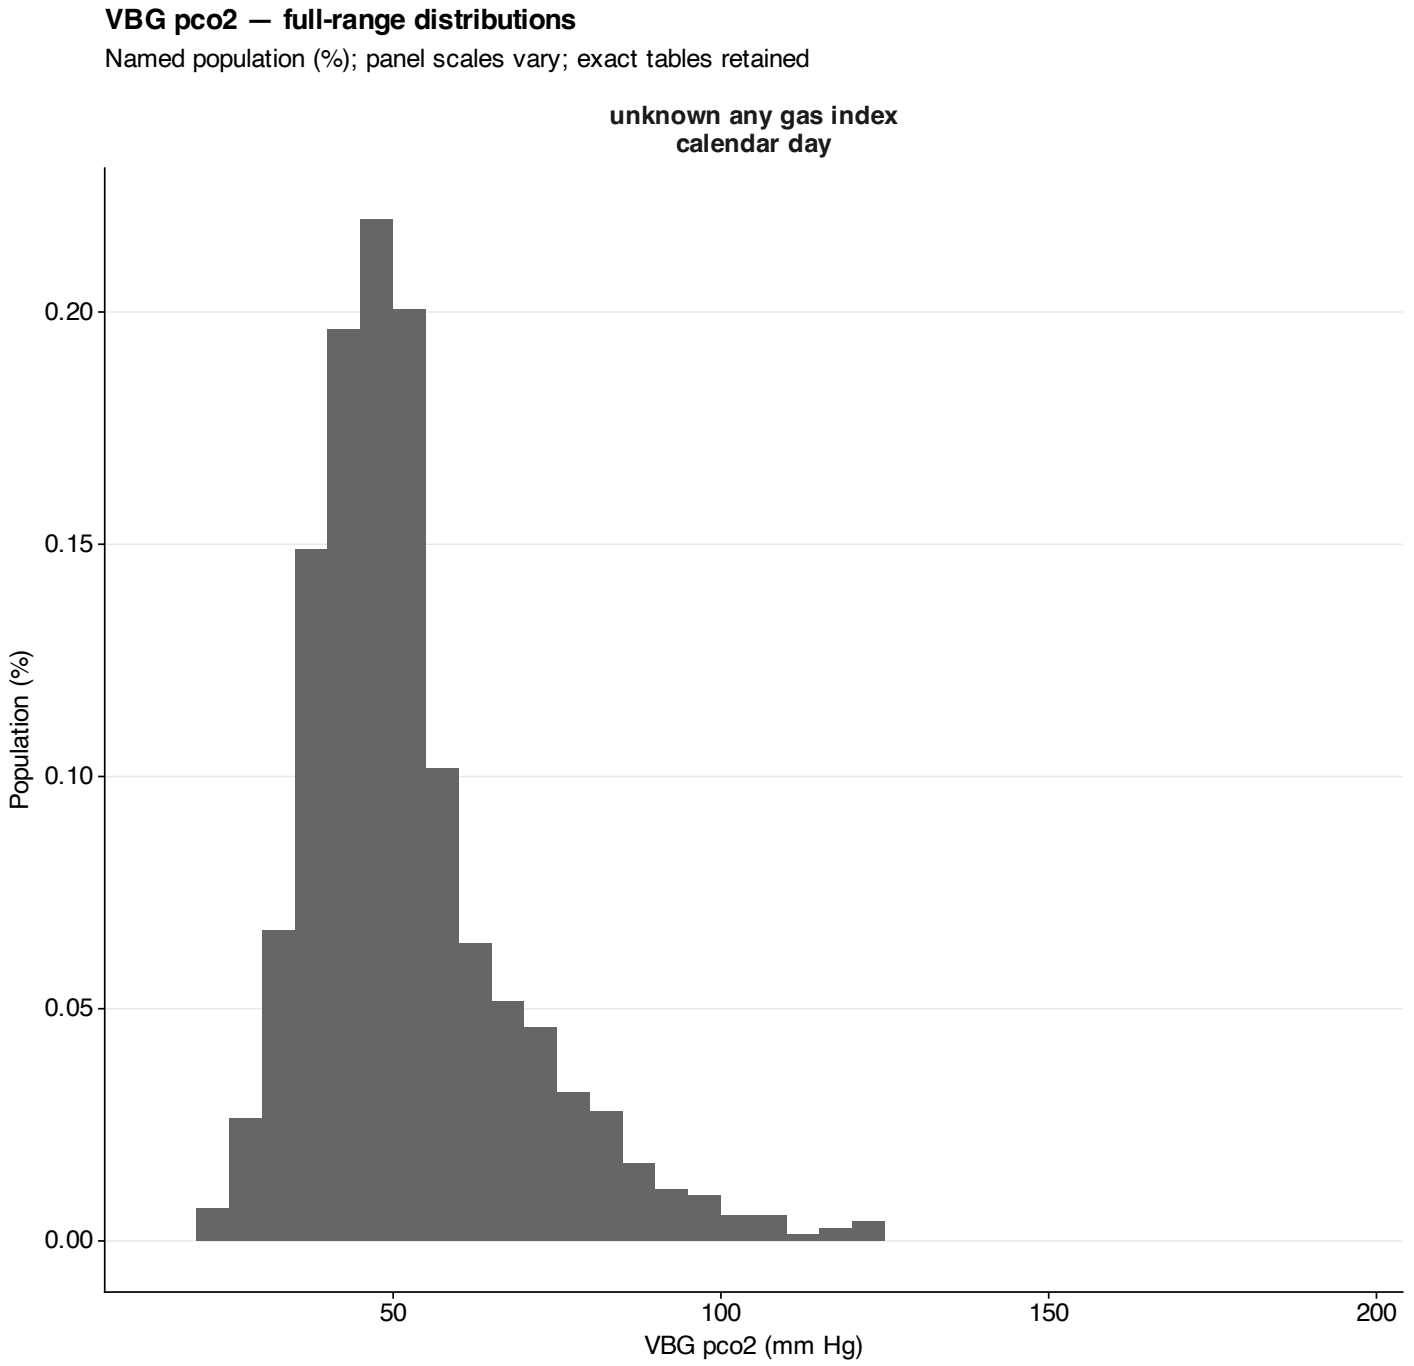

Figure 266: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete vbg_pco2 stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

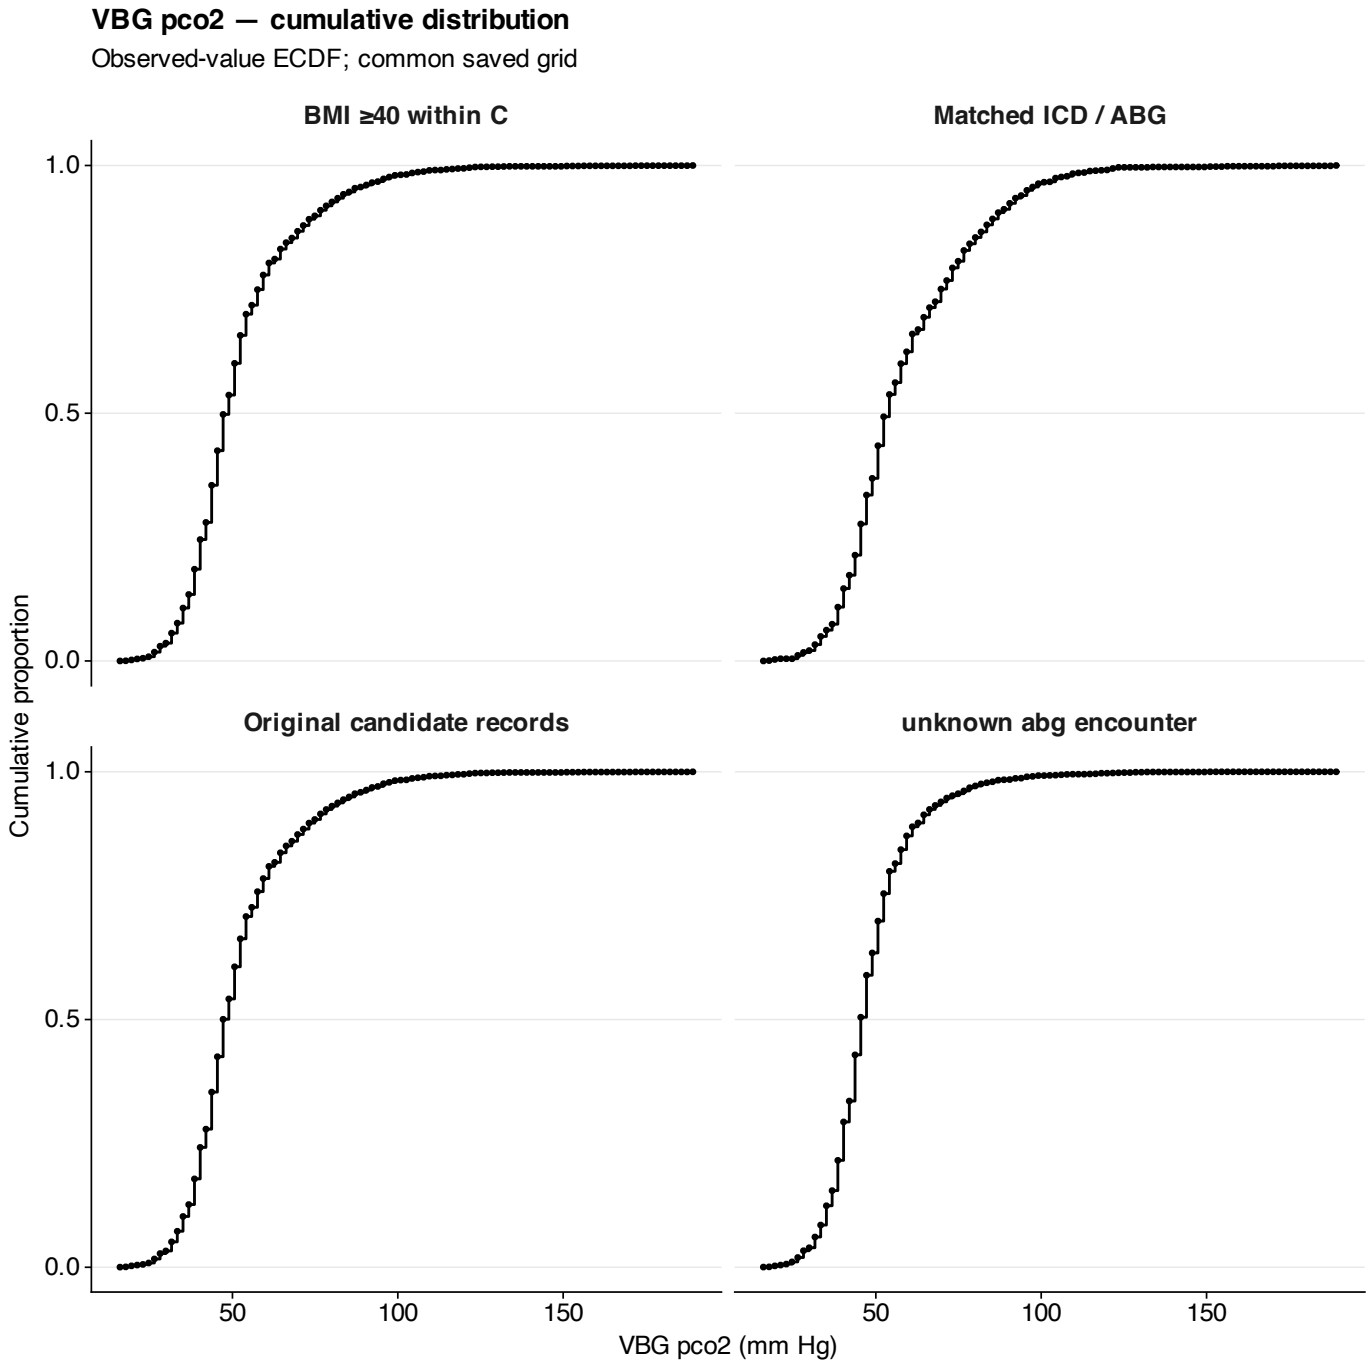

Figure 267: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. vbg_pco2 ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

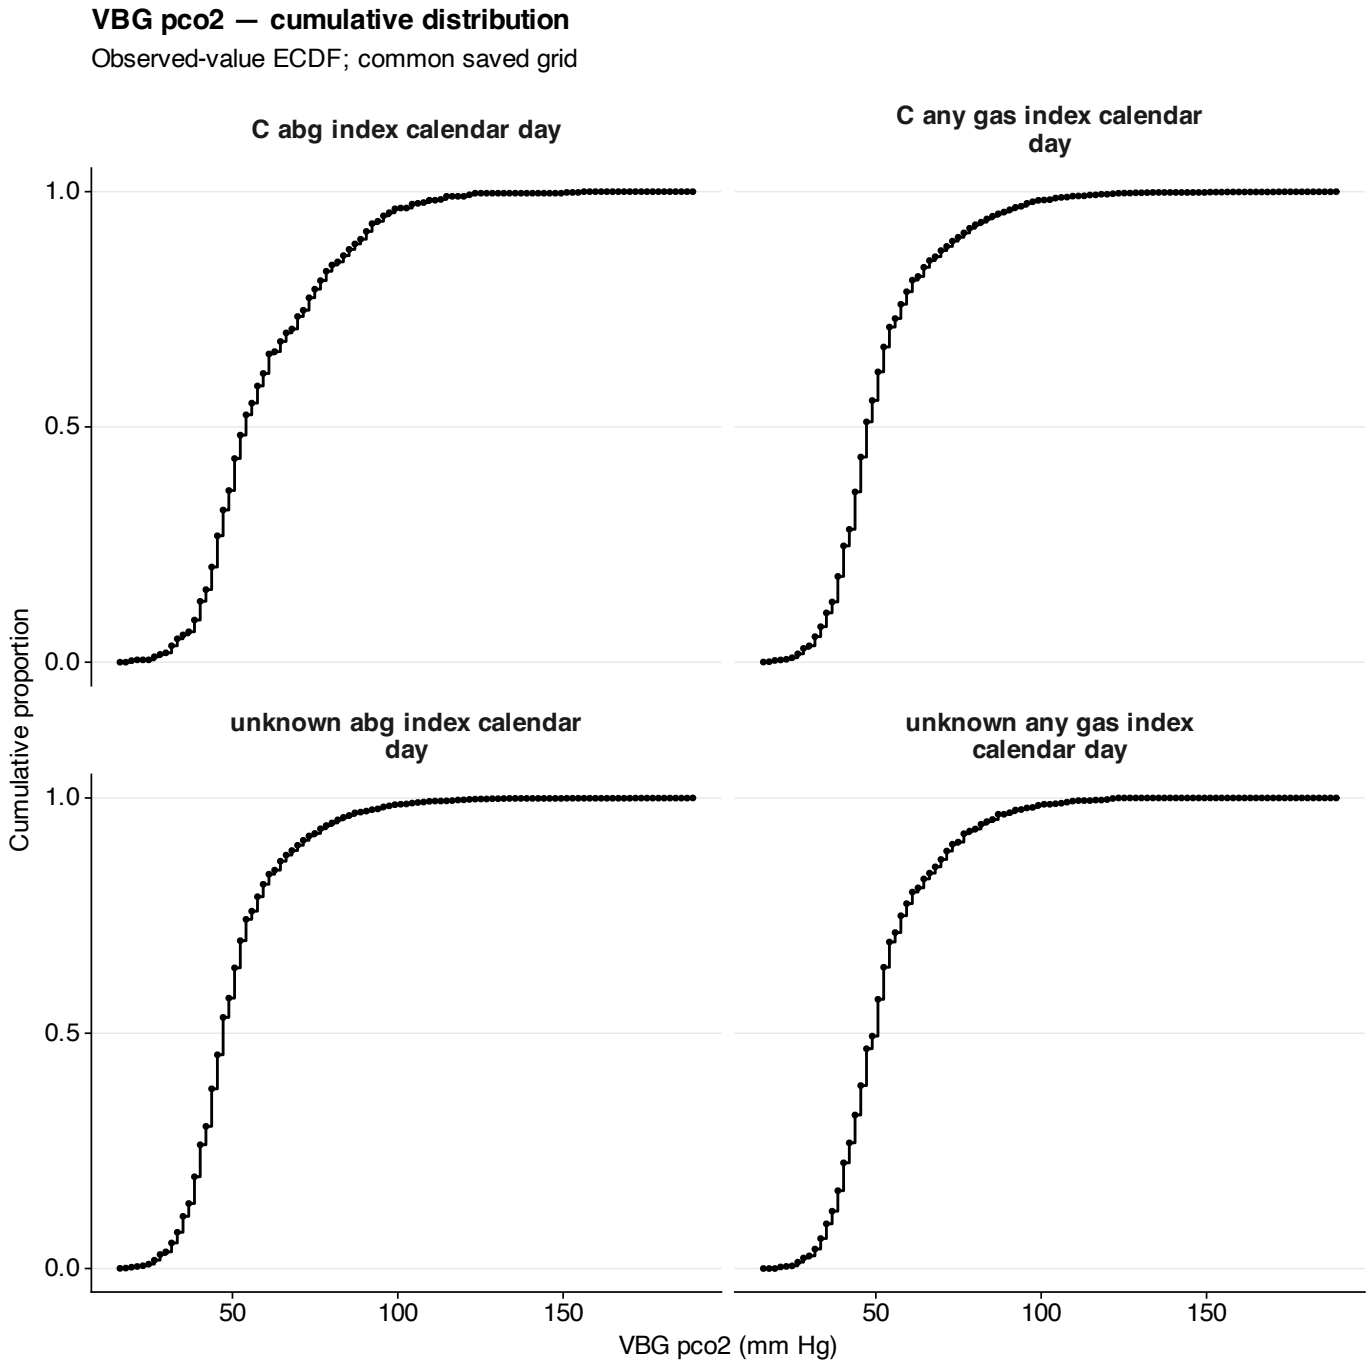

Figure 268: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. vbg_pco2 ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

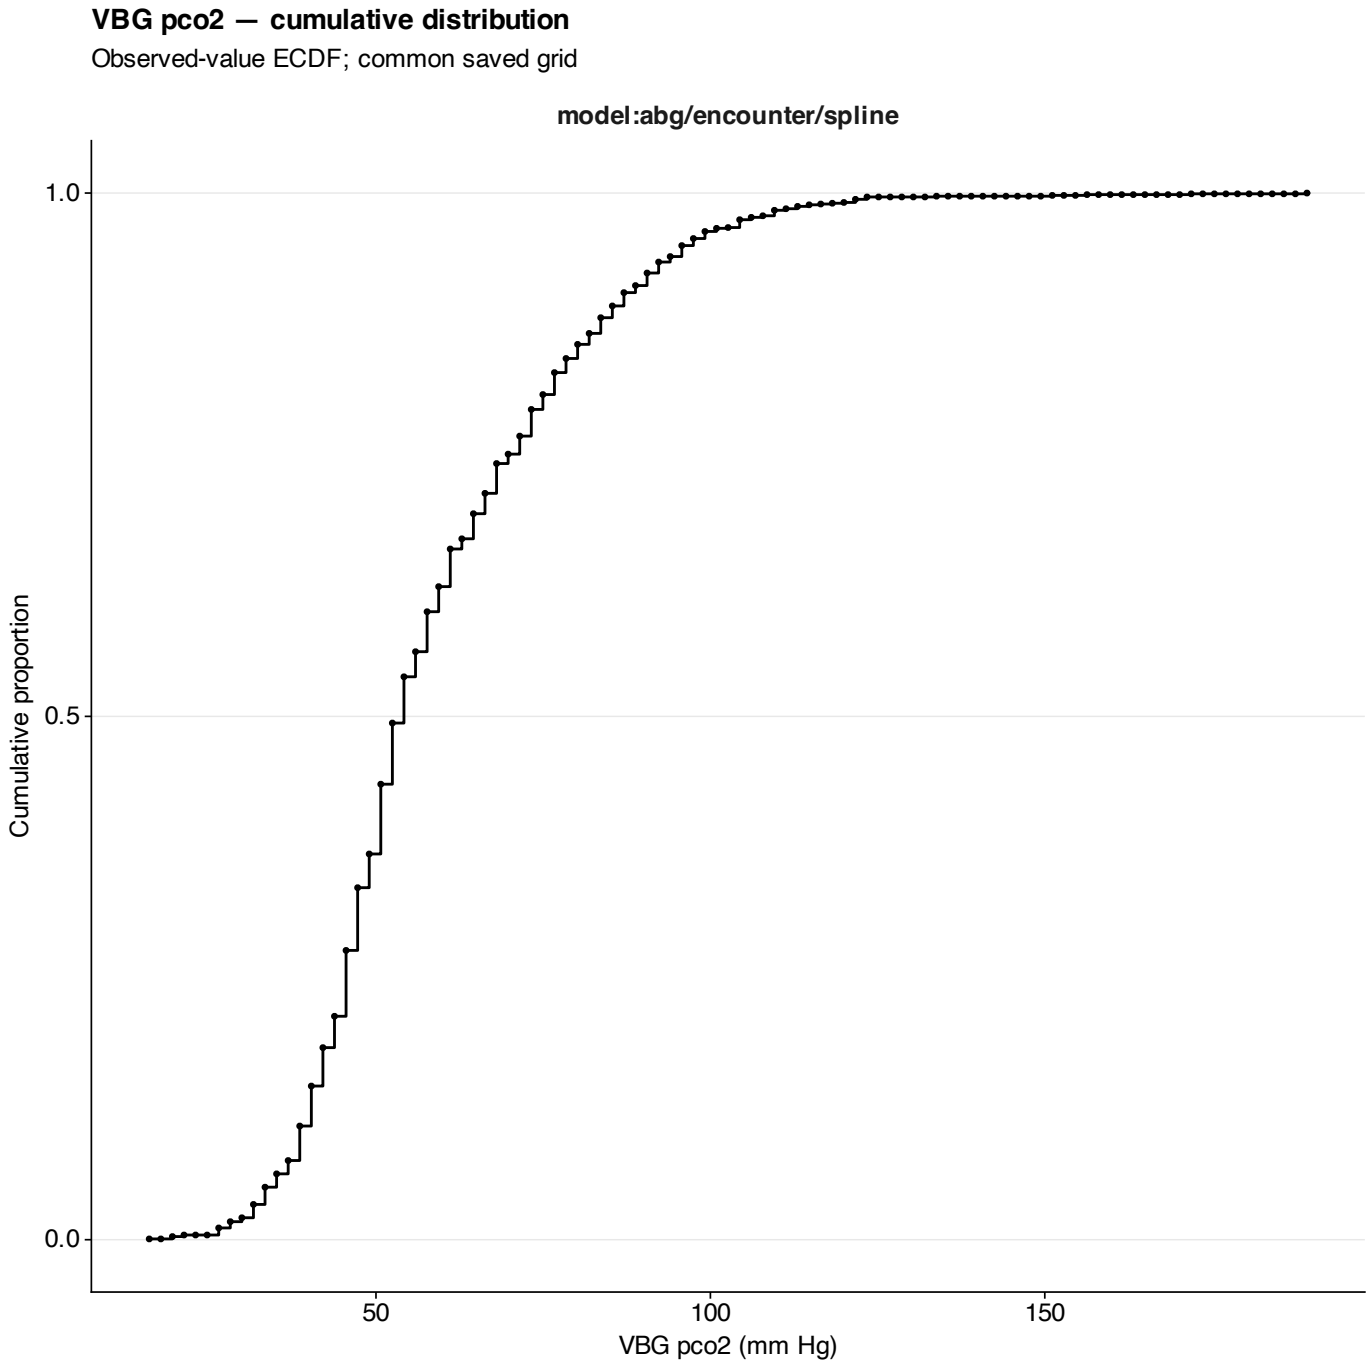

Figure 269: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. vbg_pco2 ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

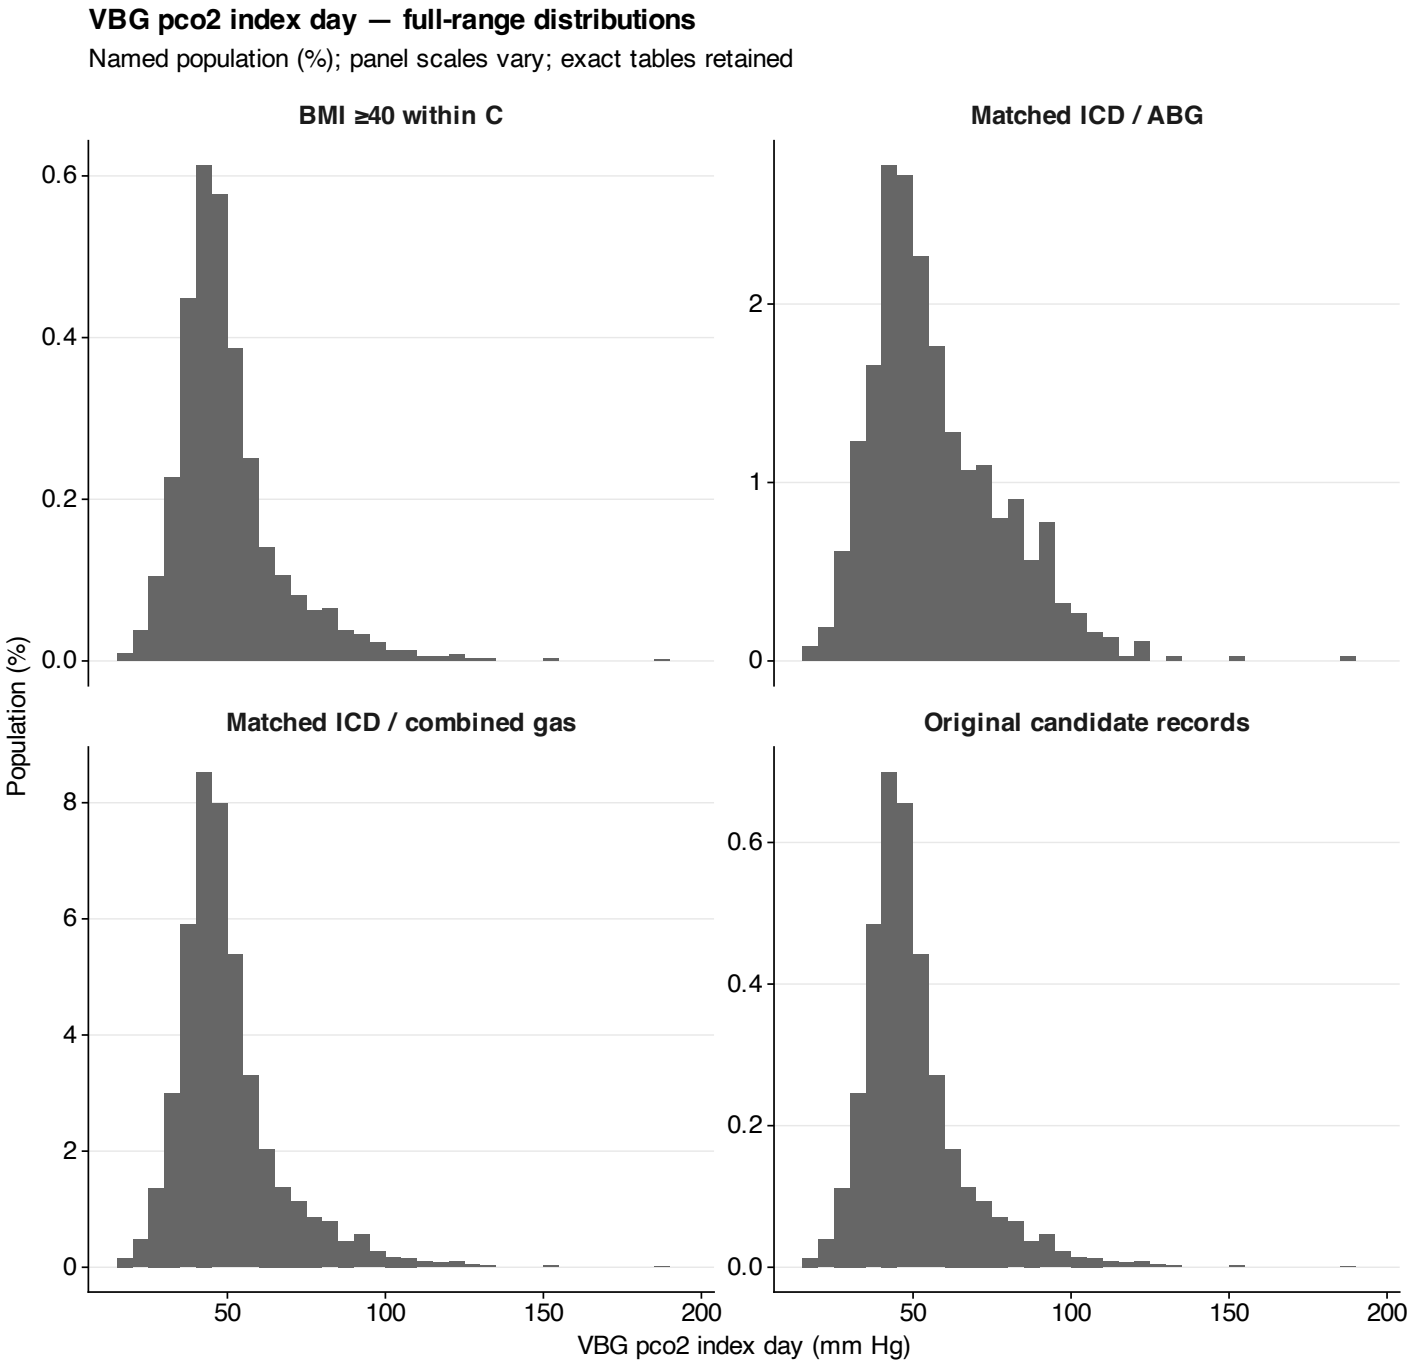

Figure 270: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete vbg_pco2_index_day stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

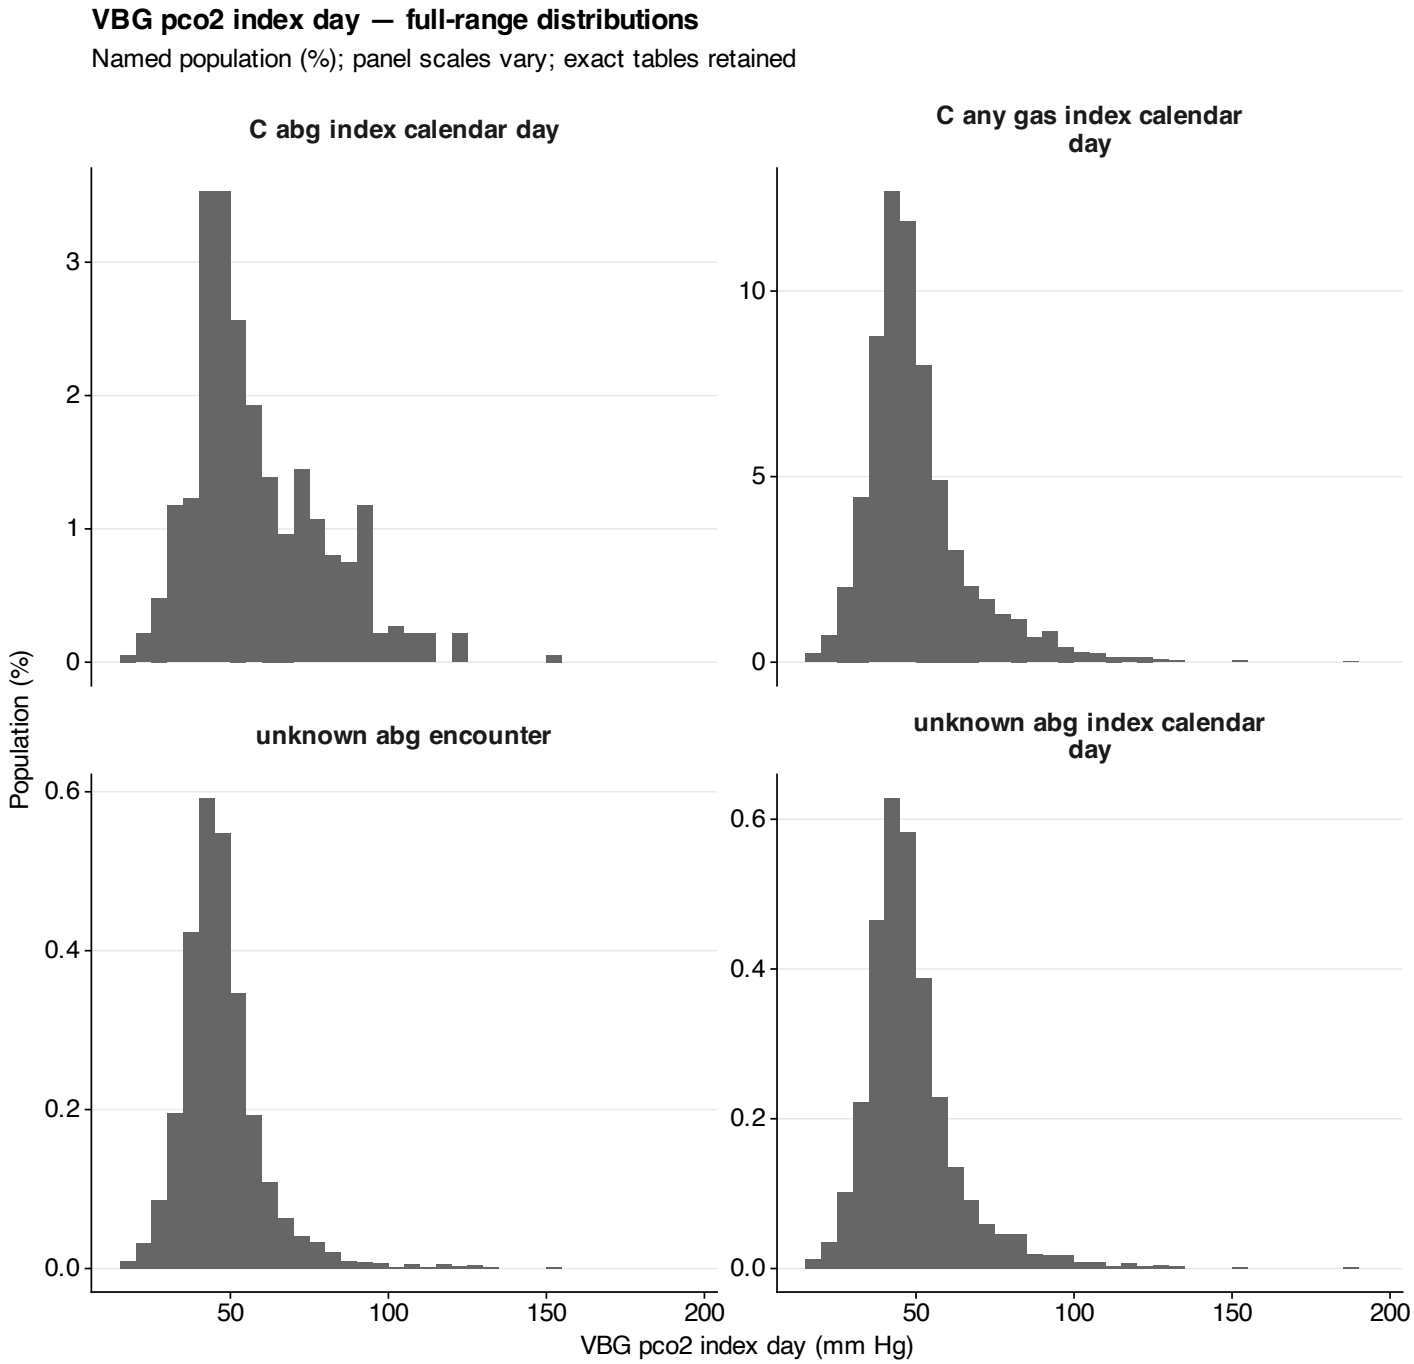

Figure 271: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete vbg_pco2_index_day stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

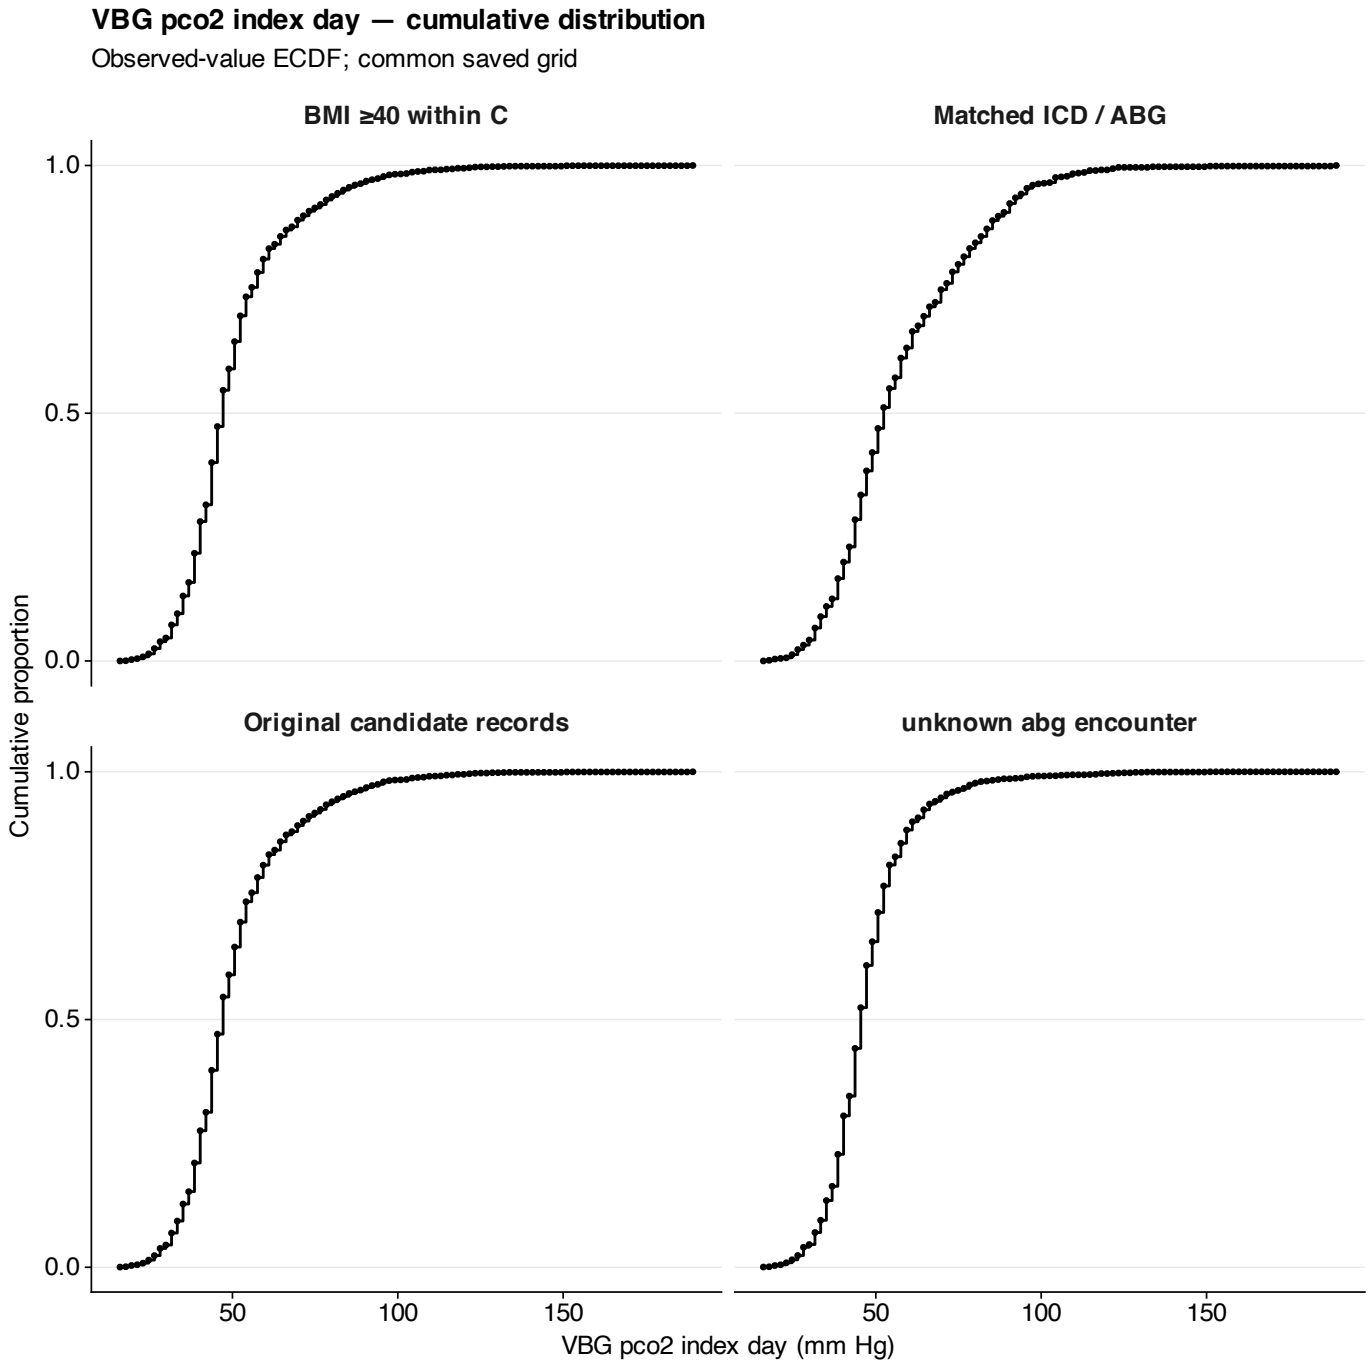

Figure 272: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. vbg_pco2_index_day ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

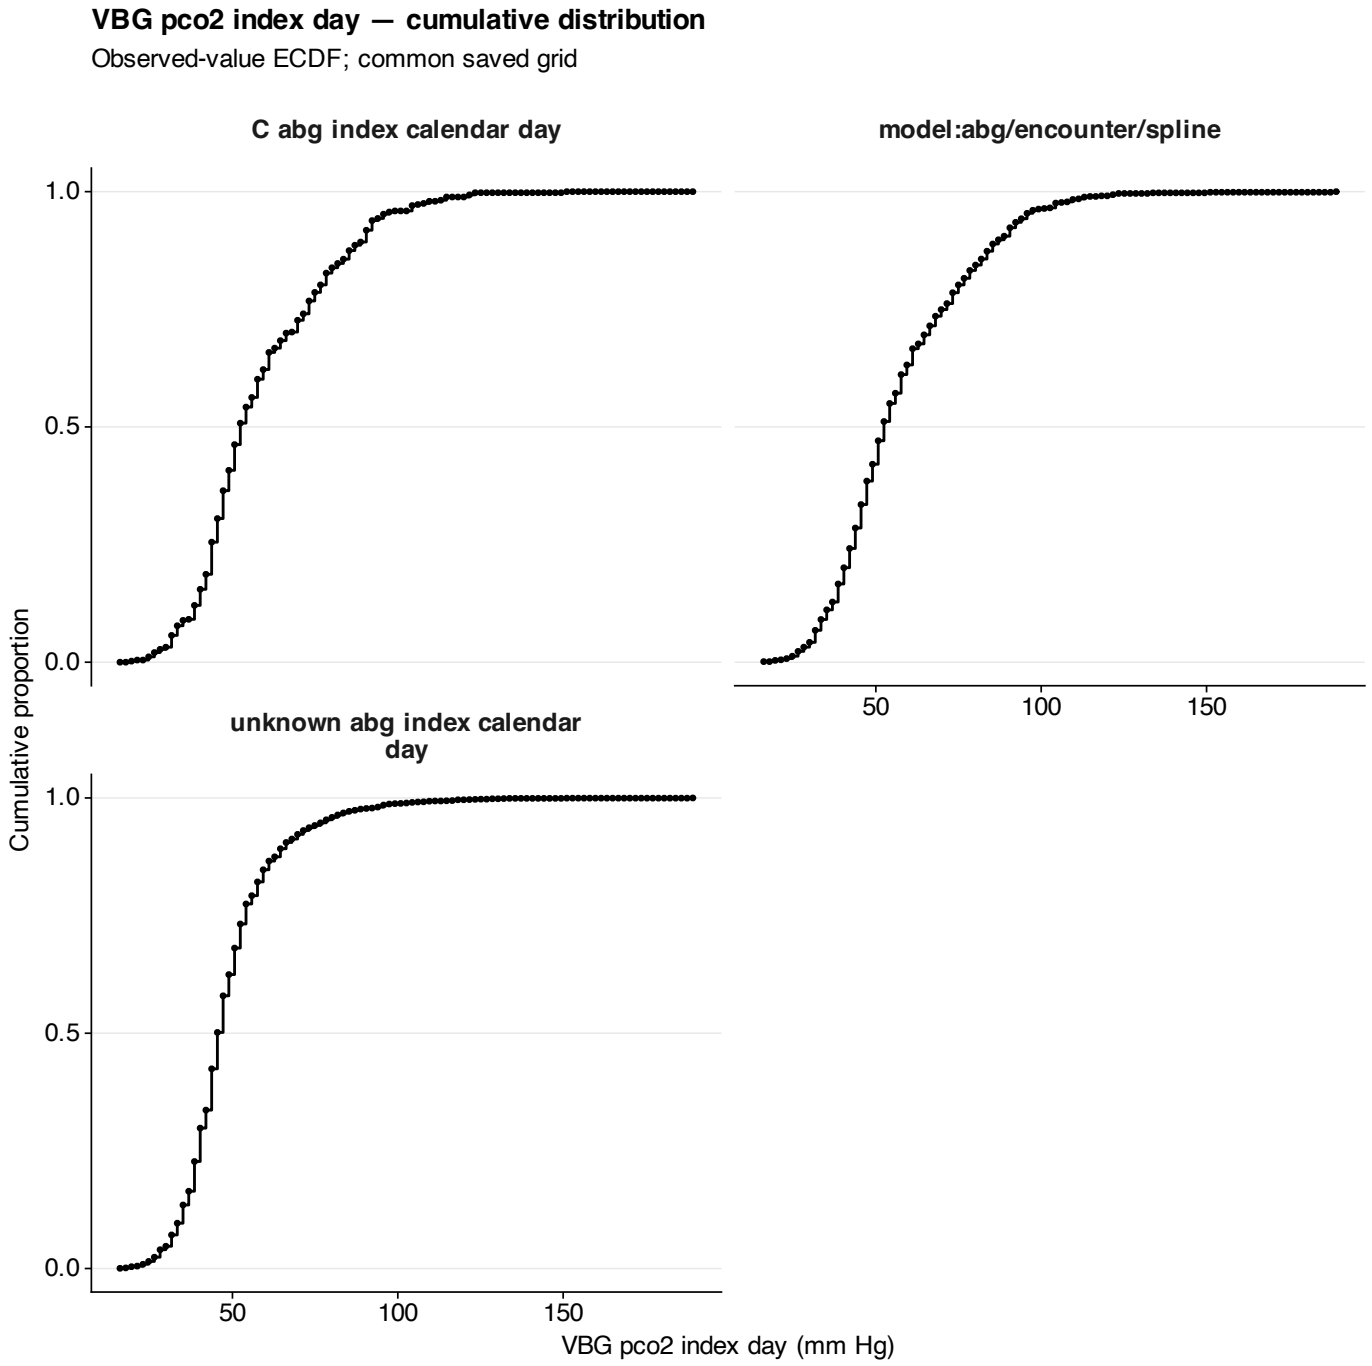

Figure 273: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. vbg_pco2_index_day ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

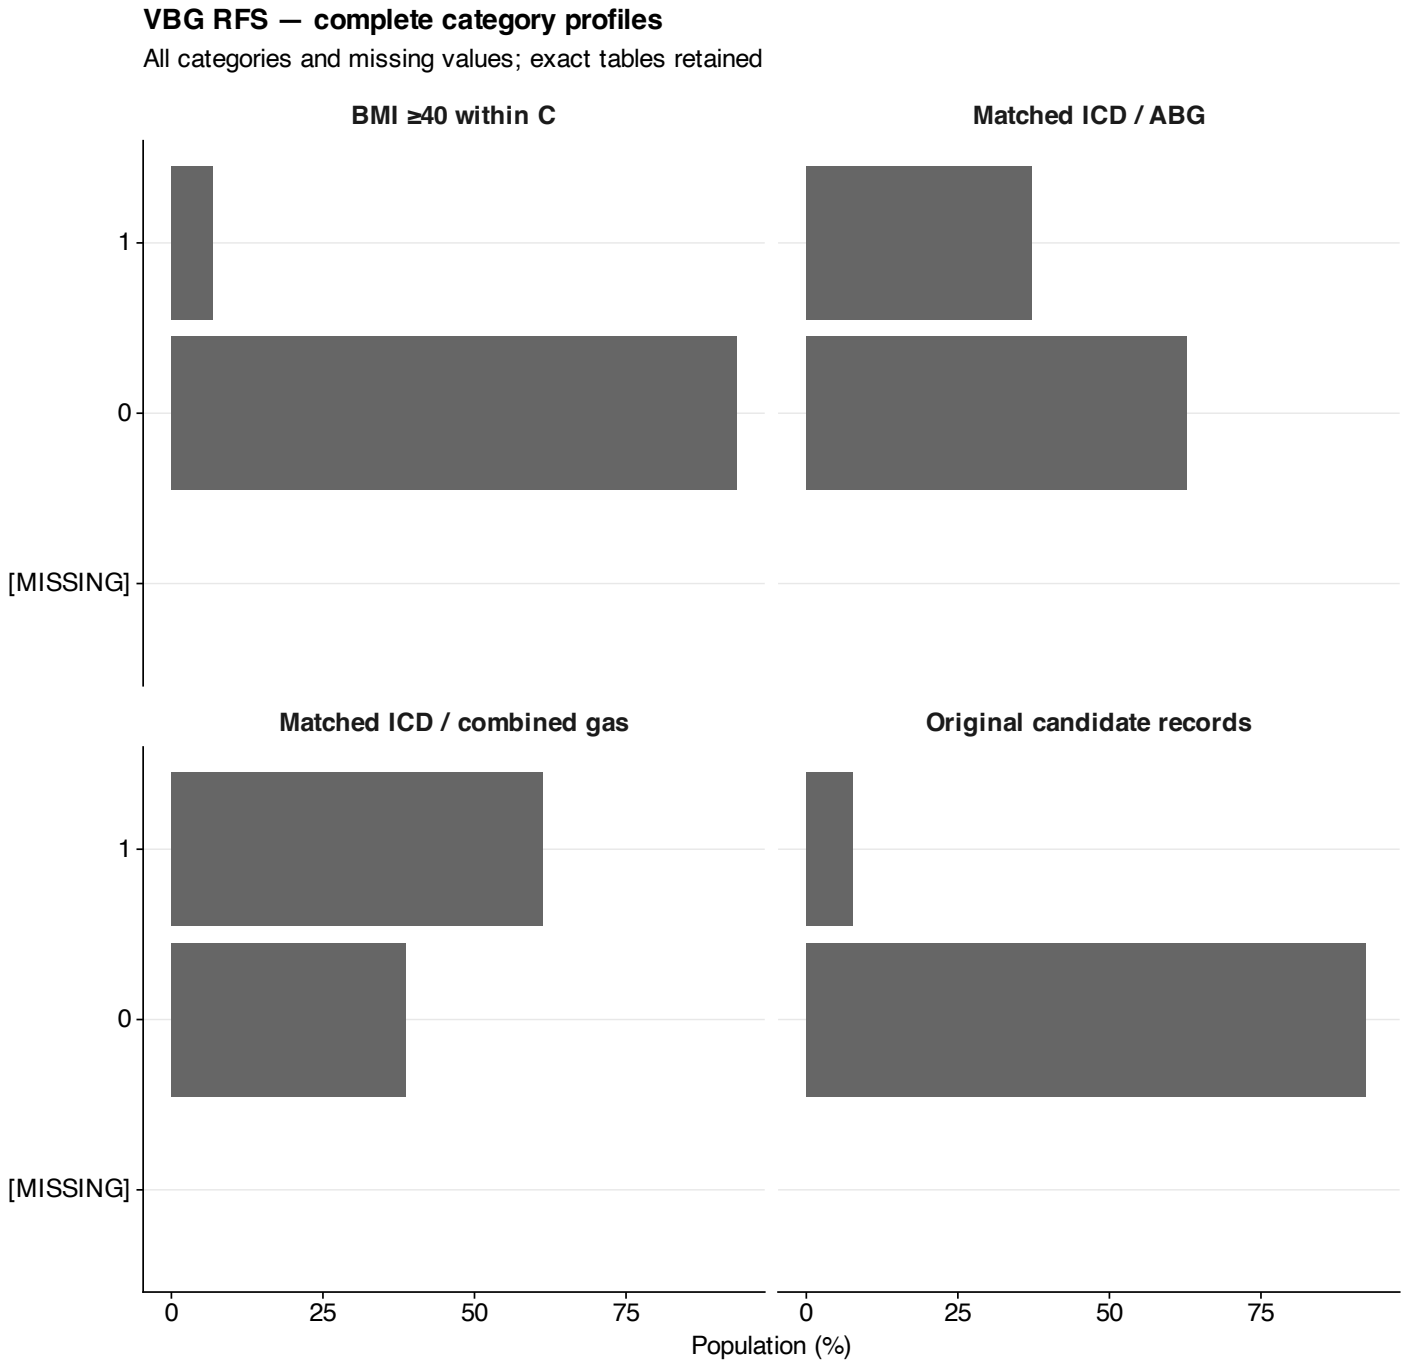

Figure 274: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete VBG_rfs stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

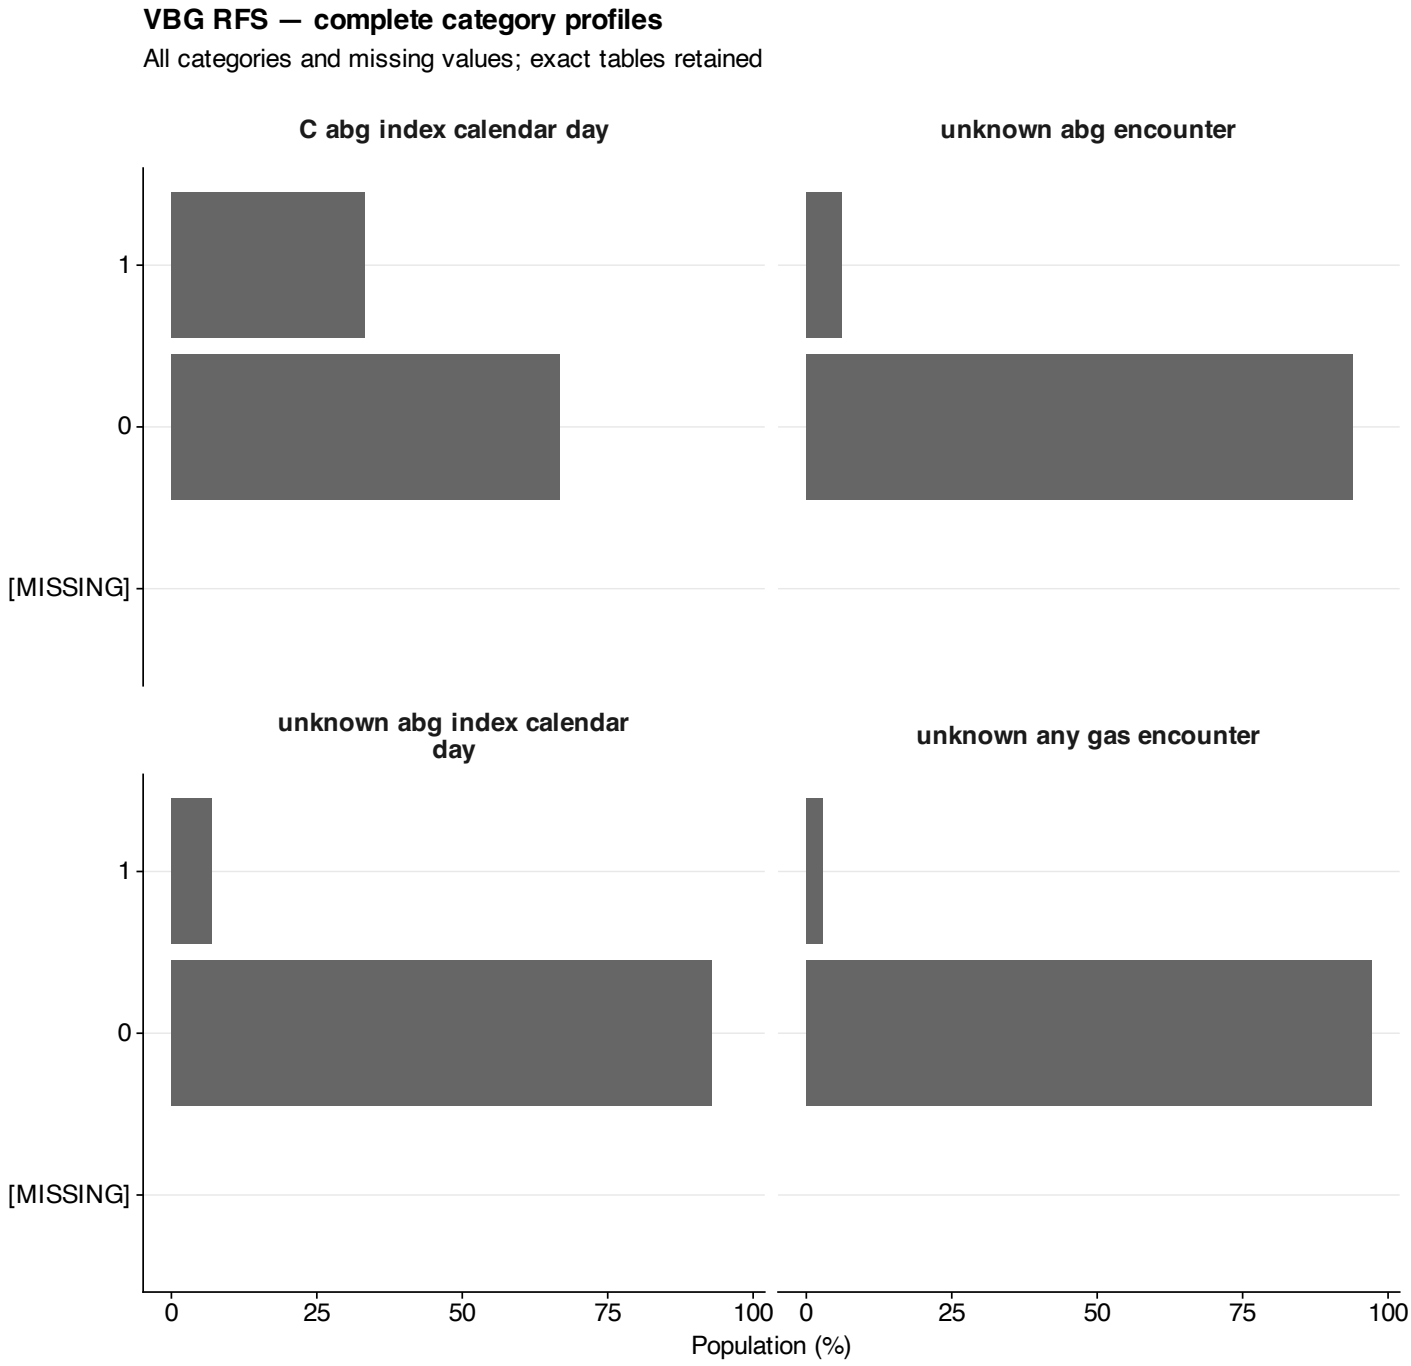

Figure 275: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete VBG_rfs stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

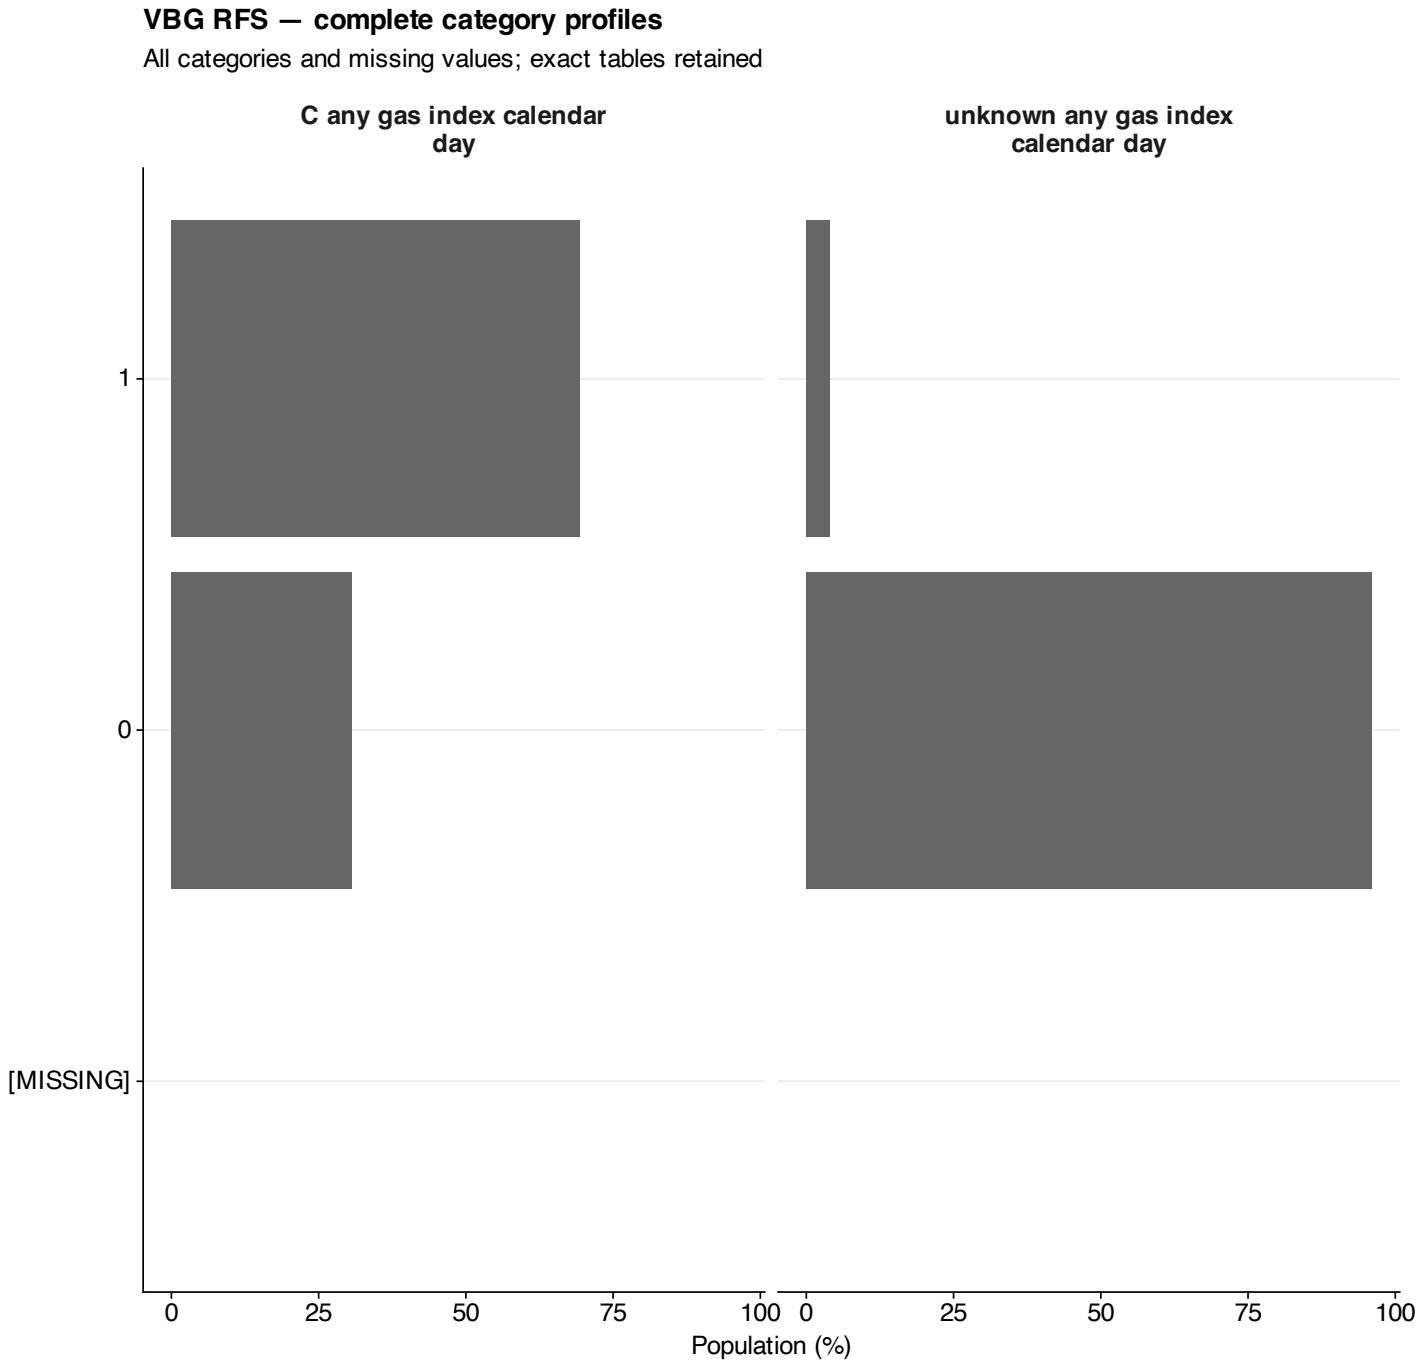

Figure 276: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete VBG_rfs stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

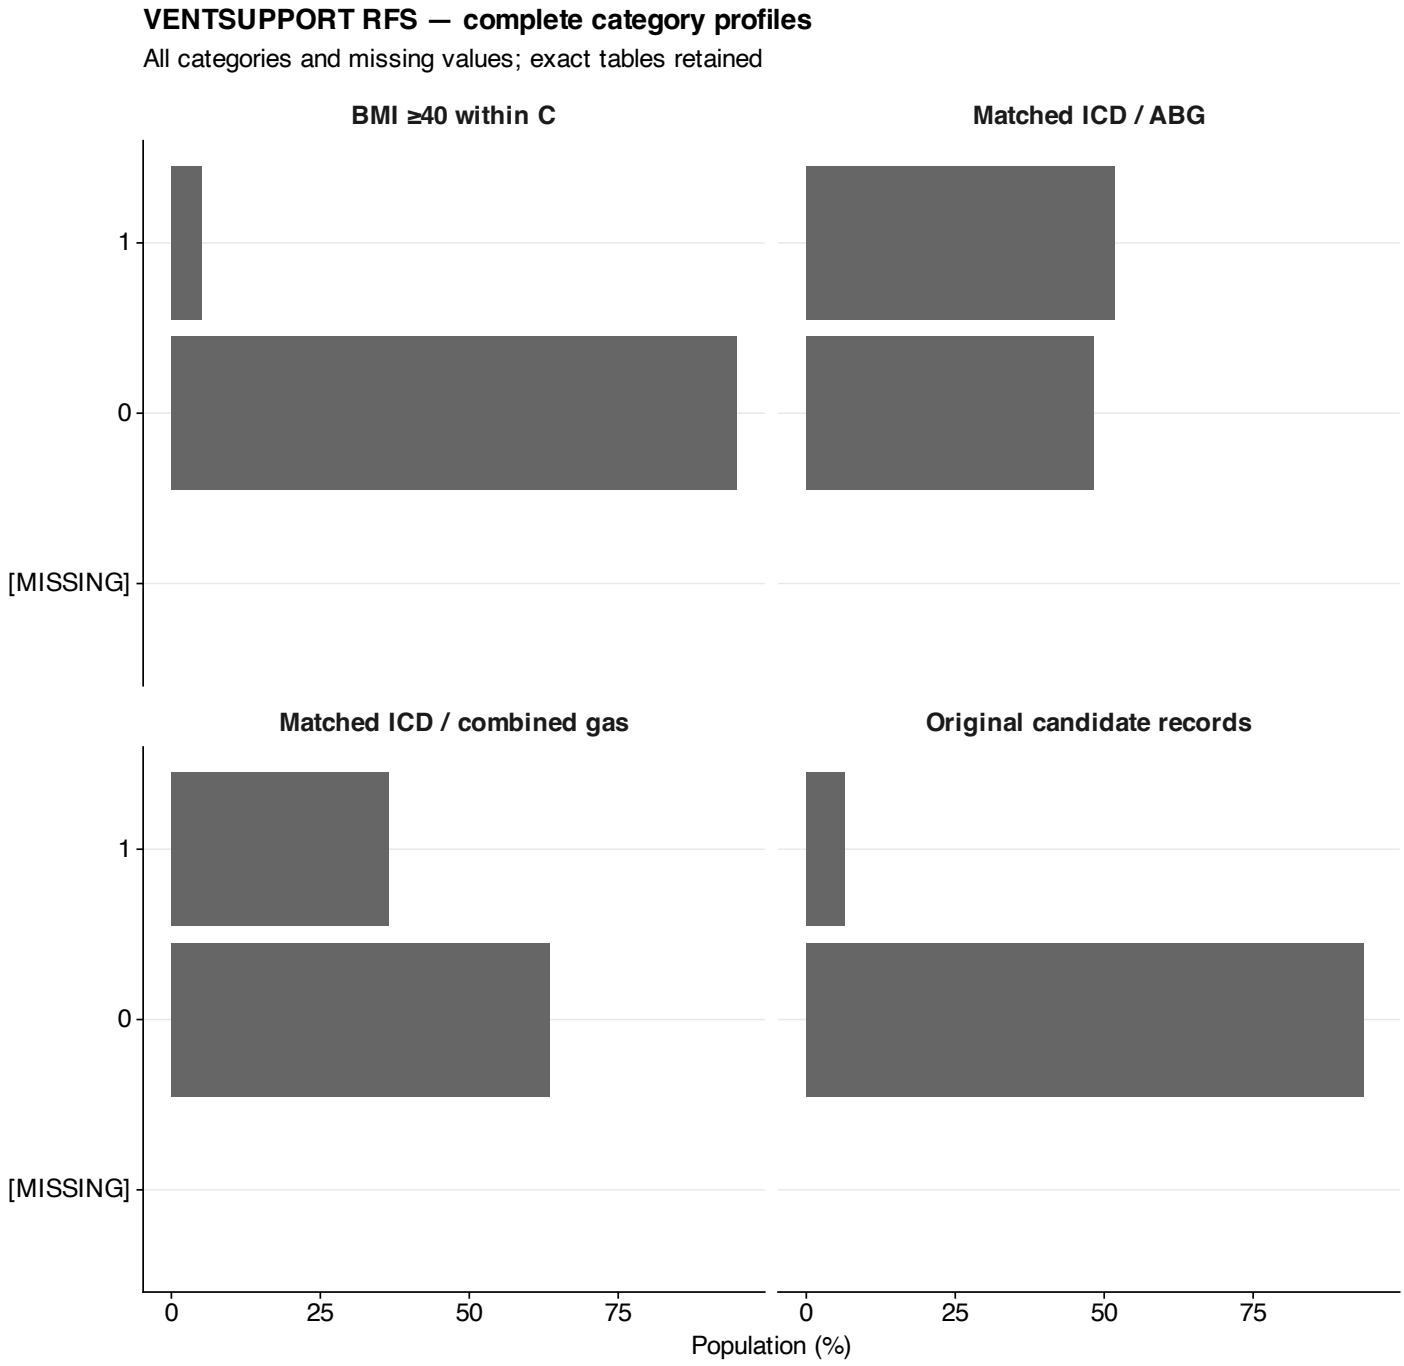

Figure 277: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete VENTSUPPORT_rfs stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

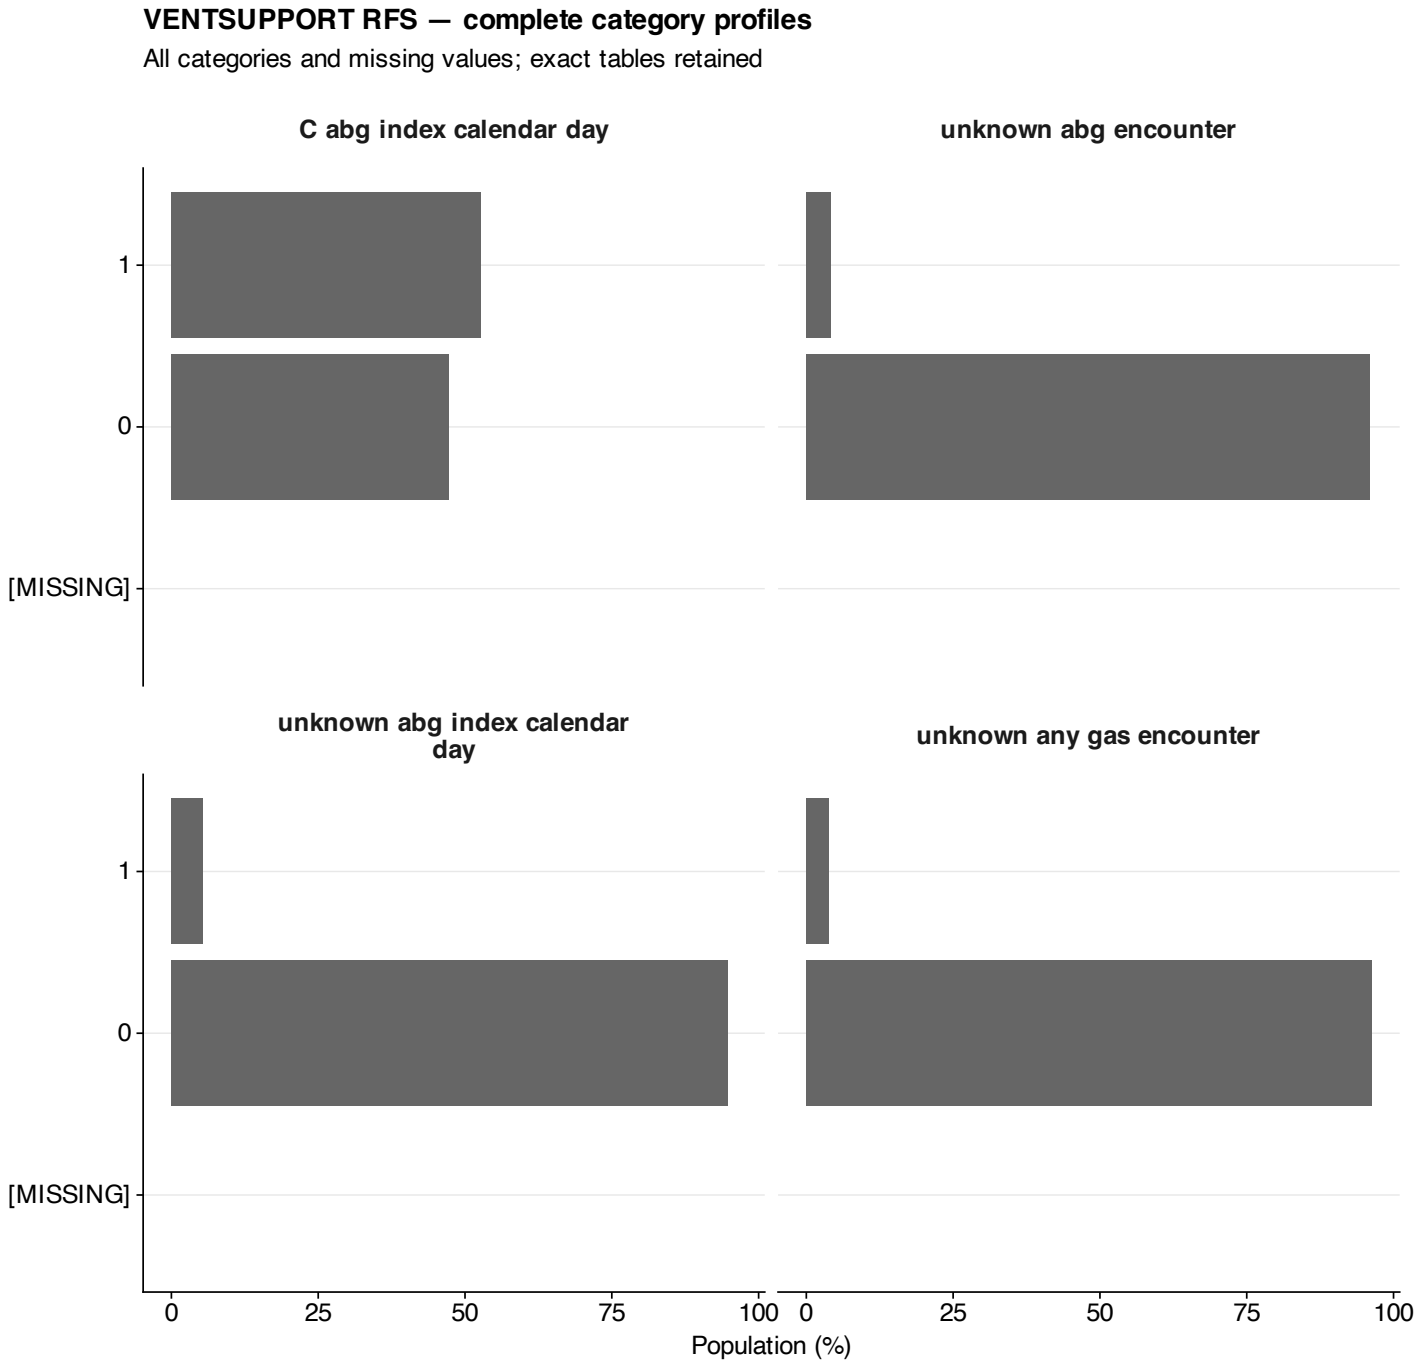

Figure 278: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete VENTSUPPORT_rfs stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

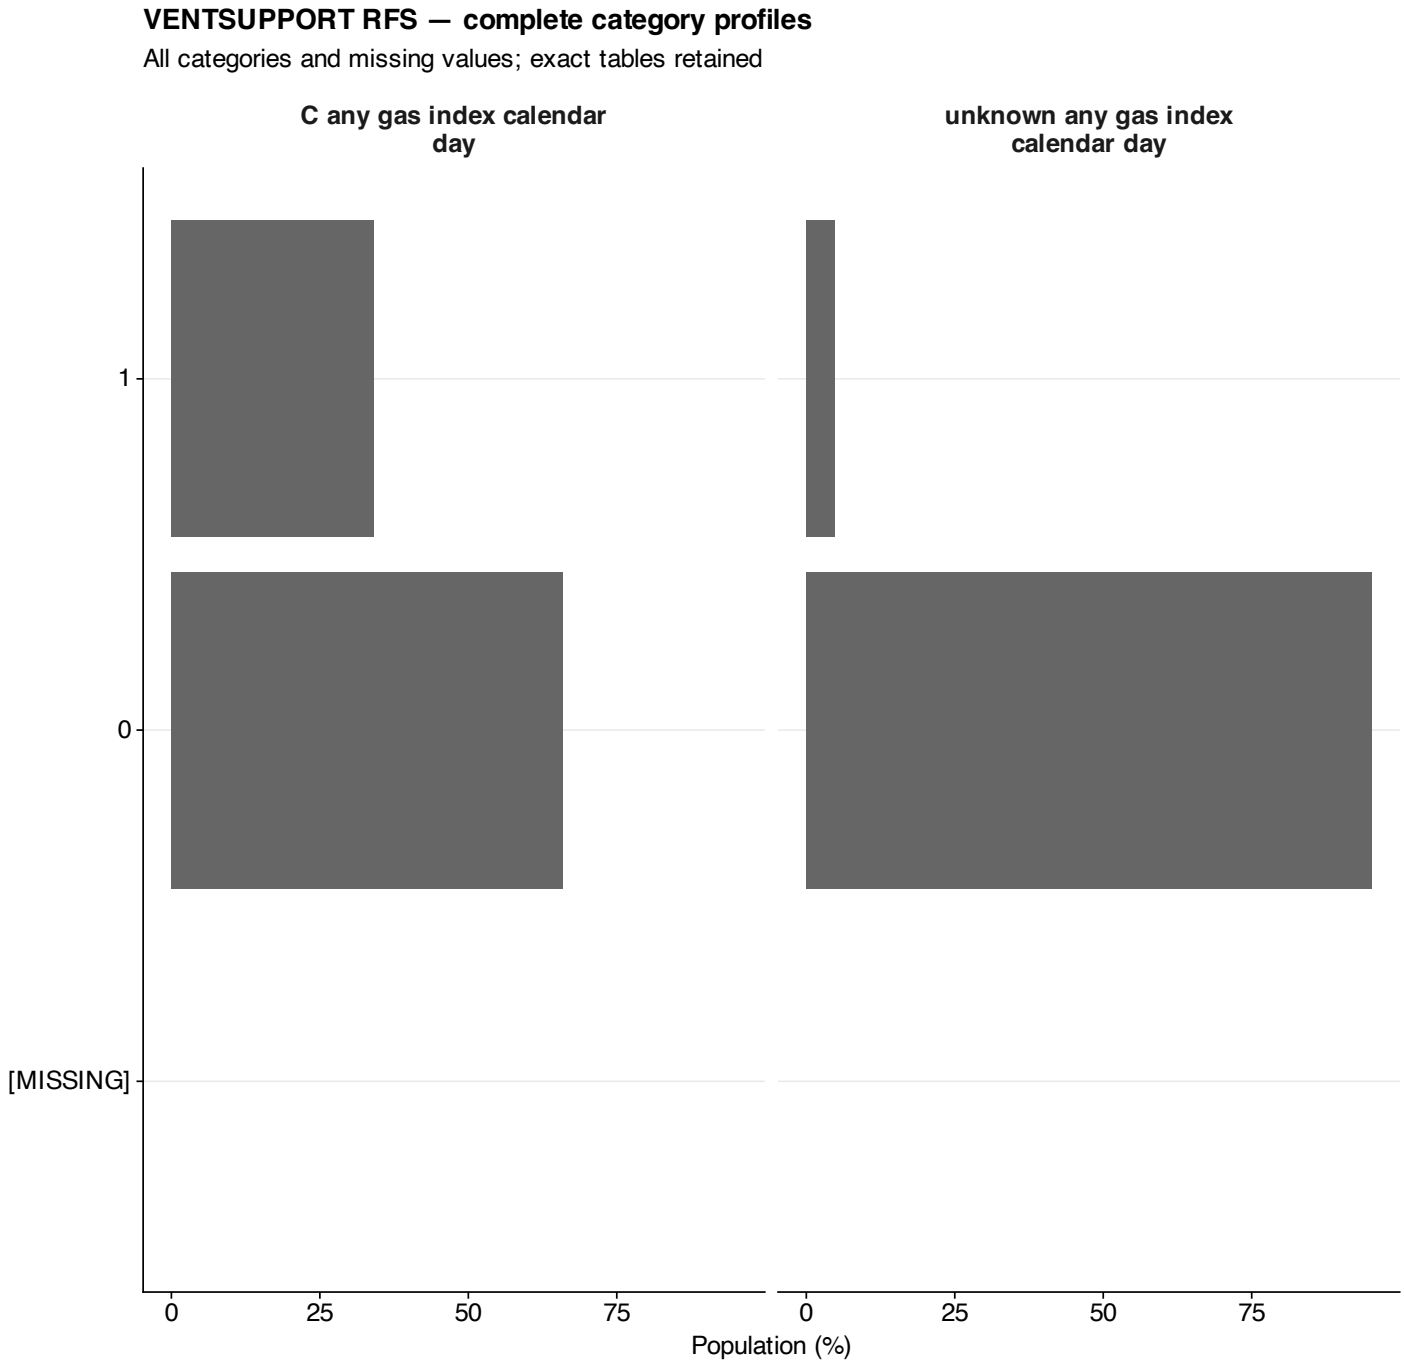

Figure 279: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete VENTSUPPORT_rfs stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

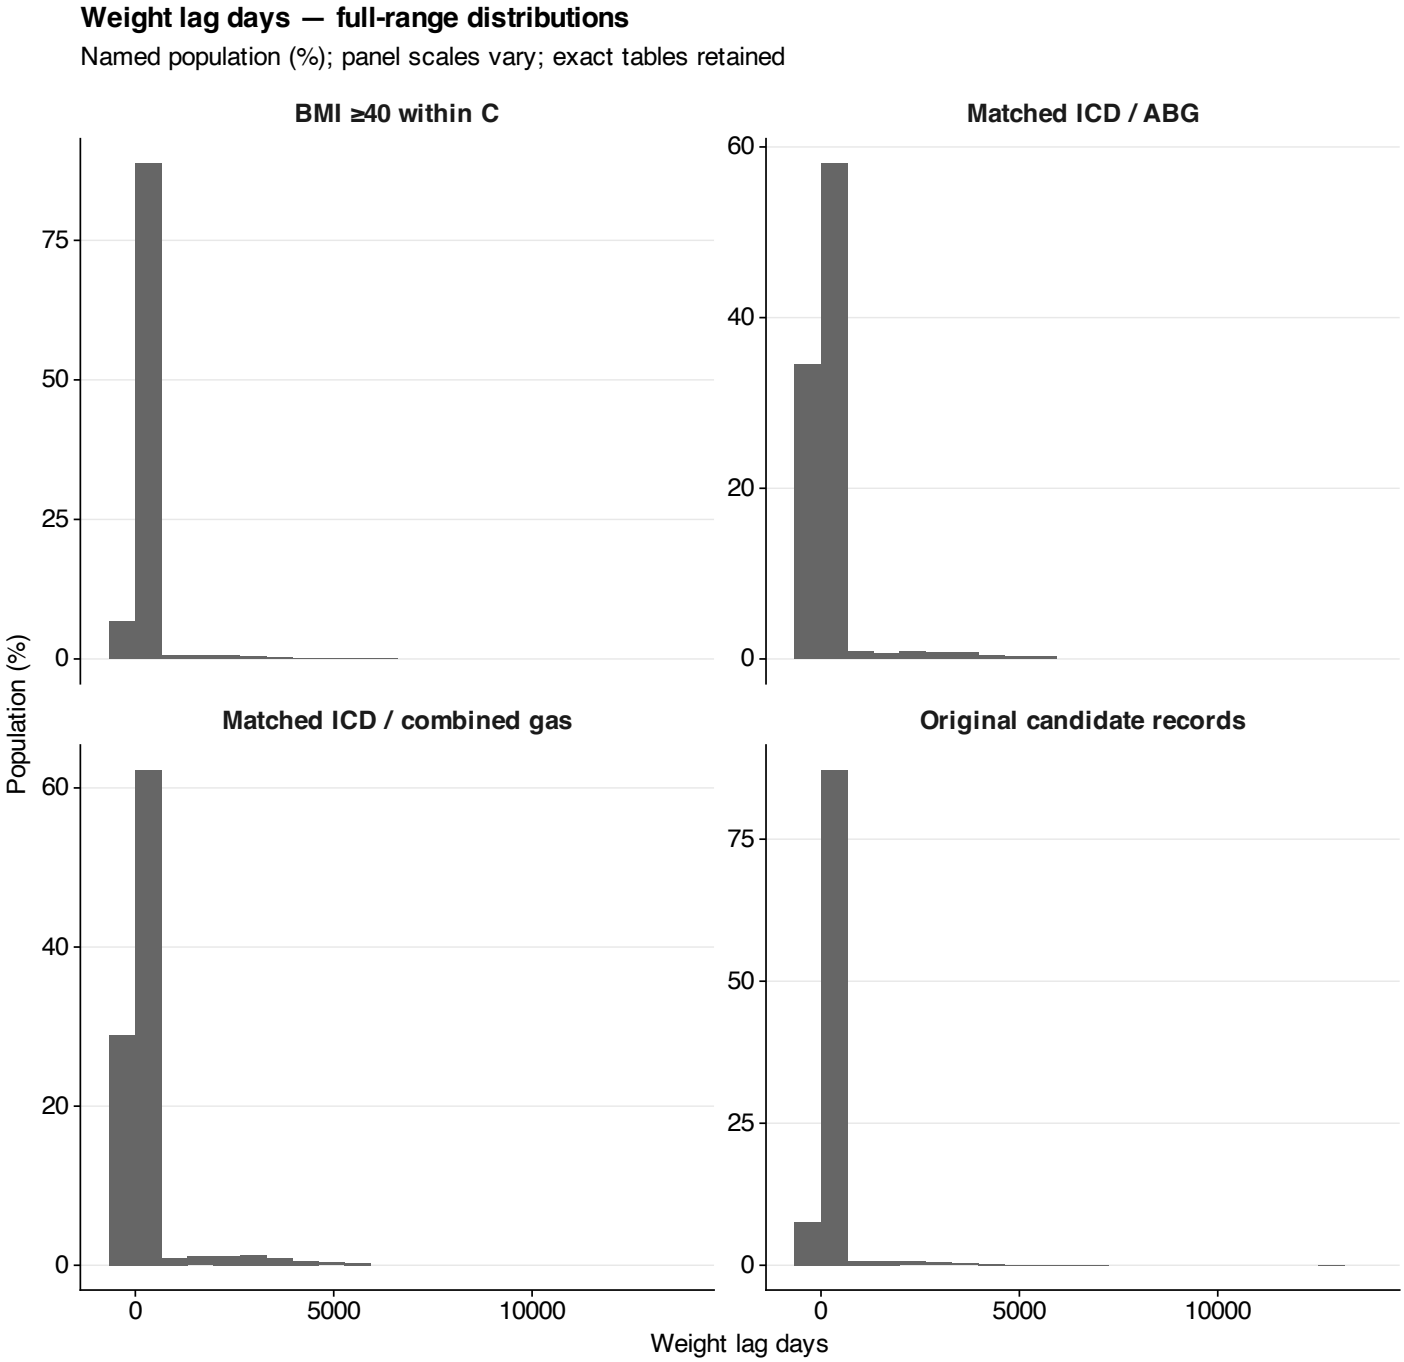

Figure 280: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete weight_lag_days stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

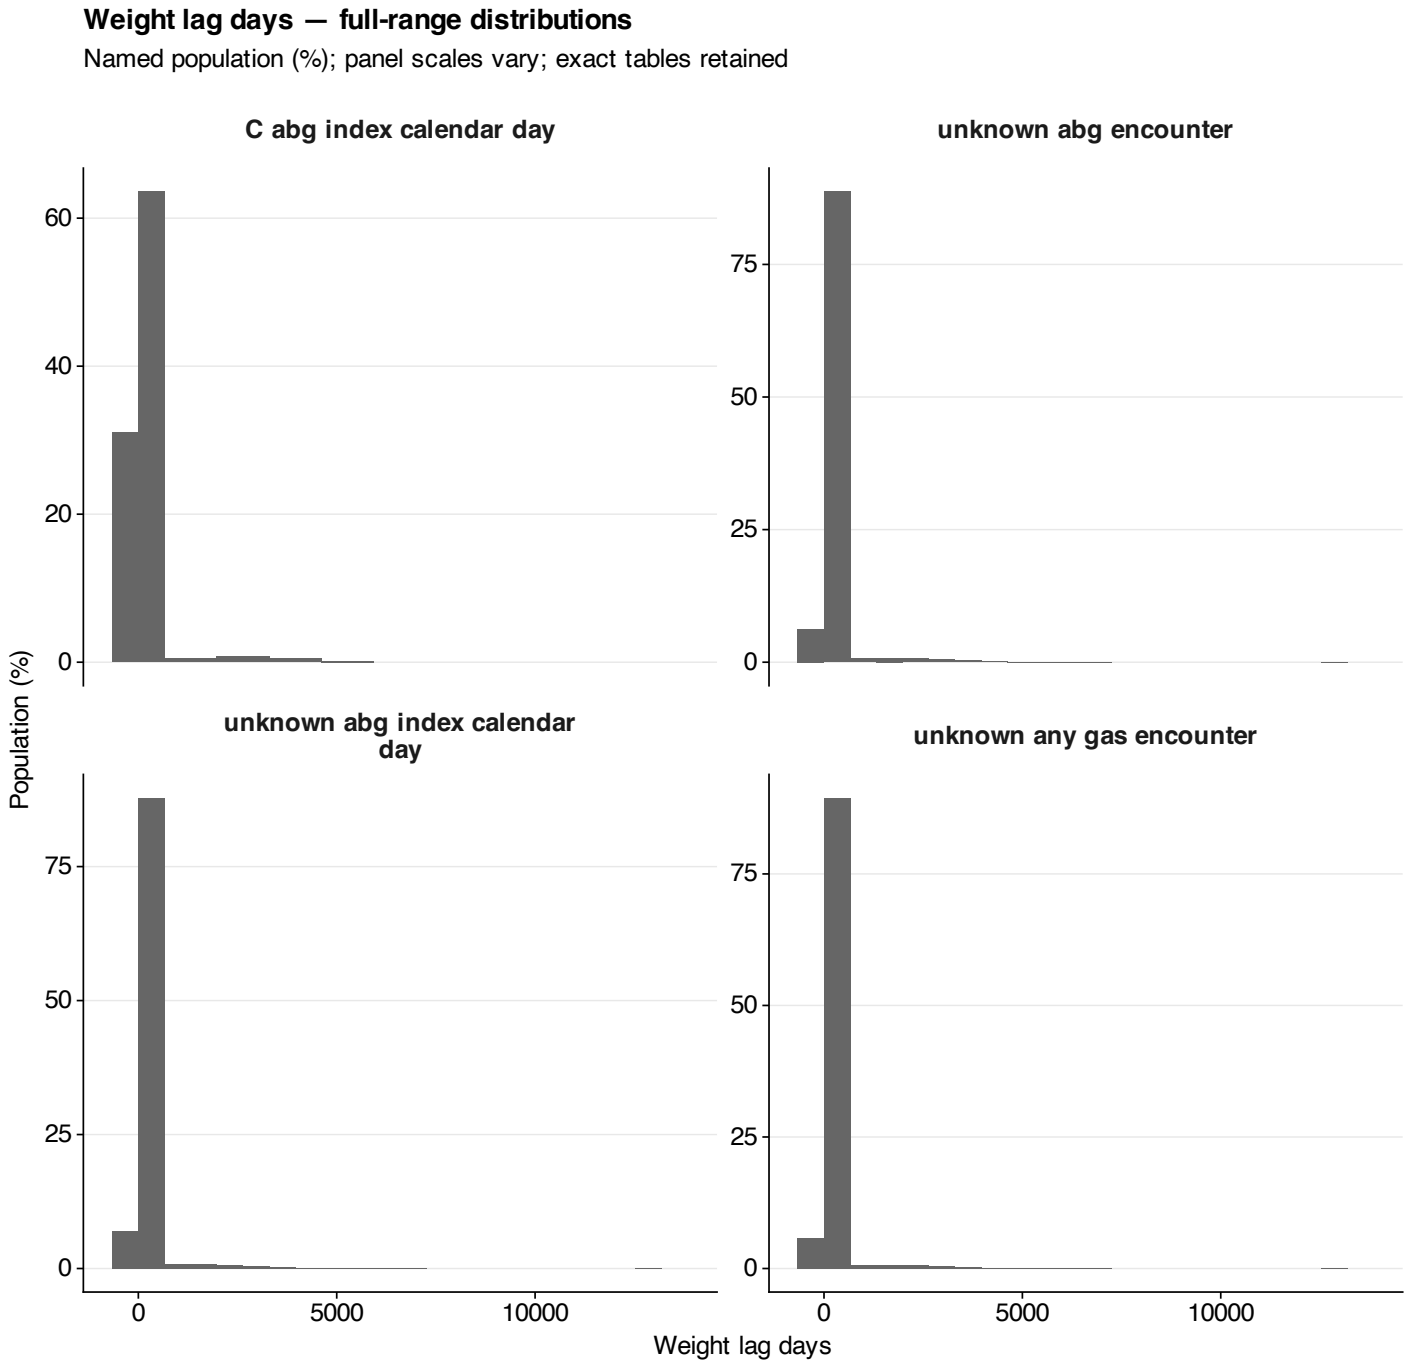

Figure 281: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete weight_lag_days stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

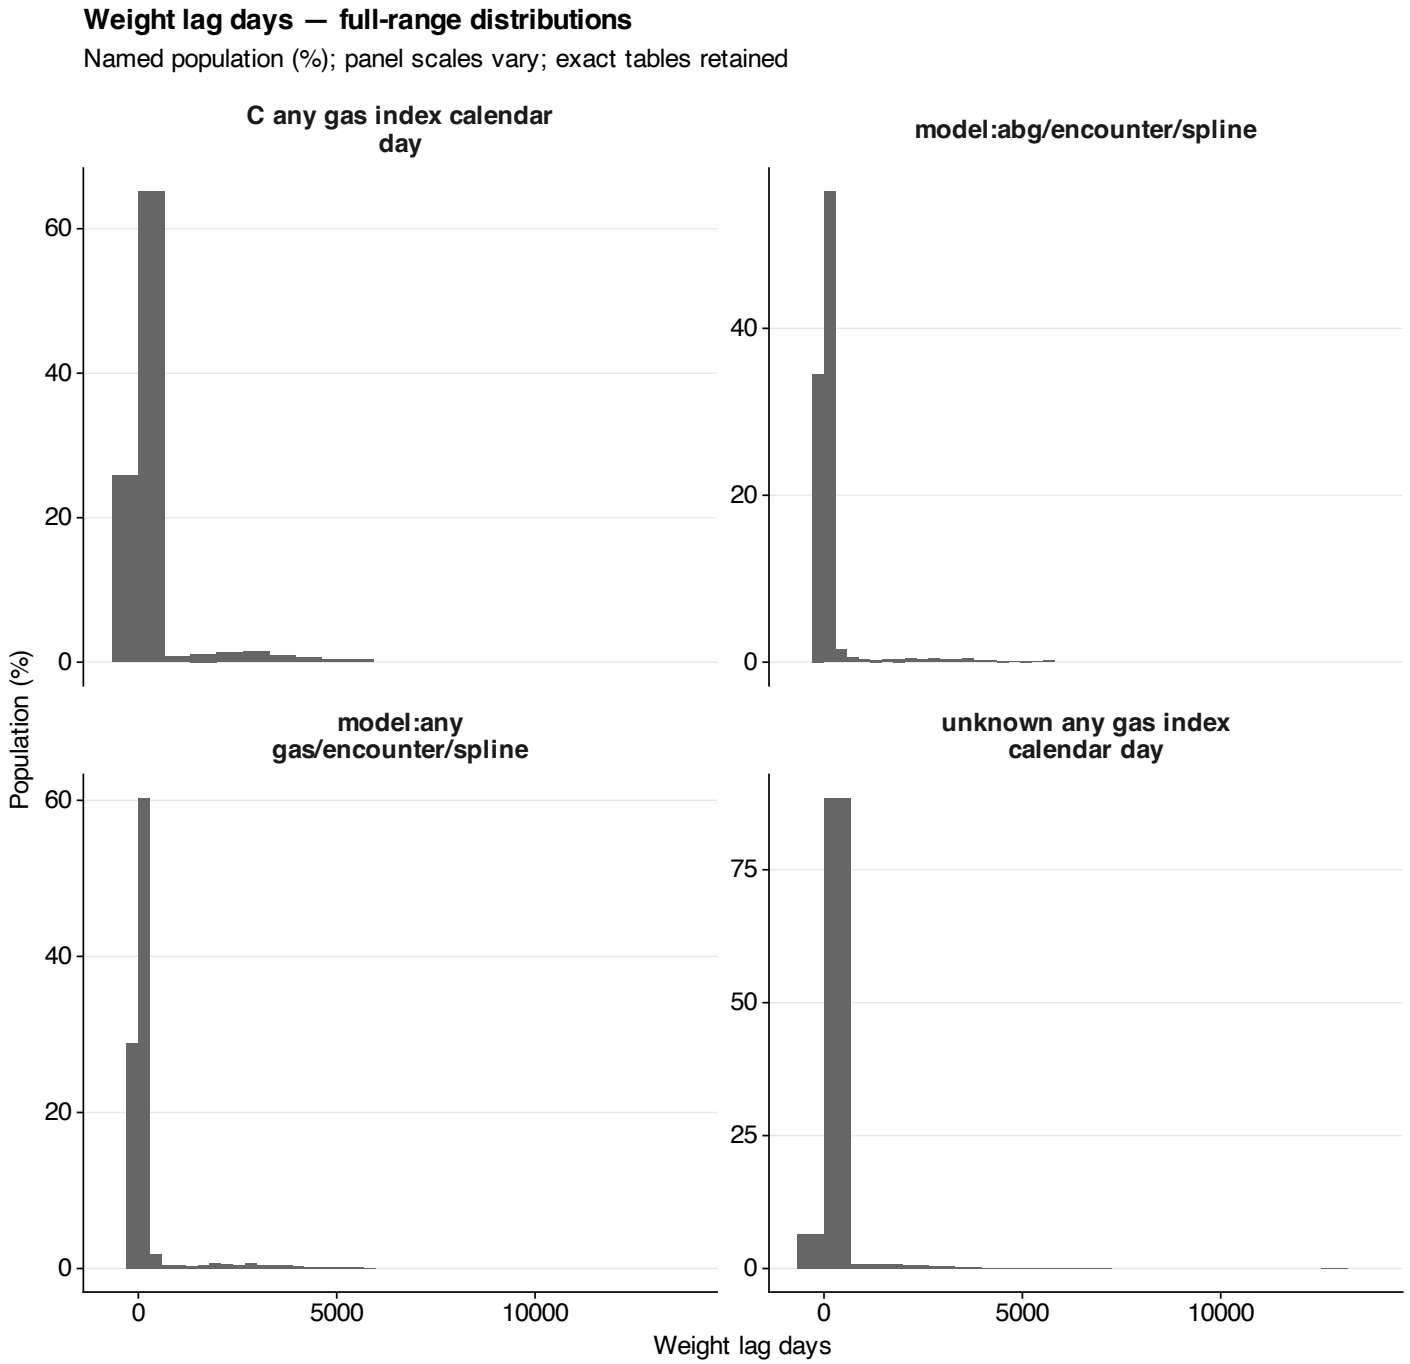

Figure 282: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Figure 528: Source-entry population: combined. Global source and pre-index accounting. F3. weight_pounds ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

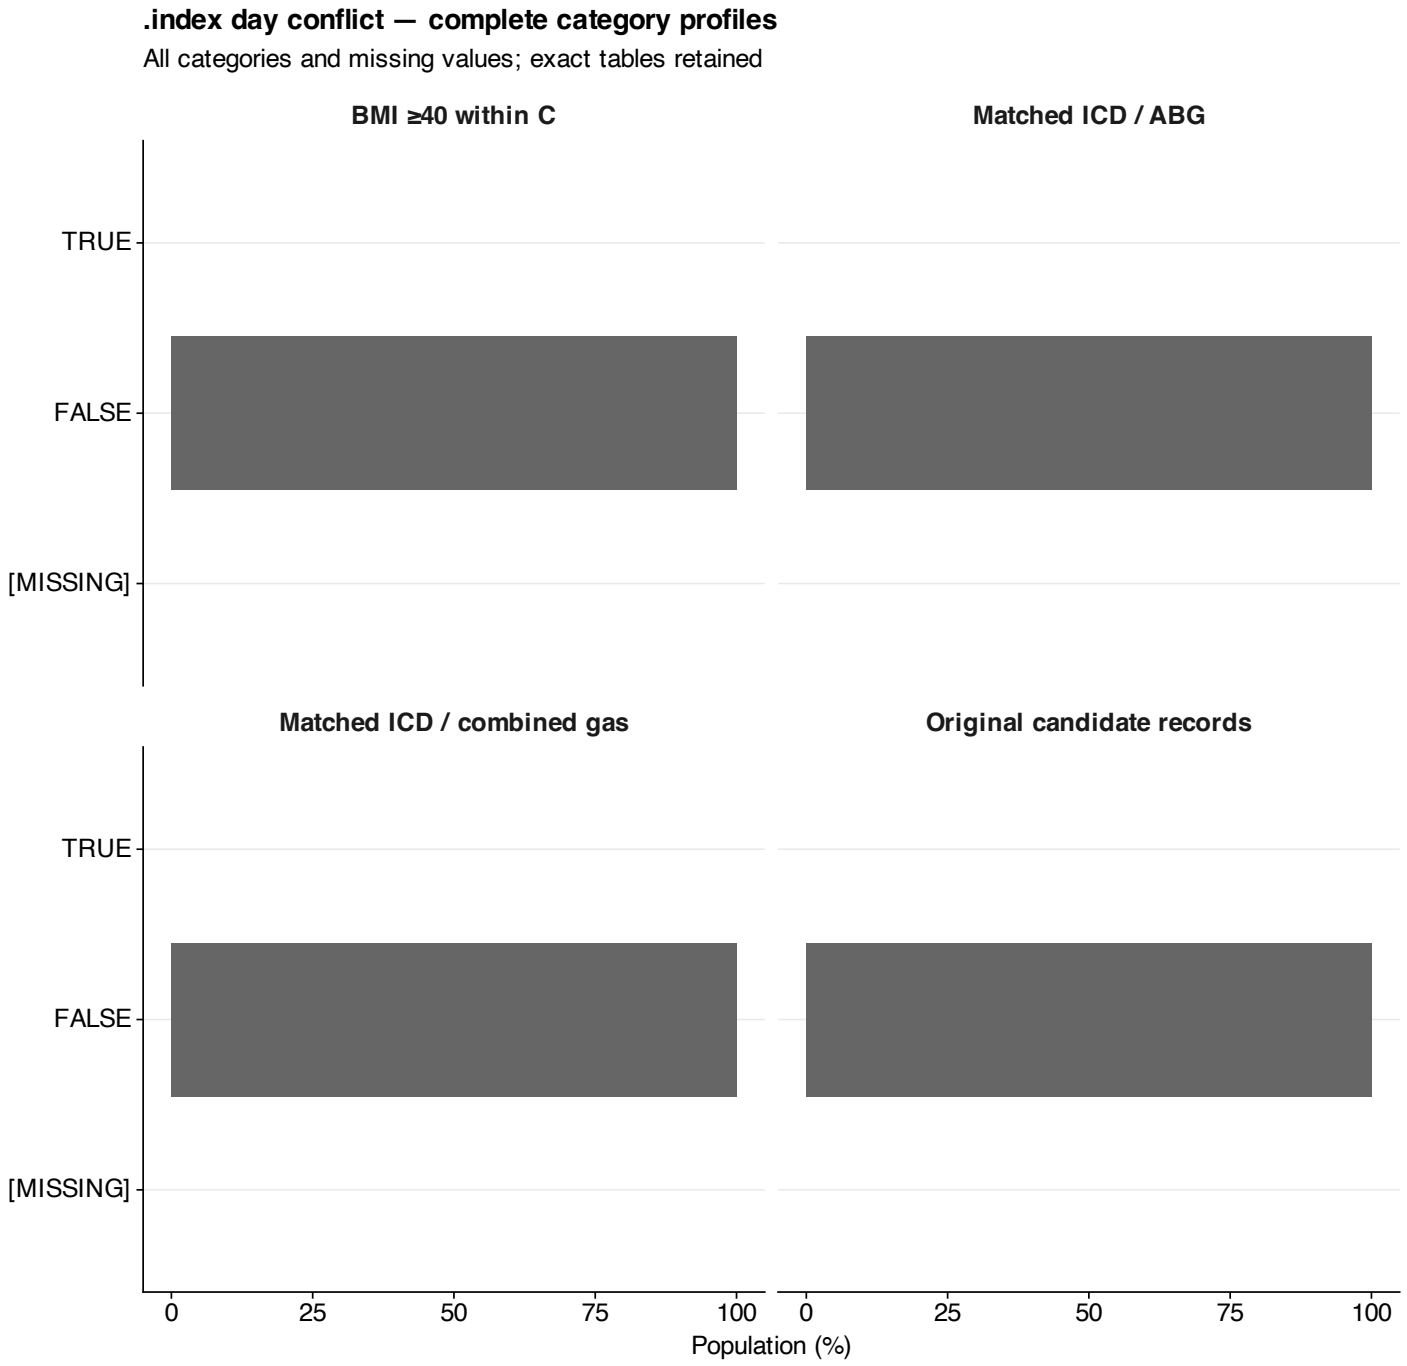

Figure 529: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete .index_day_conflict stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

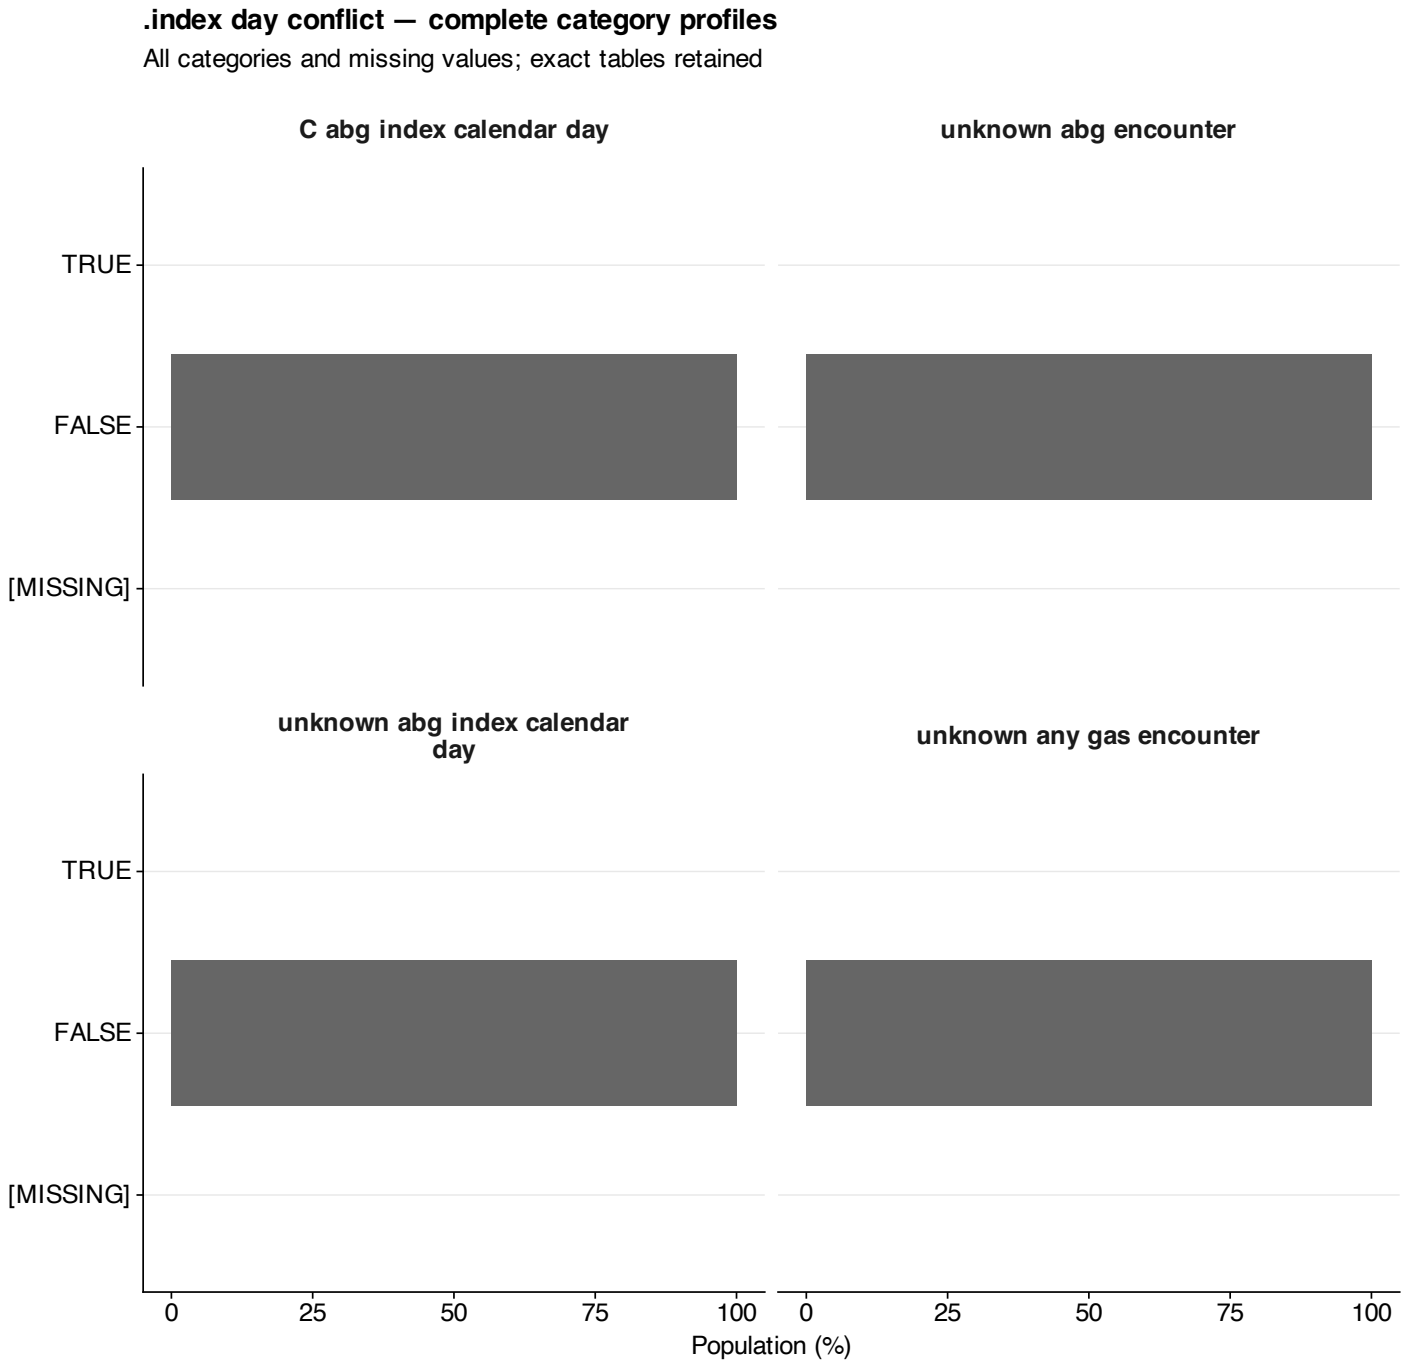

Figure 530: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete .index_day_conflict stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

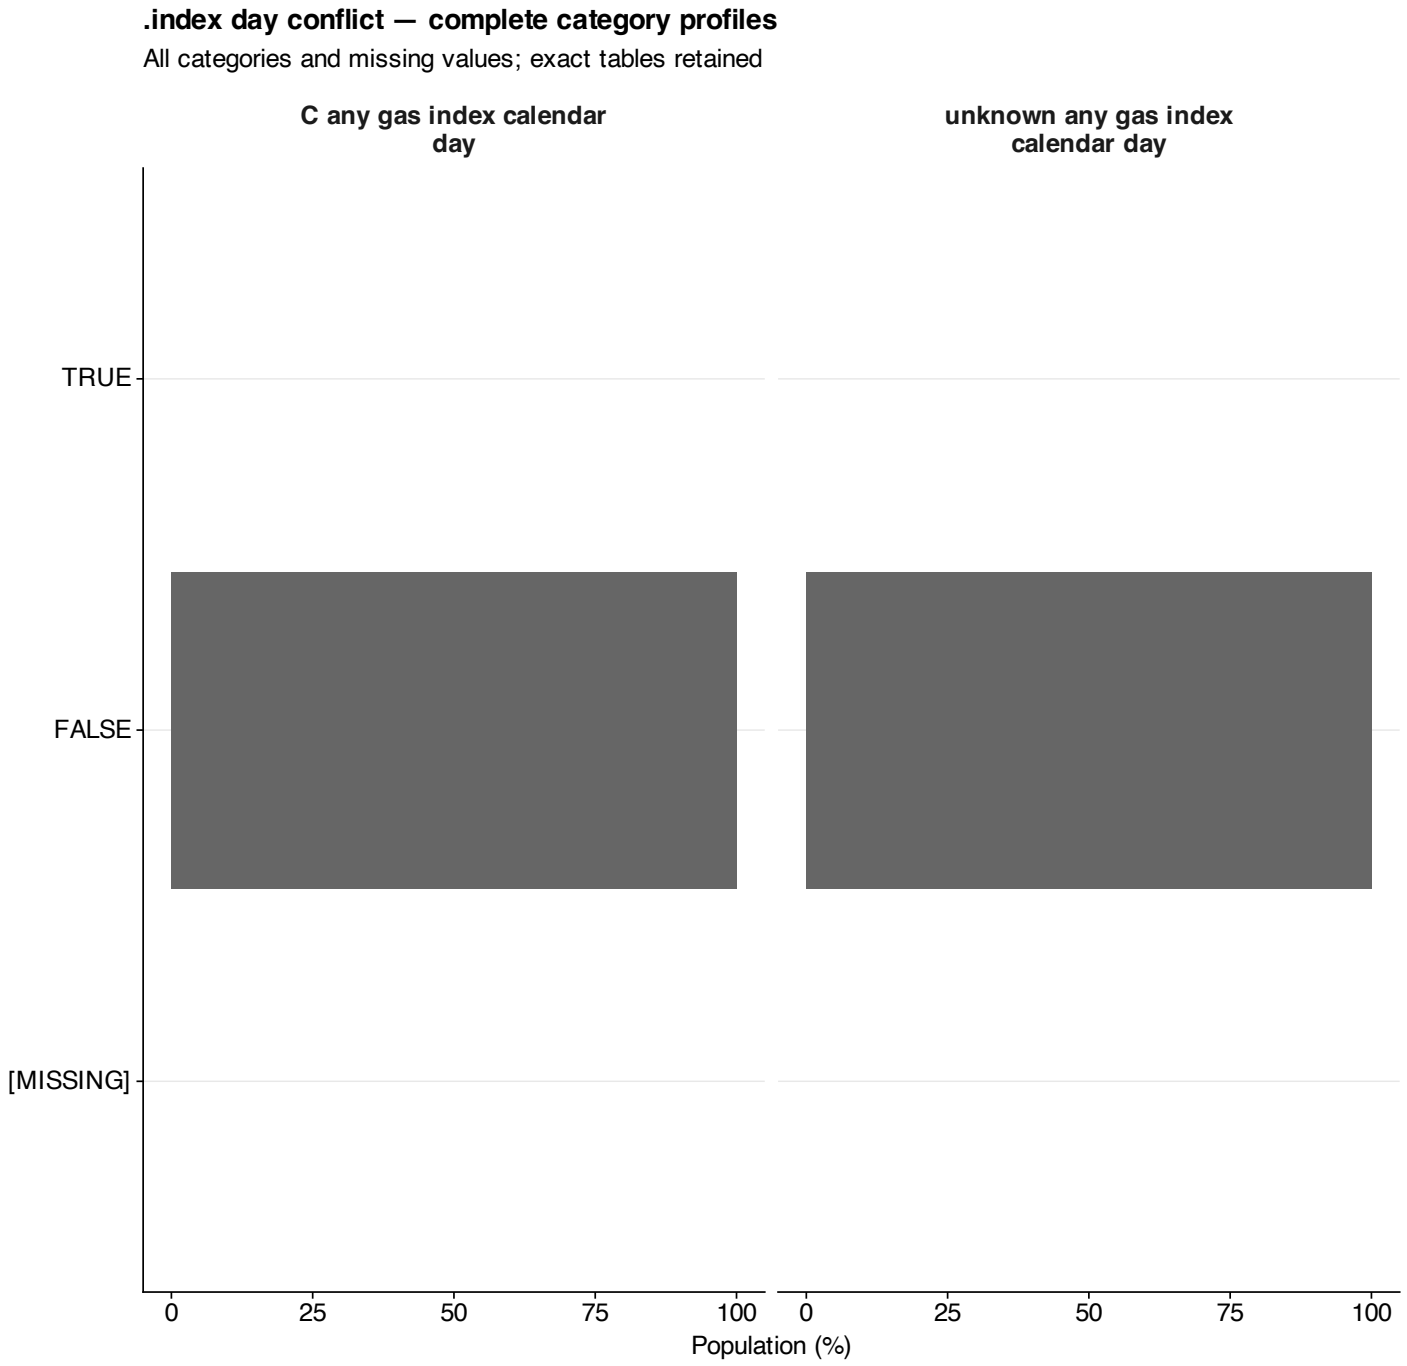

Figure 531: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete .index_day_conflict stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

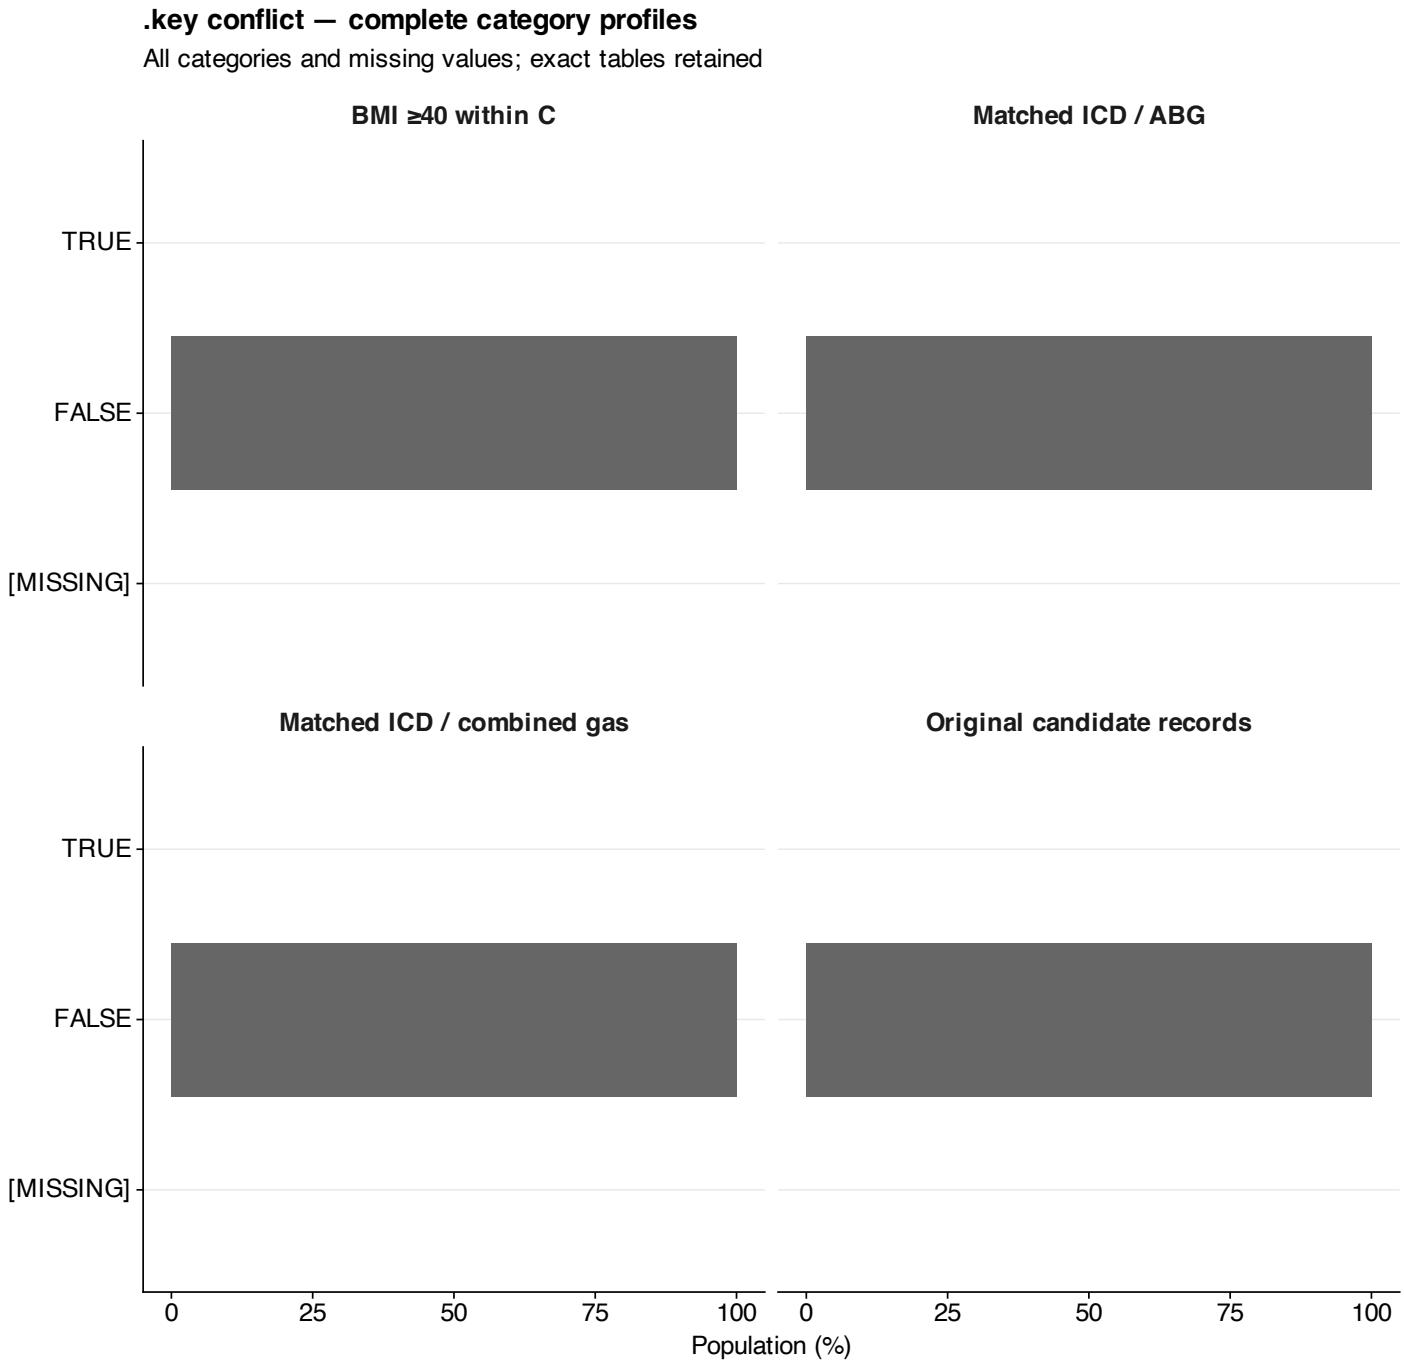

Figure 532: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete .key_conflict stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

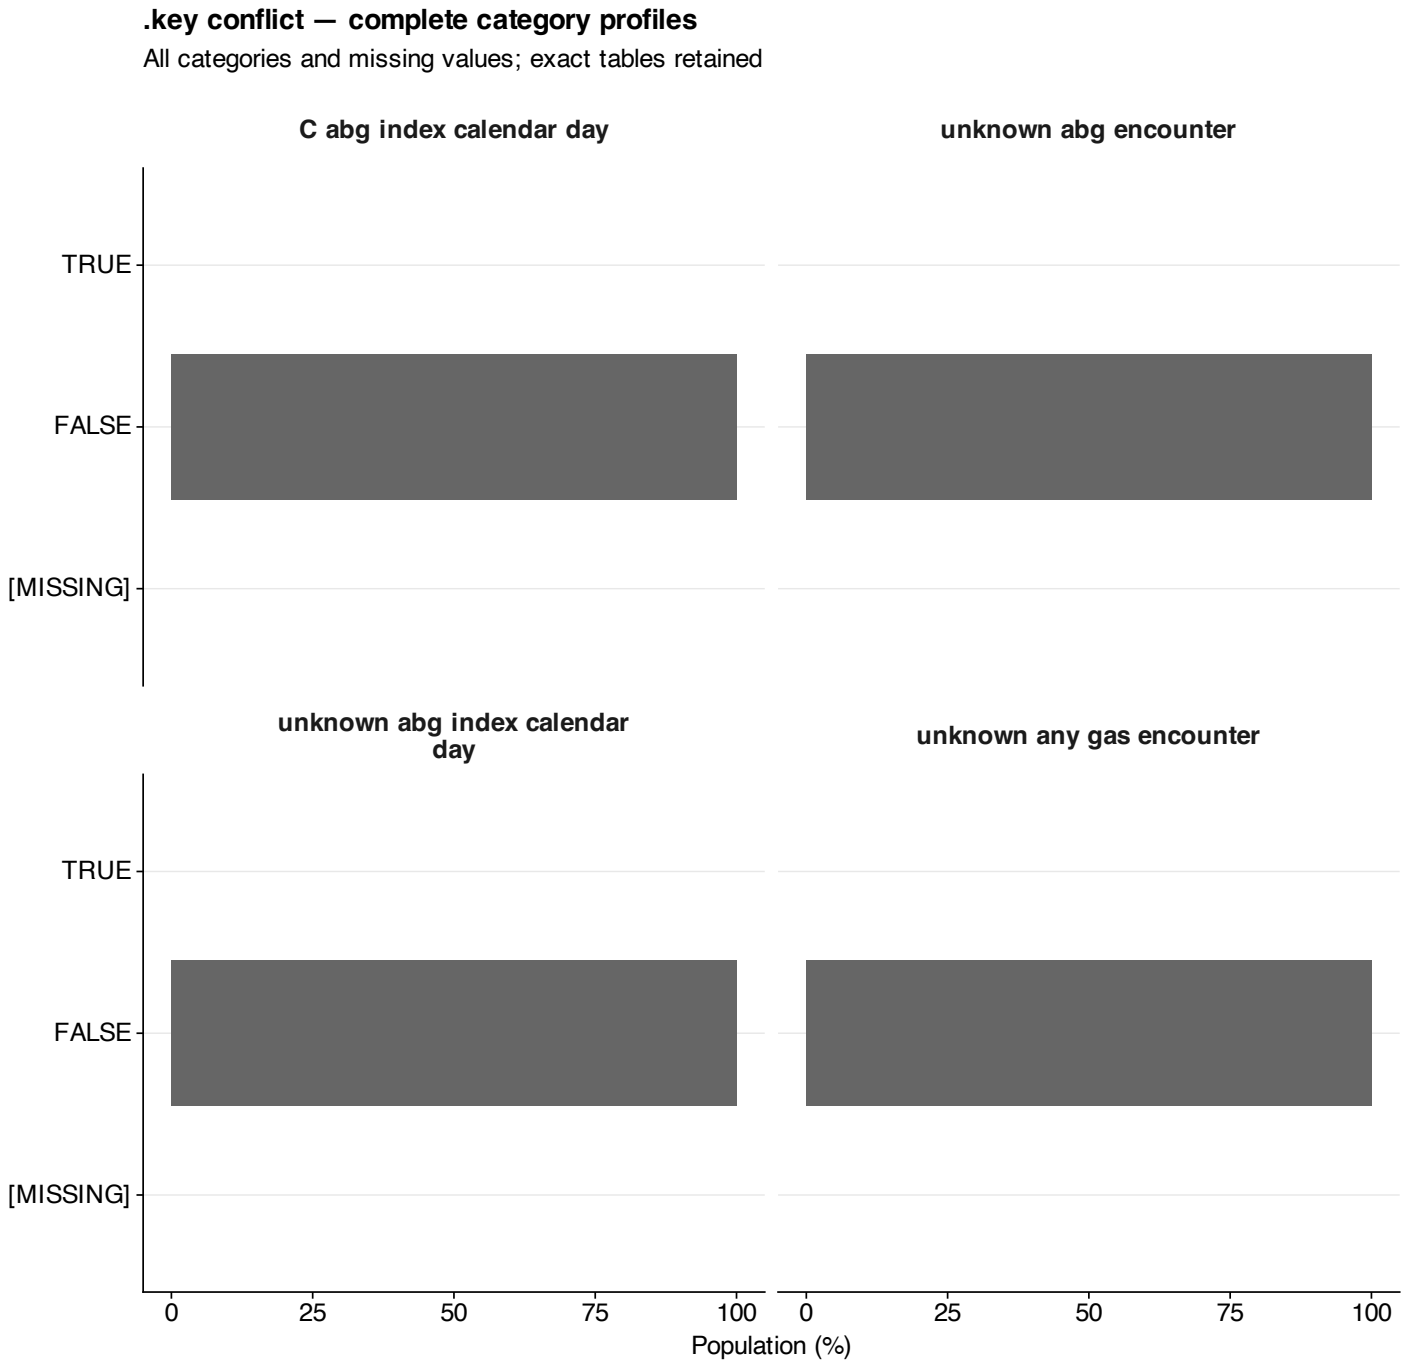

Figure 533: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete .key_conflict stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

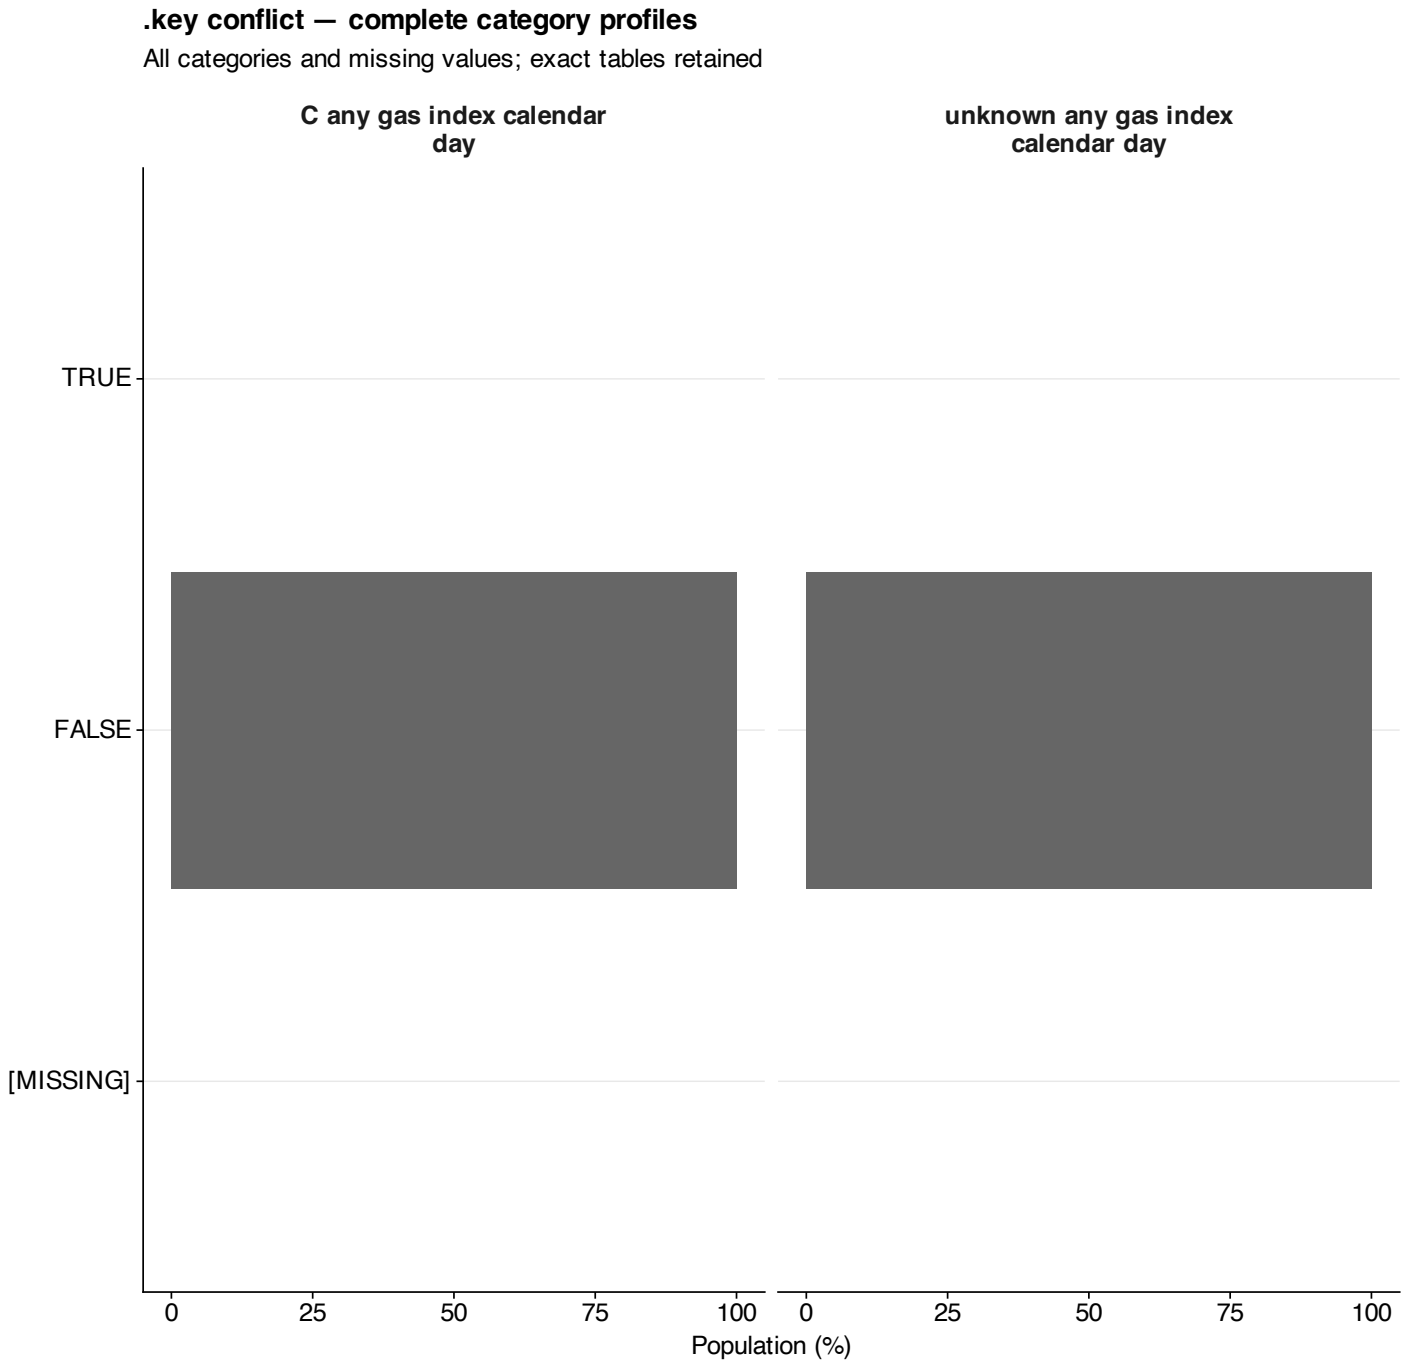

Figure 534: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete .key_conflict stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

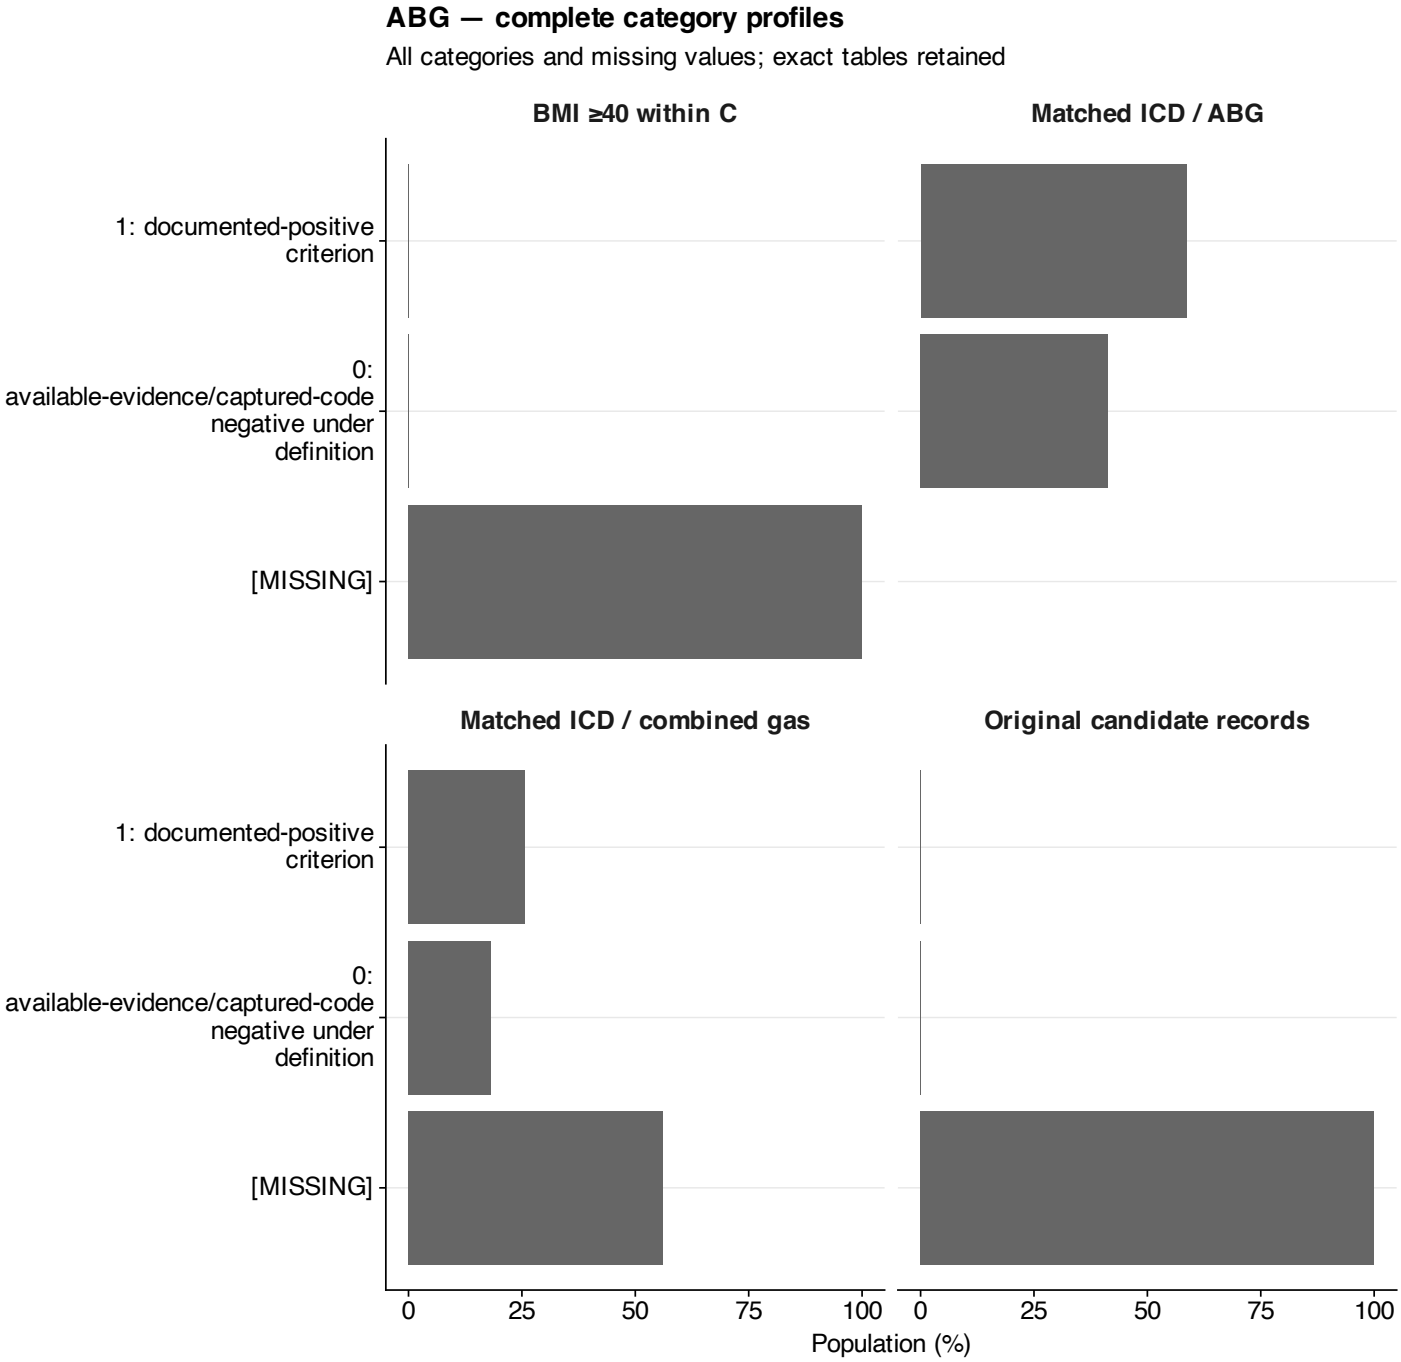

Figure 535: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete abg stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

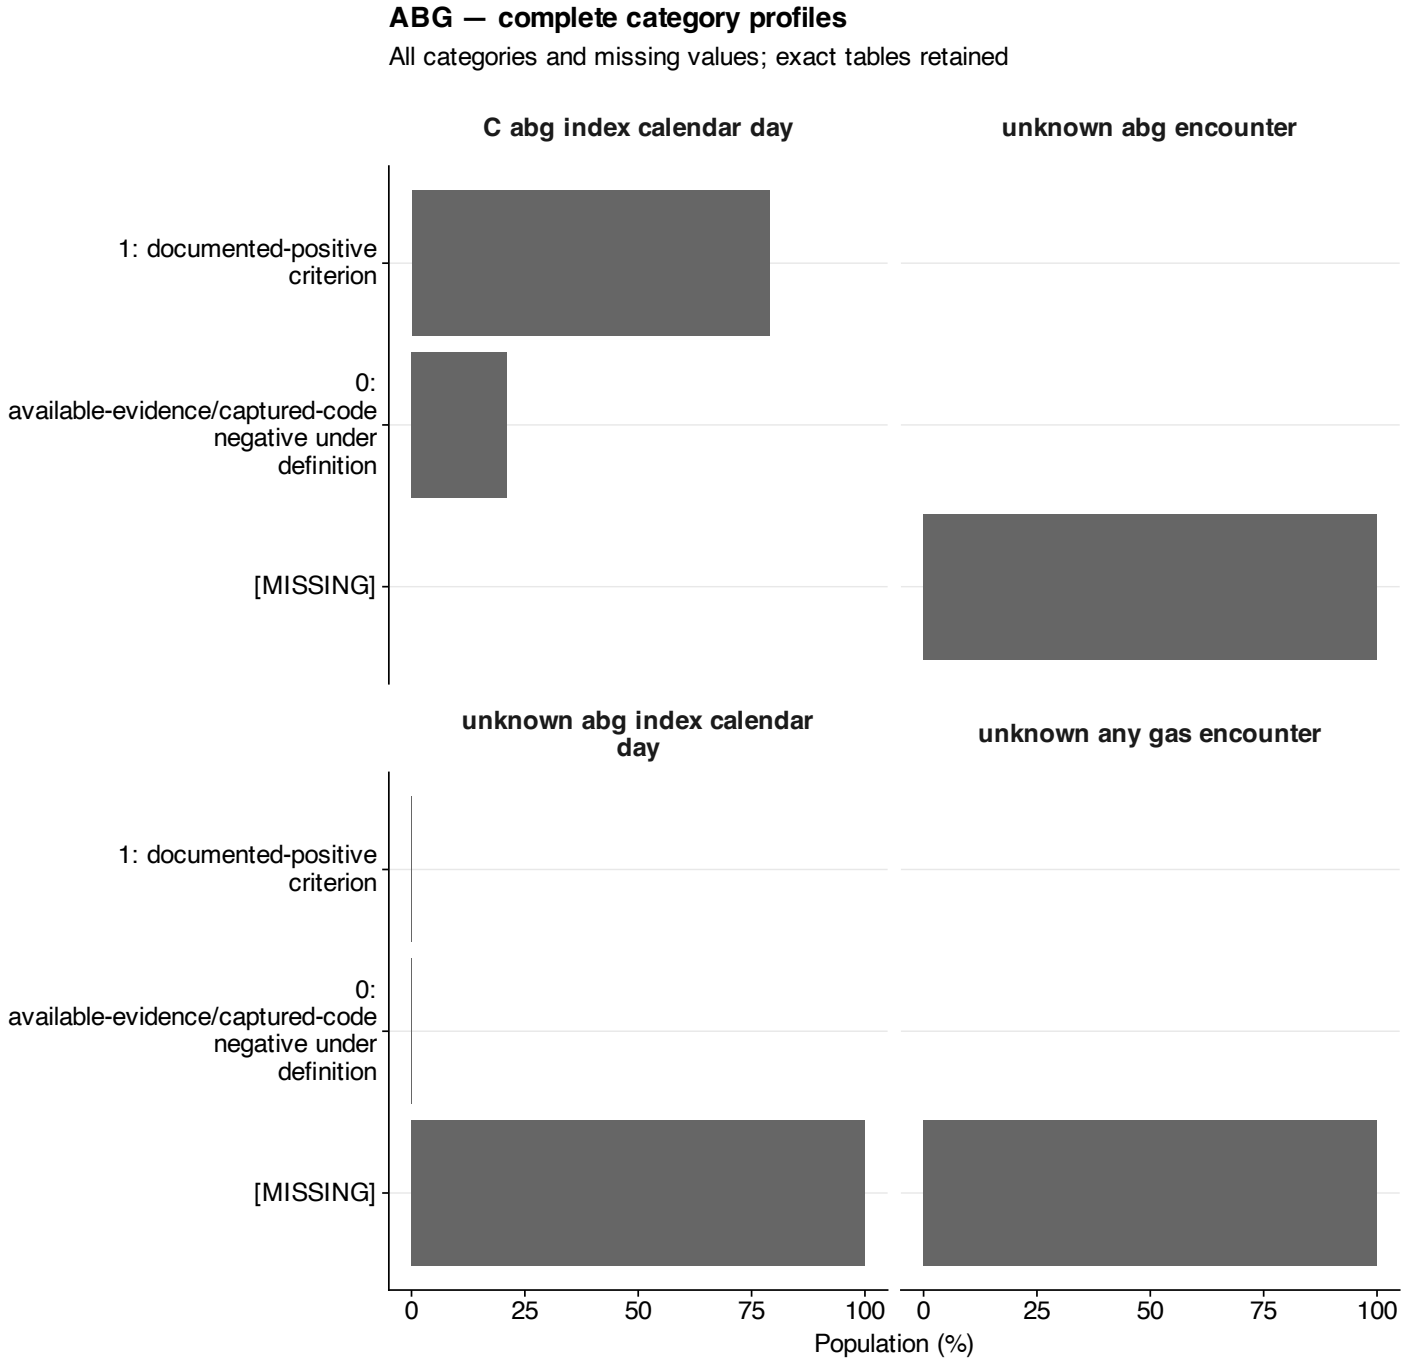

Figure 536: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete abg stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

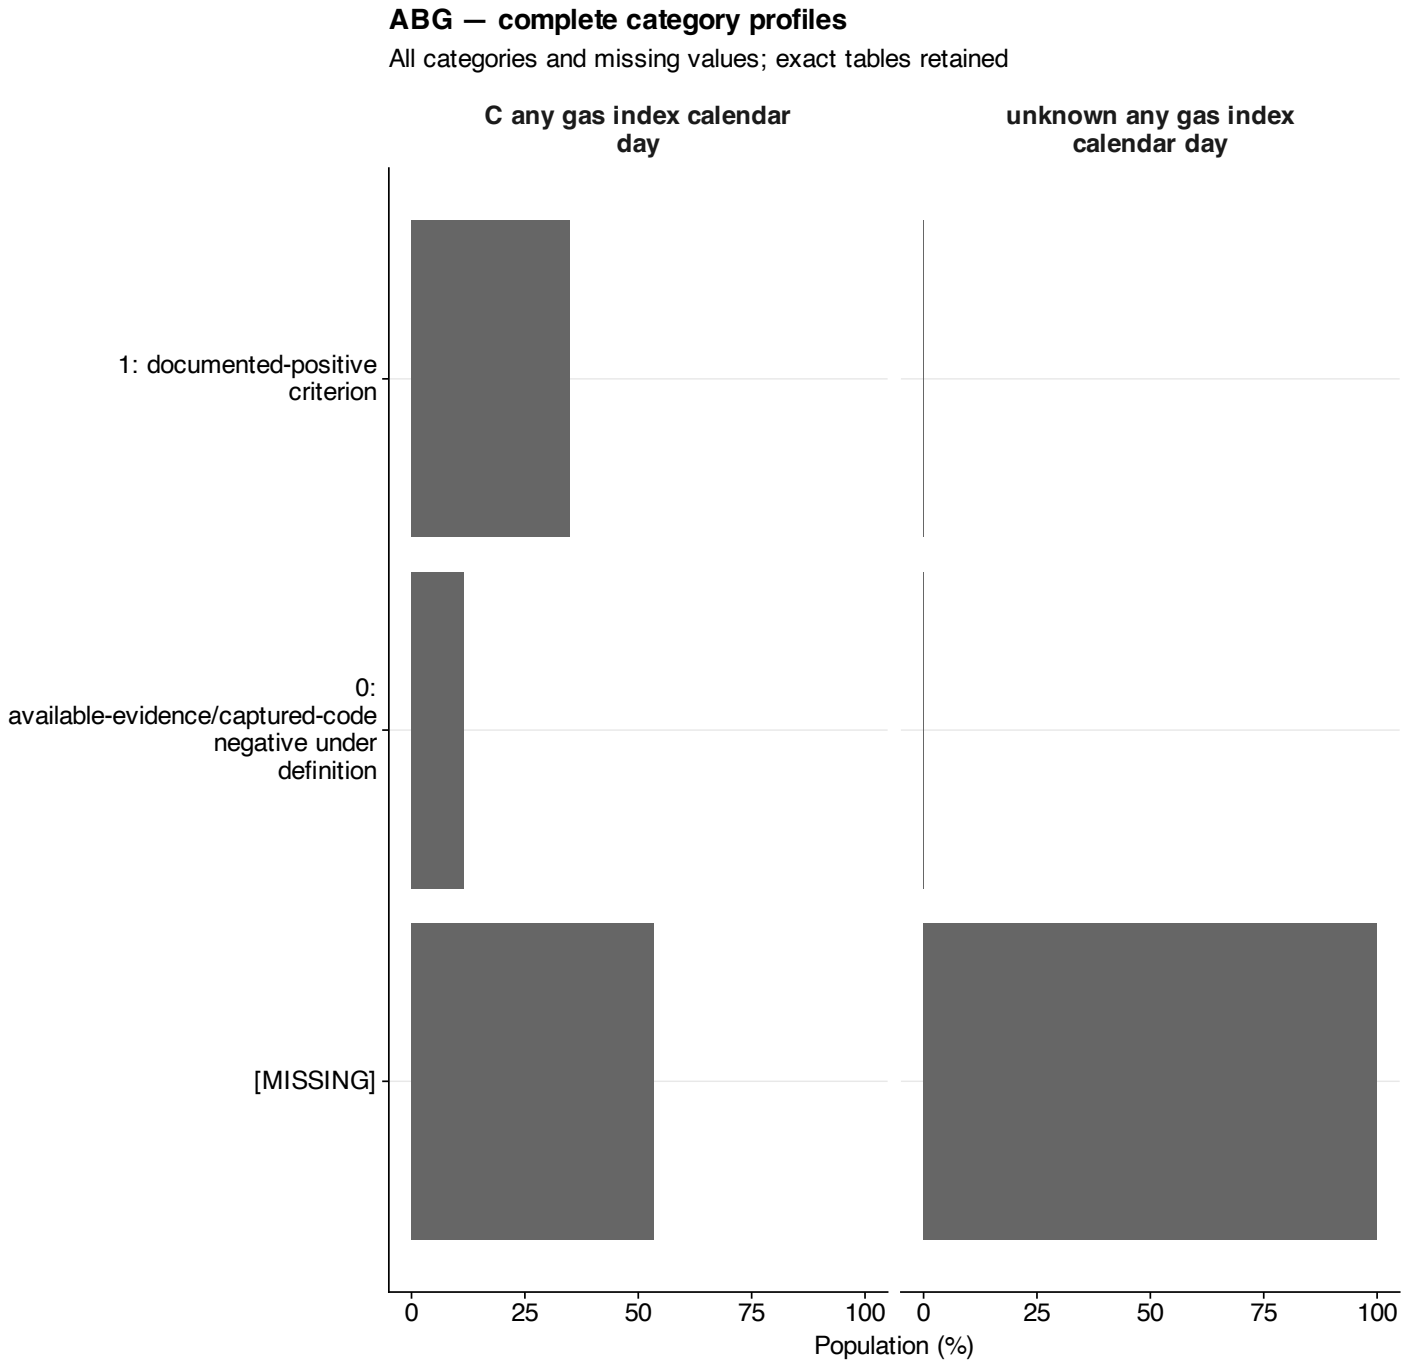

Figure 537: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete abg stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

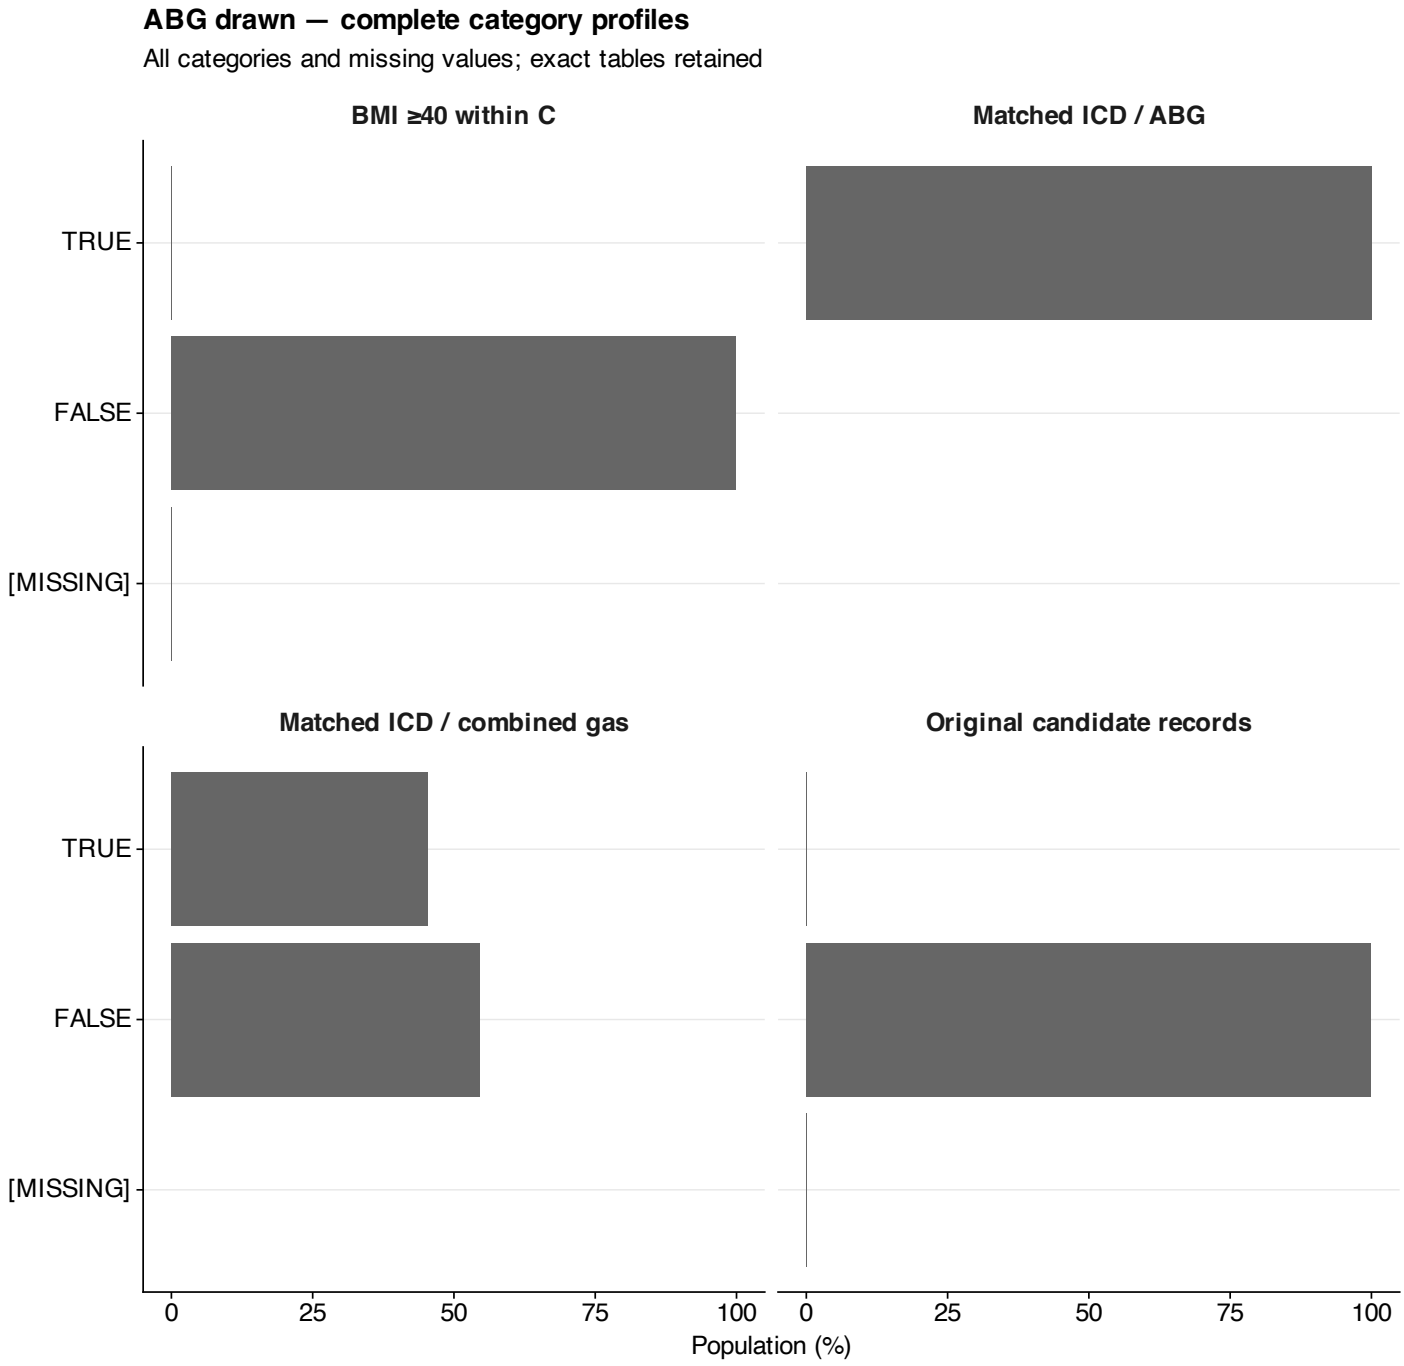

Figure 538: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete abg_drawn stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

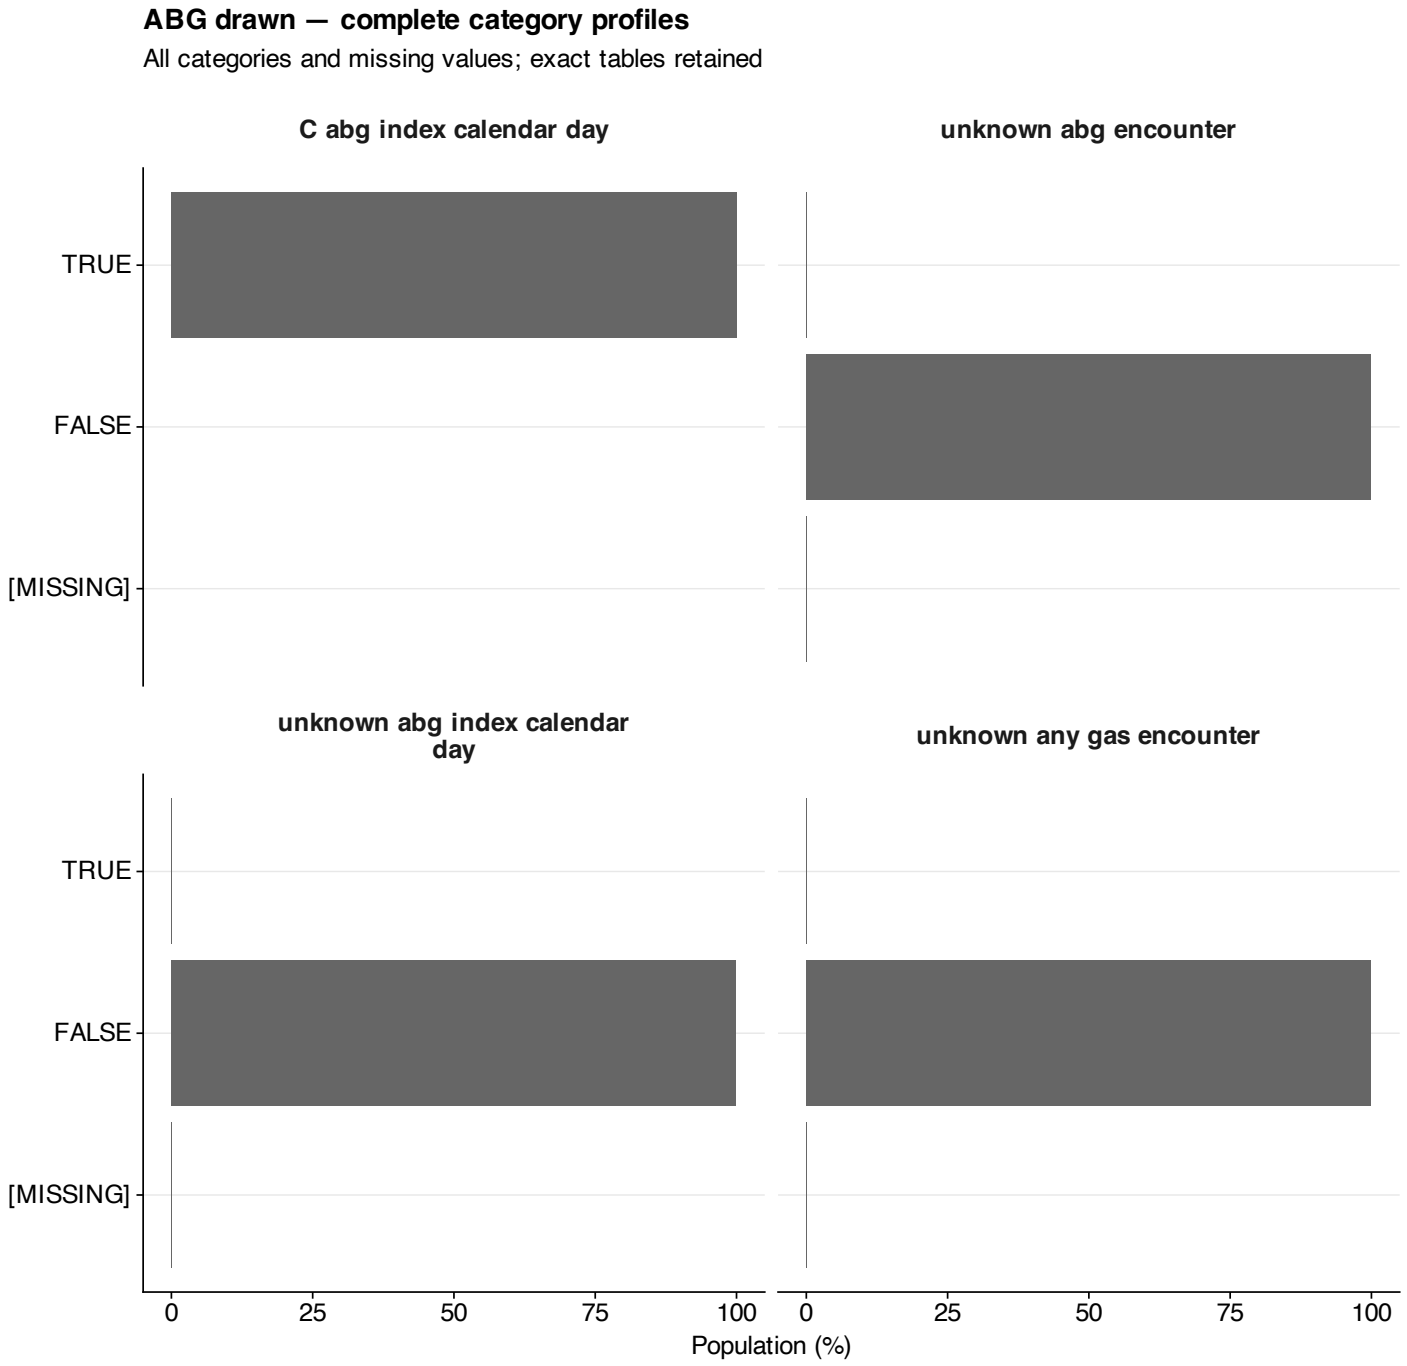

Figure 539: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete abg_drawn stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

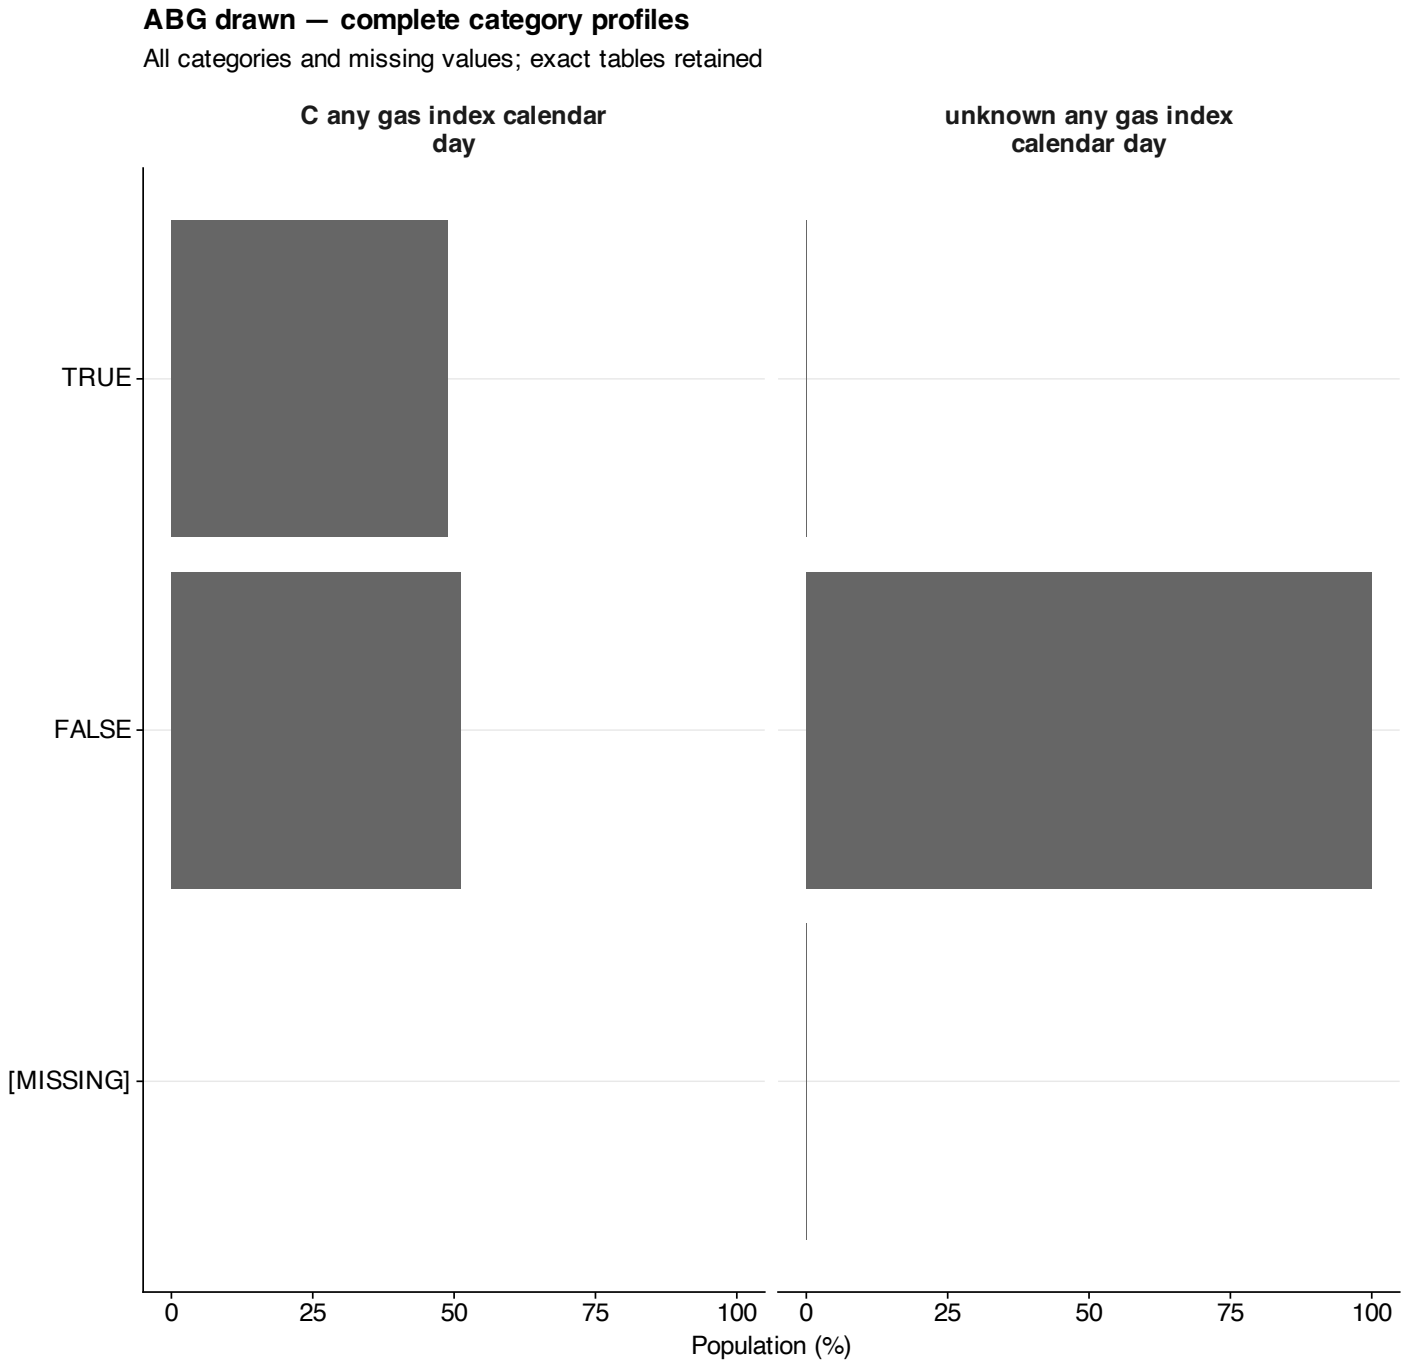

Figure 540: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete abg_drawn stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

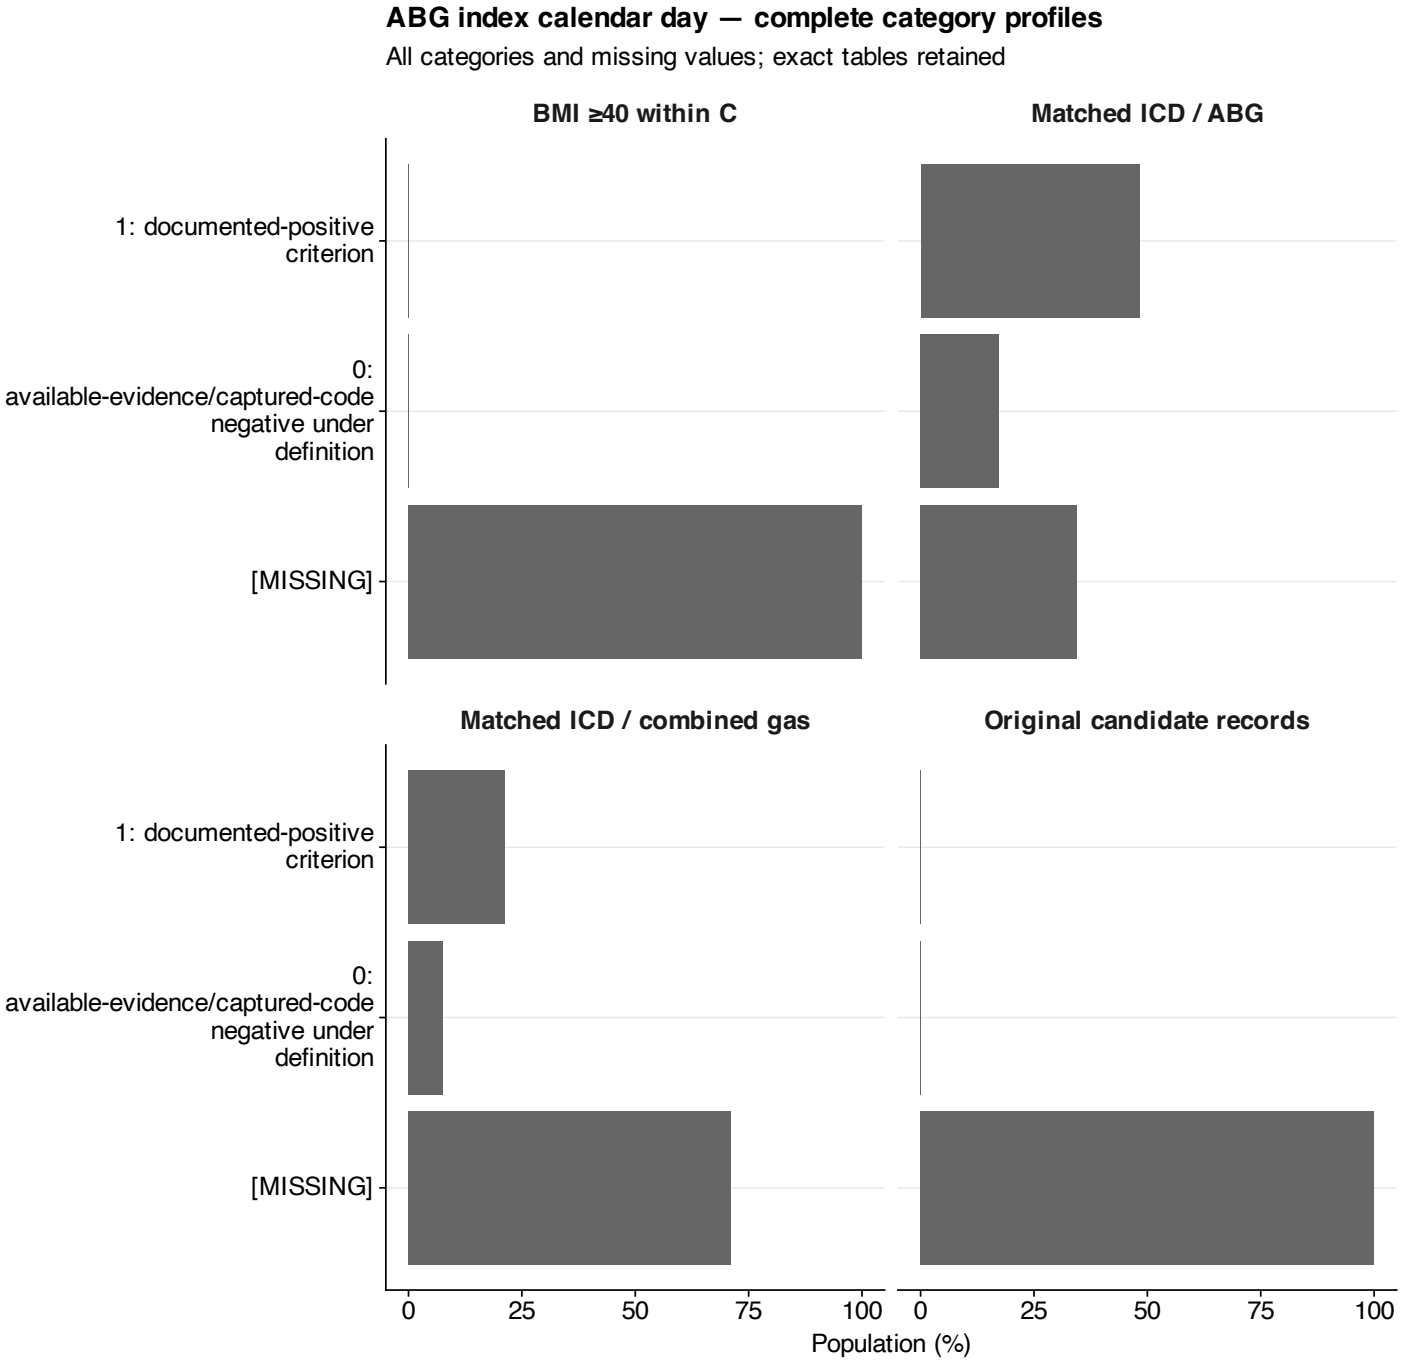

Figure 541: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete abg_index_calendar_day stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

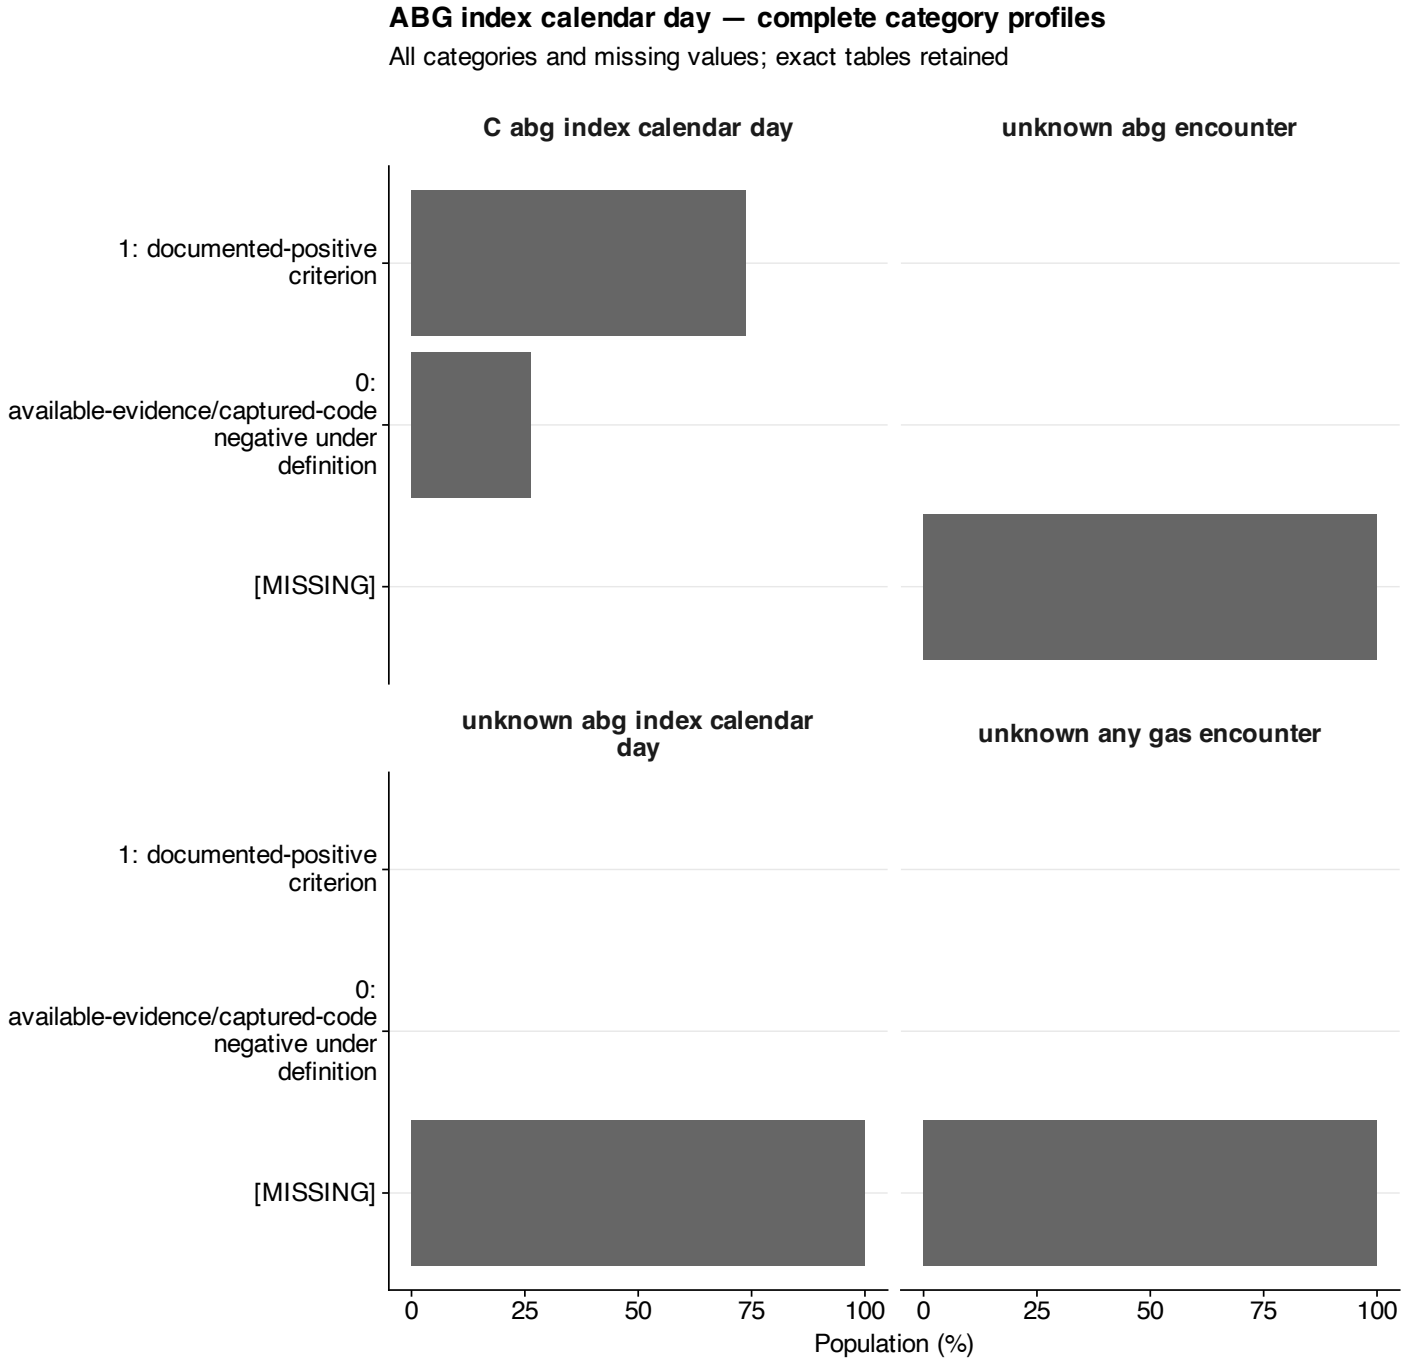

Figure 542: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete abg_index_calendar_day stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

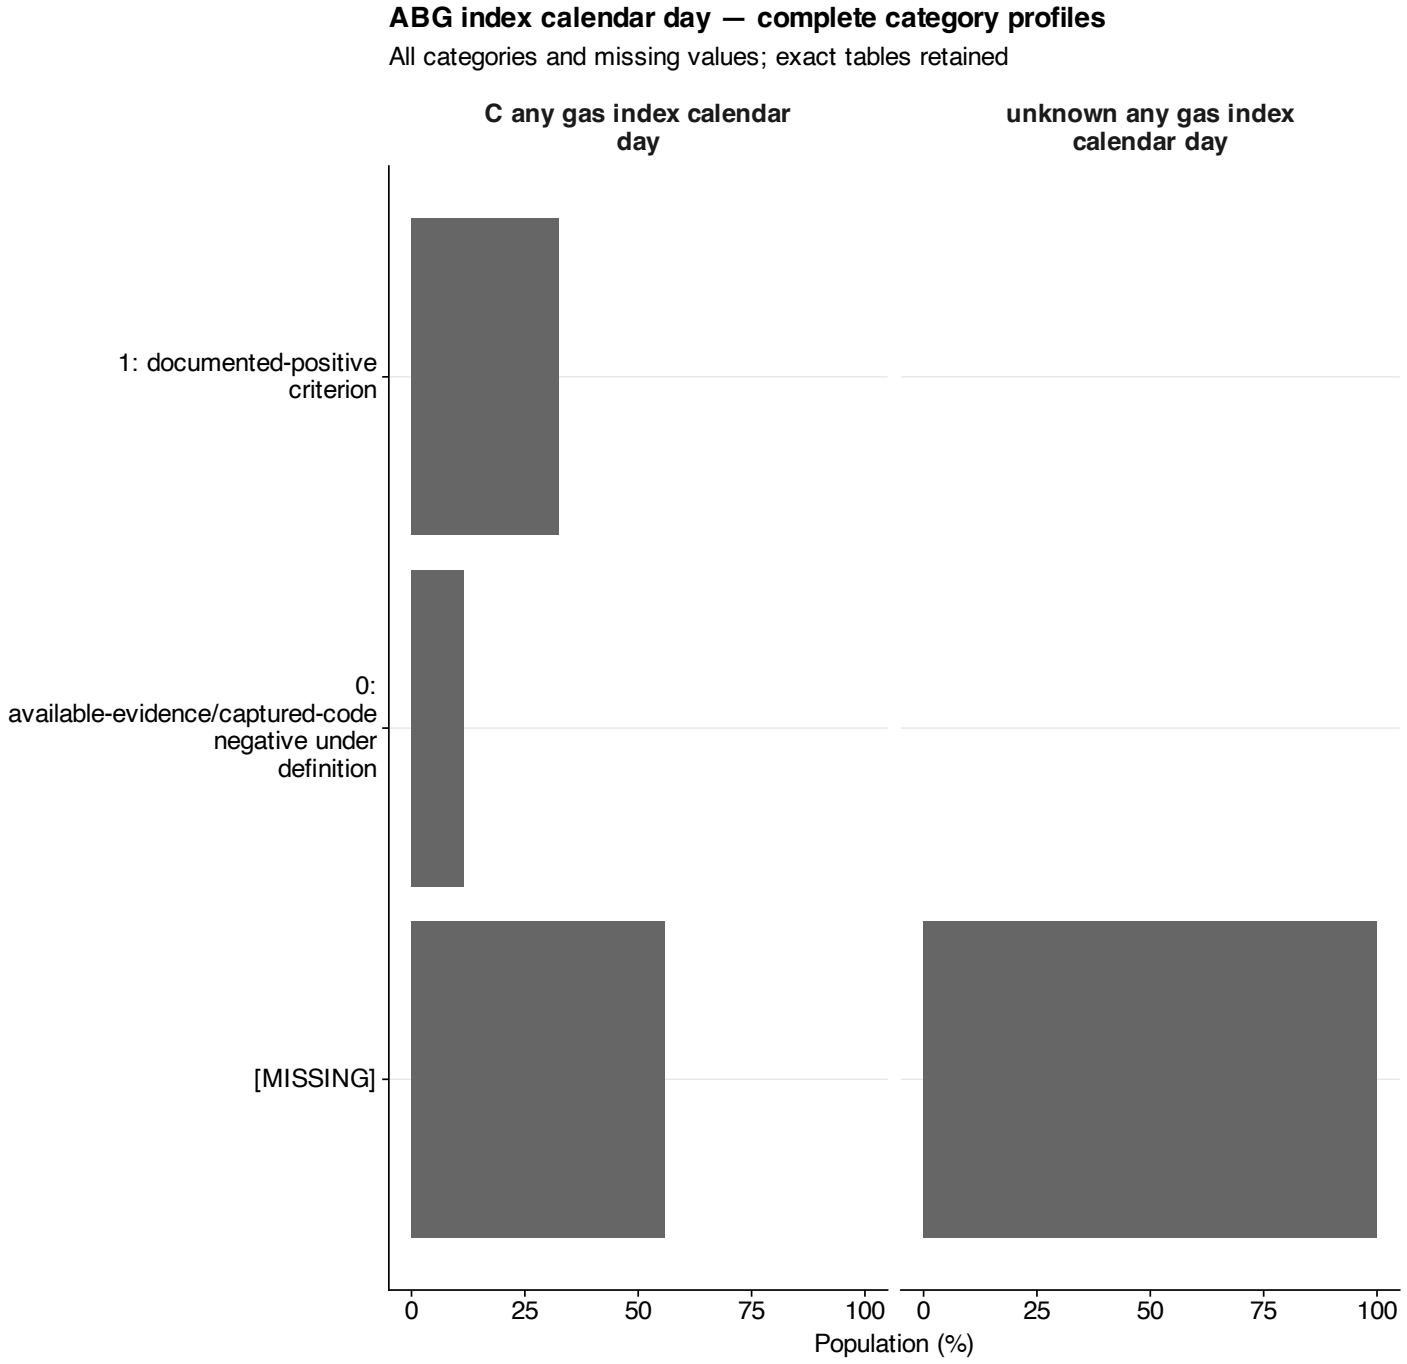

Figure 543: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete abg_index_calendar_day stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

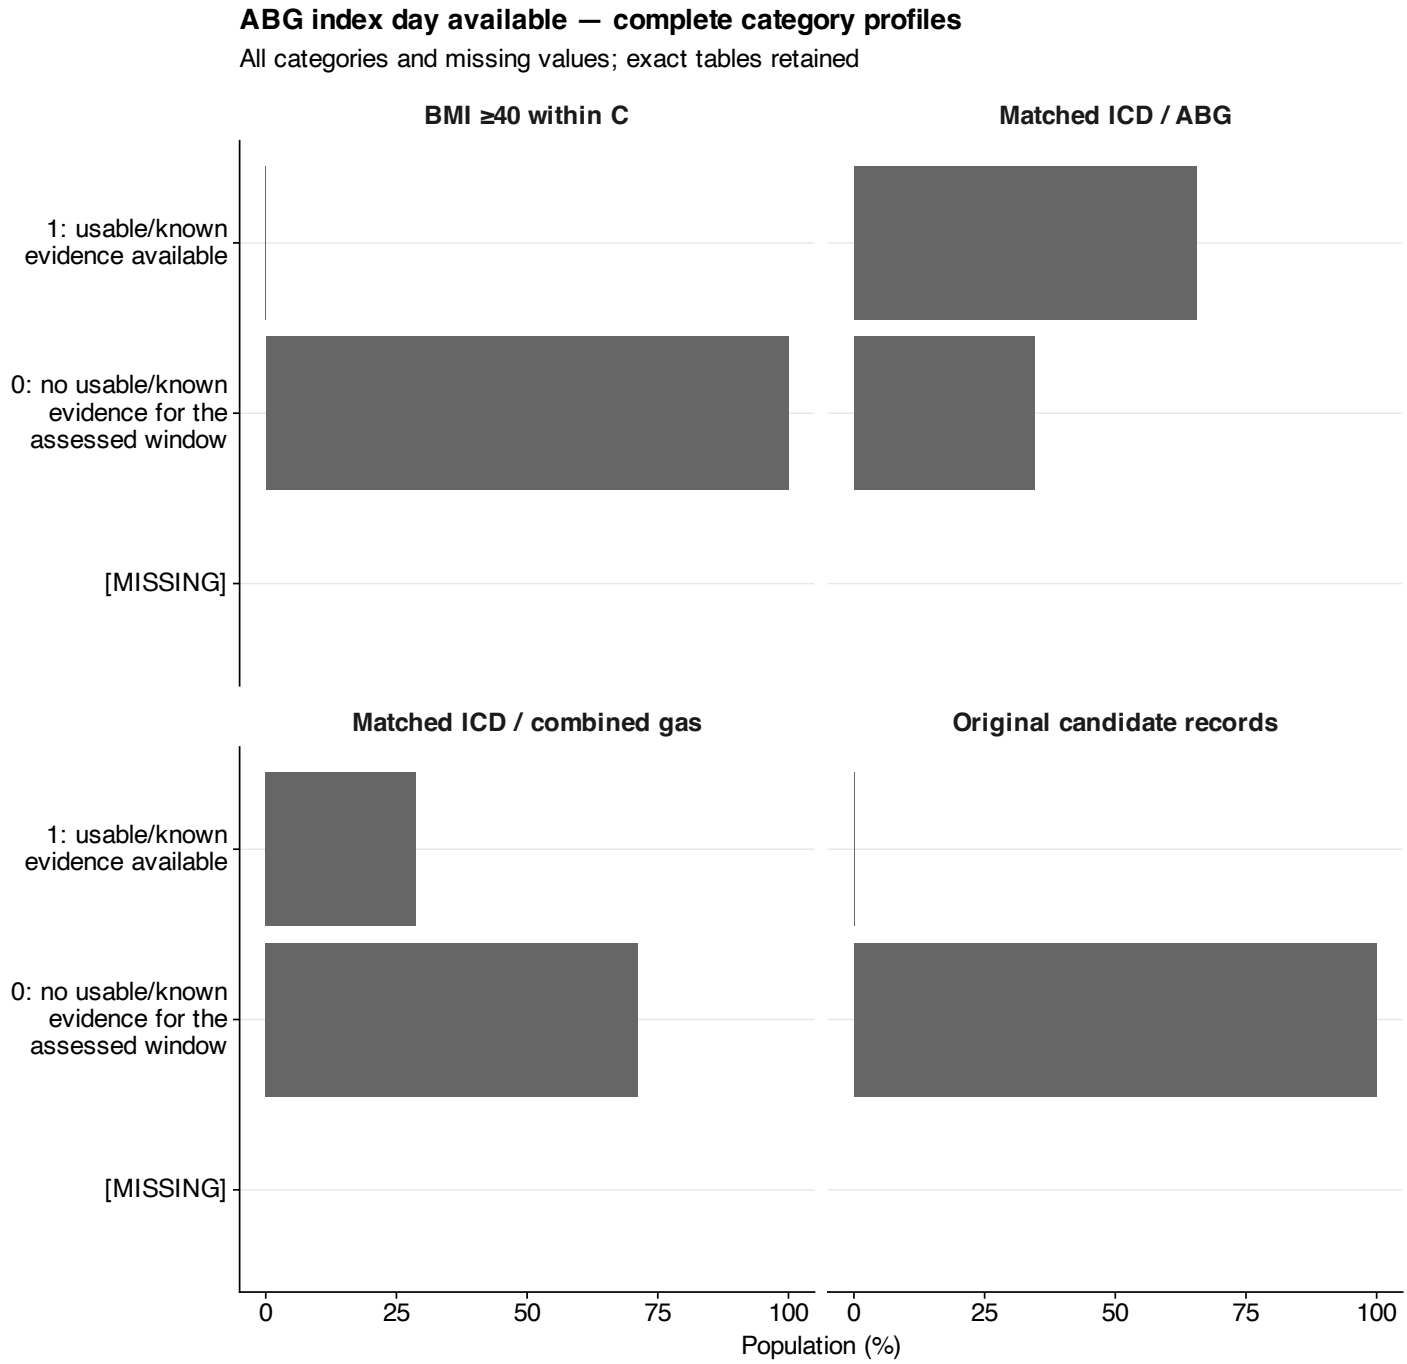

Figure 544: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete abg_index_day_available stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

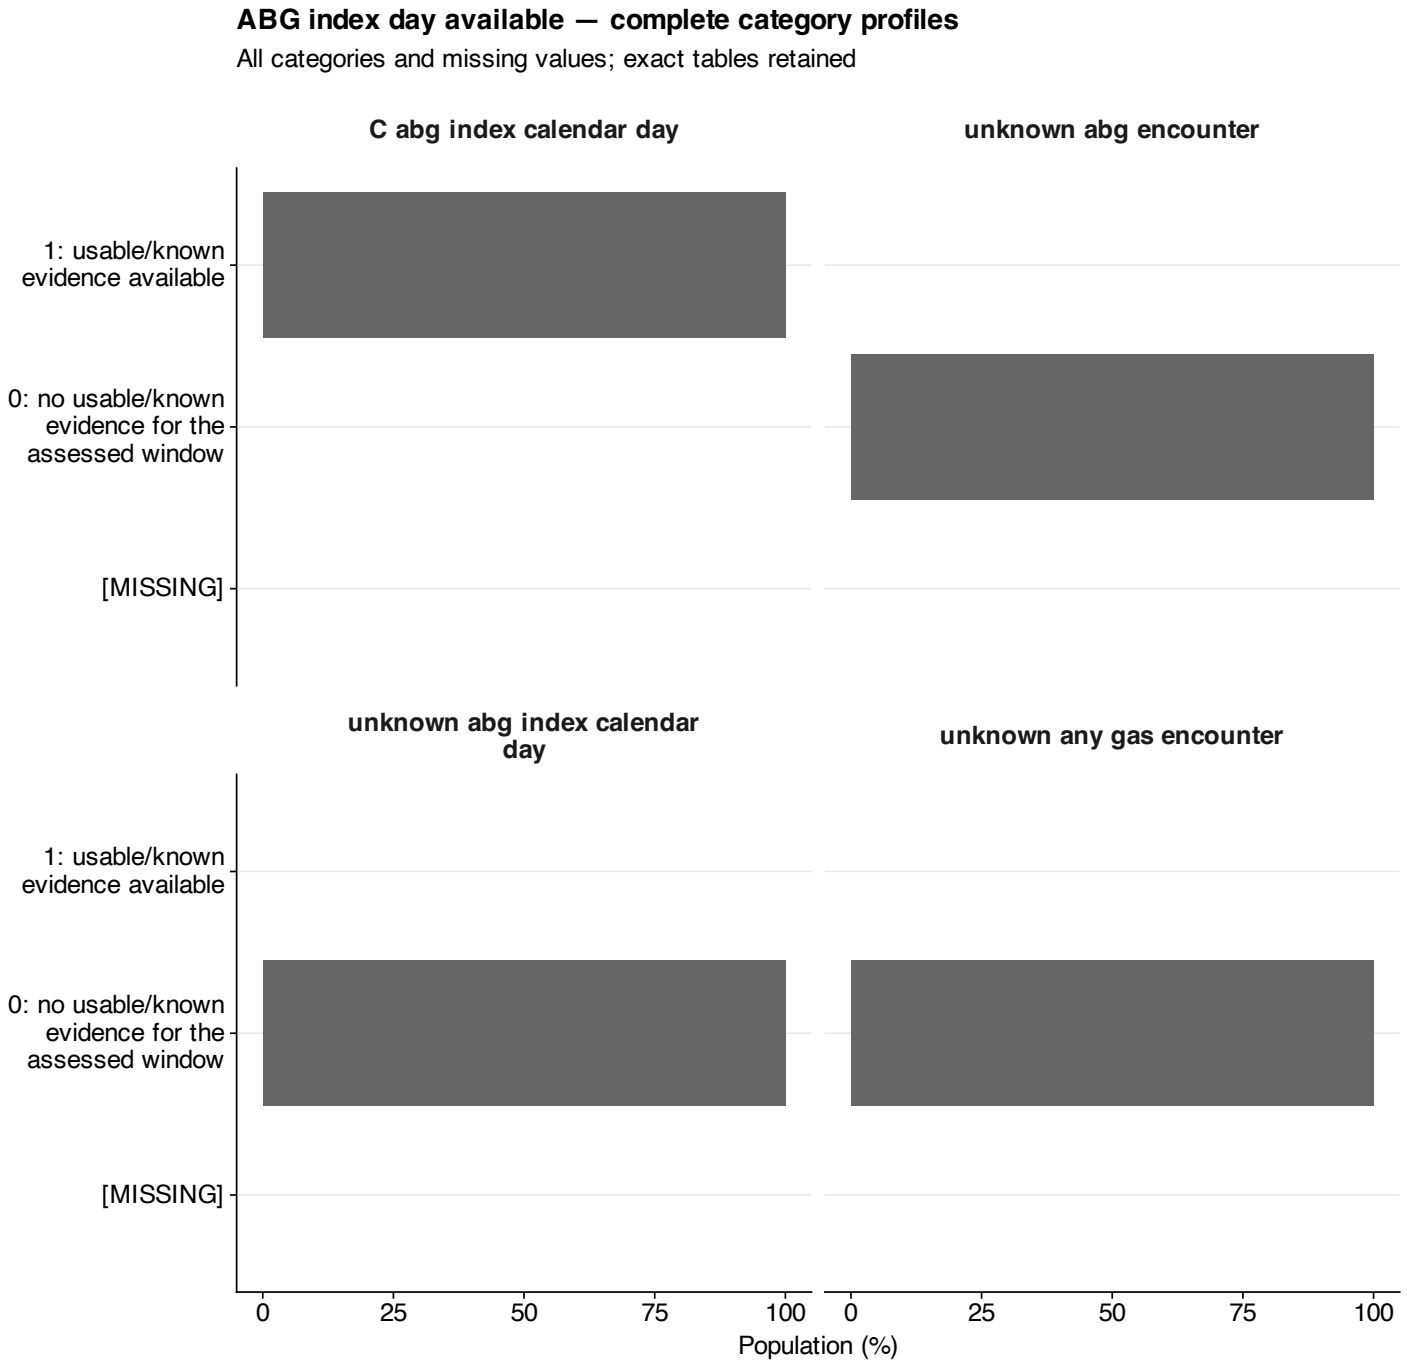

Figure 545: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete abg_index_day_available stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

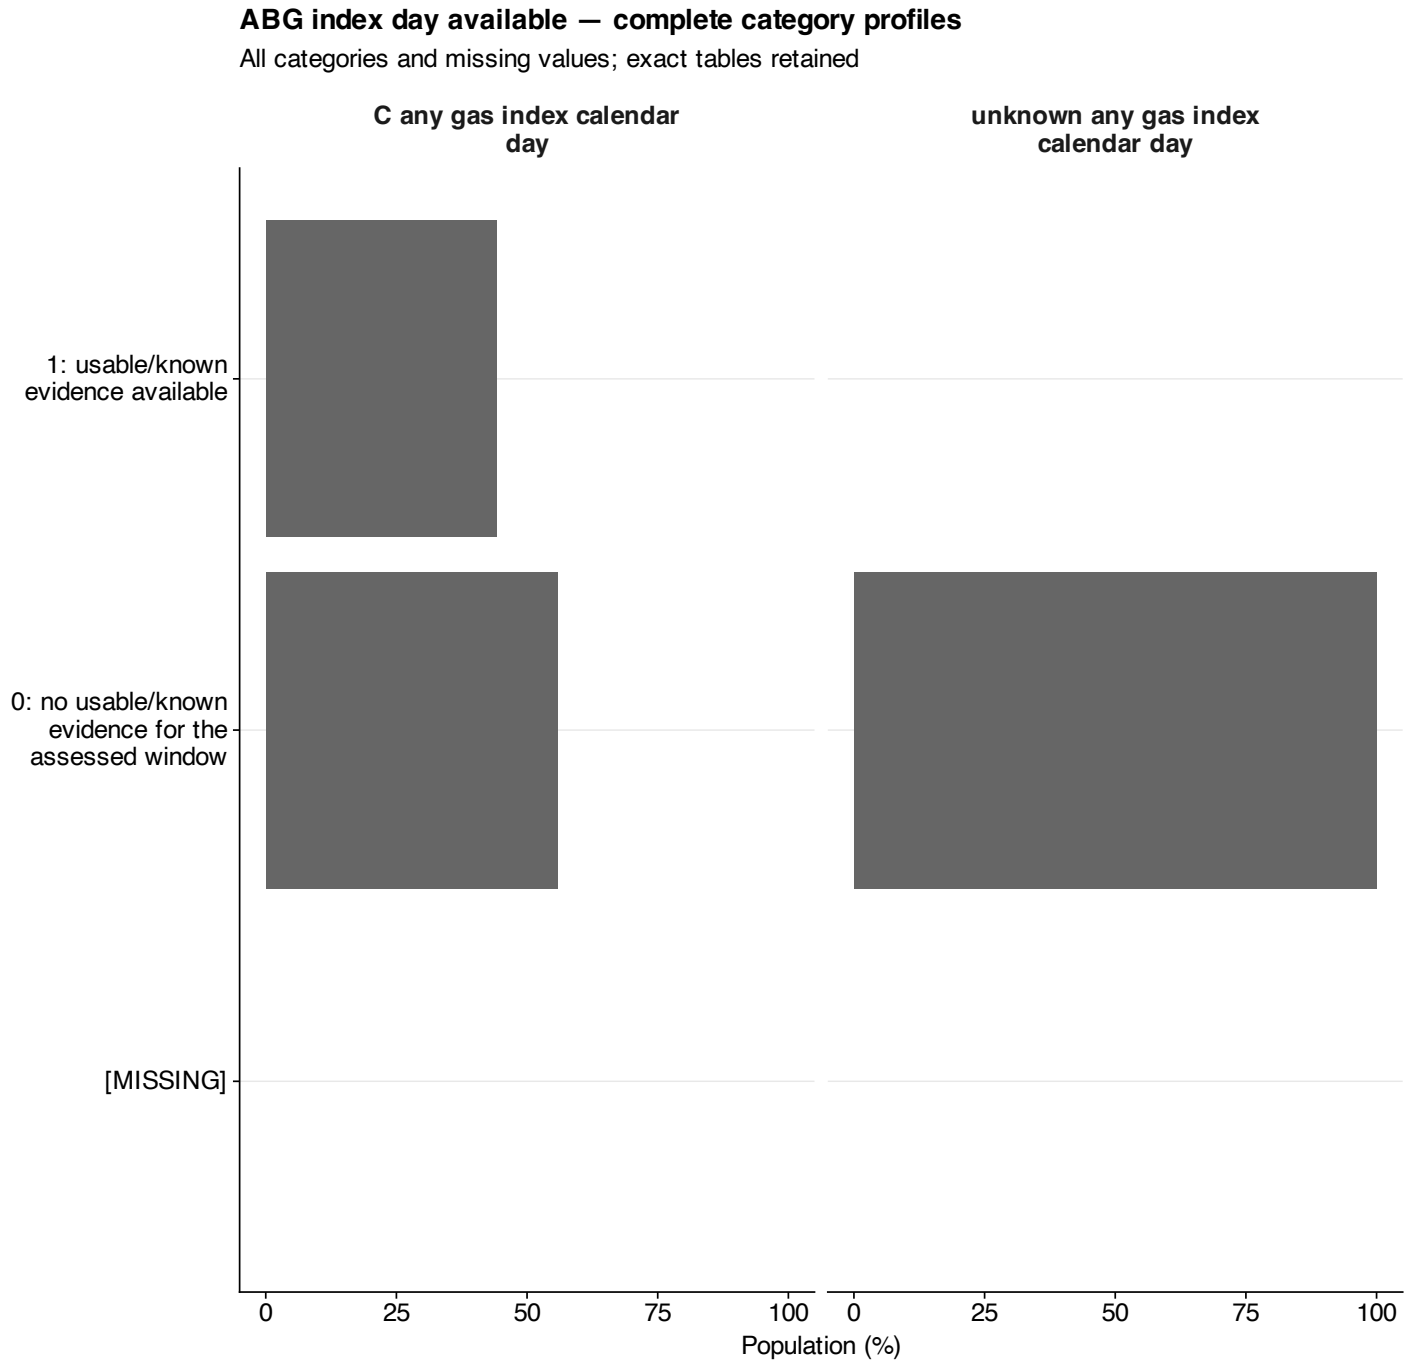

Figure 546: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete abg_index_day_available stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

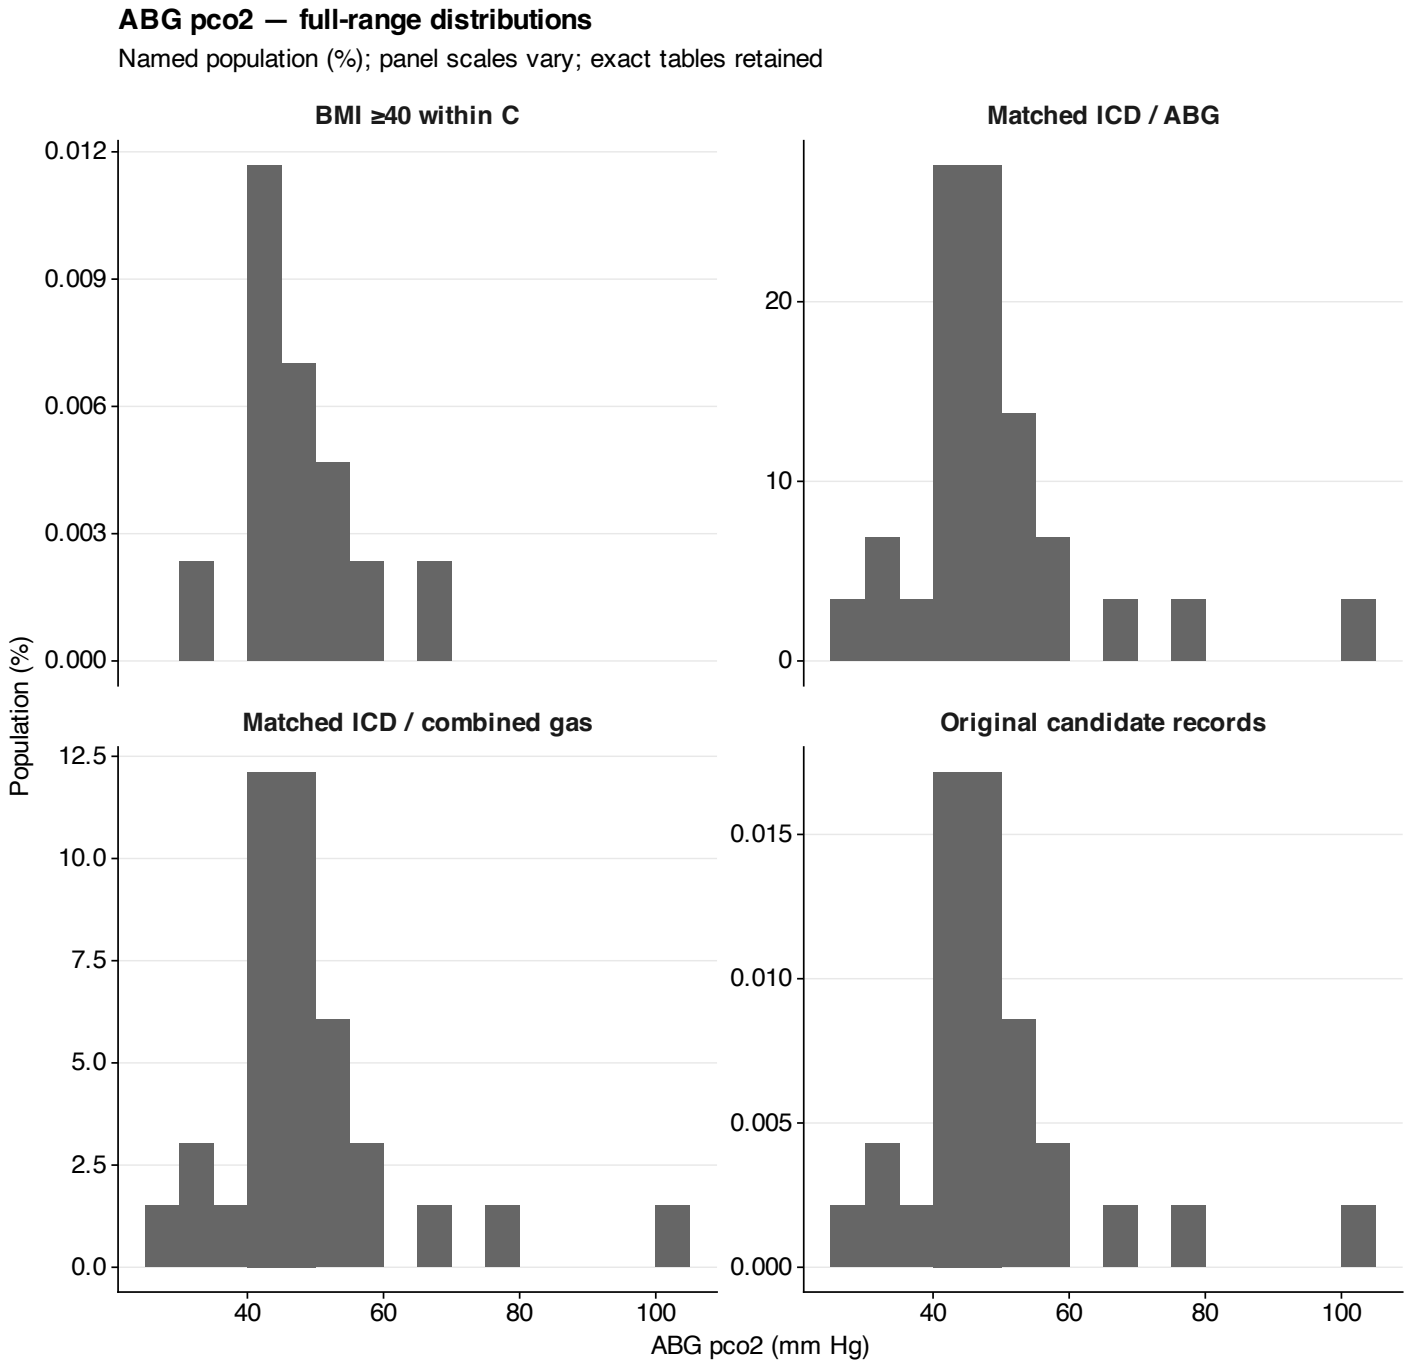

Figure 547: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete abg_pco2 stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

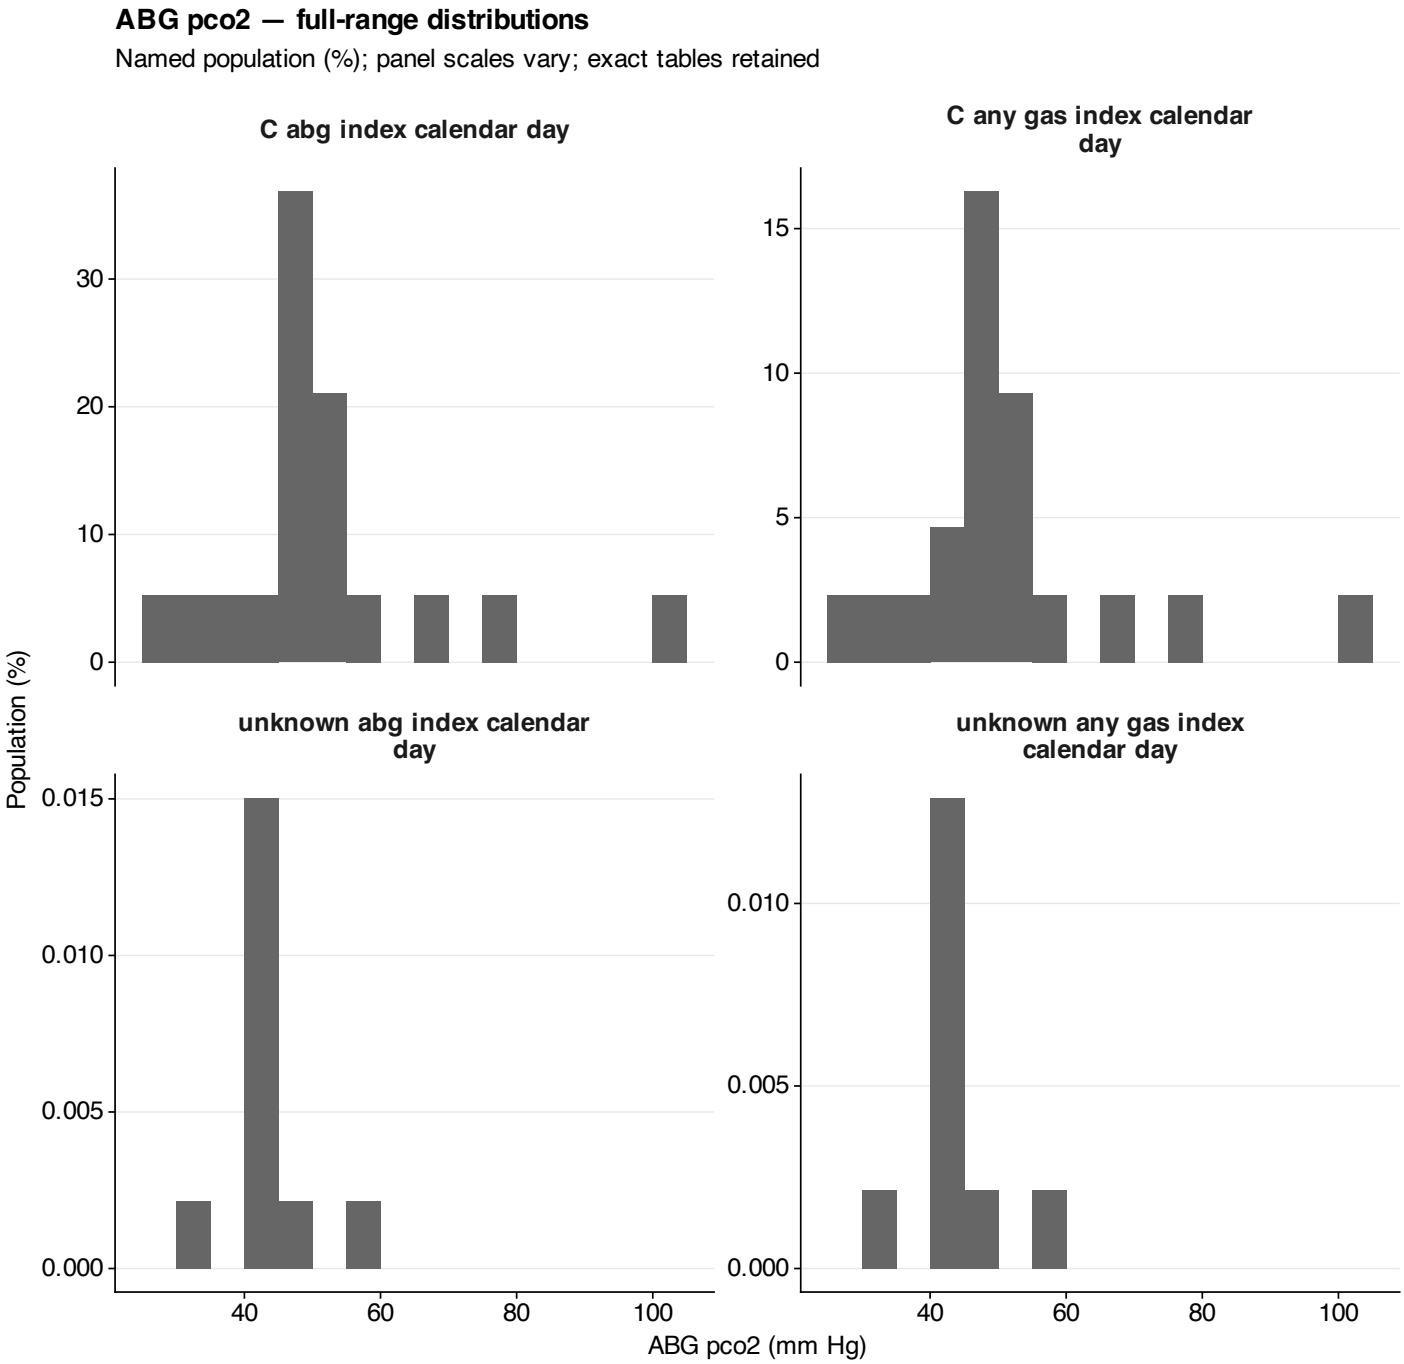

Figure 548: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete abg_pco2 stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

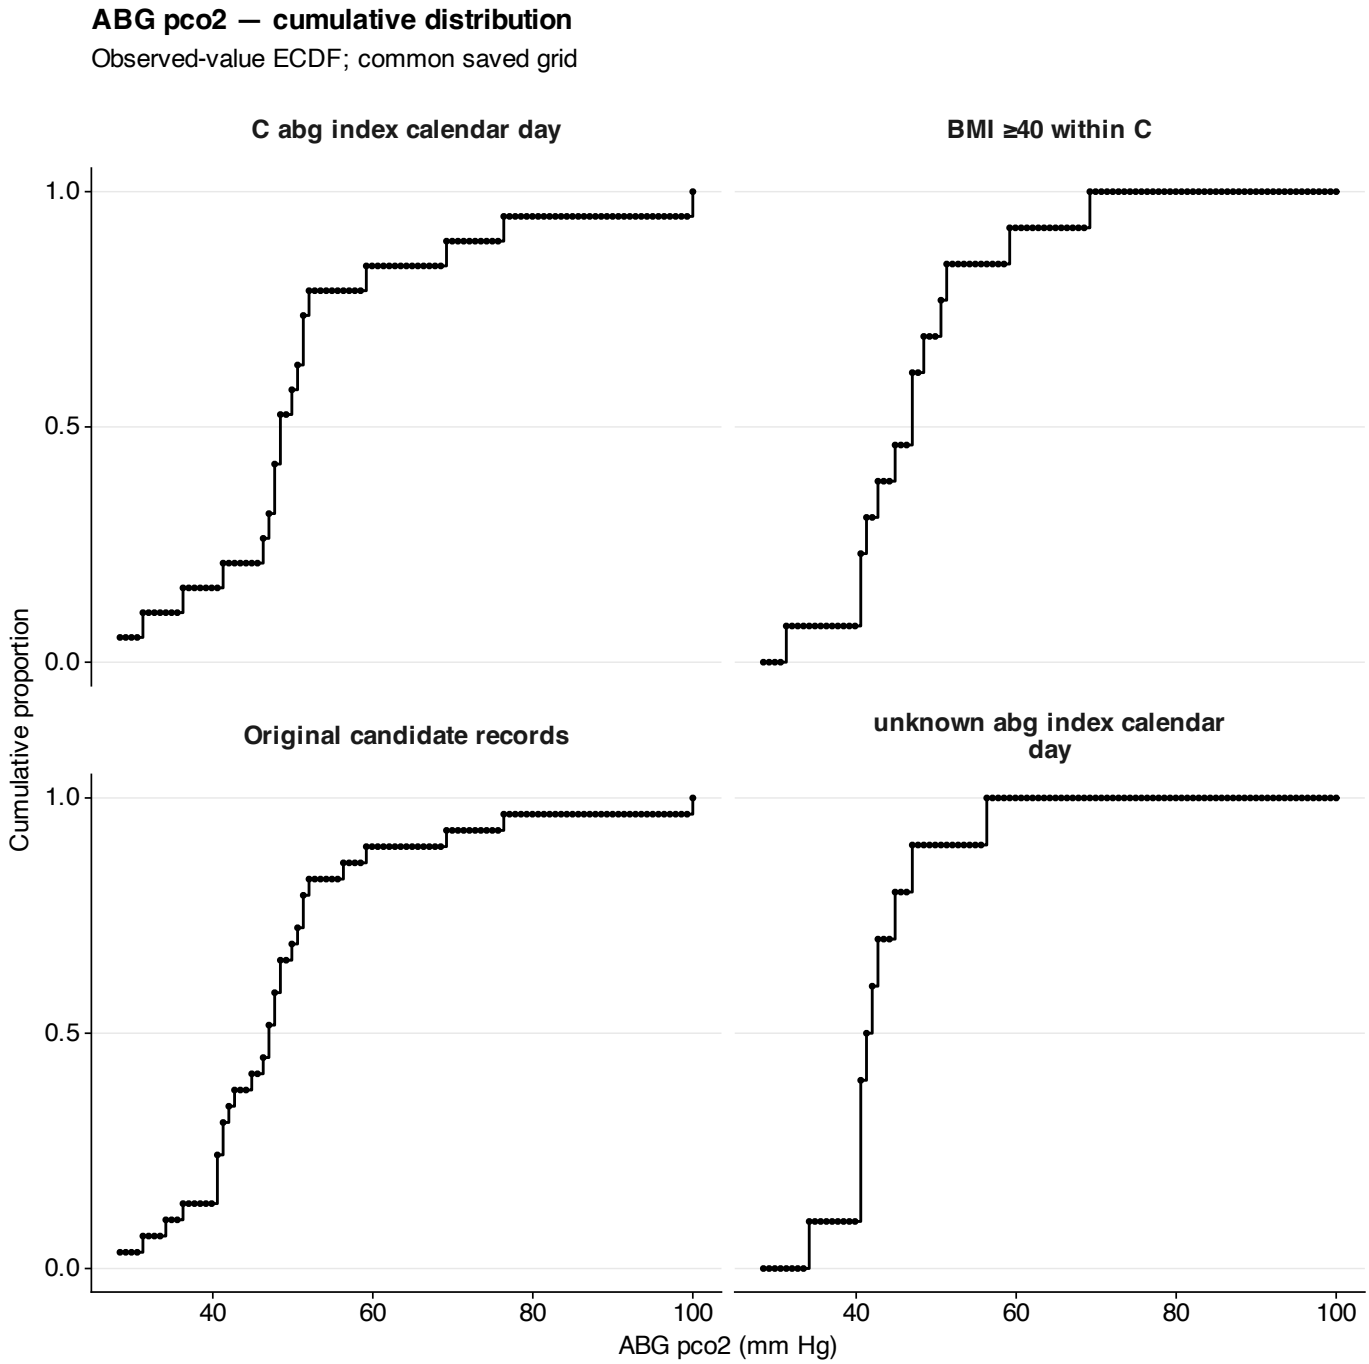

Figure 549: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. abg_pco2 ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

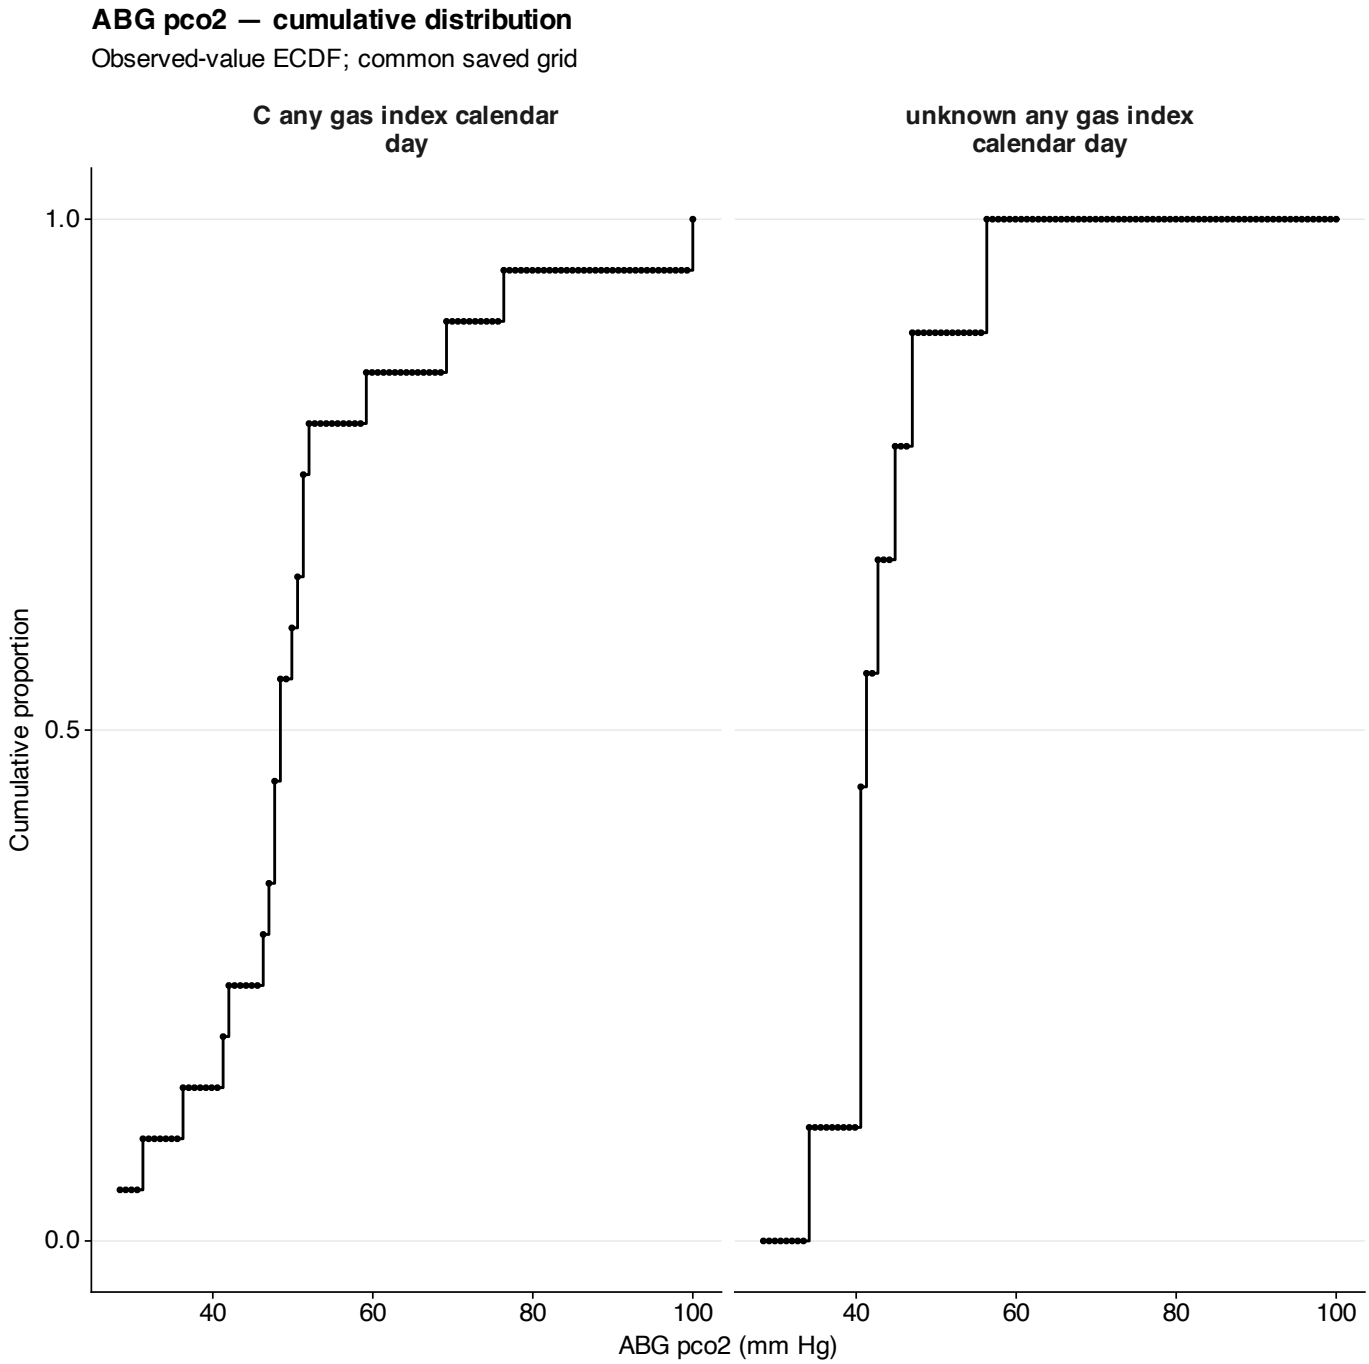

Figure 550: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. abg_pco2 ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

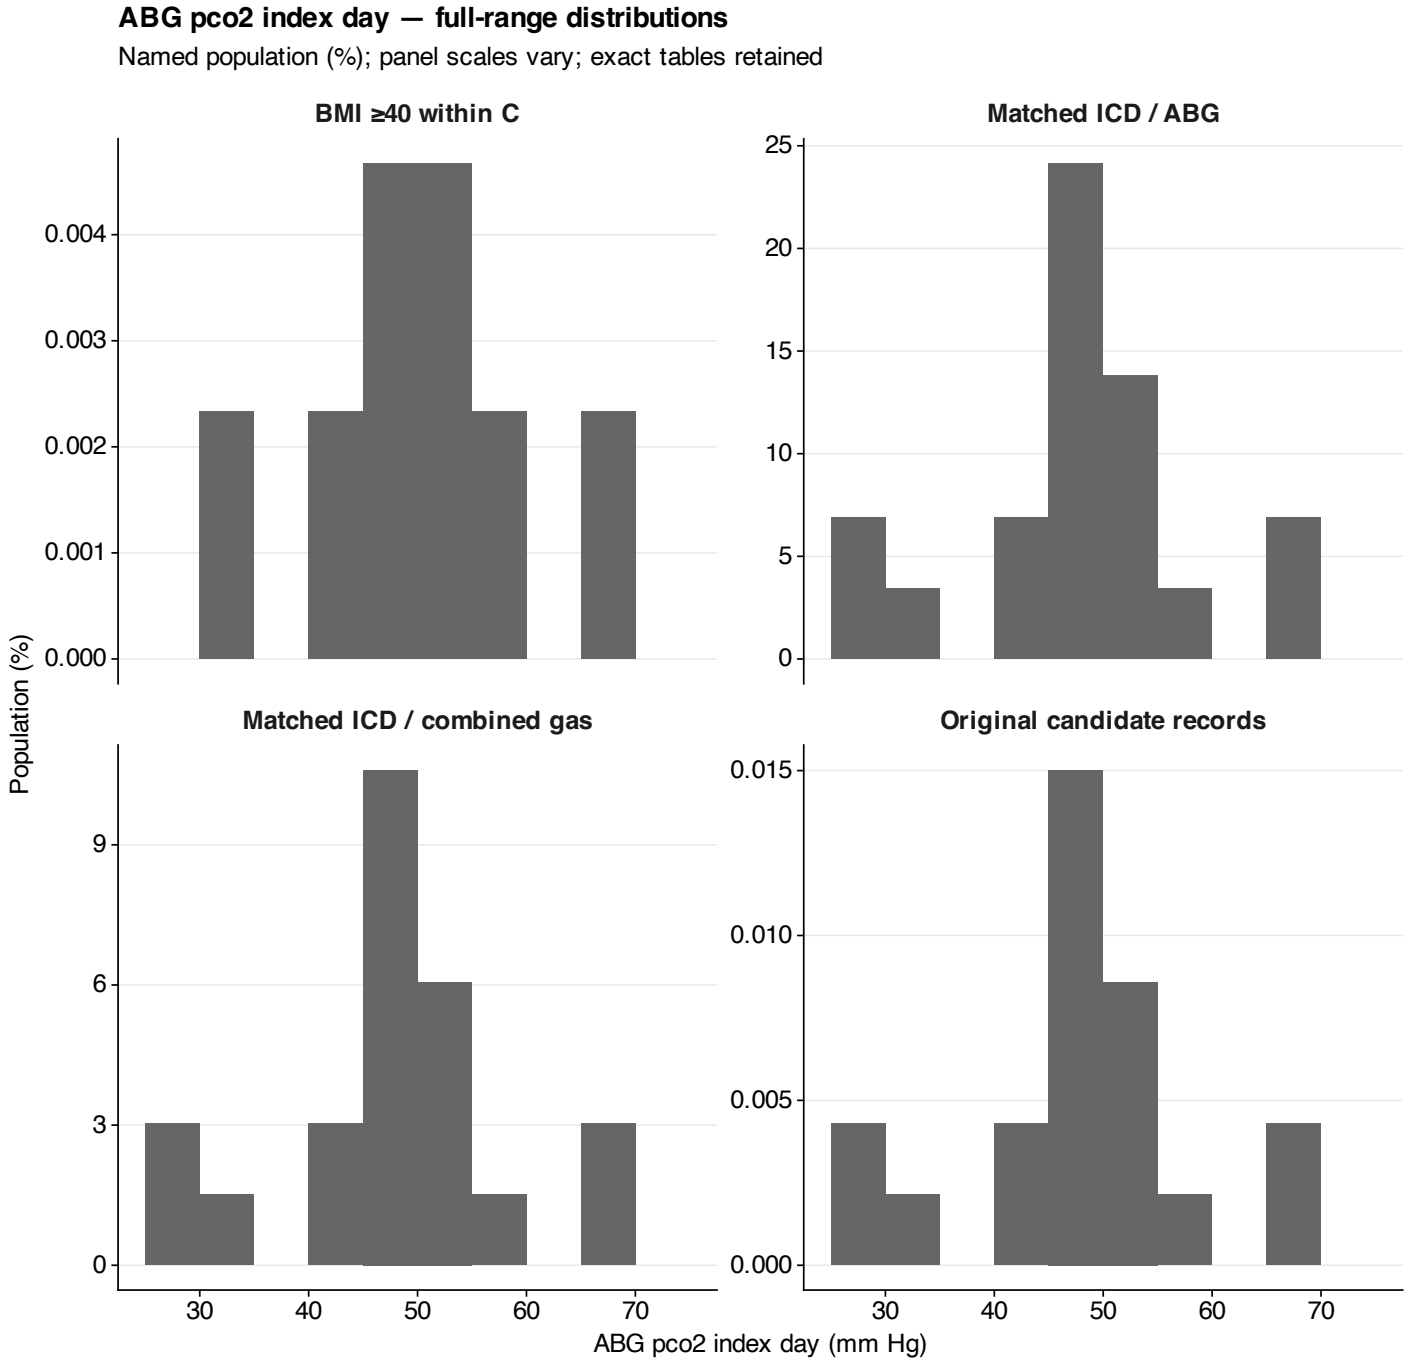

Figure 551: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete abg_pco2_index_day stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

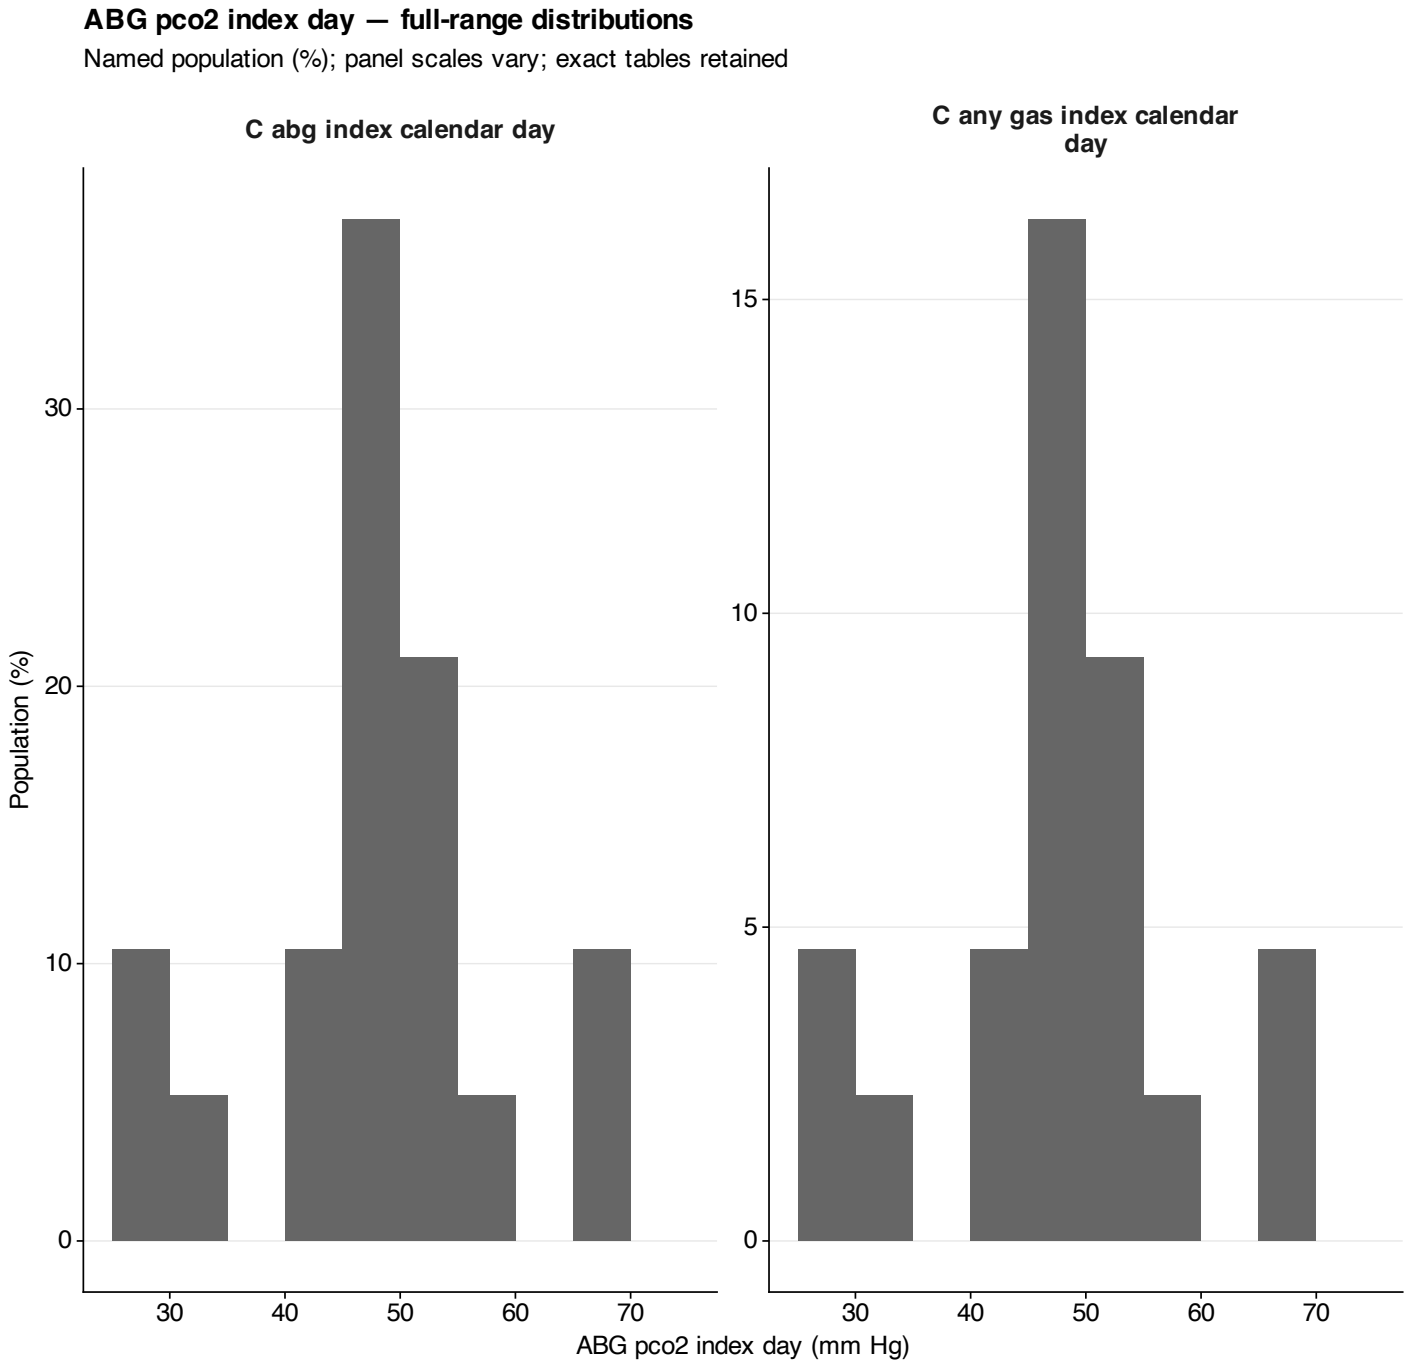

Figure 552: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete abg_pco2_index_day stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

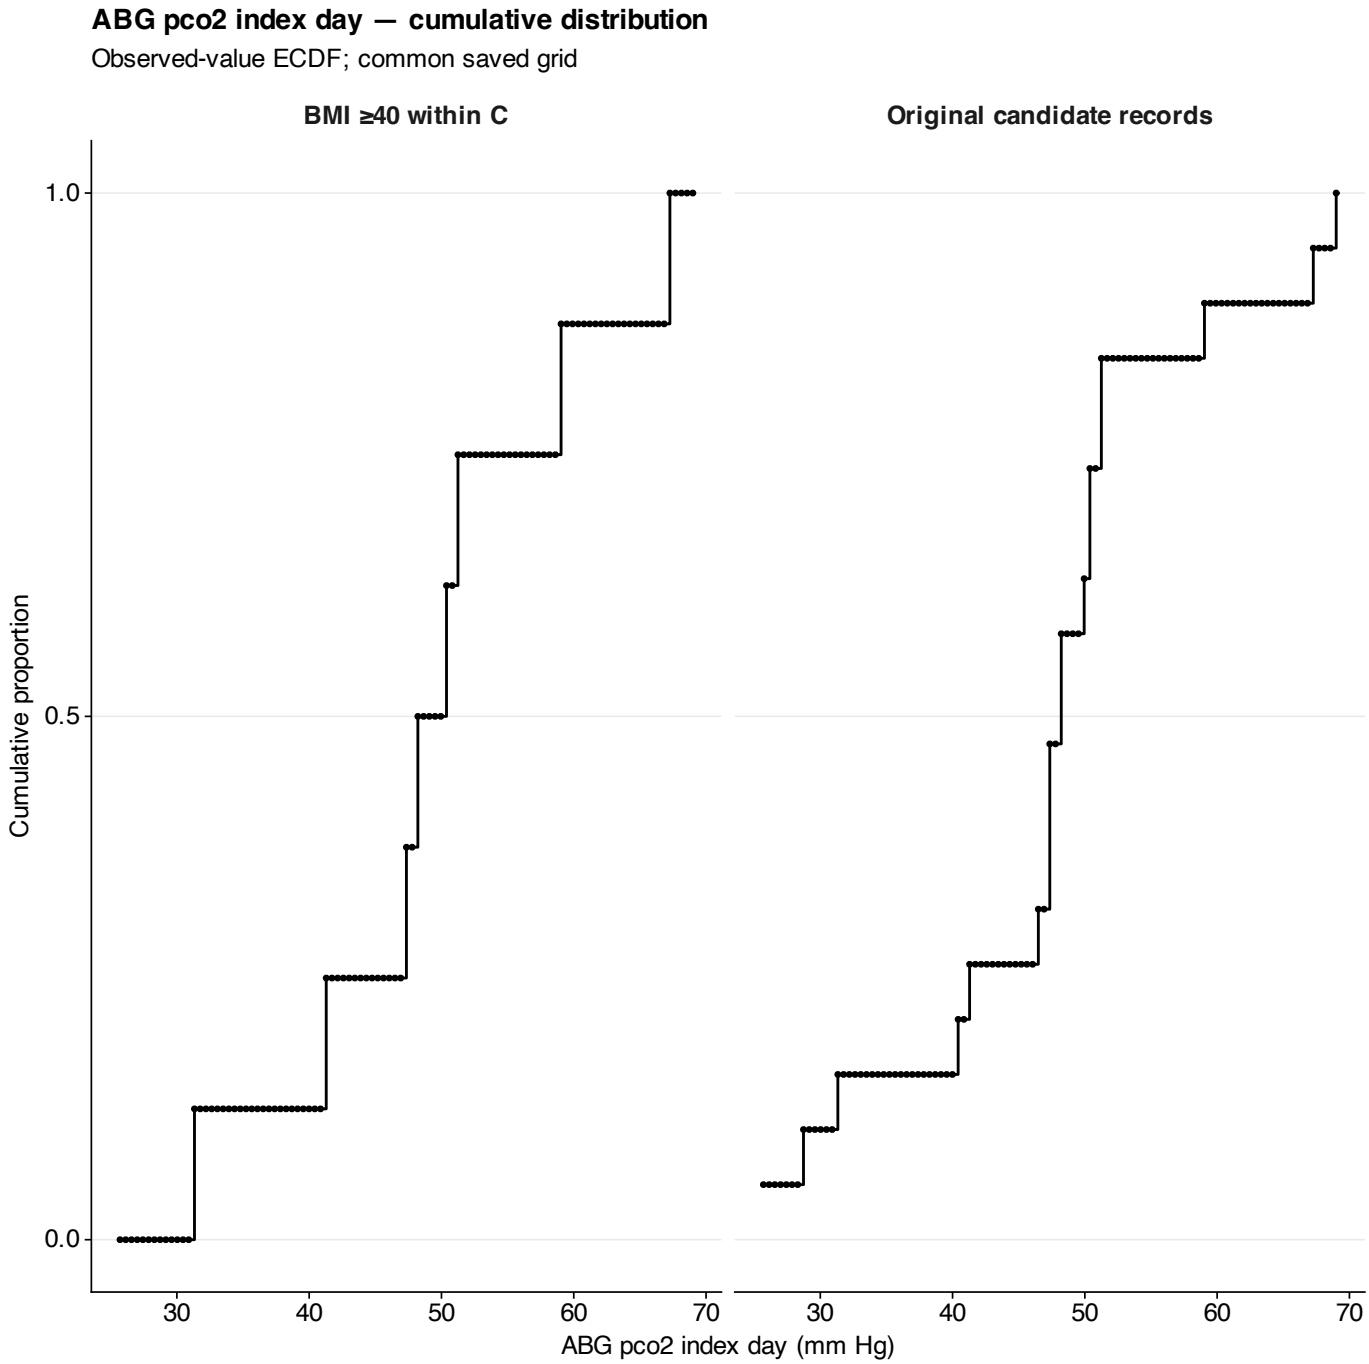

Figure 553: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. abg_pco2_index_day ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

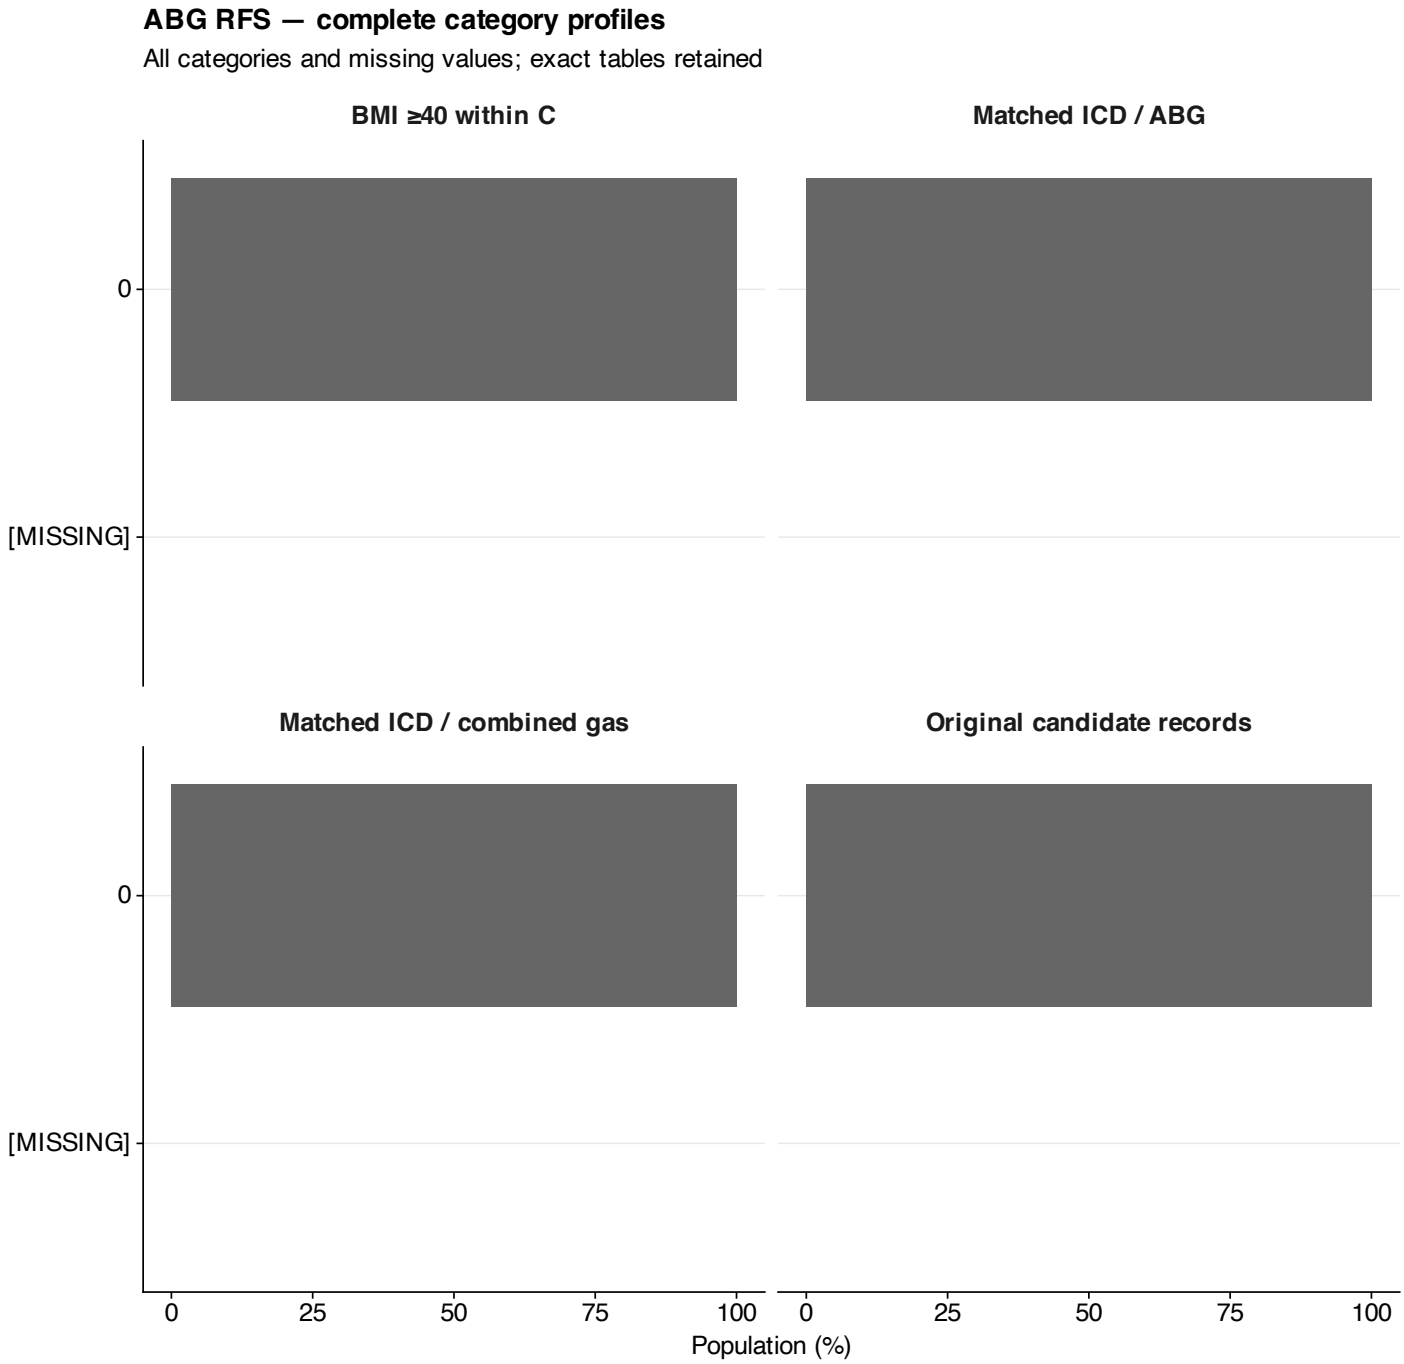

Figure 554: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete ABG_rfs stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

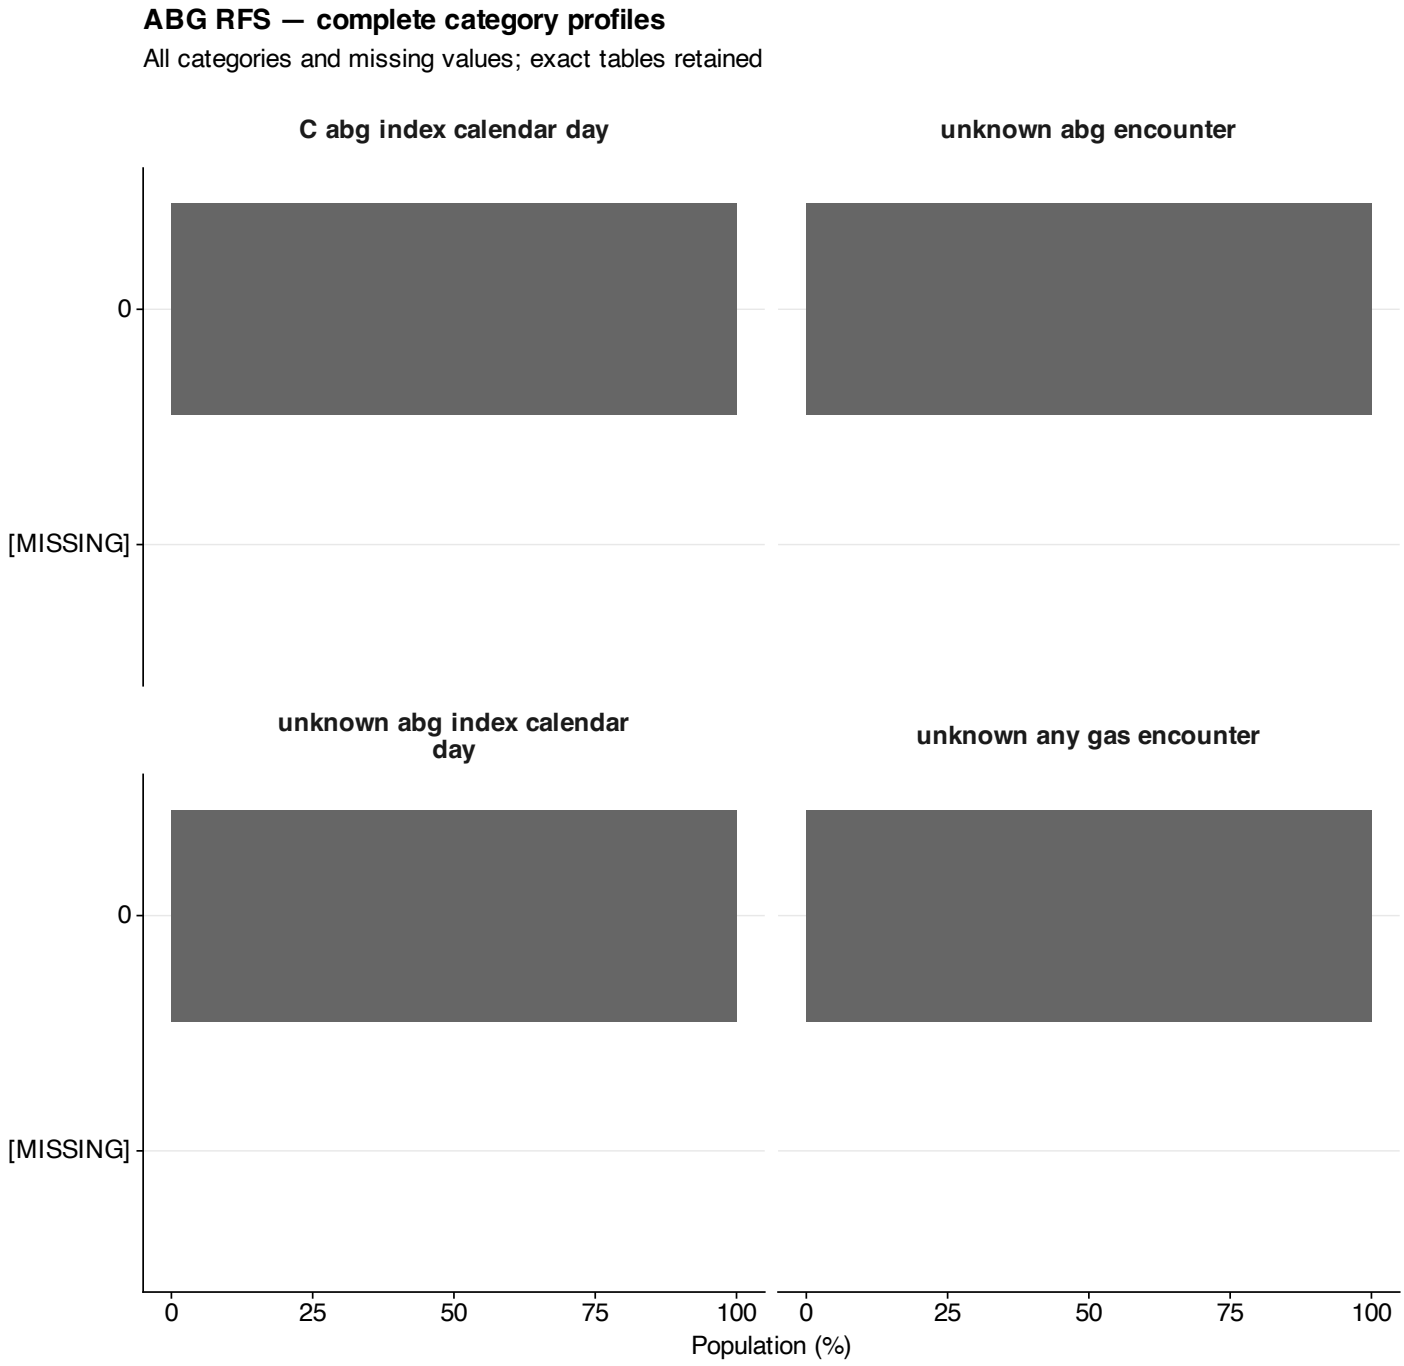

Figure 555: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete ABG_rfs stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

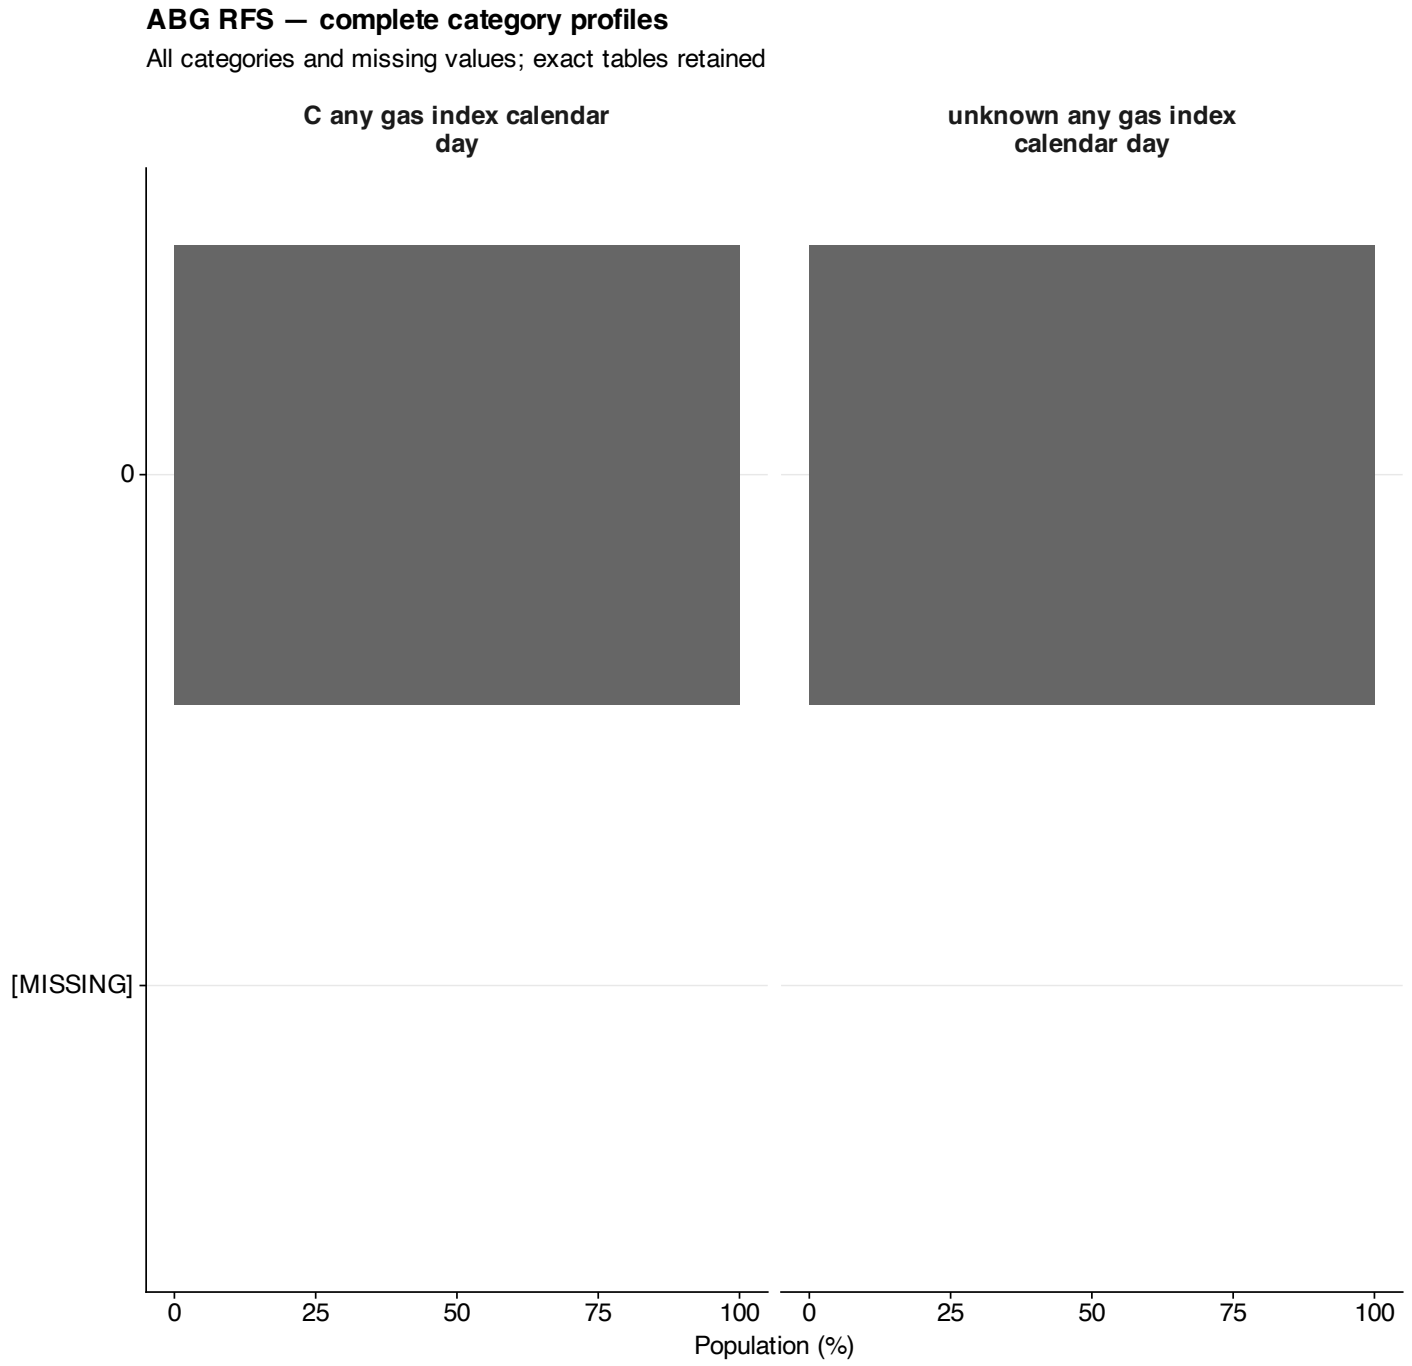

Figure 556: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete ABG_rfs stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

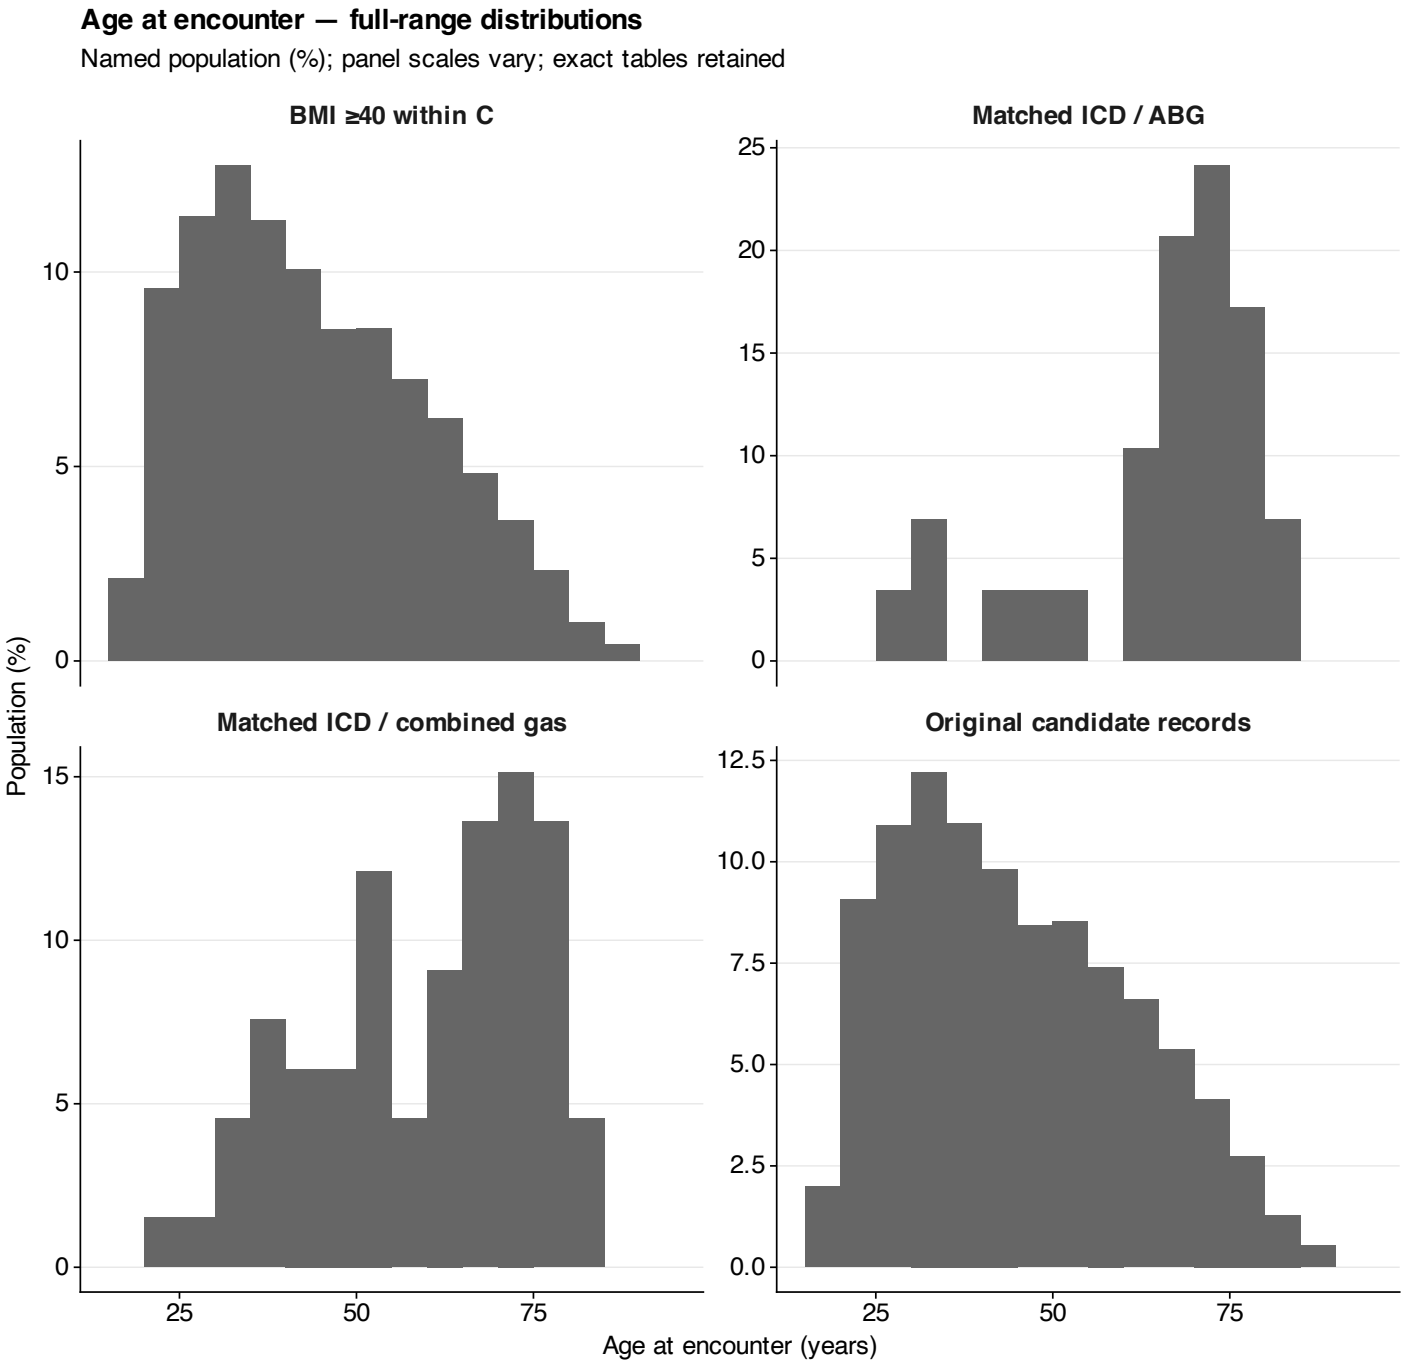

Figure 557: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete age_at_encounter stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

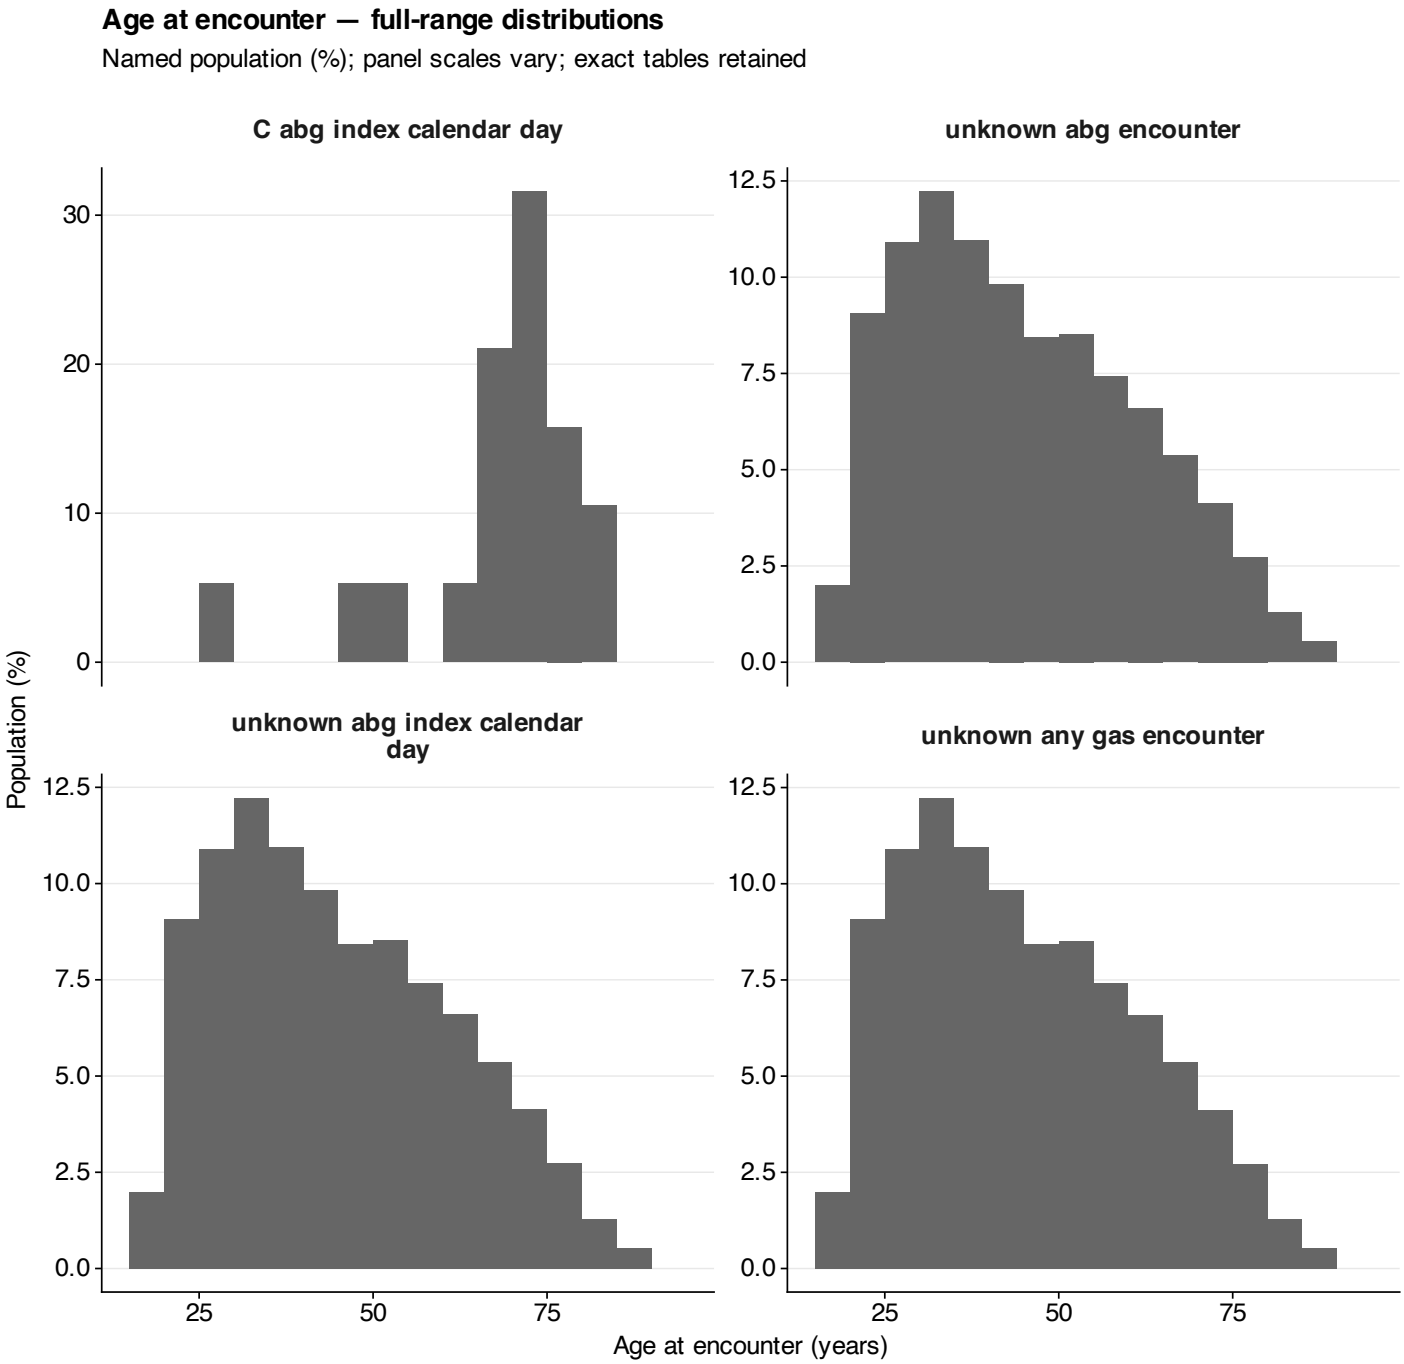

Figure 558: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete age_at_encounter stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

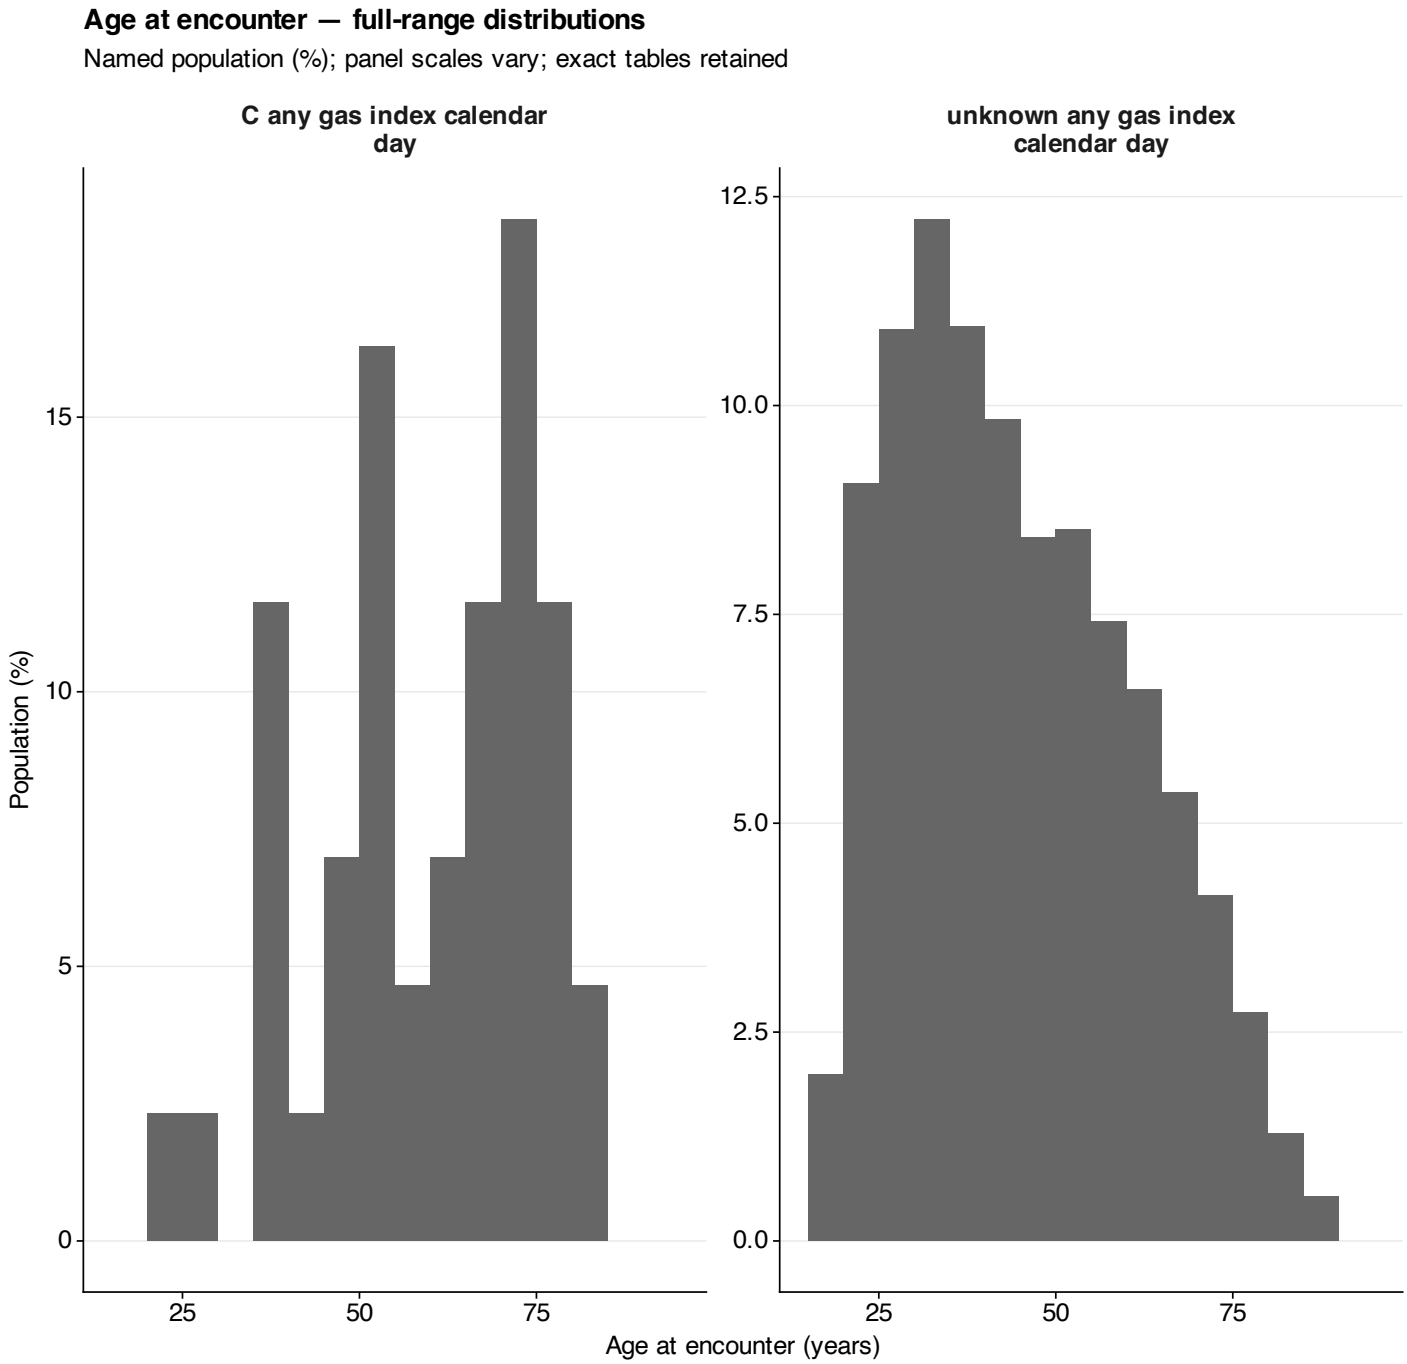

Figure 559: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete age_at_encounter stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

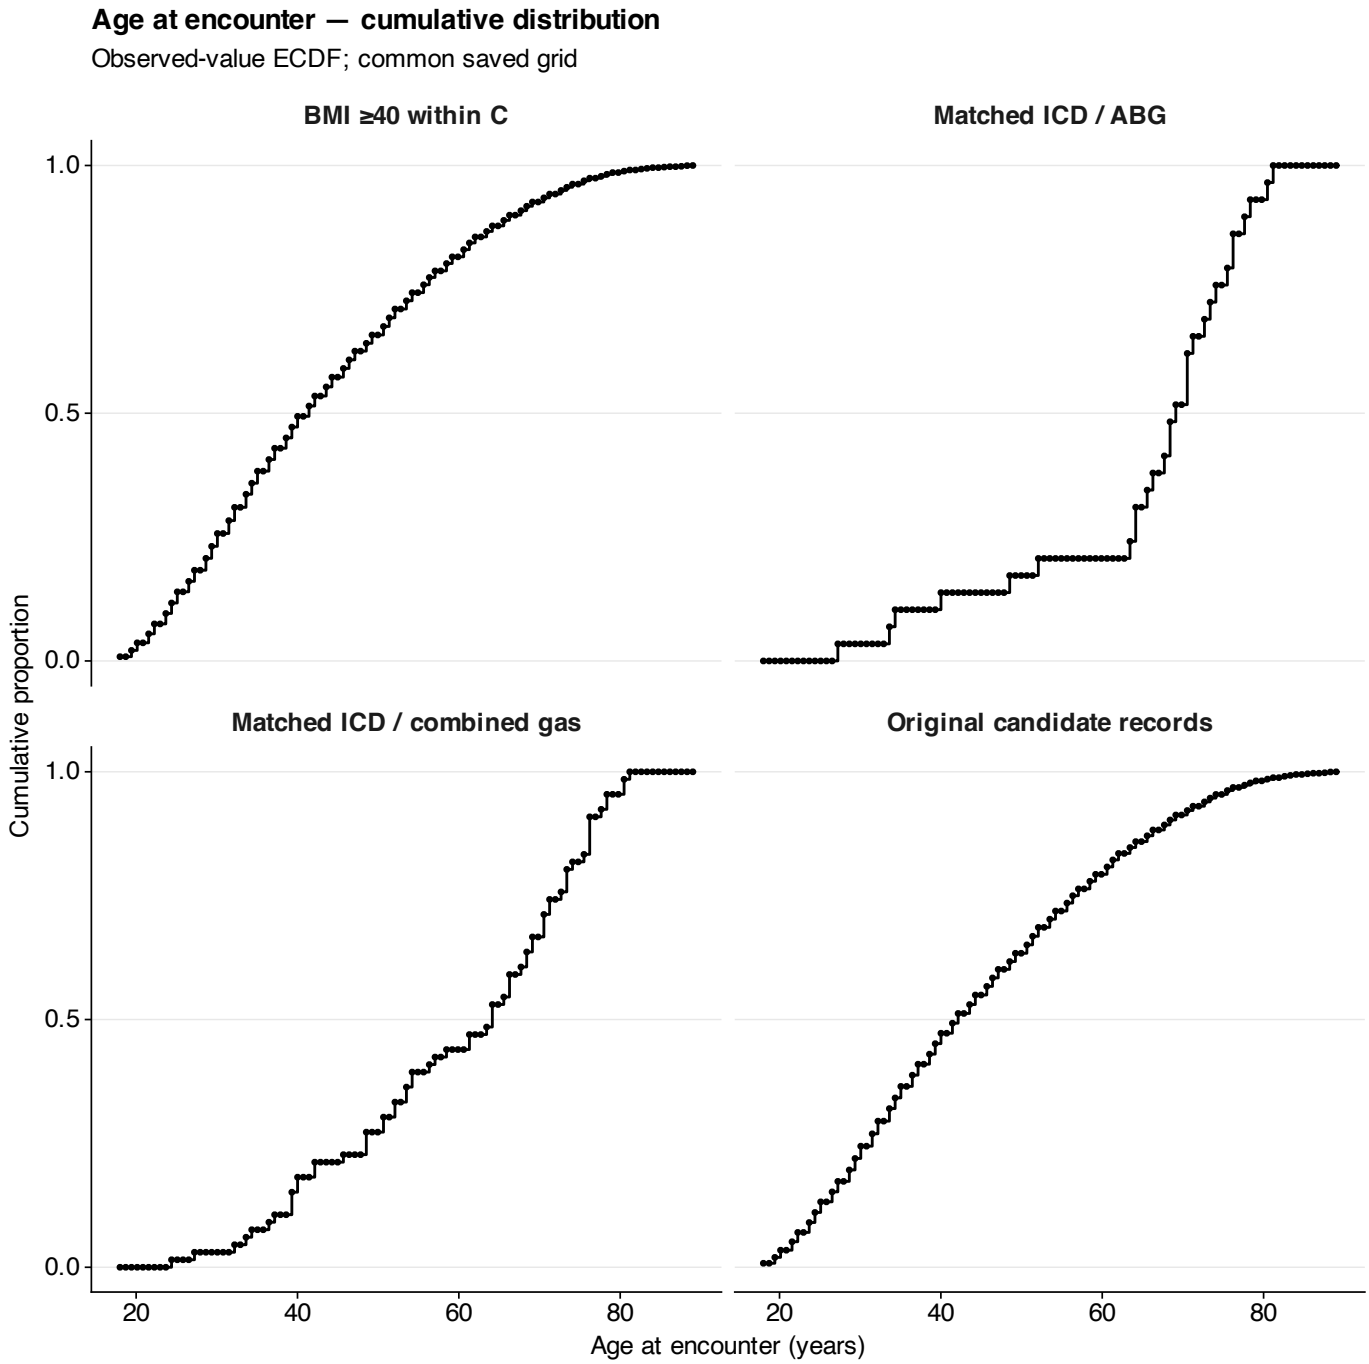

Figure 560: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. age_at_encounter ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

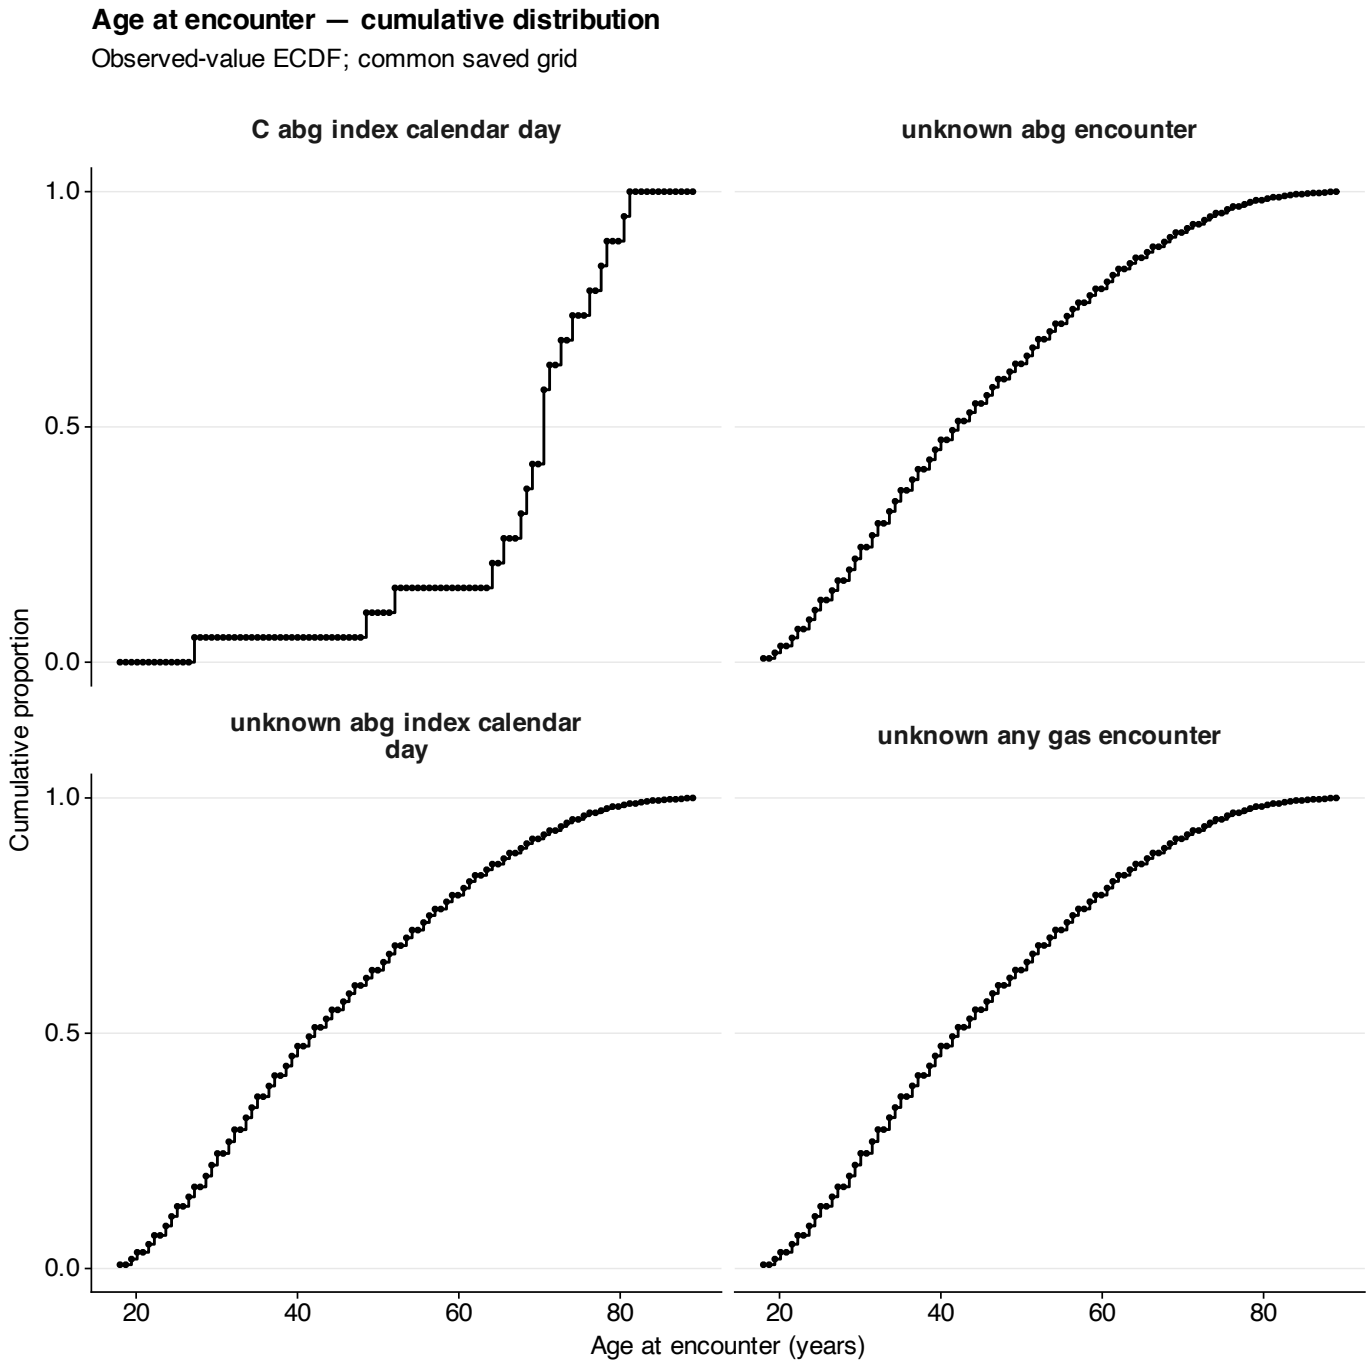

Figure 561: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. age_at_encounter ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

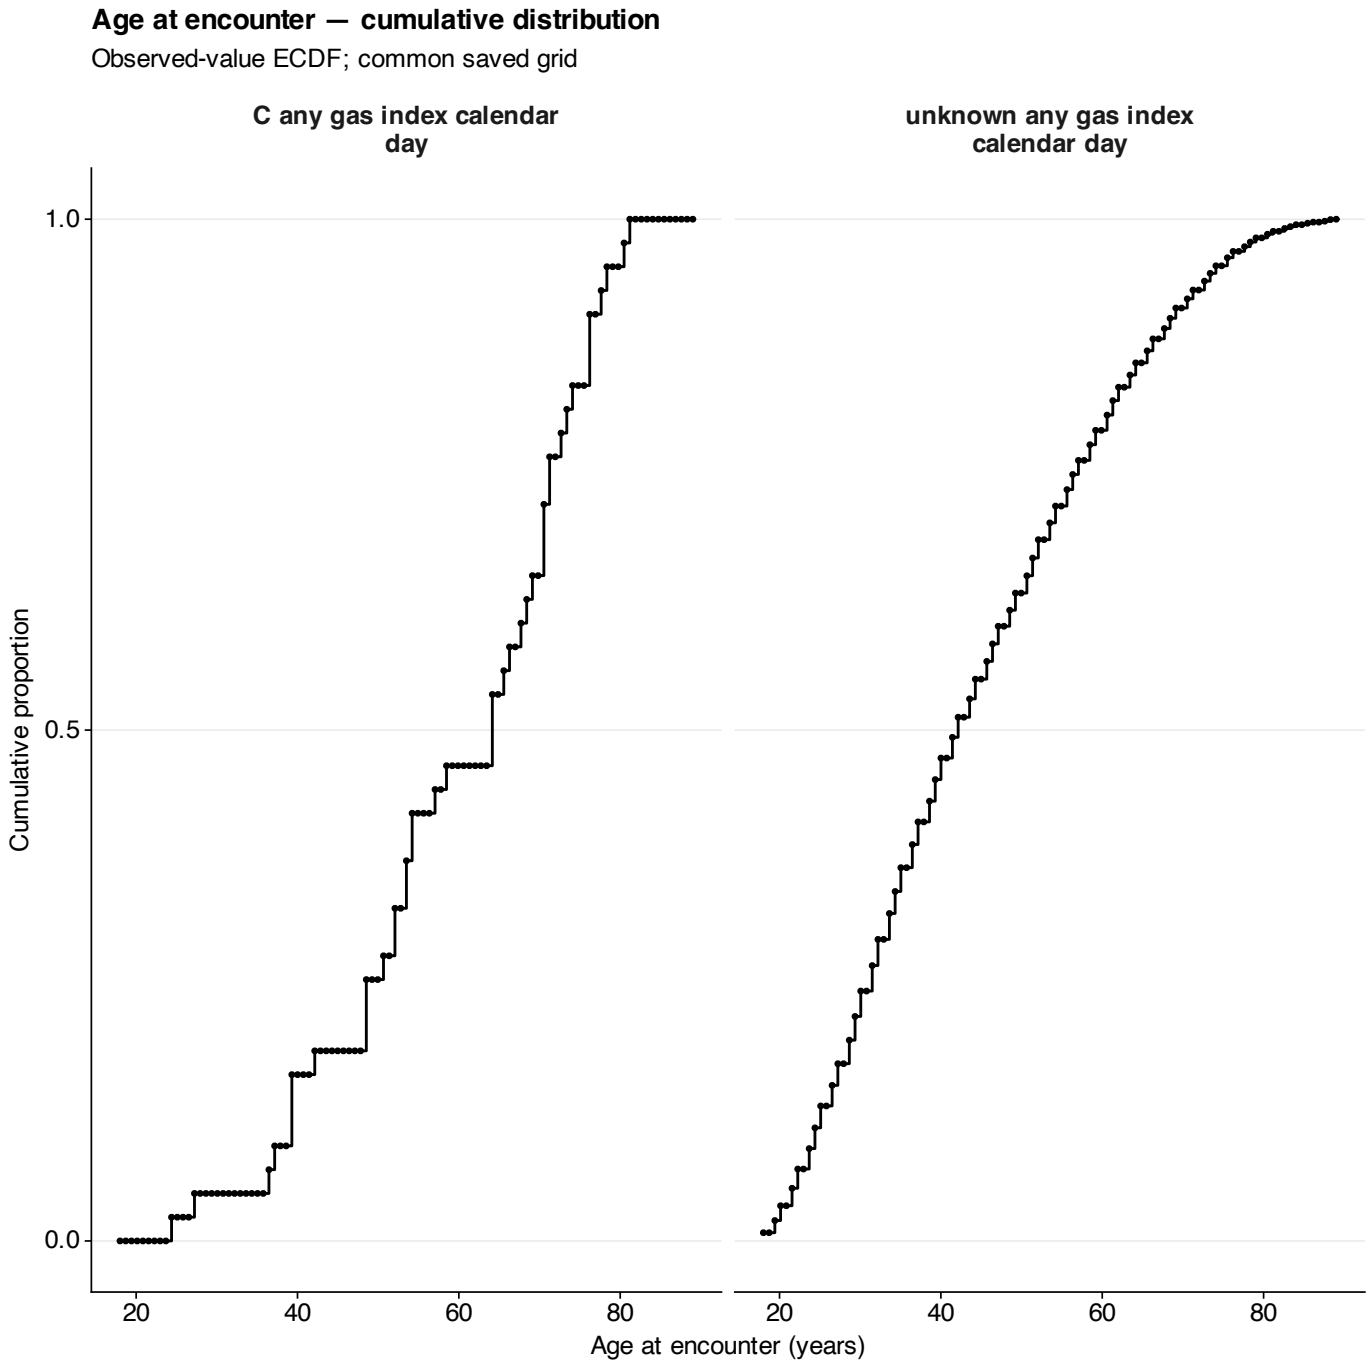

Figure 562: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. age_at_encounter ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

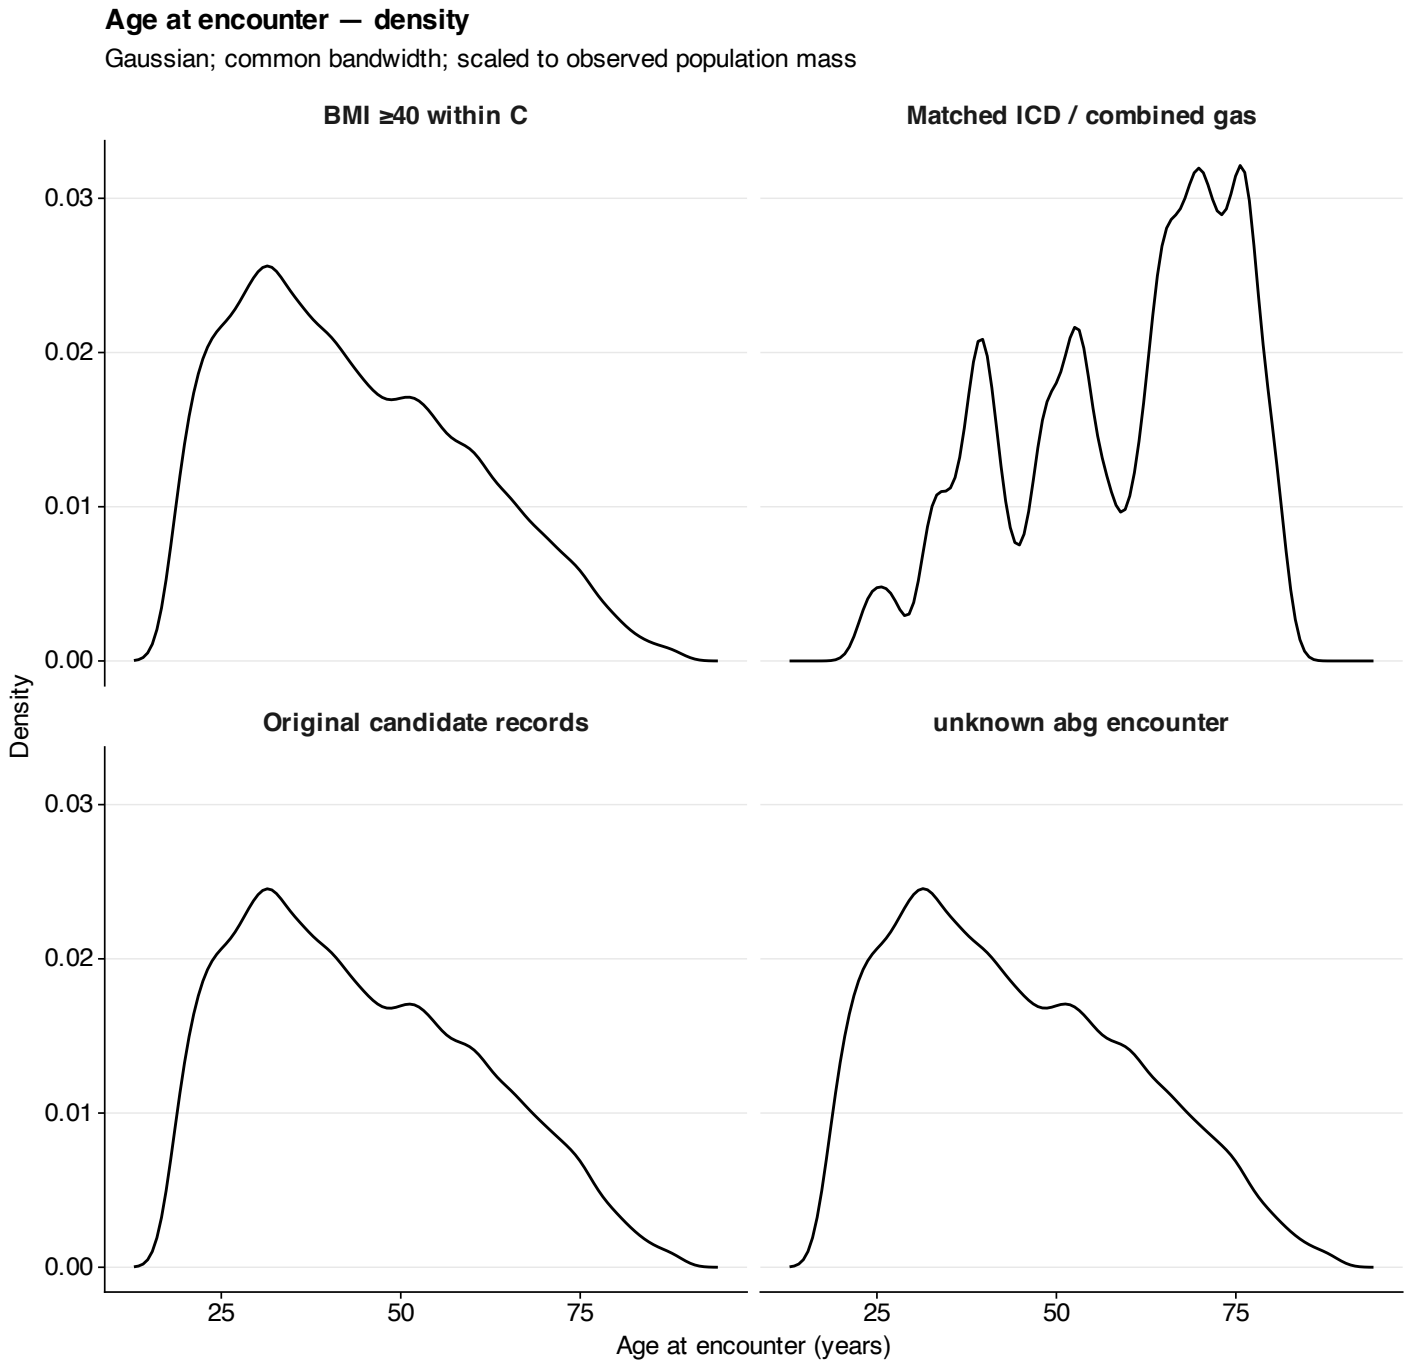

Figure 563: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. age_at_encounter kde across named stages; full coordinate export and normalization metadata in distribution_curves.

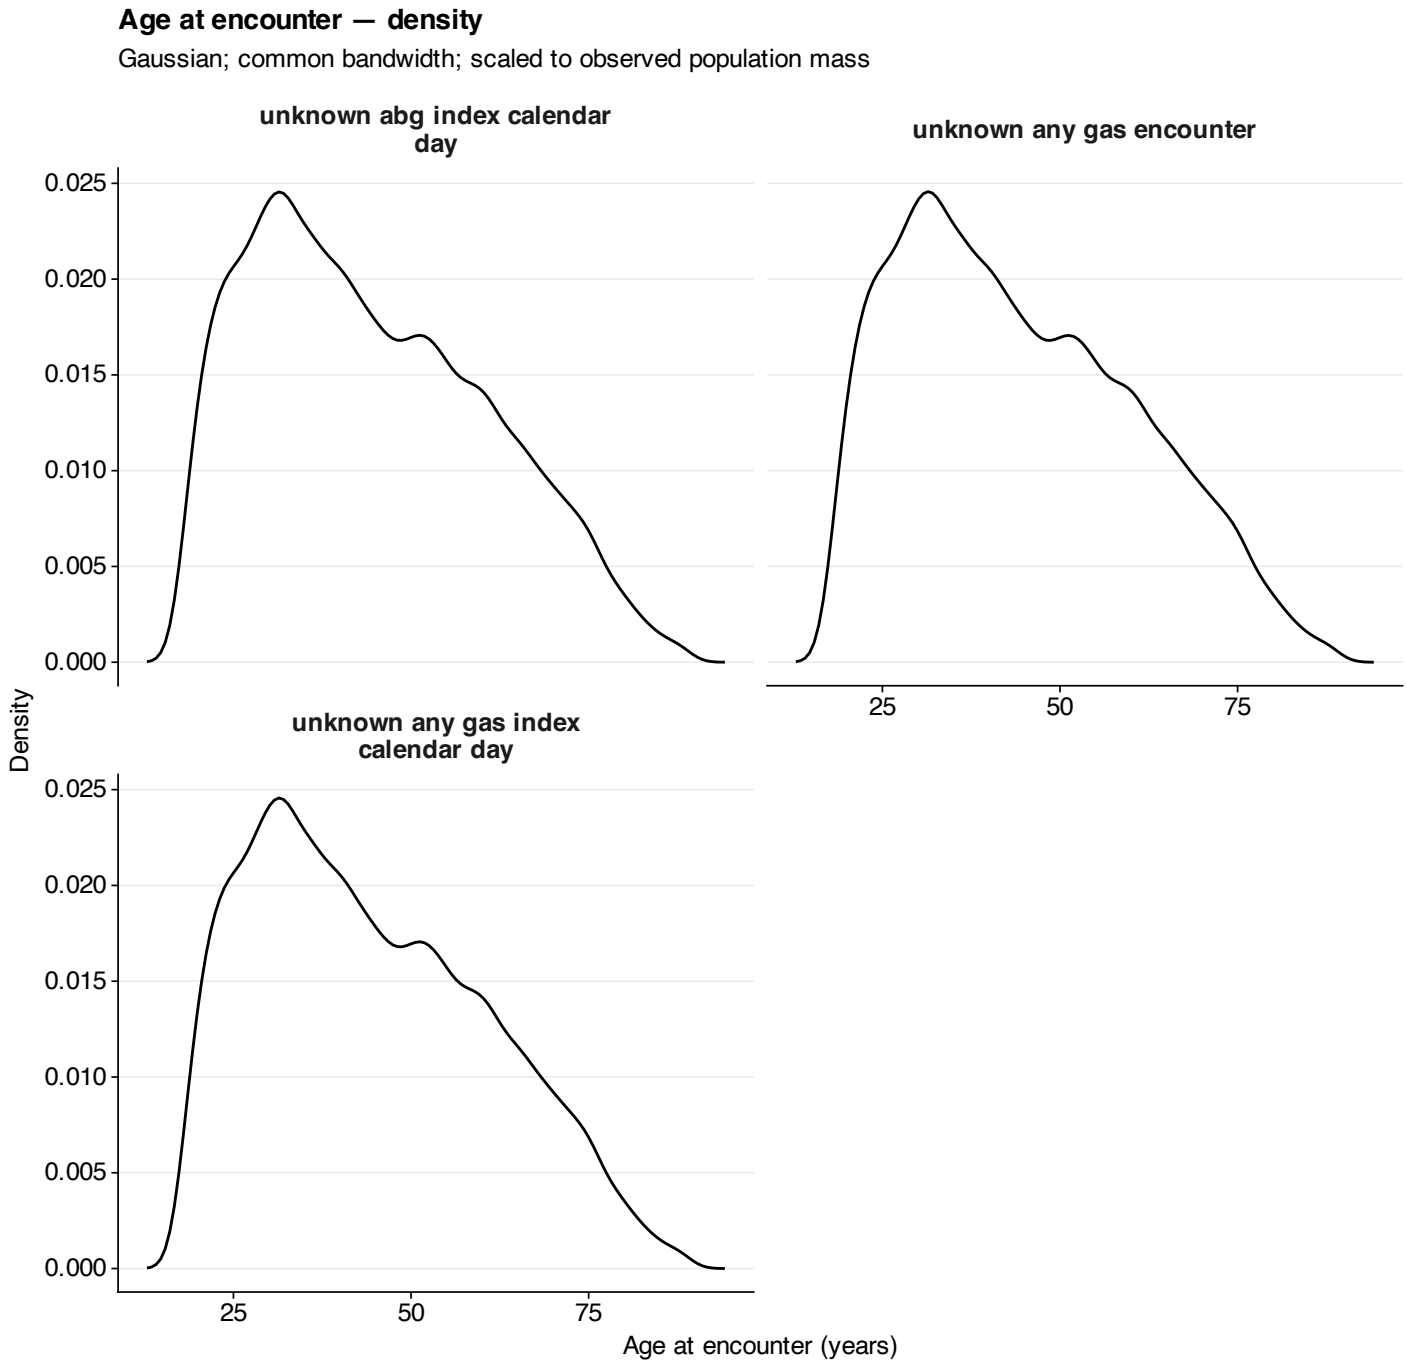

Figure 564: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. age_at_encounter kde across named stages; full coordinate export and normalization metadata in distribution_curves.

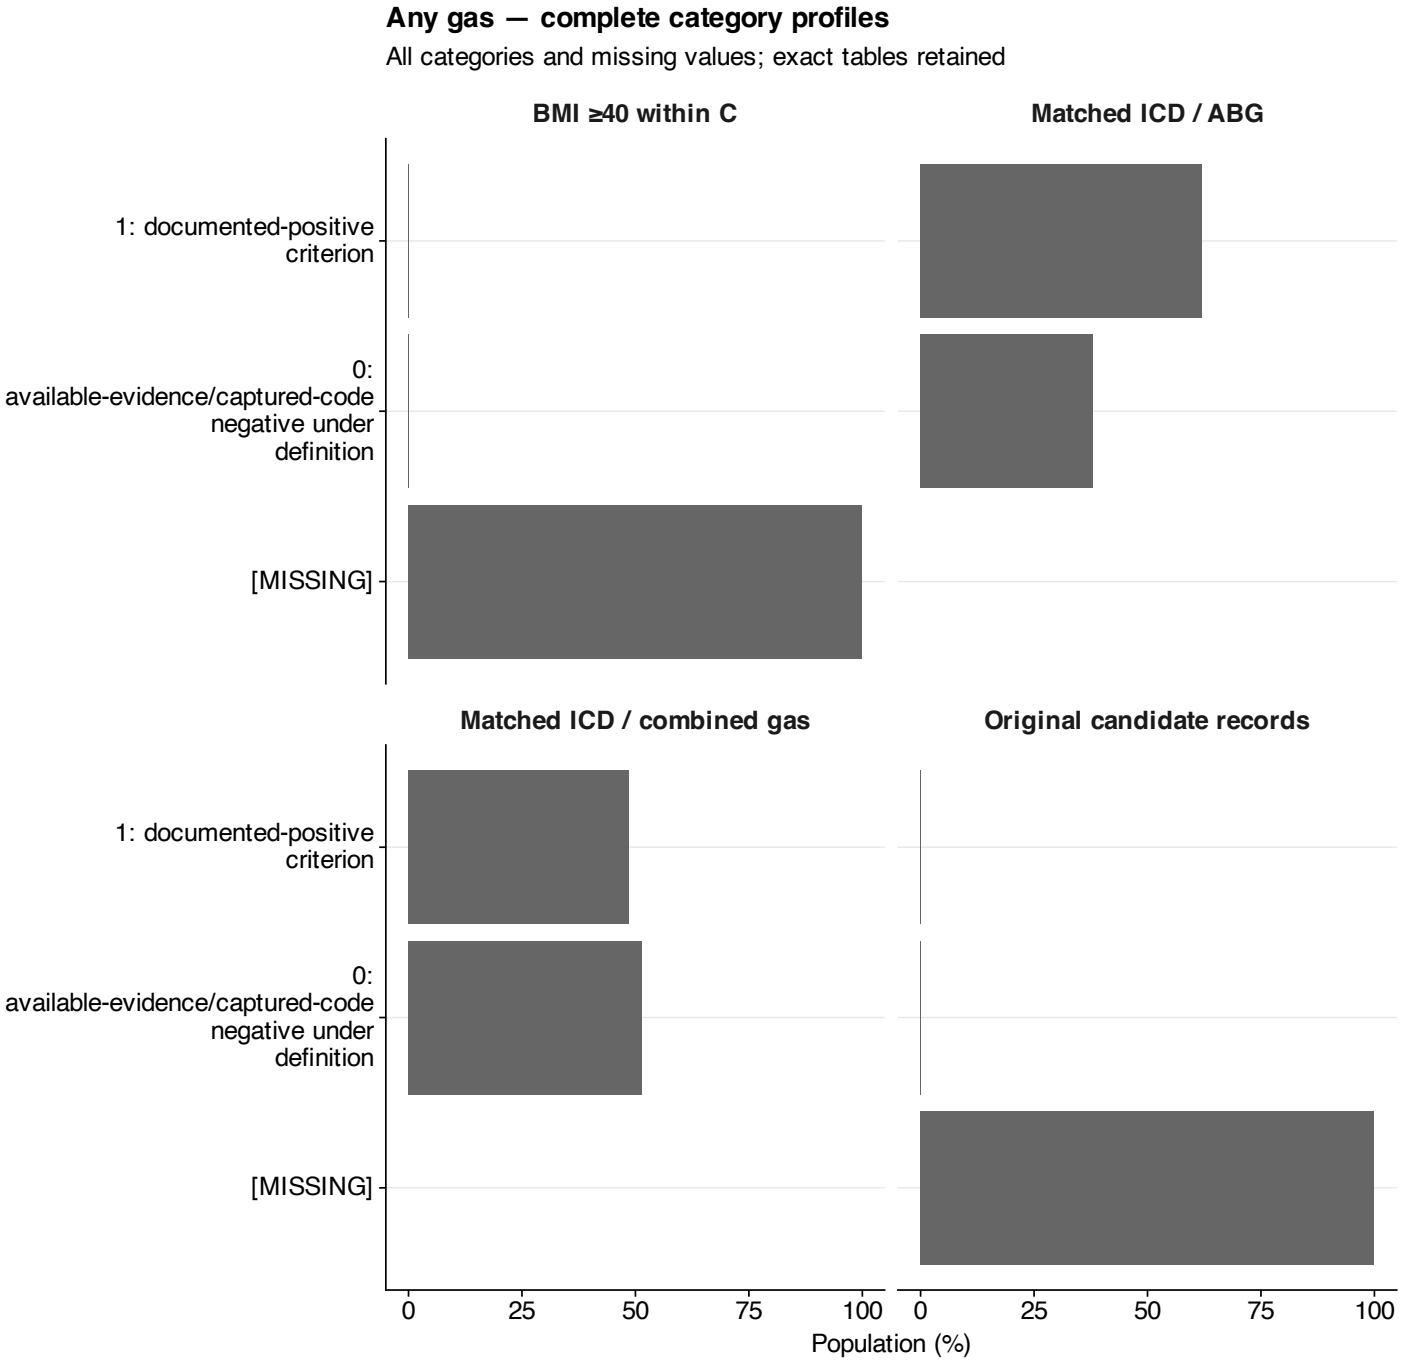

Figure 565: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete any_gas stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

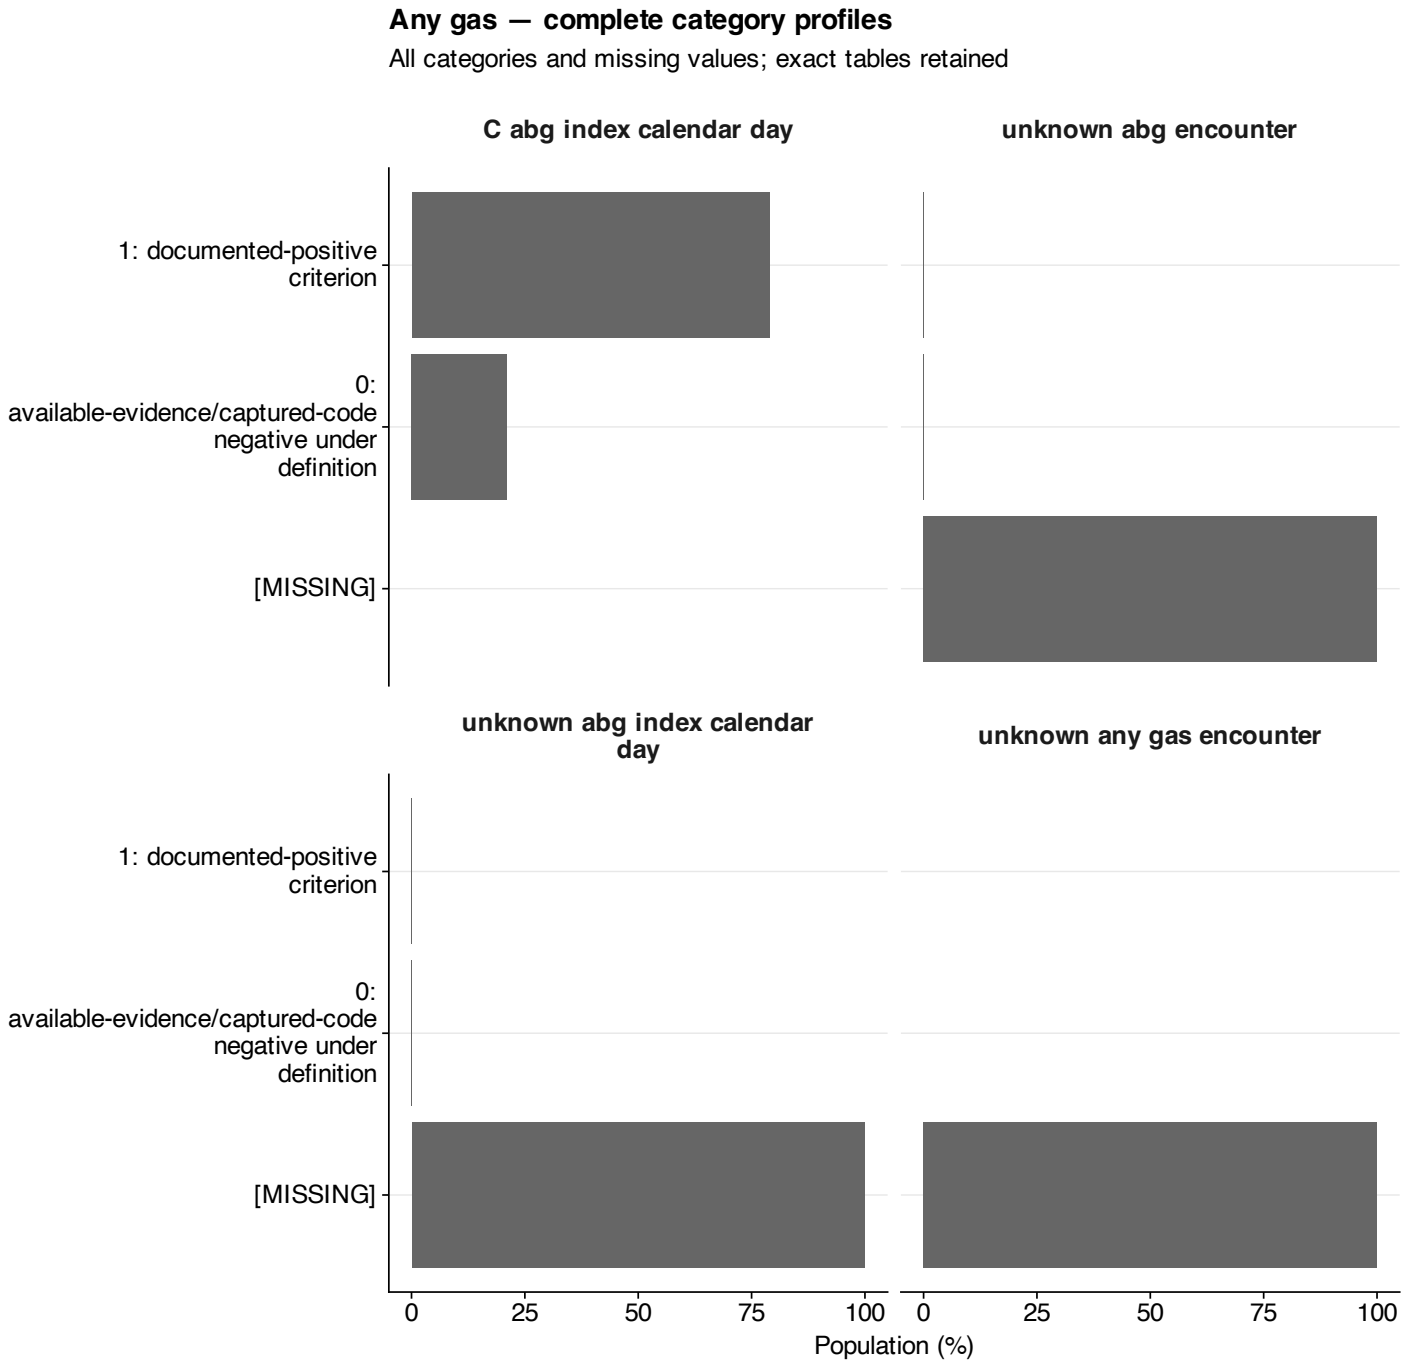

Figure 566: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete any_gas stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

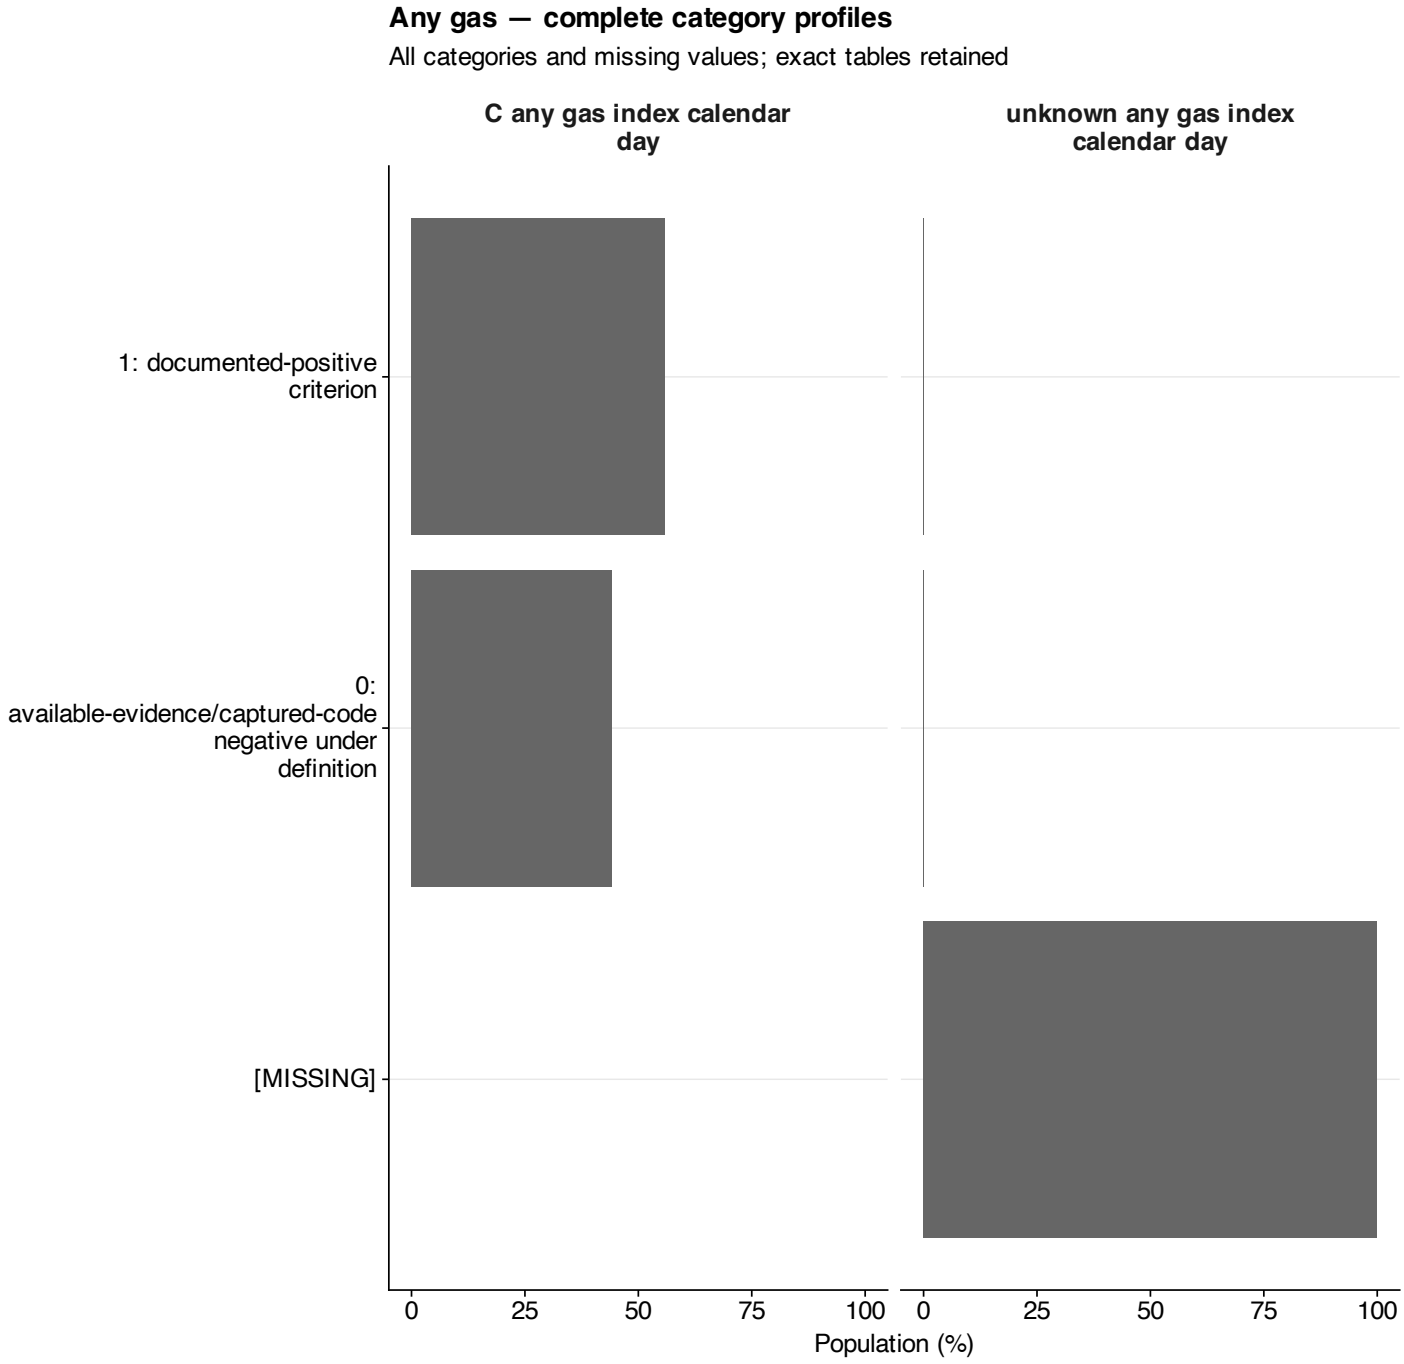

Figure 567: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete any_gas stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

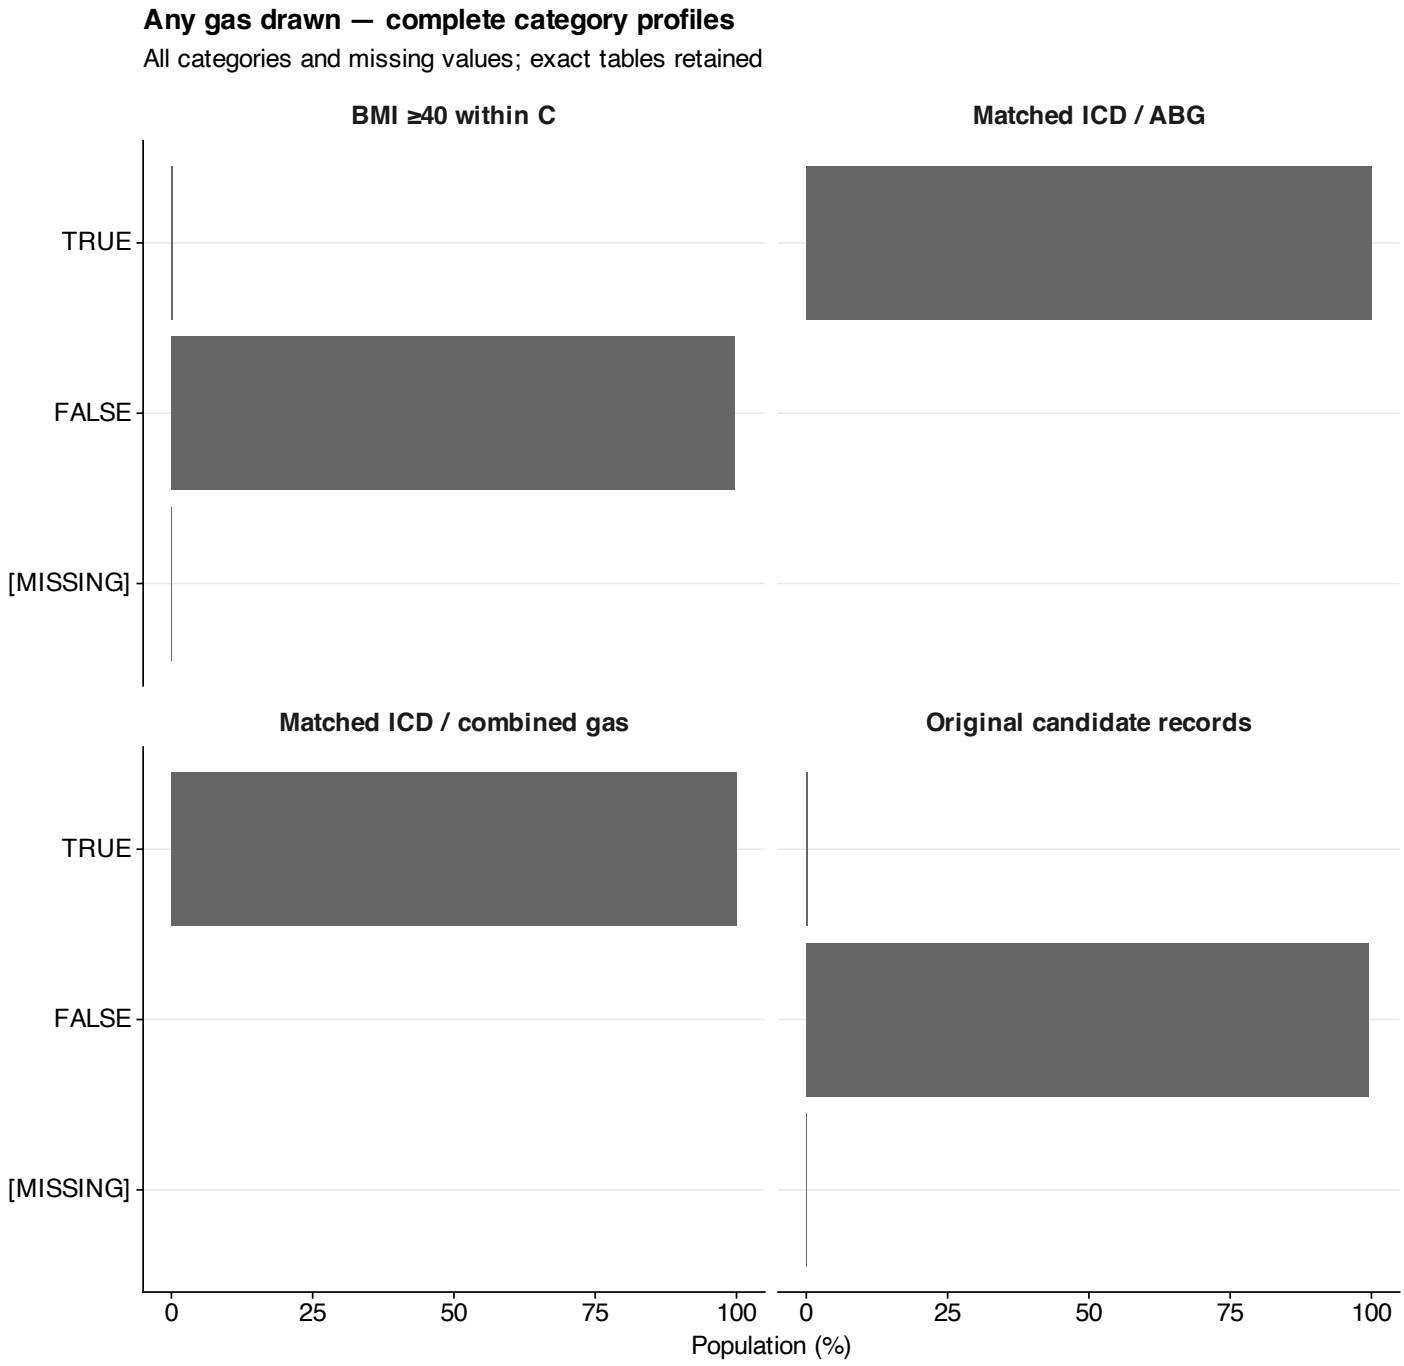

Figure 568: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete any_gas_drawn stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

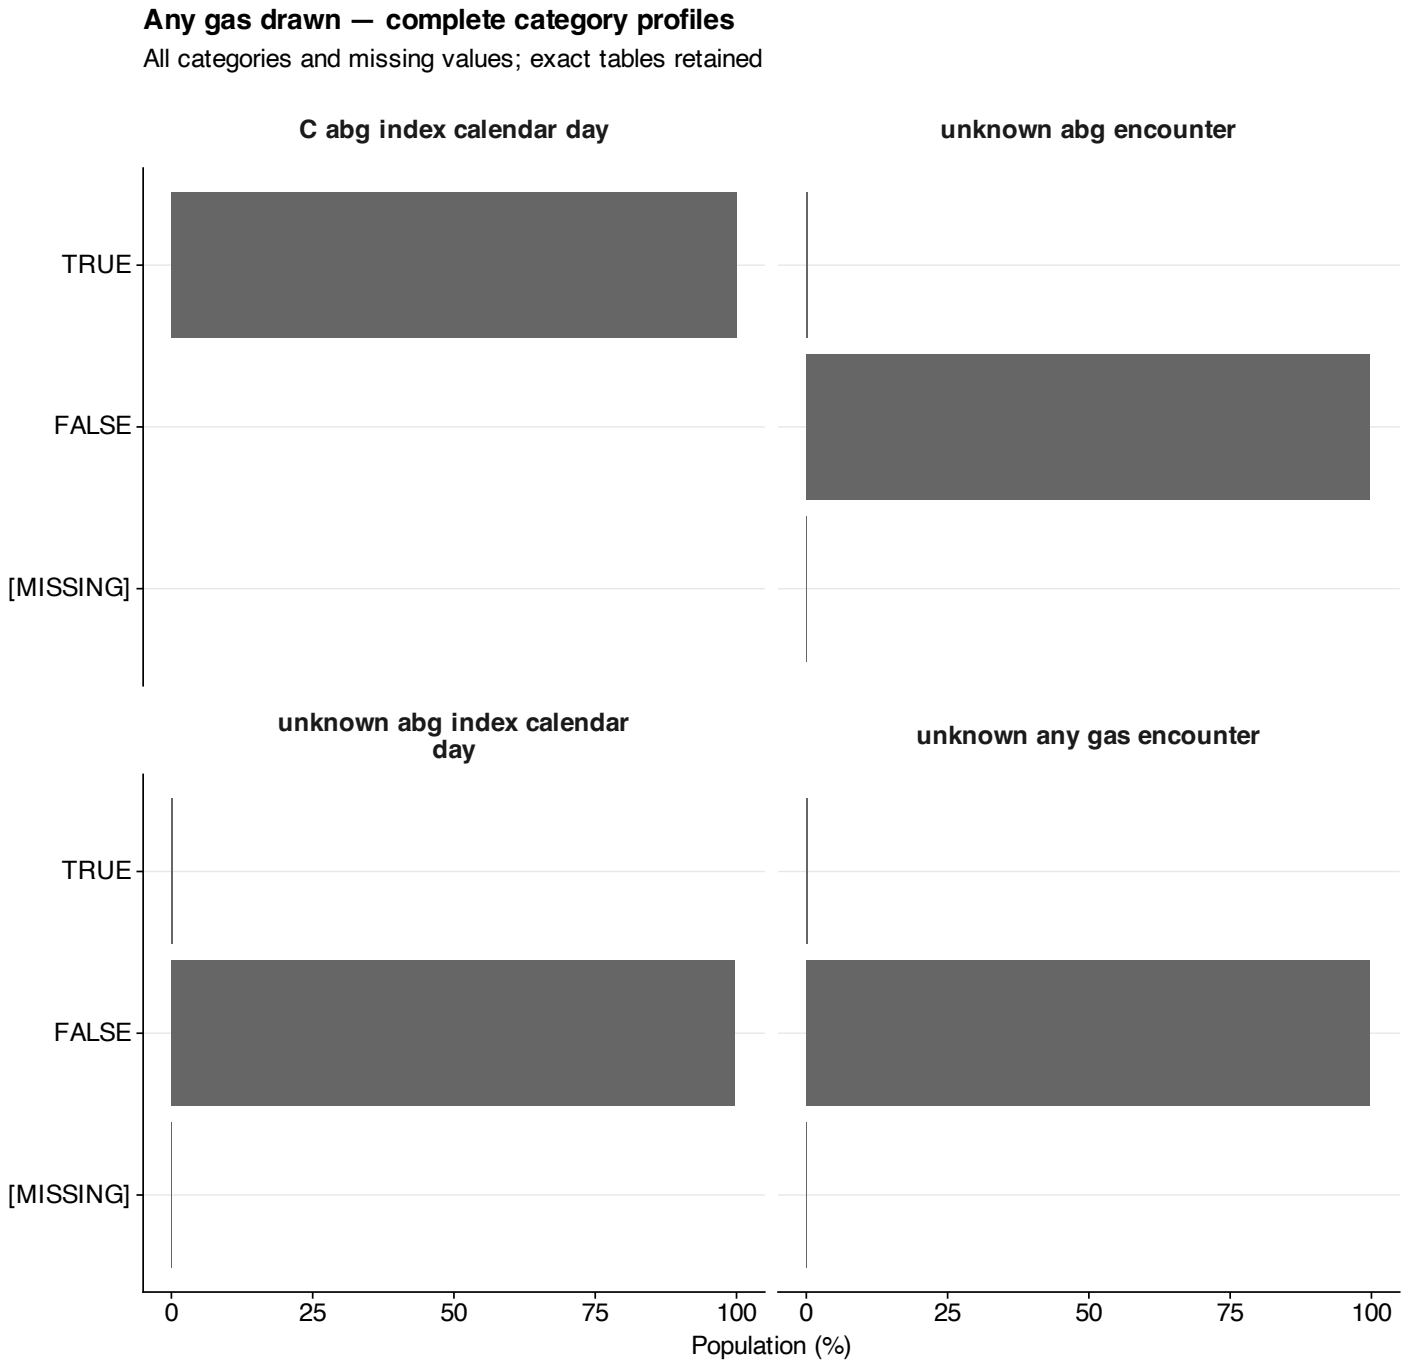

Figure 569: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete any_gas_drawn stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

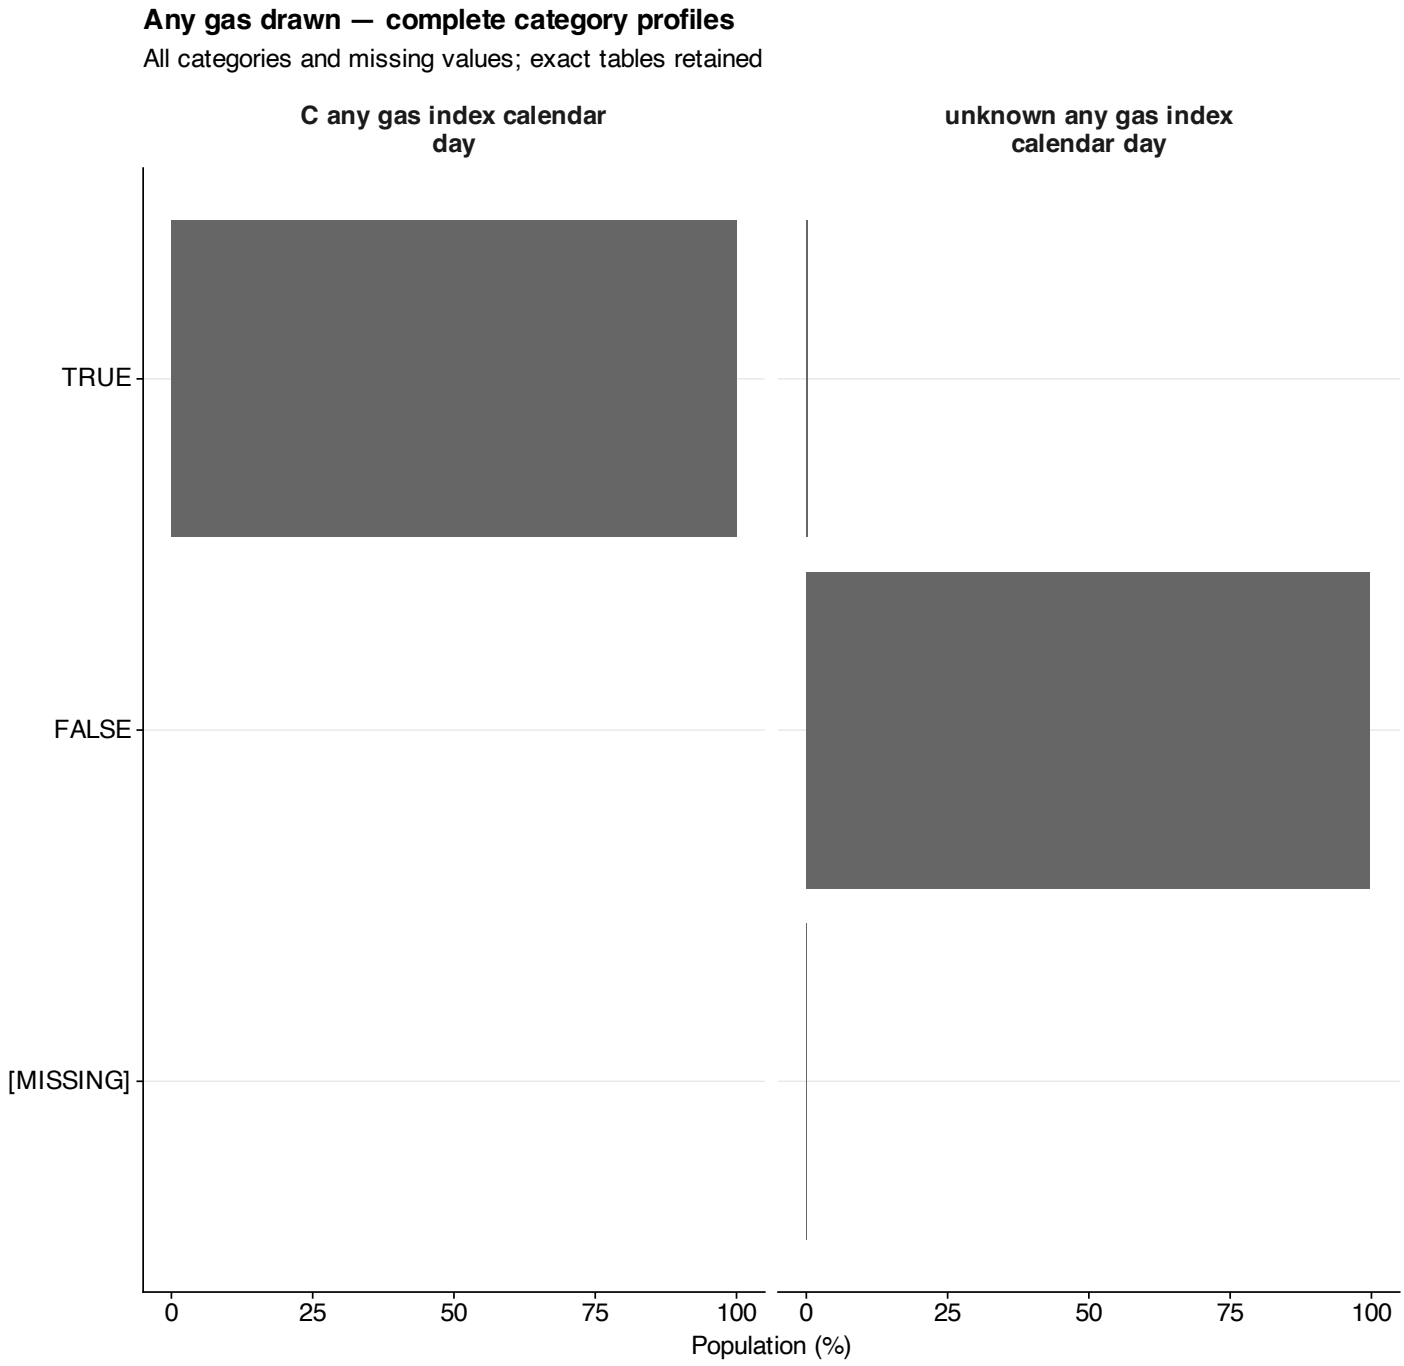

Figure 570: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete any_gas_drawn stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

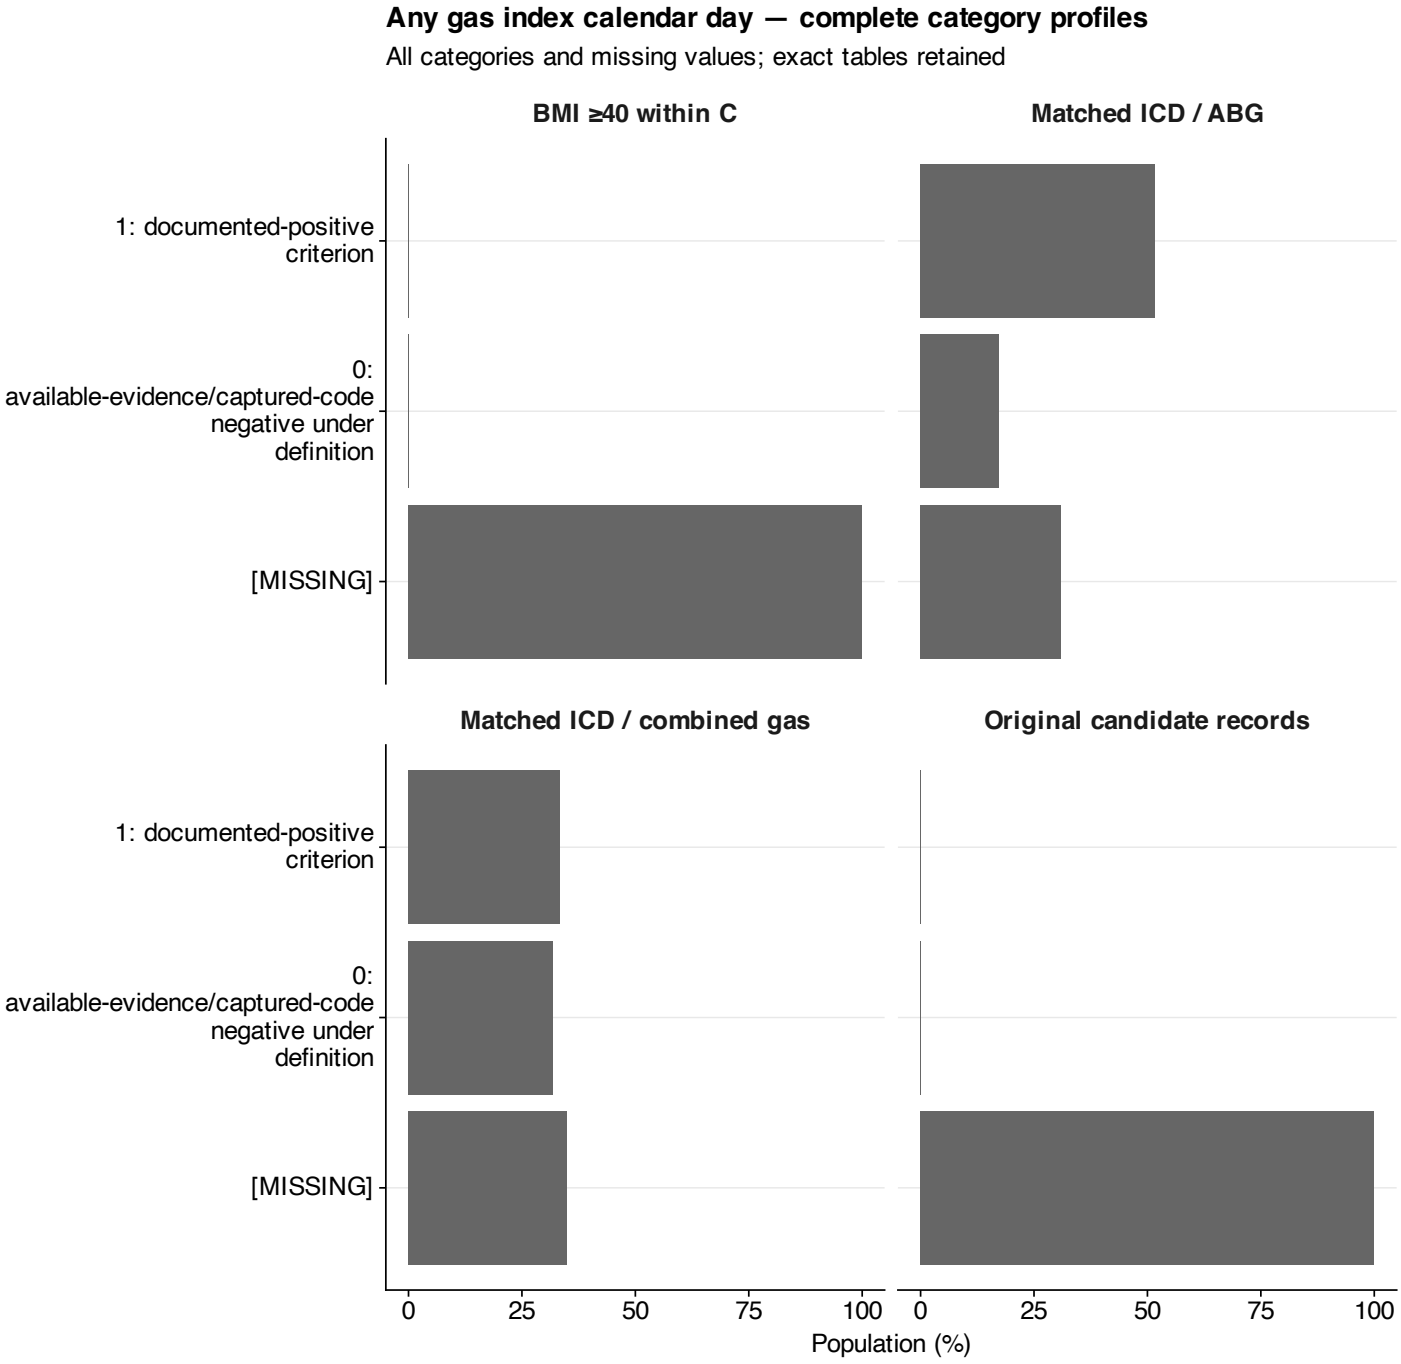

Figure 571: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete any_gas_index_calendar_day stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

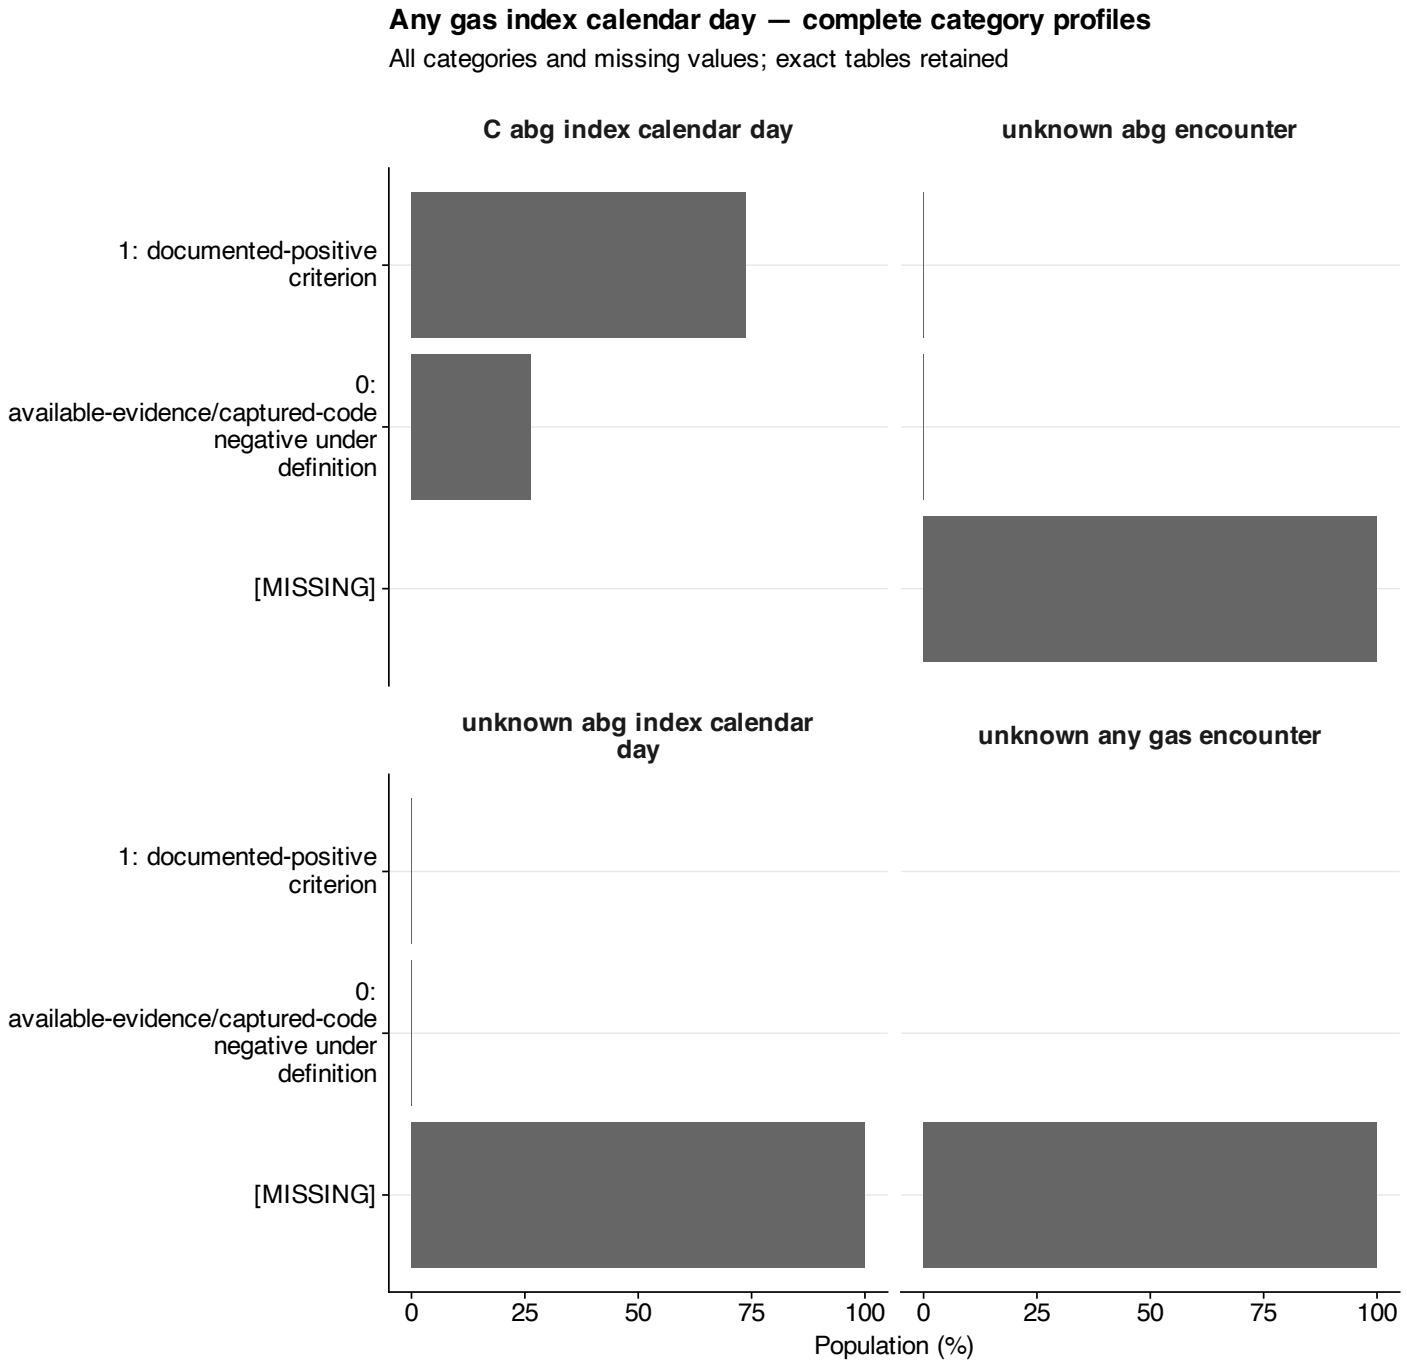

Figure 572: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete any_gas_index_calendar_day stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

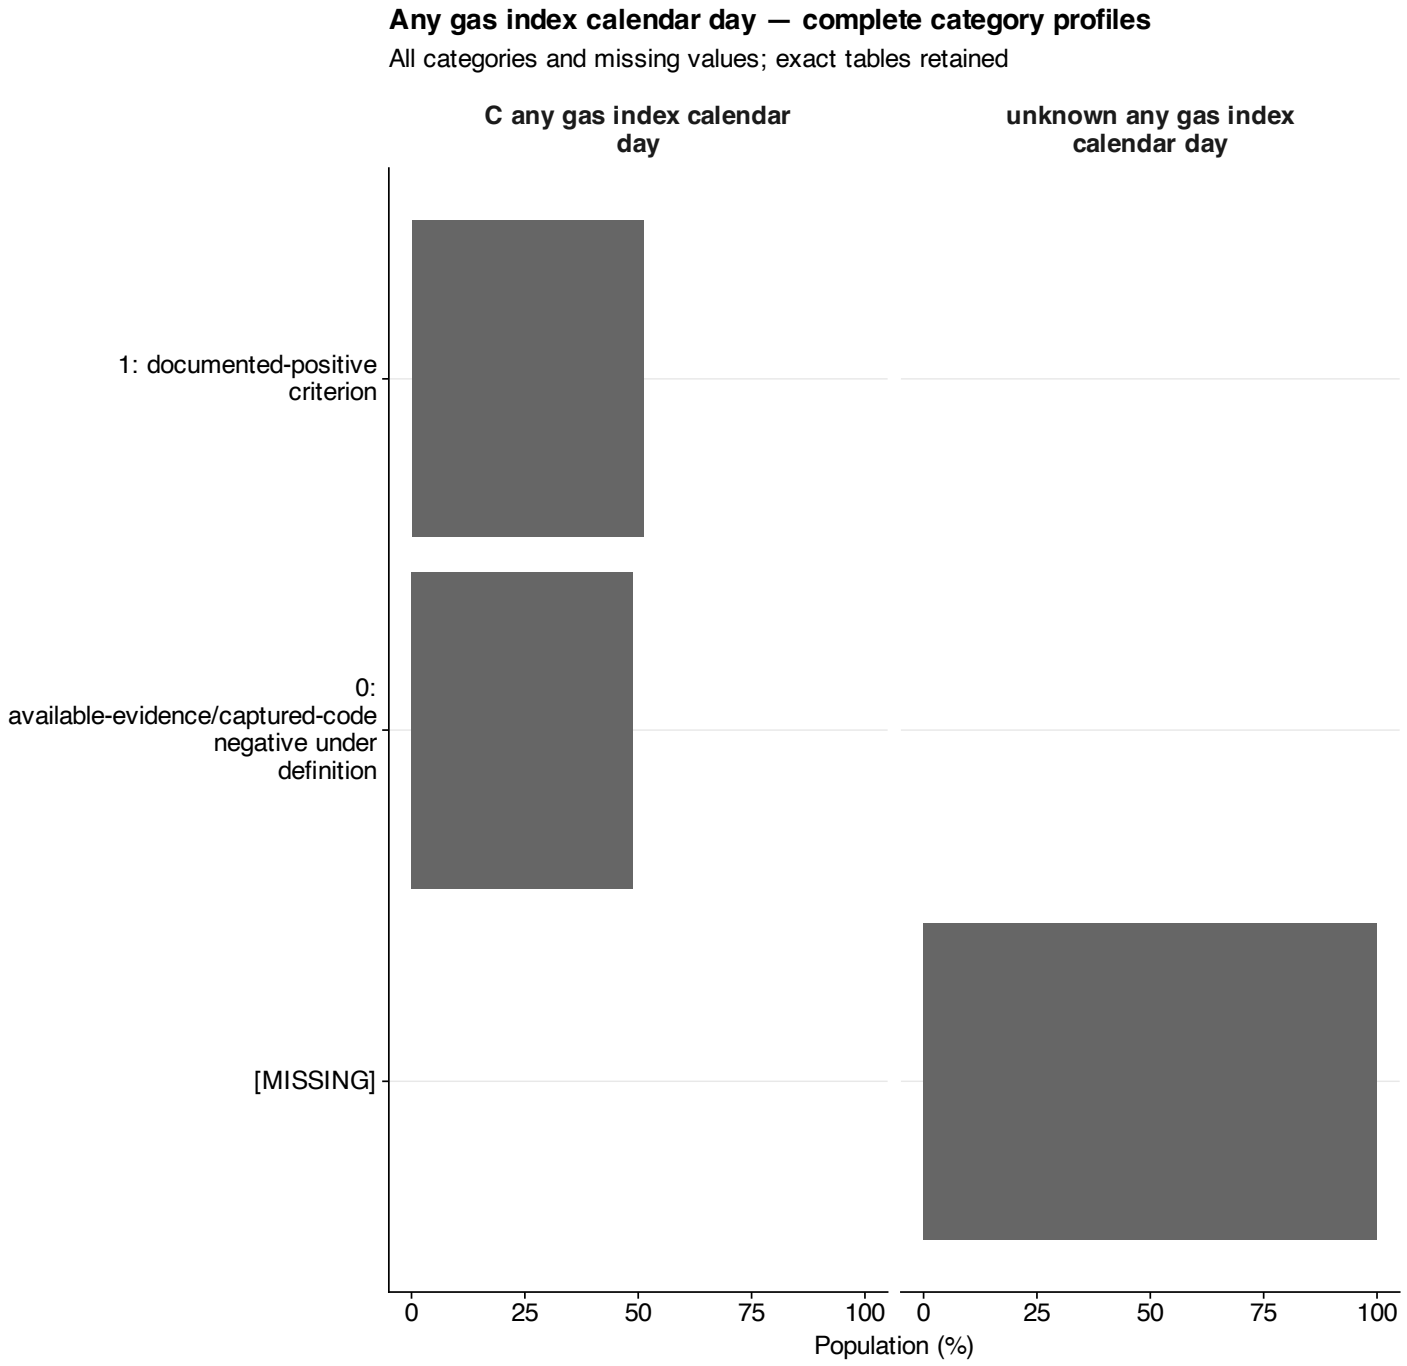

Figure 573: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete any_gas_index_calendar_day stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

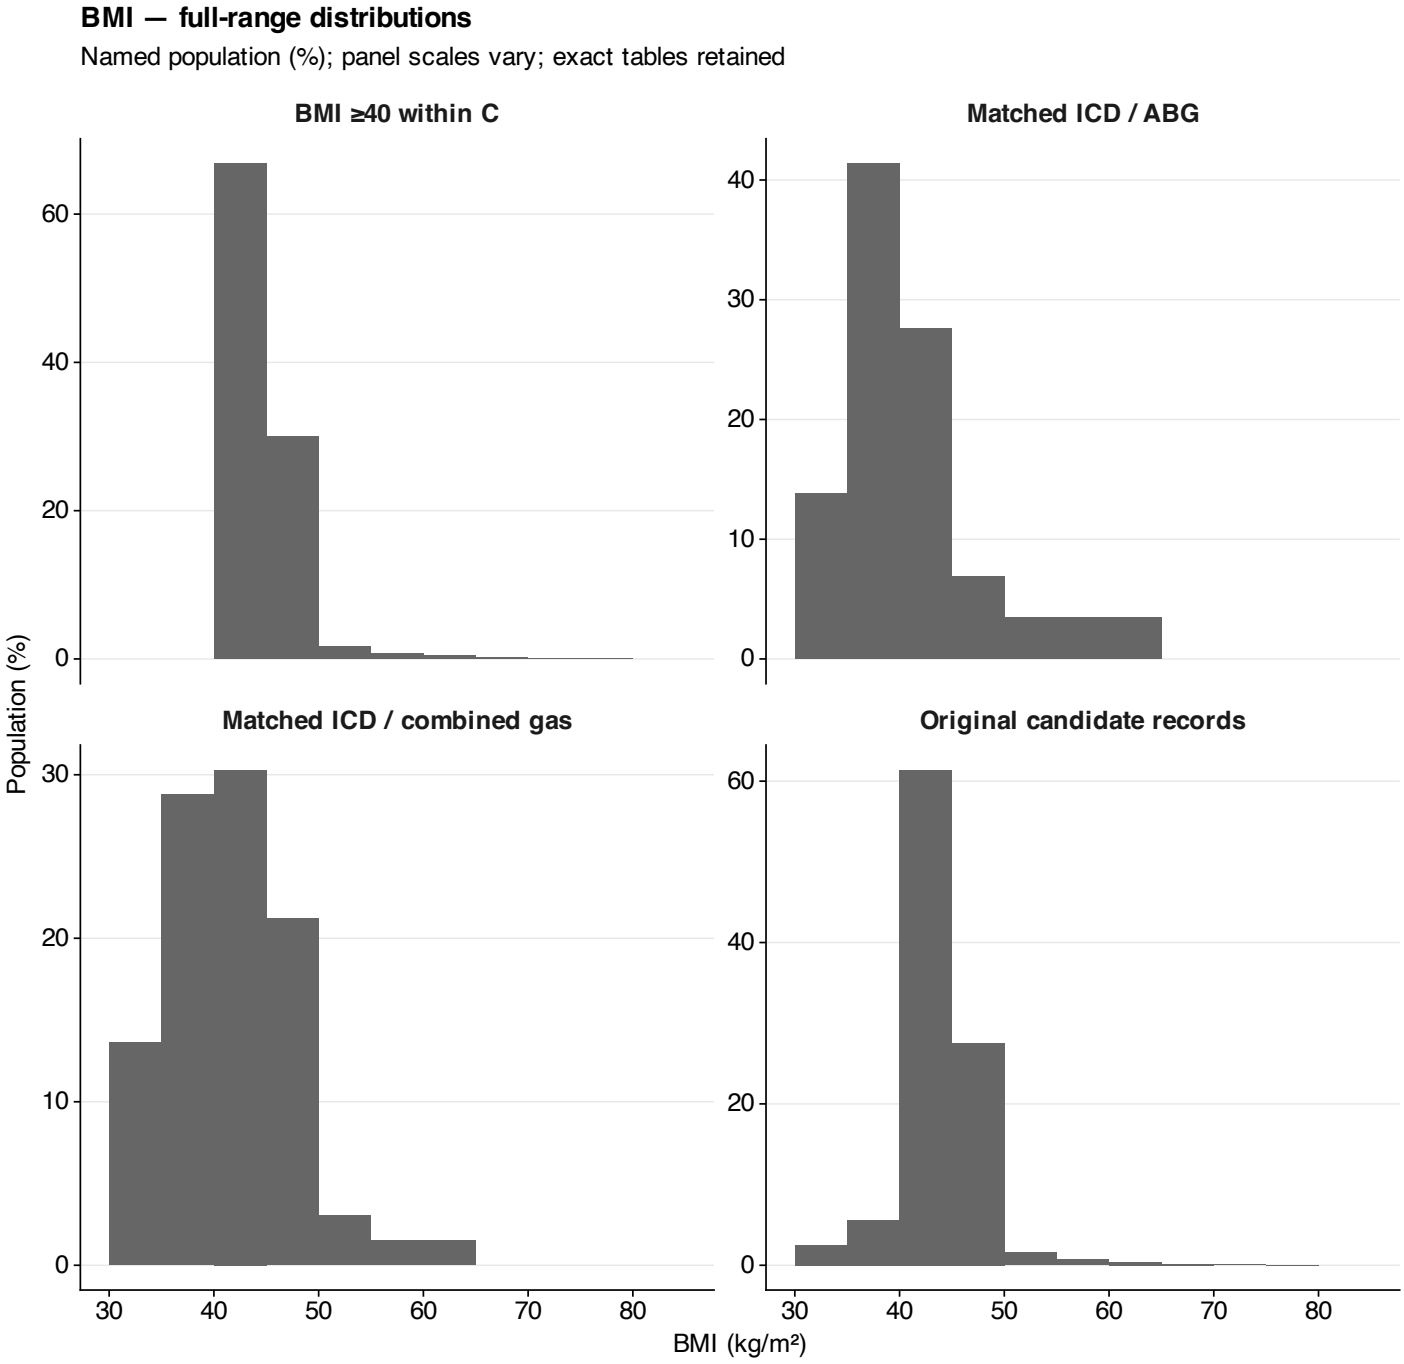

Figure 574: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete bmi stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

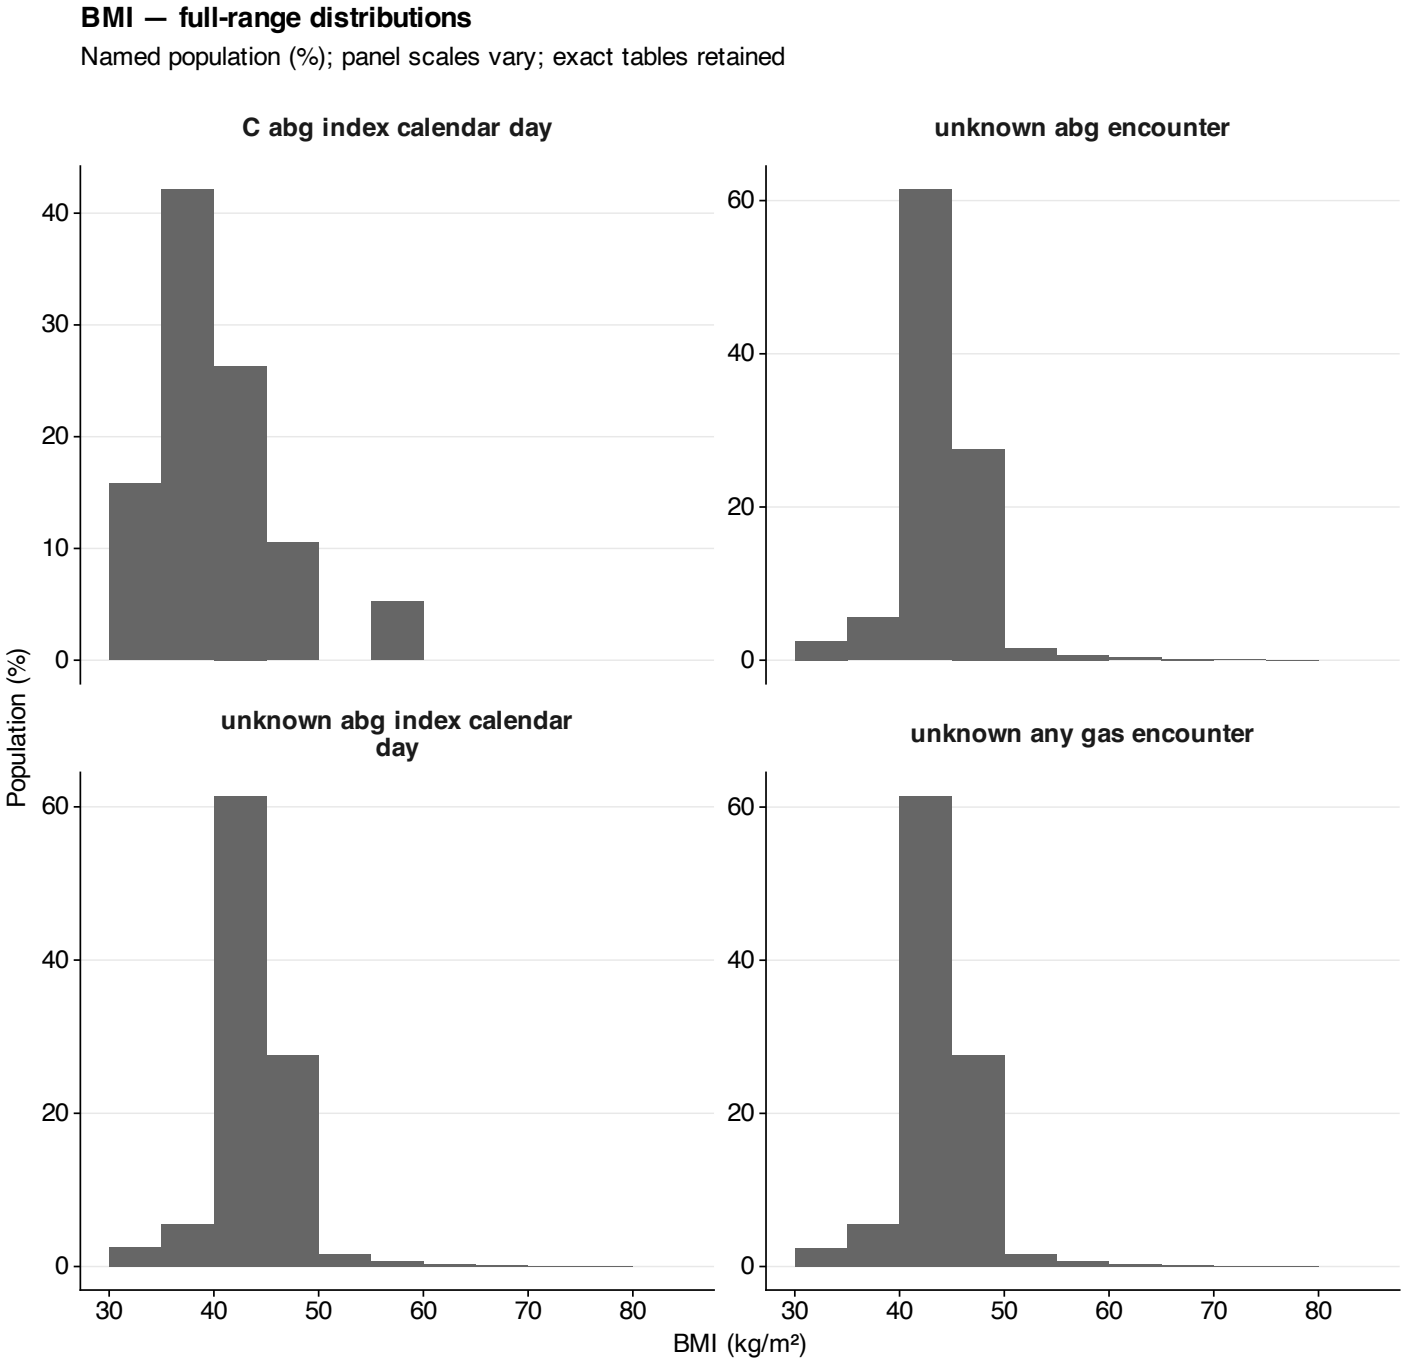

Figure 575: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete bmi stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

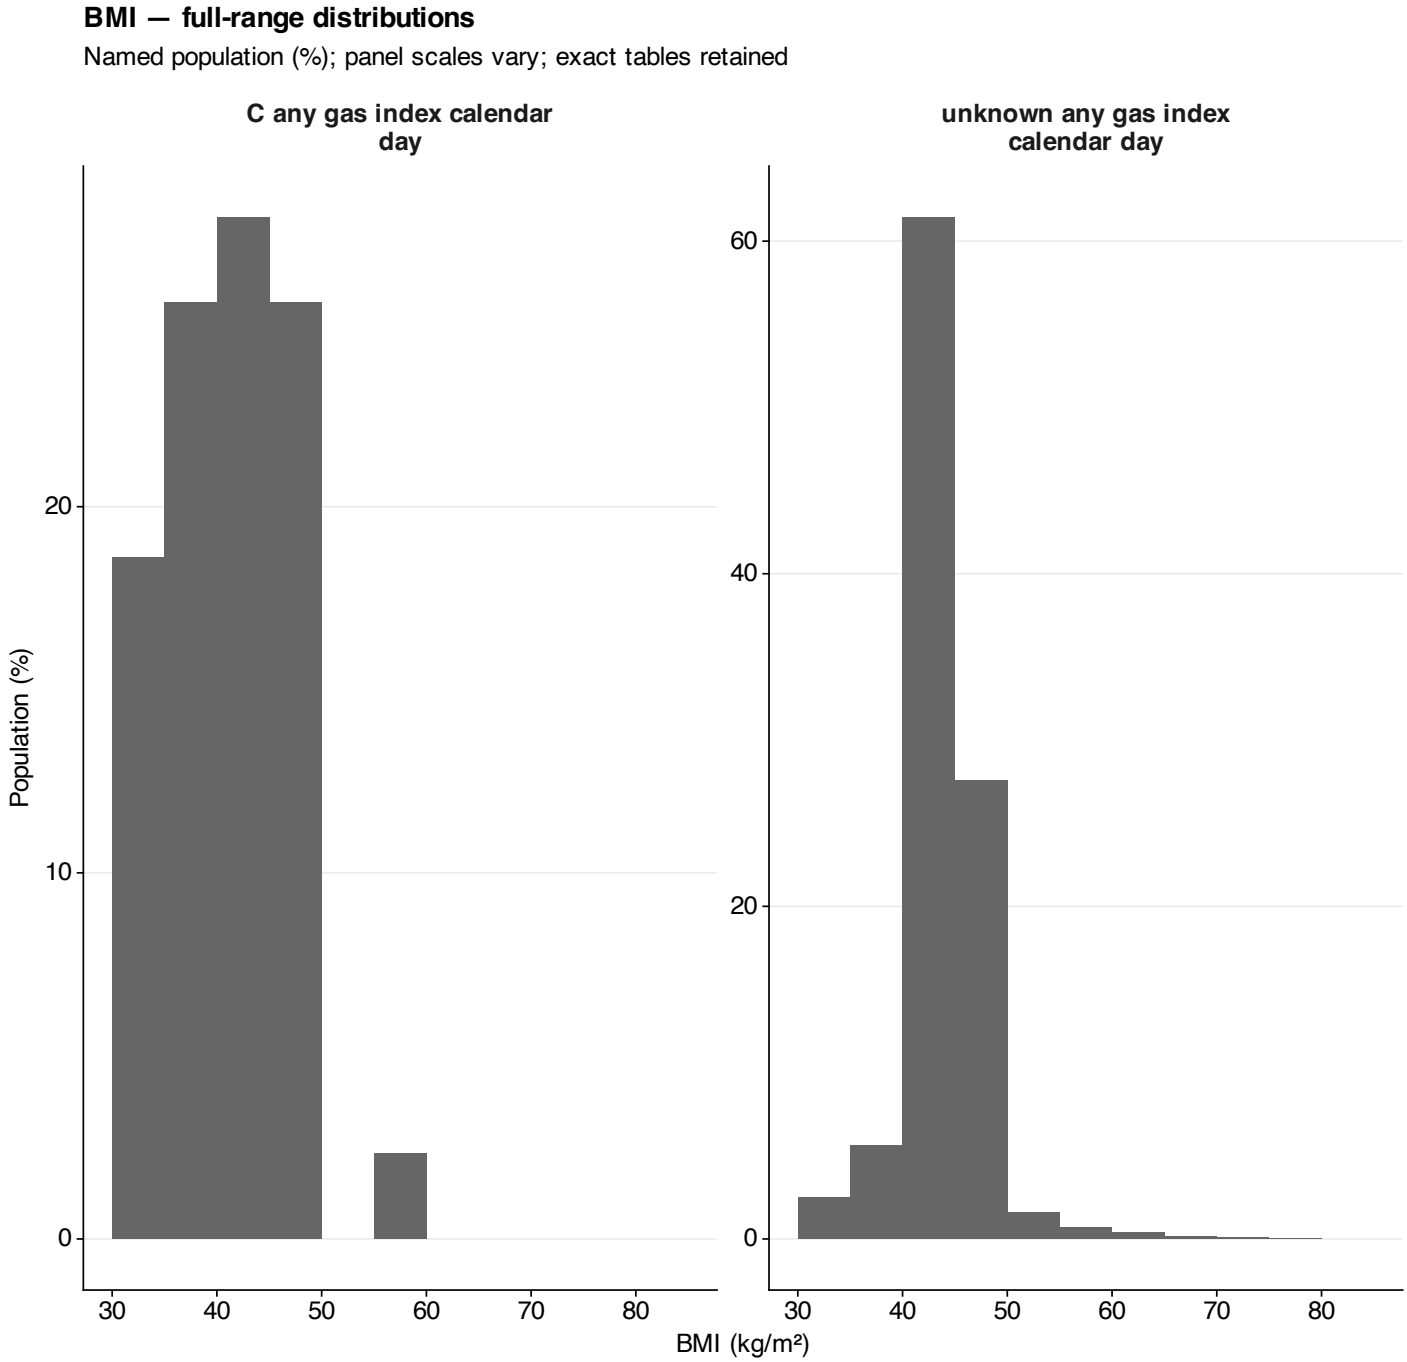

Figure 576: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete bmi stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

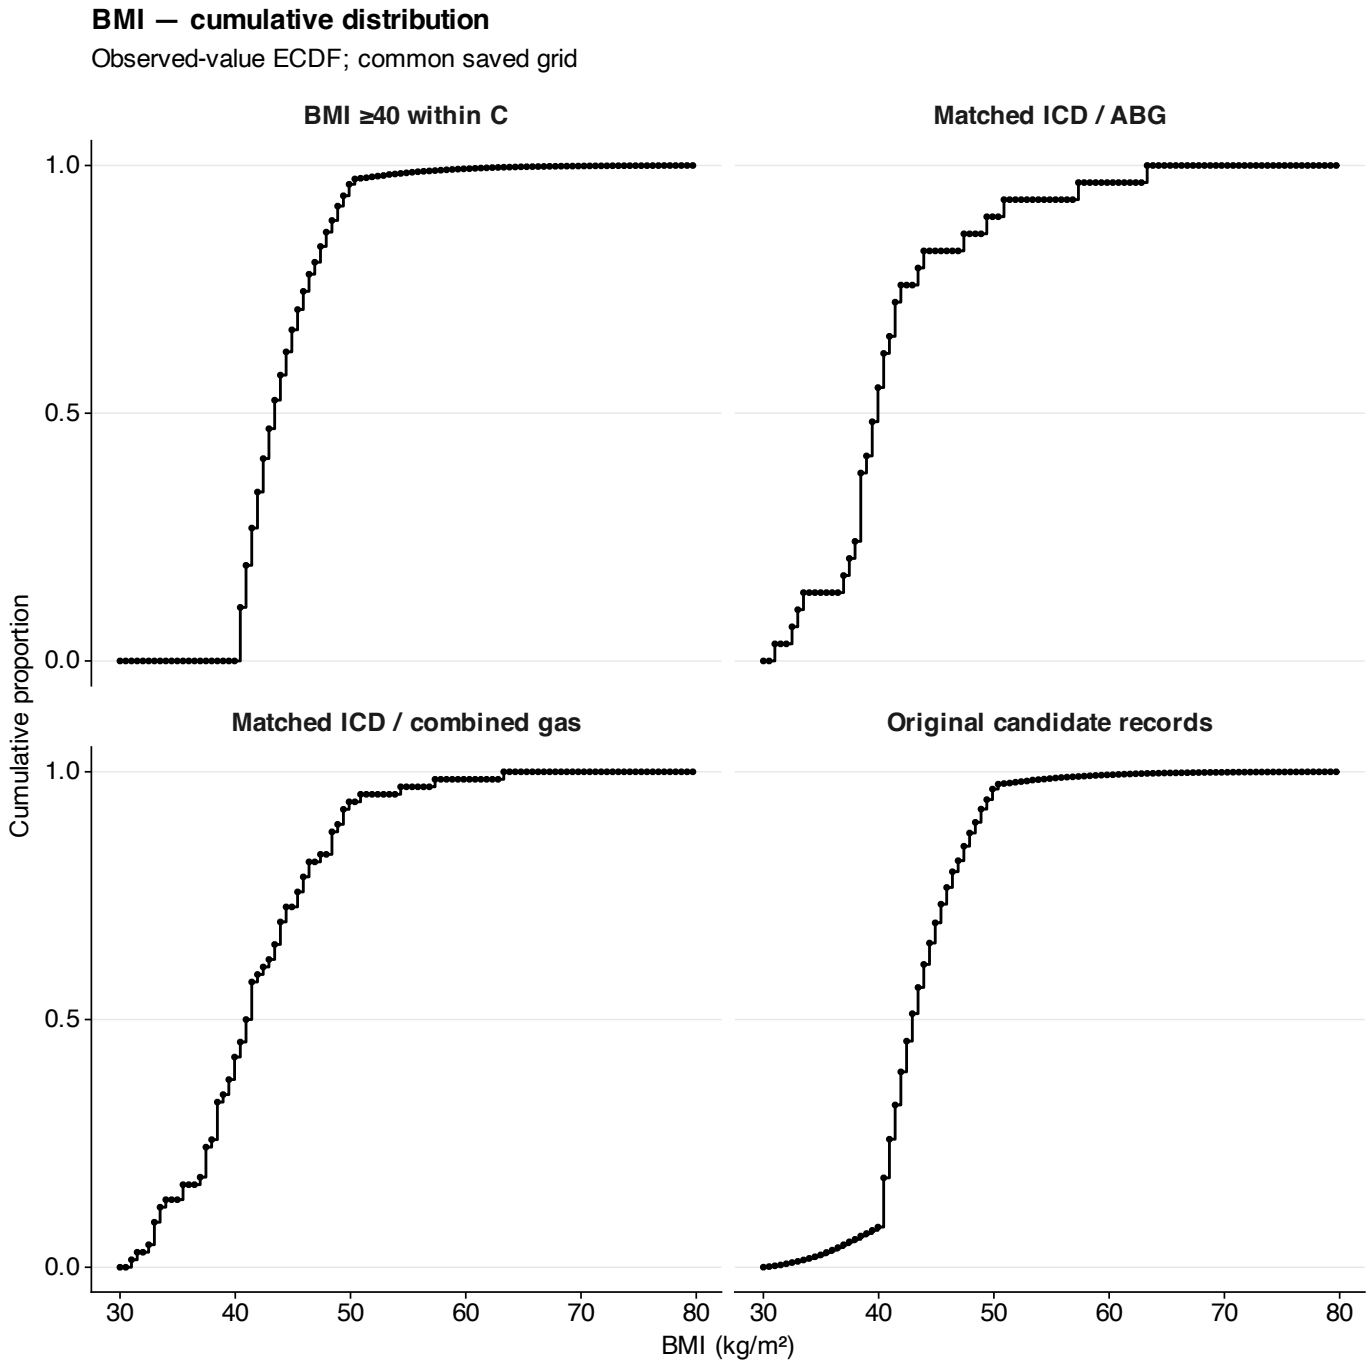

Figure 577: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. bmi ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

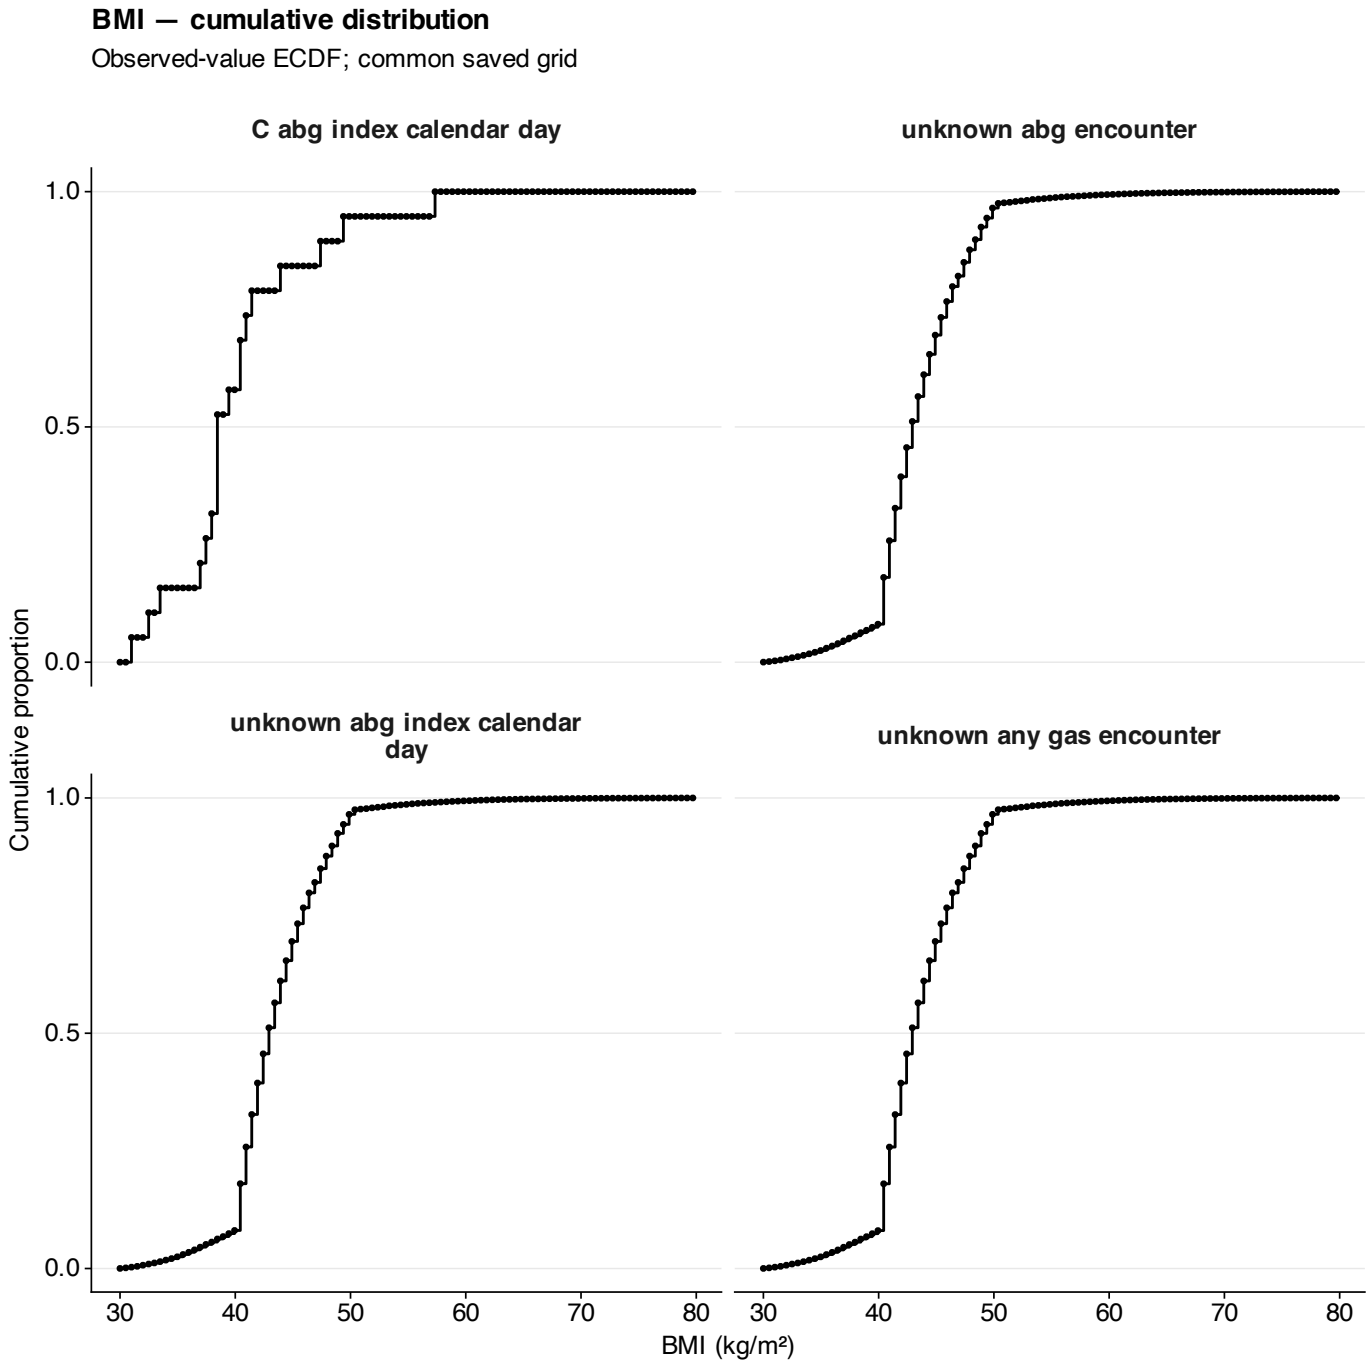

Figure 578: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. bmi ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

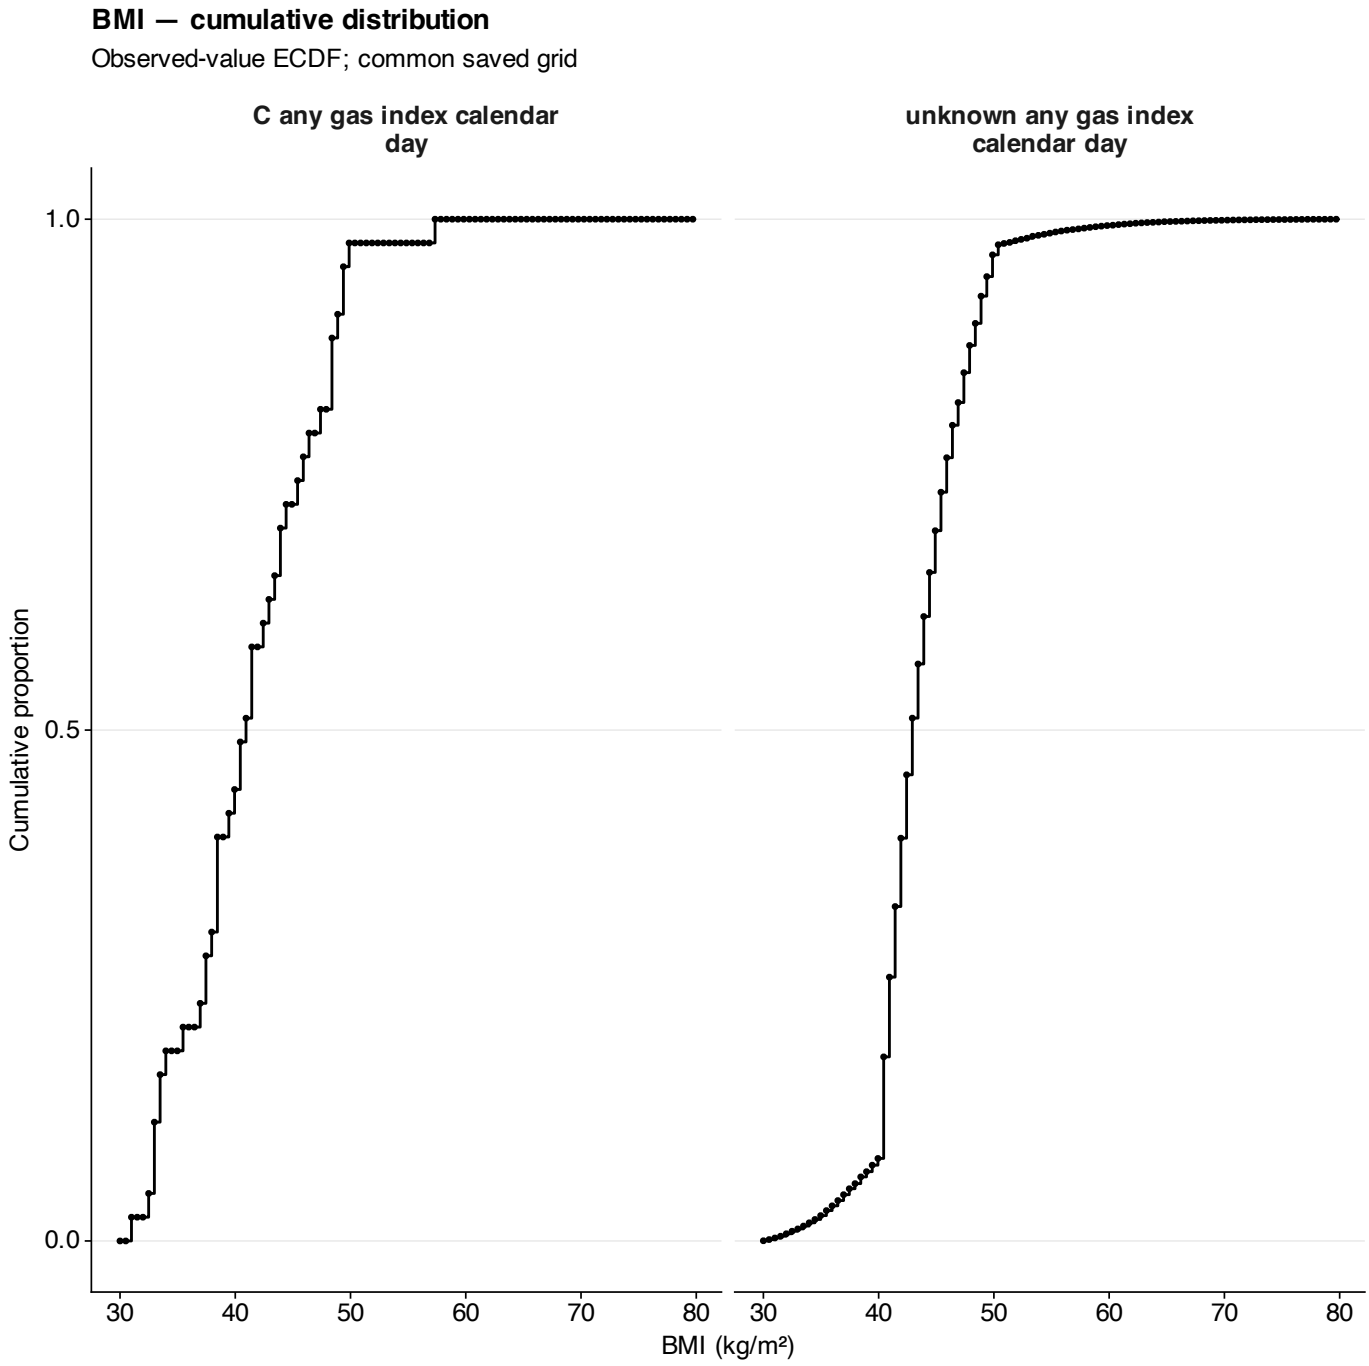

Figure 579: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. bmi ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

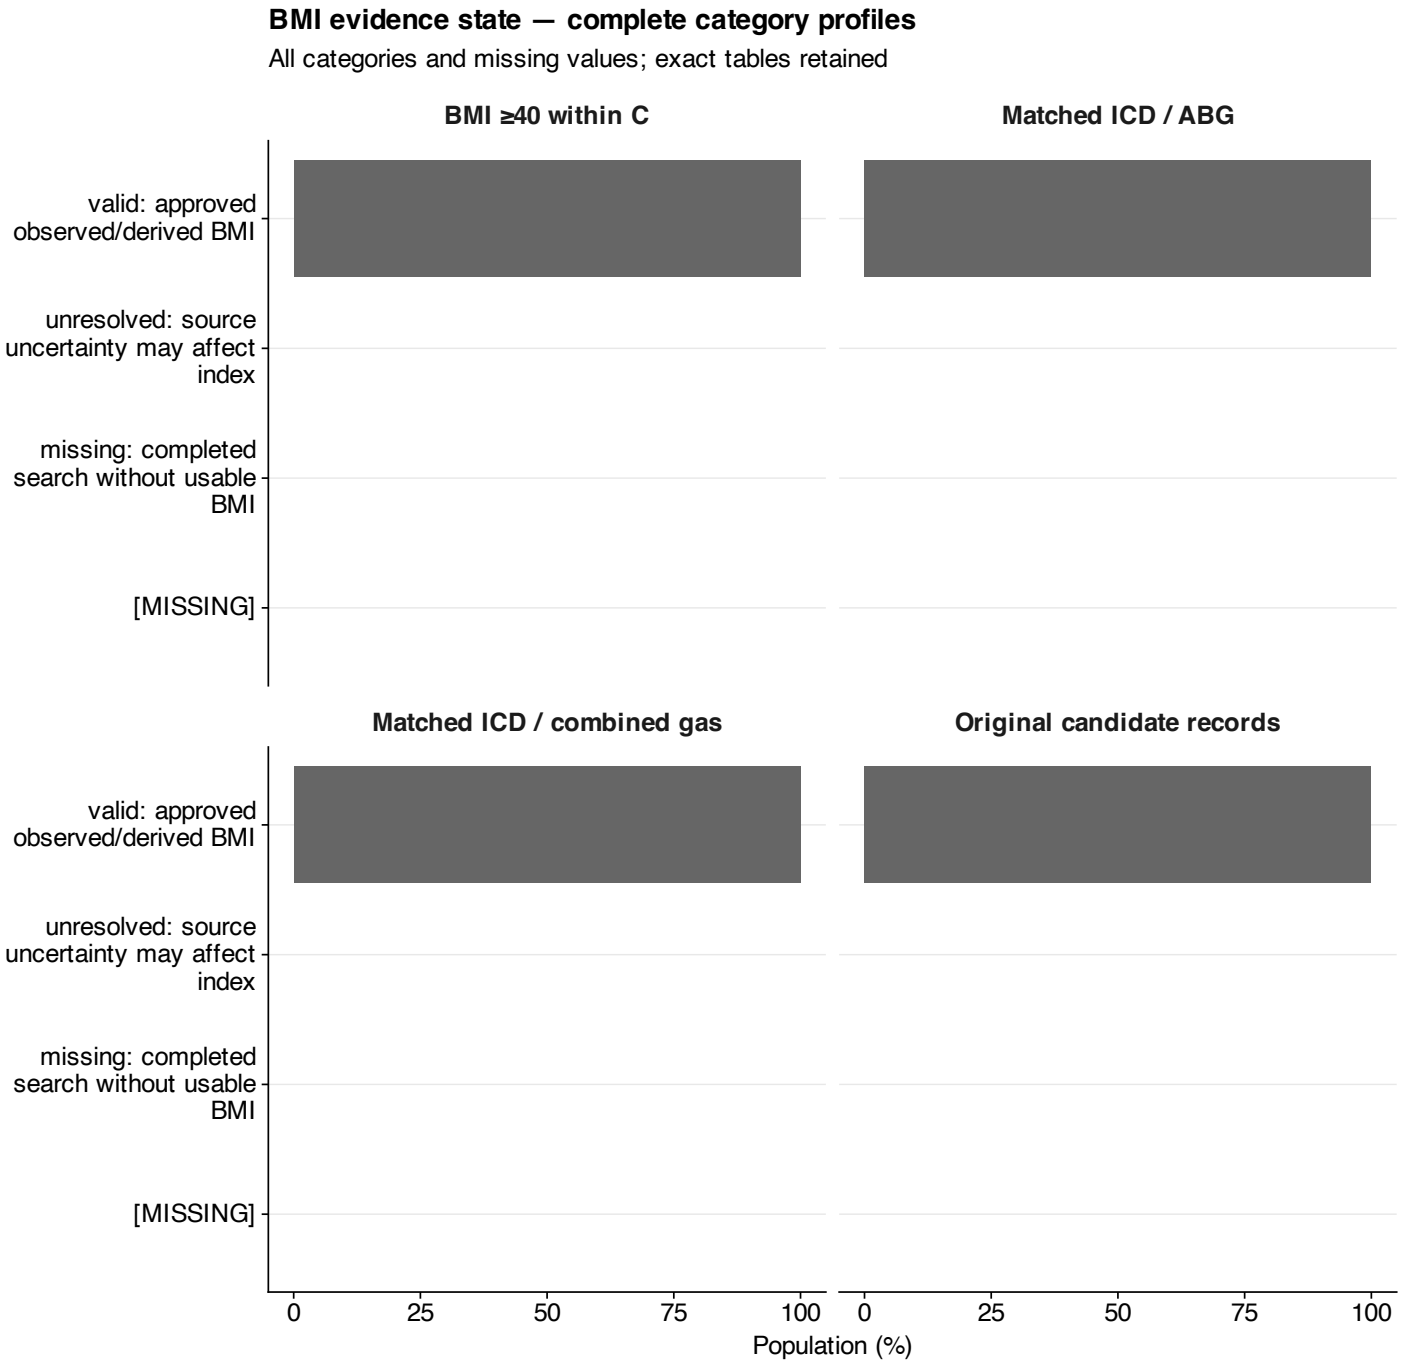

Figure 580: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete bmi_evidence_state stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

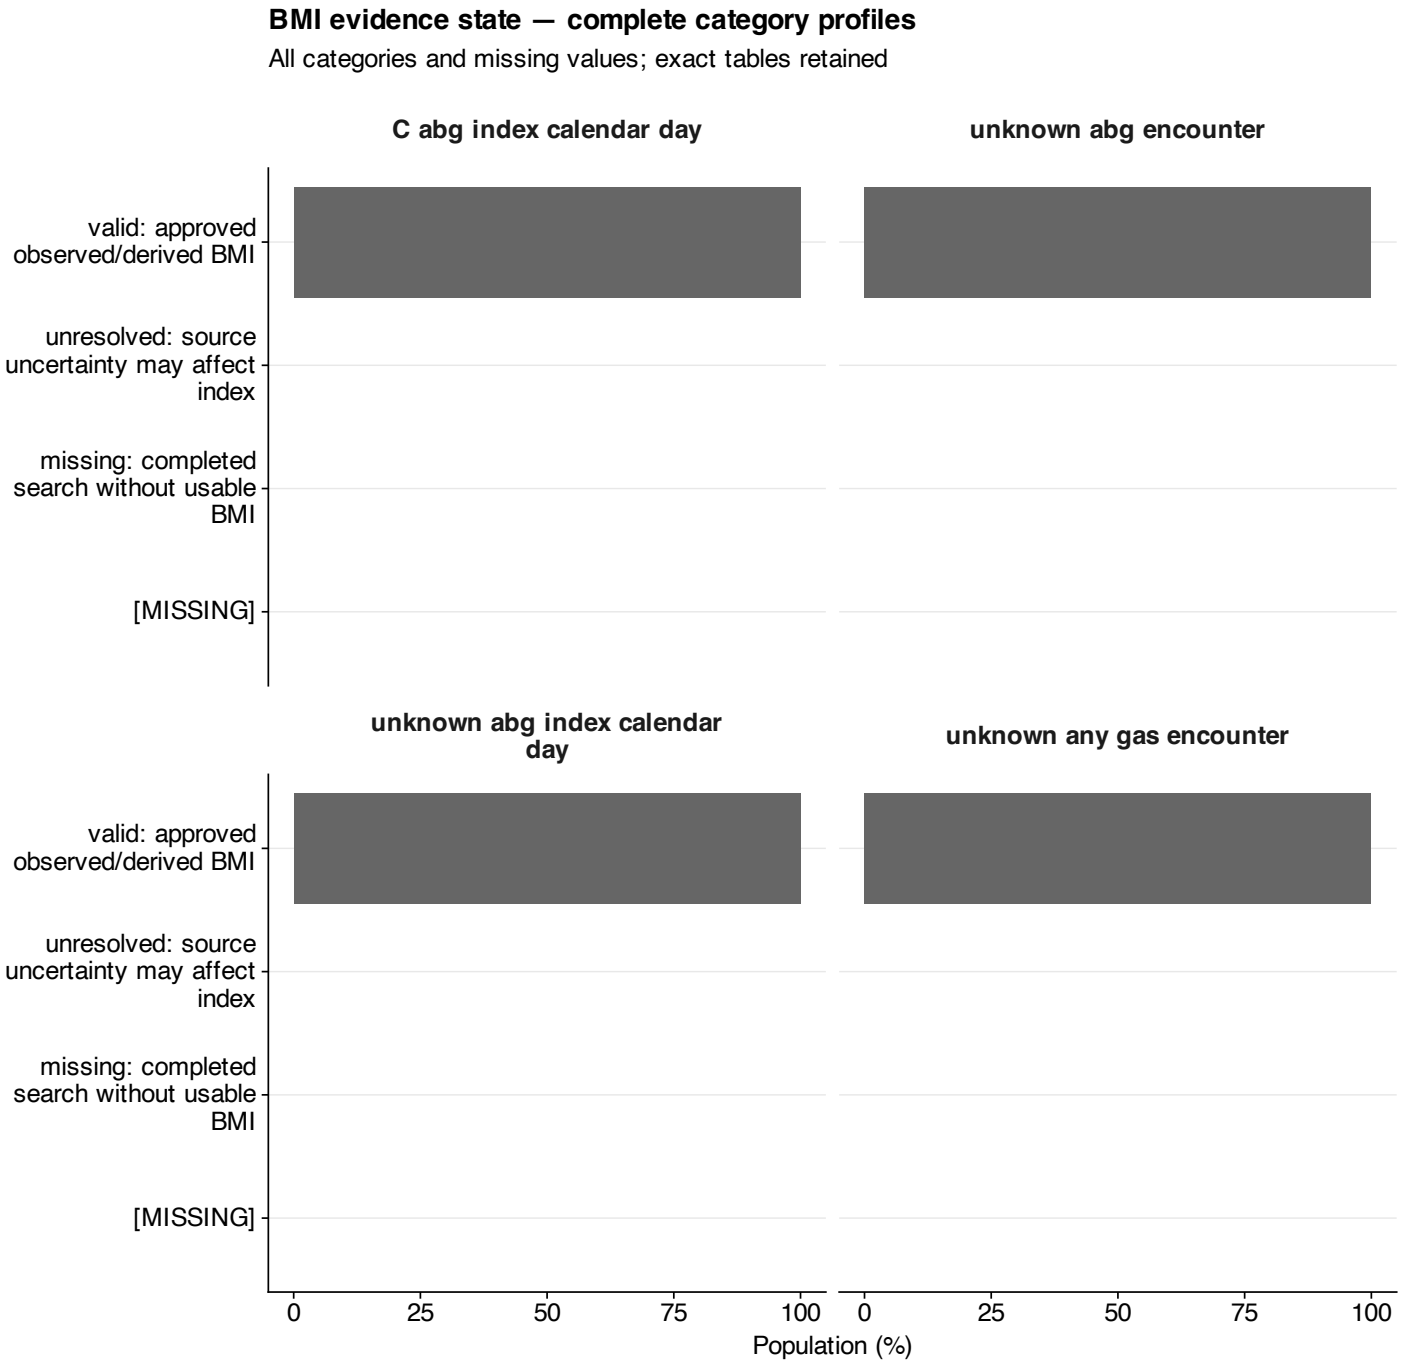

Figure 581: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete bmi_evidence_state stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

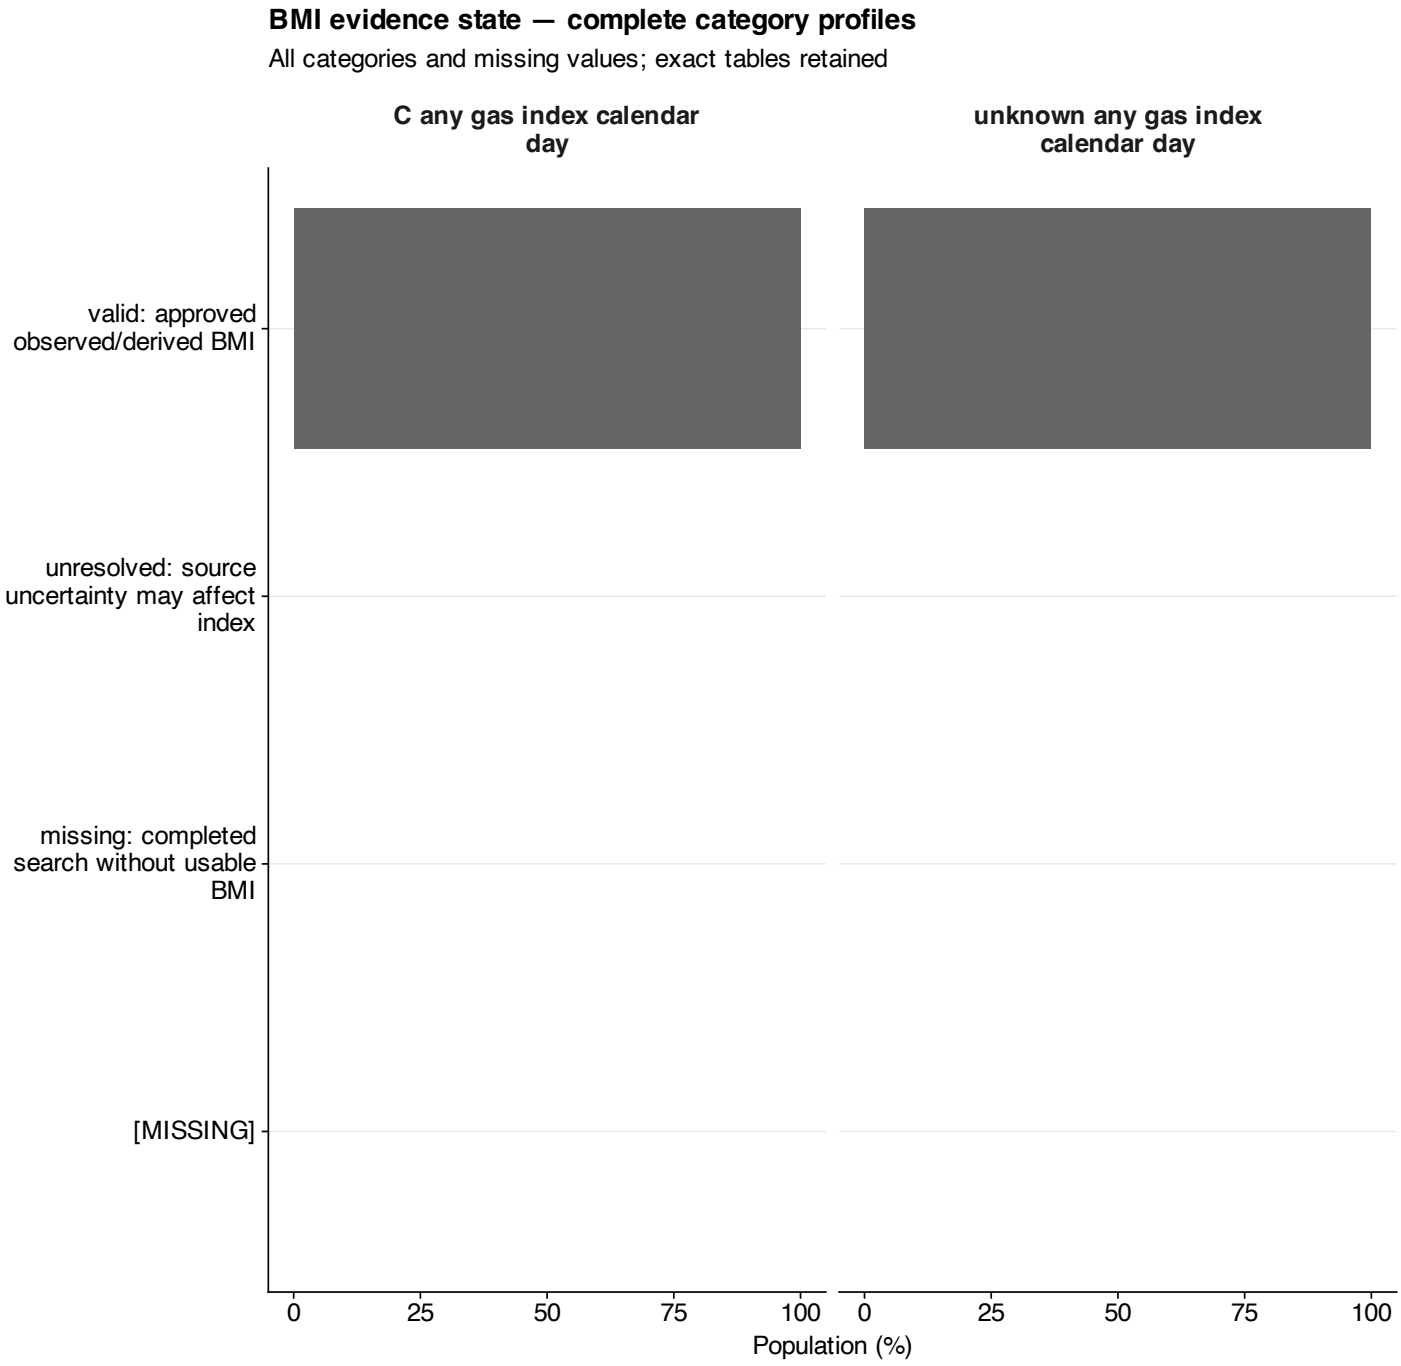

Figure 582: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete bmi_evidence_state stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

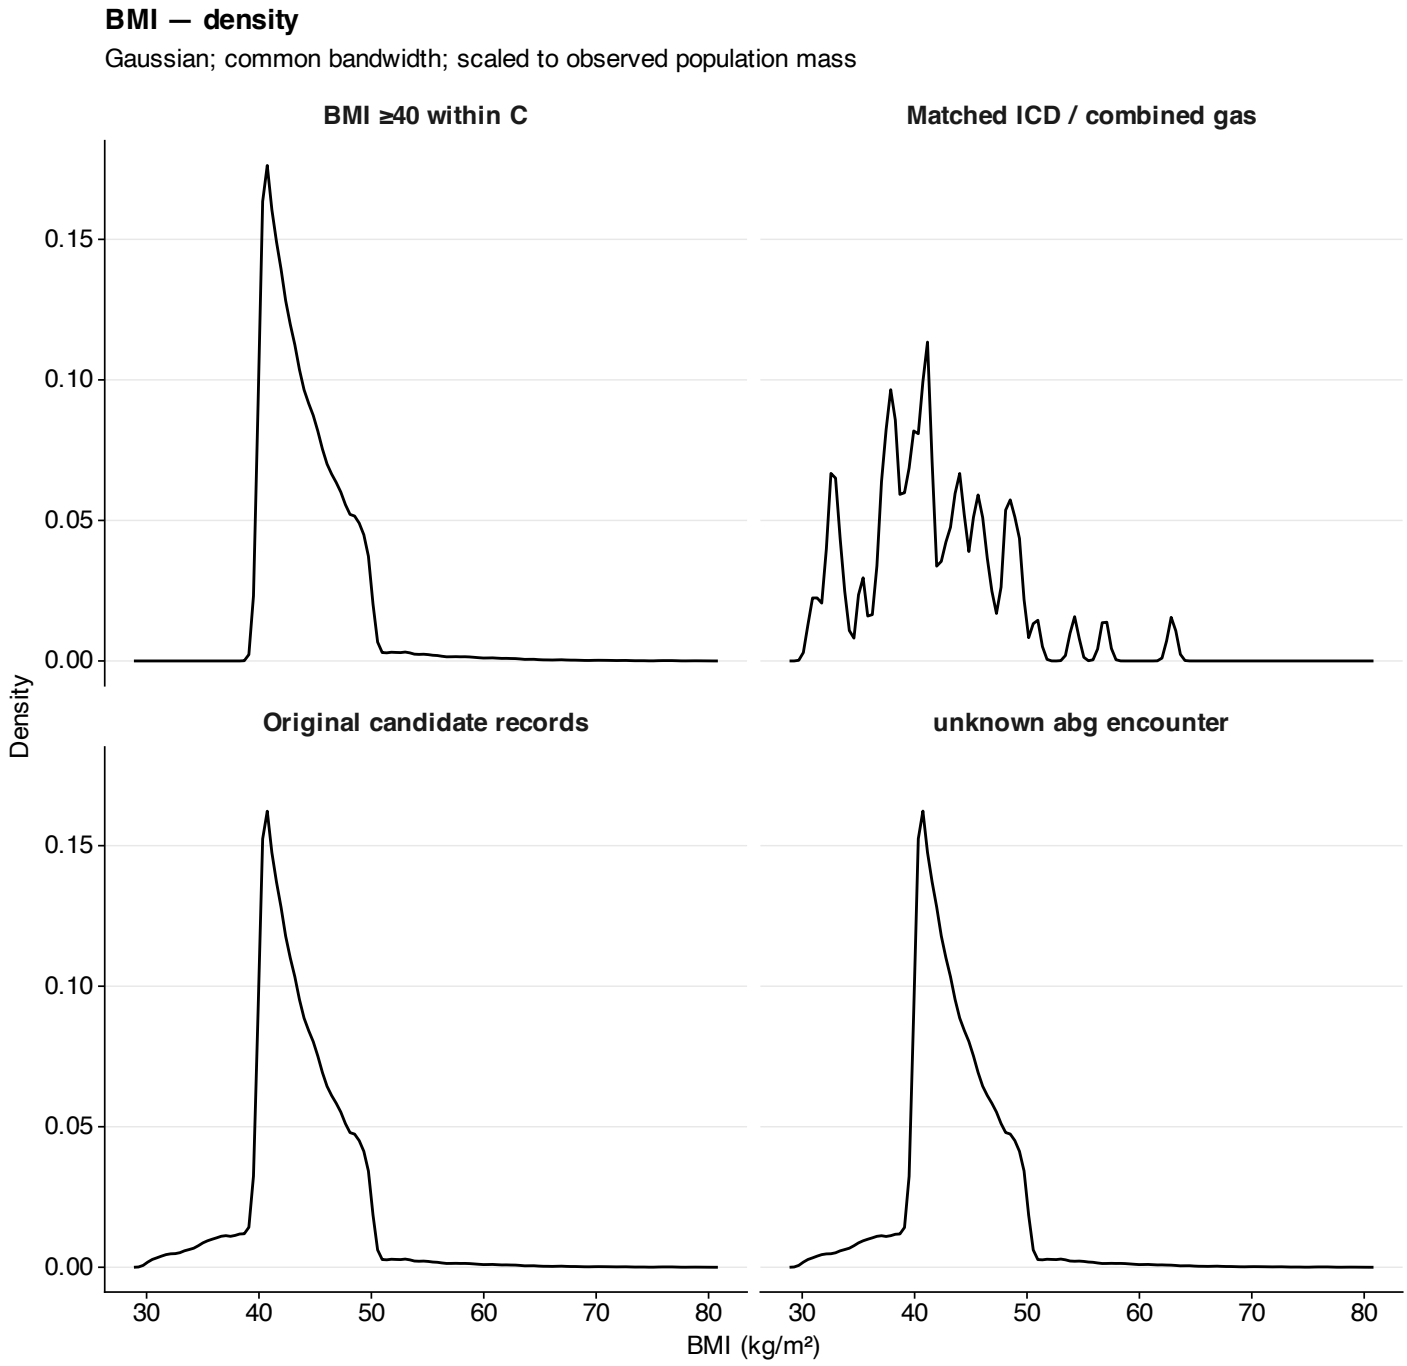

Figure 583: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. bmi kde across named stages; full coordinate export and normalization metadata in distribution_curves.

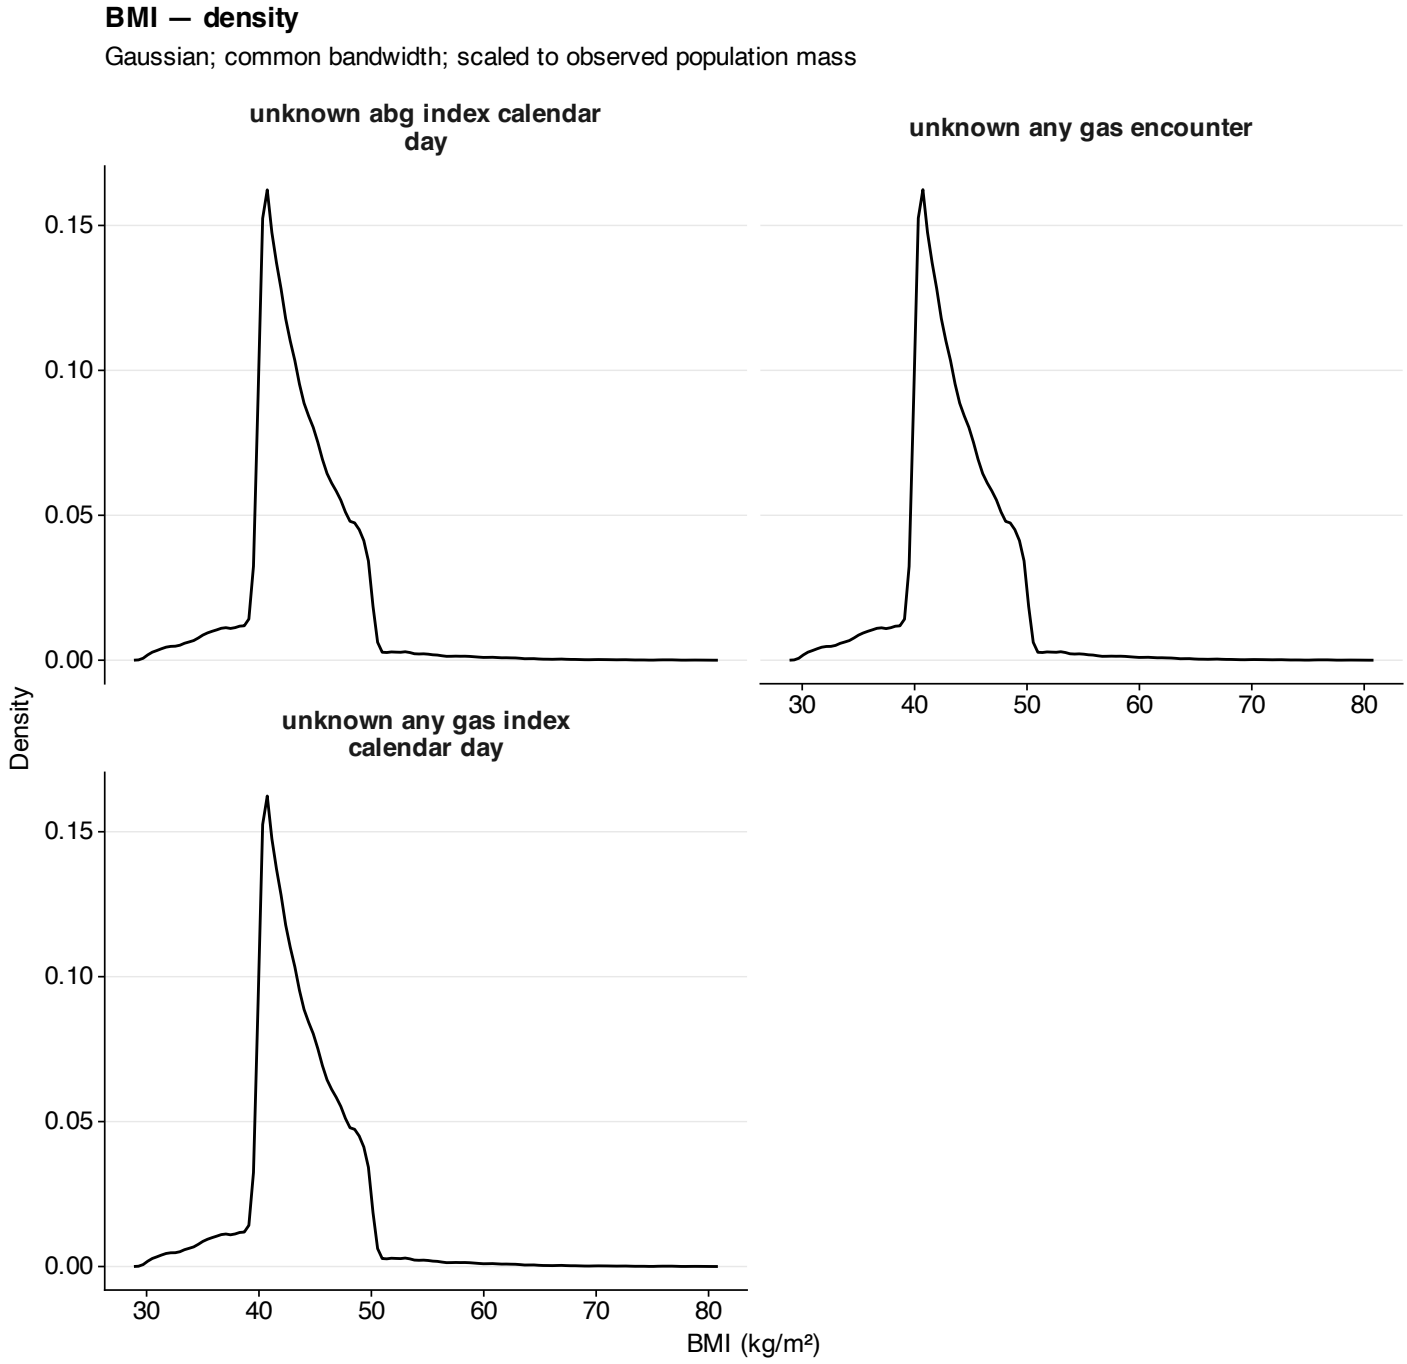

Figure 584: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. bmi kde across named stages; full coordinate export and normalization metadata in distribution_curves.

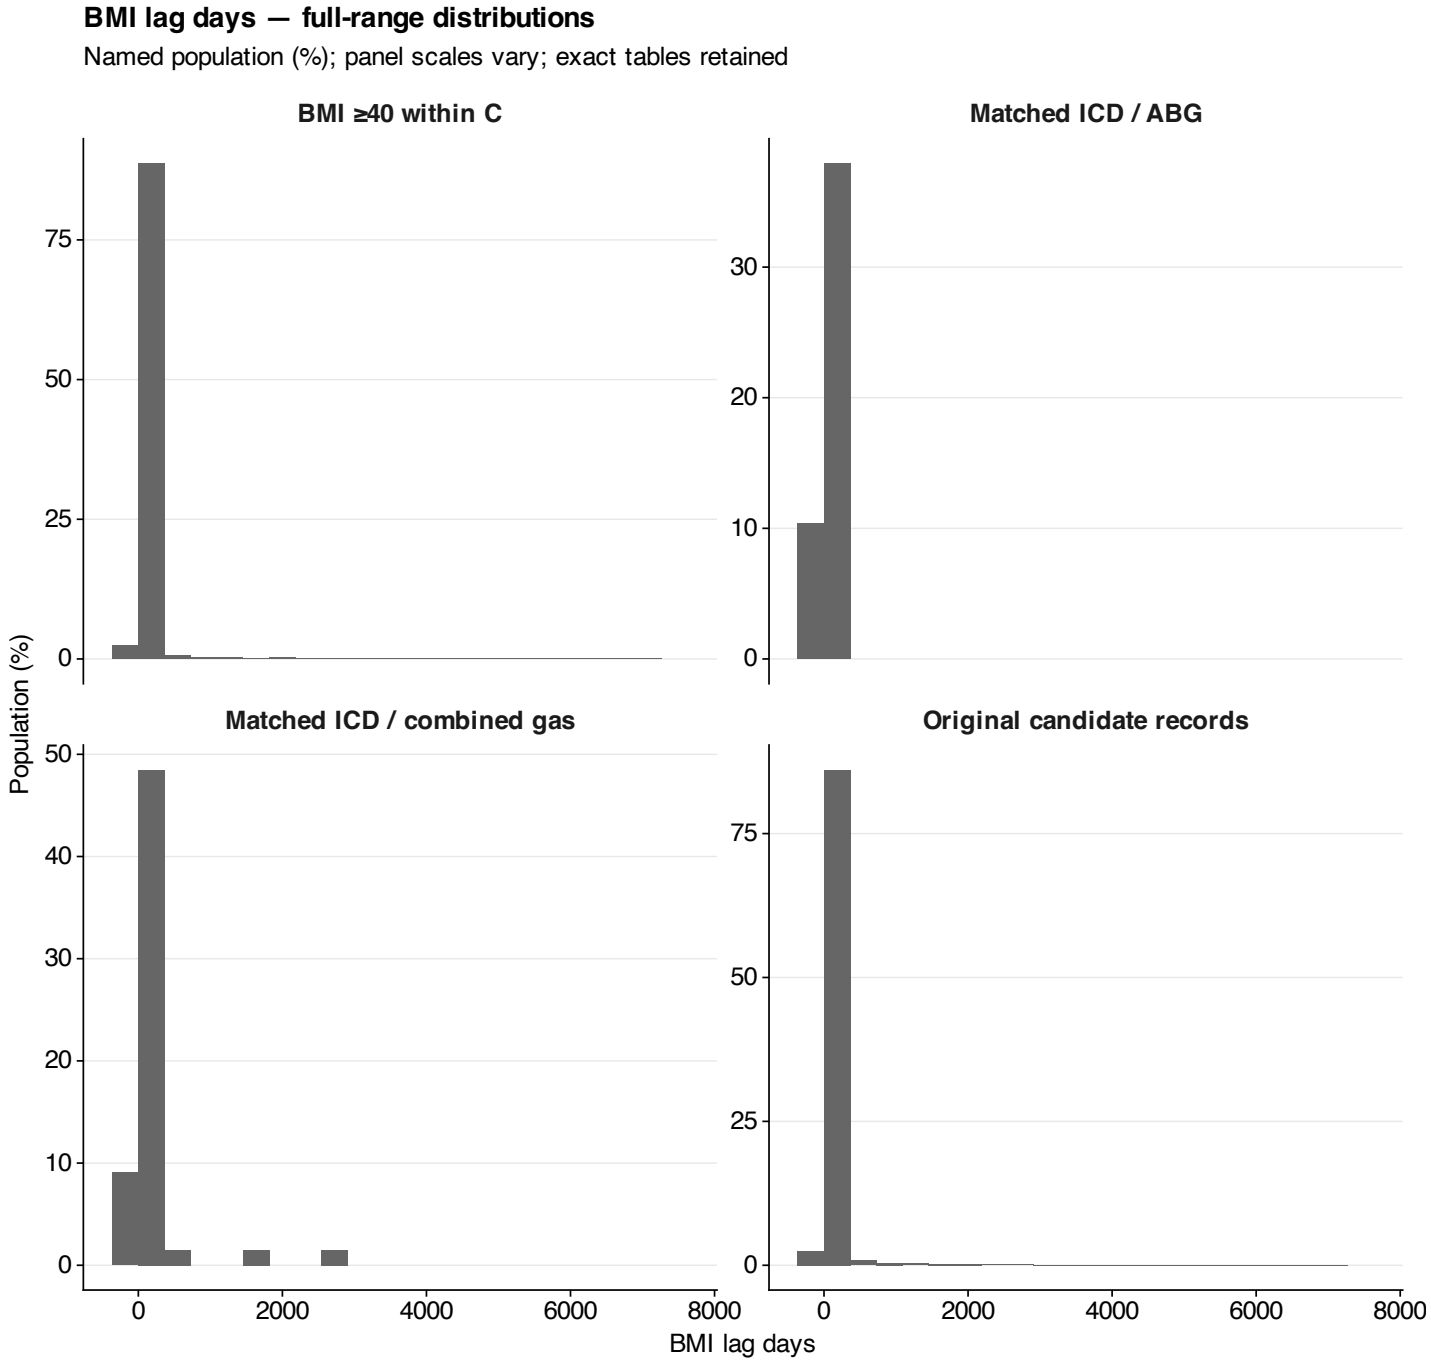

Figure 585: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete bmi_lag_days stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

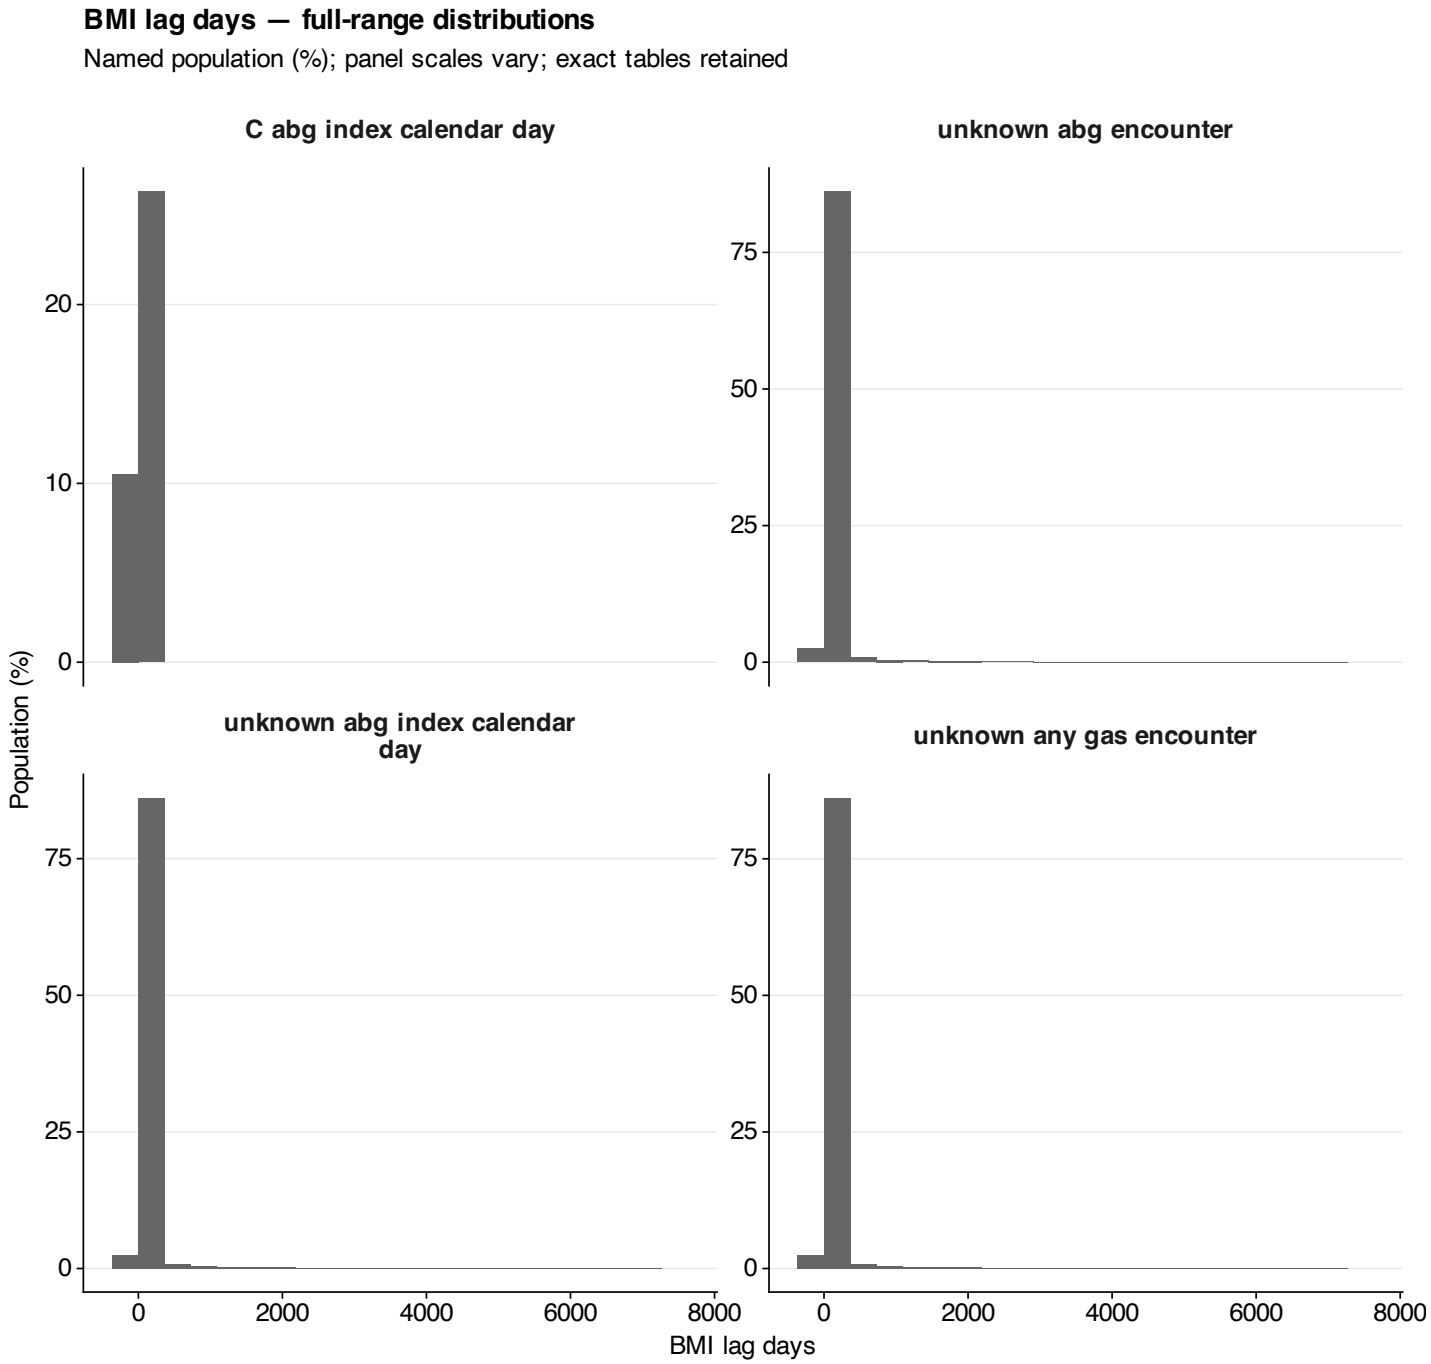

Figure 586: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete bmi_lag_days stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

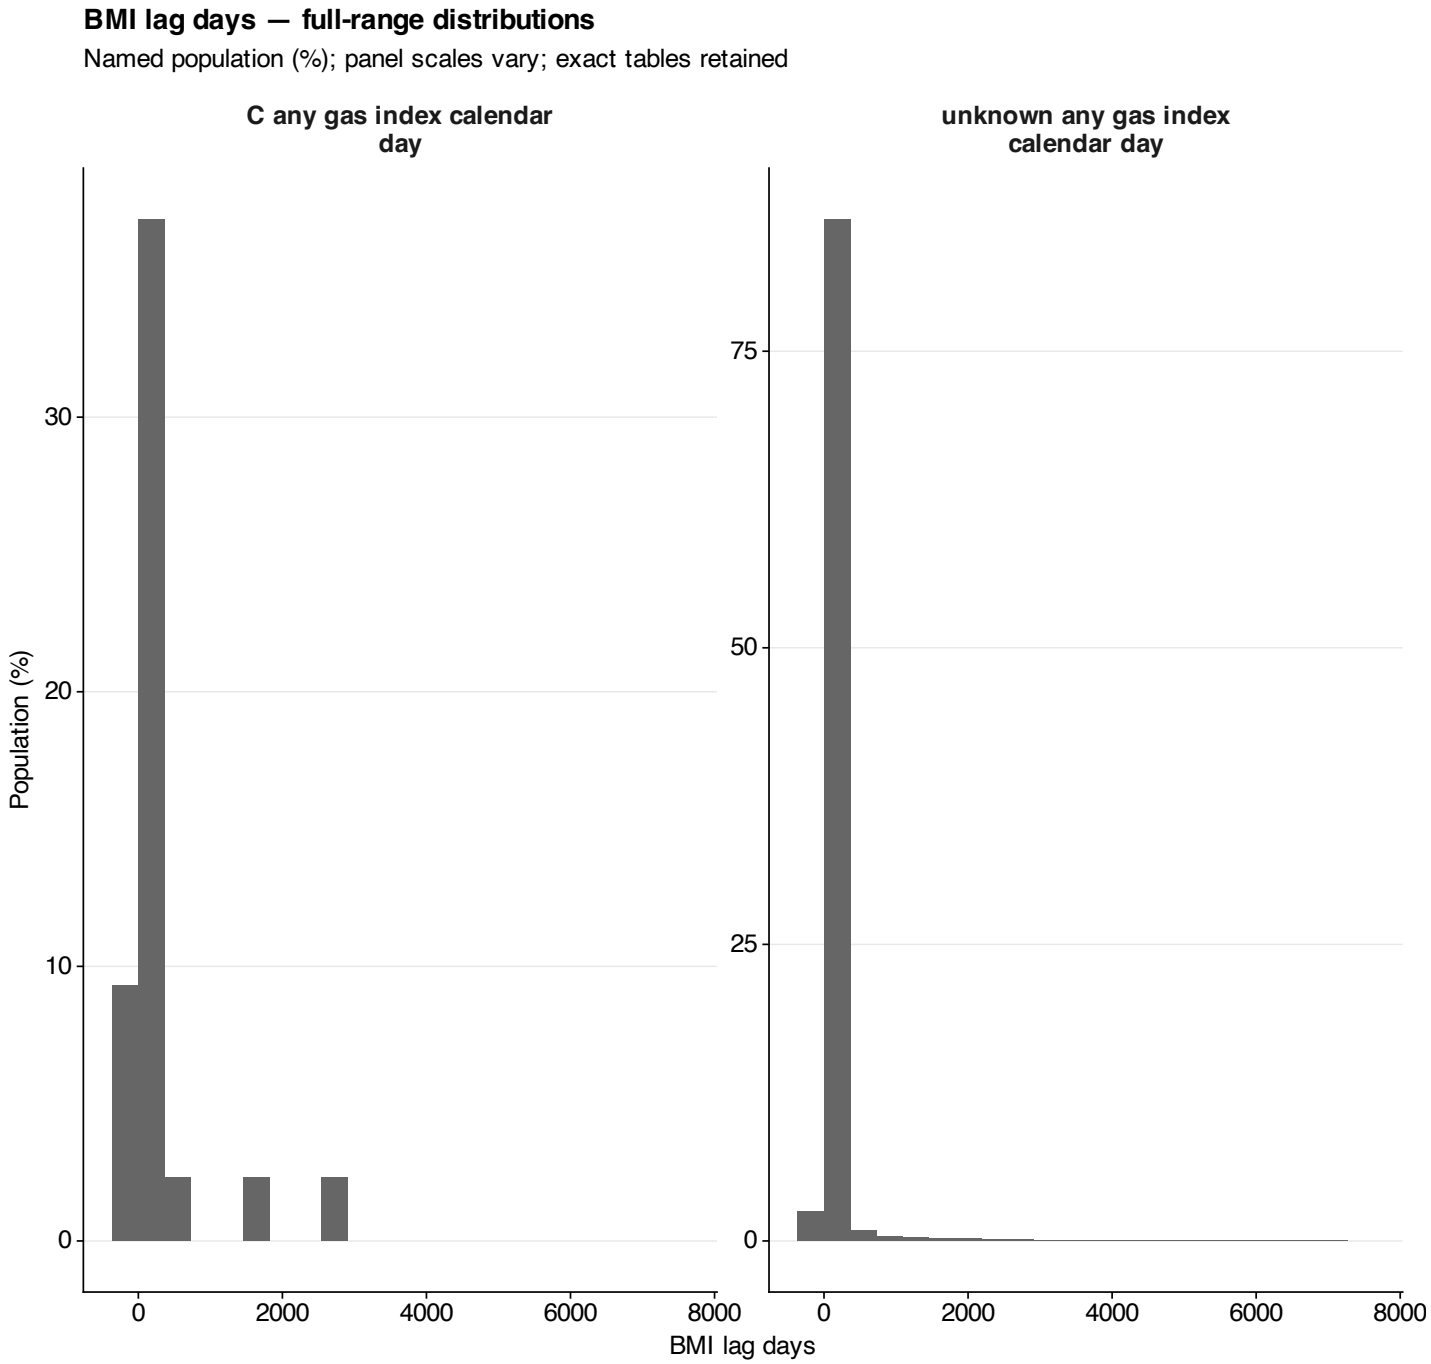

Figure 587: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete bmi_lag_days stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

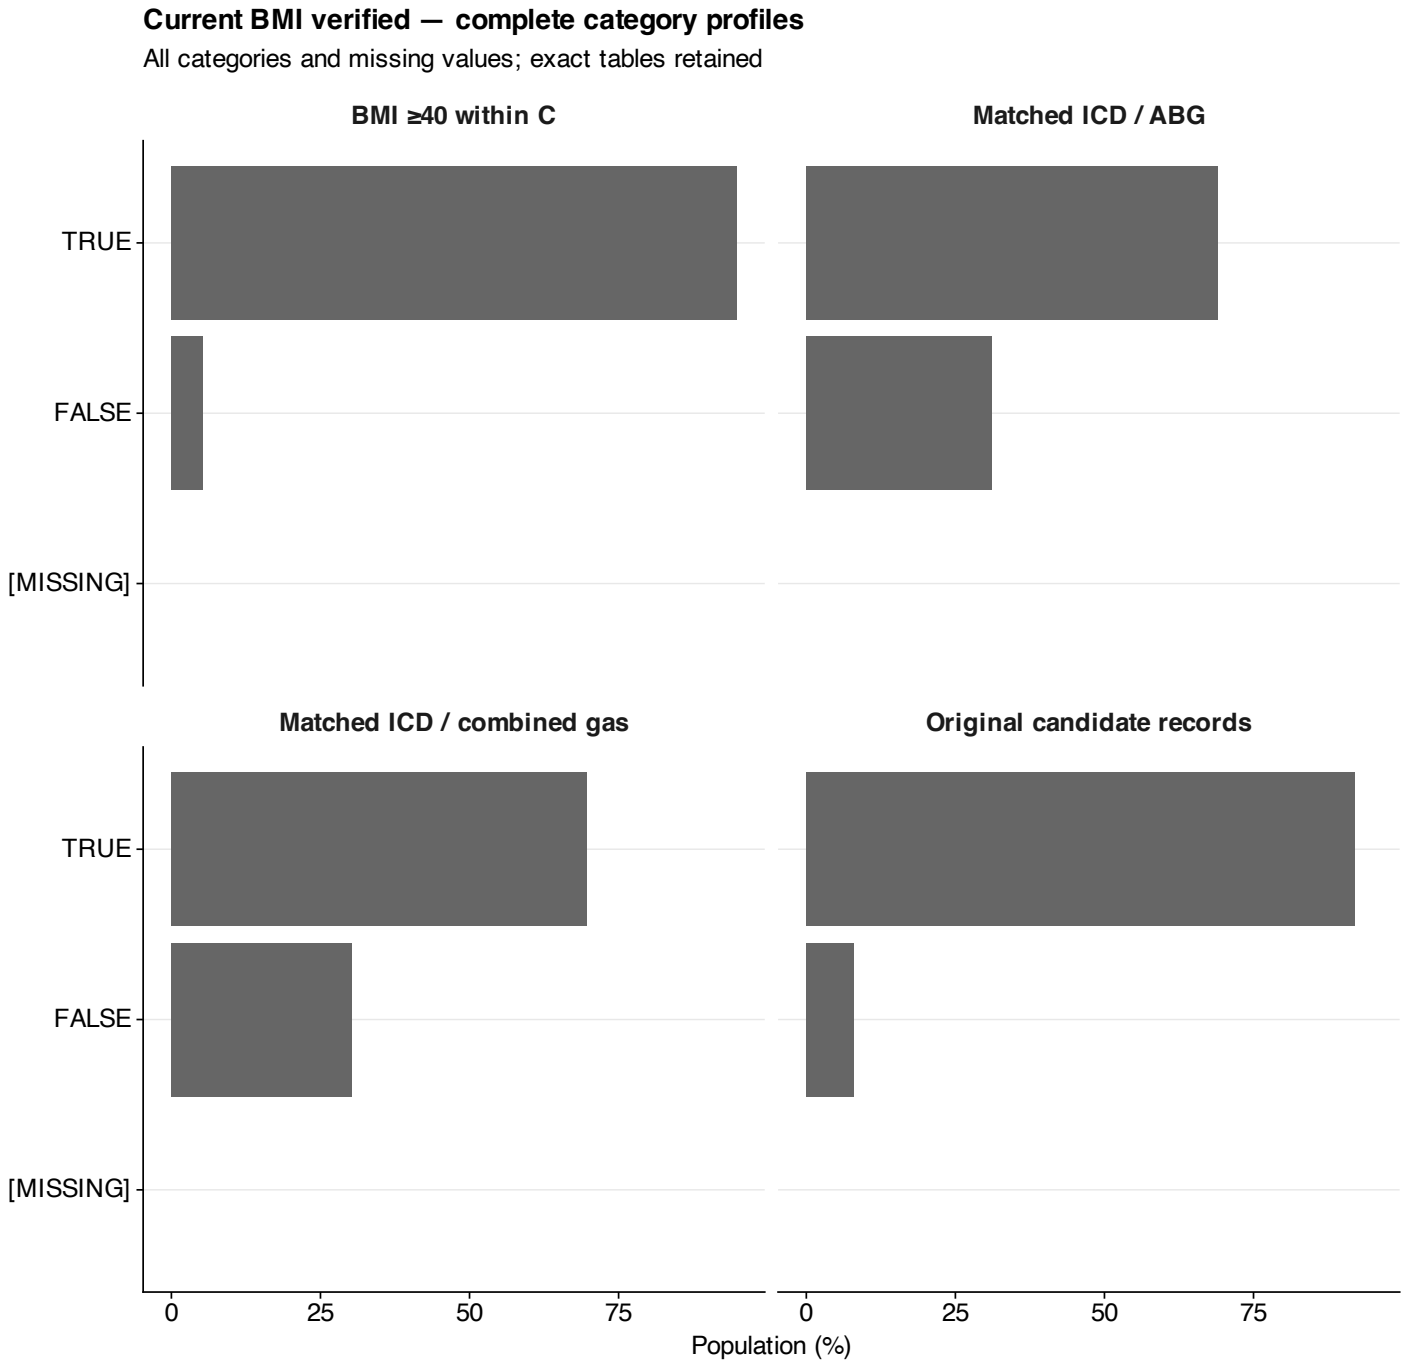

Figure 606: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete current_bmi_verified stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

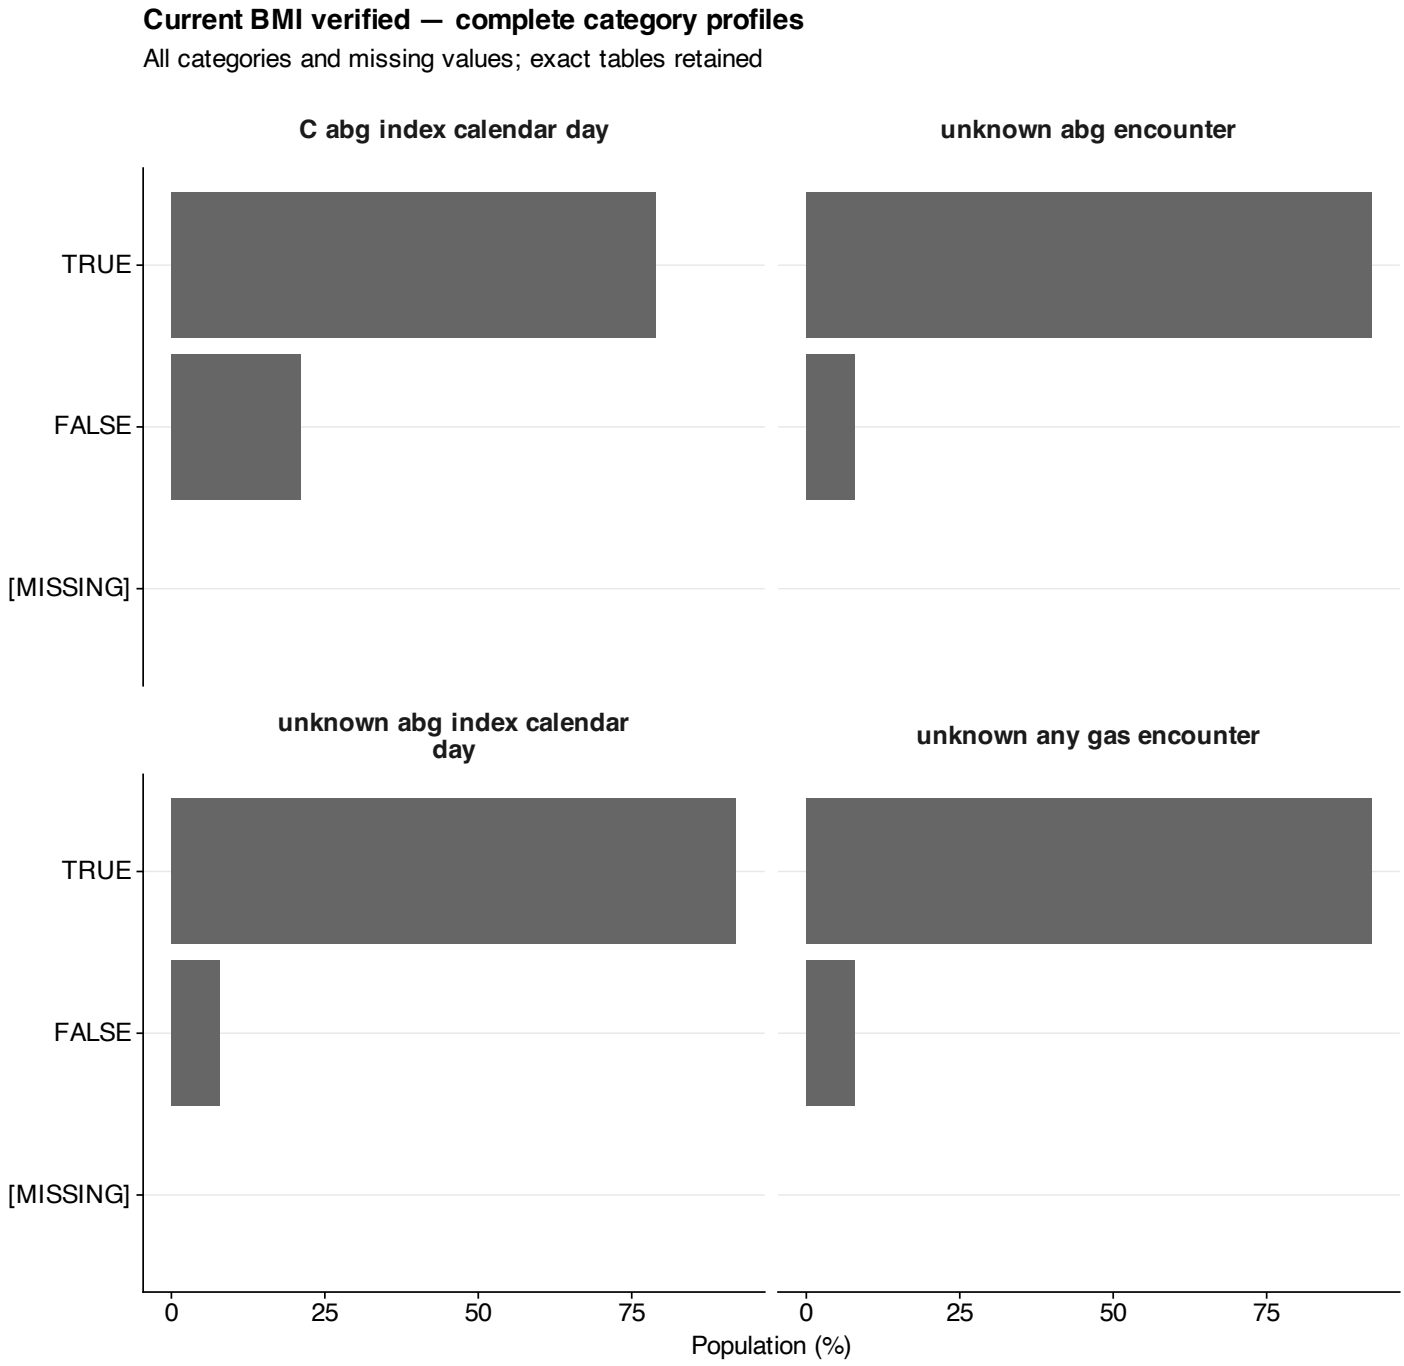

Figure 607: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete current_bmi_verified stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

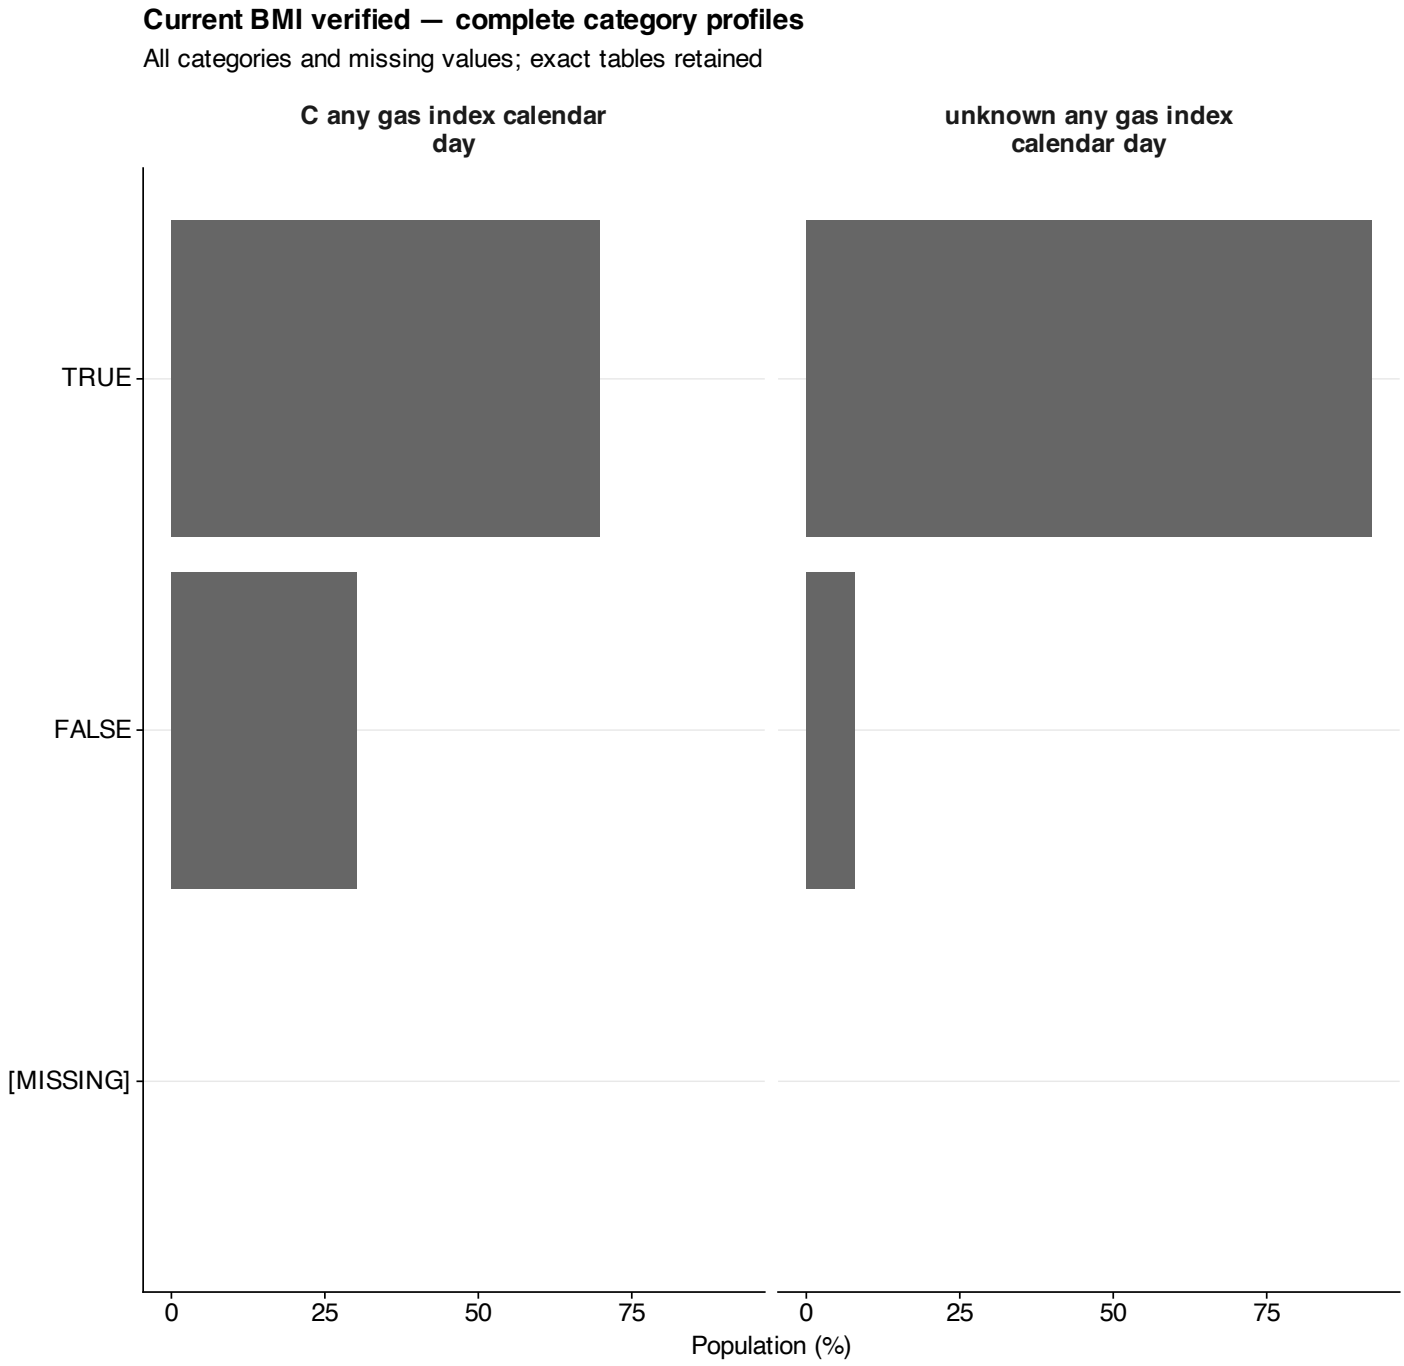

Figure 608: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete current_bmi_verified stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

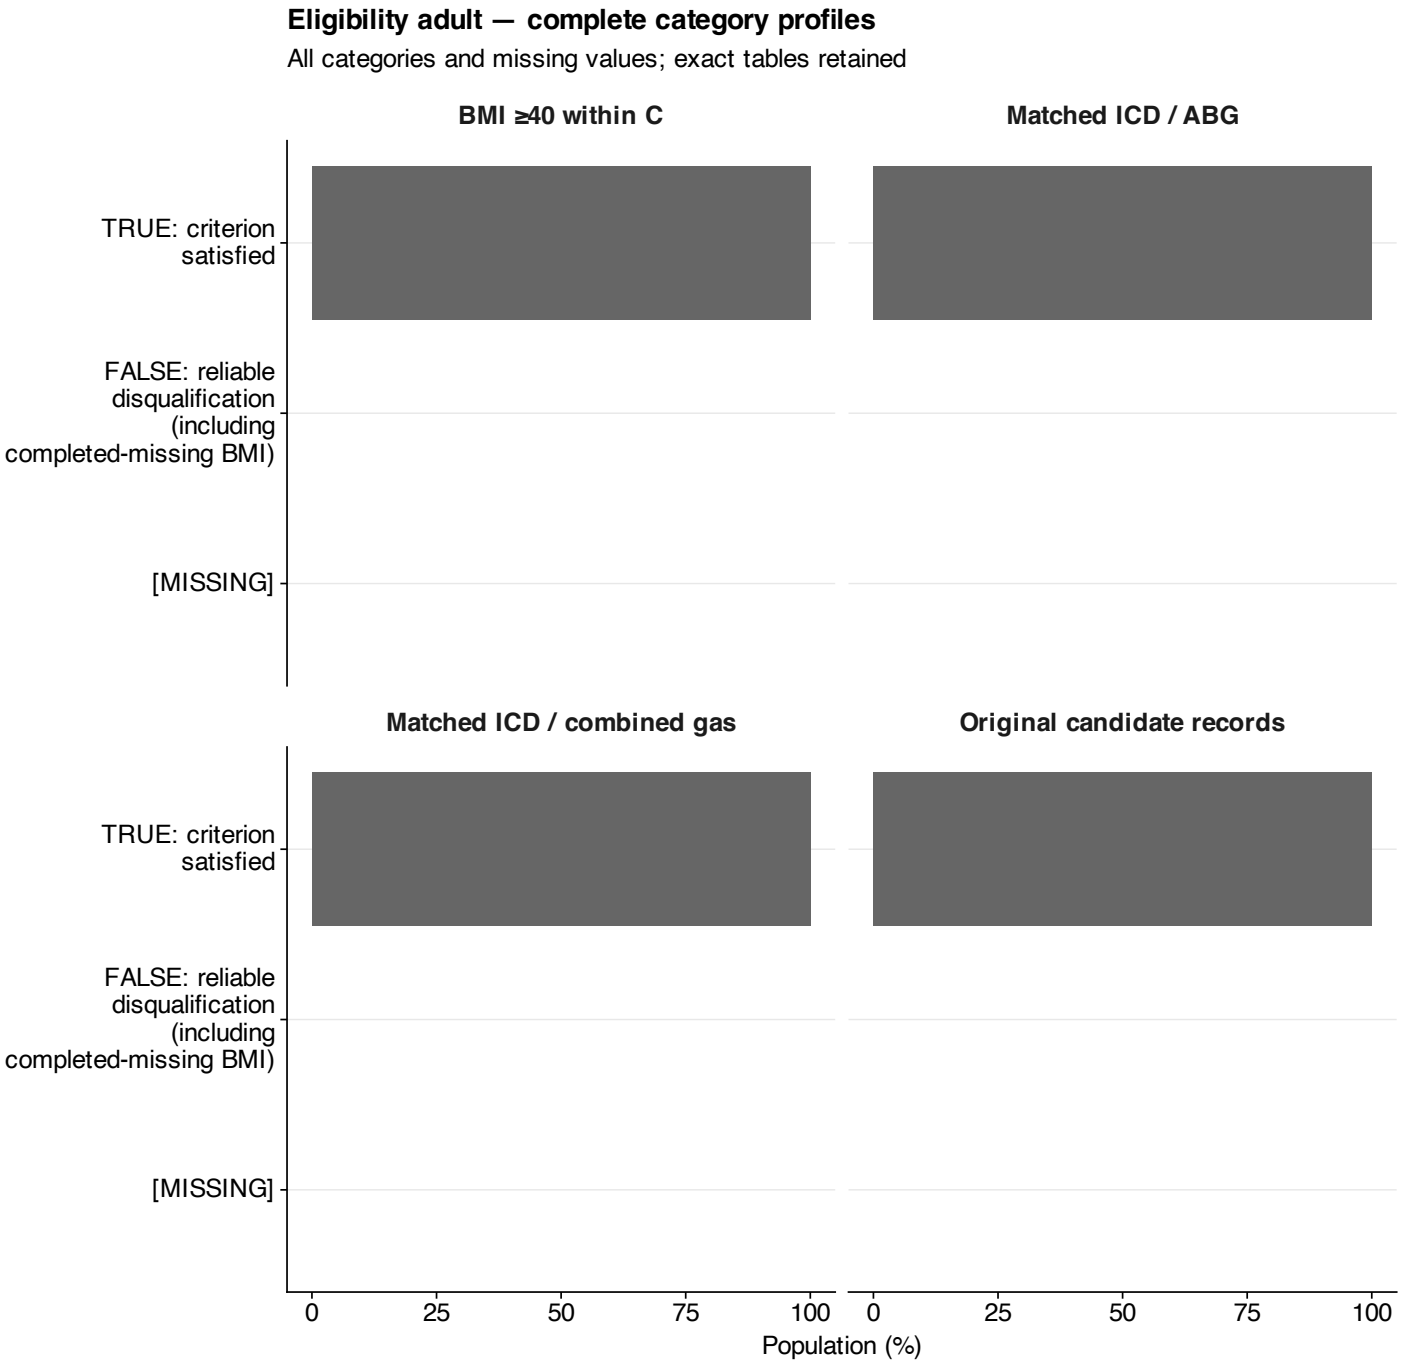

Figure 609: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete eligibility_adult stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

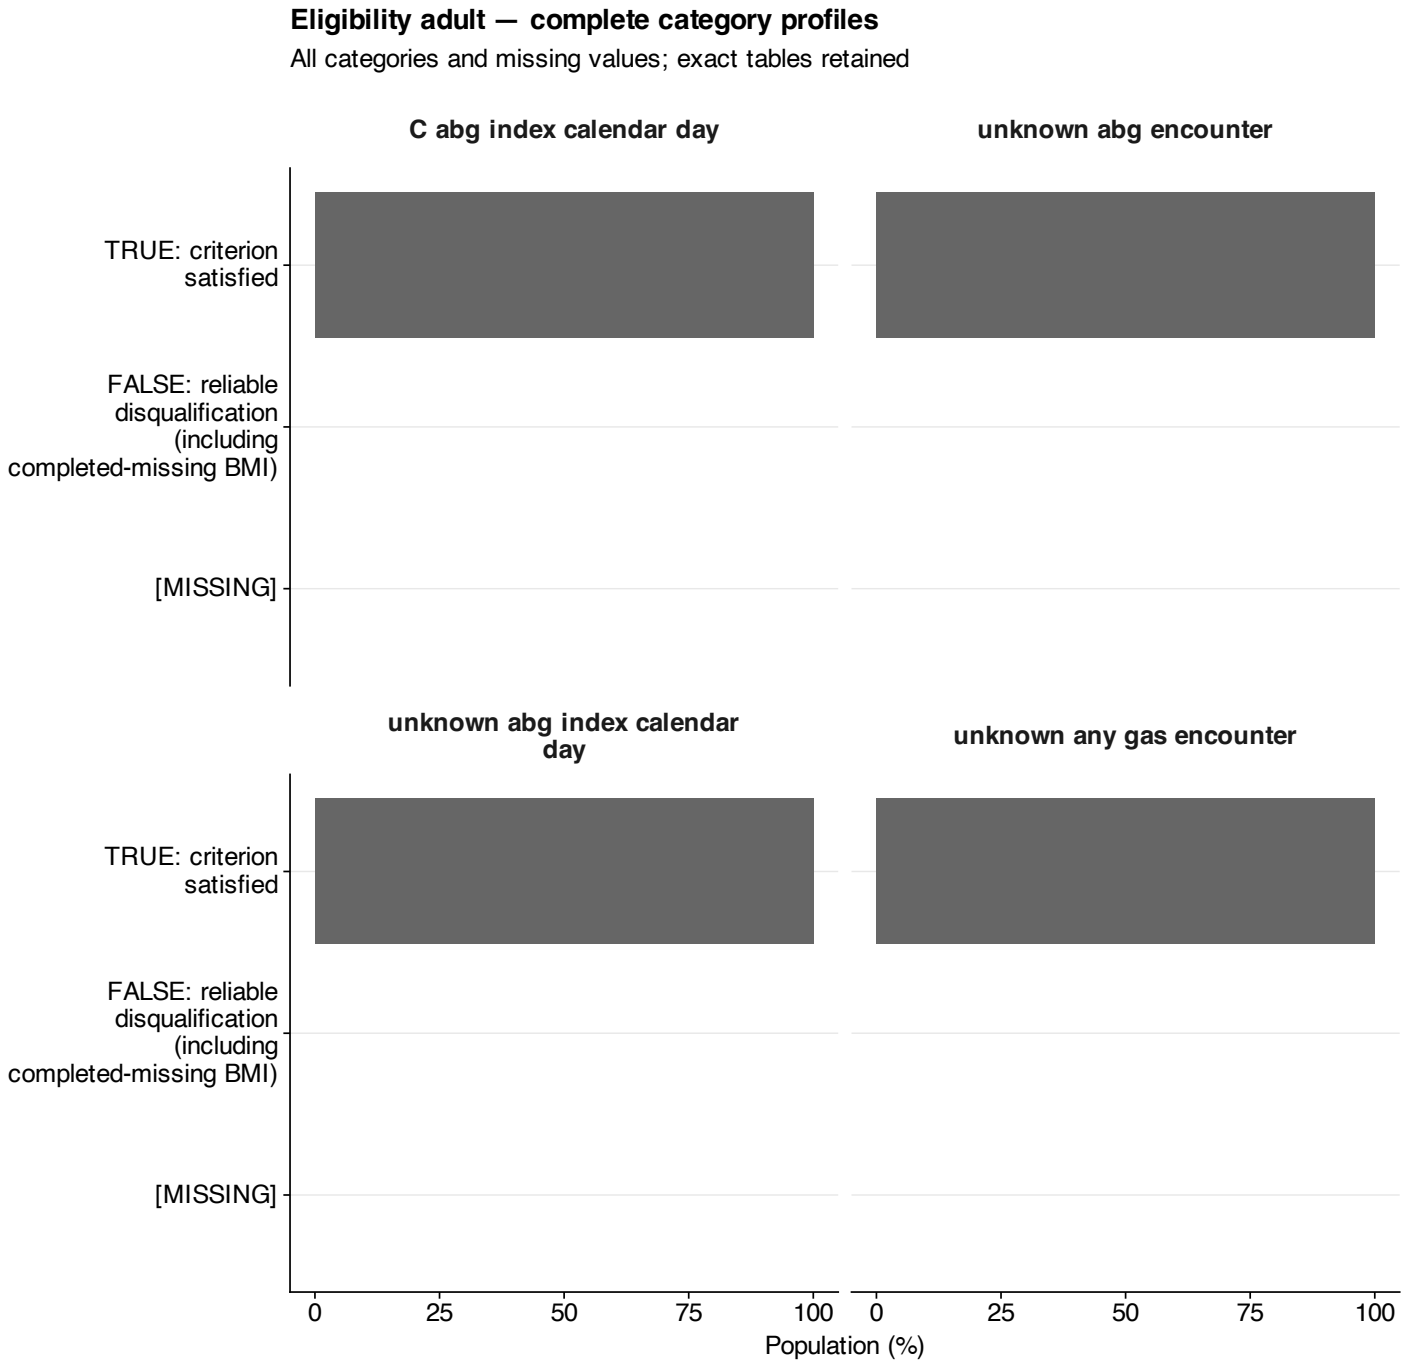

Figure 610: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete eligibility_adult stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

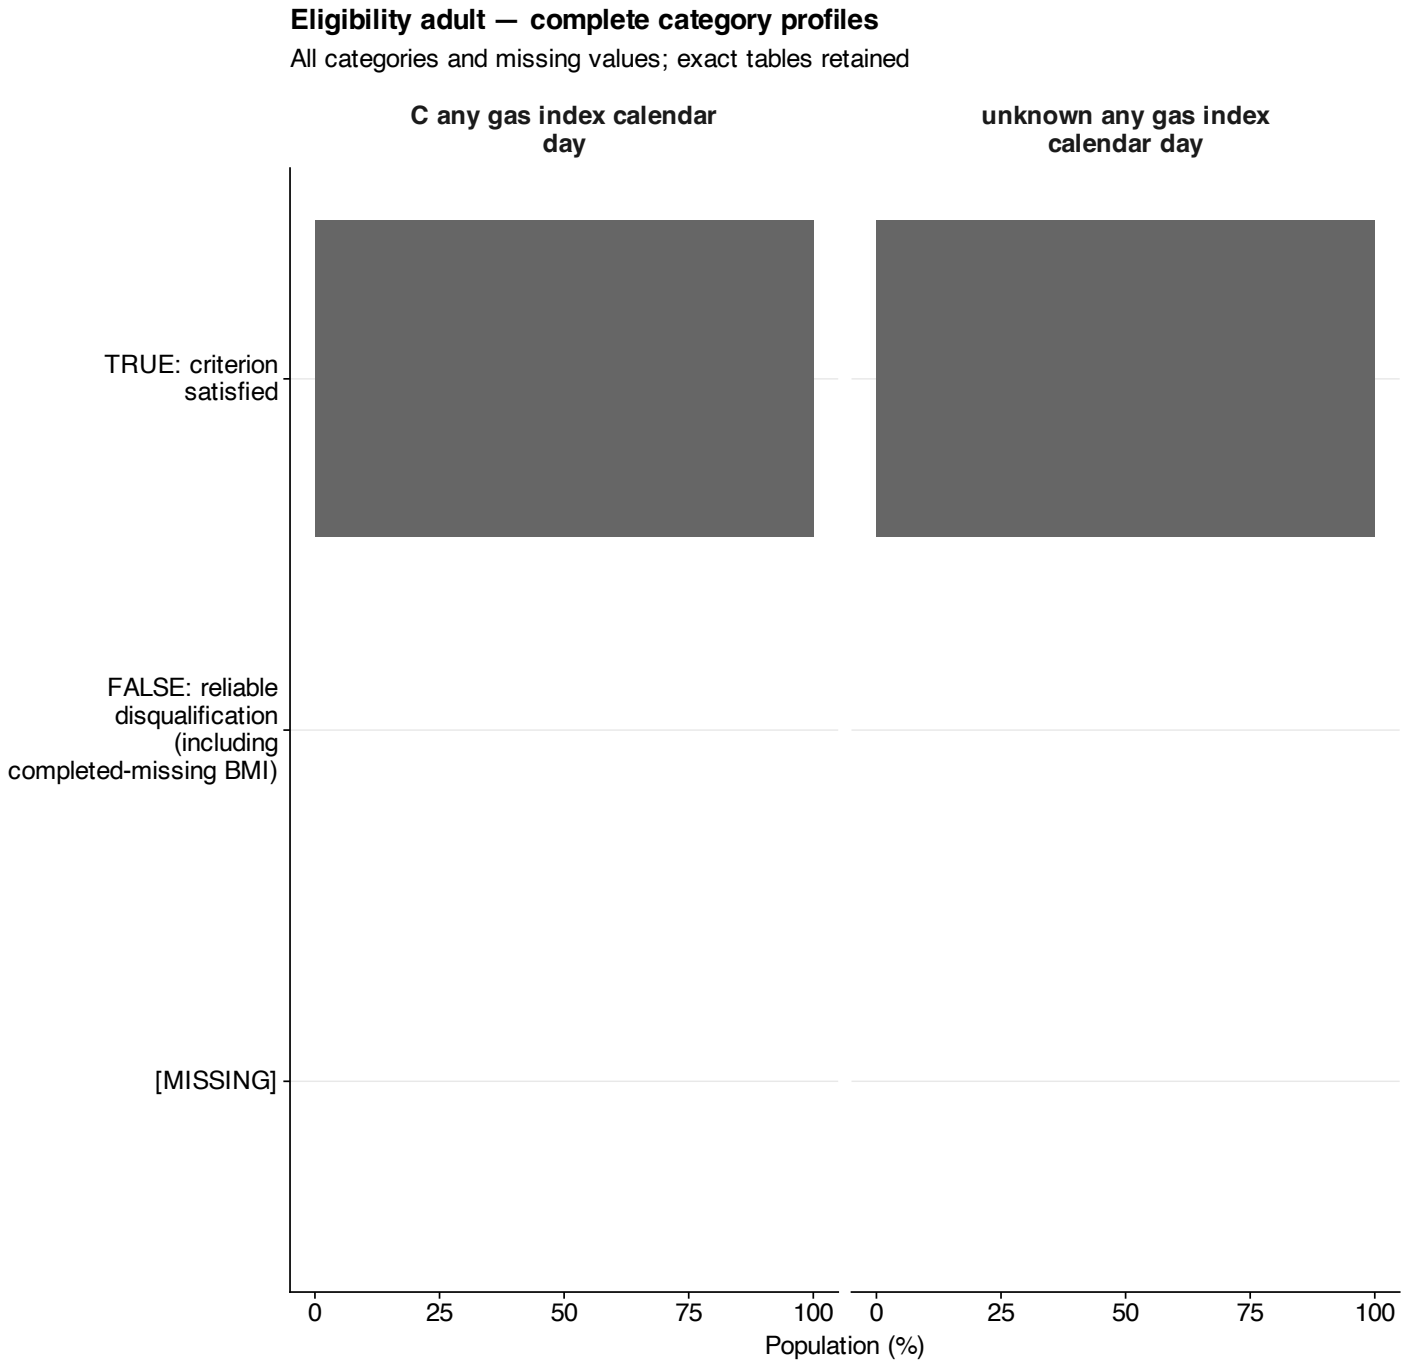

Figure 611: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete eligibility_adult stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

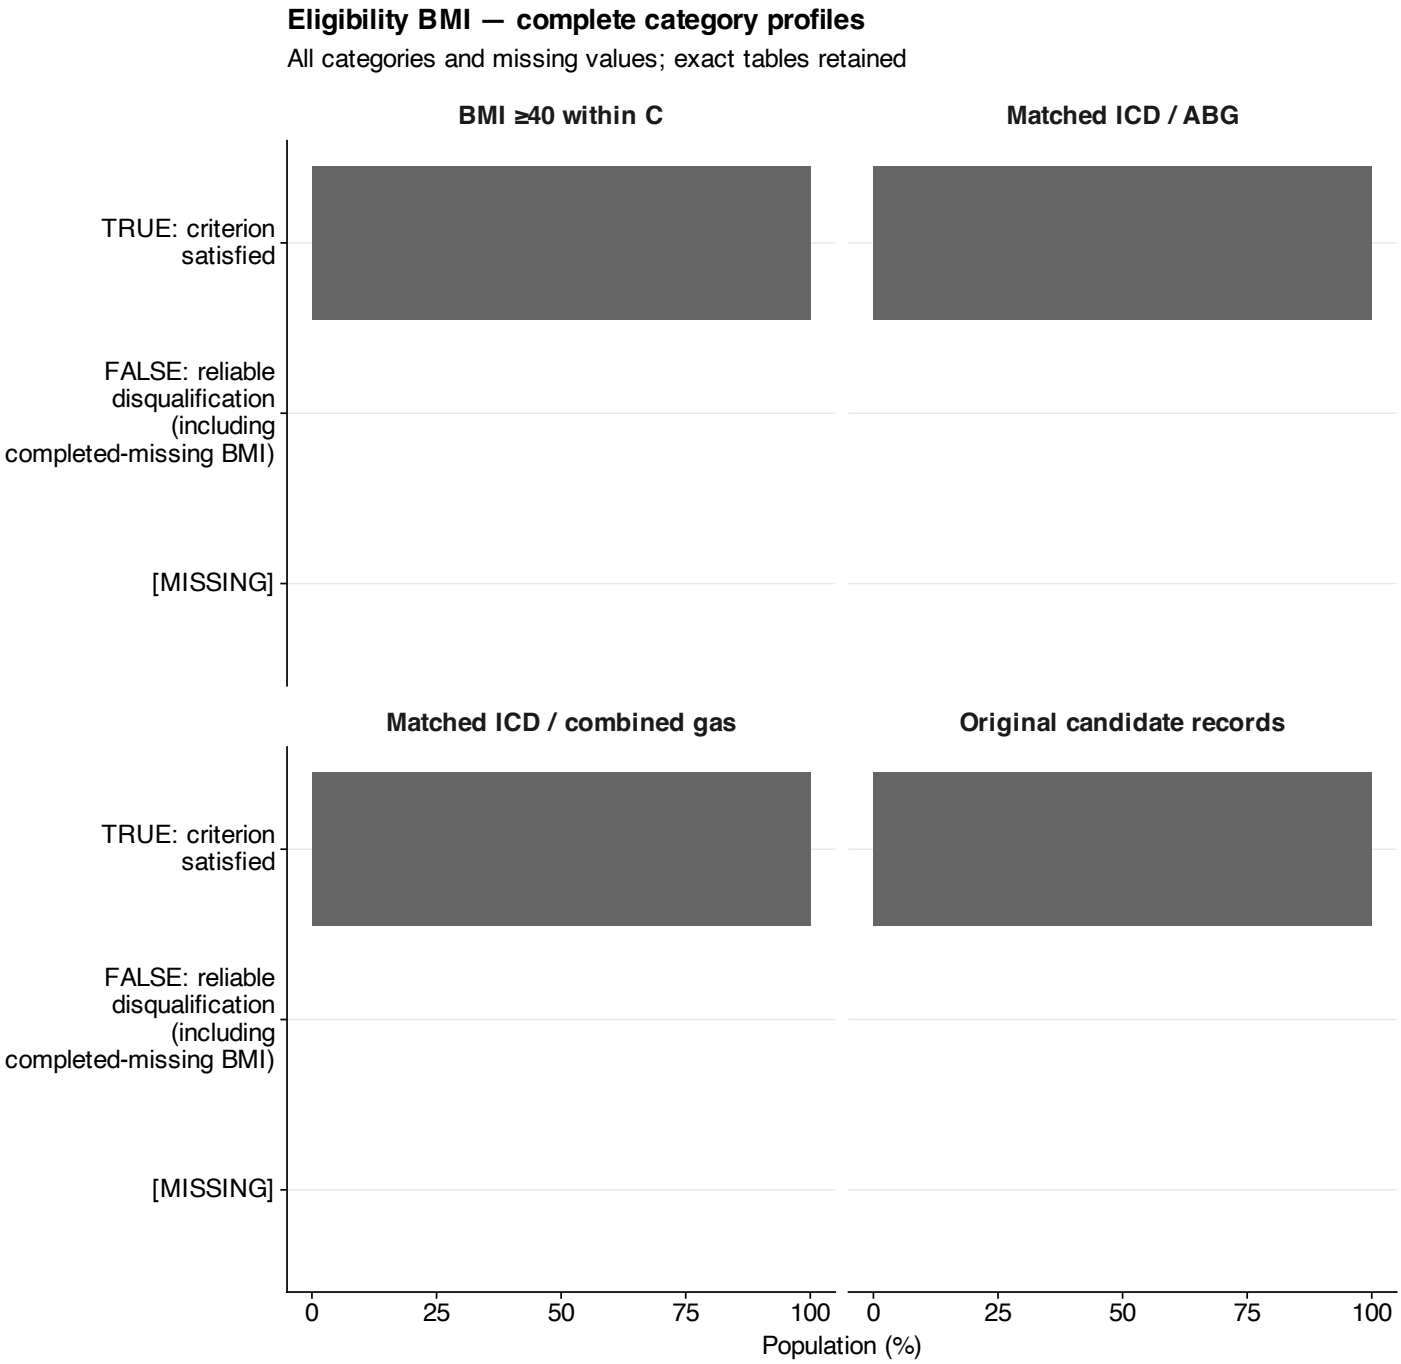

Figure 612: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete eligibility_bmi stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

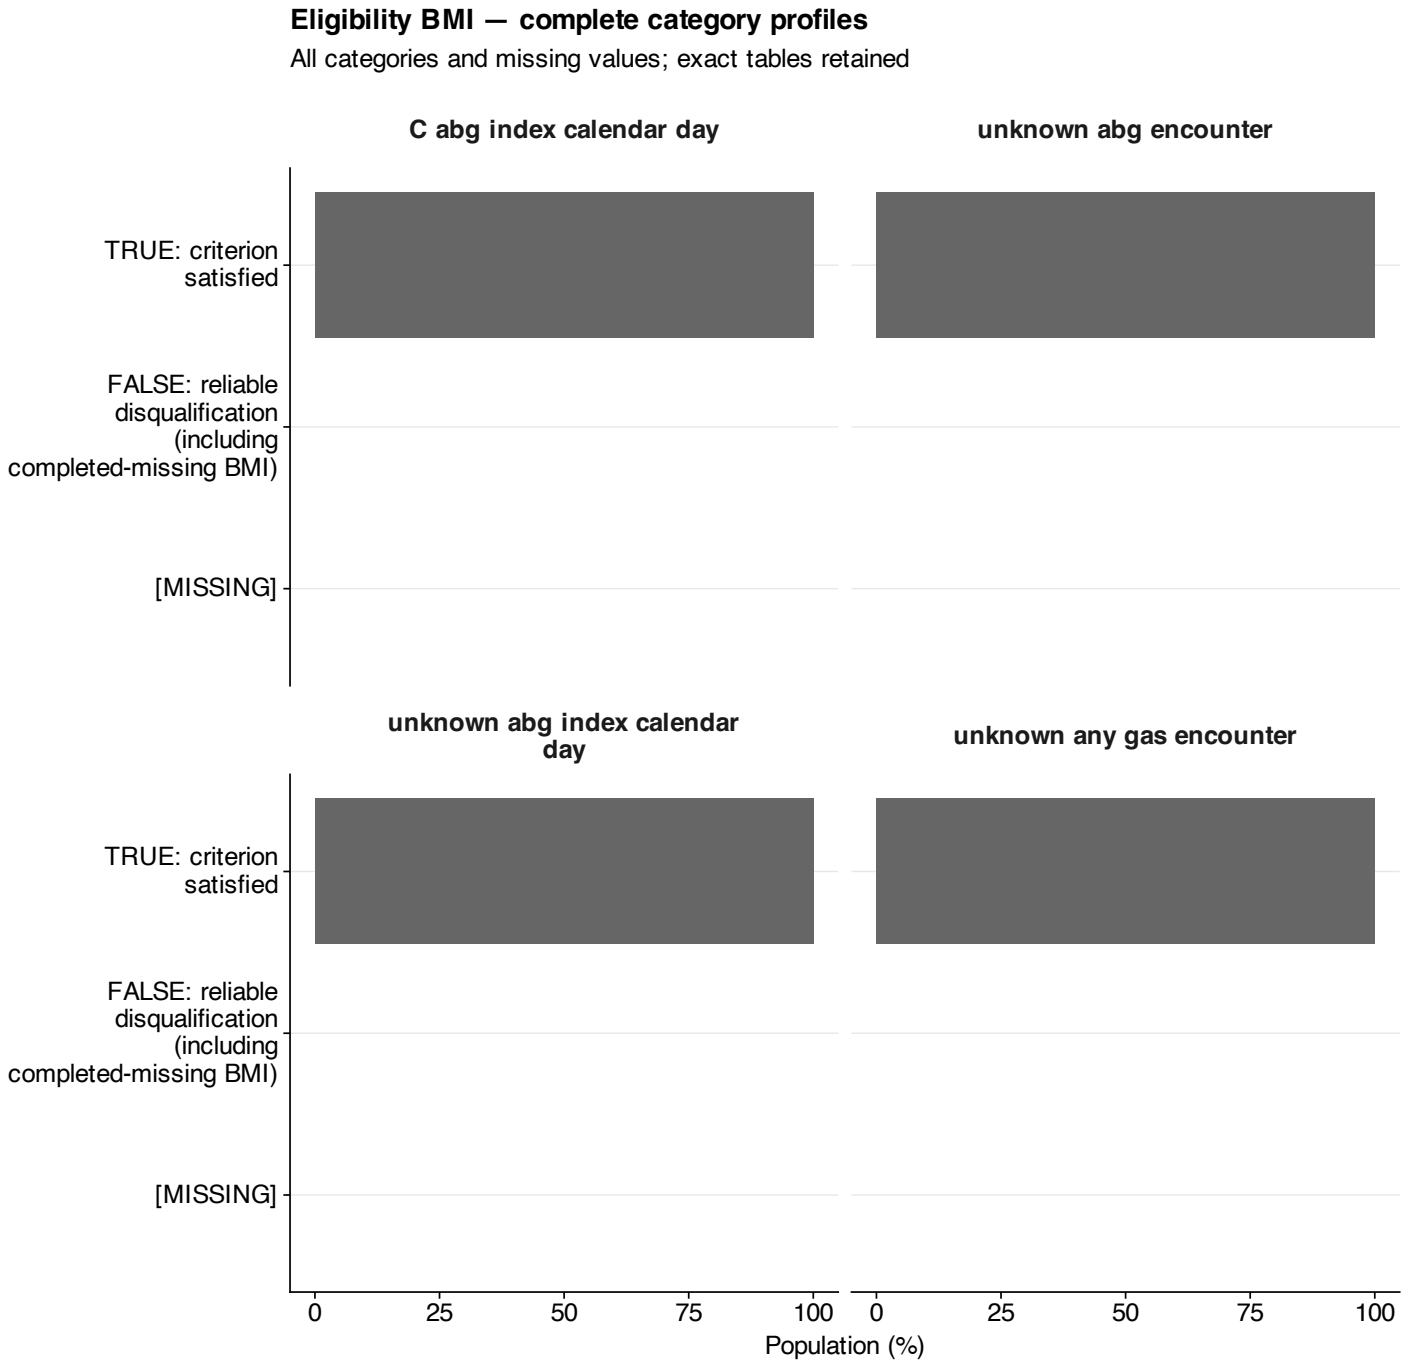

Figure 613: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete eligibility_bmi stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

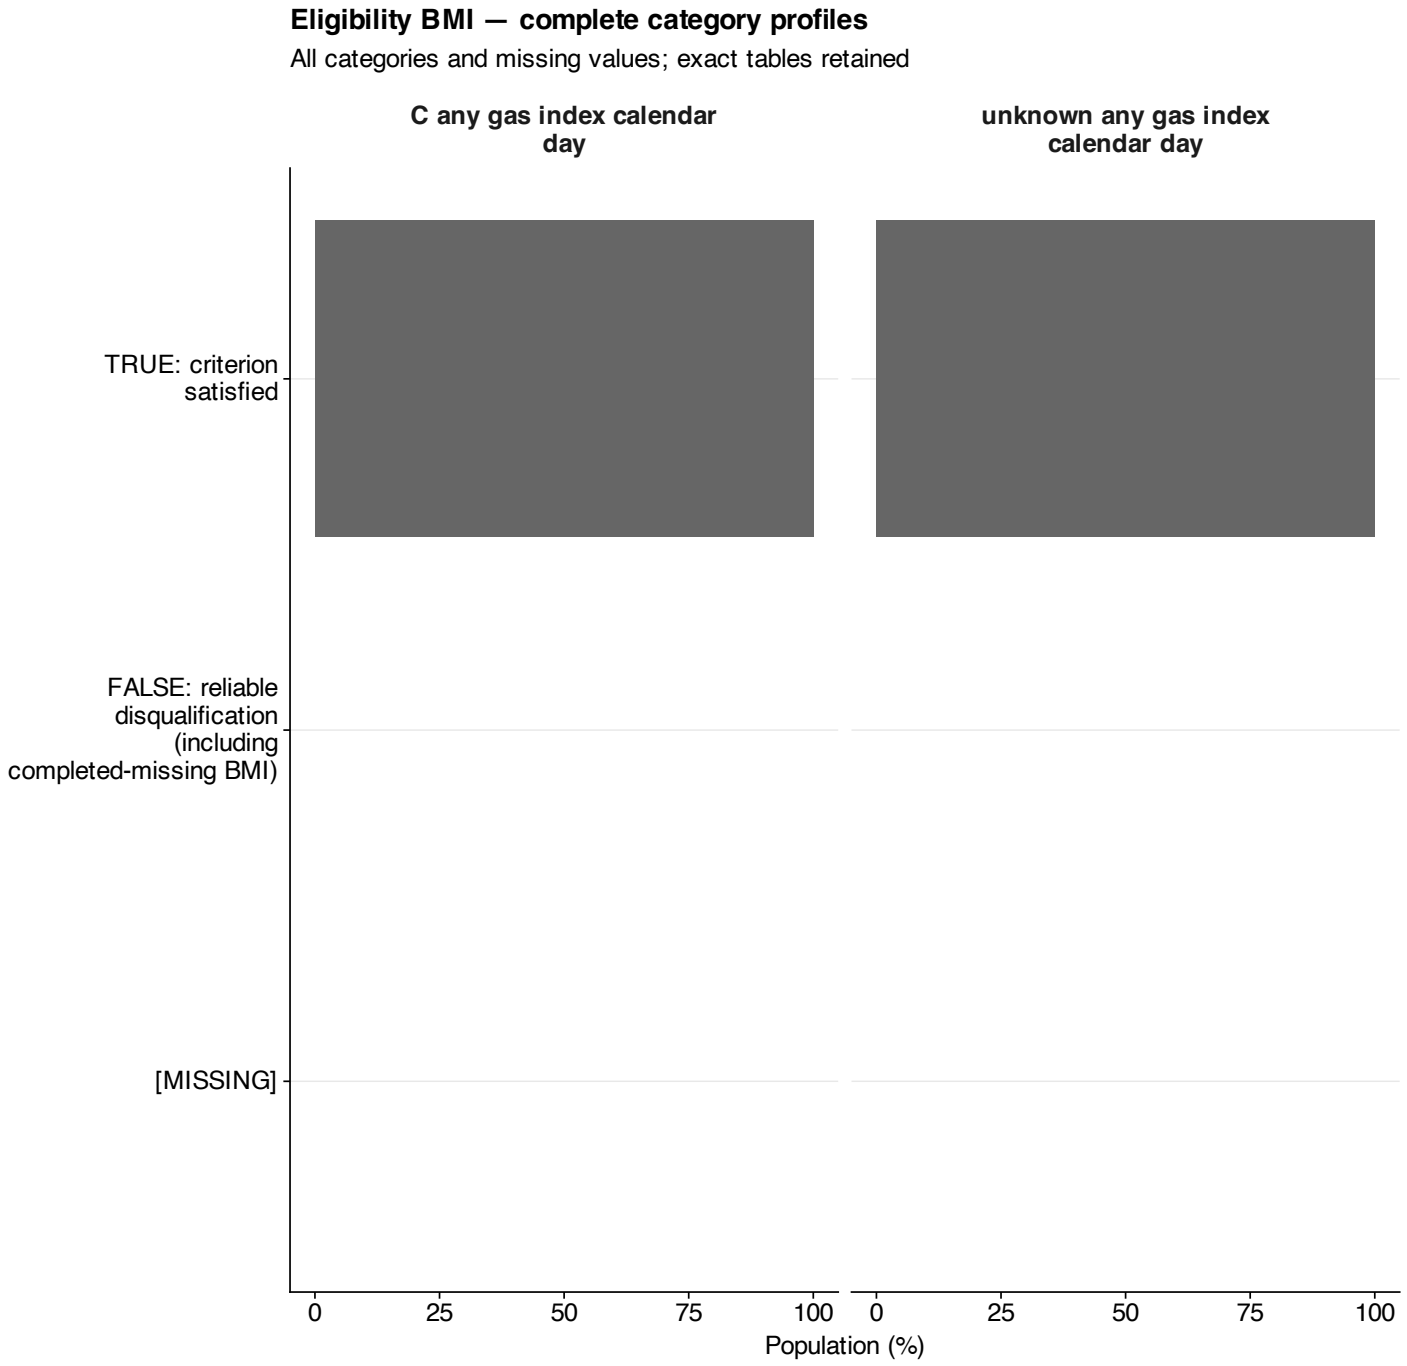

Figure 614: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete eligibility_bmi stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

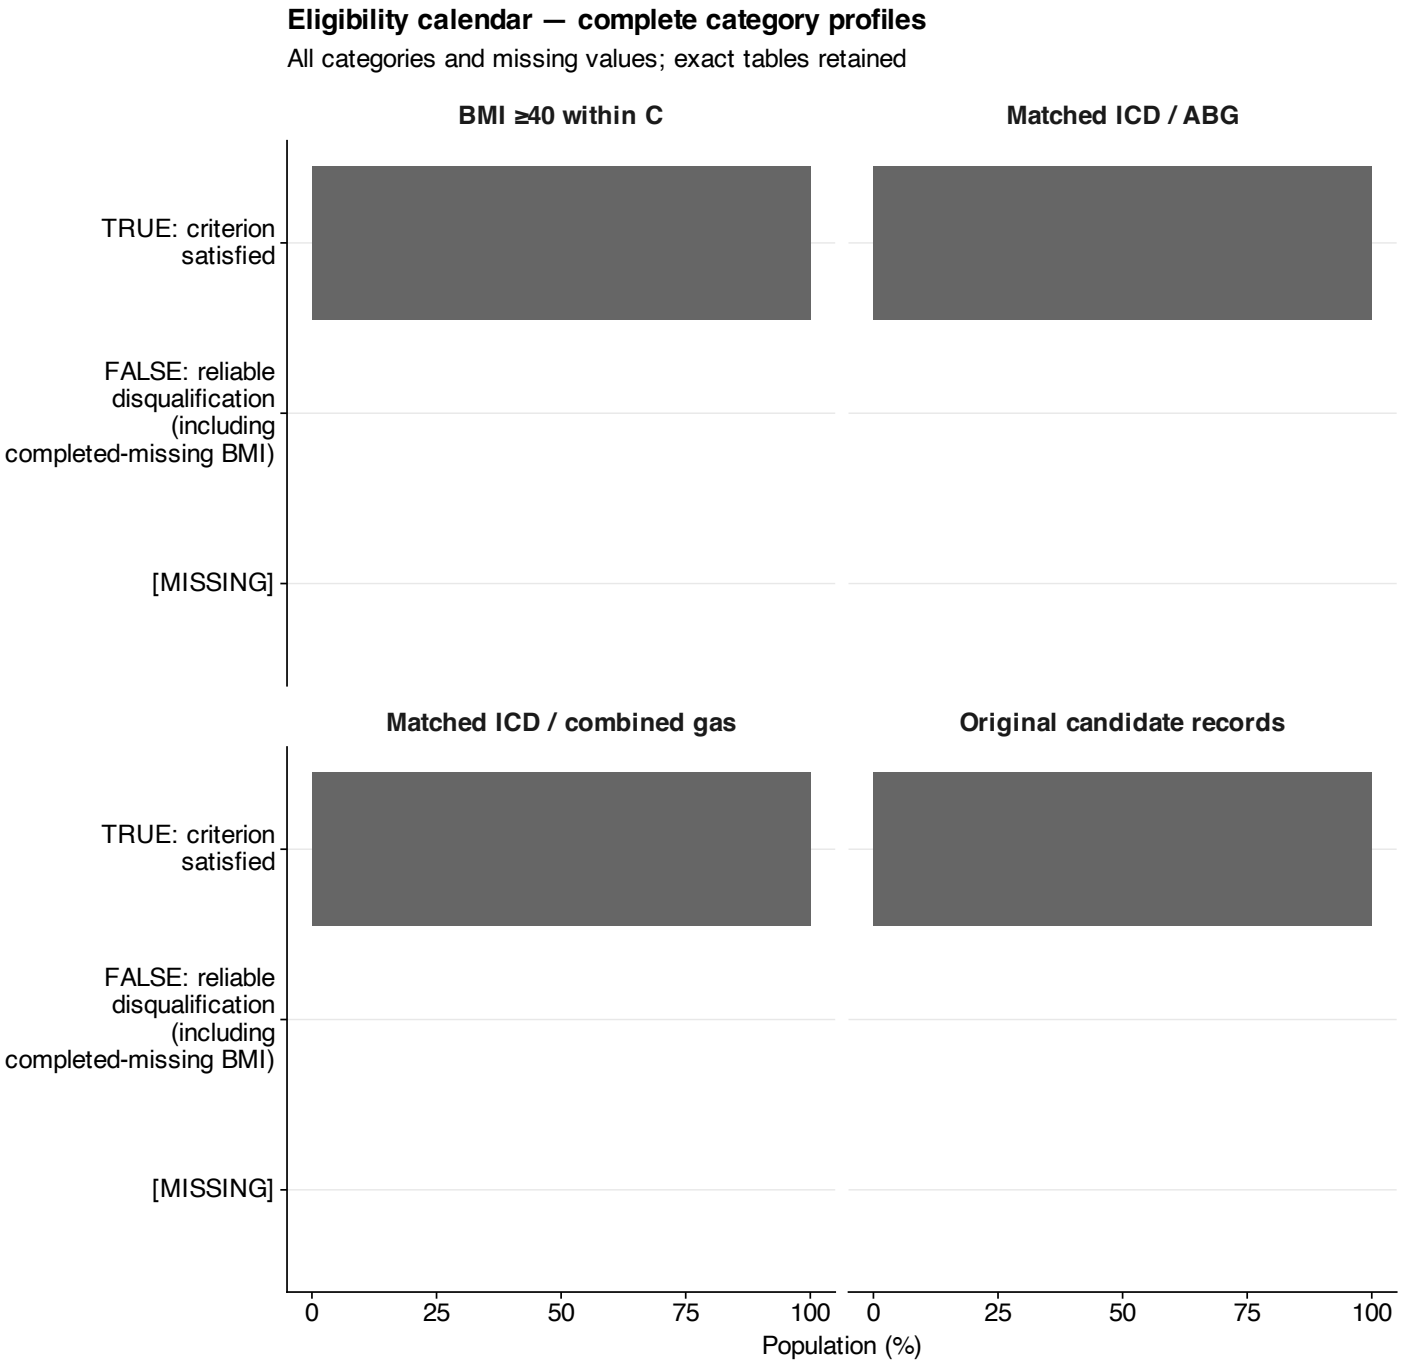

Figure 615: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete eligibility_calendar stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

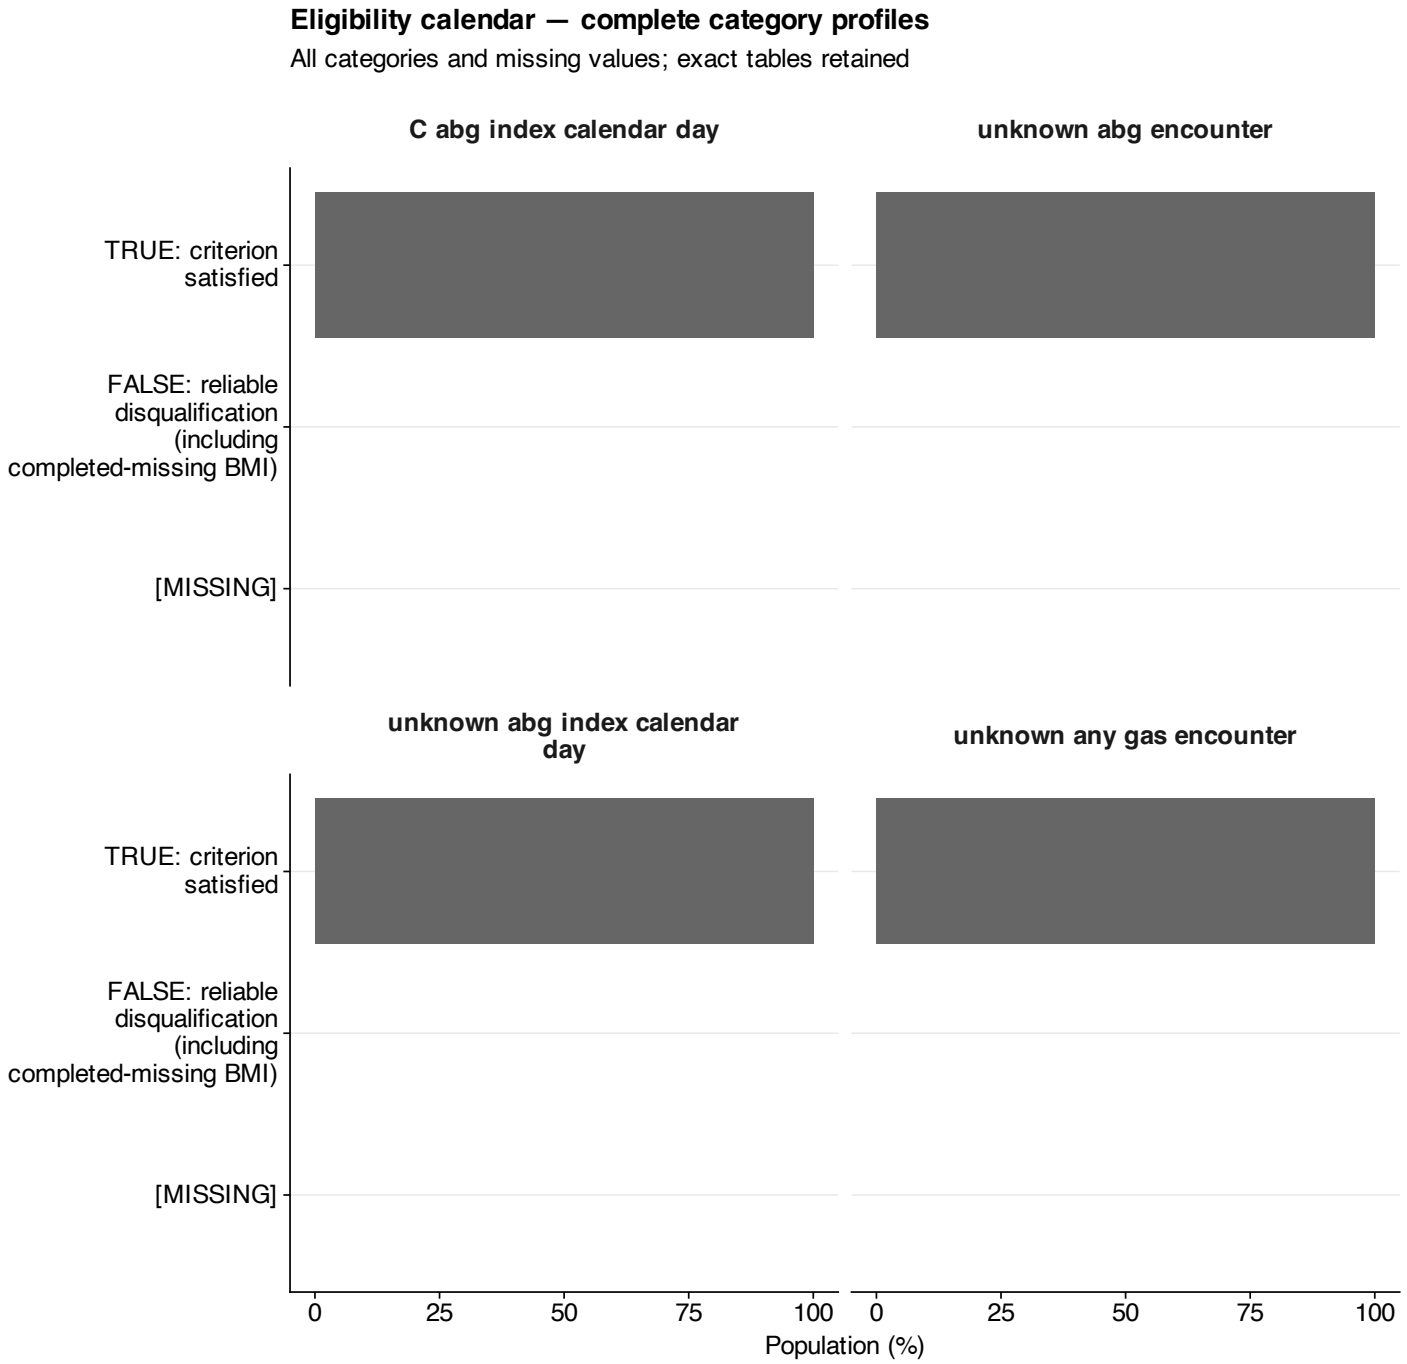

Figure 616: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete eligibility_calendar stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

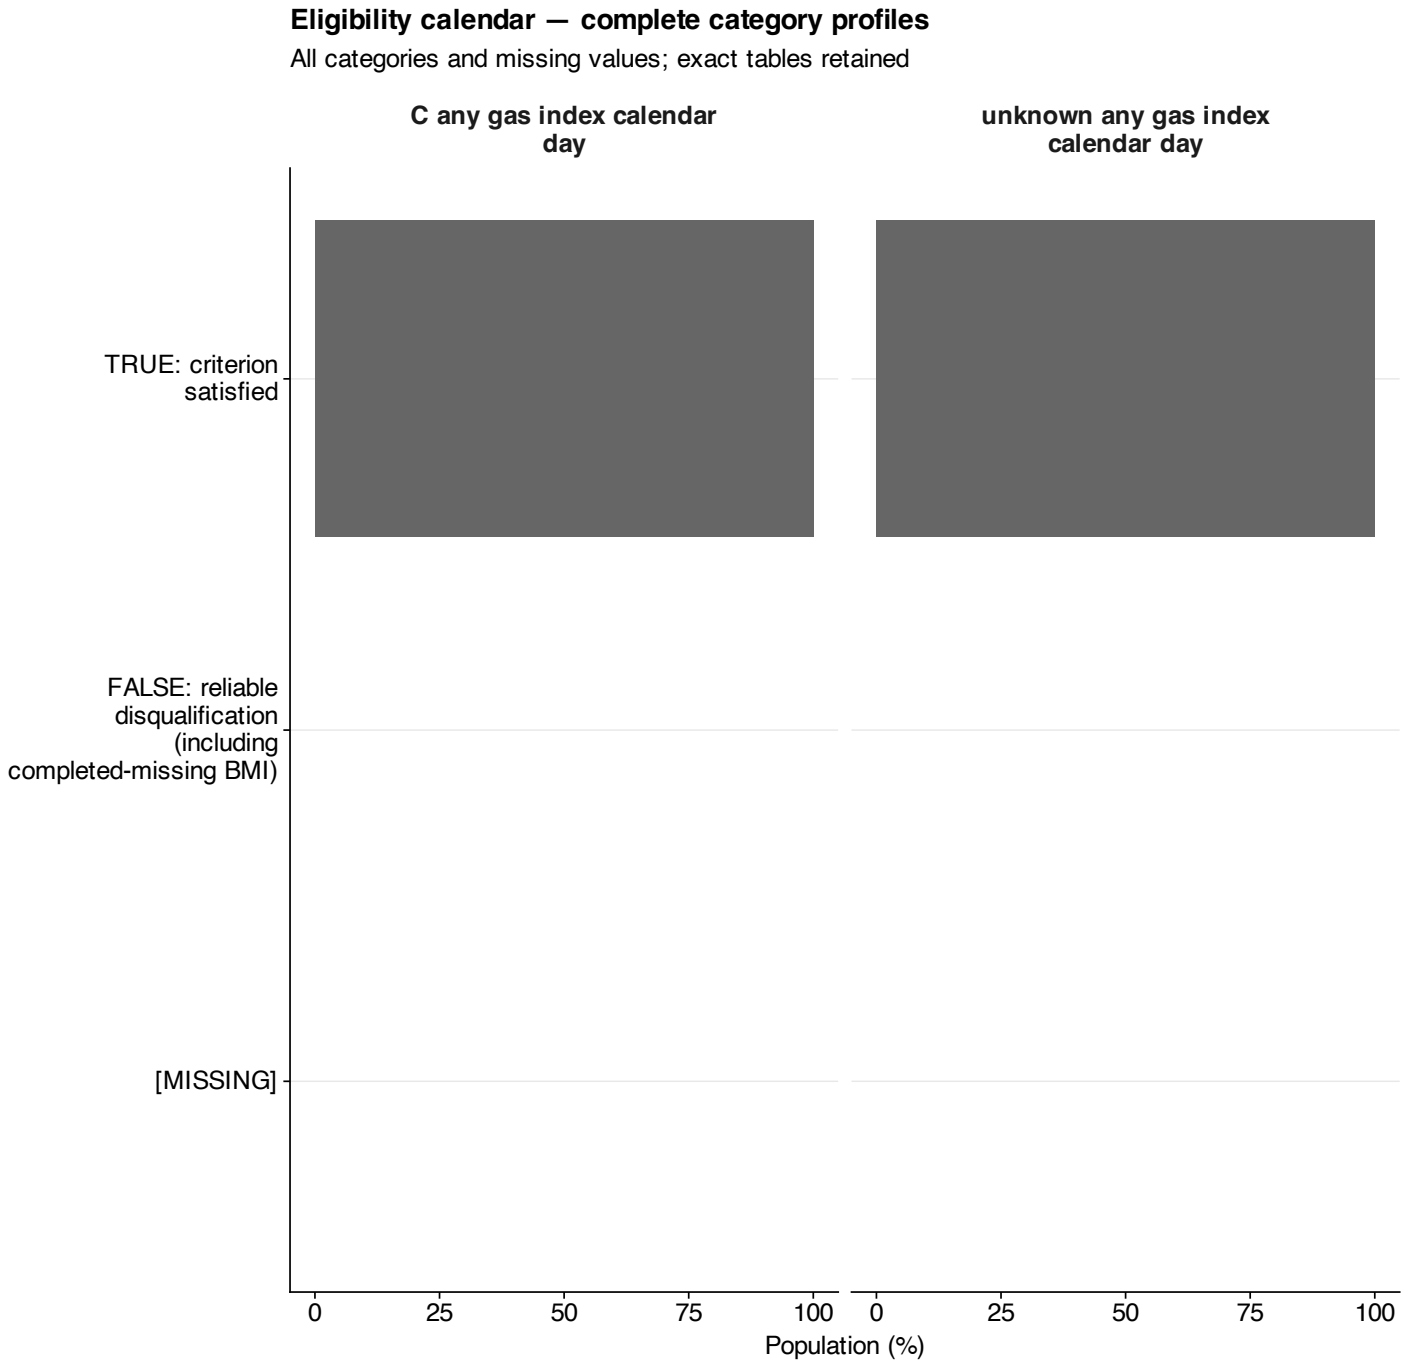

Figure 617: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete eligibility_calendar stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

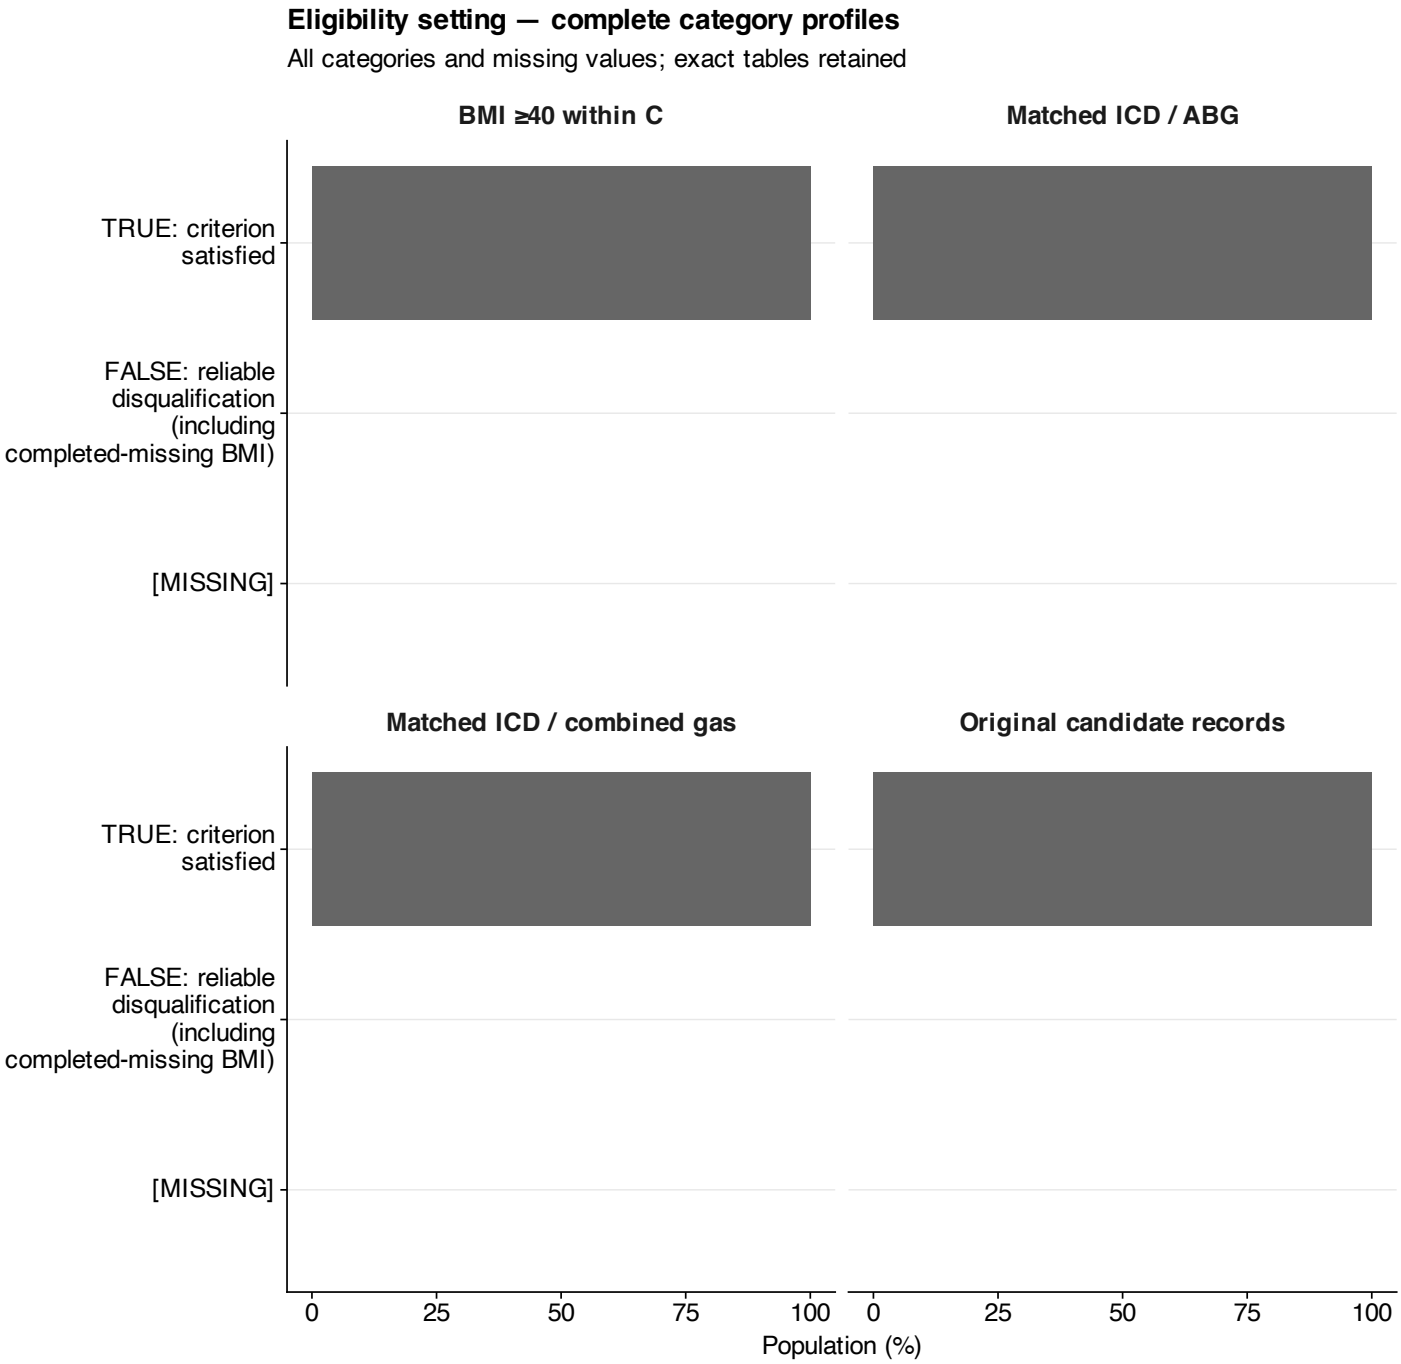

Figure 618: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete eligibility_setting stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

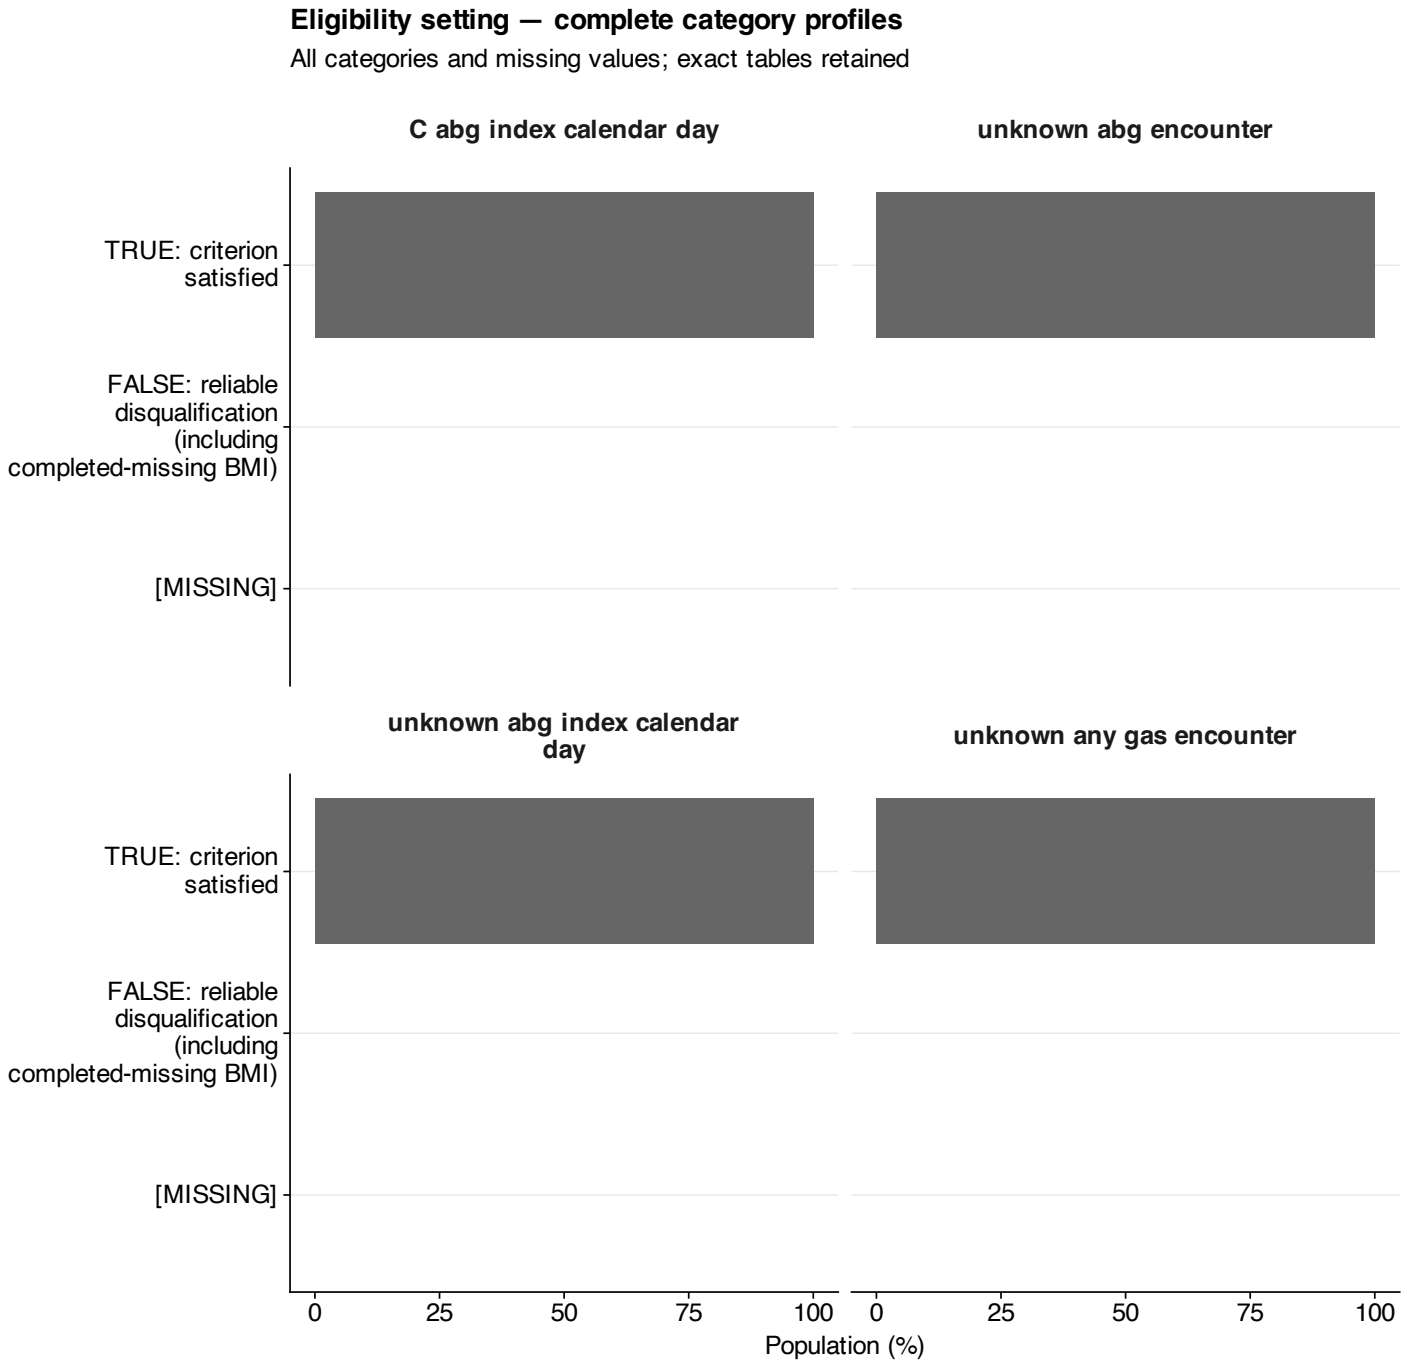

Figure 619: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete eligibility_setting stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

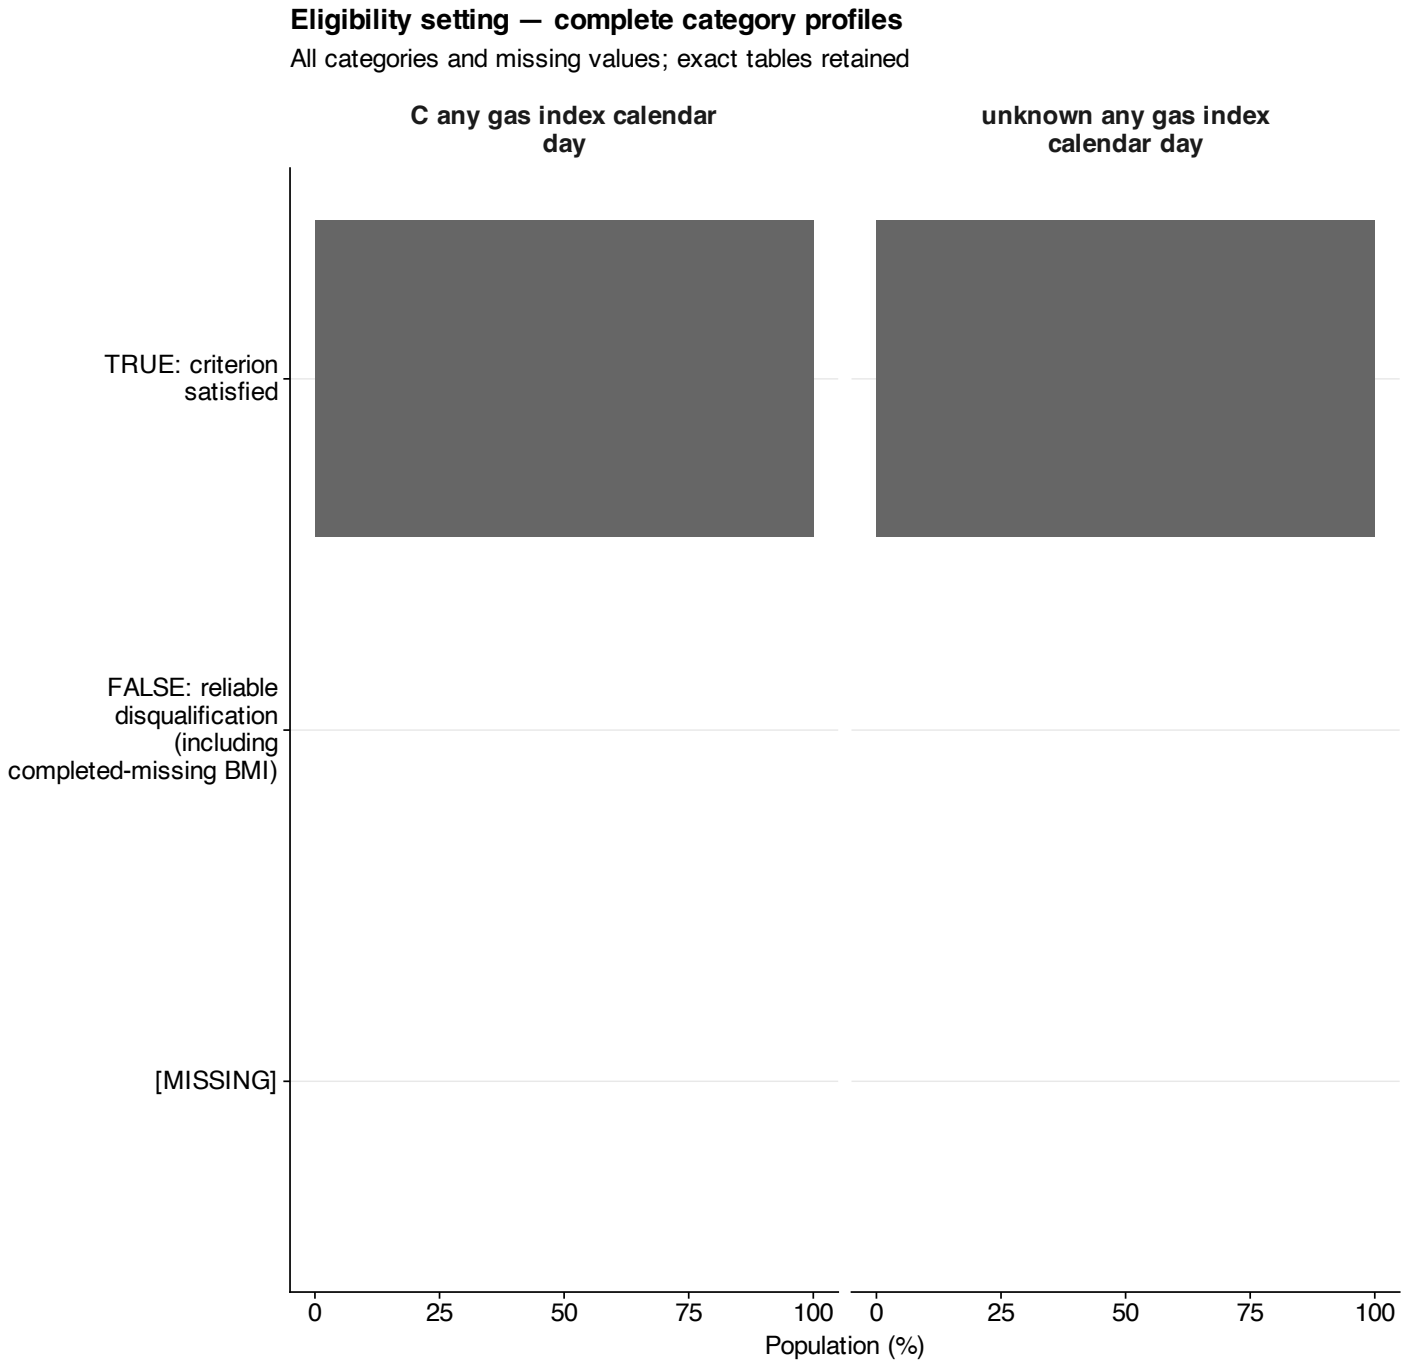

Figure 620: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete eligibility_setting stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

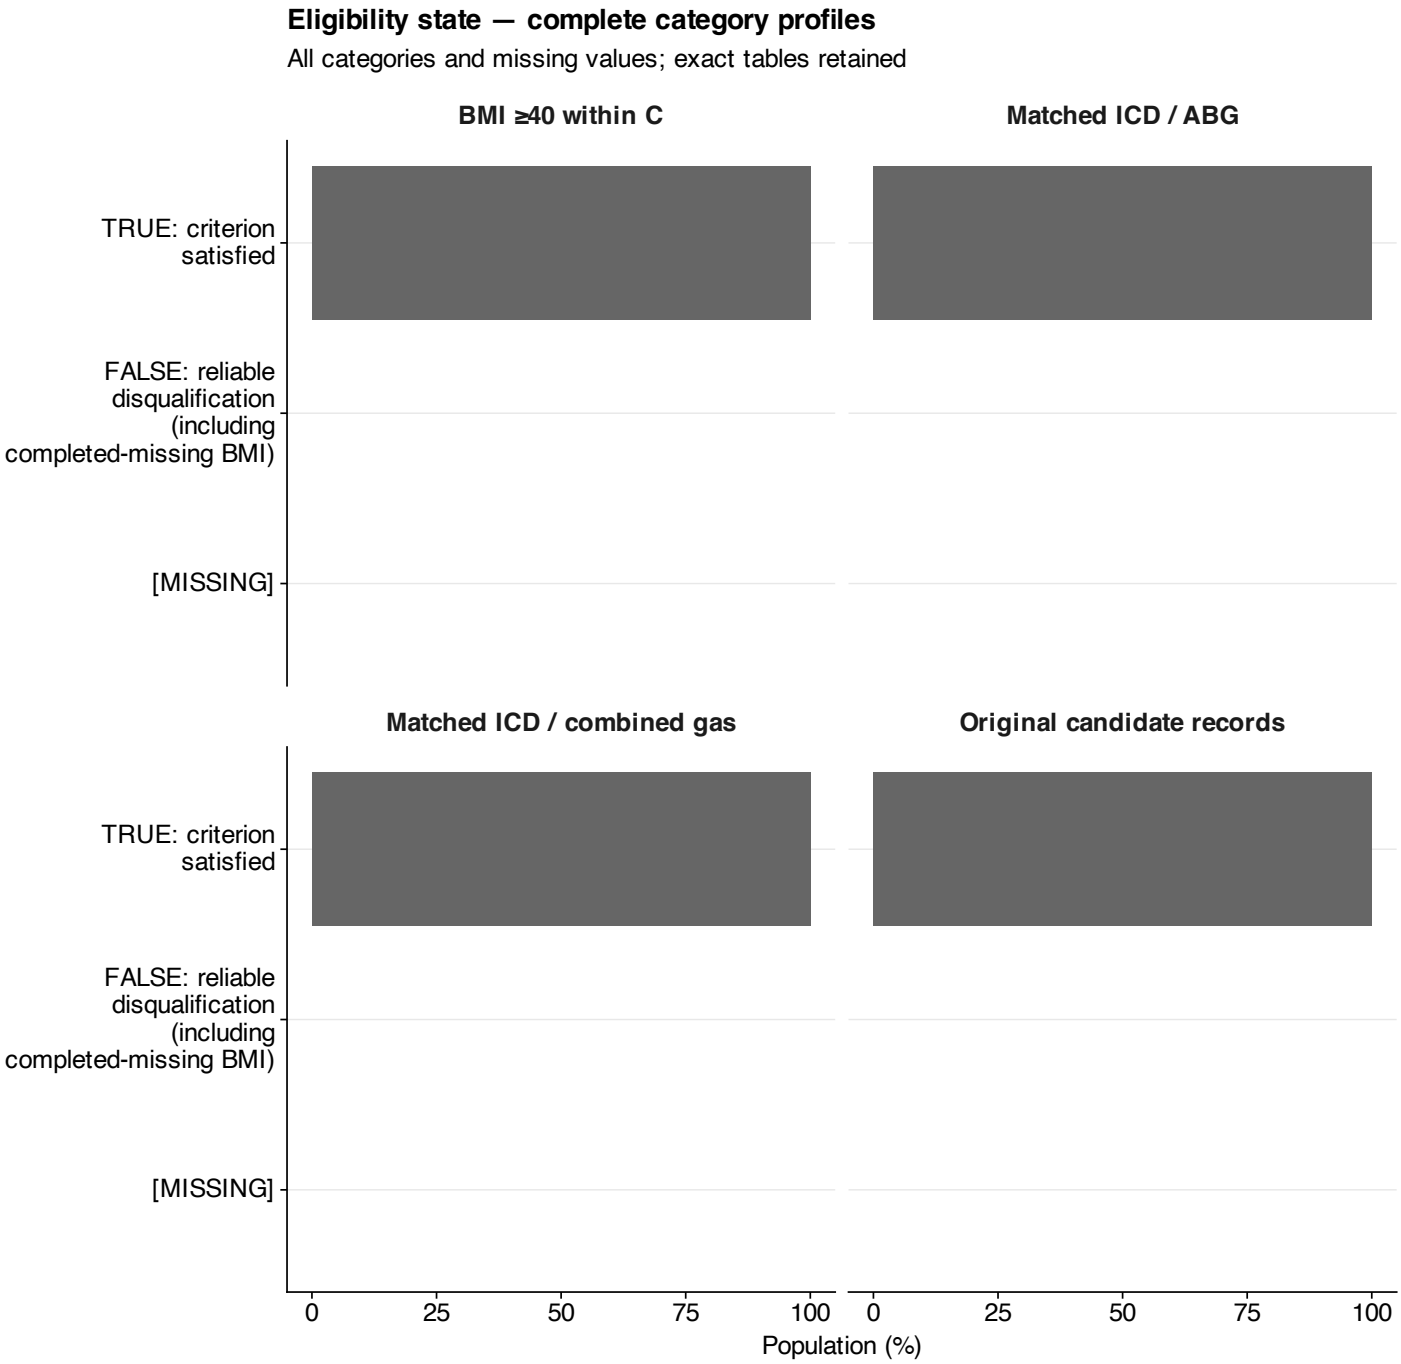

Figure 621: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete eligibility_state stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

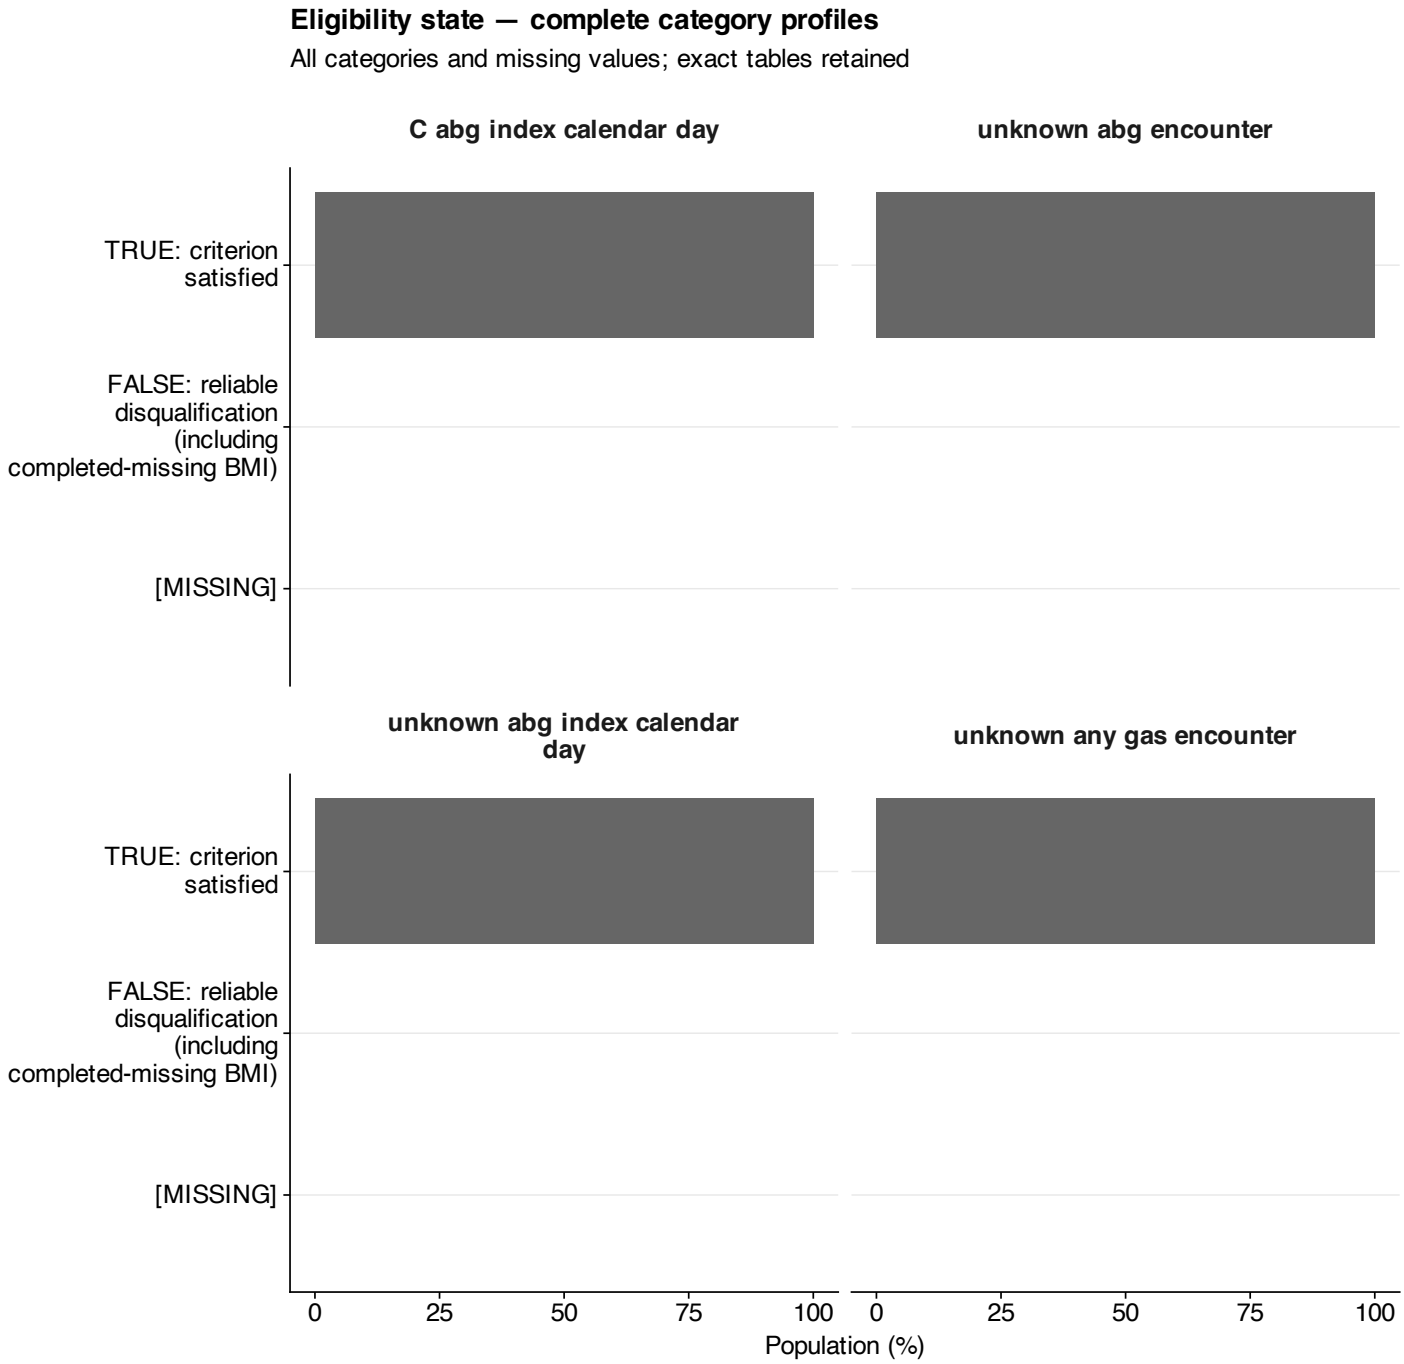

Figure 622: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete eligibility_state stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

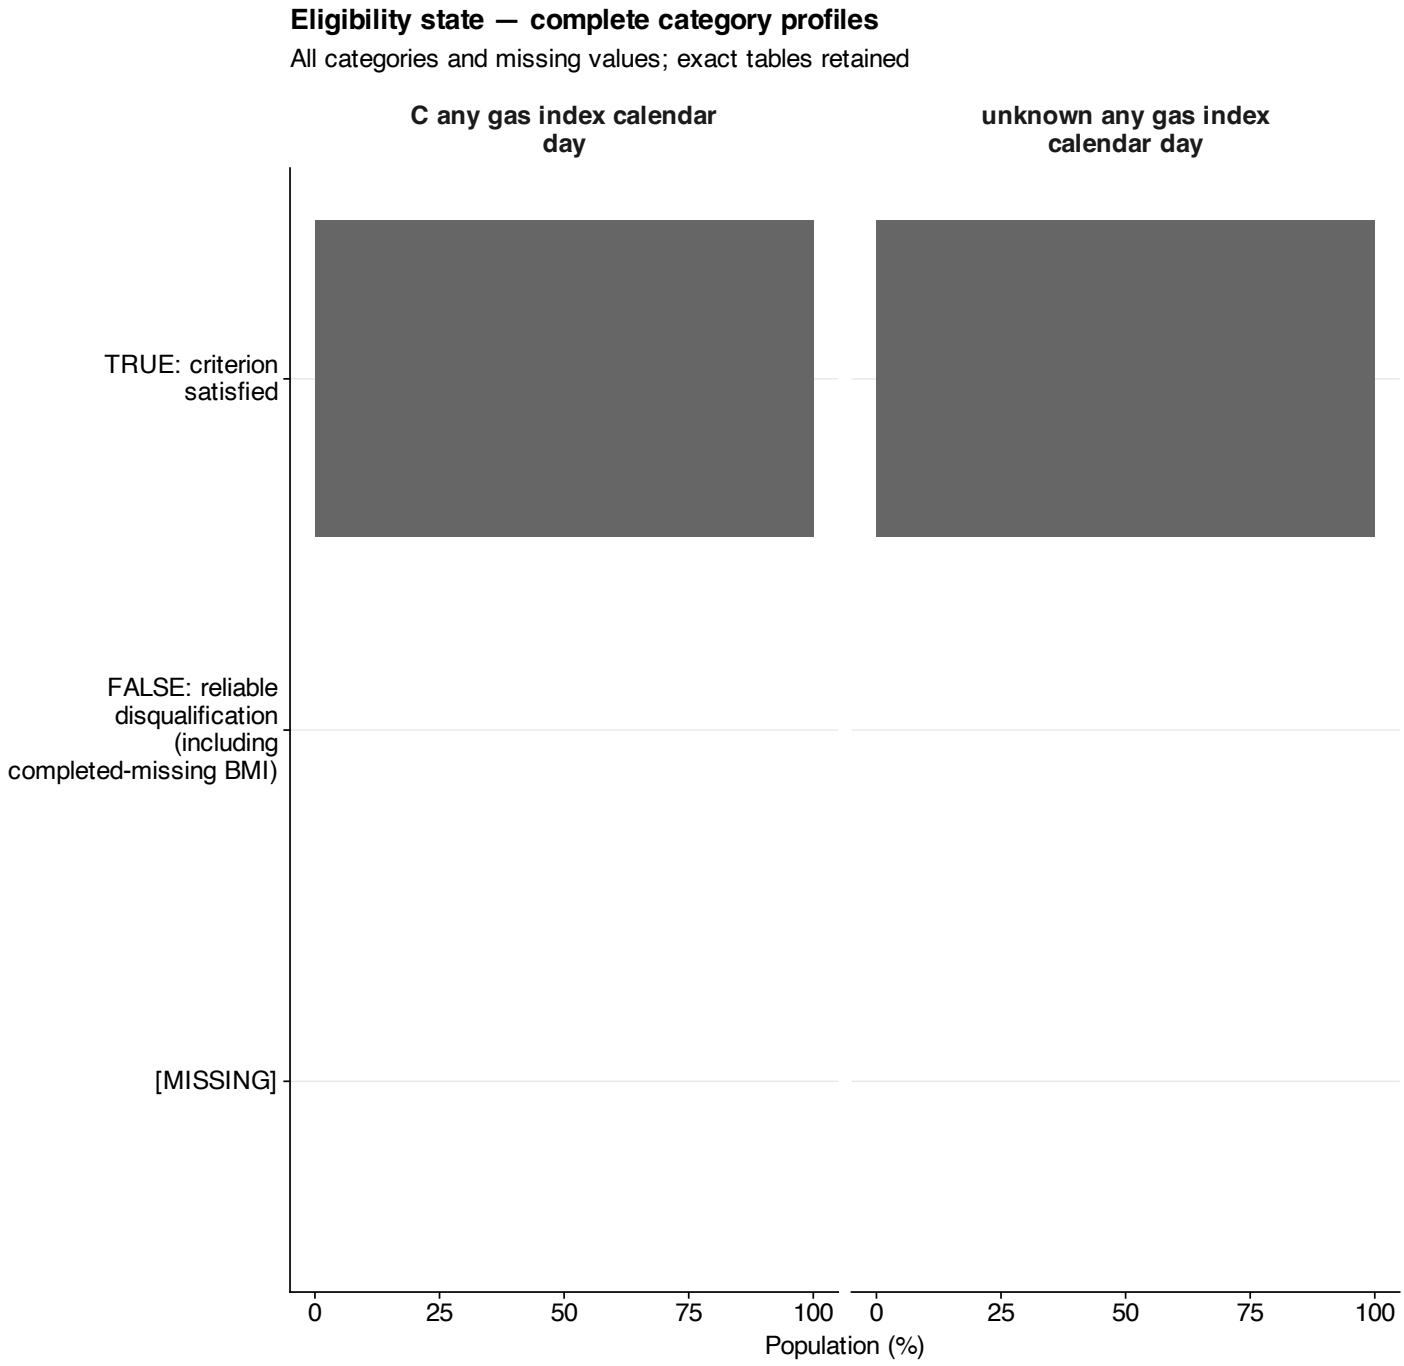

Figure 623: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete eligibility_state stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

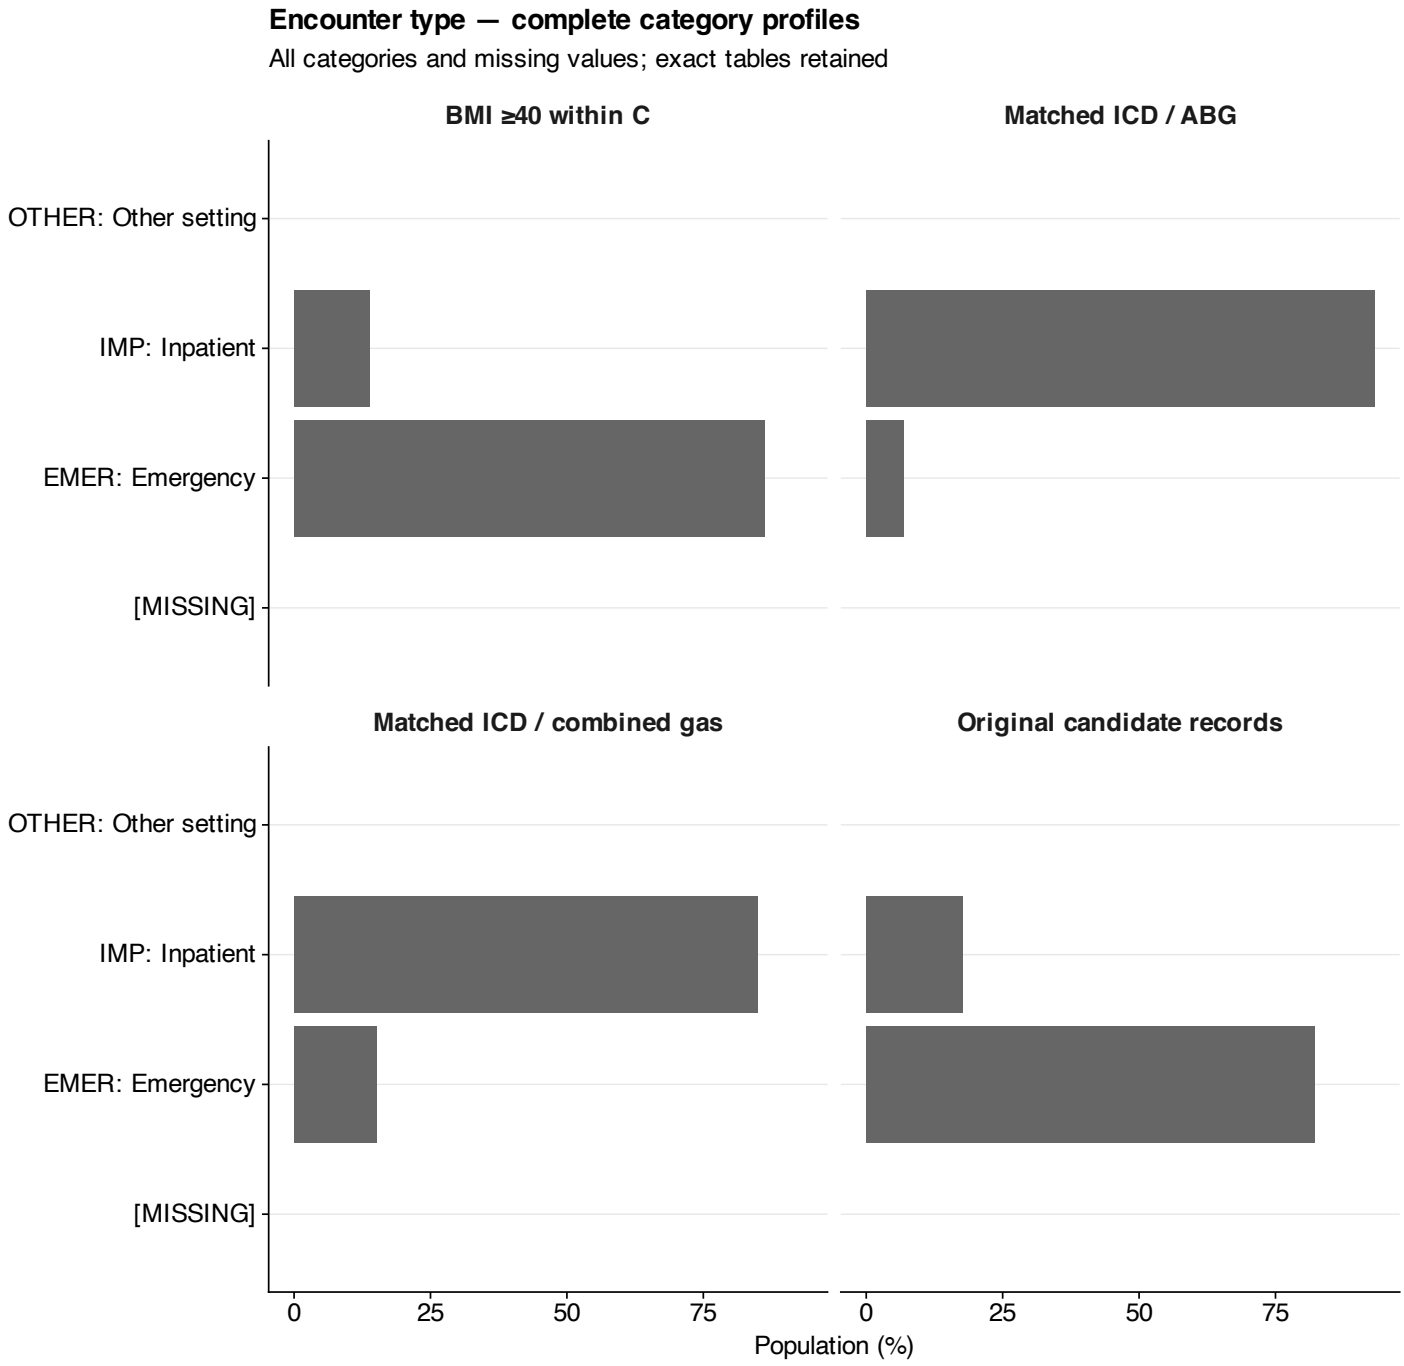

Figure 624: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete encounter_type stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

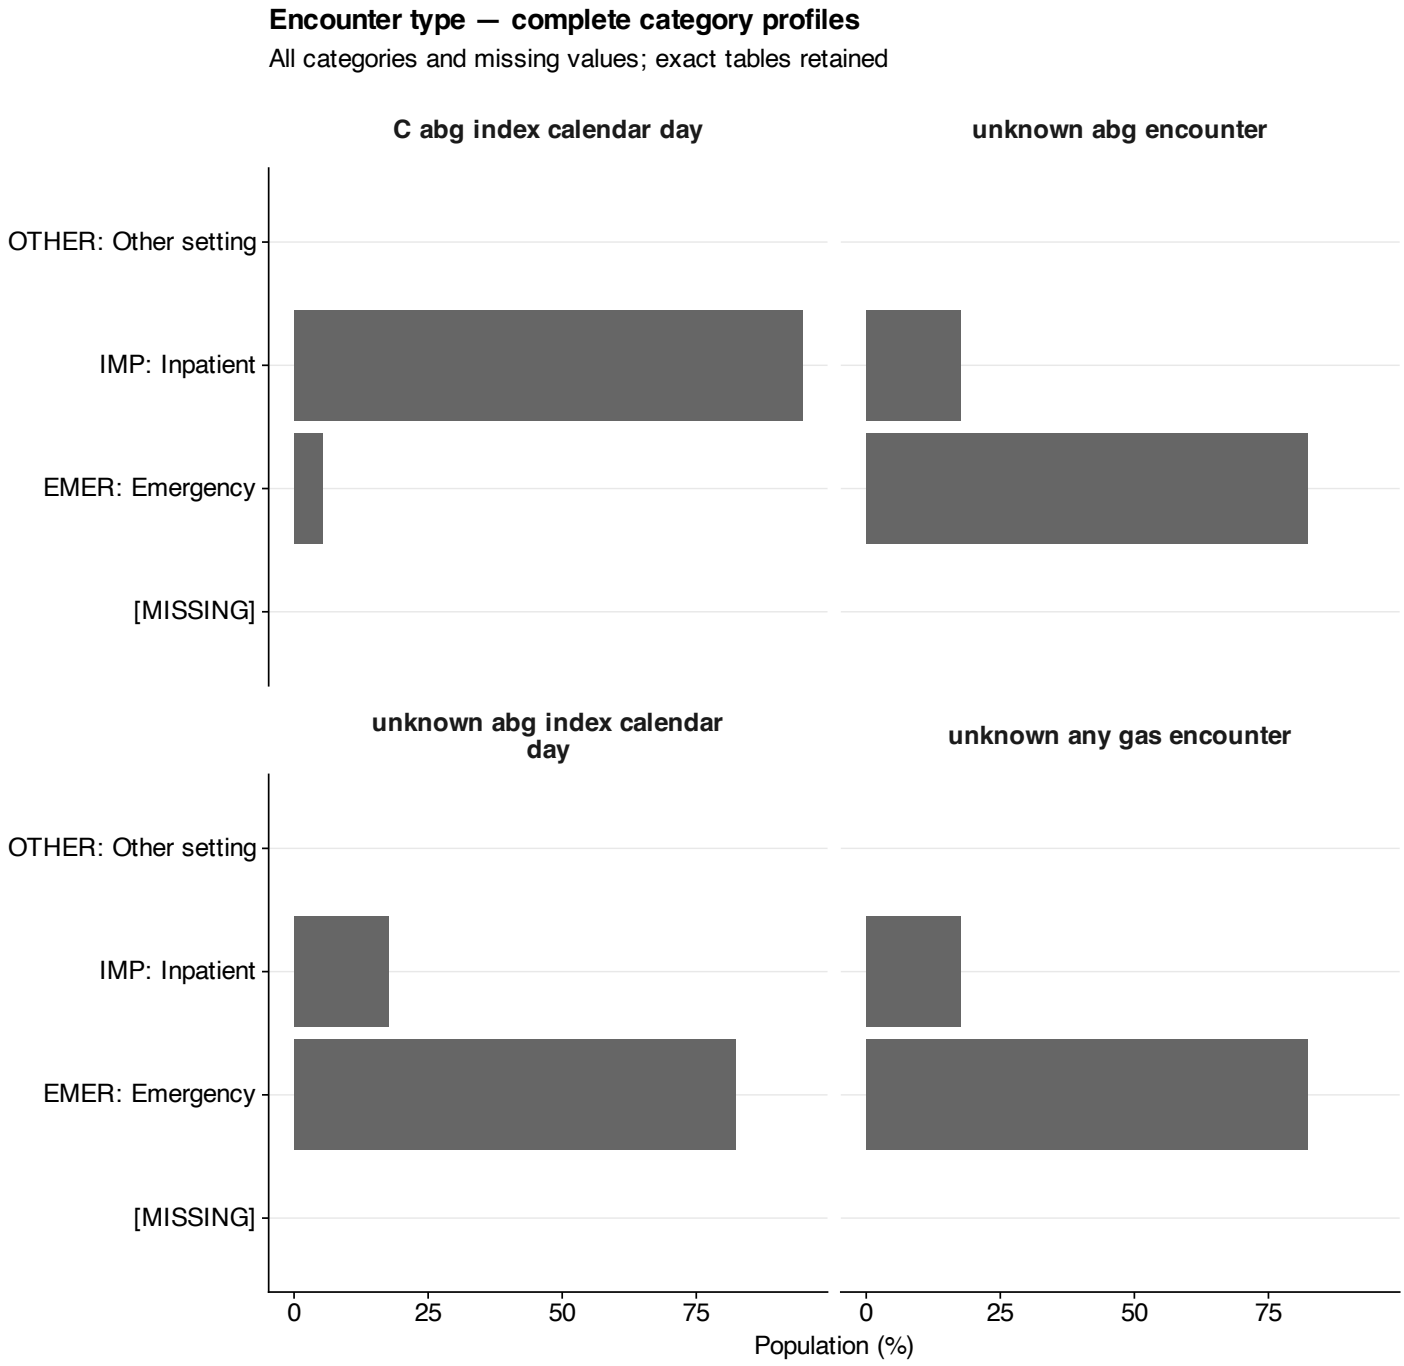

Figure 625: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete encounter_type stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

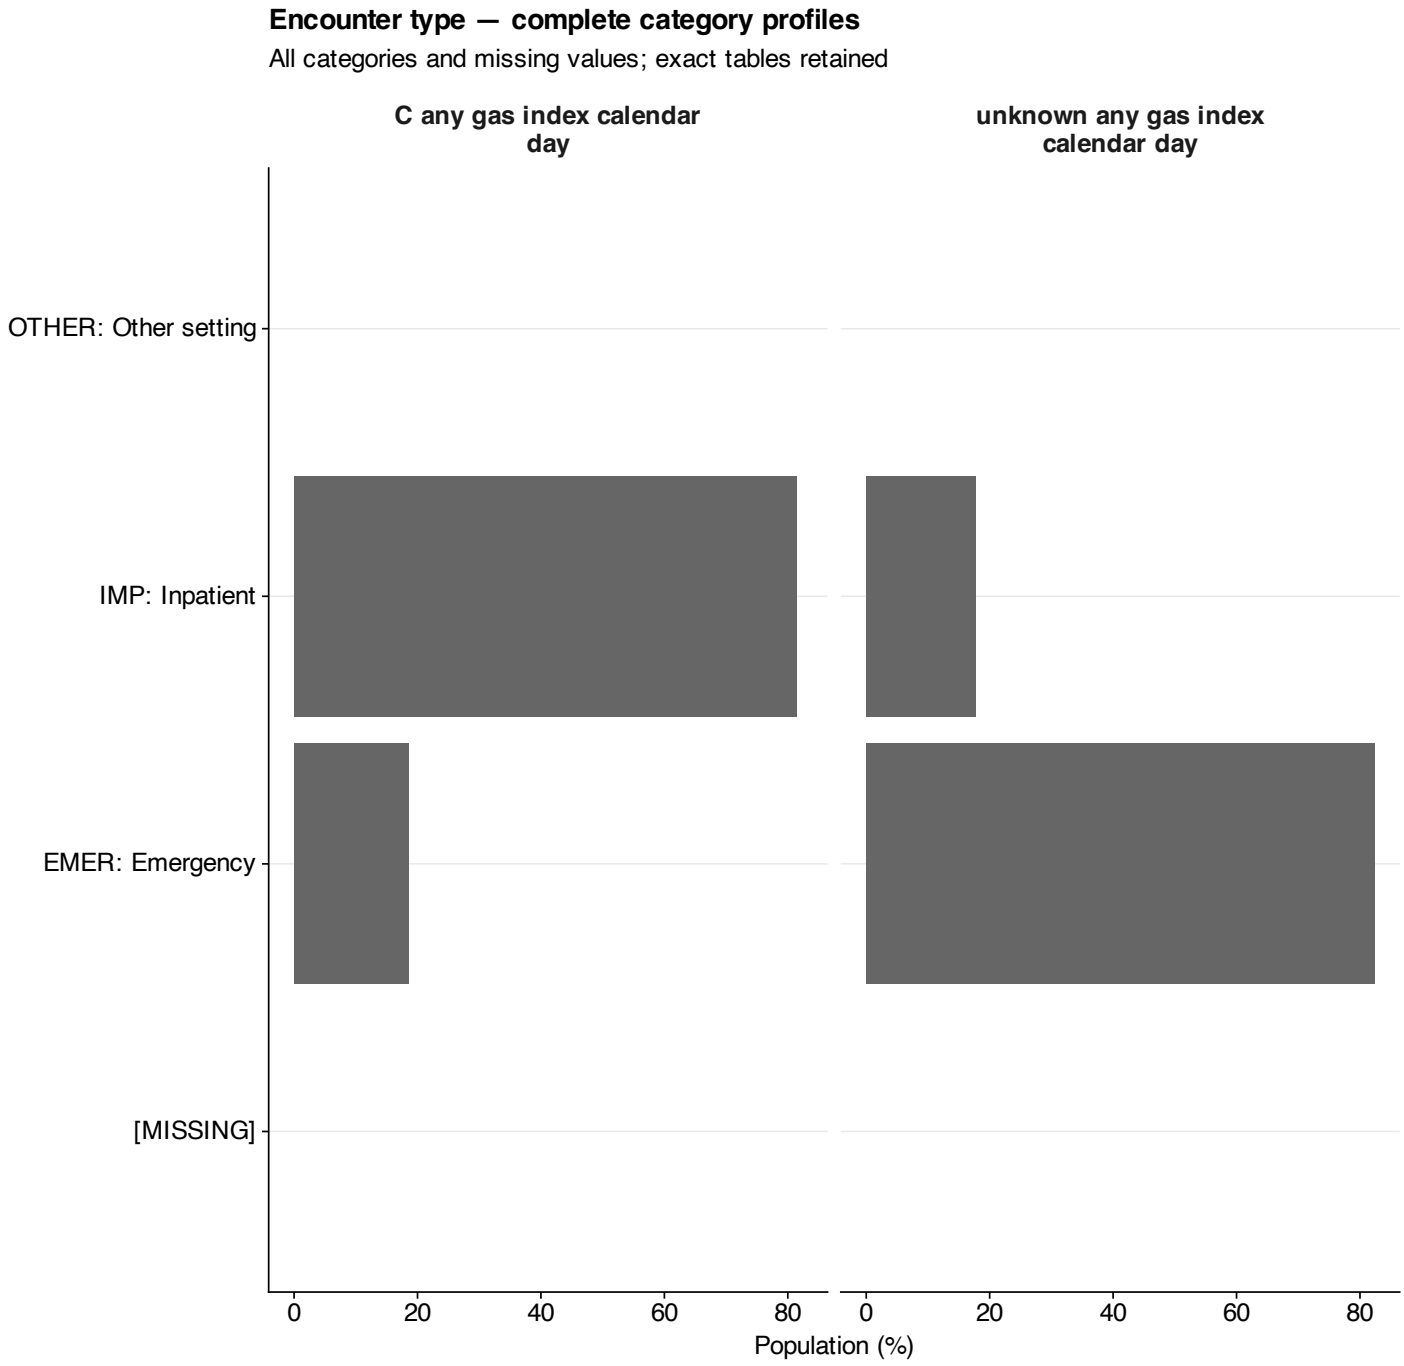

Figure 626: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete encounter_type stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

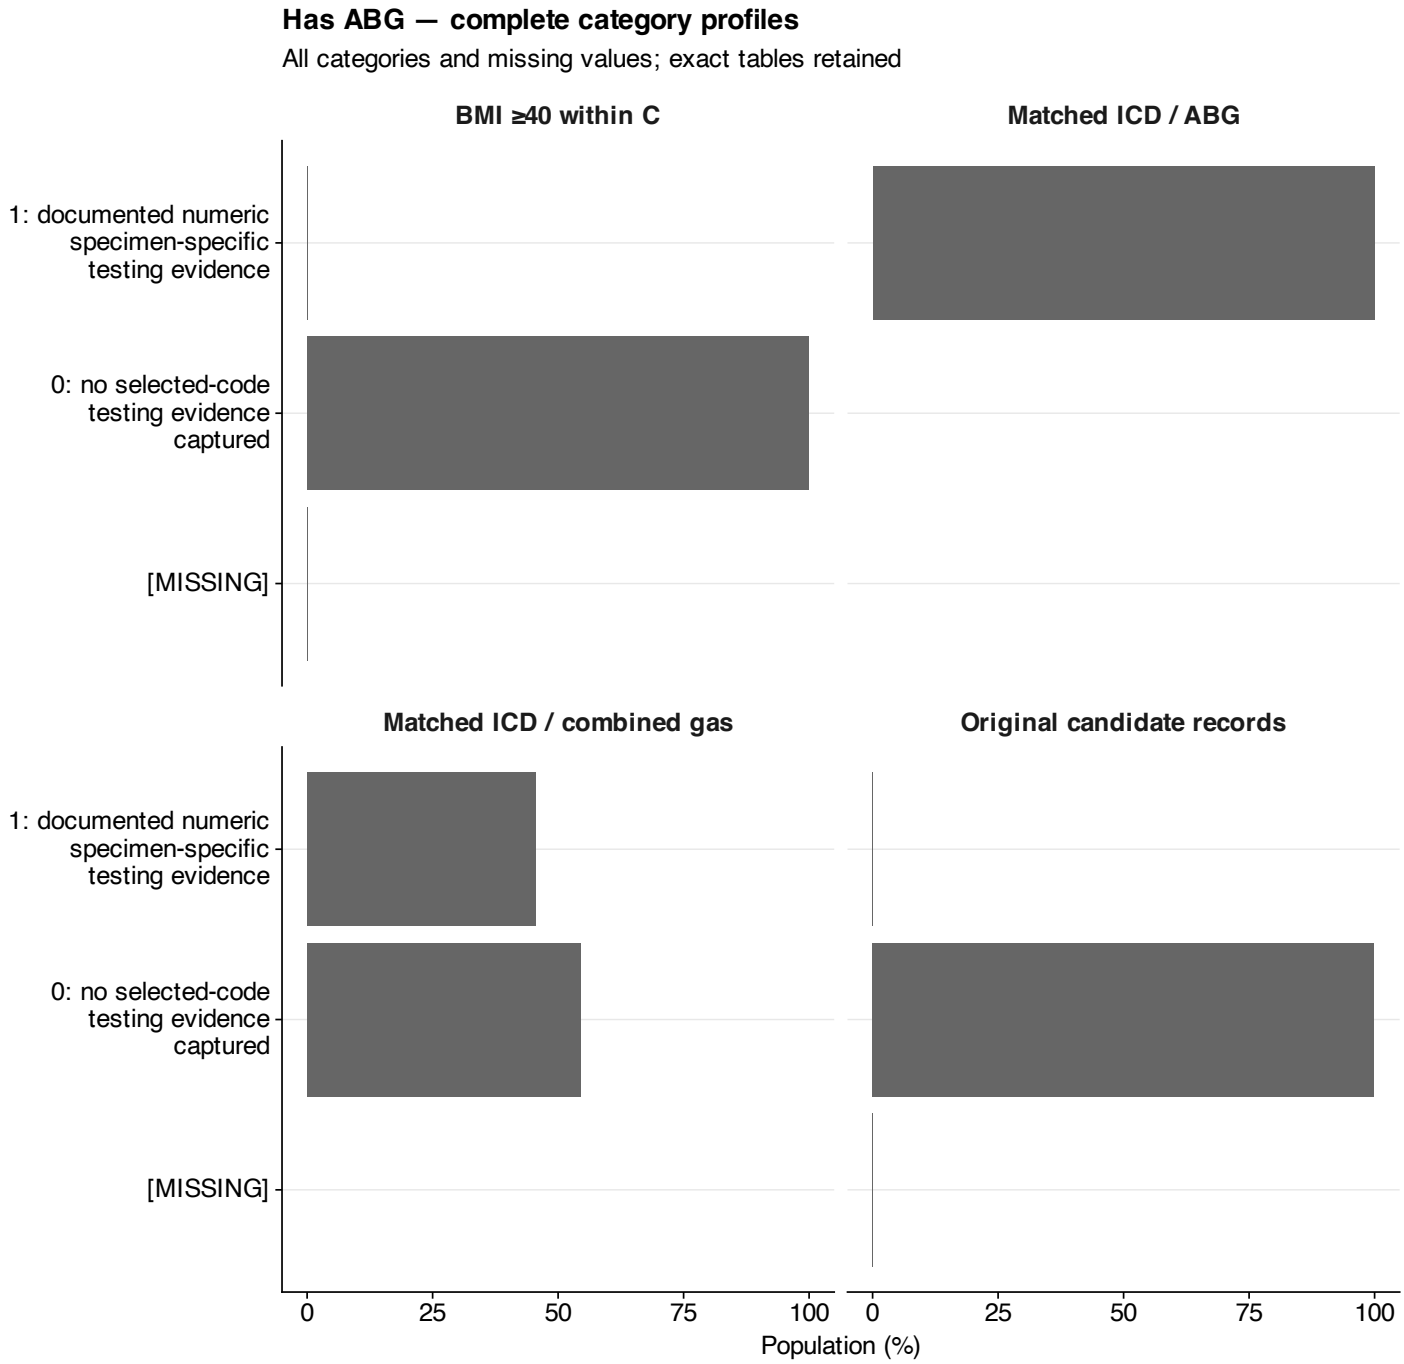

Figure 627: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete has_abg stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

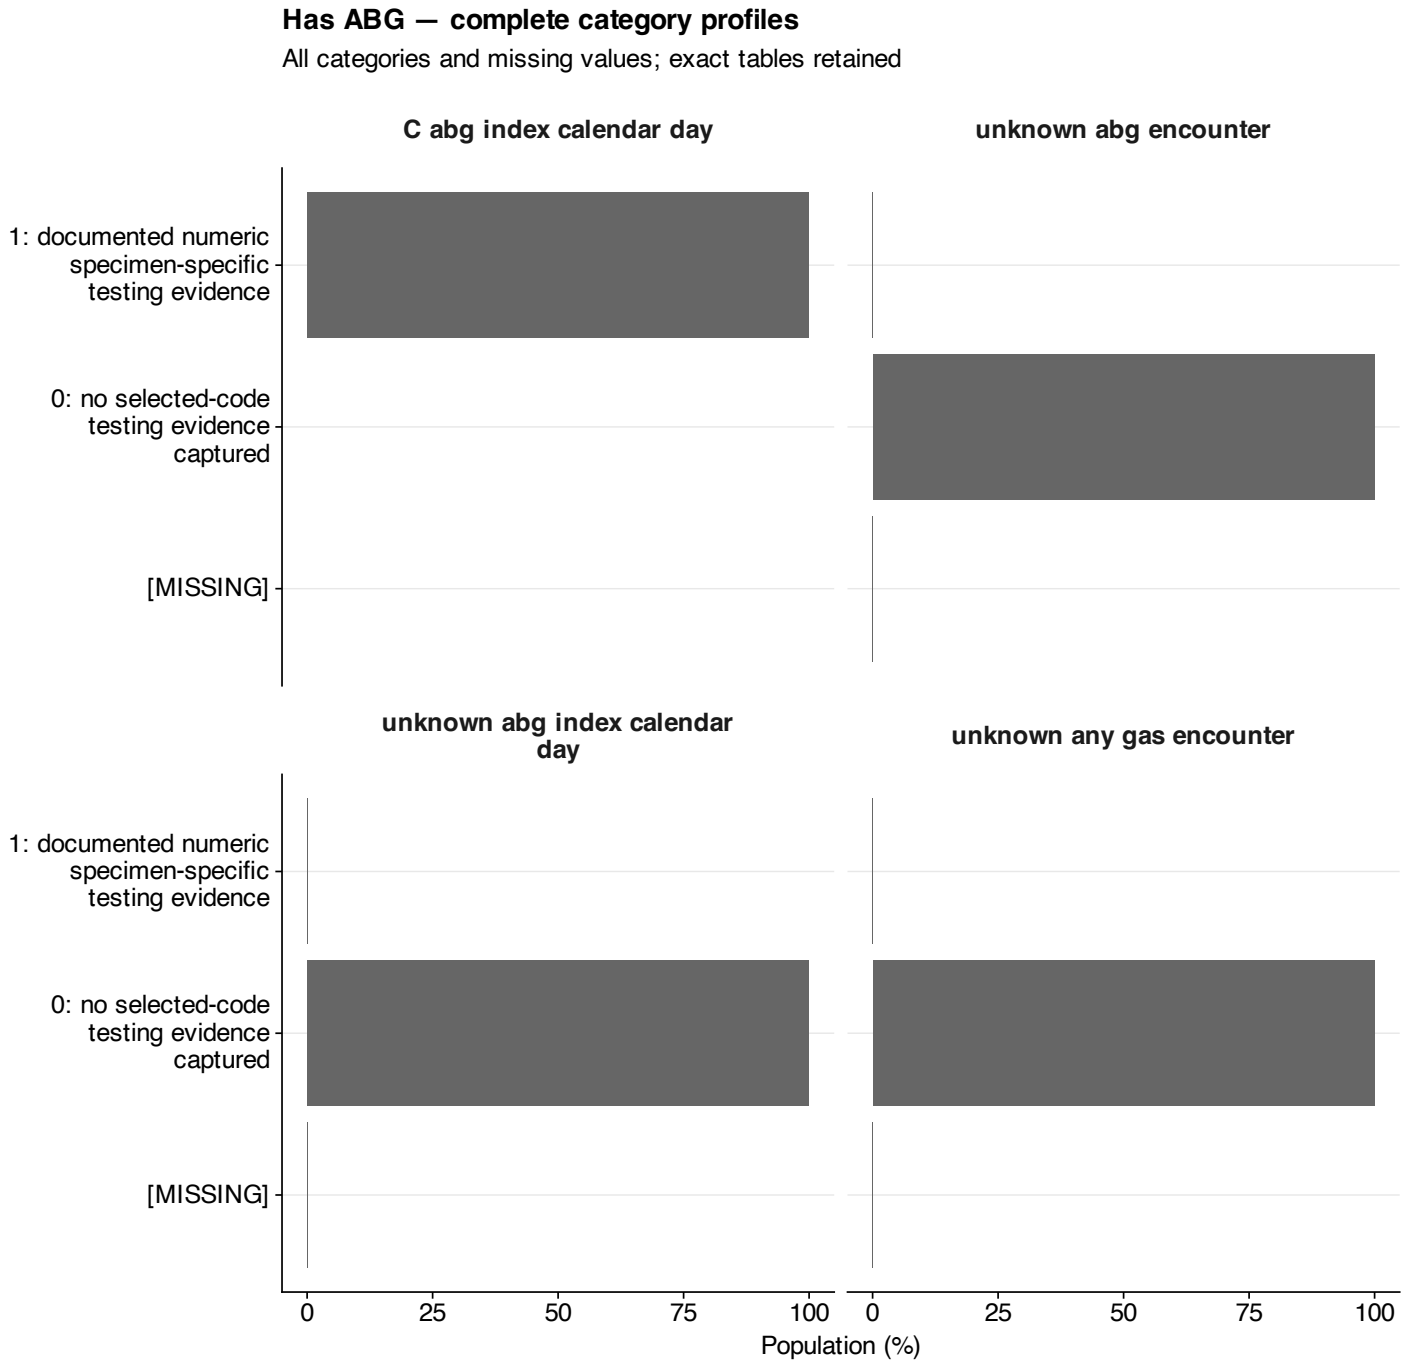

Figure 628: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete has_abg stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

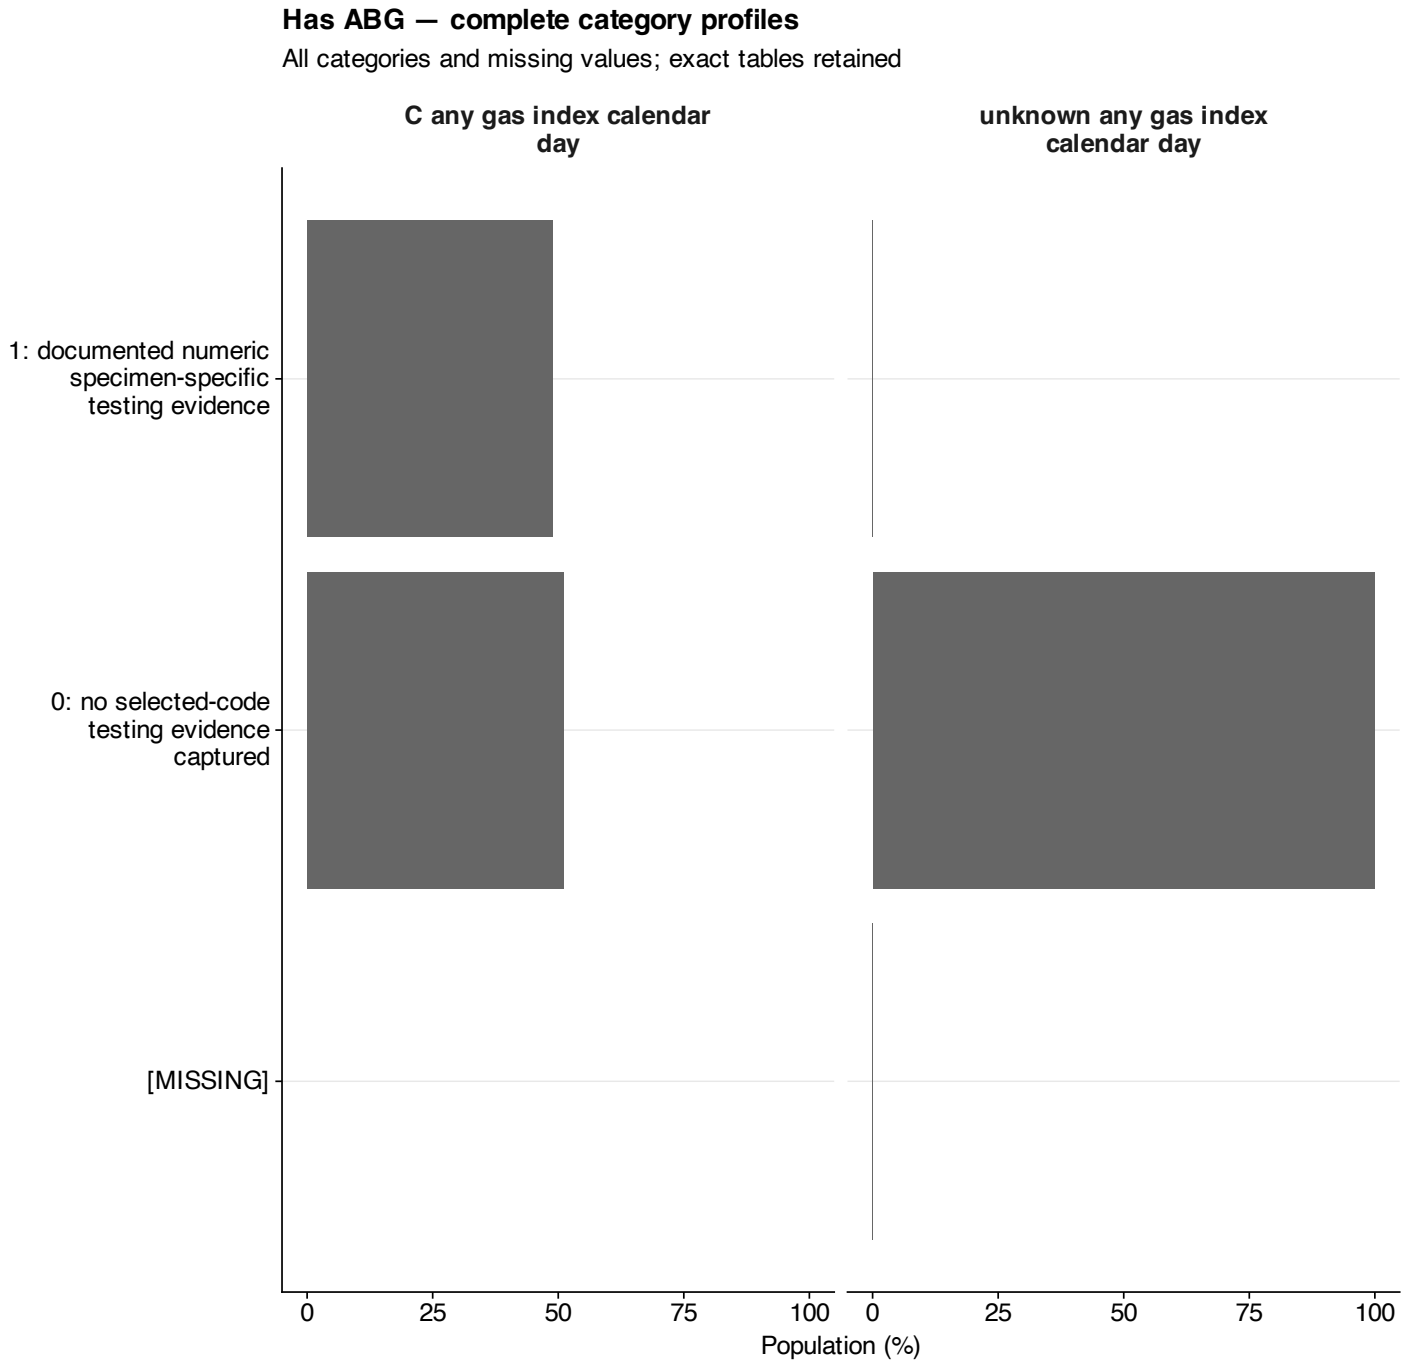

Figure 629: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete has_abg stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

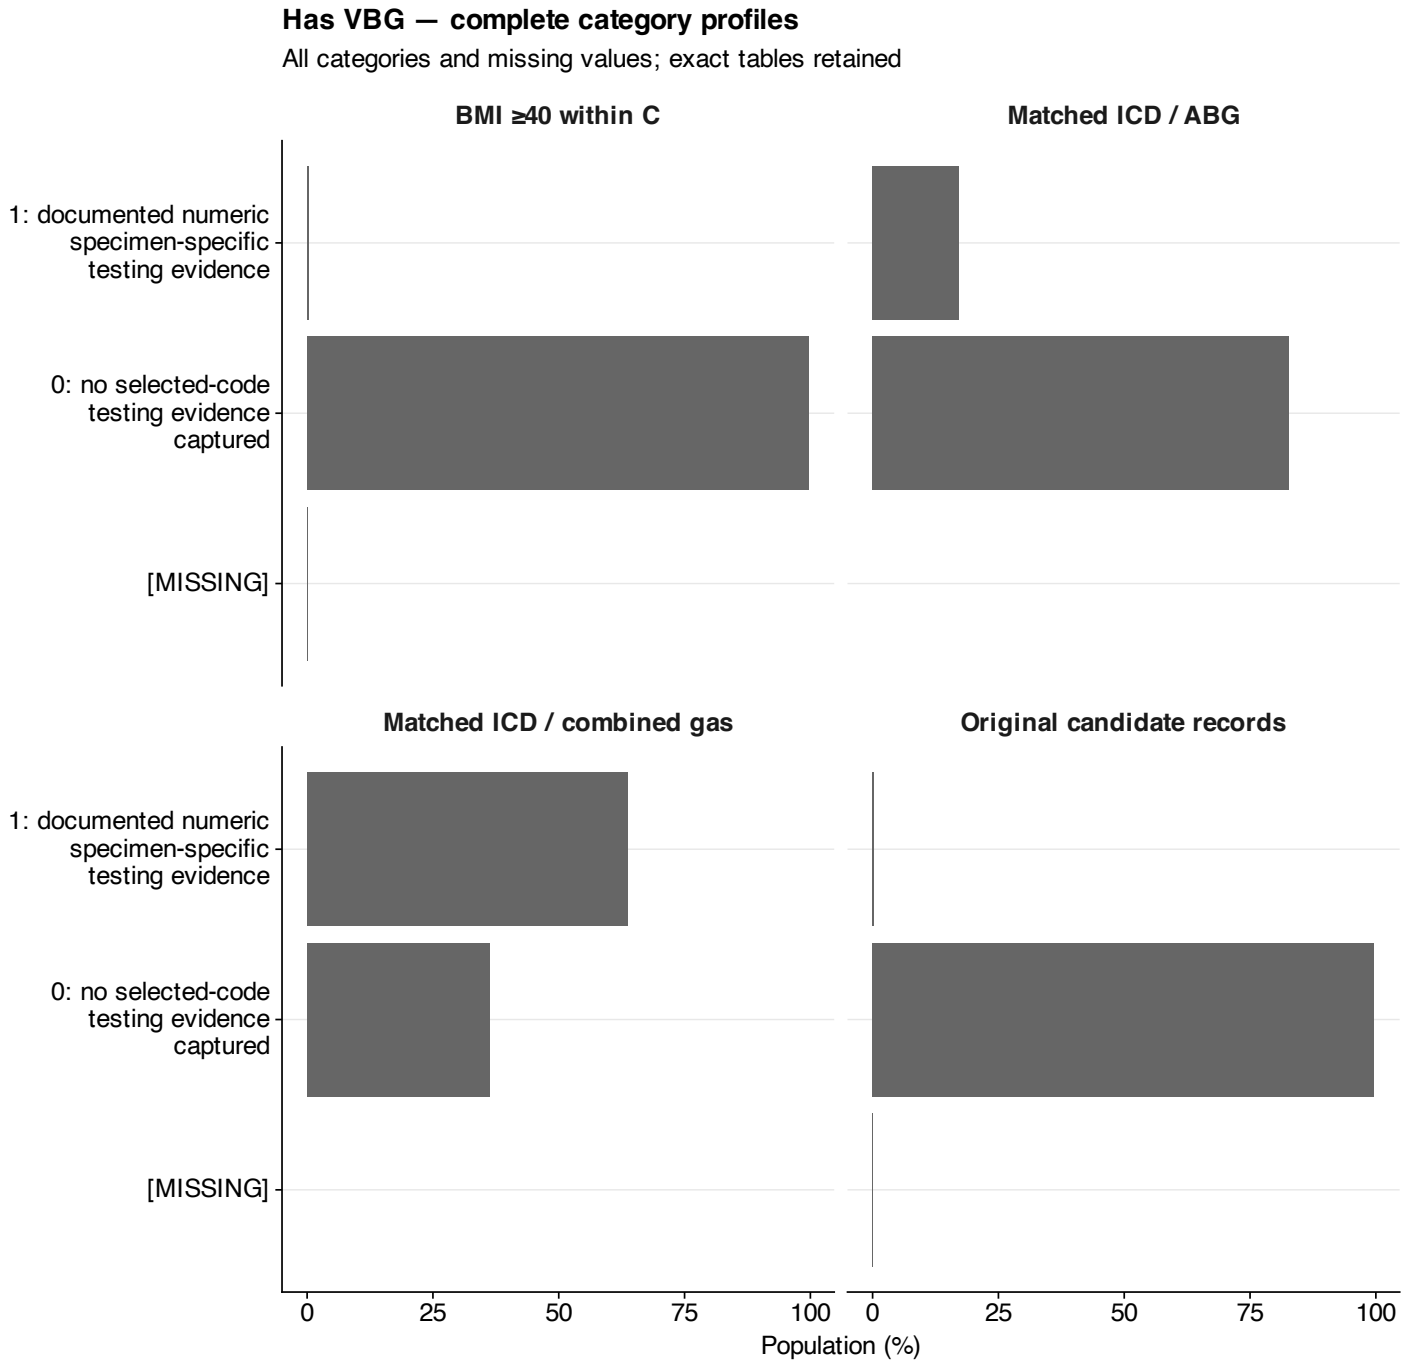

Figure 630: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete has_vbg stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

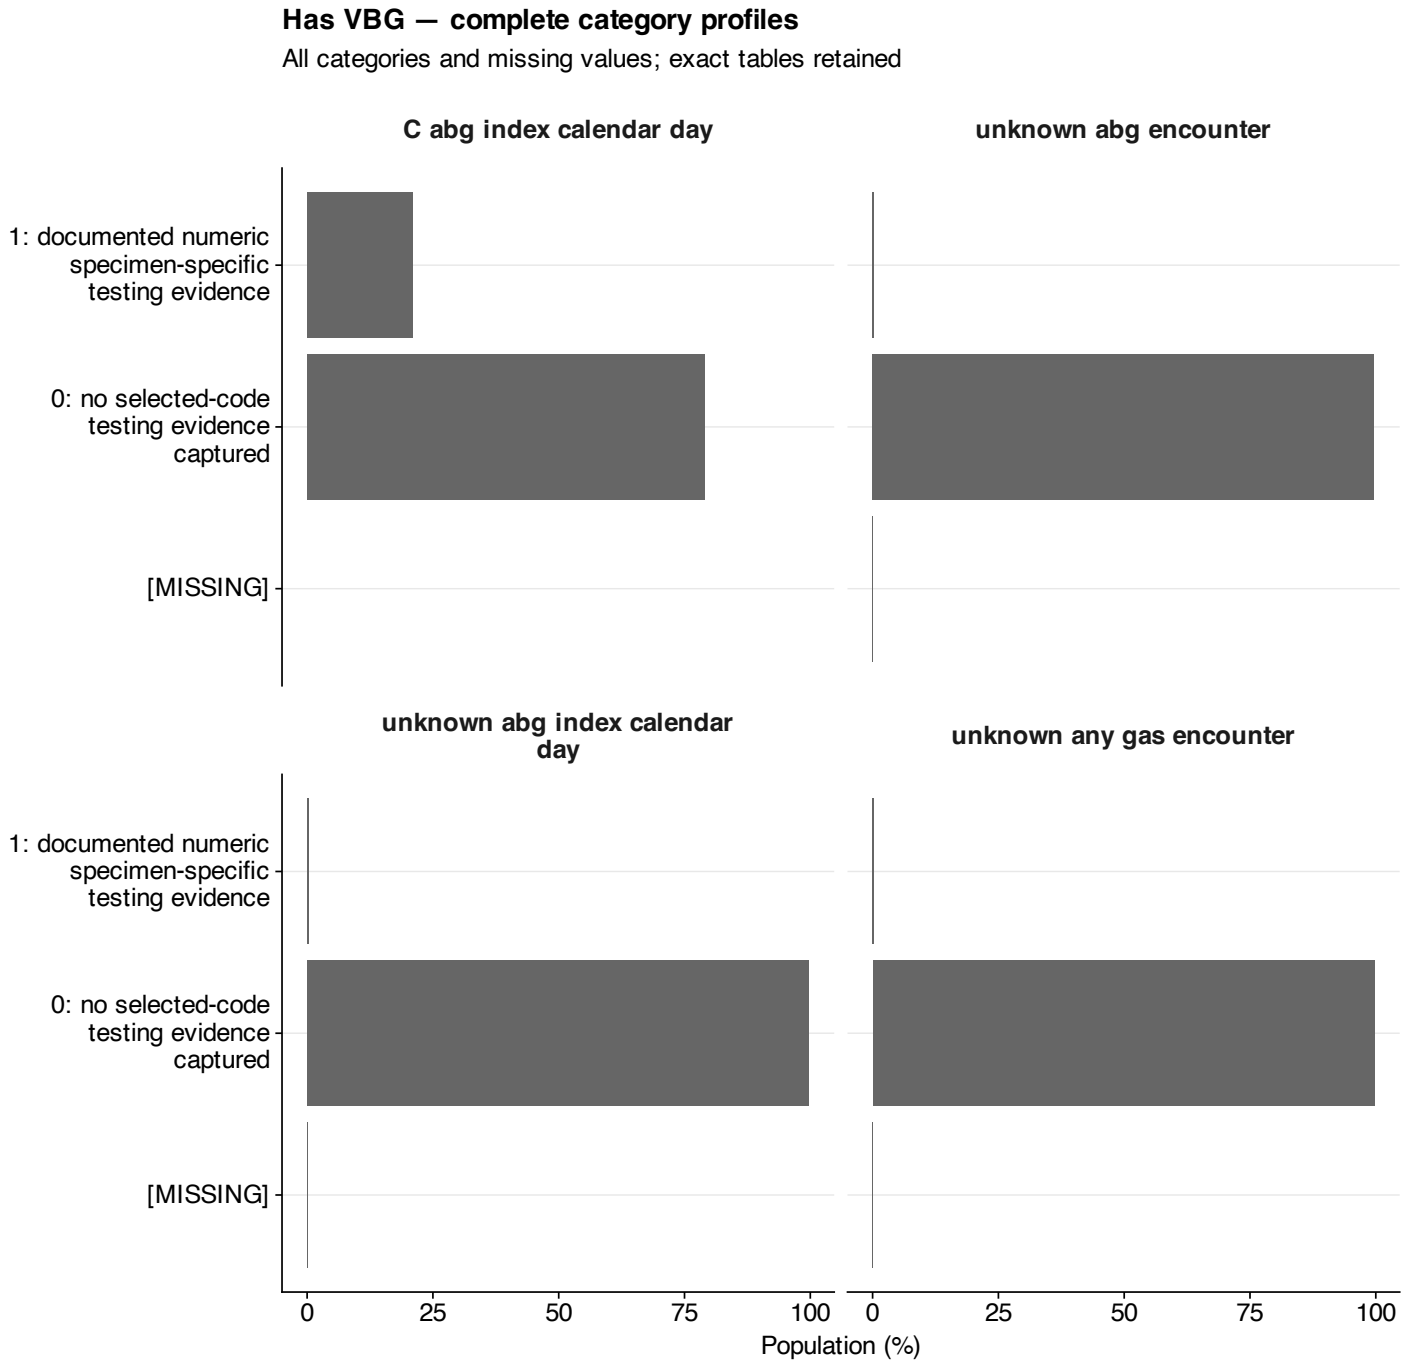

Figure 631: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete has_vbg stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

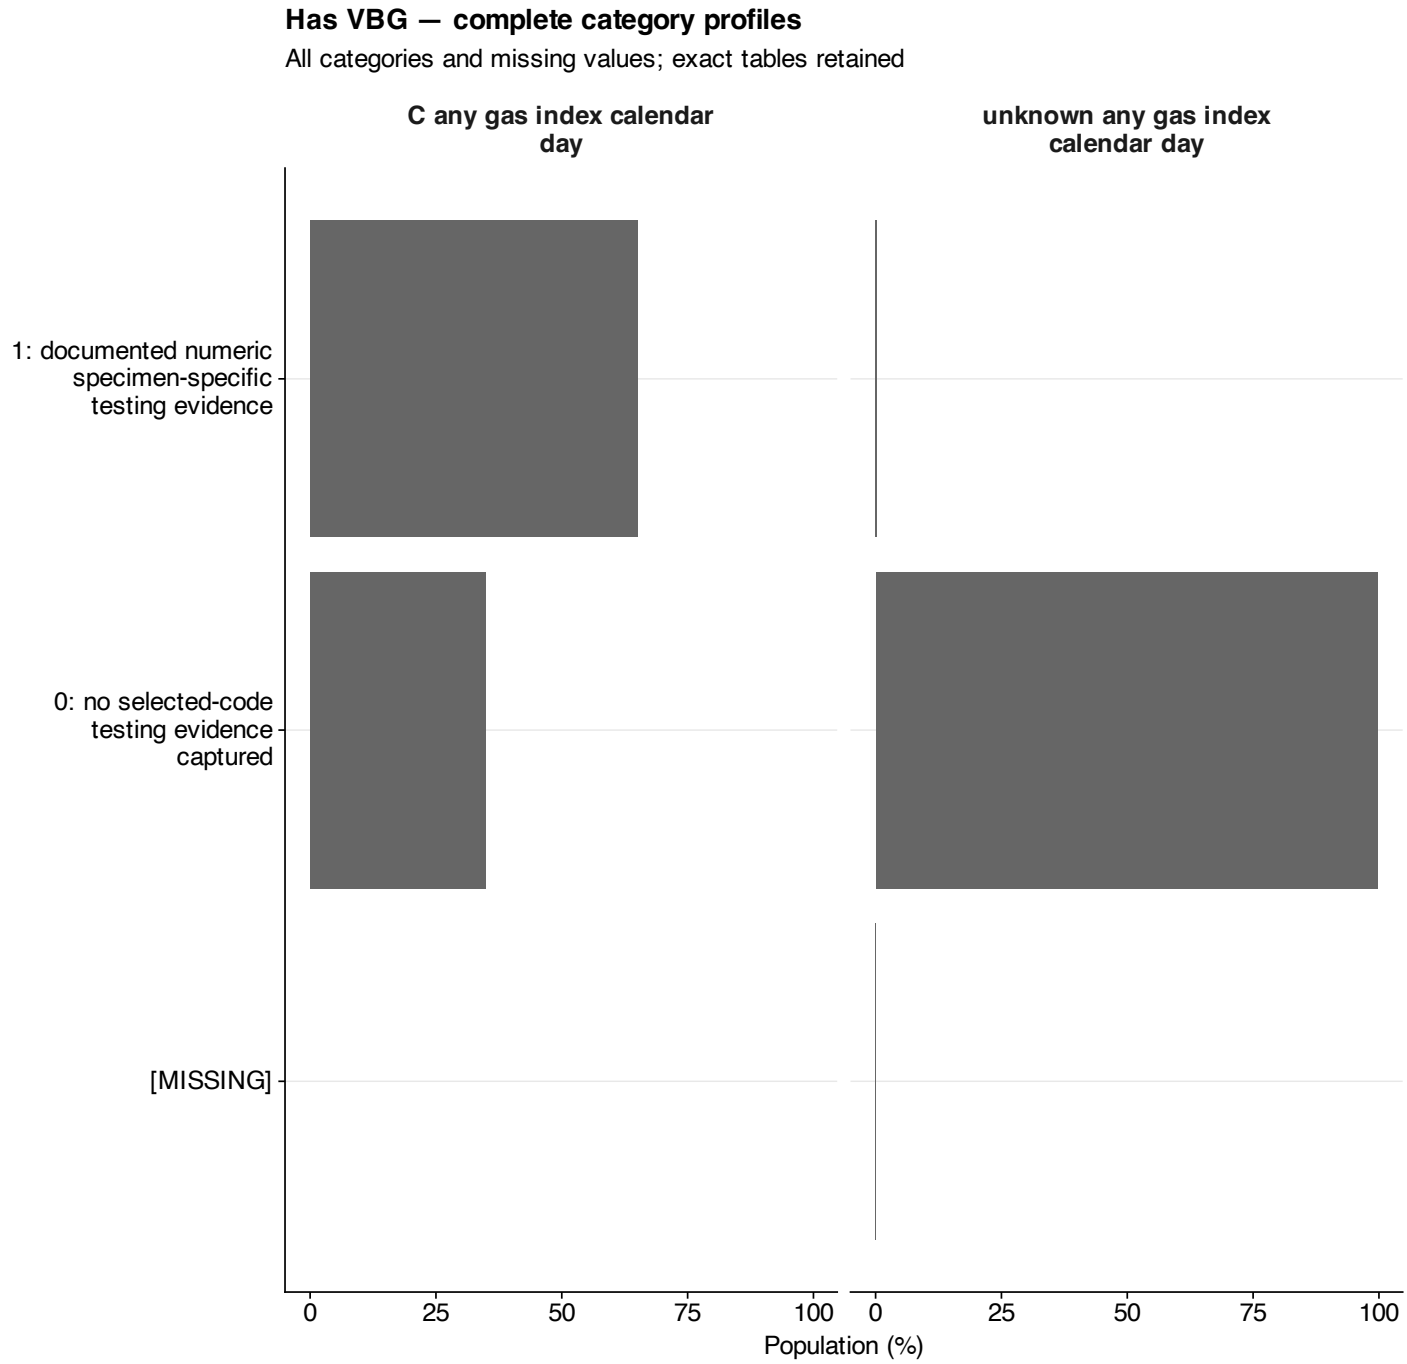

Figure 632: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete has_vbg stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

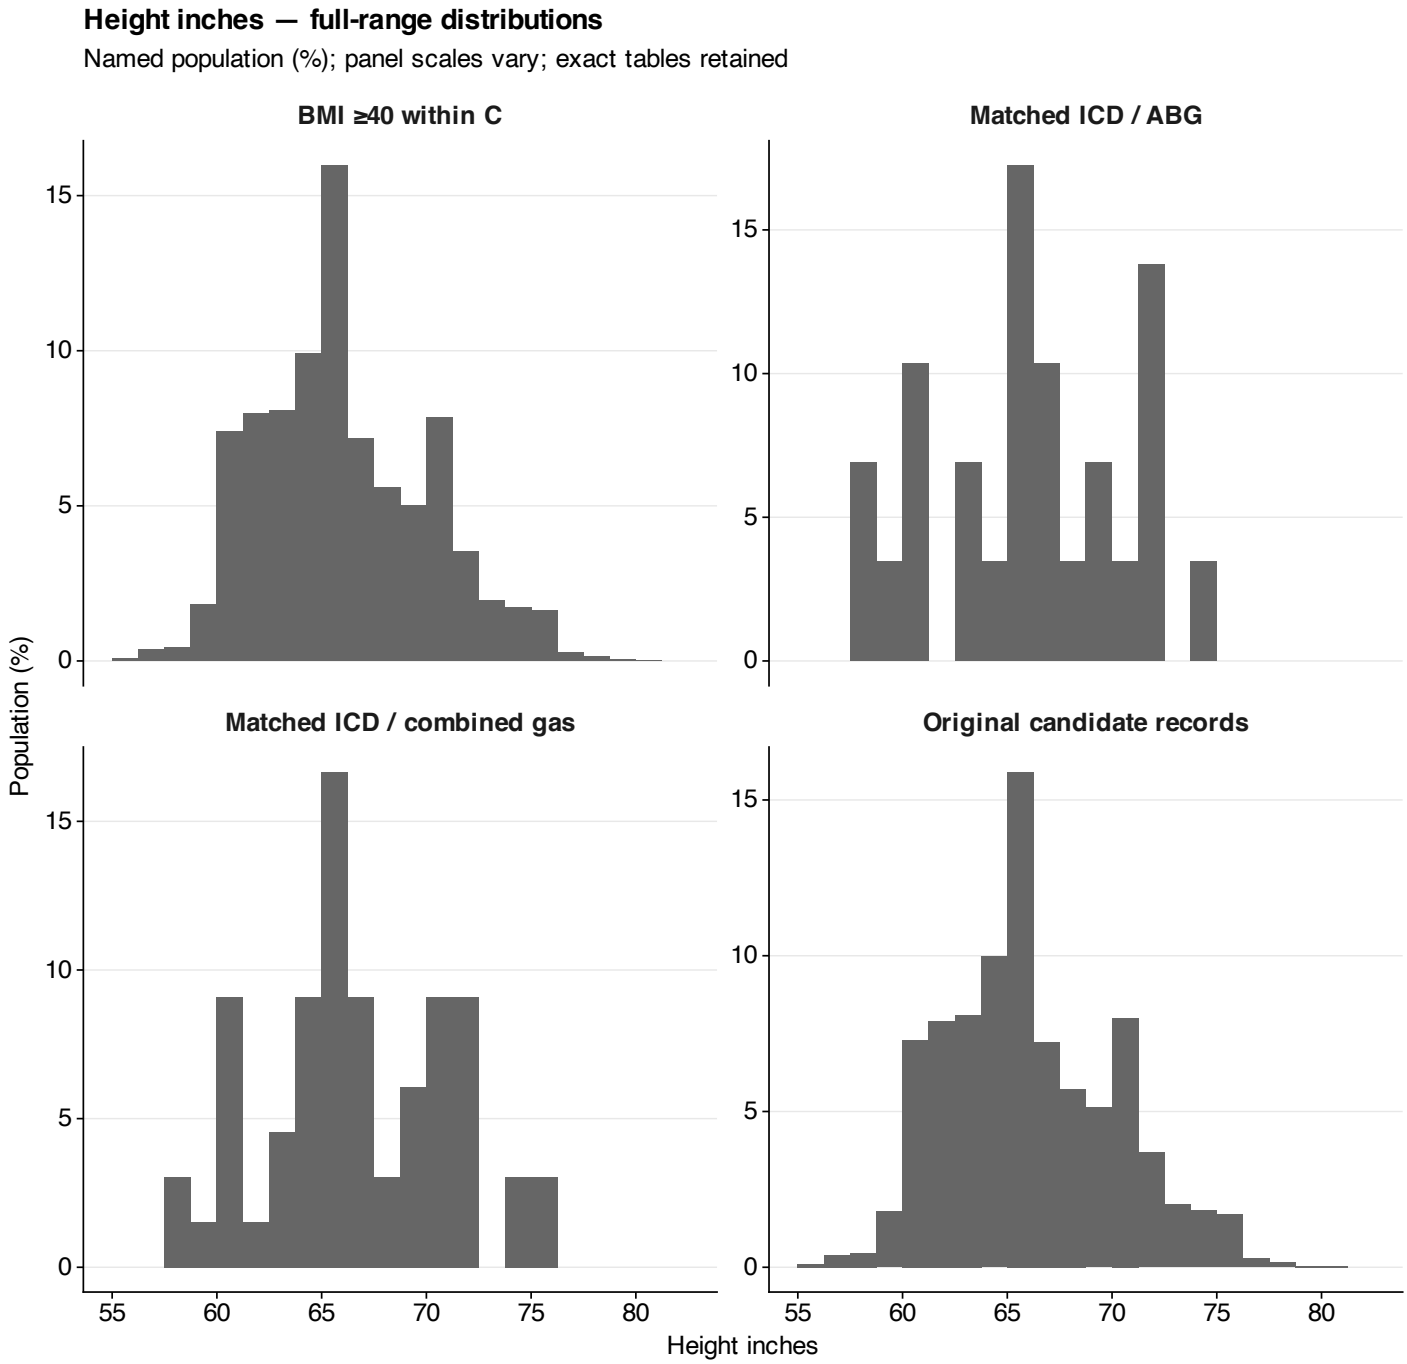

Figure 633: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete height_inches stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

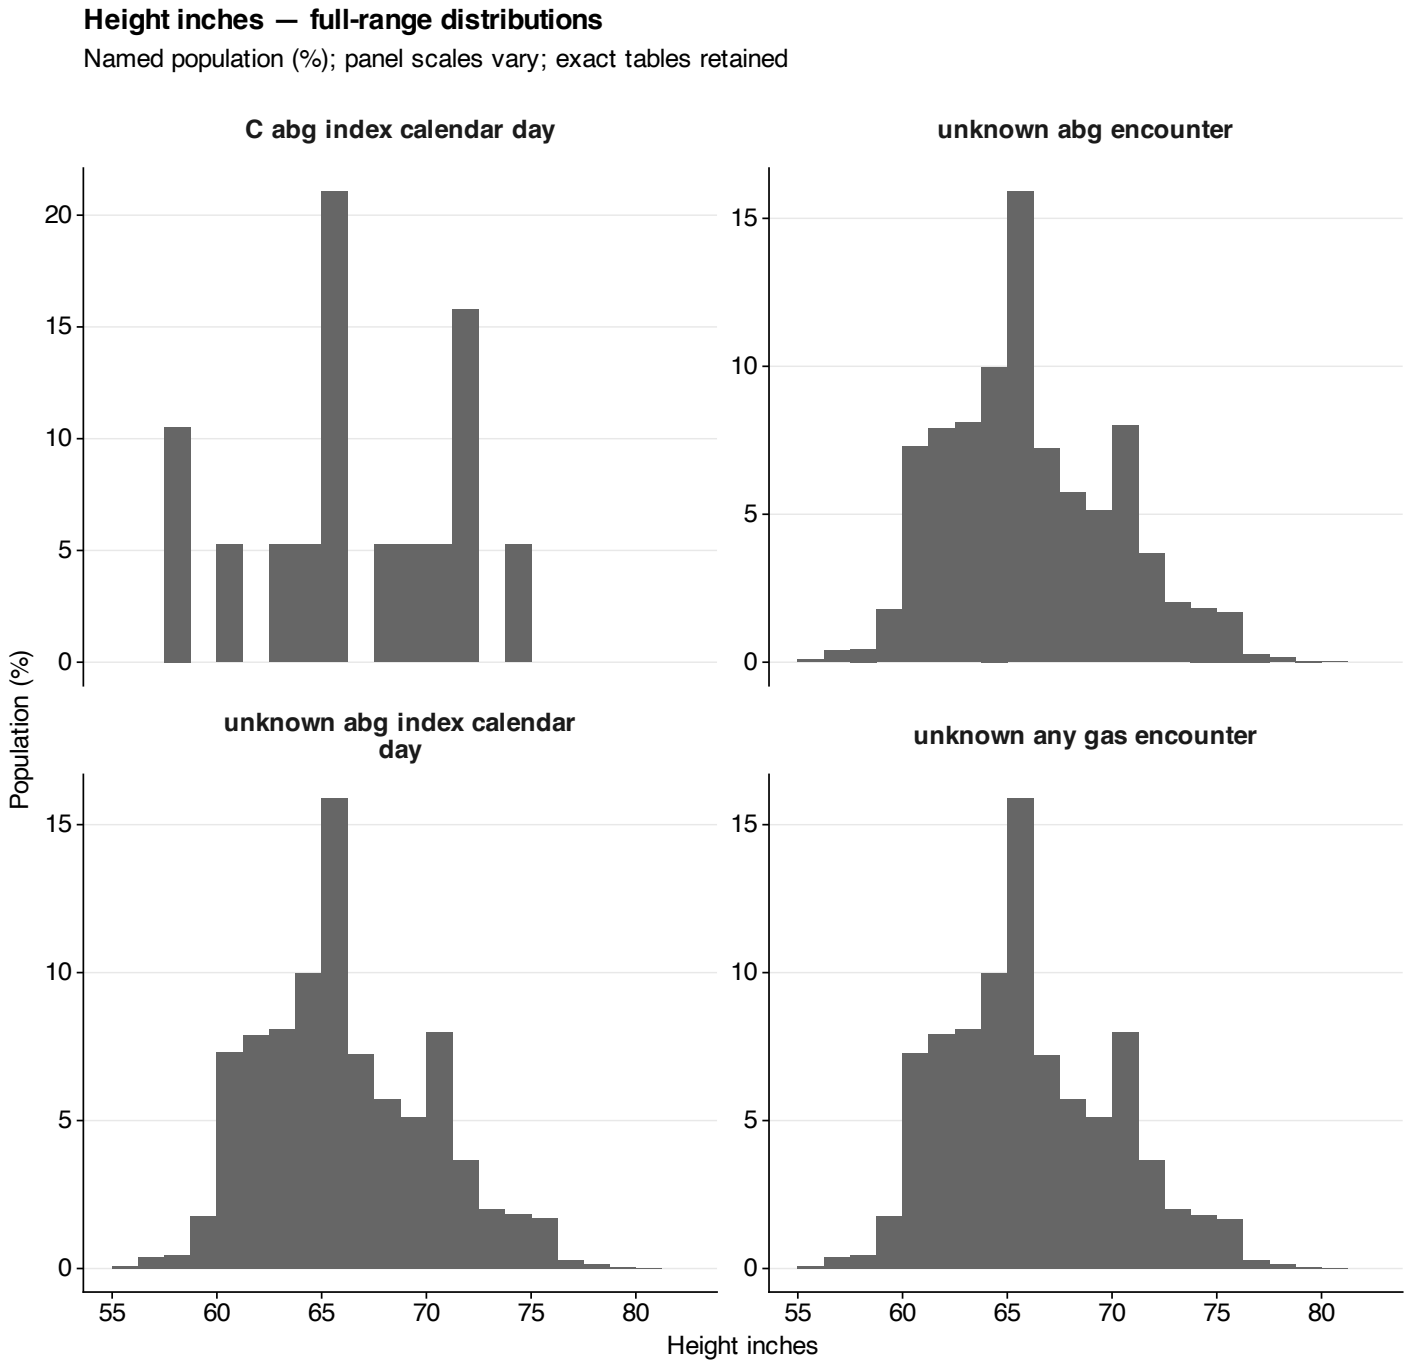

Figure 634: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete height_inches stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

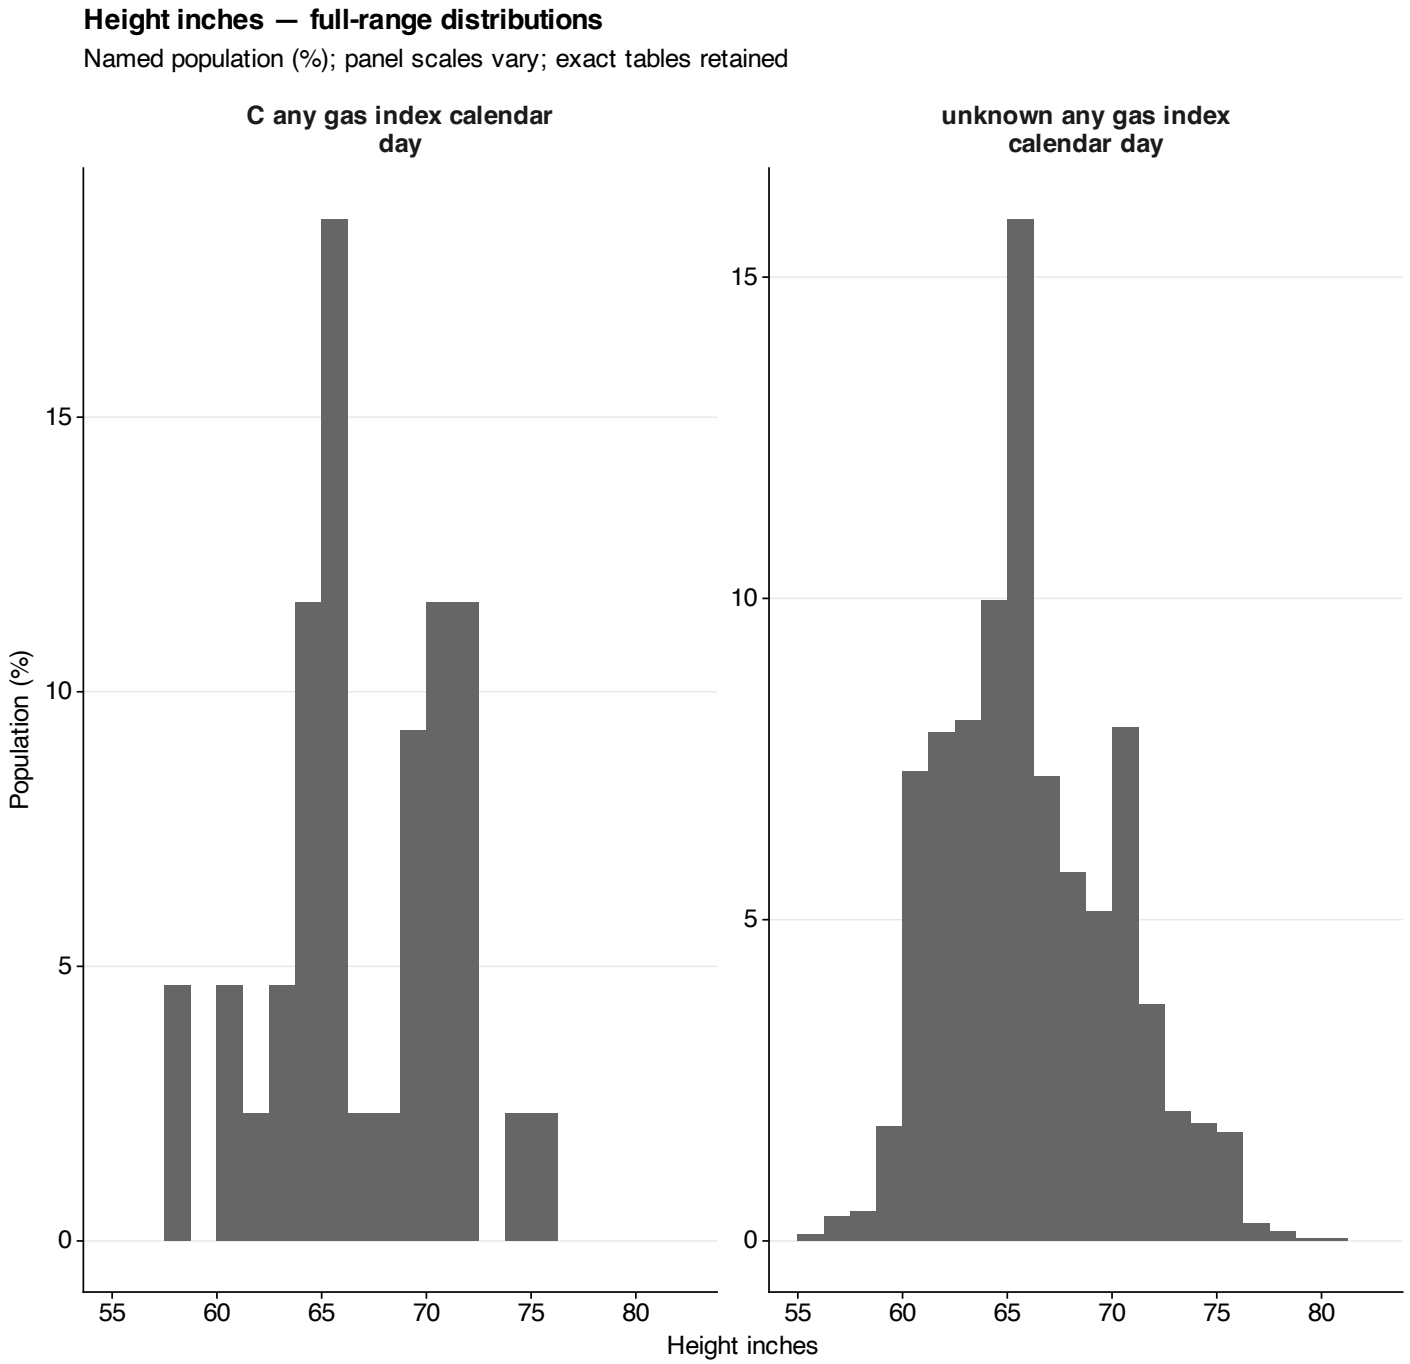

Figure 635: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete height_inches stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

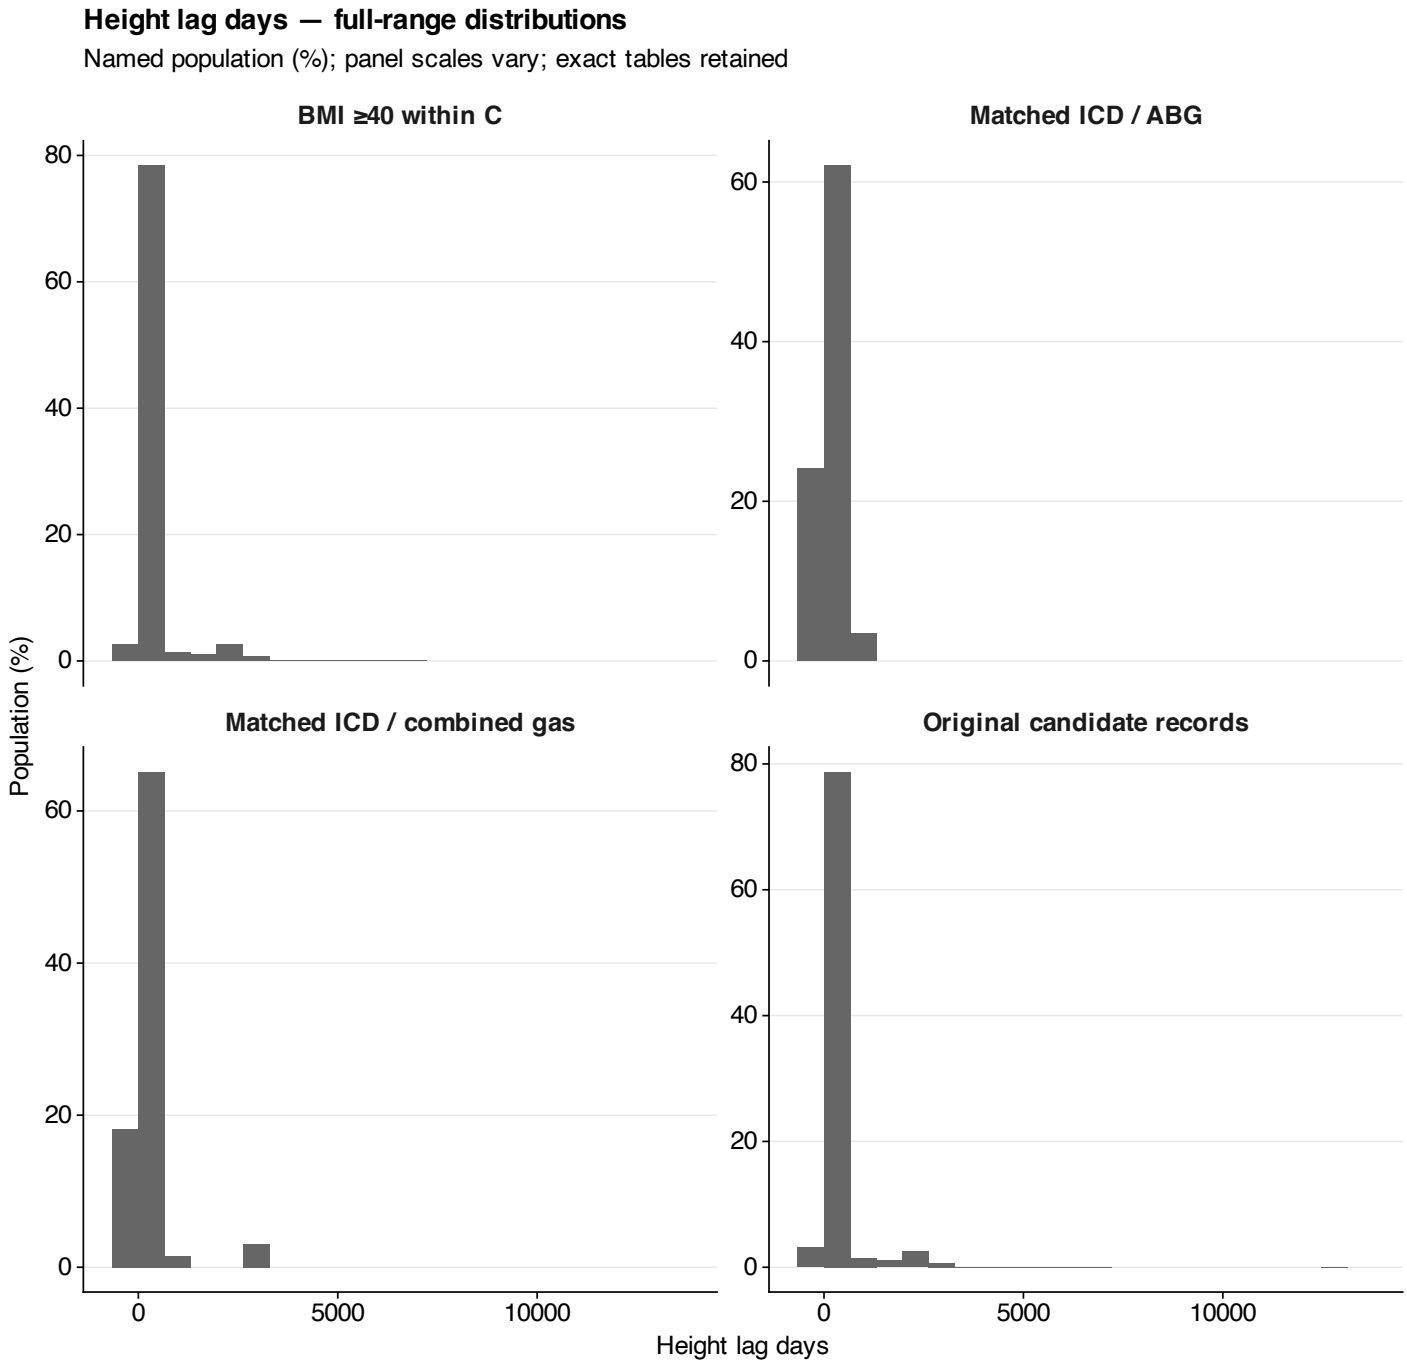

Figure 639: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete height_lag_days stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

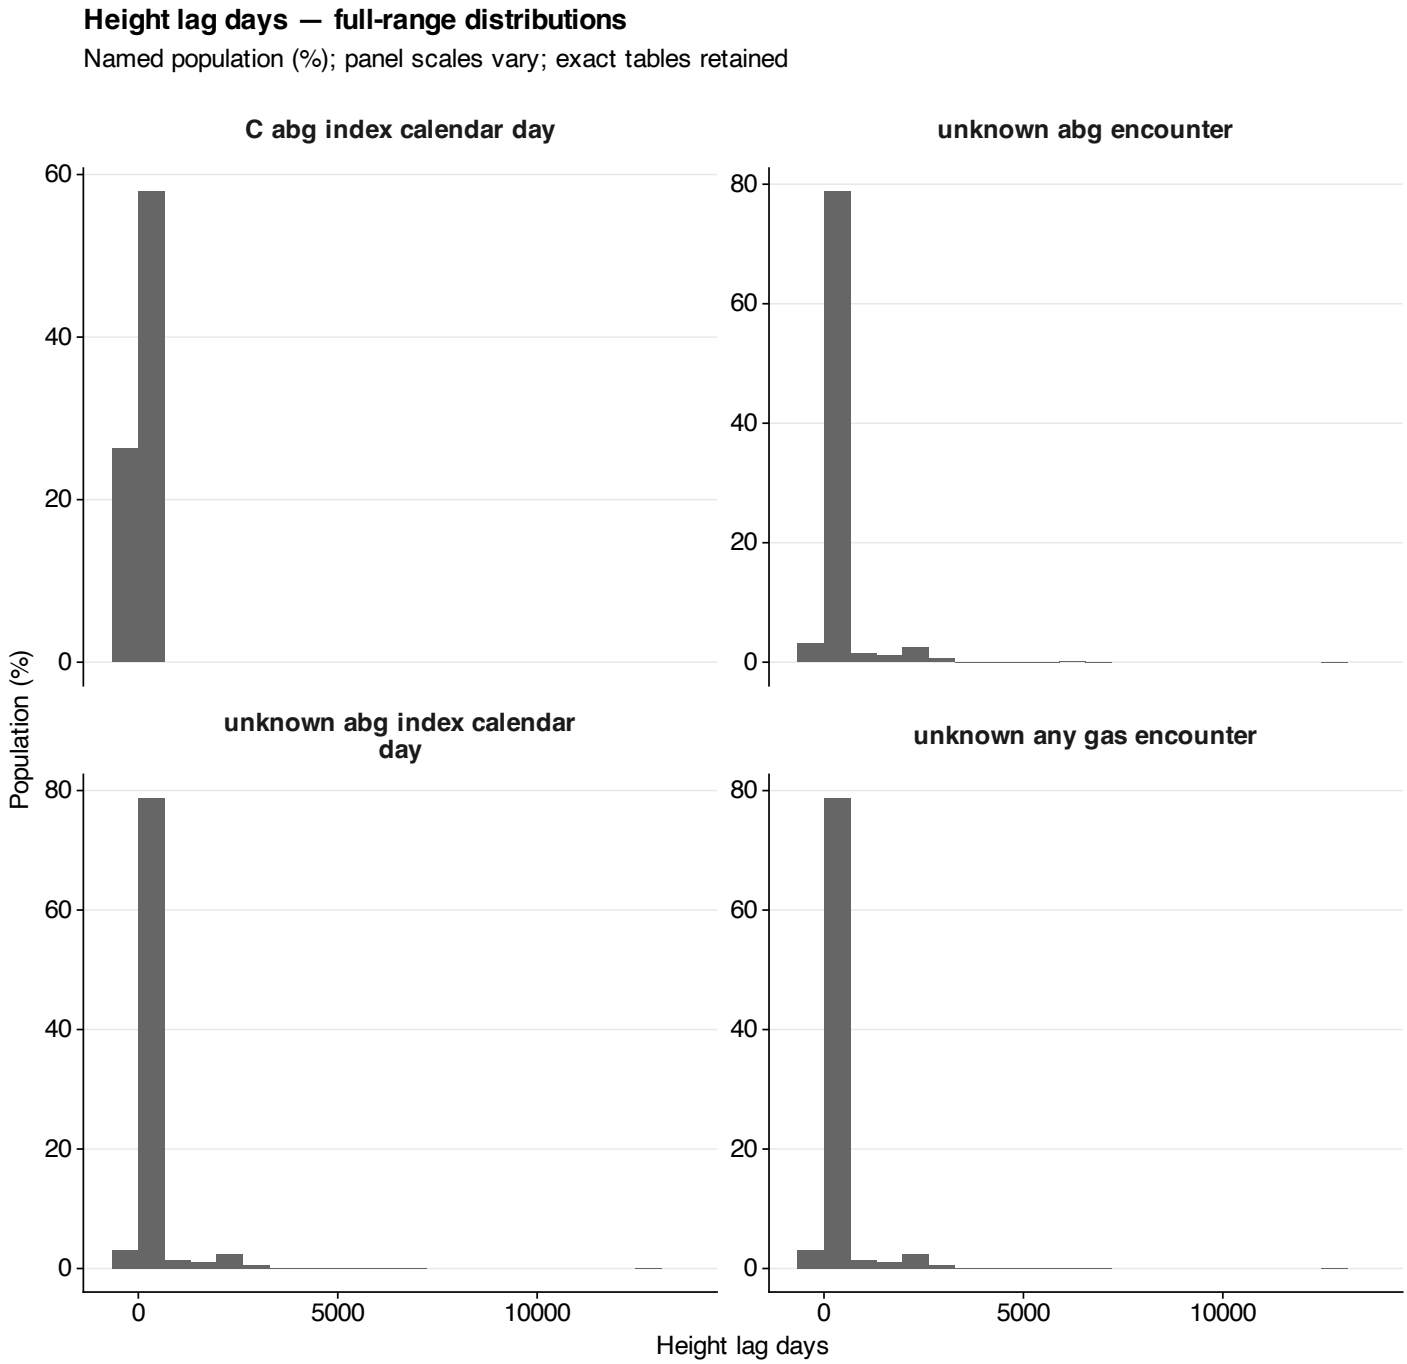

Figure 640: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete height_lag_days stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

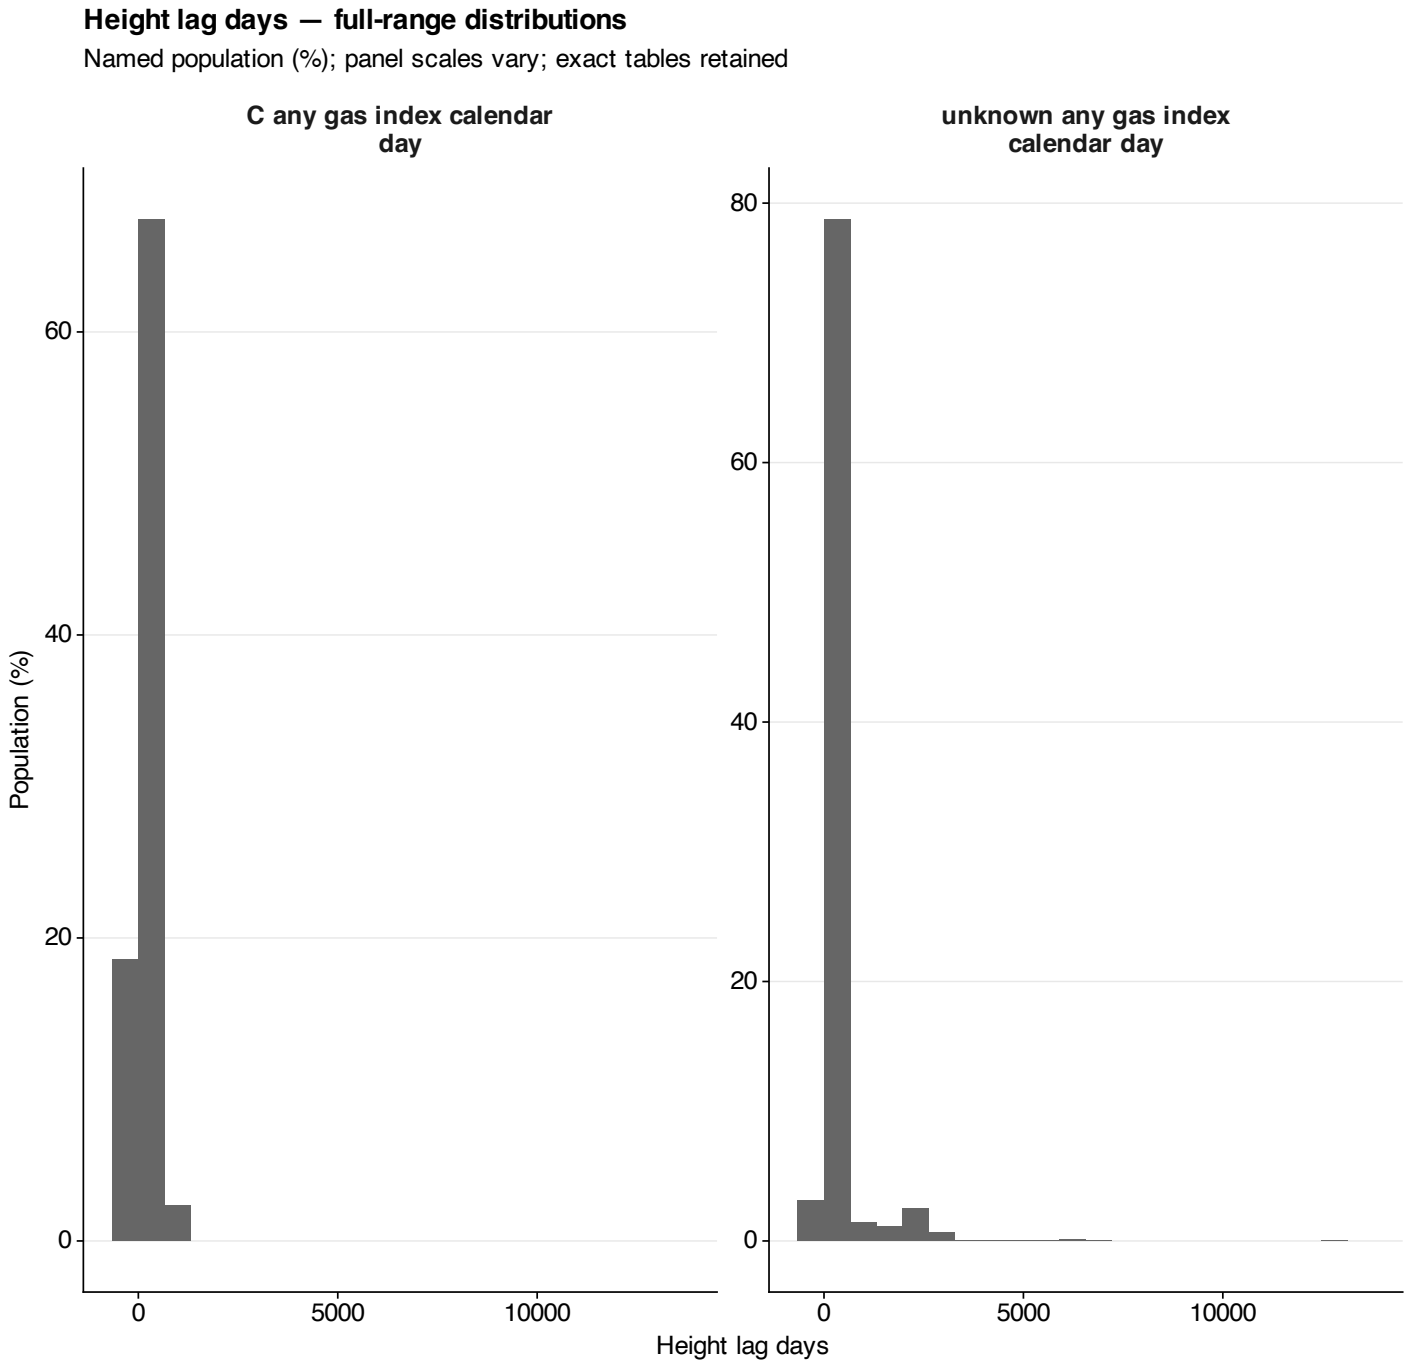

Figure 641: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete height_lag_days stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

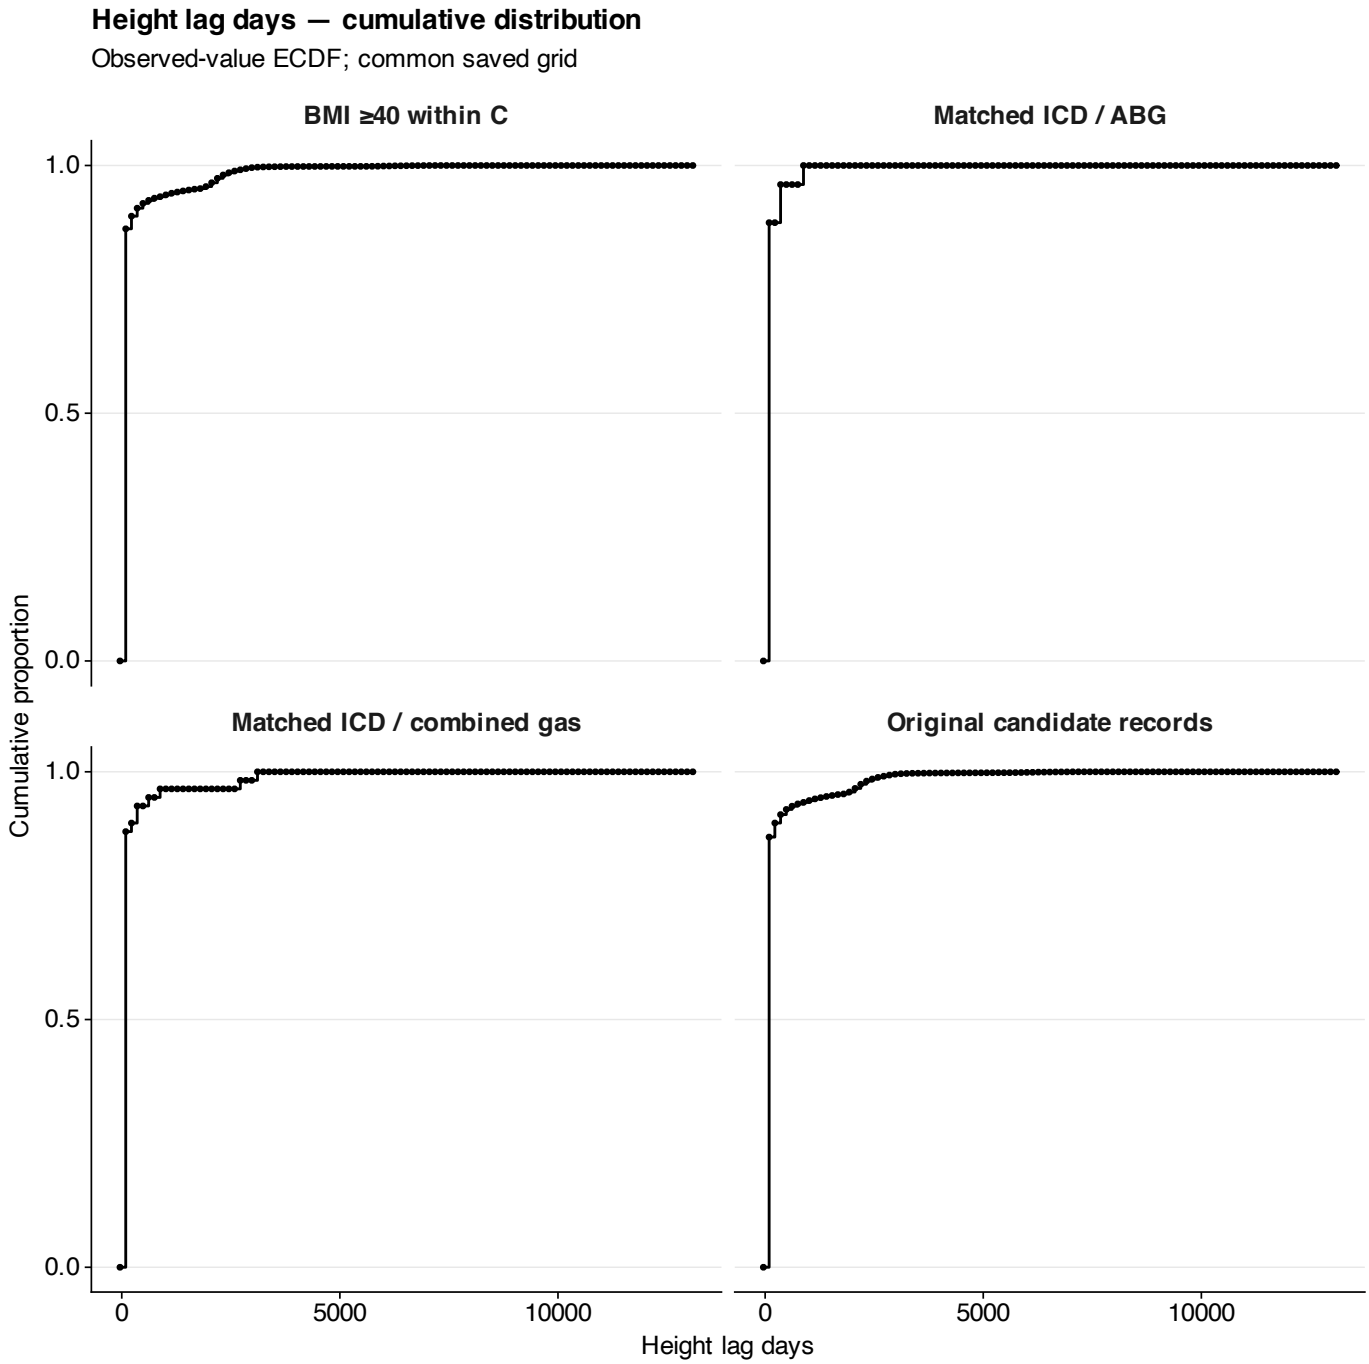

Figure 642: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. height_lag_days ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

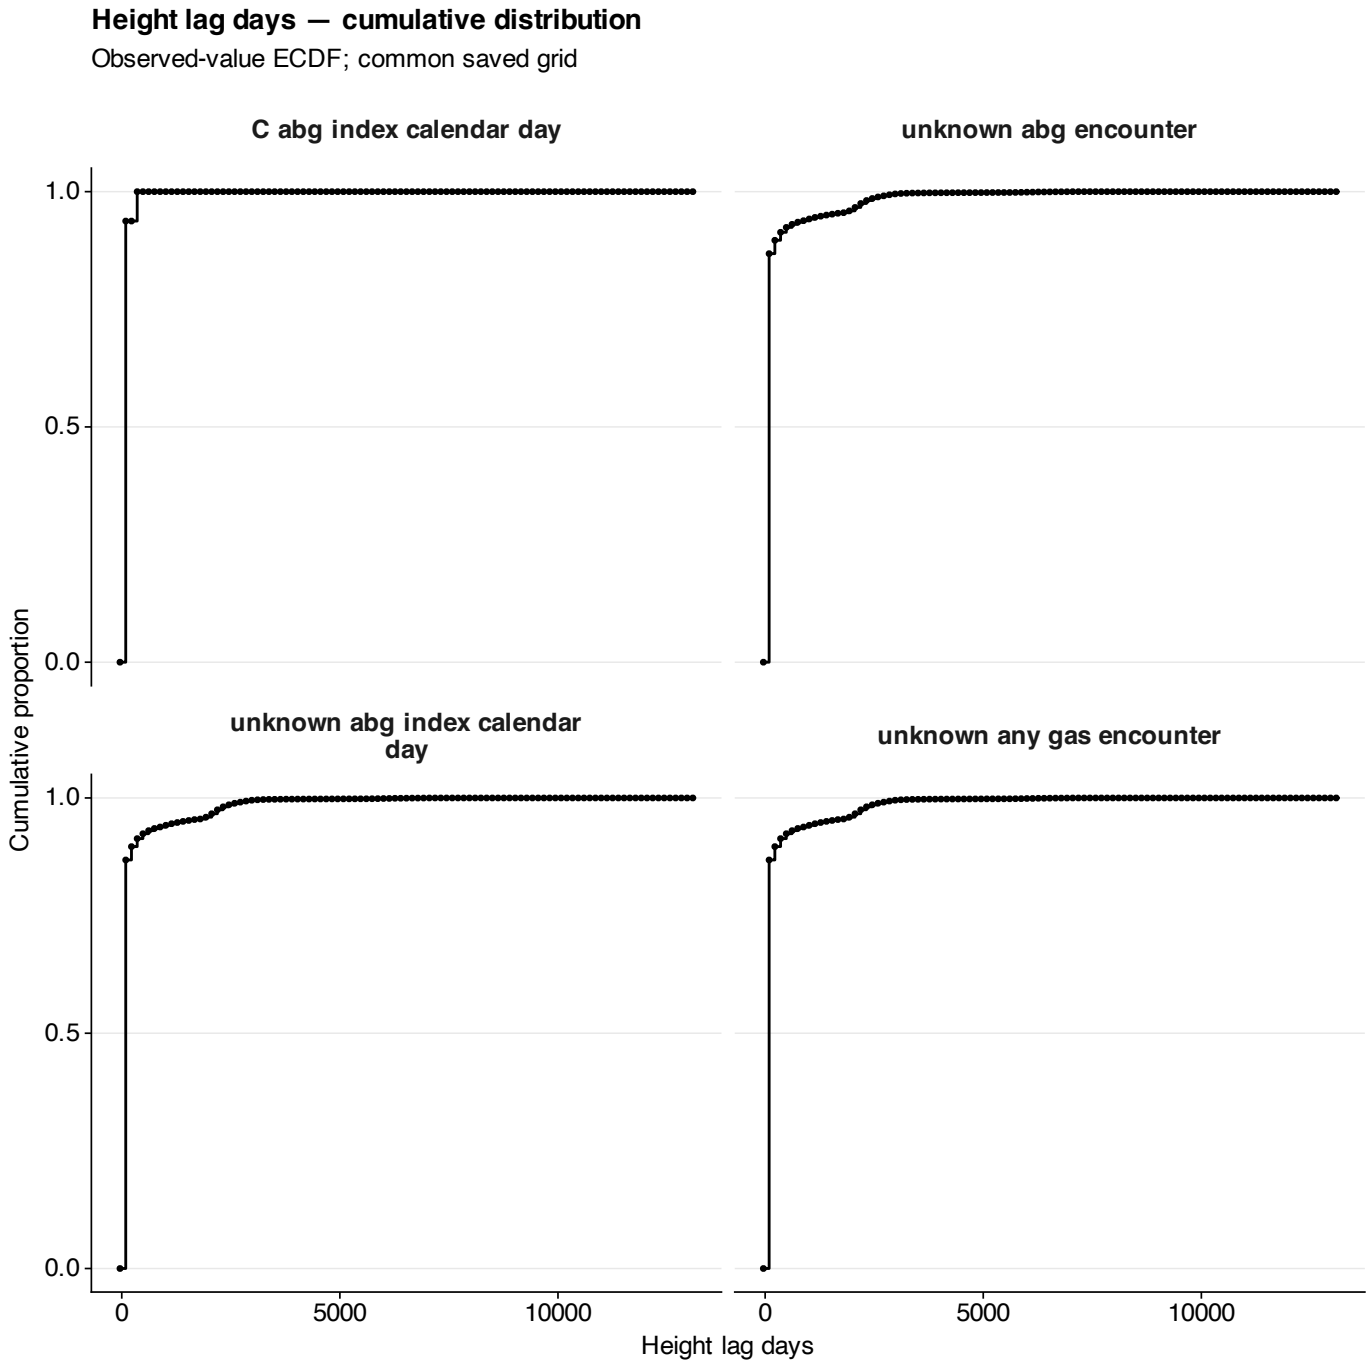

Figure 643: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. height_lag_days ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

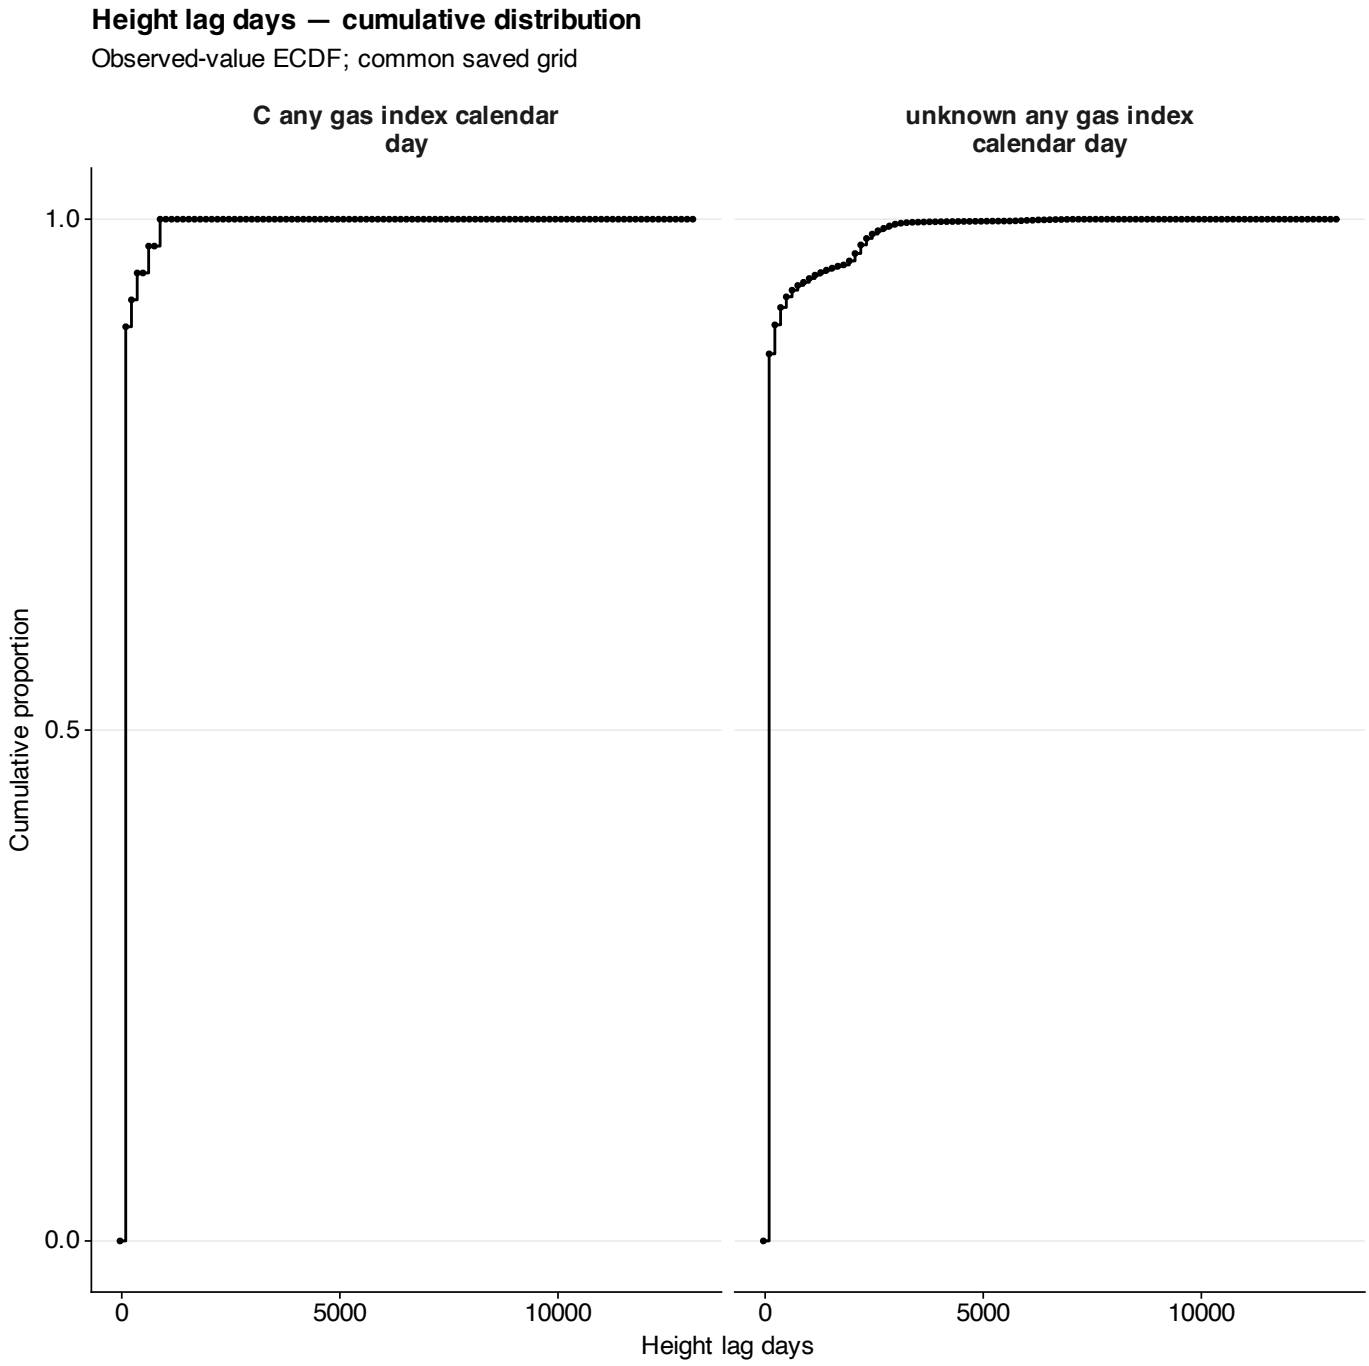

Figure 644: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. height_lag_days ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

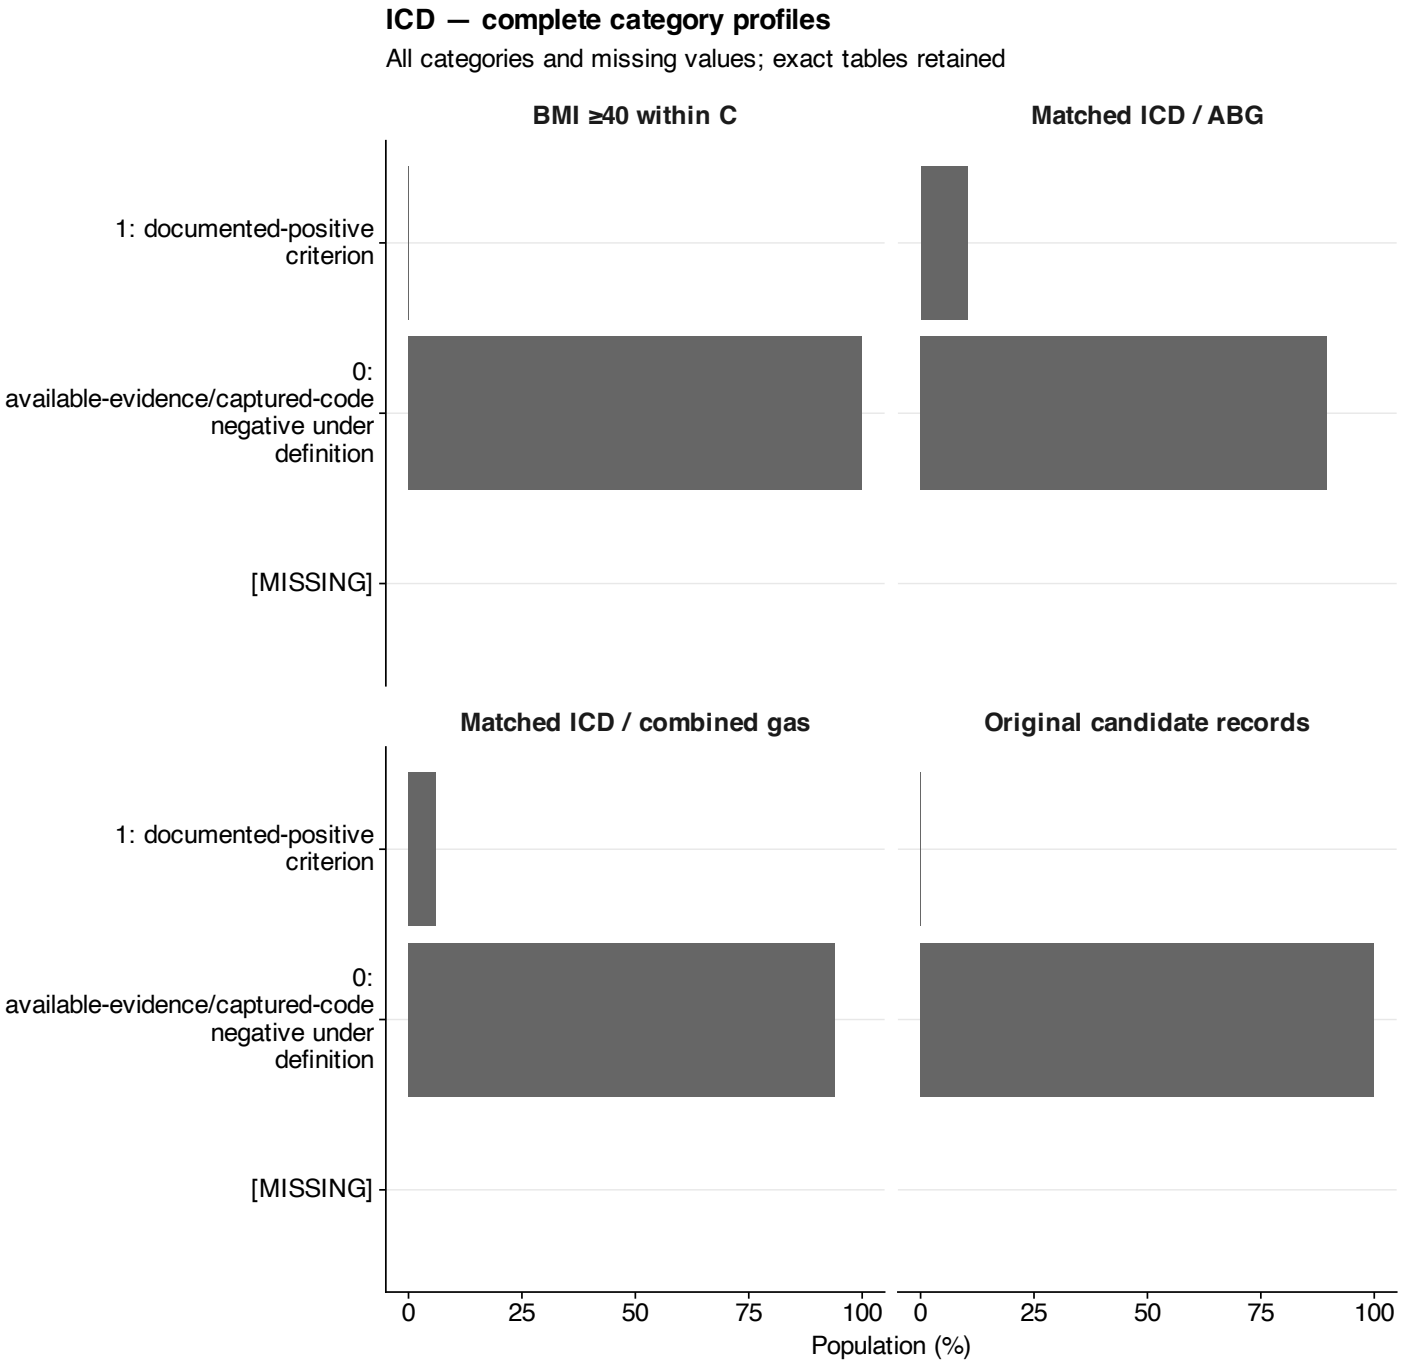

Figure 645: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete icd stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

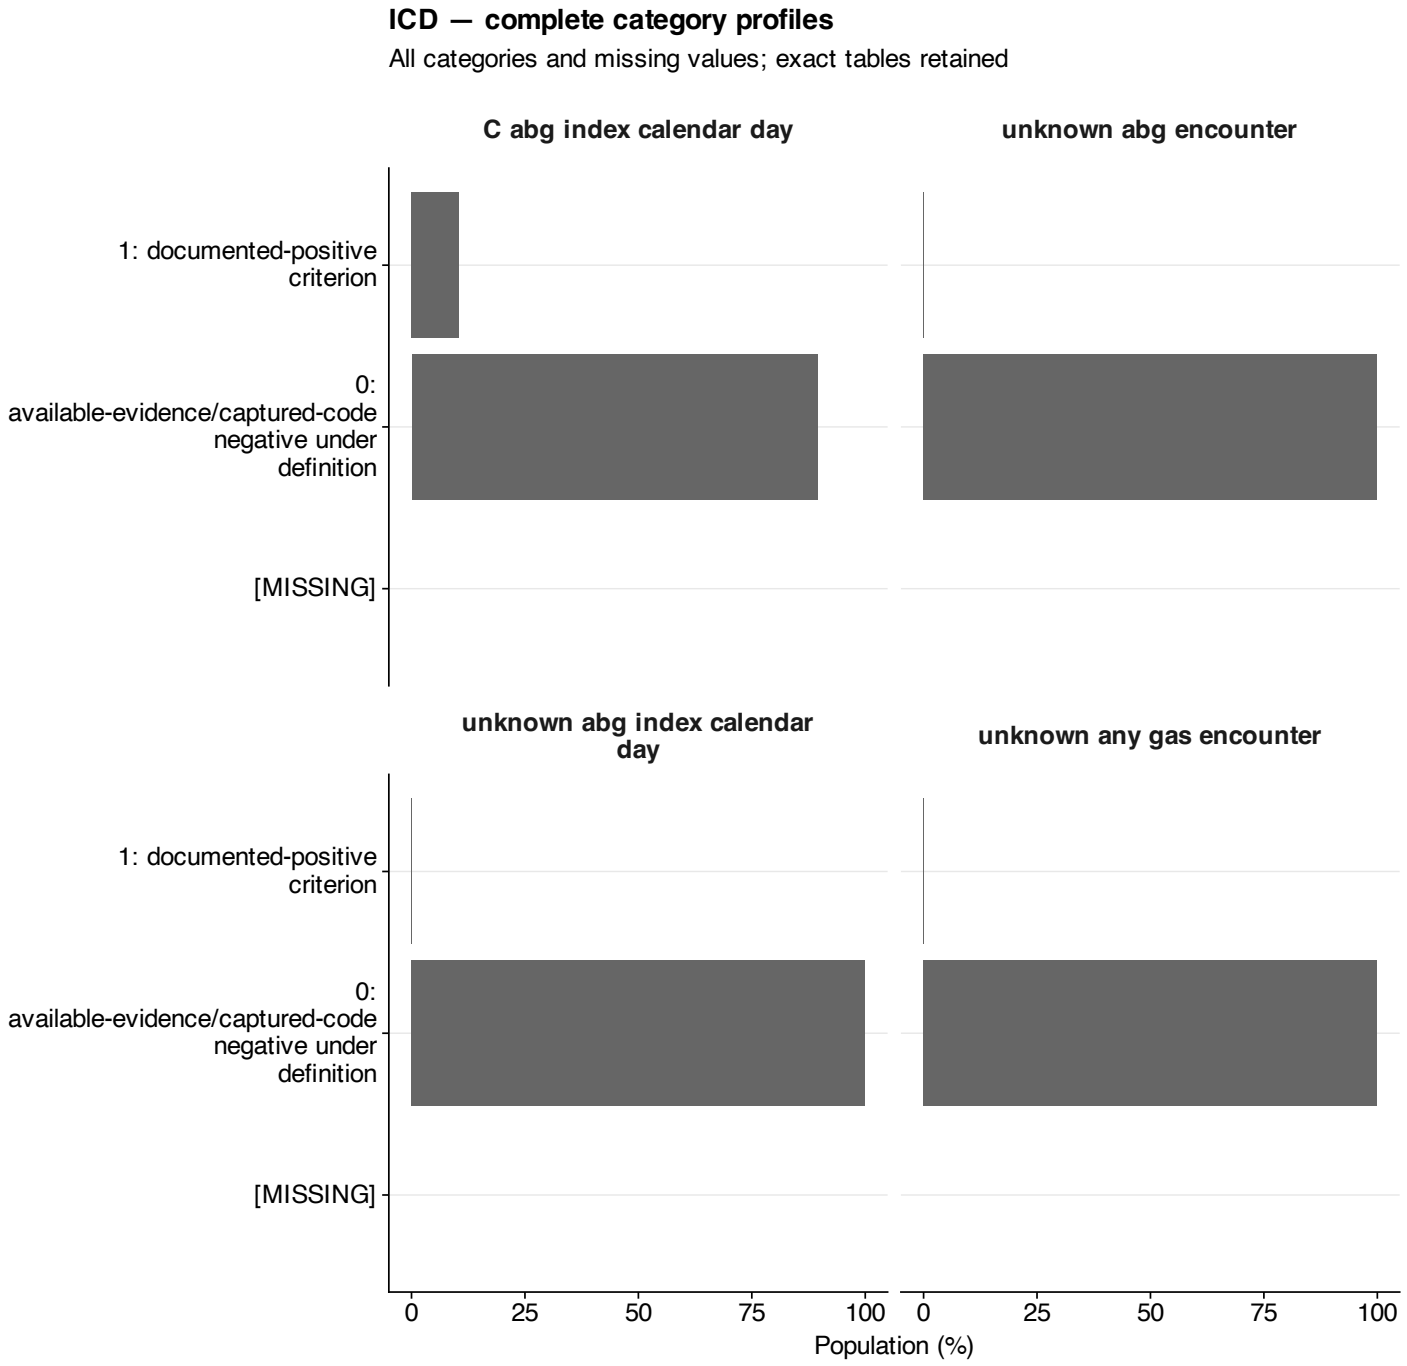

Figure 646: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete icd stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

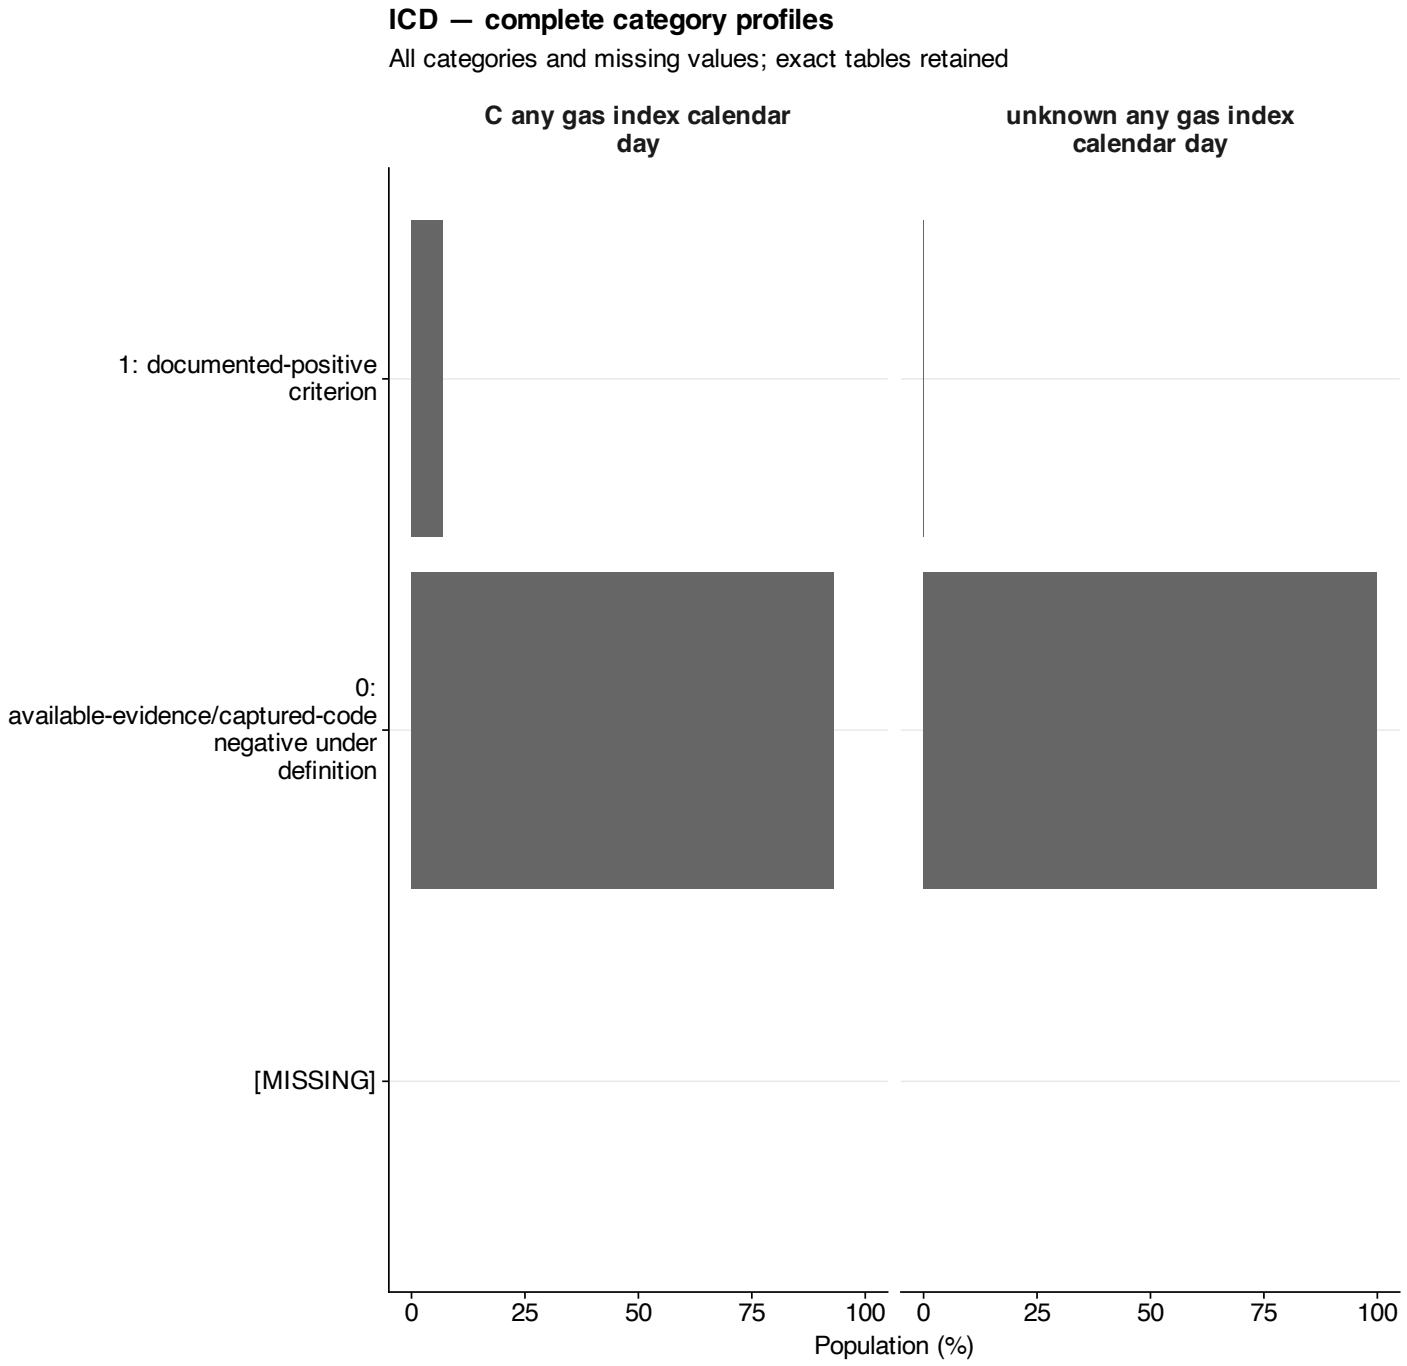

Figure 647: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete icd stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

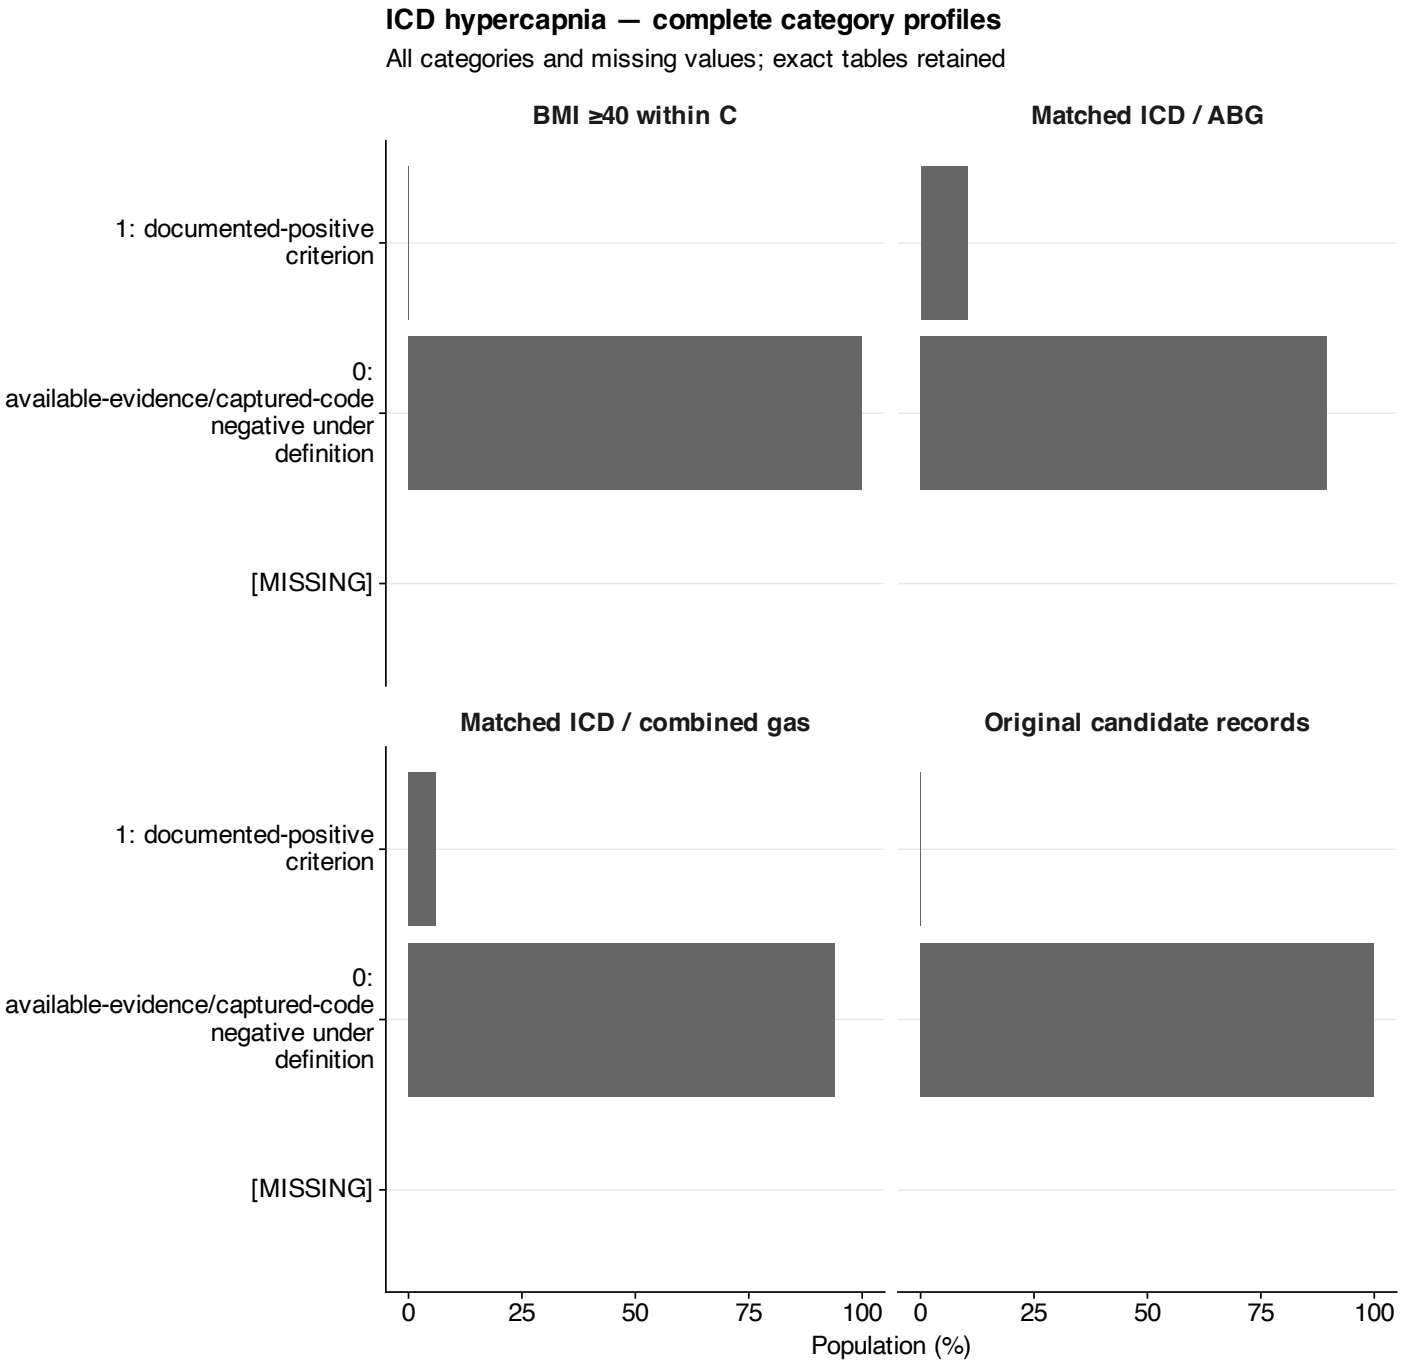

Figure 648: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete icd_hypercapnia stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

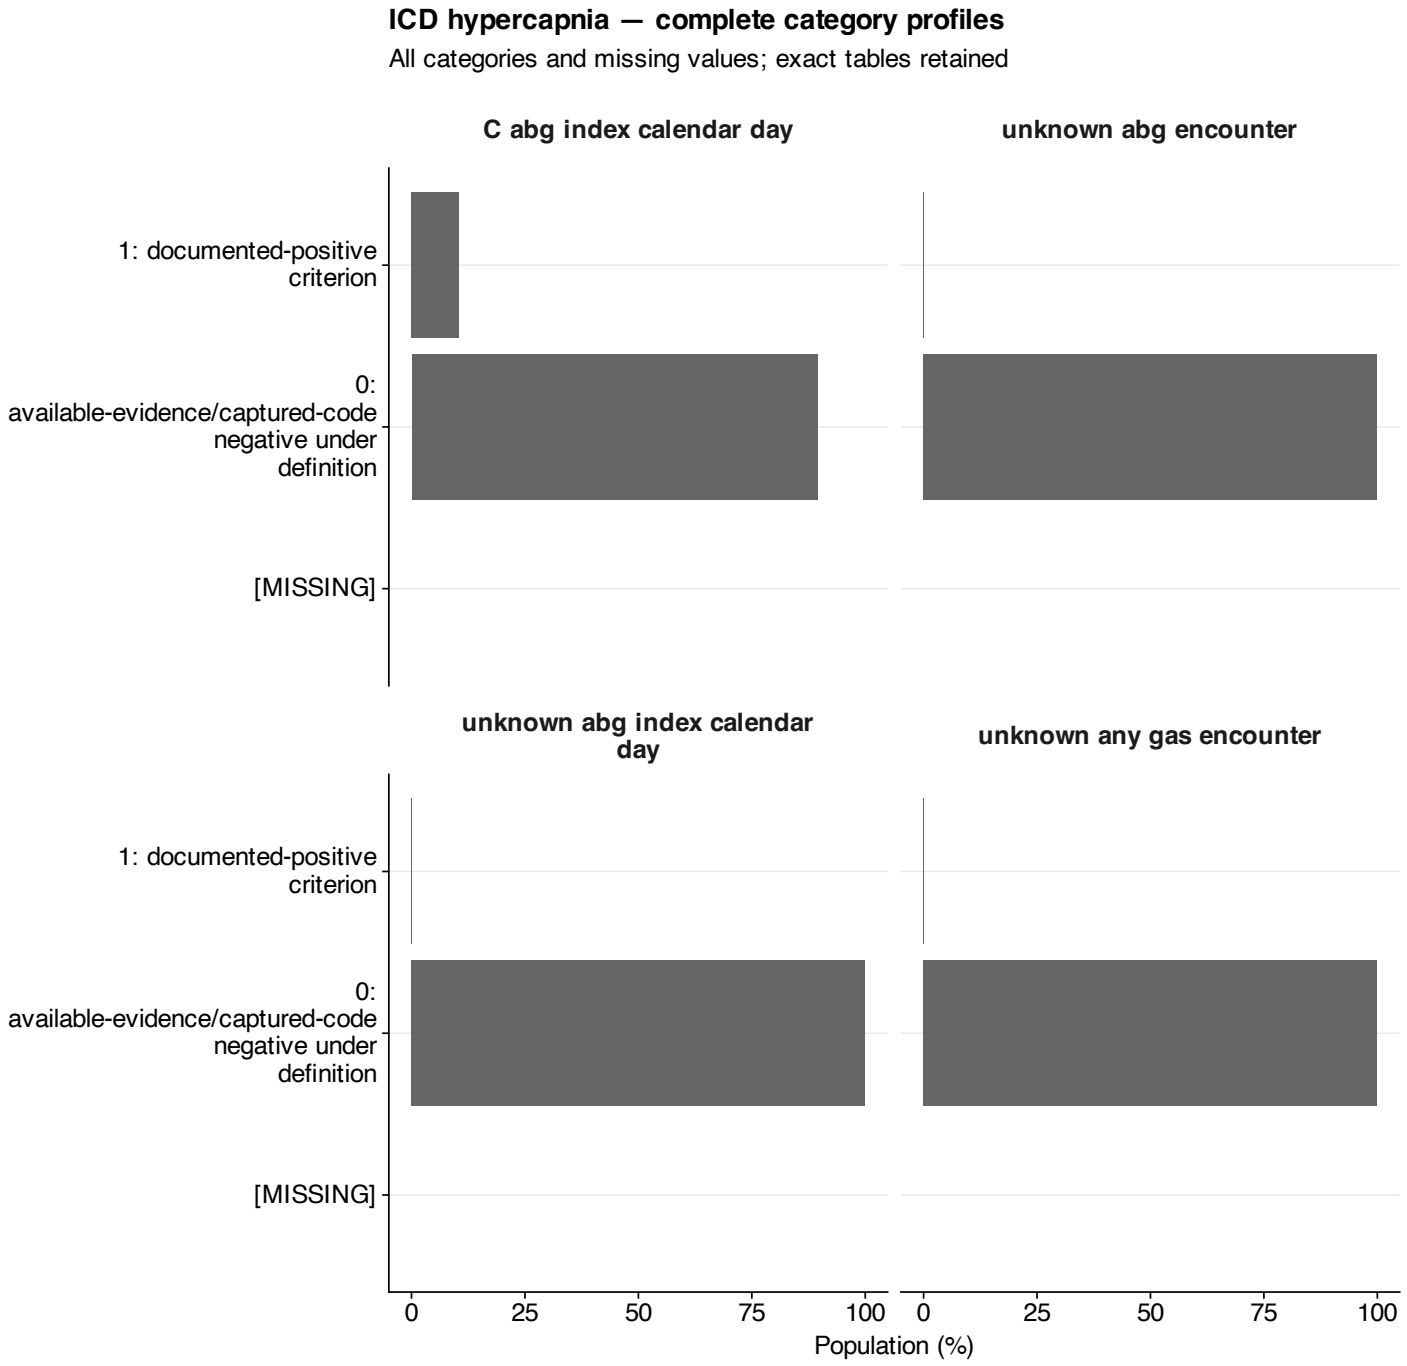

Figure 649: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete icd_hypercapnia stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

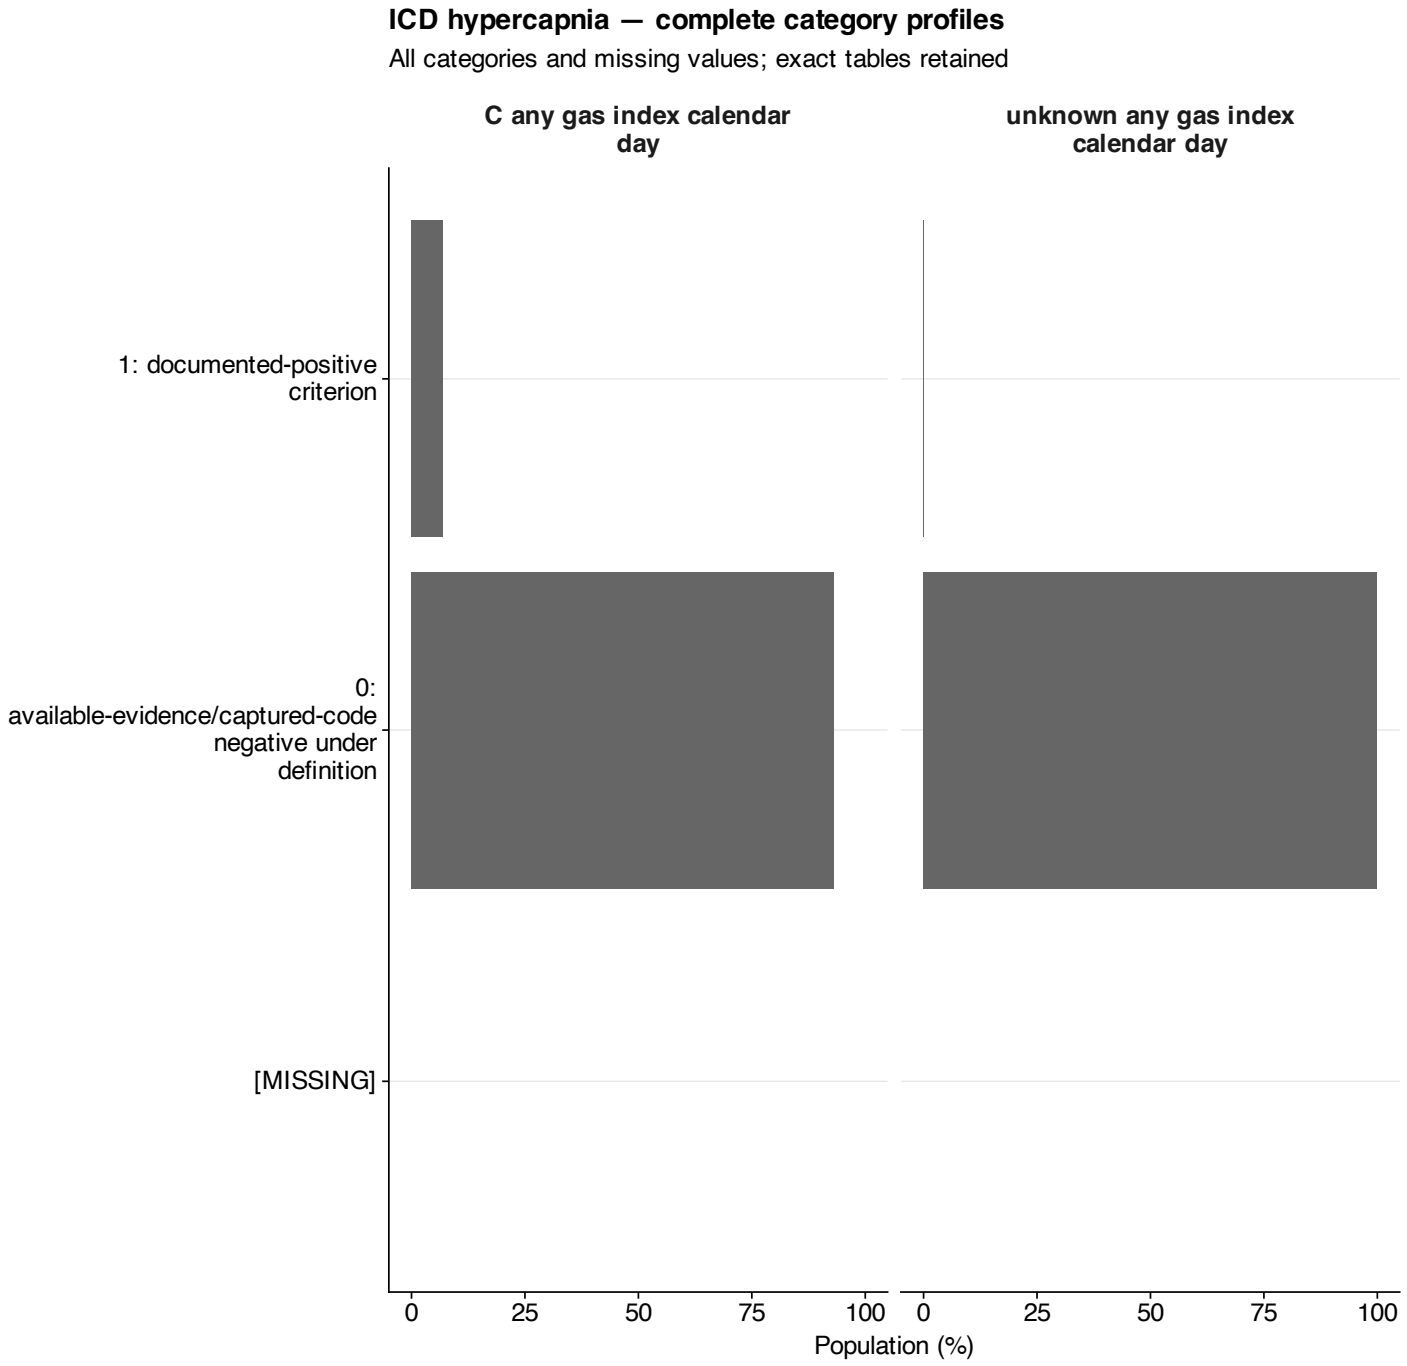

Figure 650: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete icd_hypercapnia stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

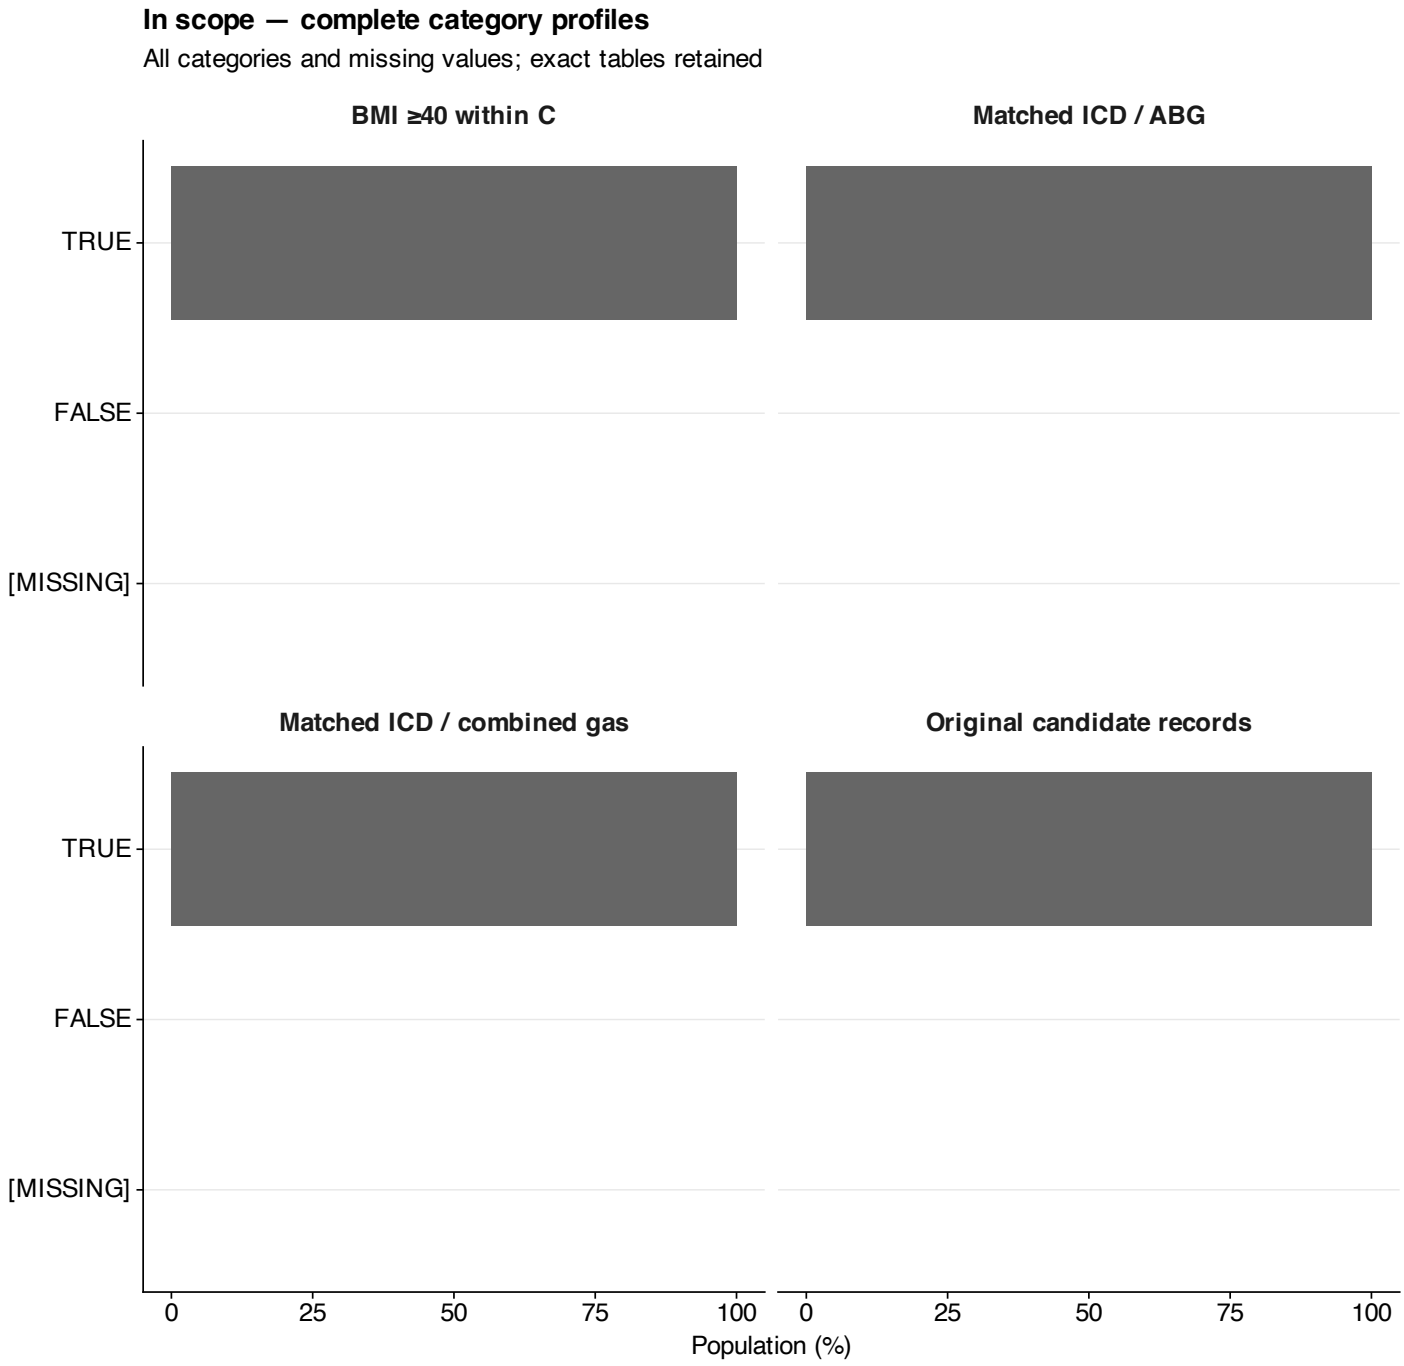

Figure 651: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete in_scope stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

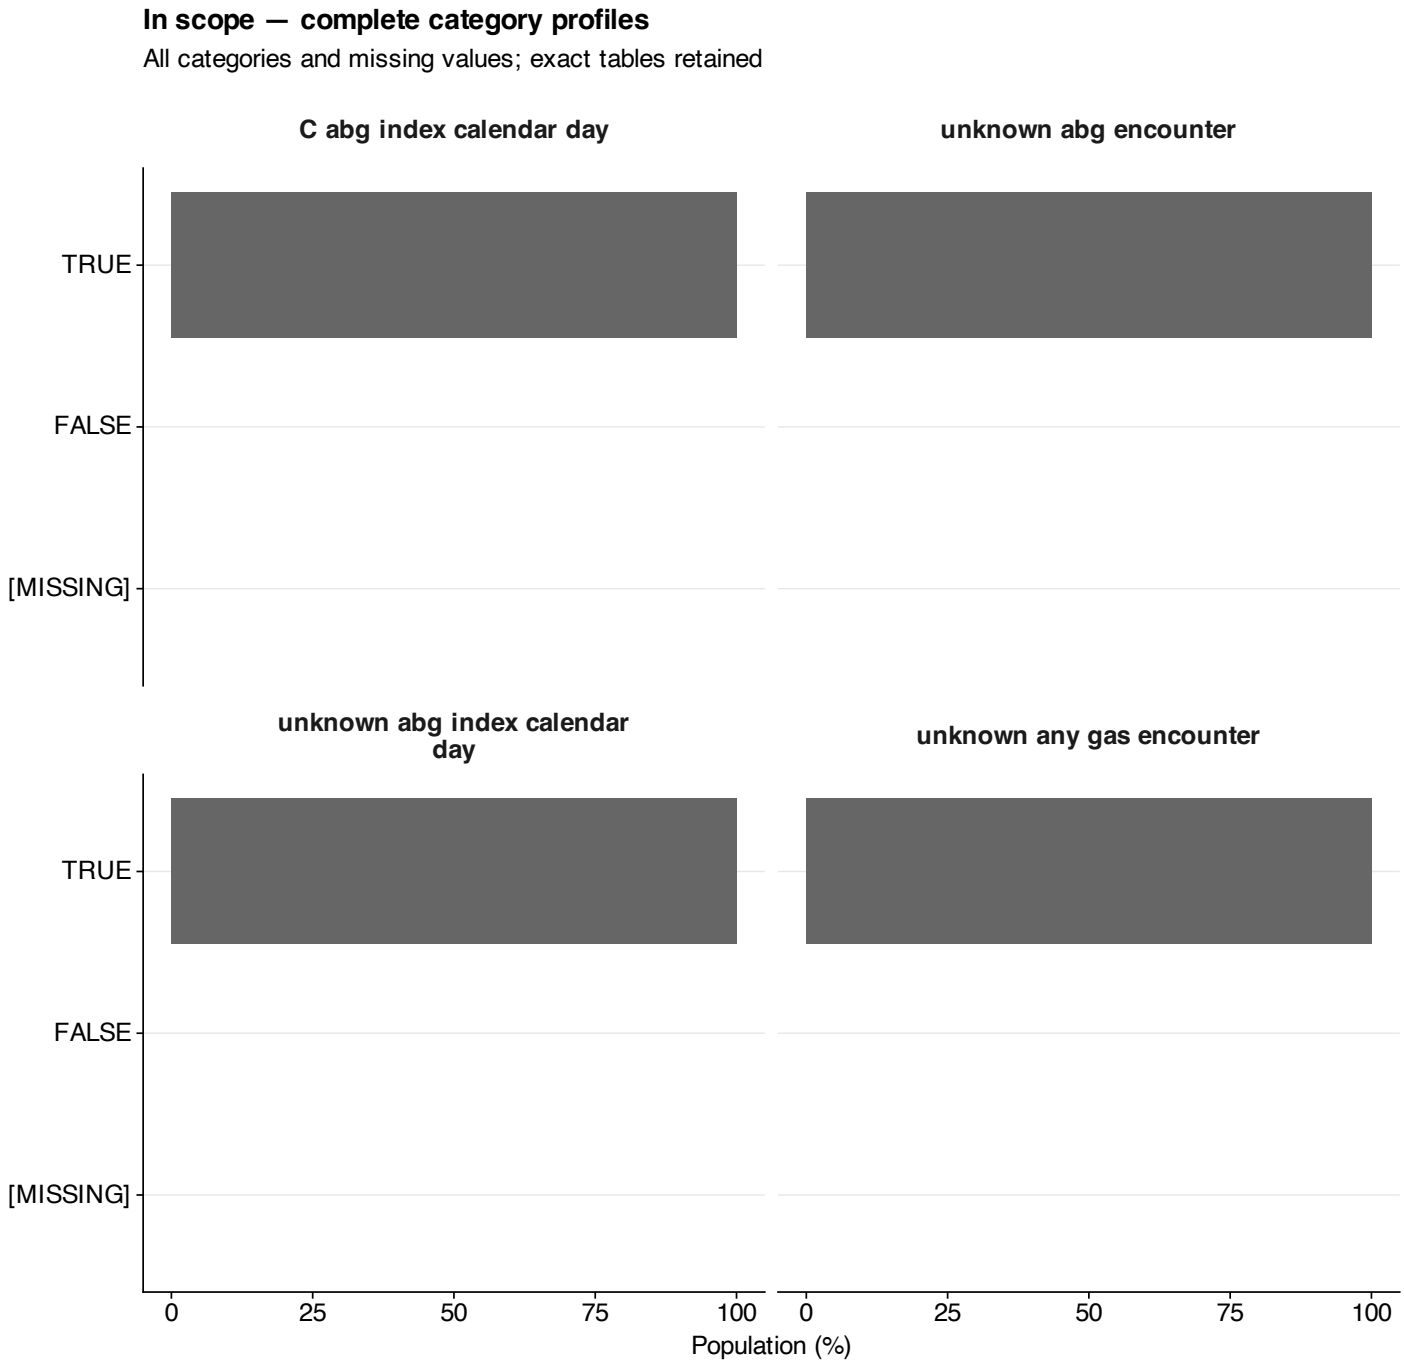

Figure 652: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete in_scope stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

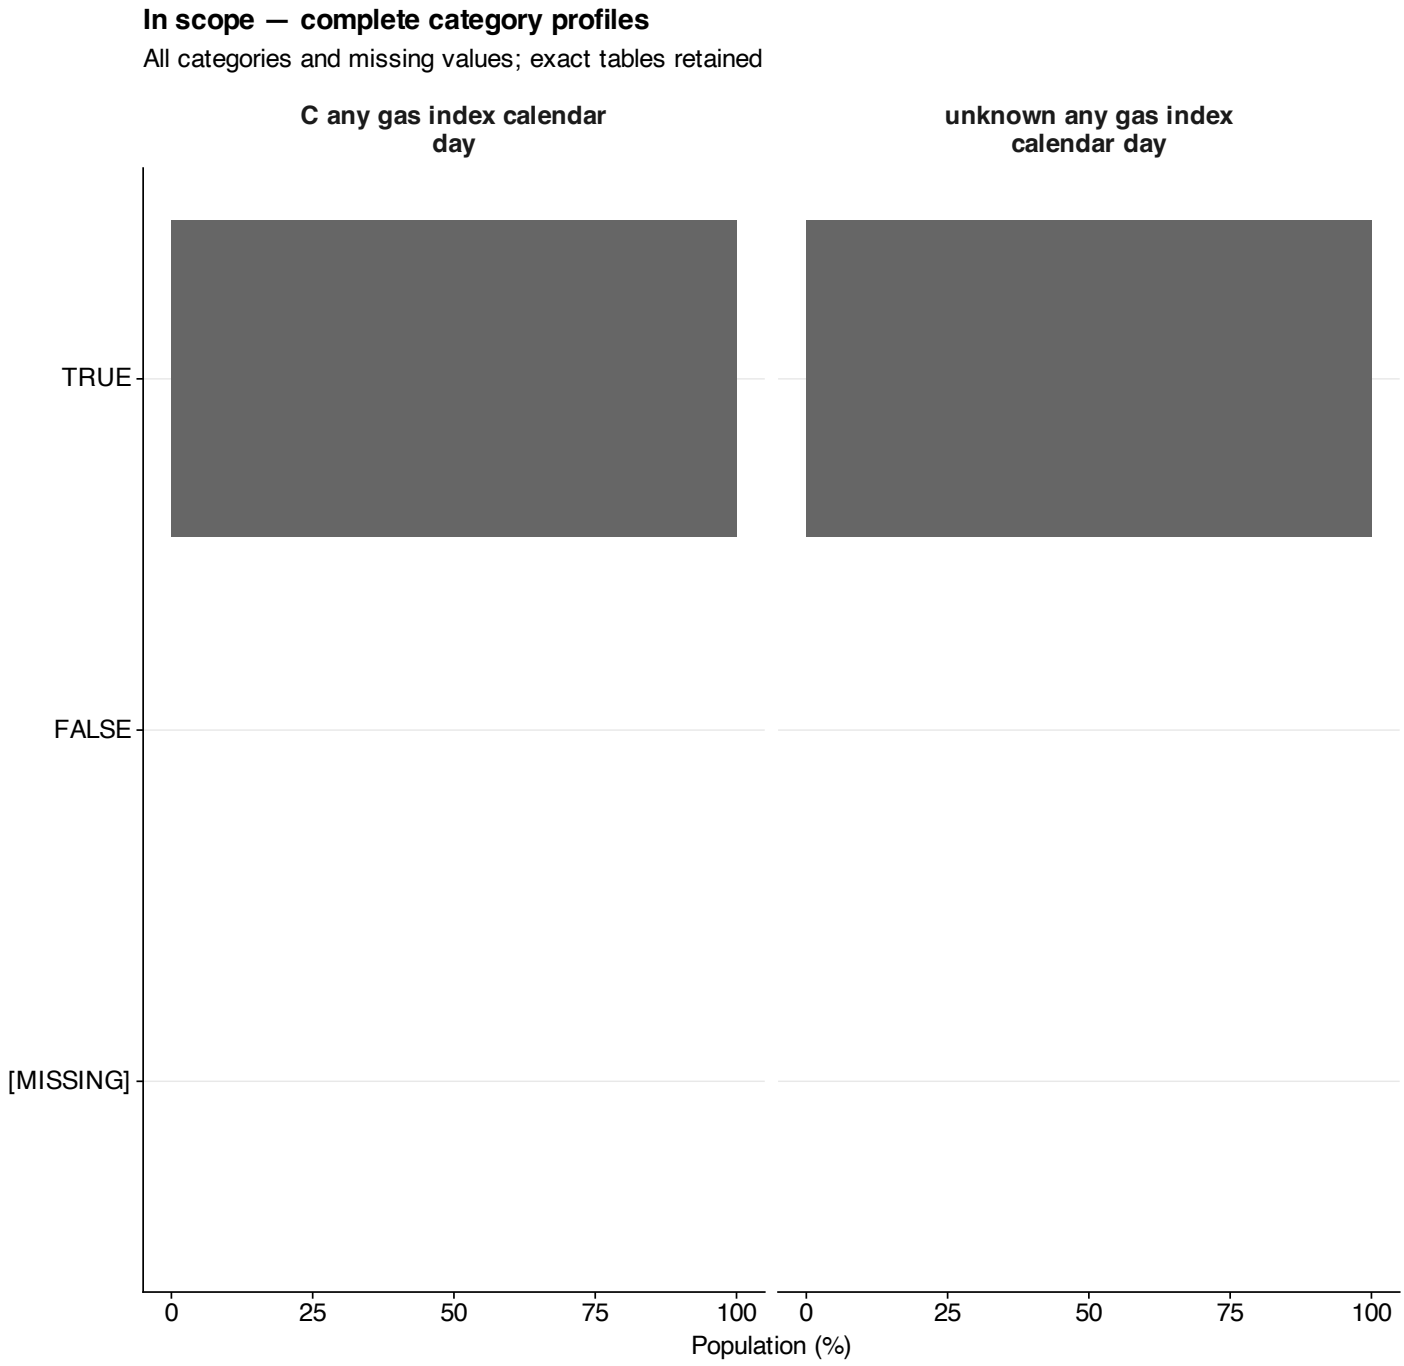

Figure 653: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete in_scope stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

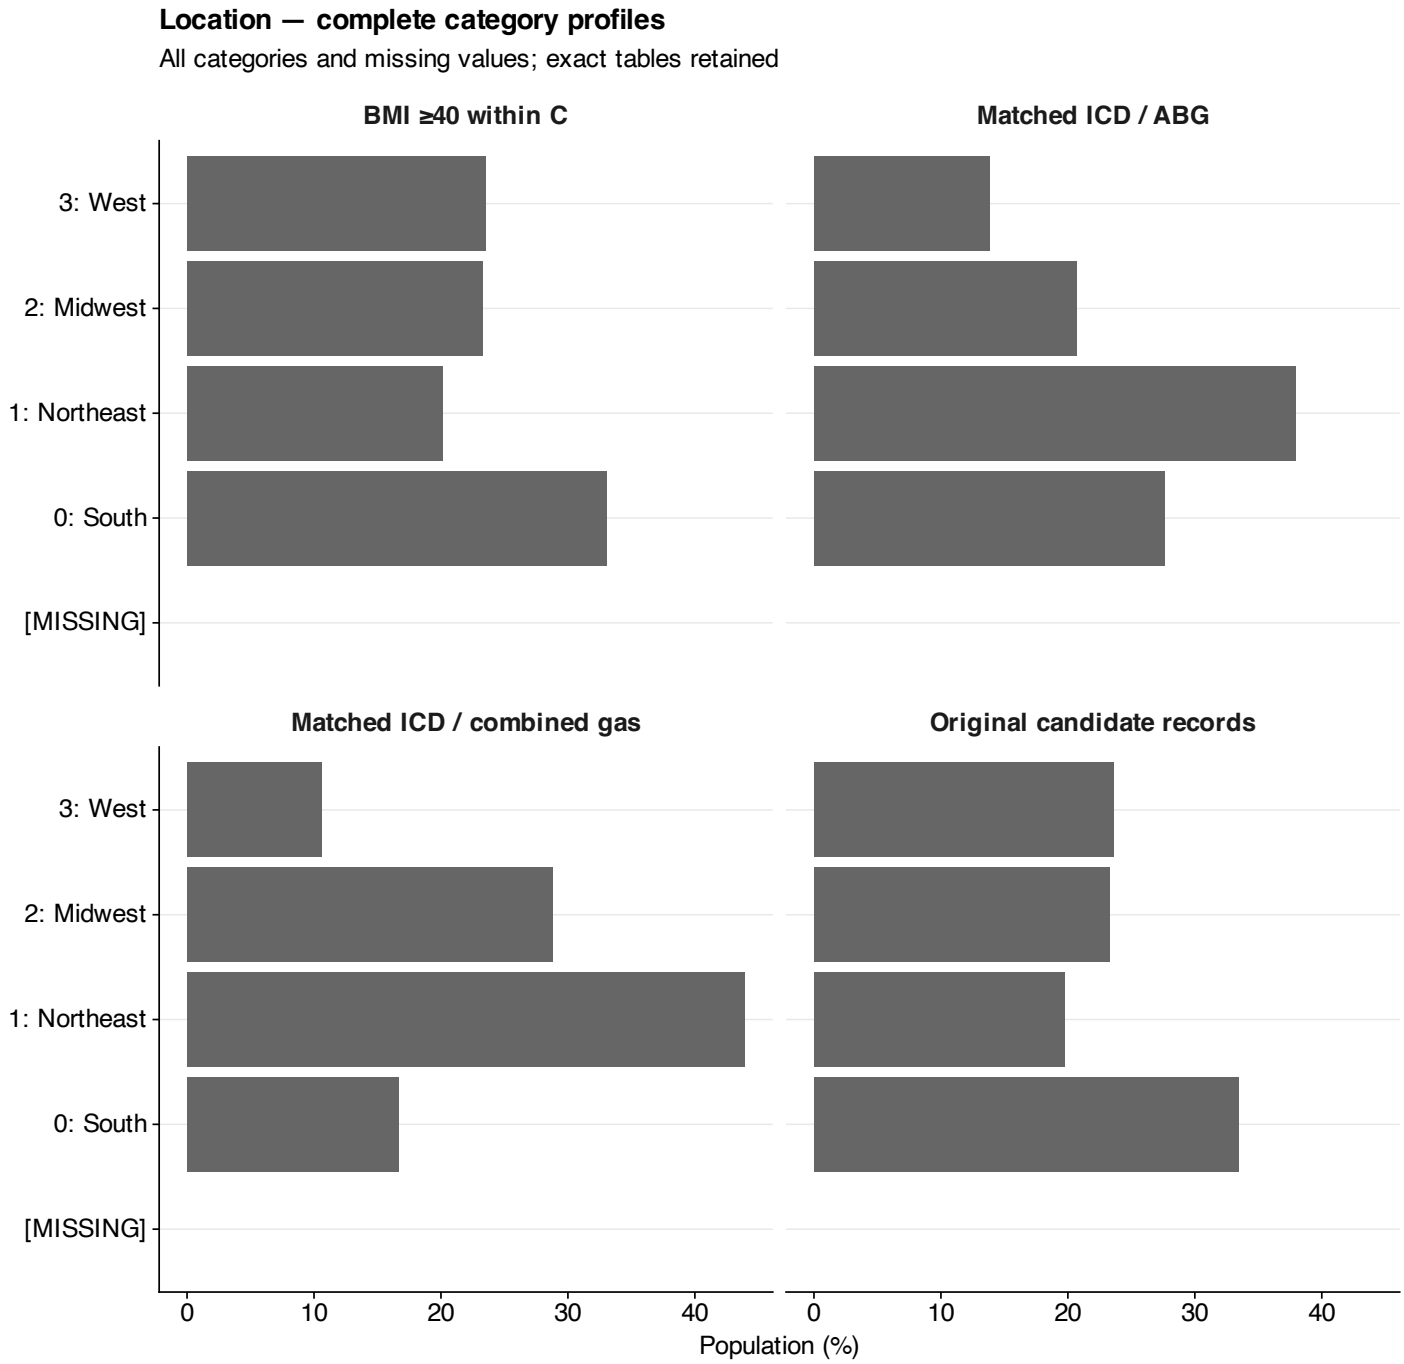

Figure 654: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete location stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

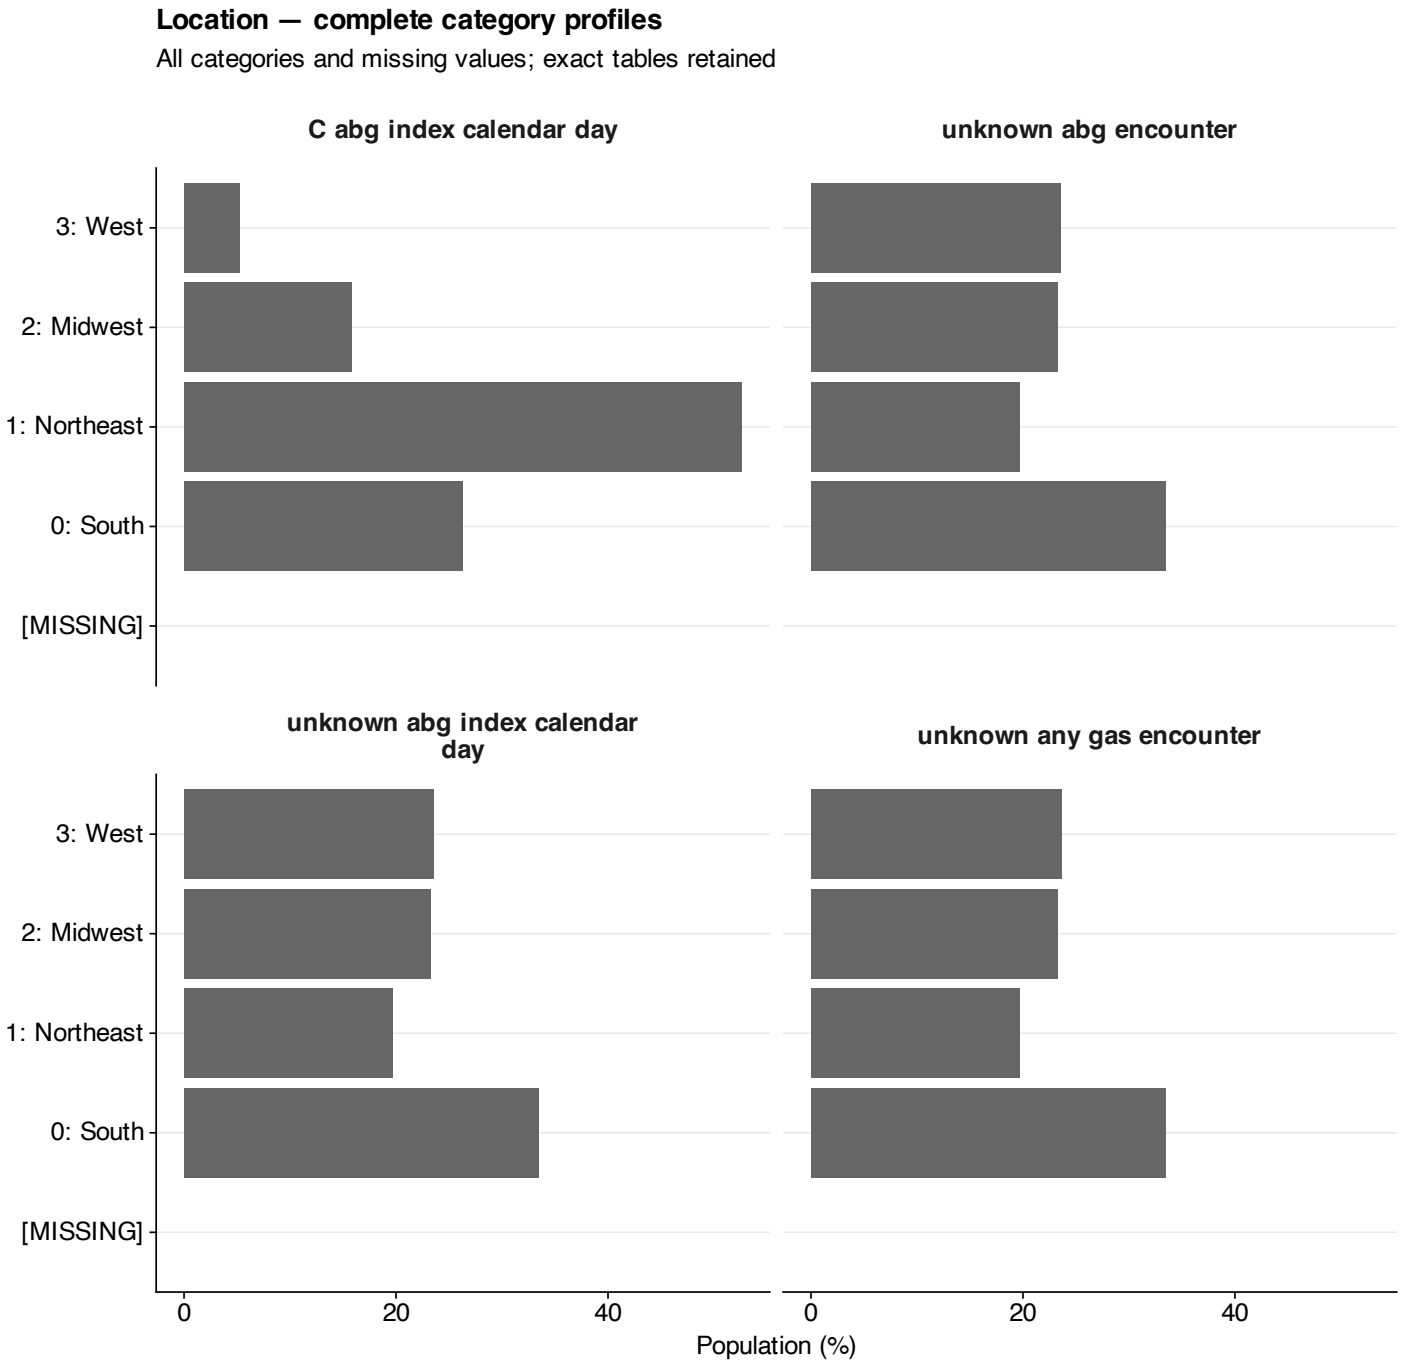

Figure 655: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete location stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

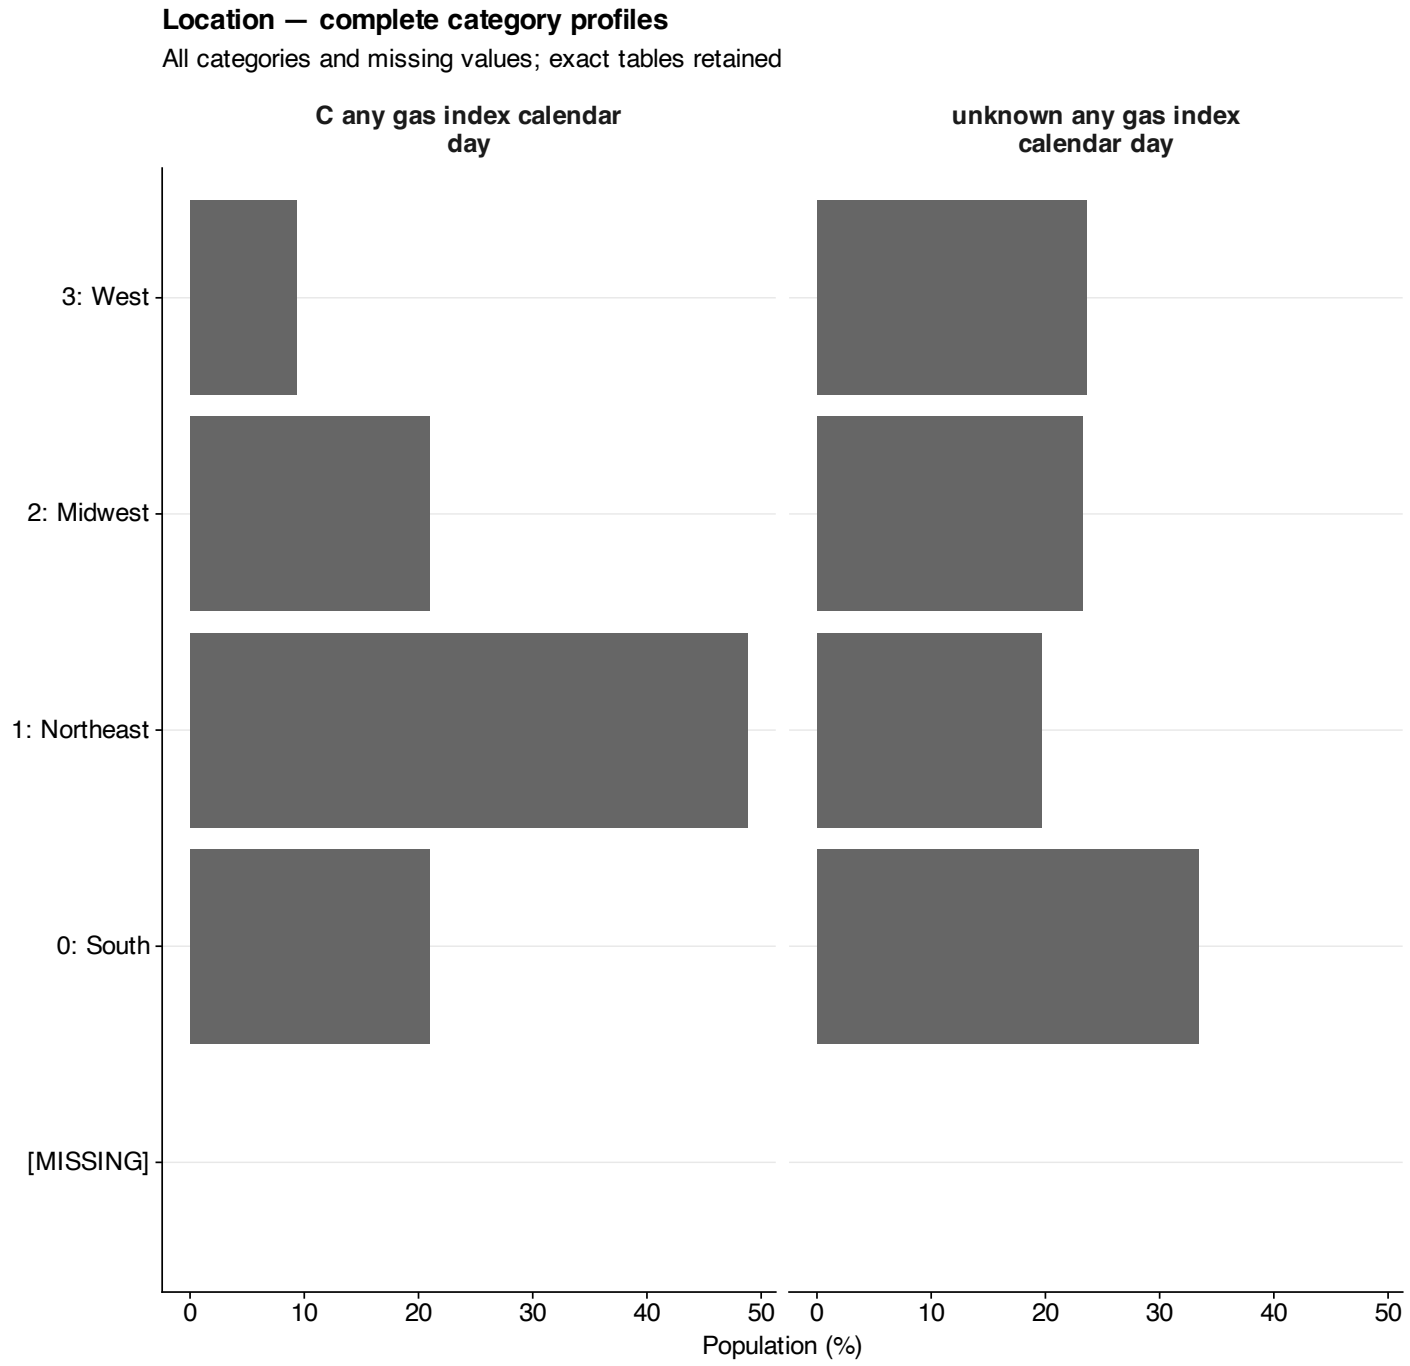

Figure 656: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete location stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

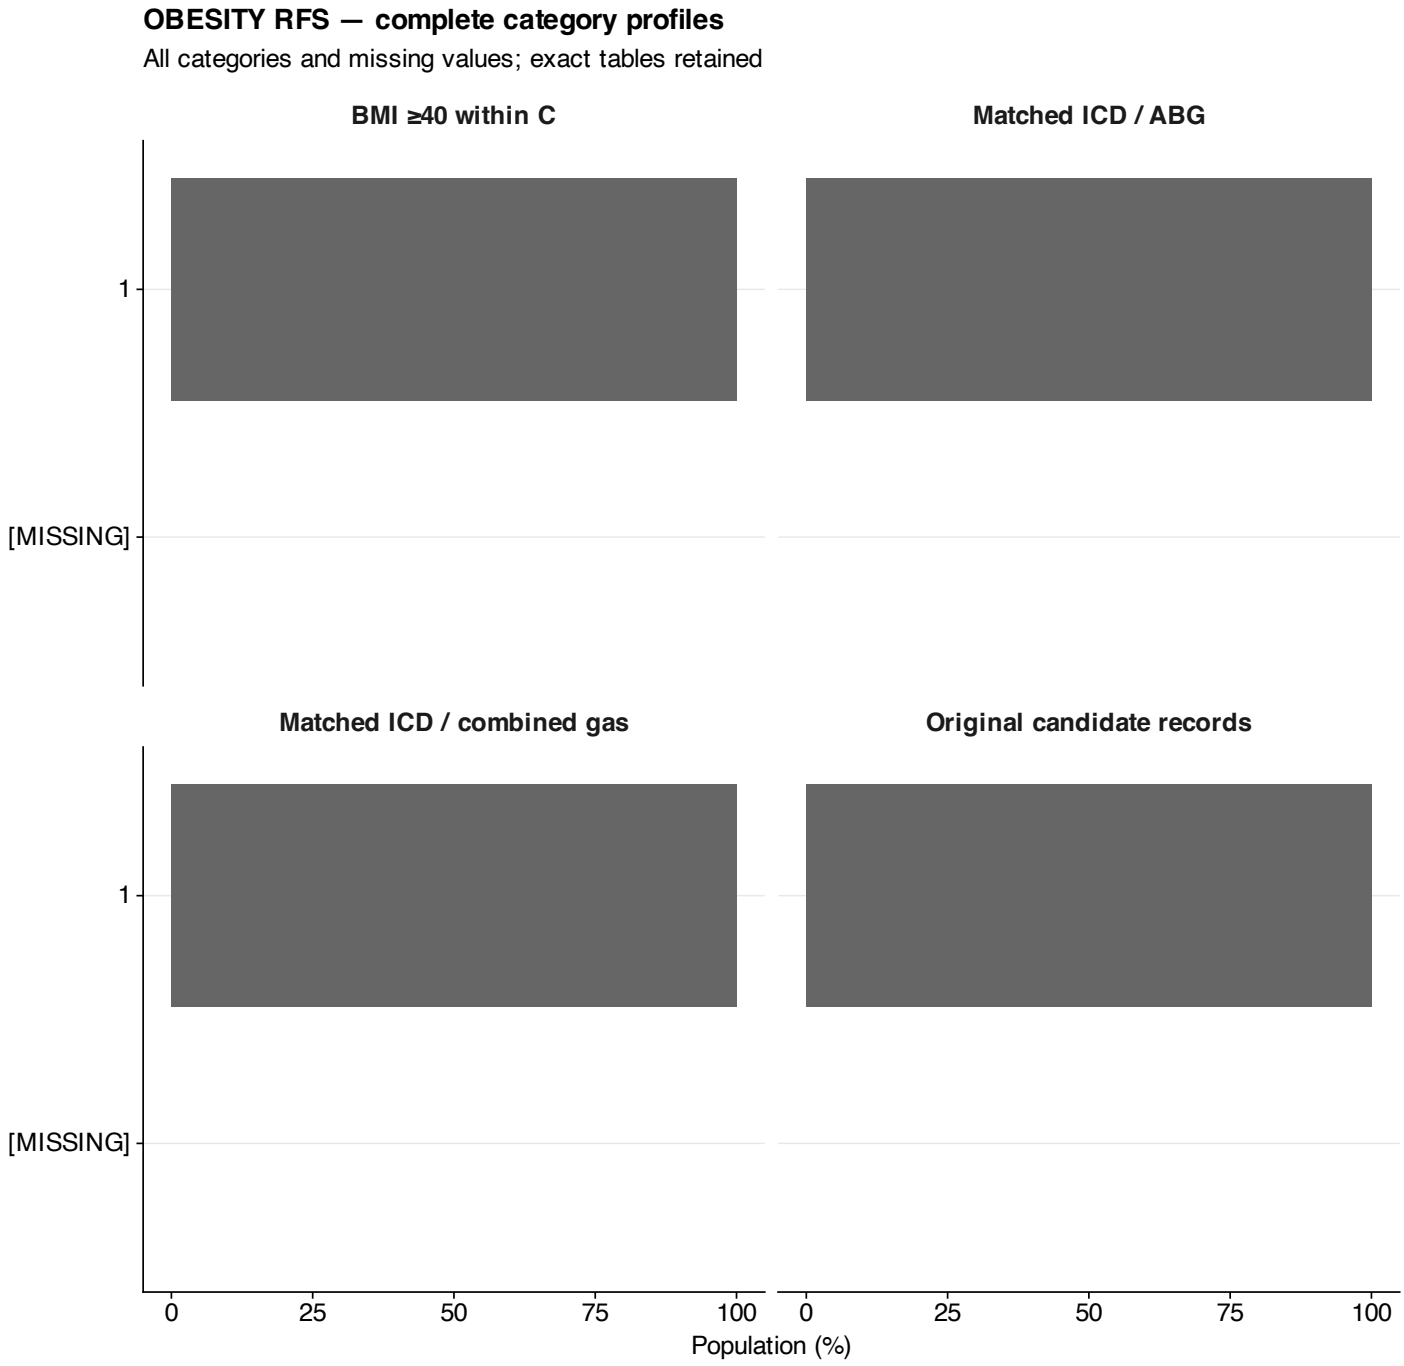

Figure 657: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete OBESITY_rfs stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

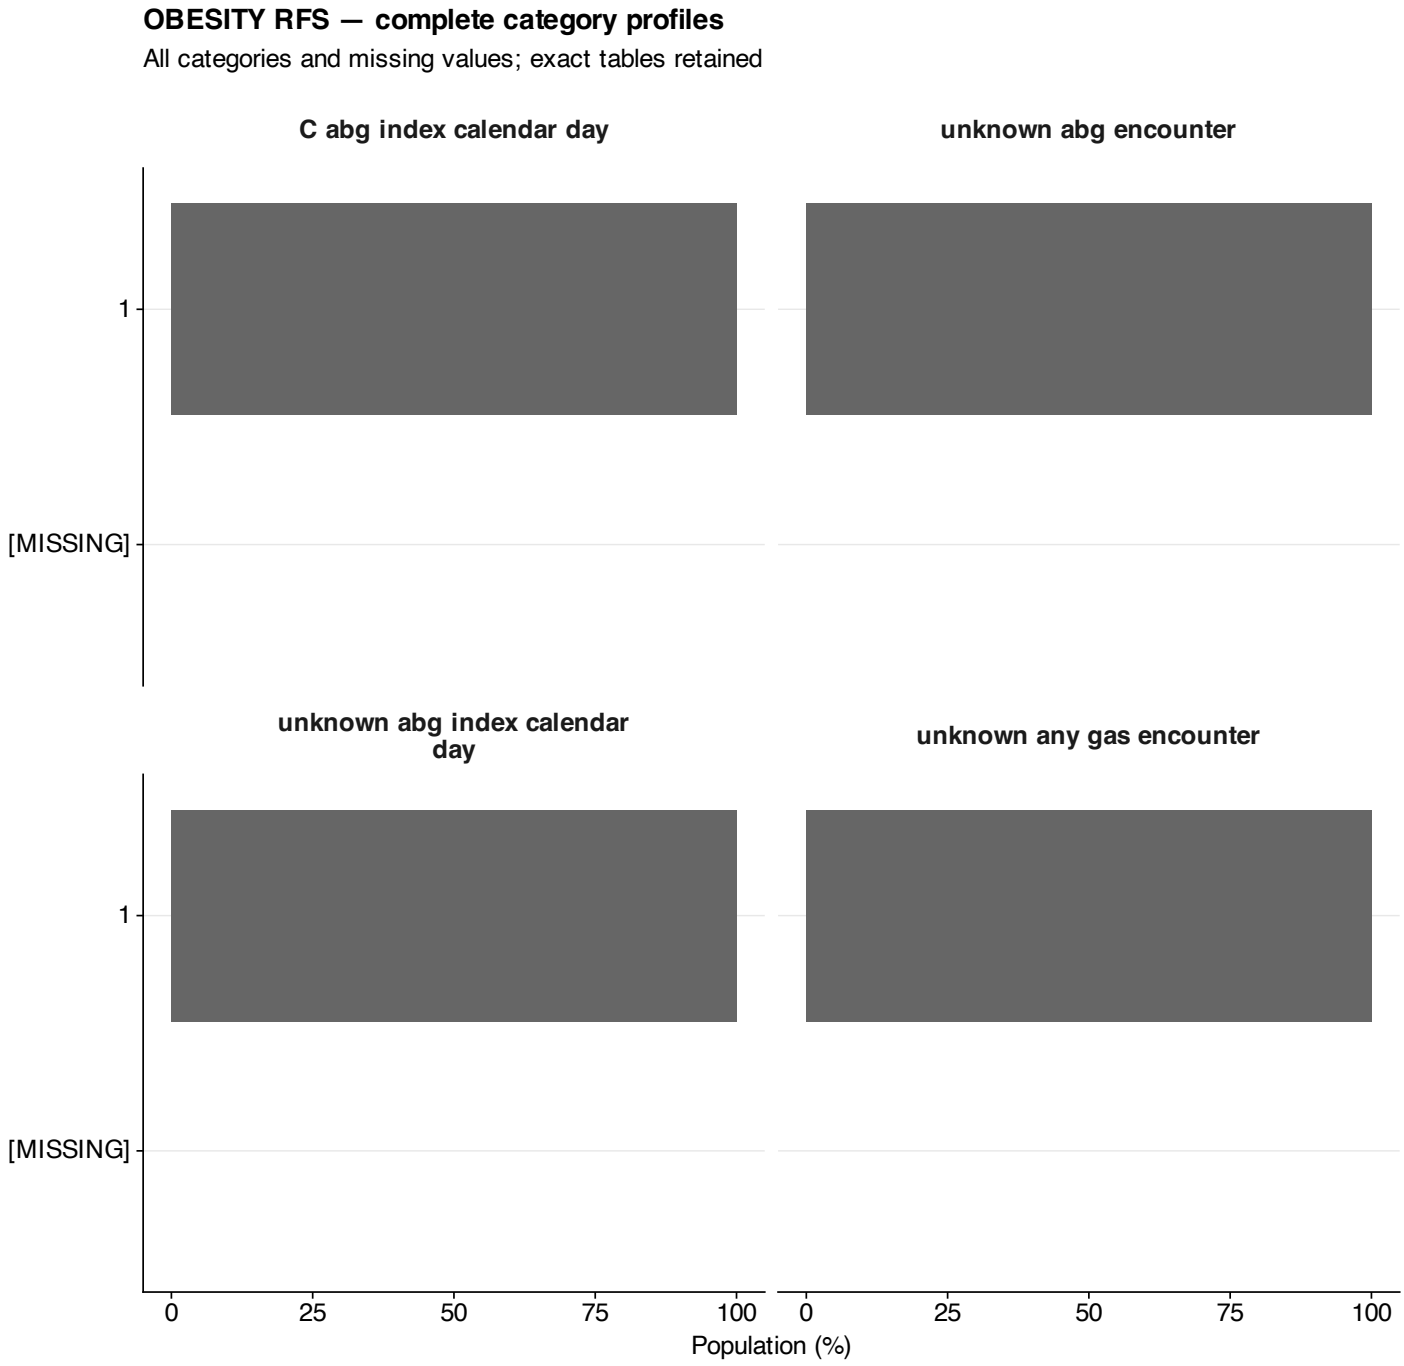

Figure 658: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete OBESITY_rfs stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

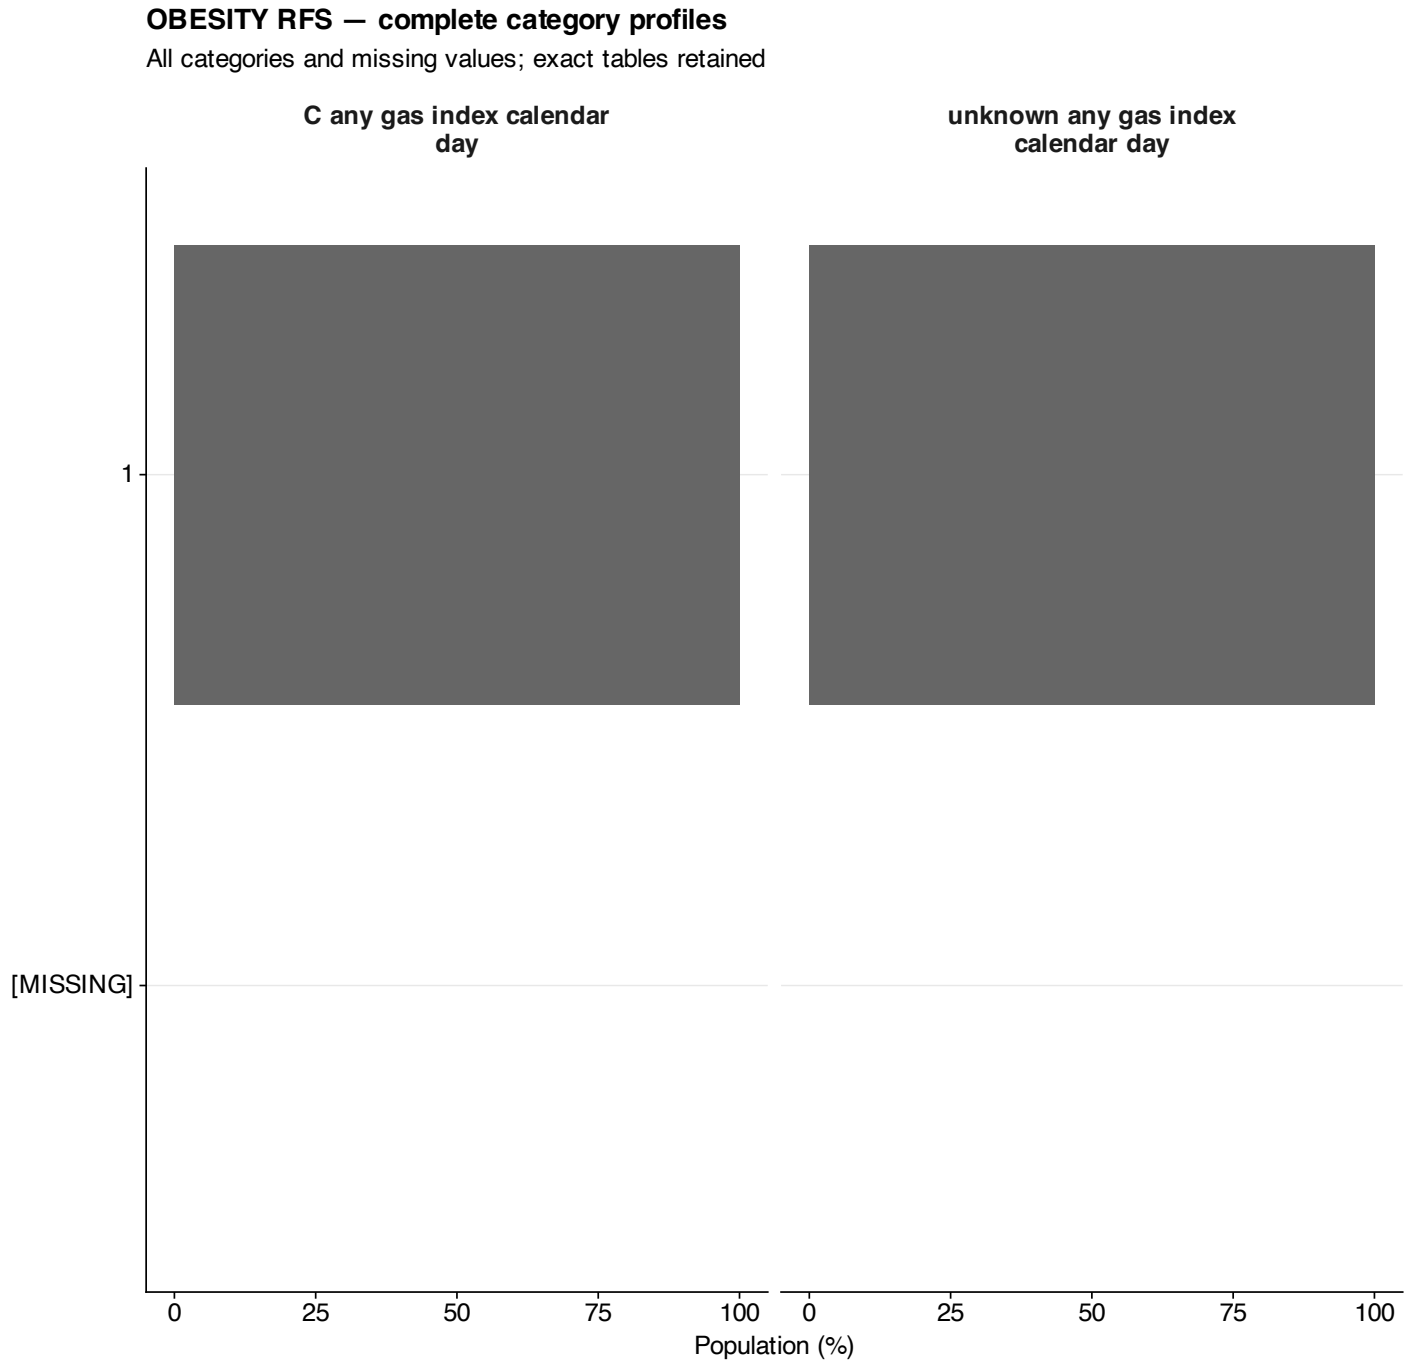

Figure 659: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete OBESITY_rfs stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

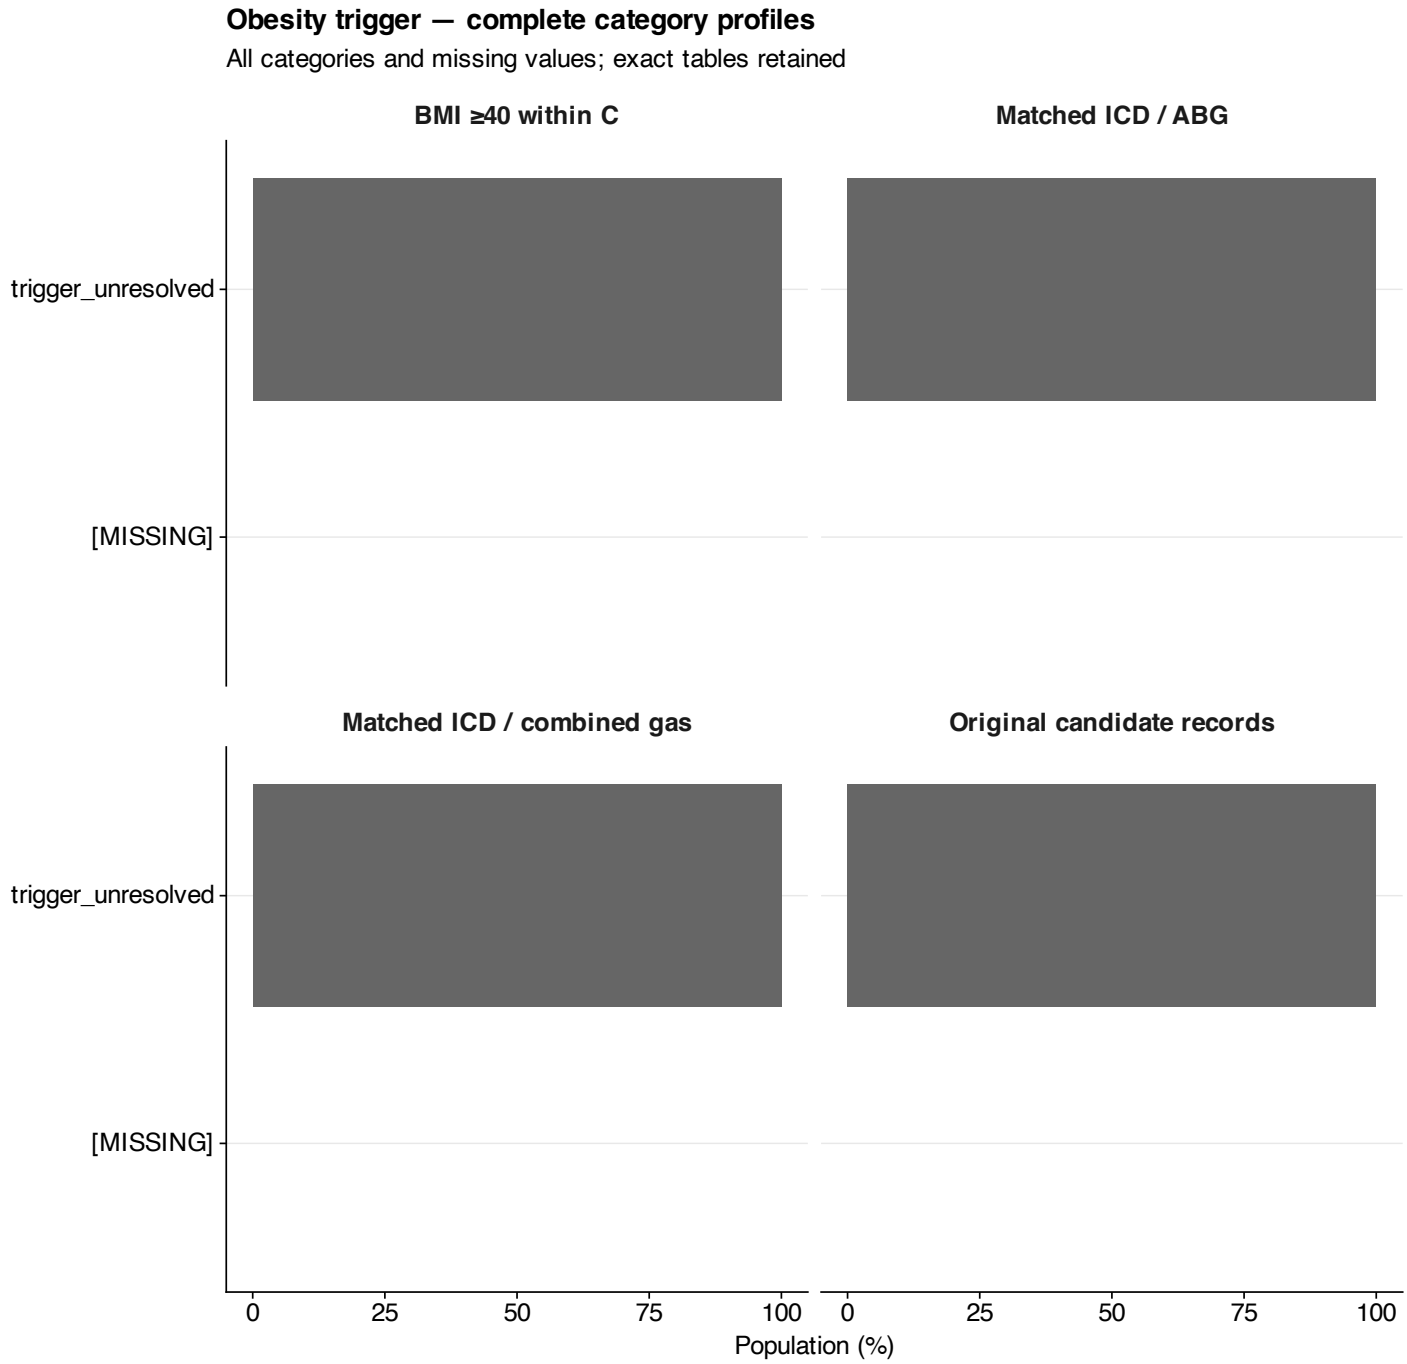

Figure 660: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete obesity_trigger stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

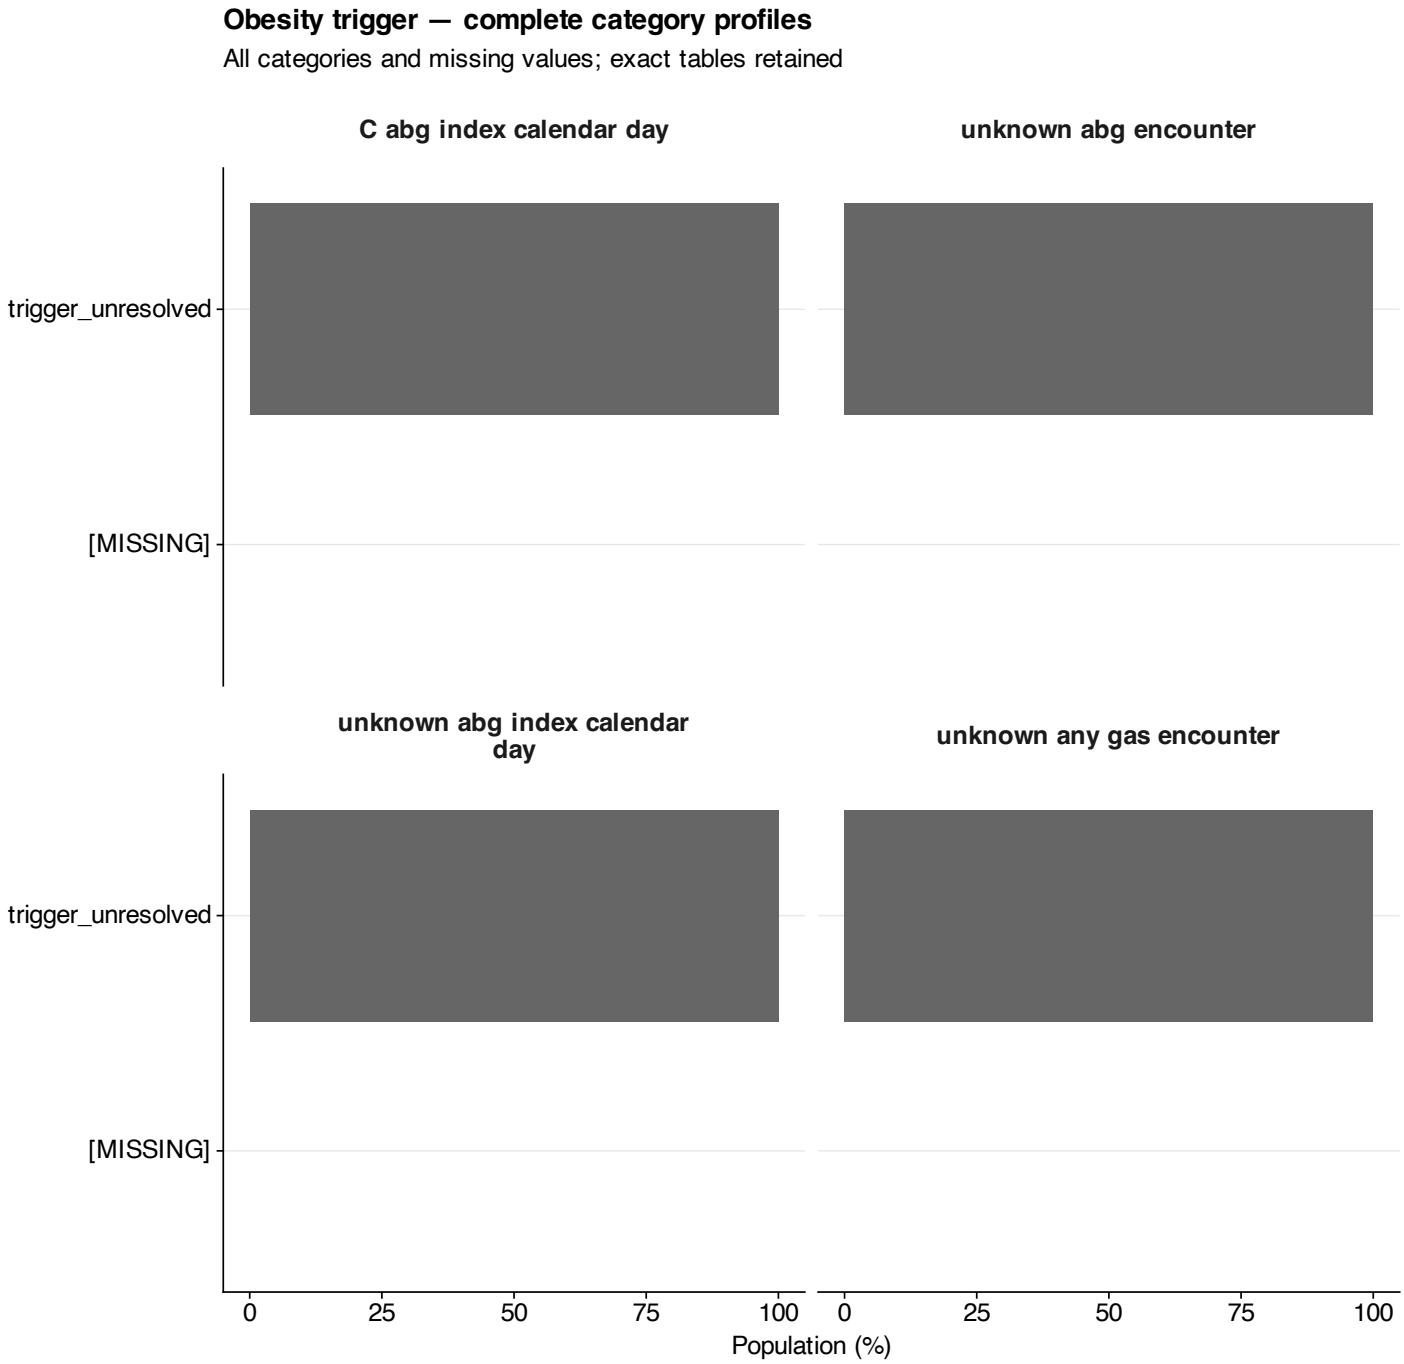

Figure 661: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete obesity_trigger stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

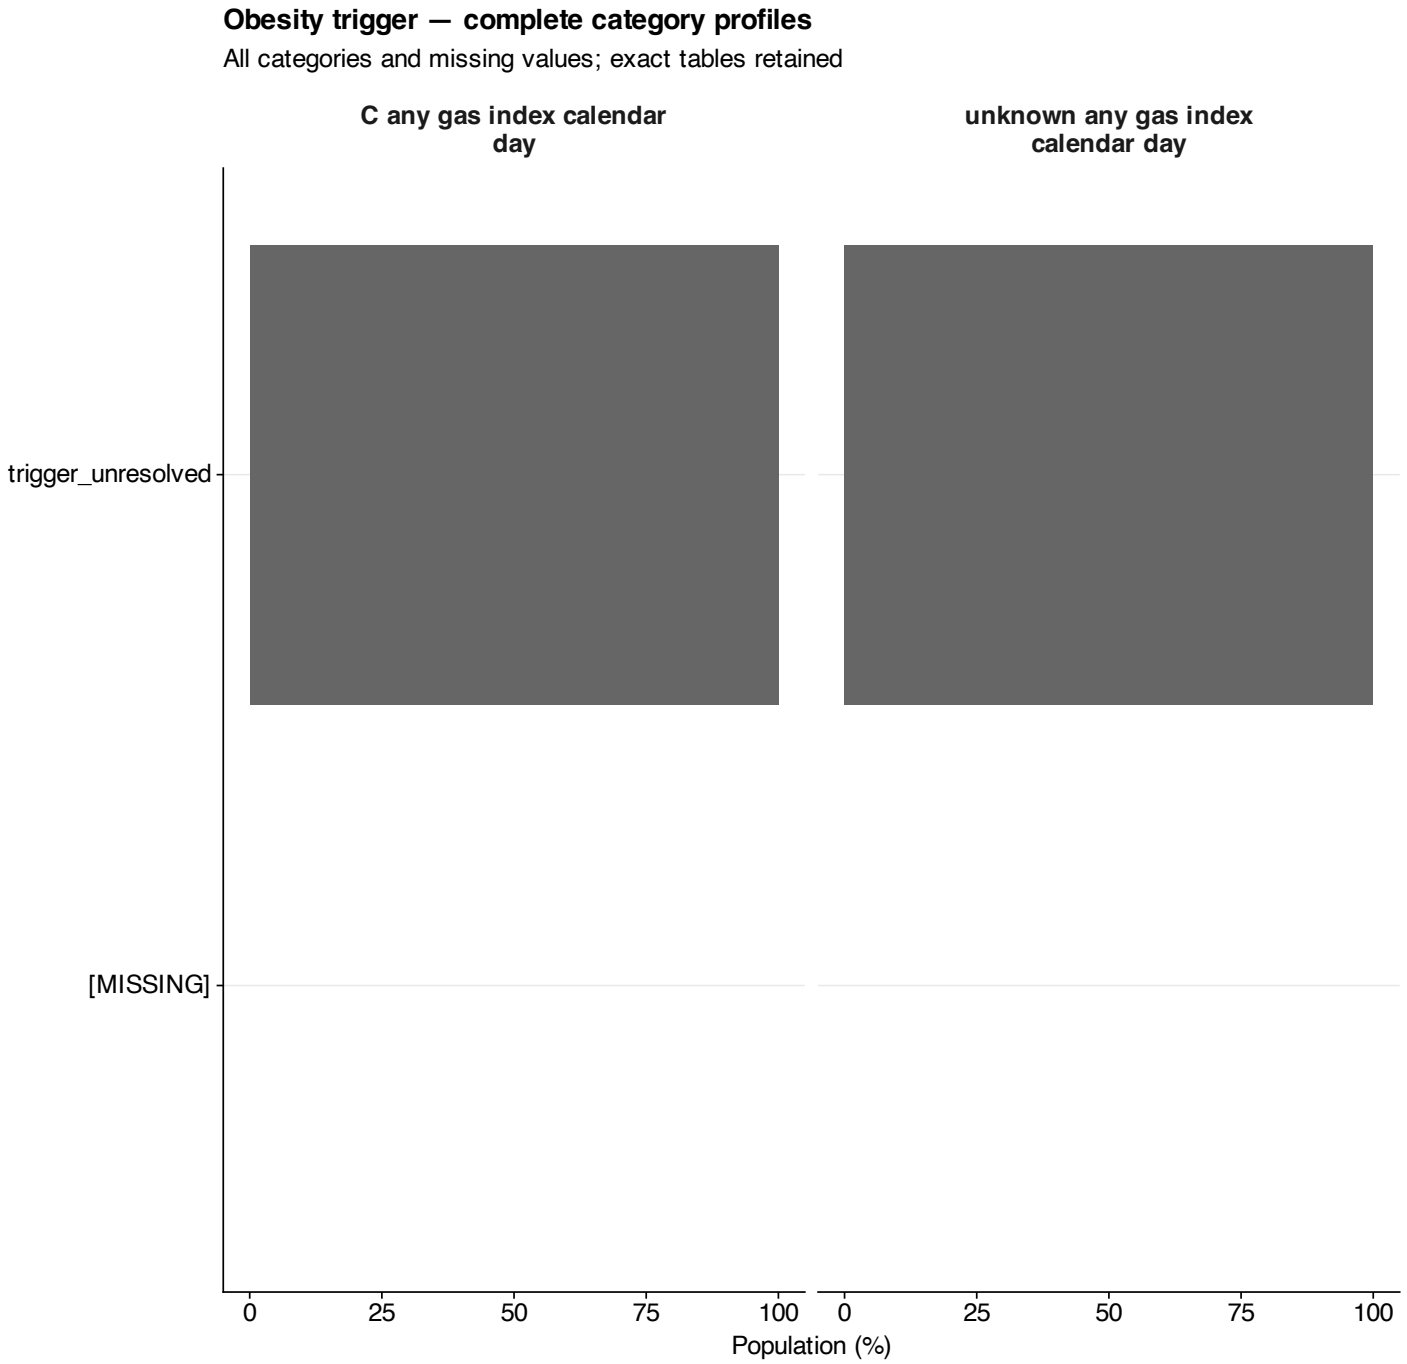

Figure 662: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete obesity_trigger stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

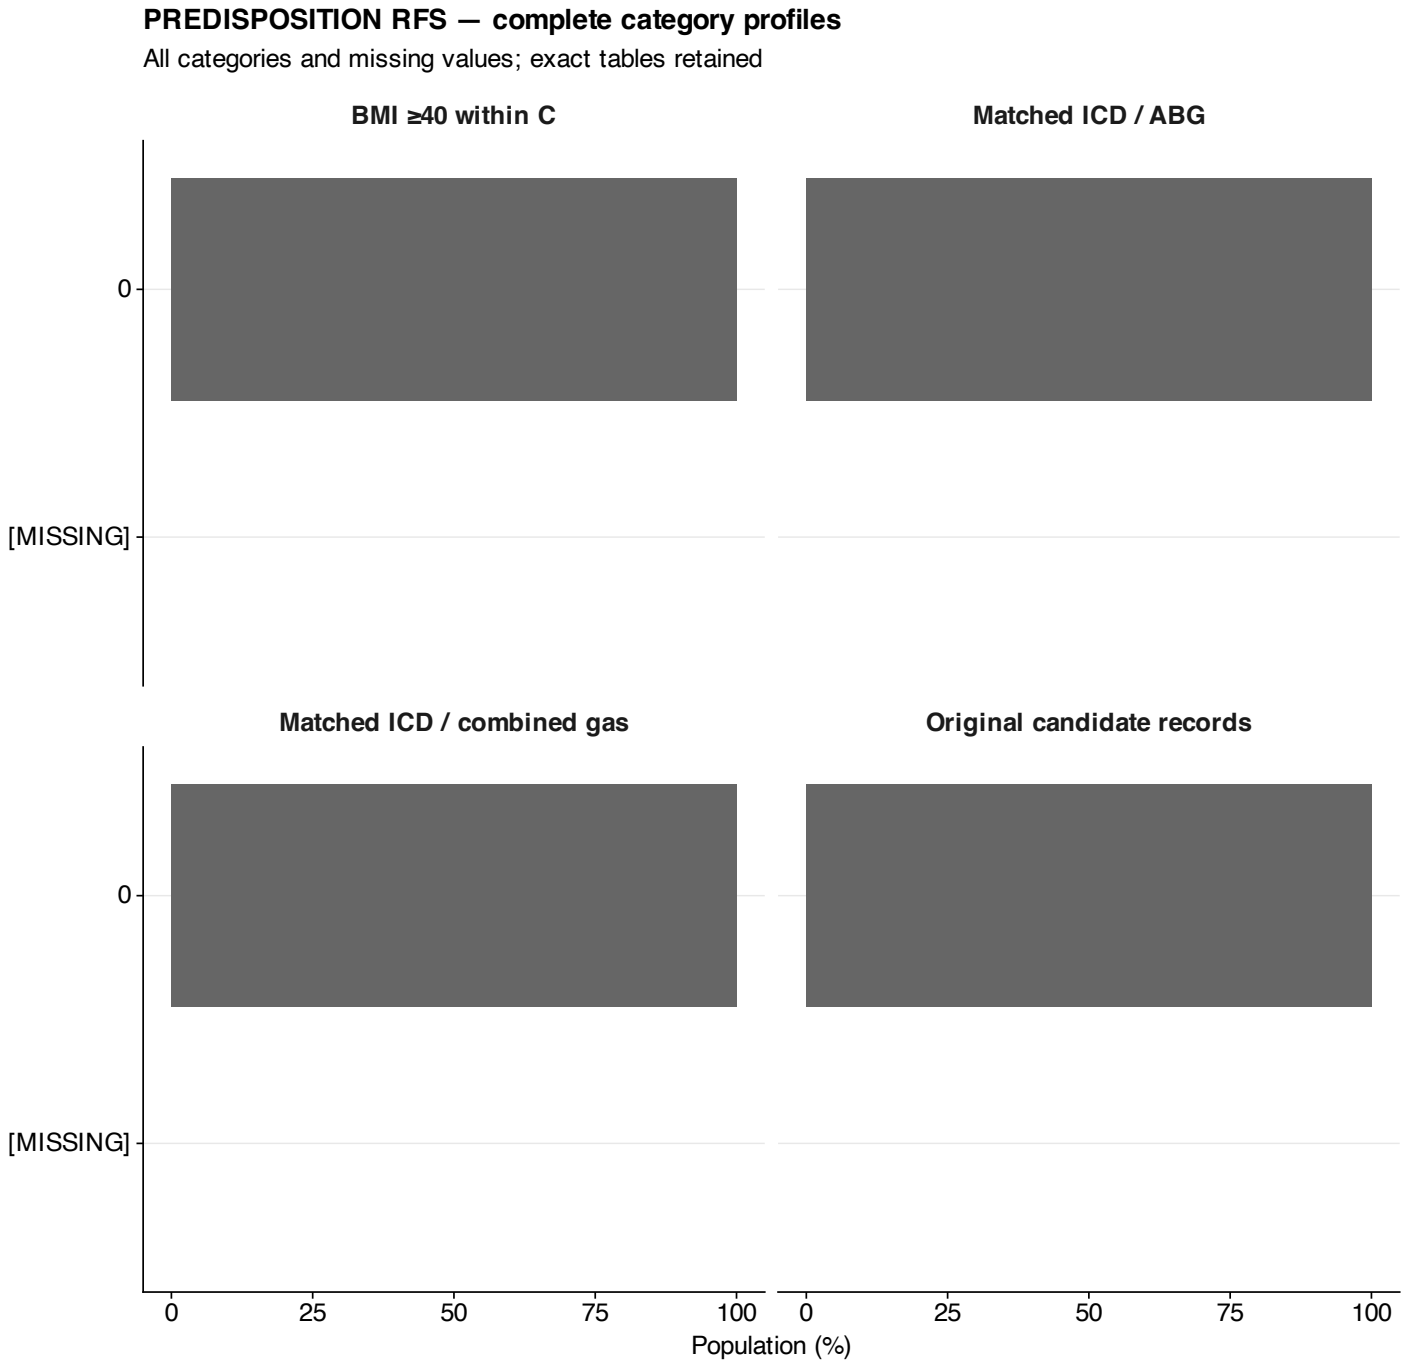

Figure 663: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete PREDISPOSITION_rfs stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

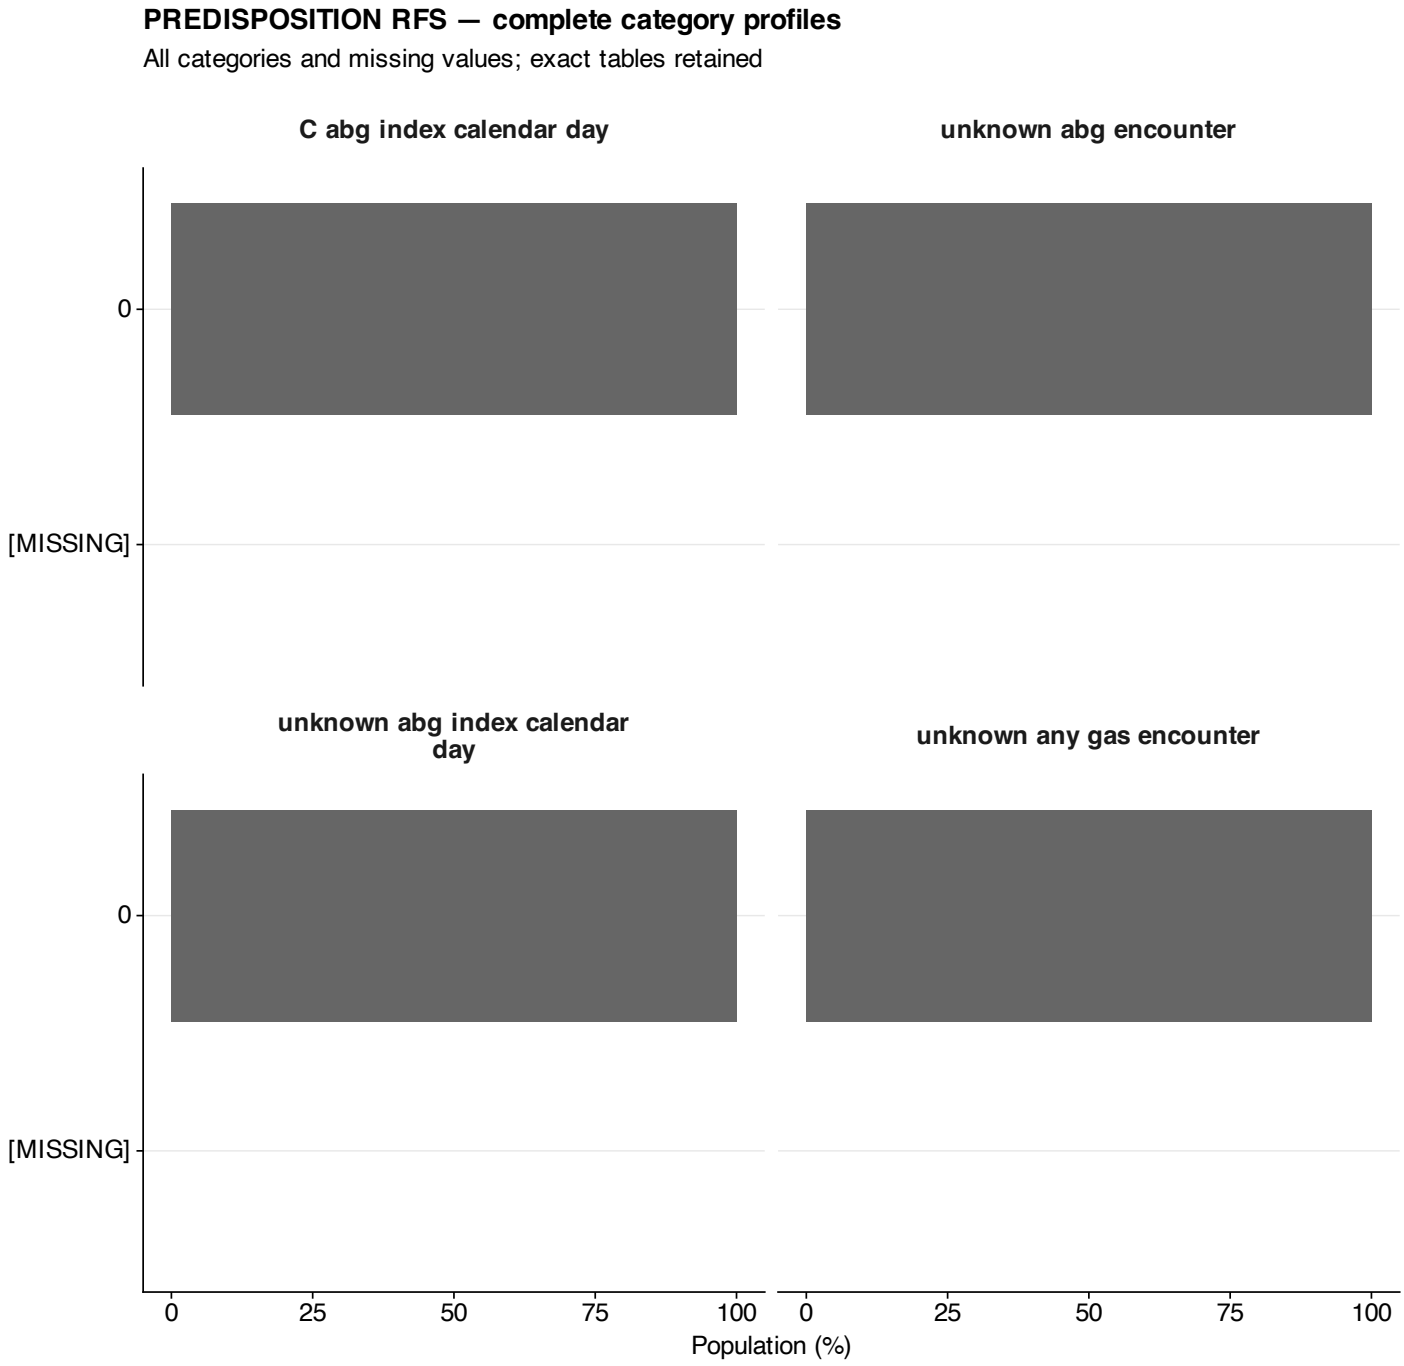

Figure 664: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete PREDISPOSITION_rfs stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

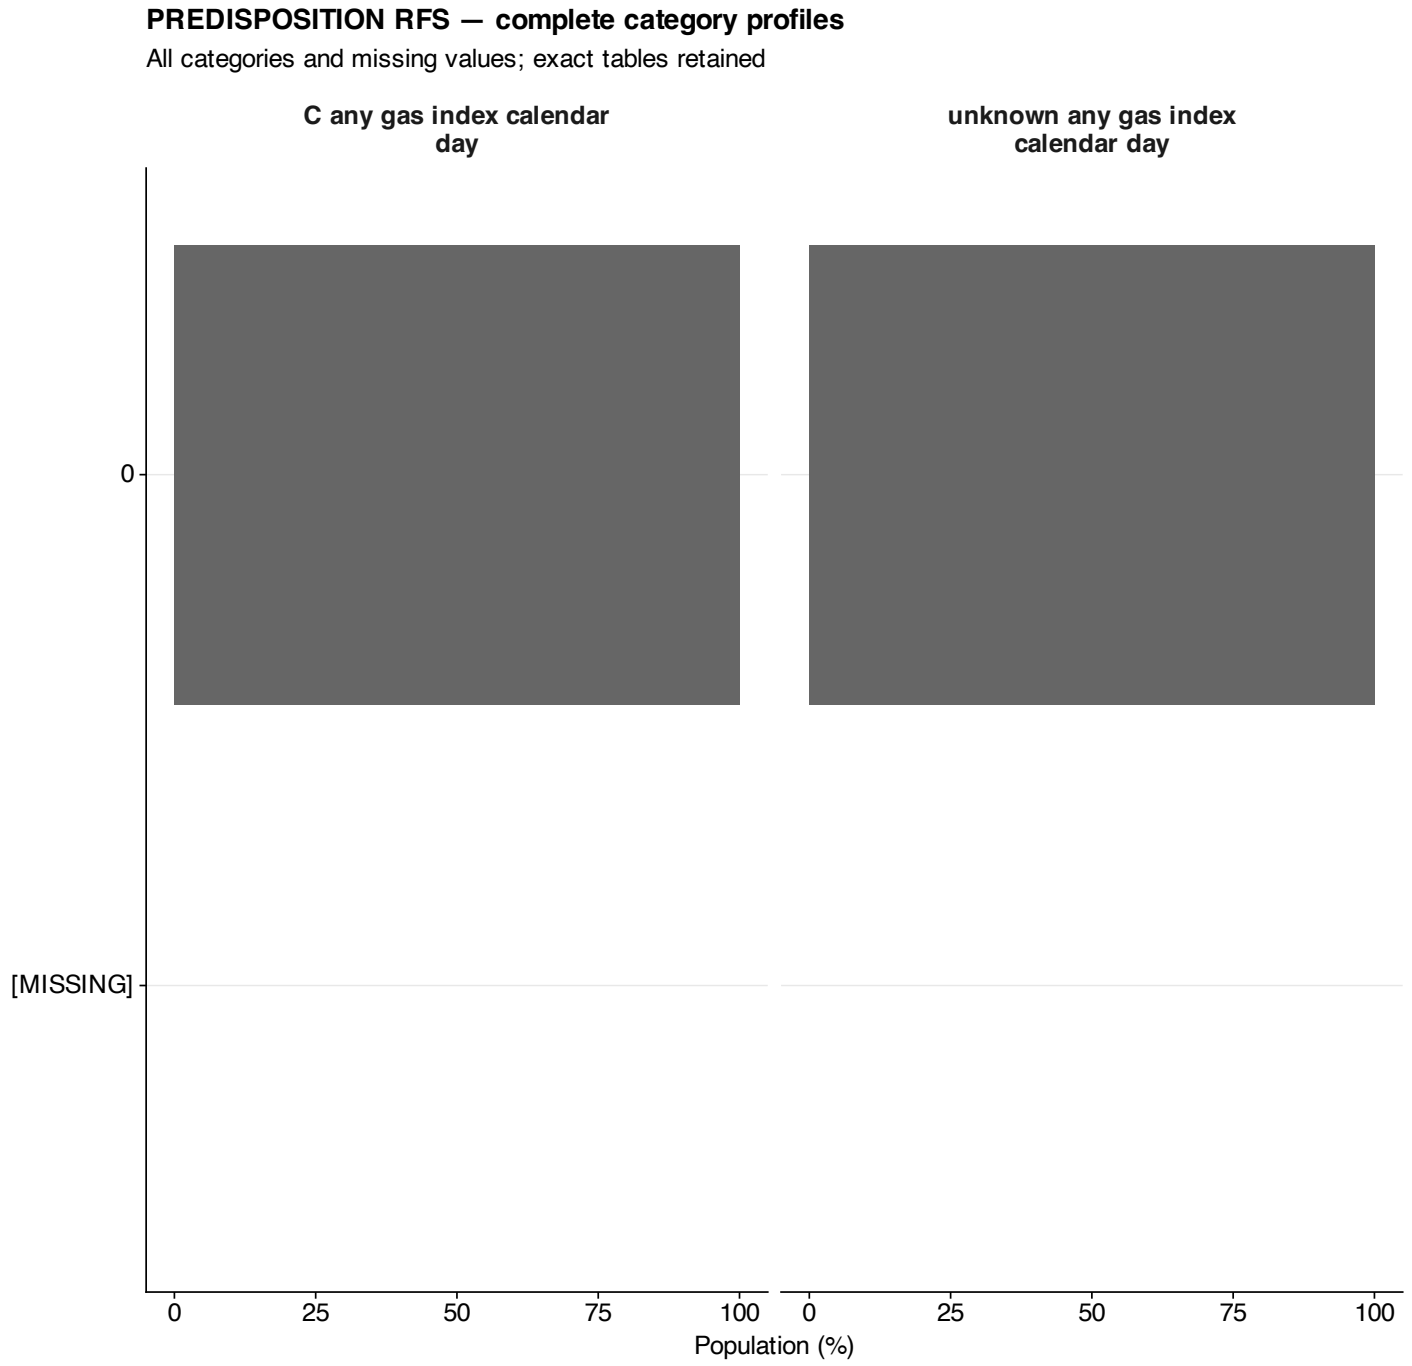

Figure 665: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete PREDISPOSITION_rfs stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

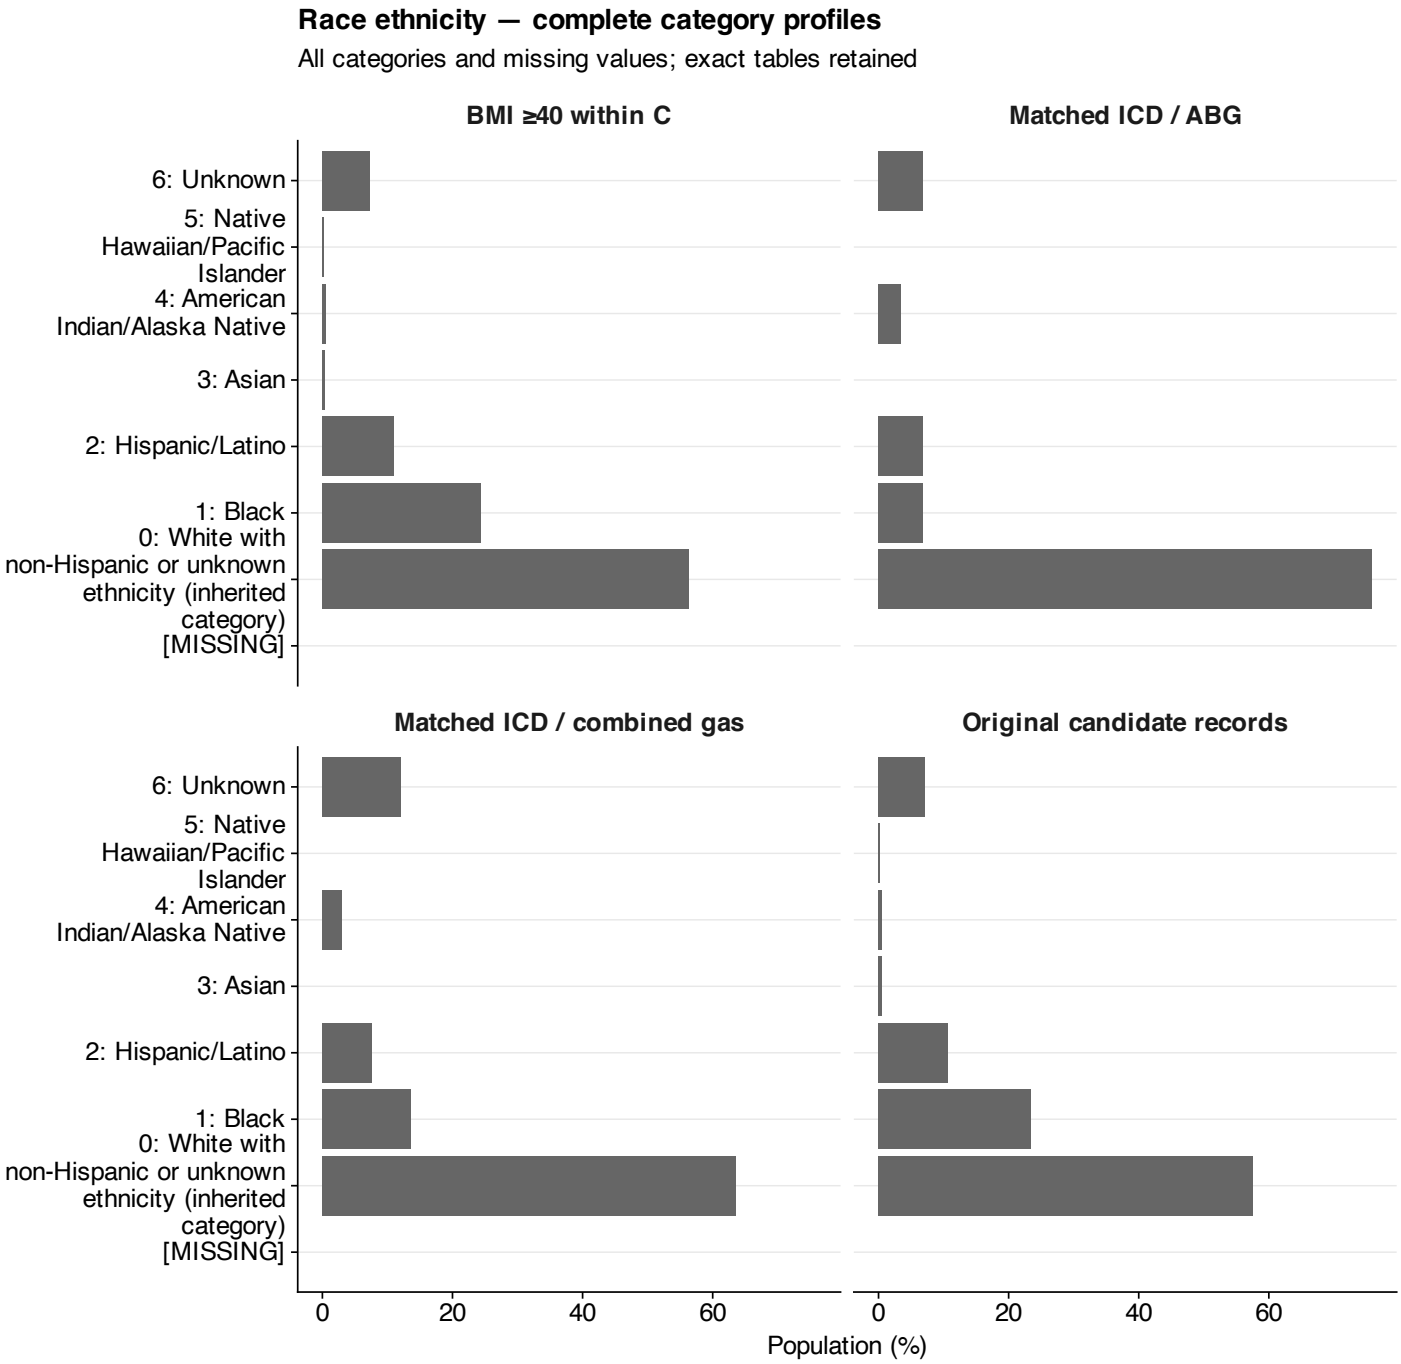

Figure 666: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete race_ethnicity stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

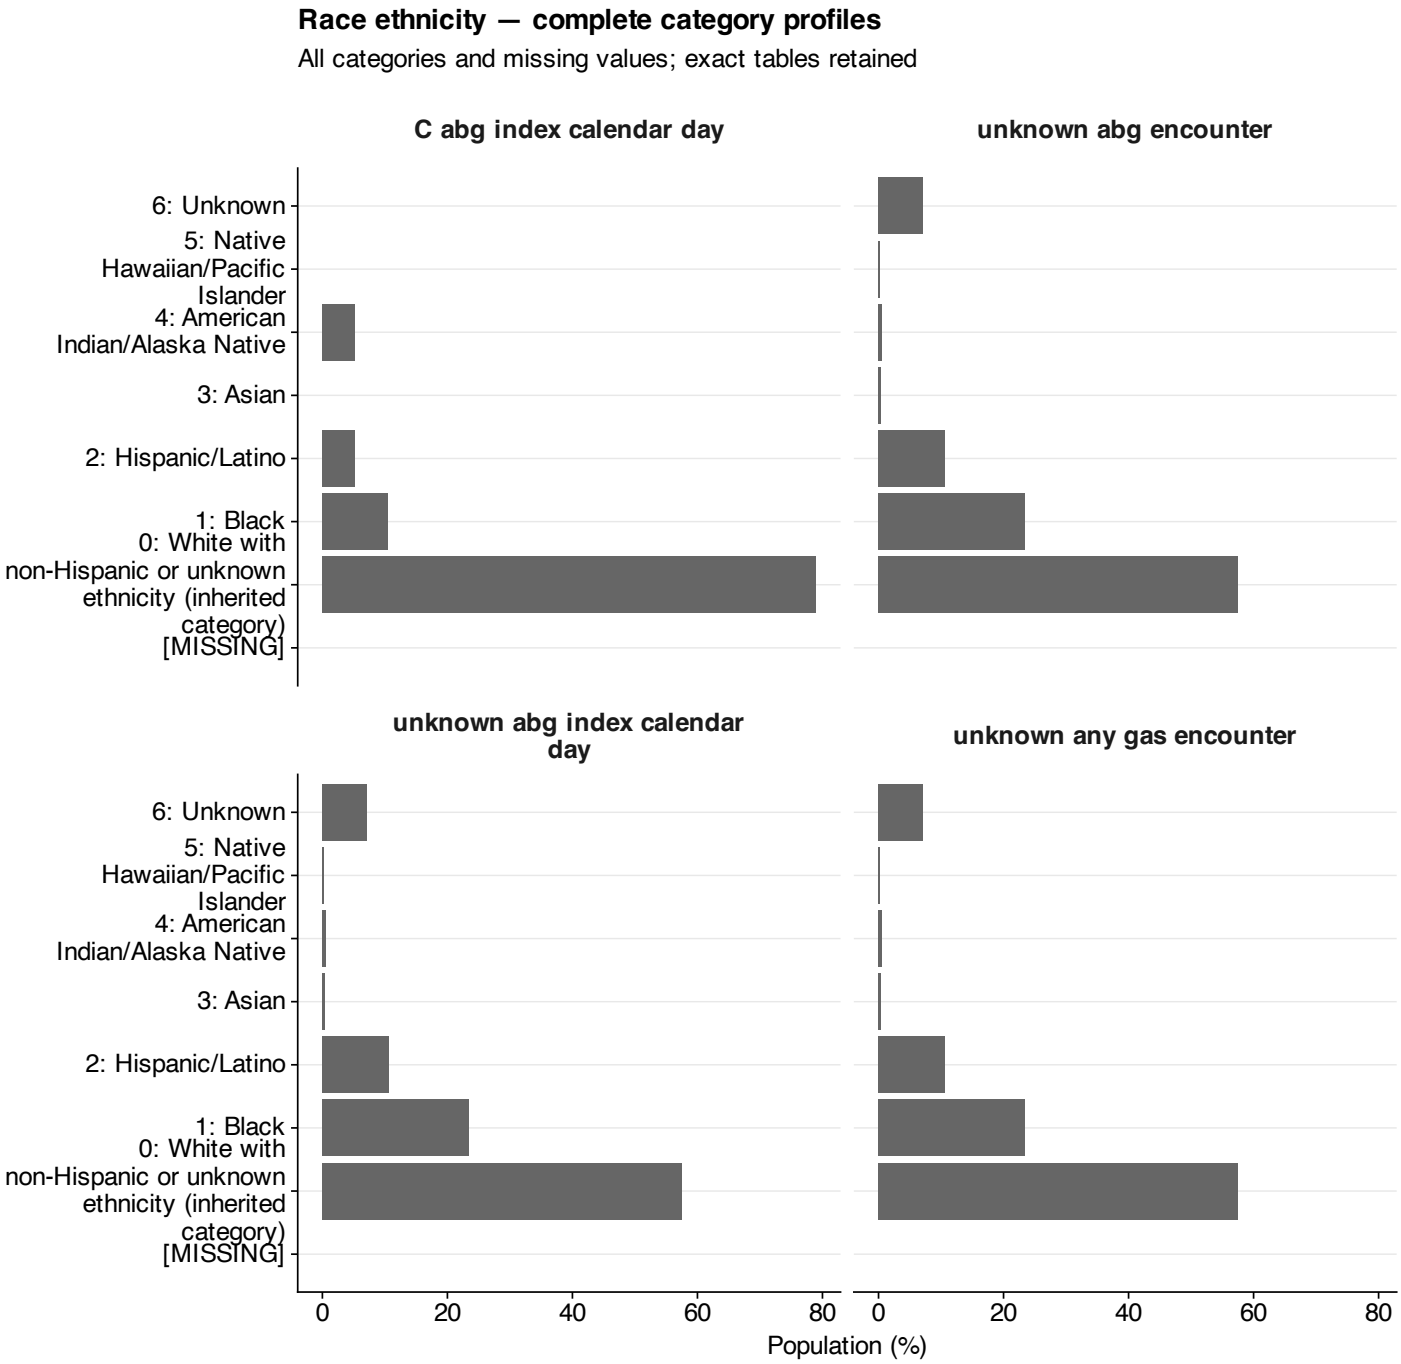

Figure 667: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete race_ethnicity stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

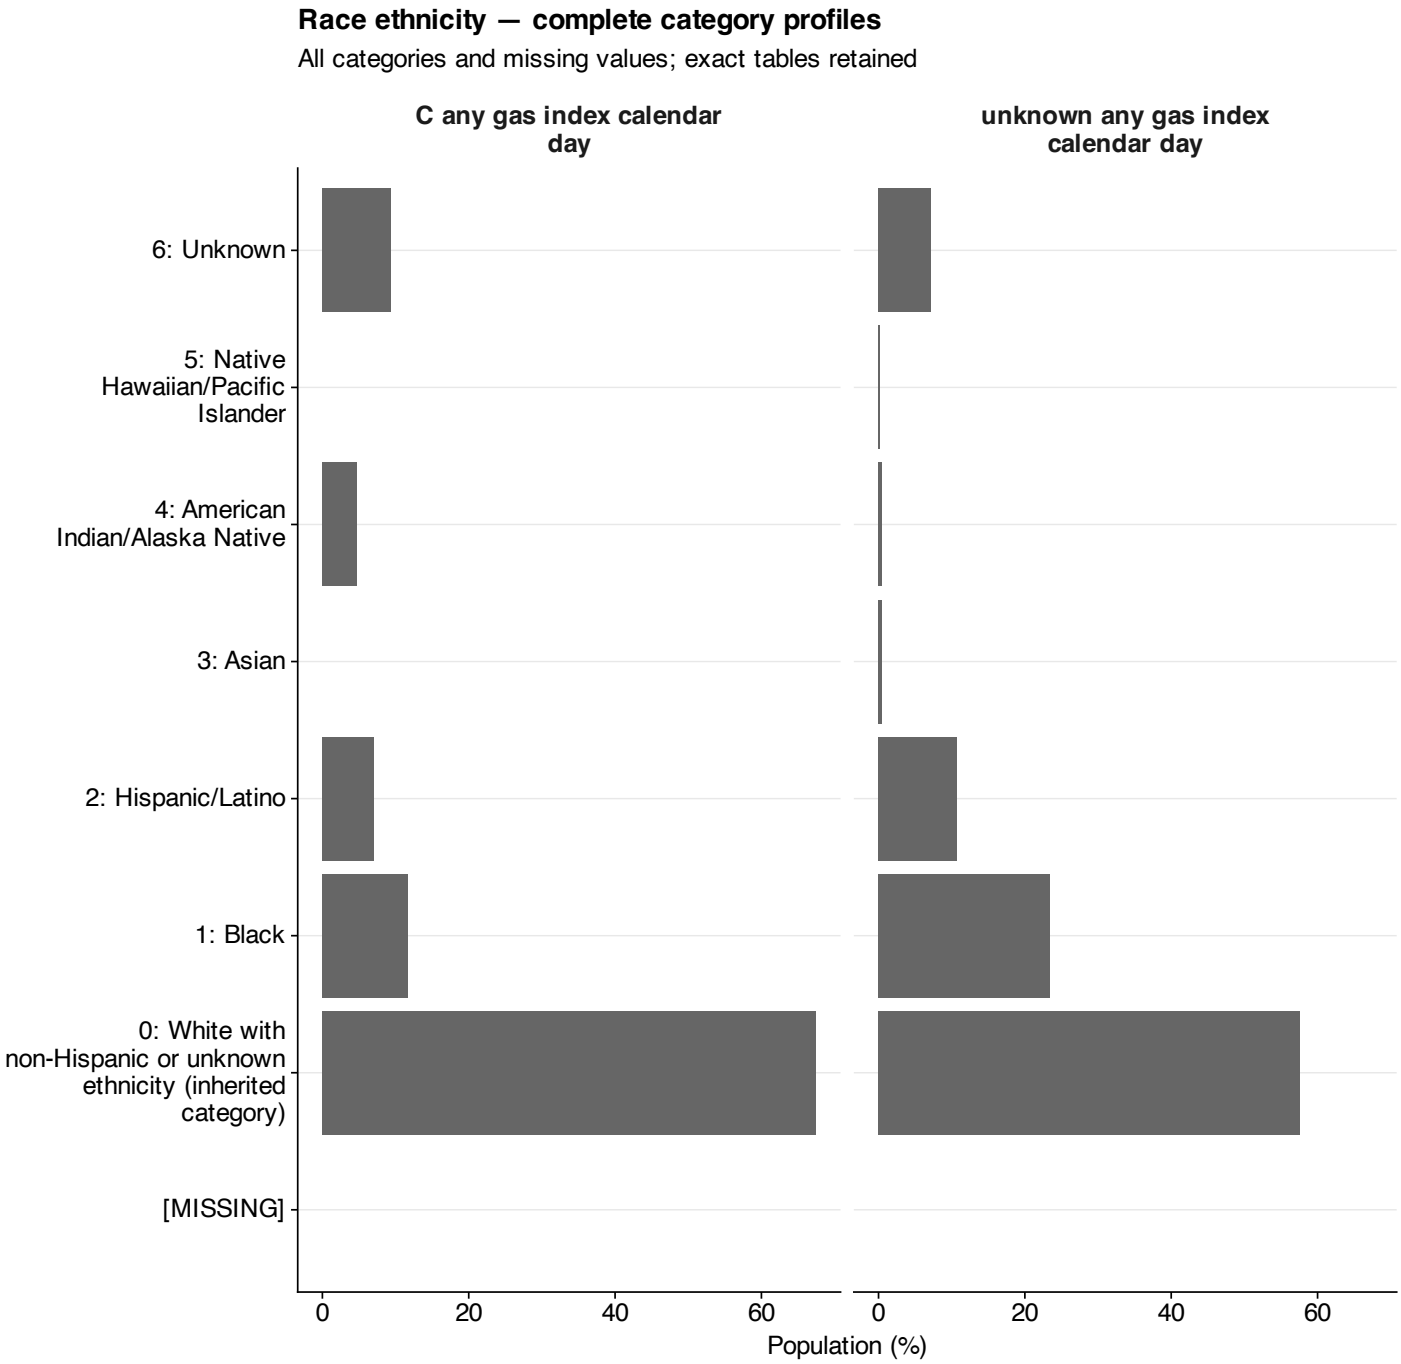

Figure 668: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete race_ethnicity stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

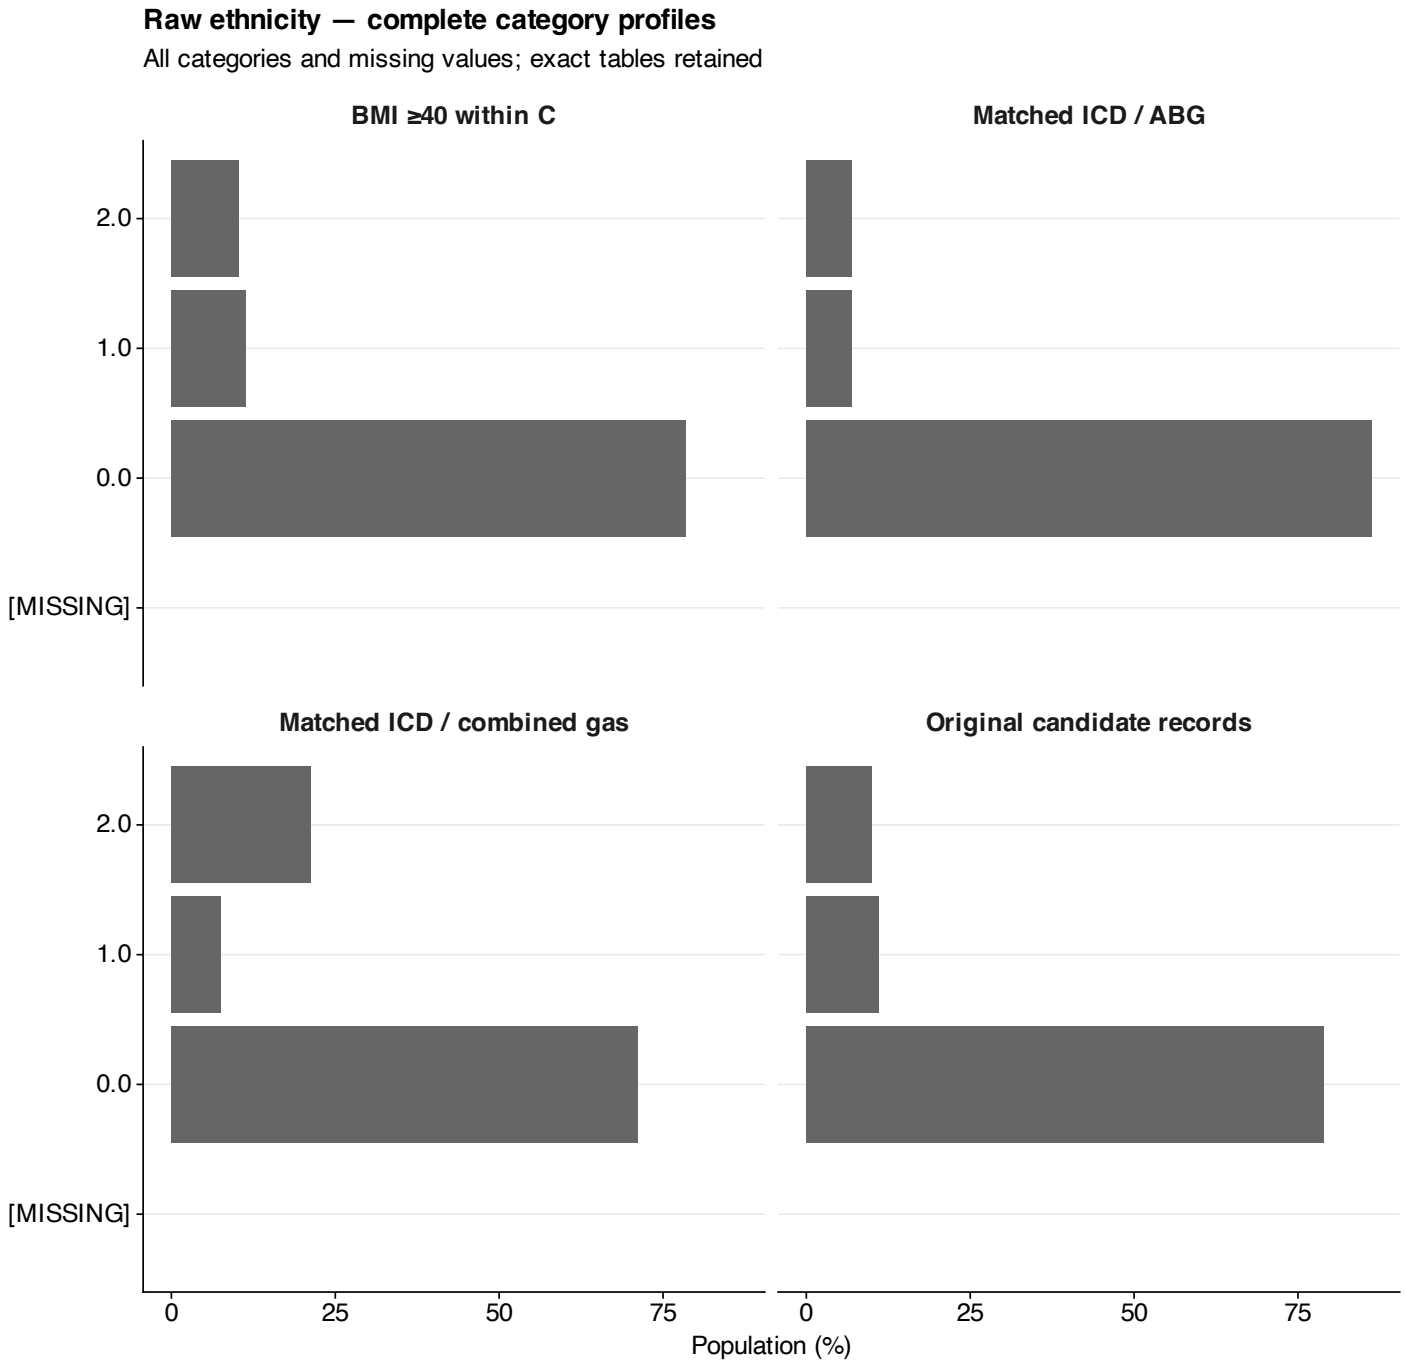

Figure 669: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete raw_ethnicity stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

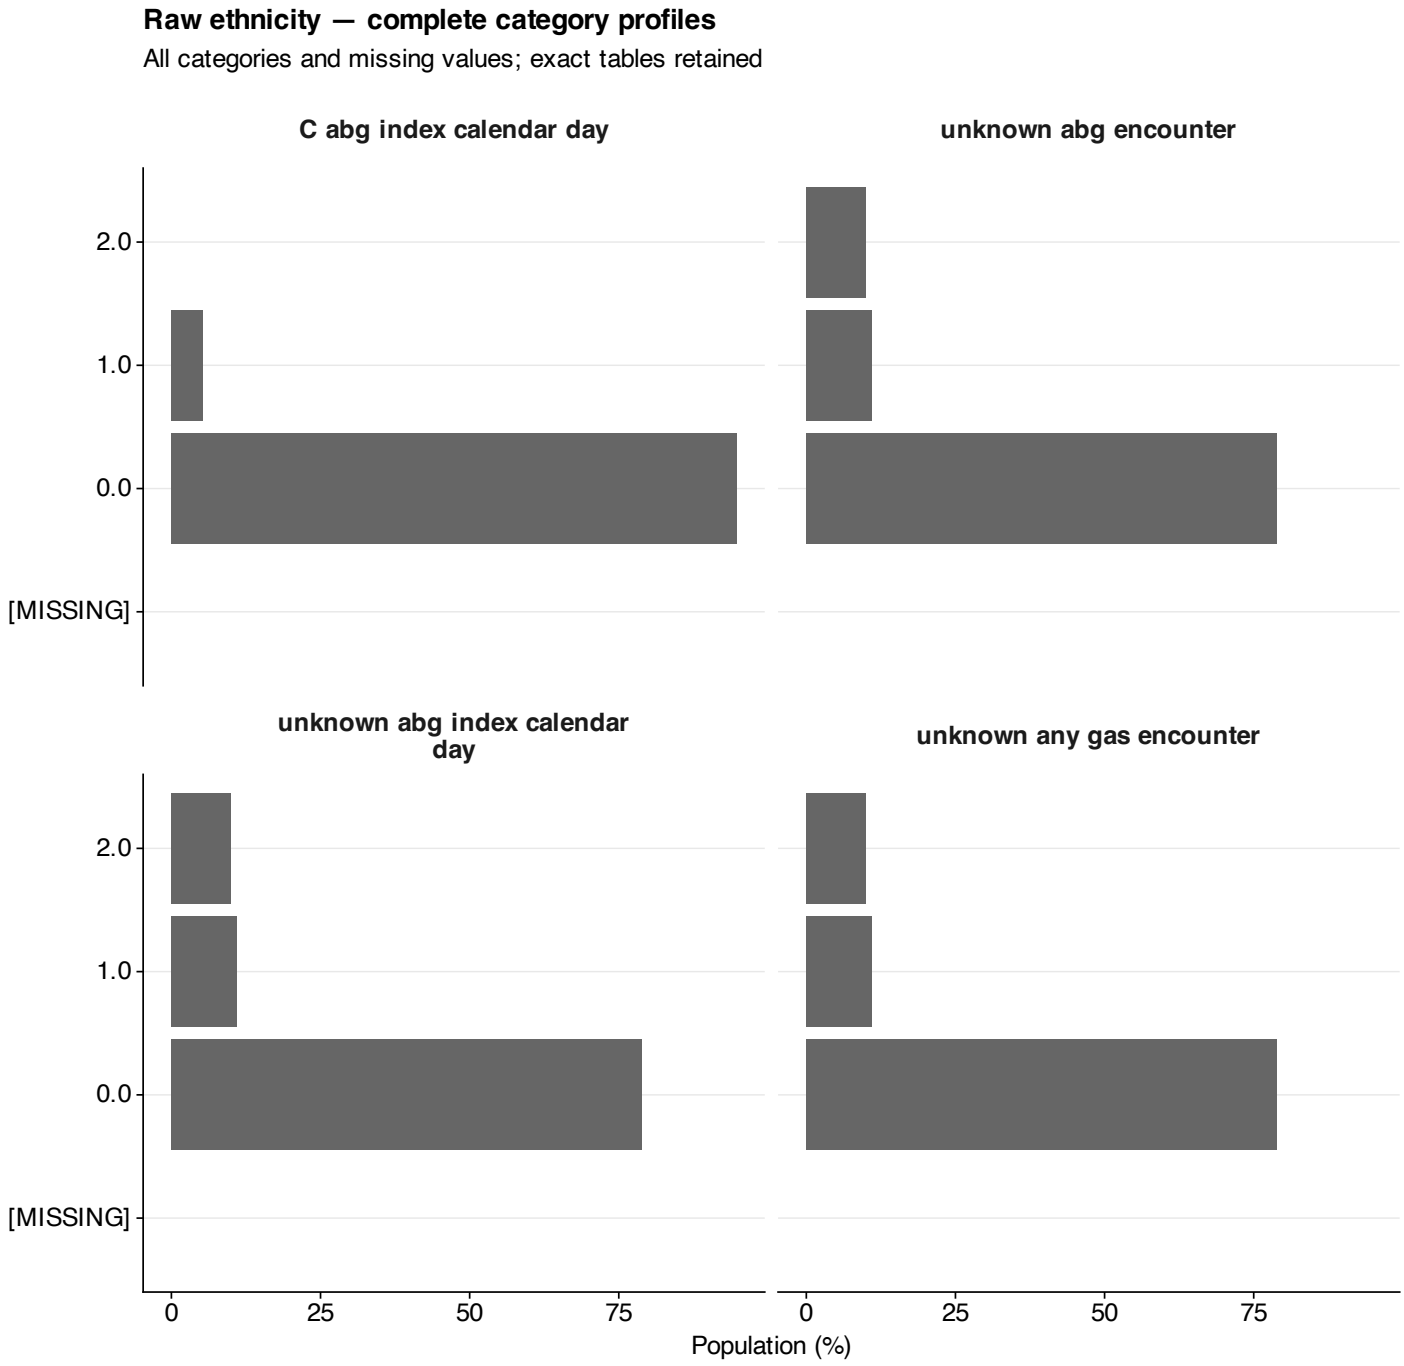

Figure 670: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete raw_ethnicity stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

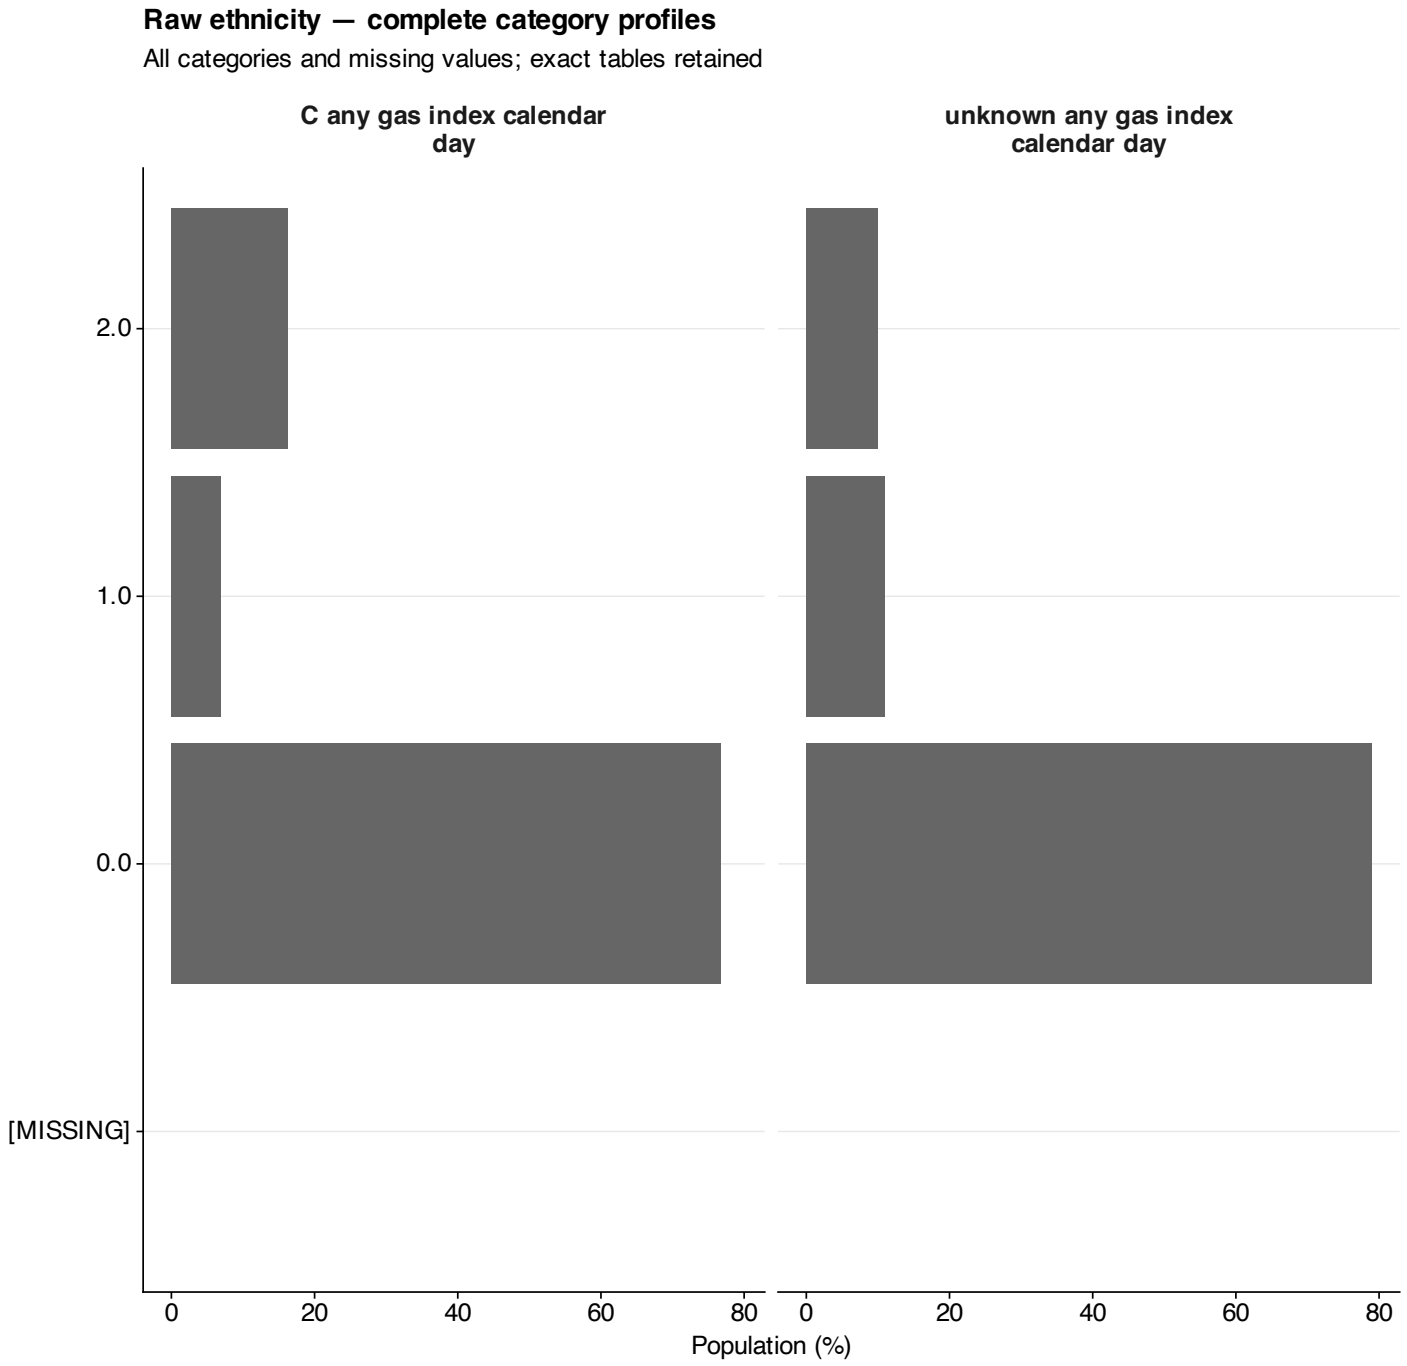

Figure 671: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete raw_ethnicity stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

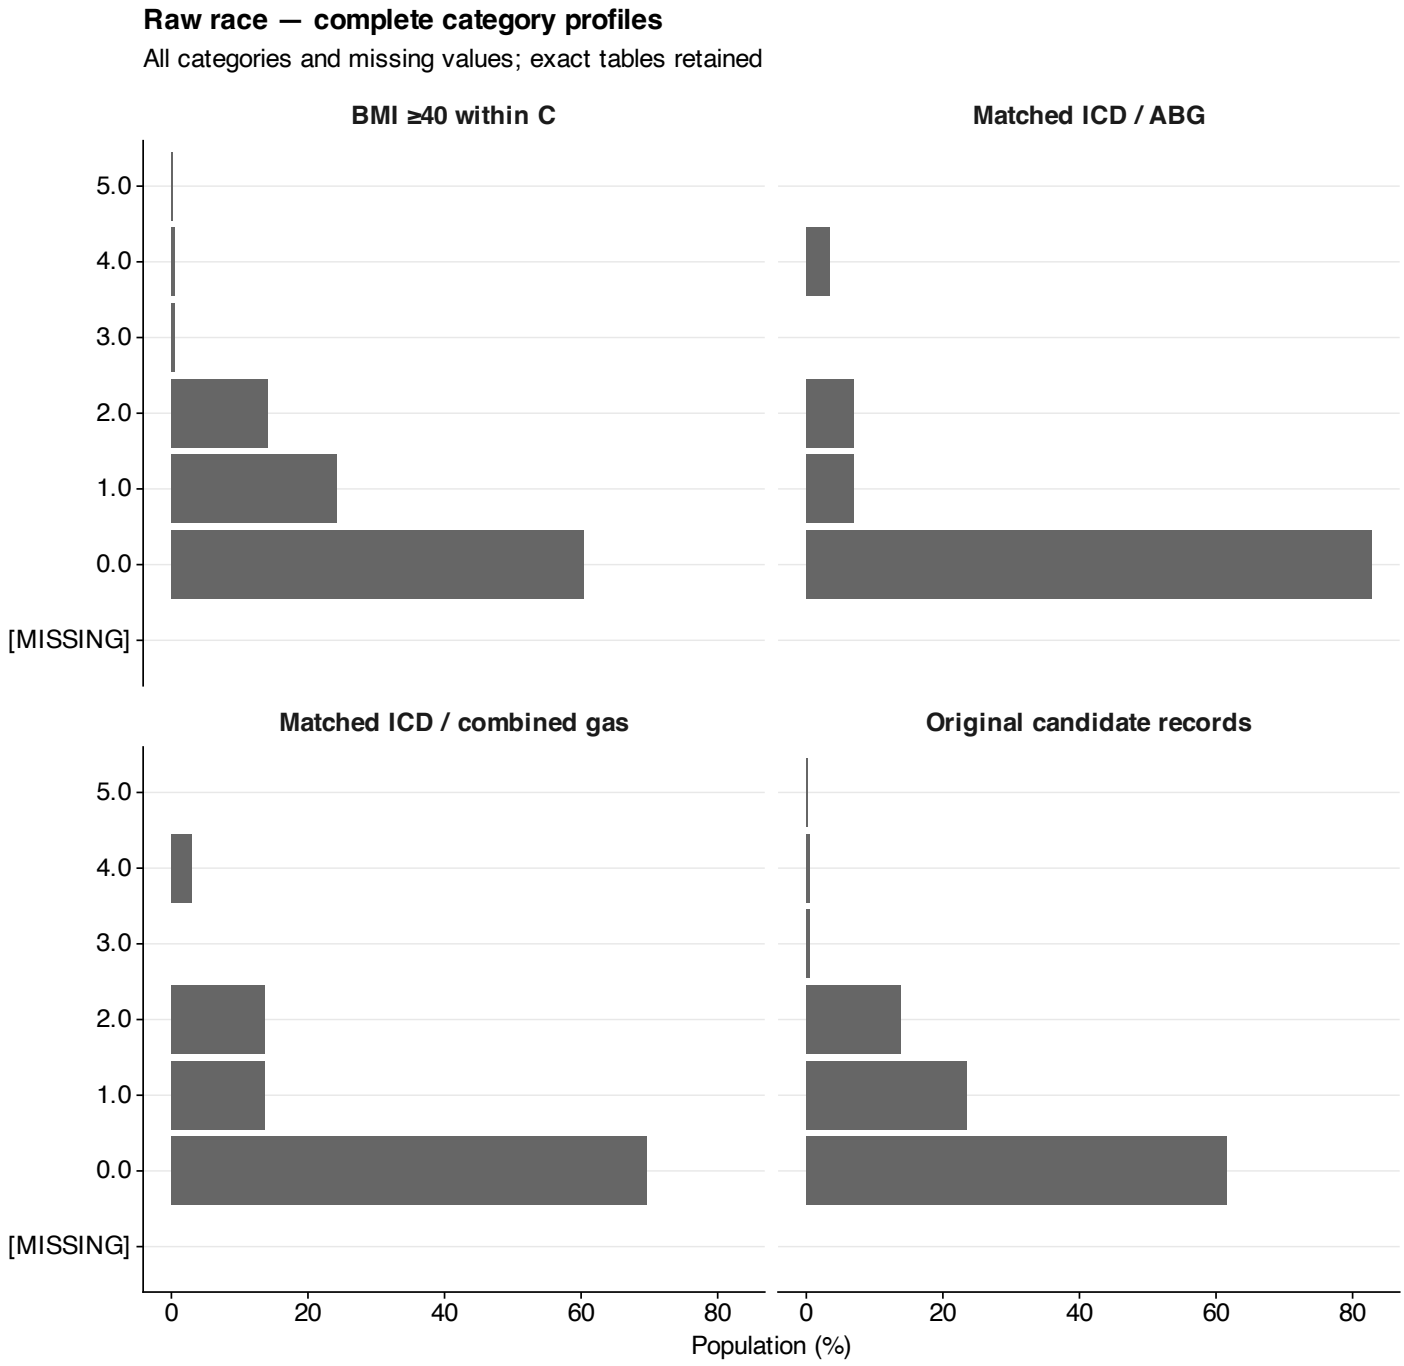

Figure 672: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete raw_race stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

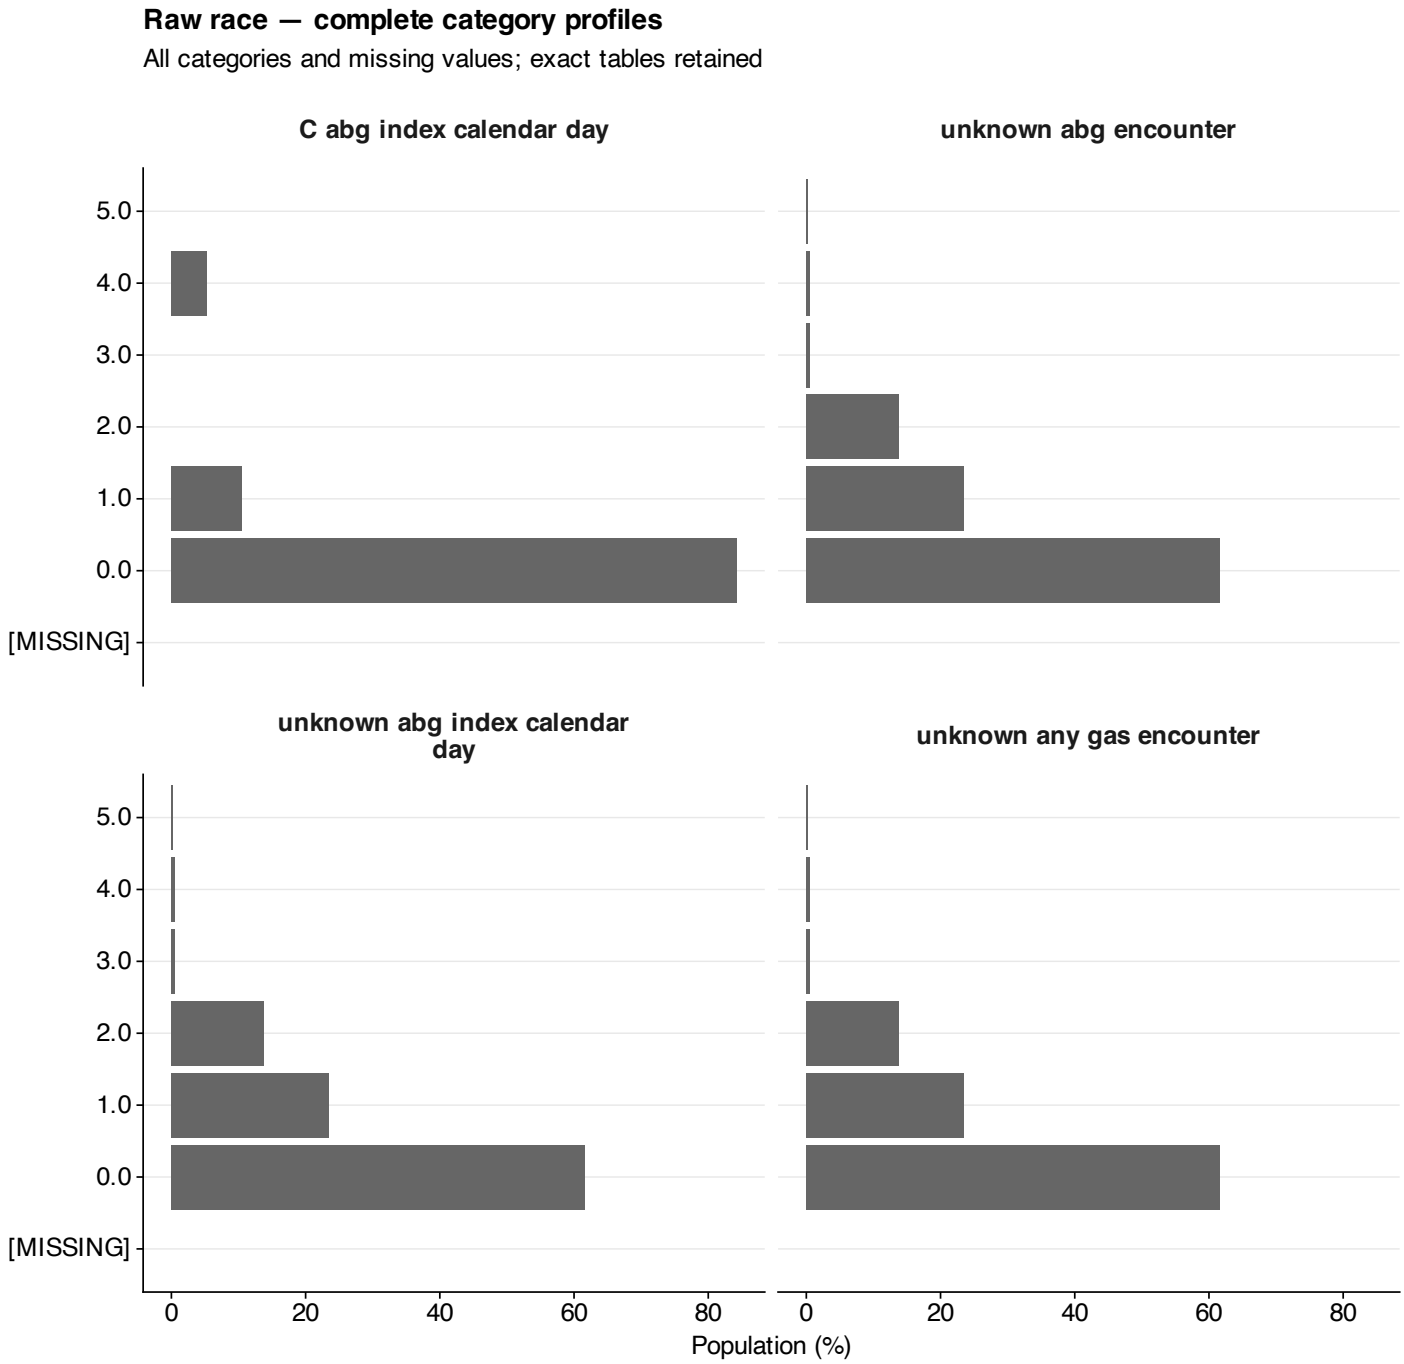

Figure 673: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete raw_race stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

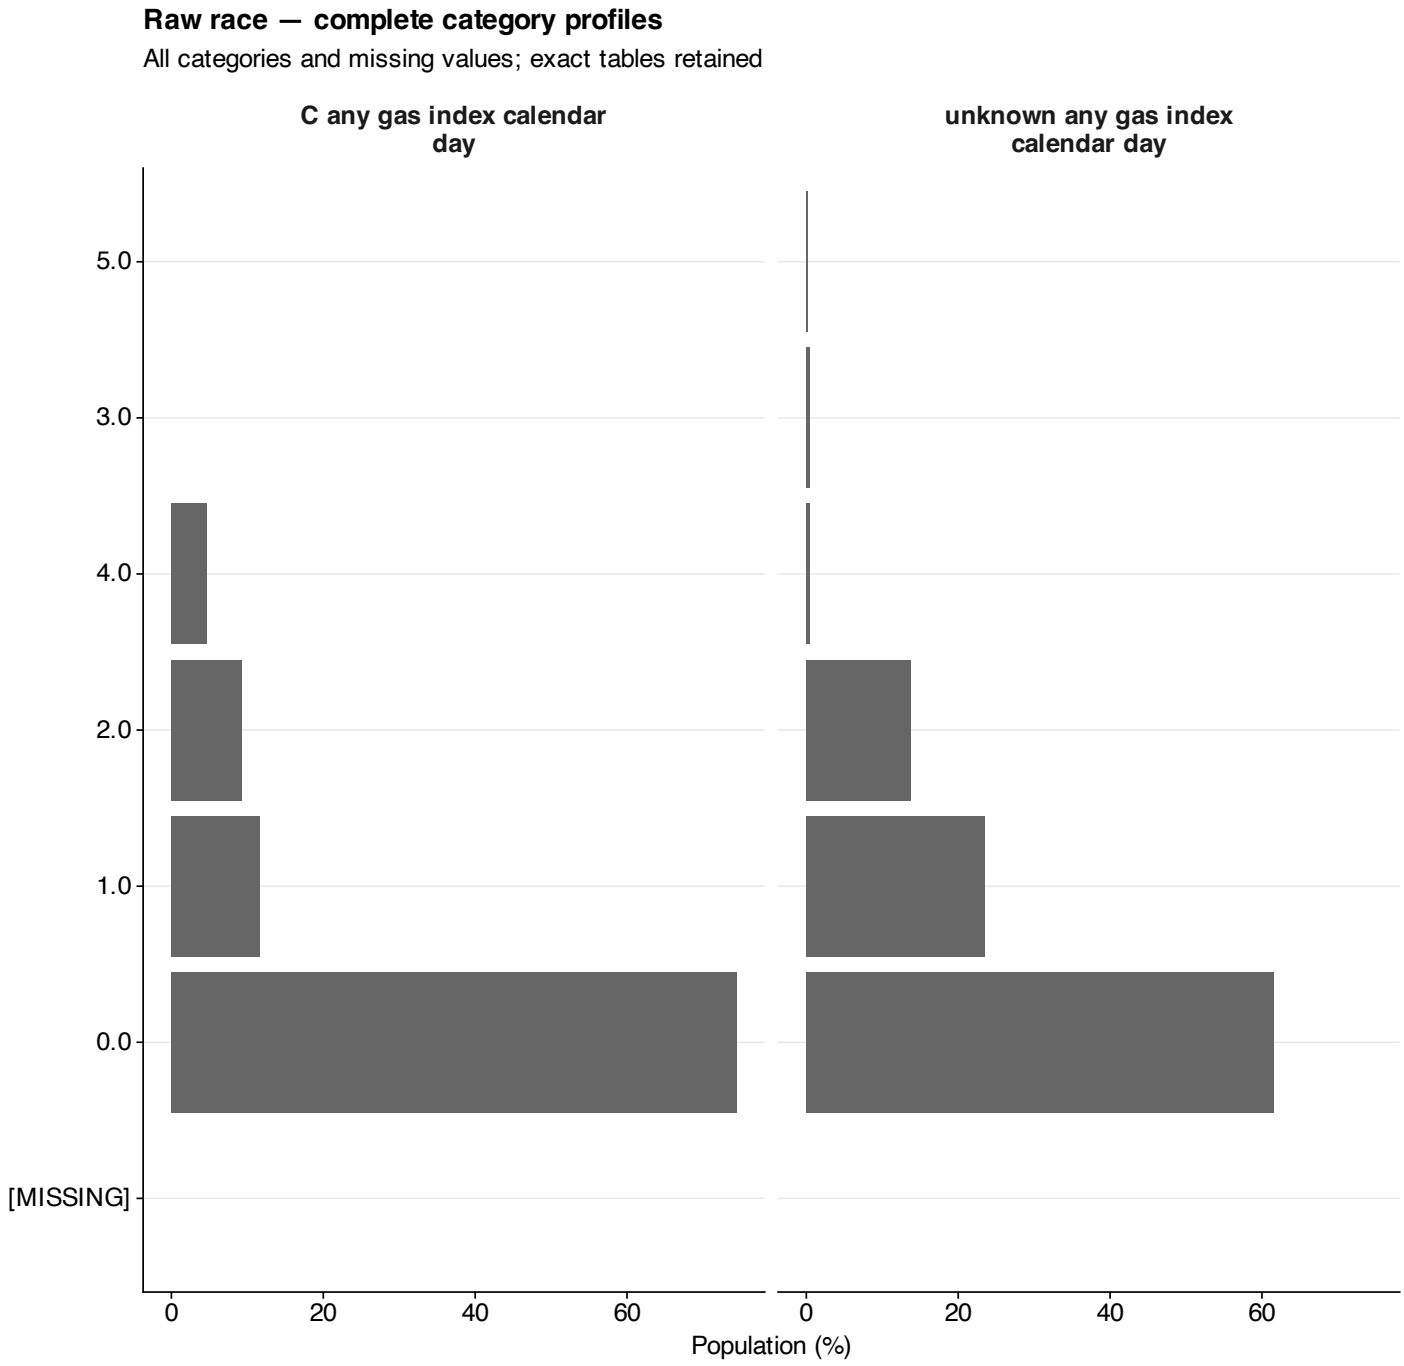

Figure 674: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete raw_race stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

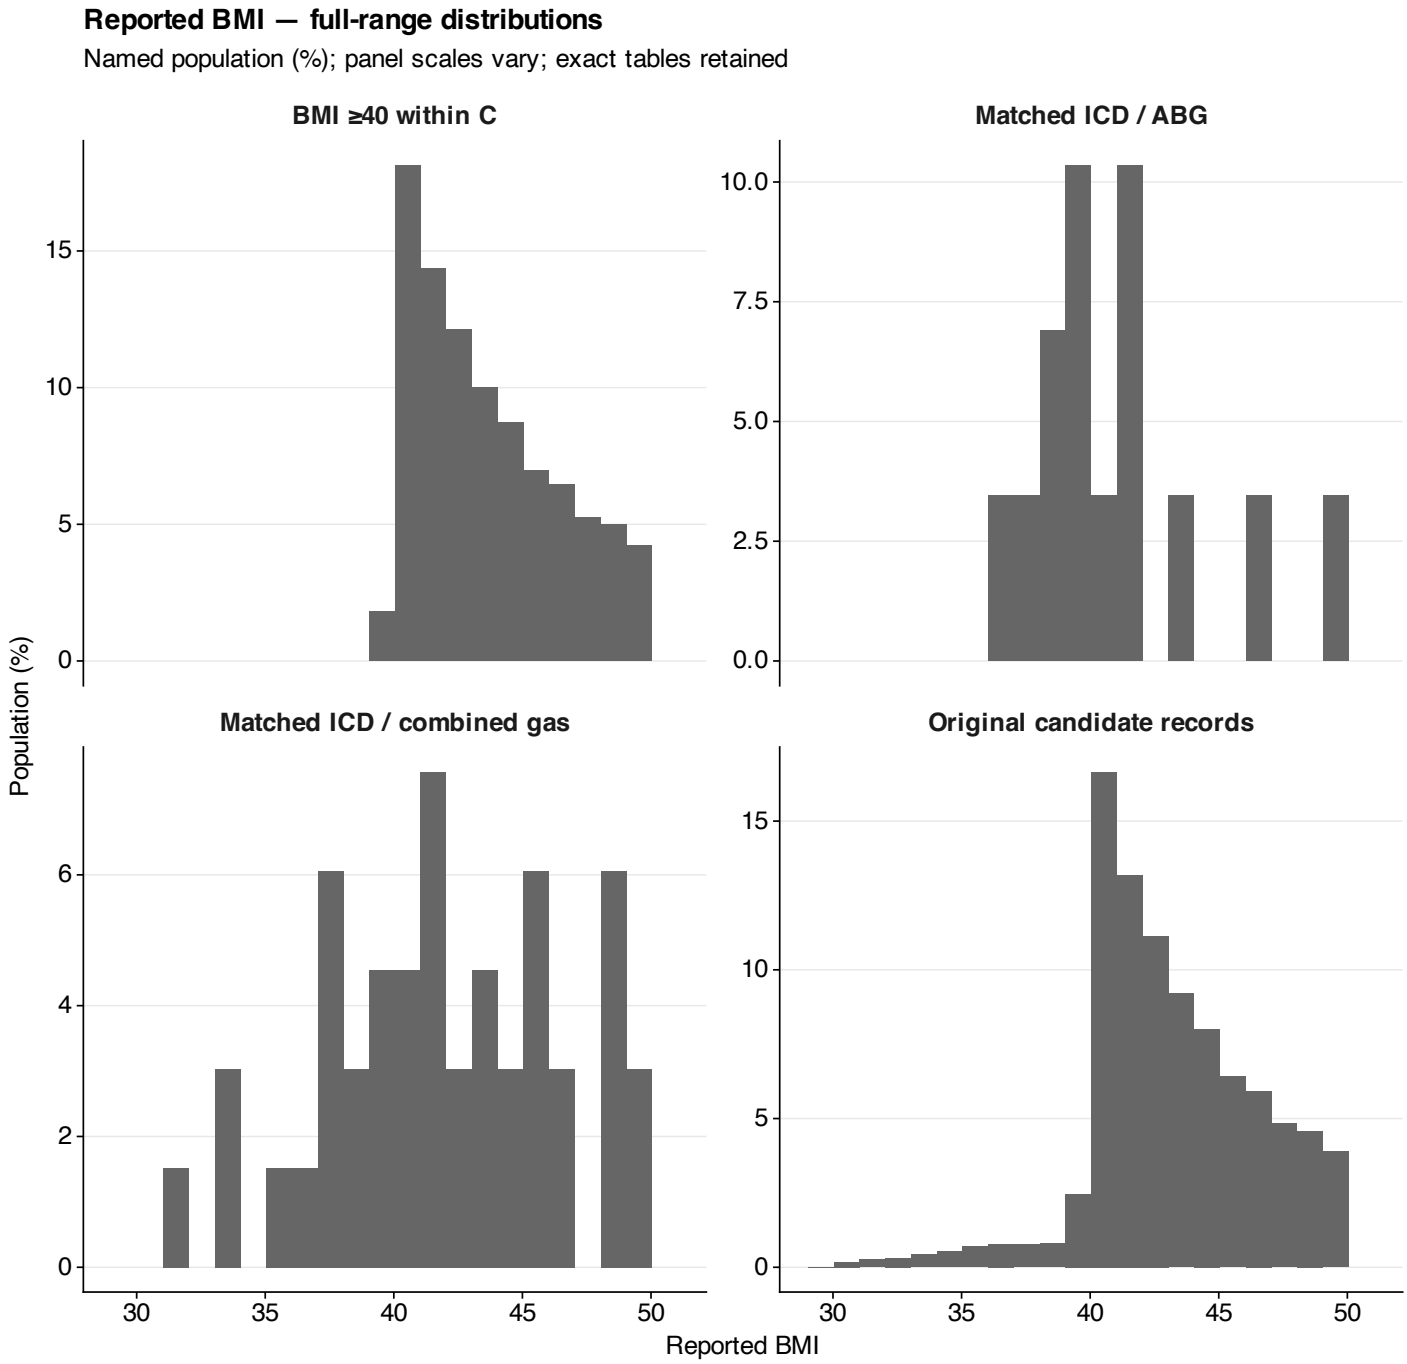

Figure 675: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete reported_bmi stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

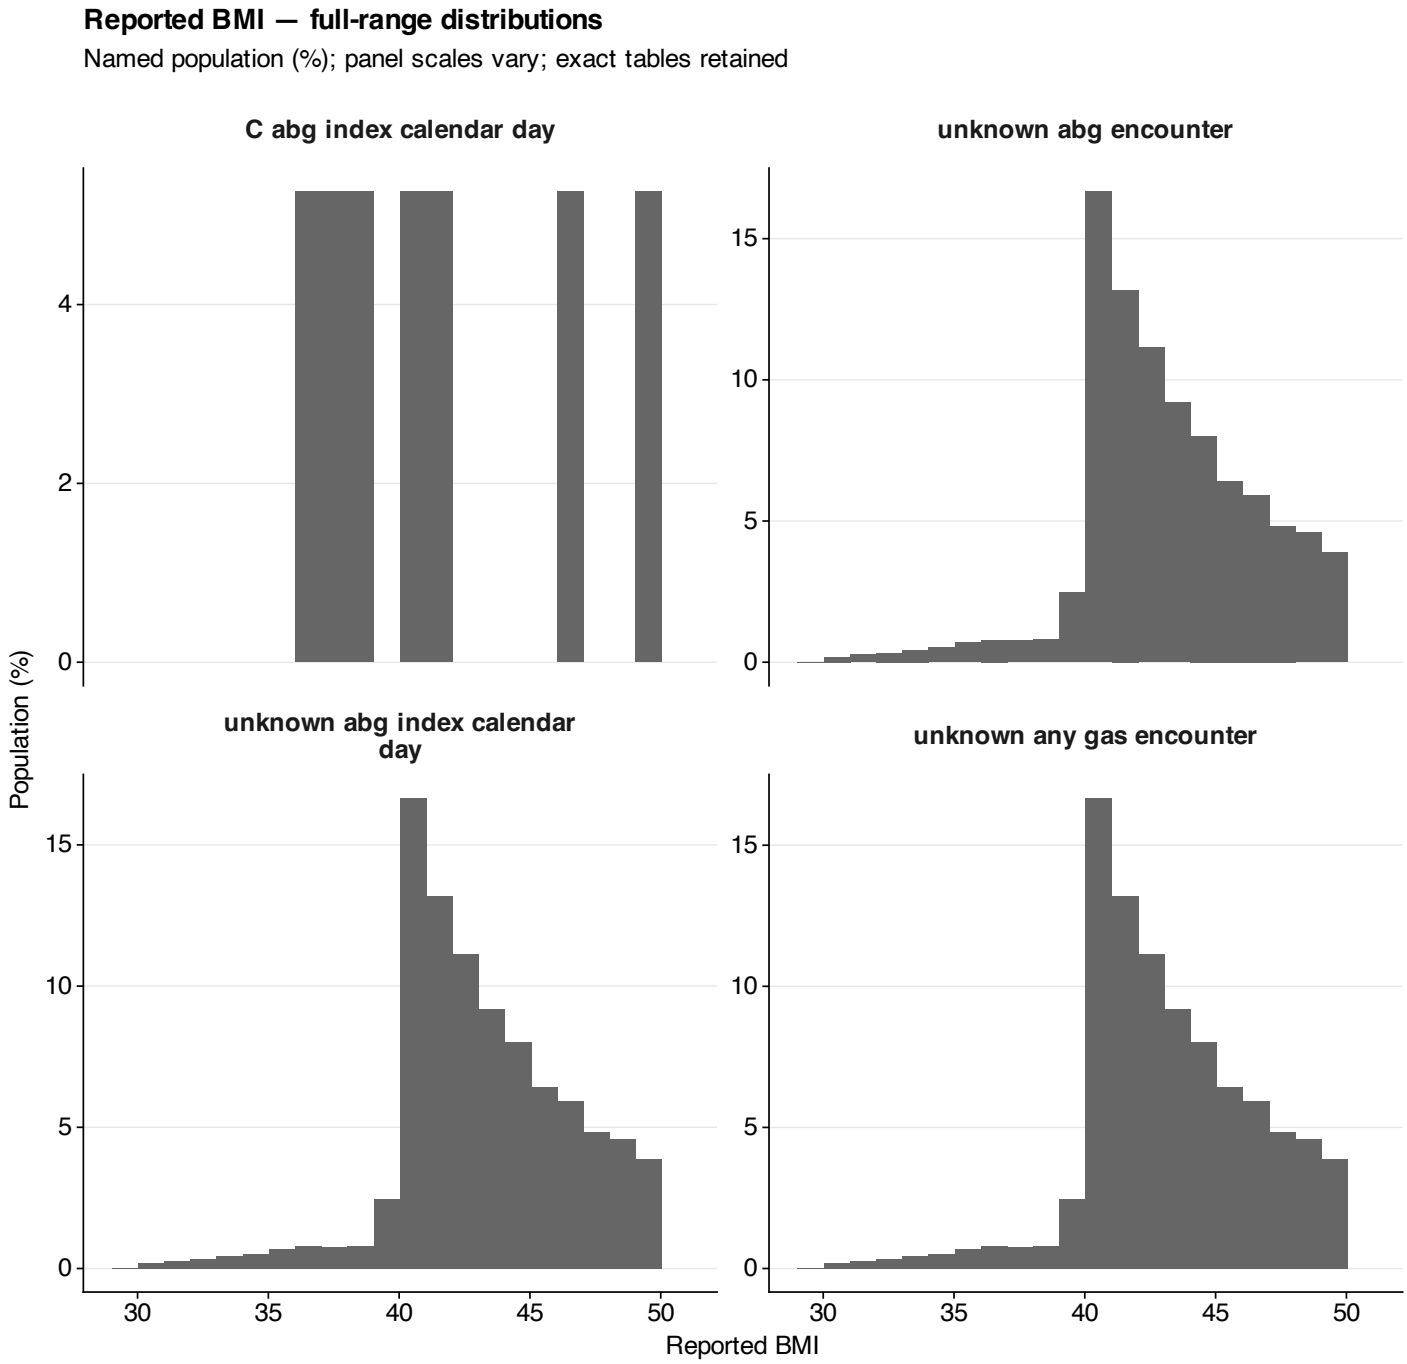

Figure 676: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete reported_bmi stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

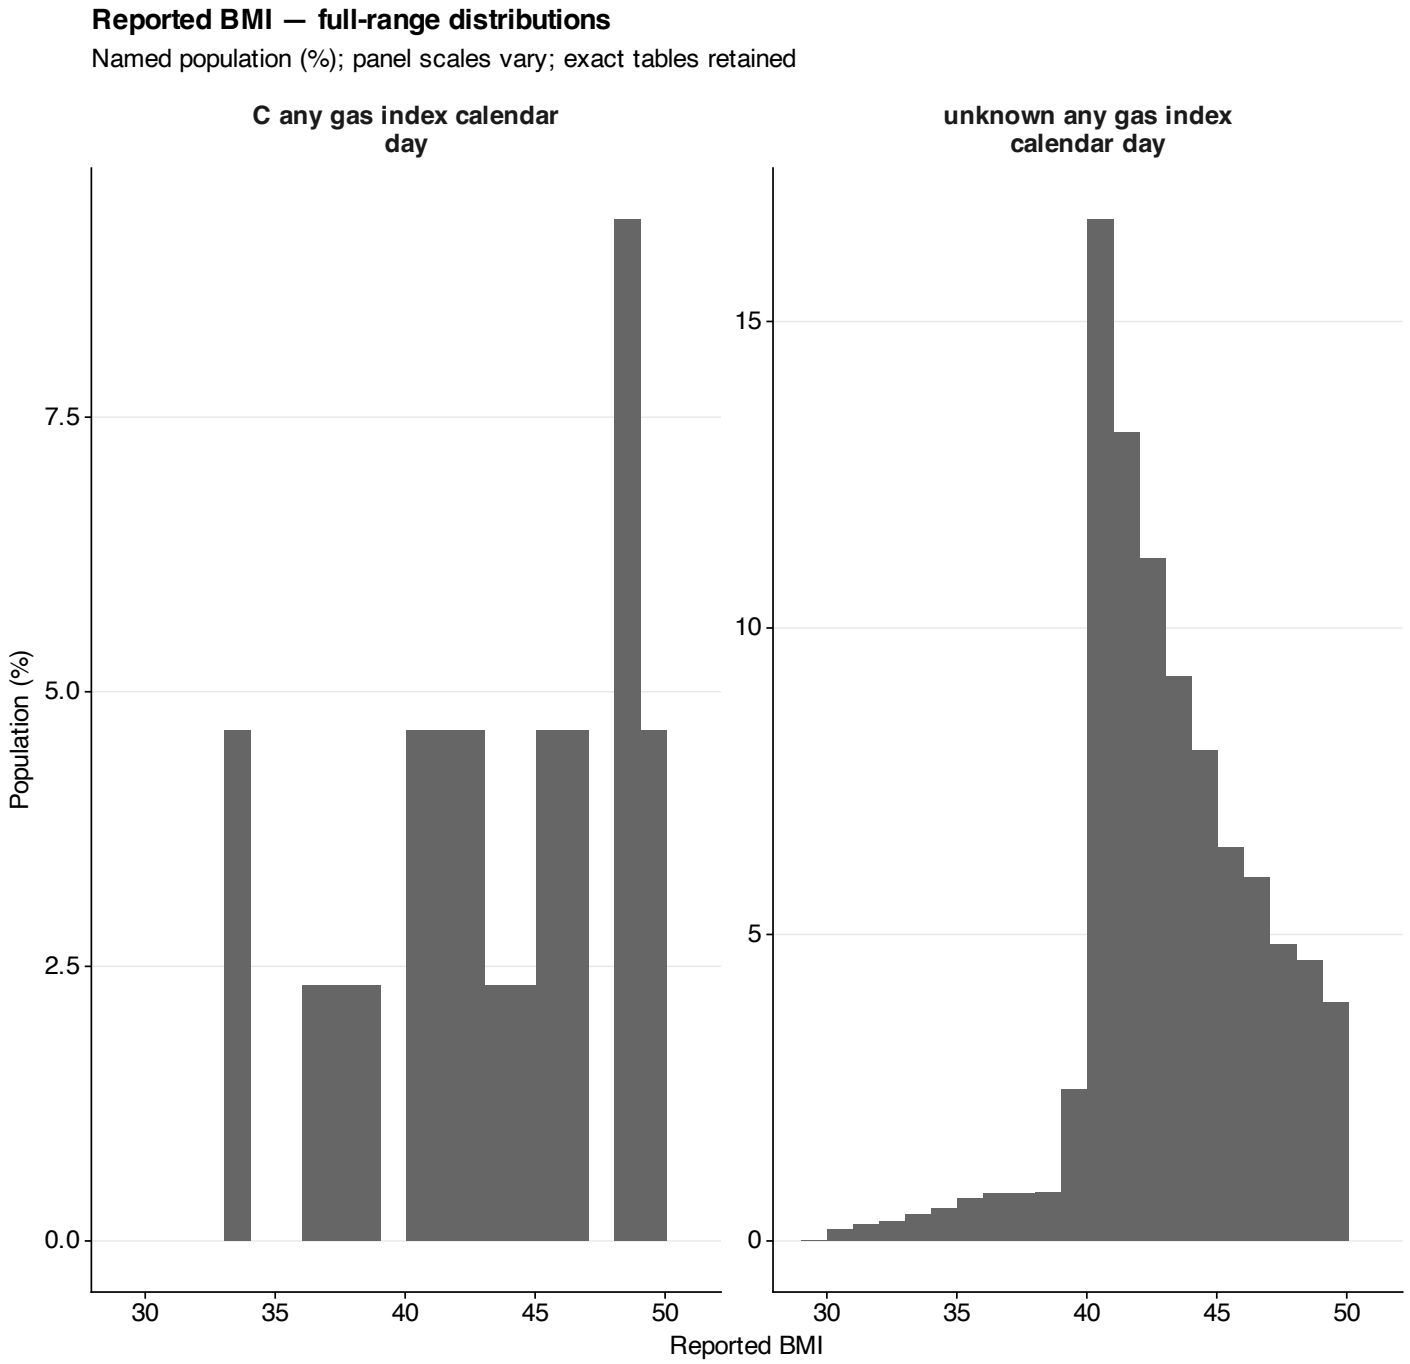

Figure 677: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete reported_bmi stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

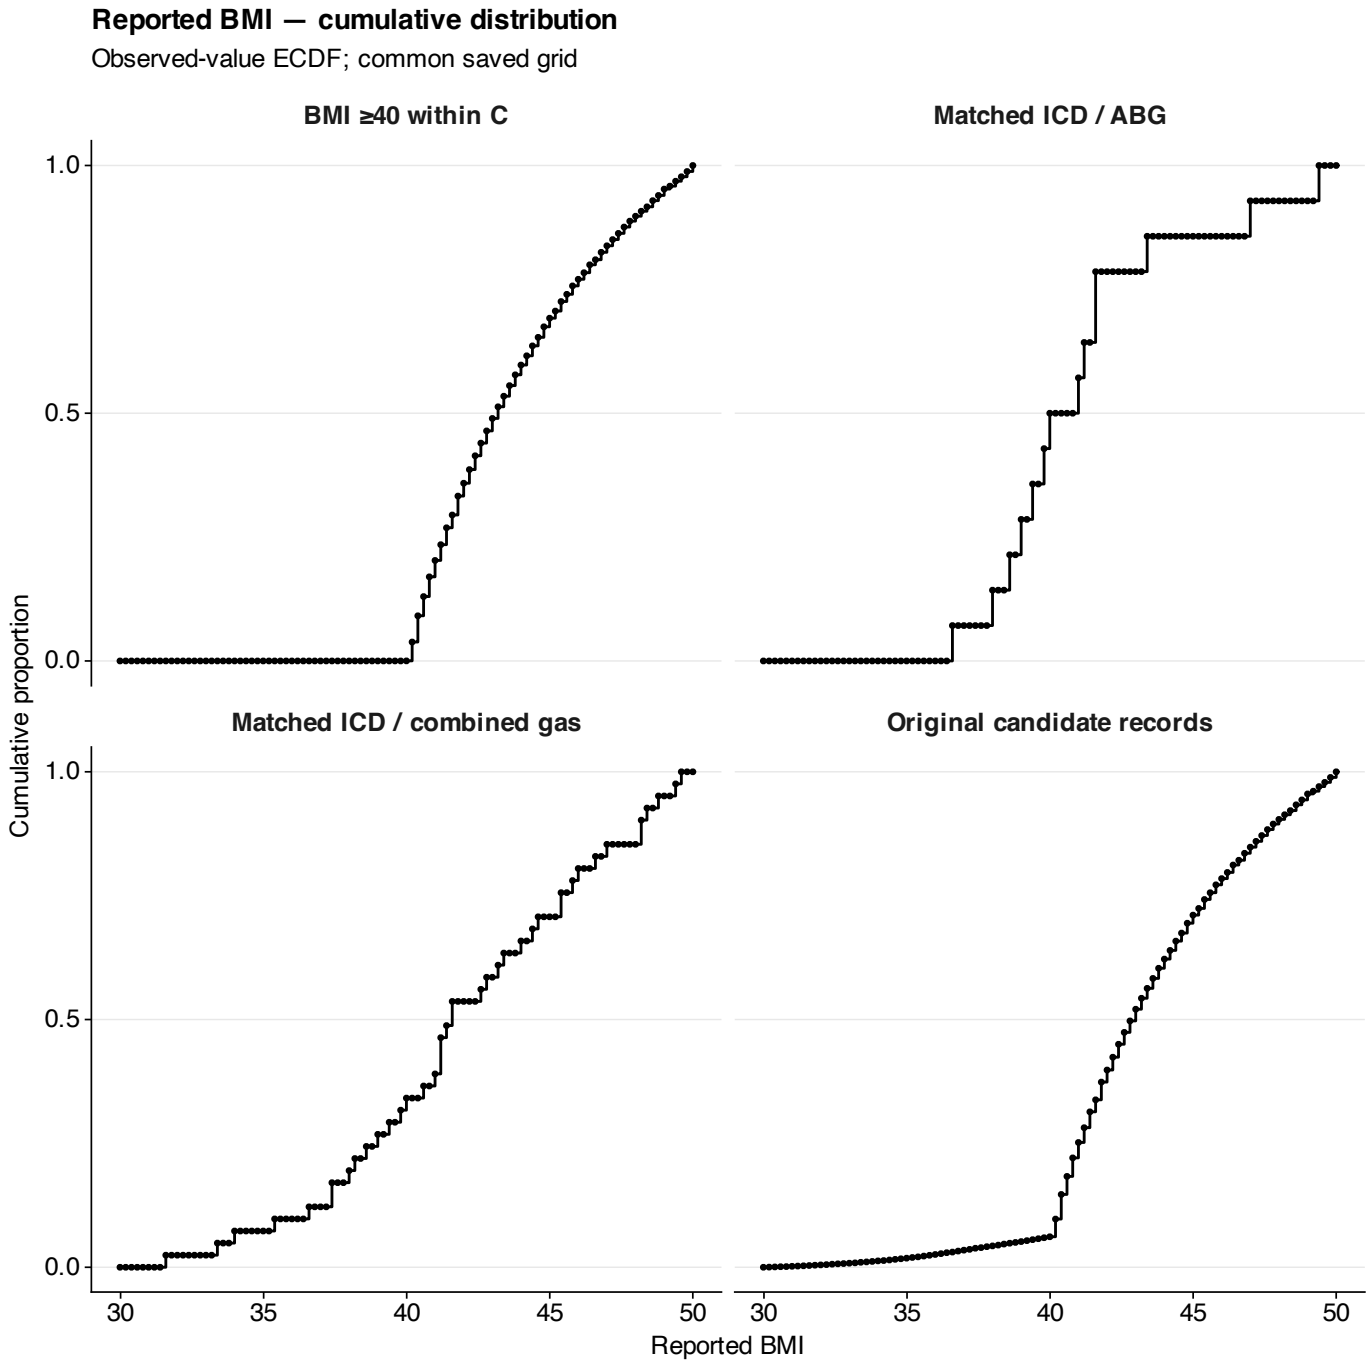

Figure 678: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. reported_bmi ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

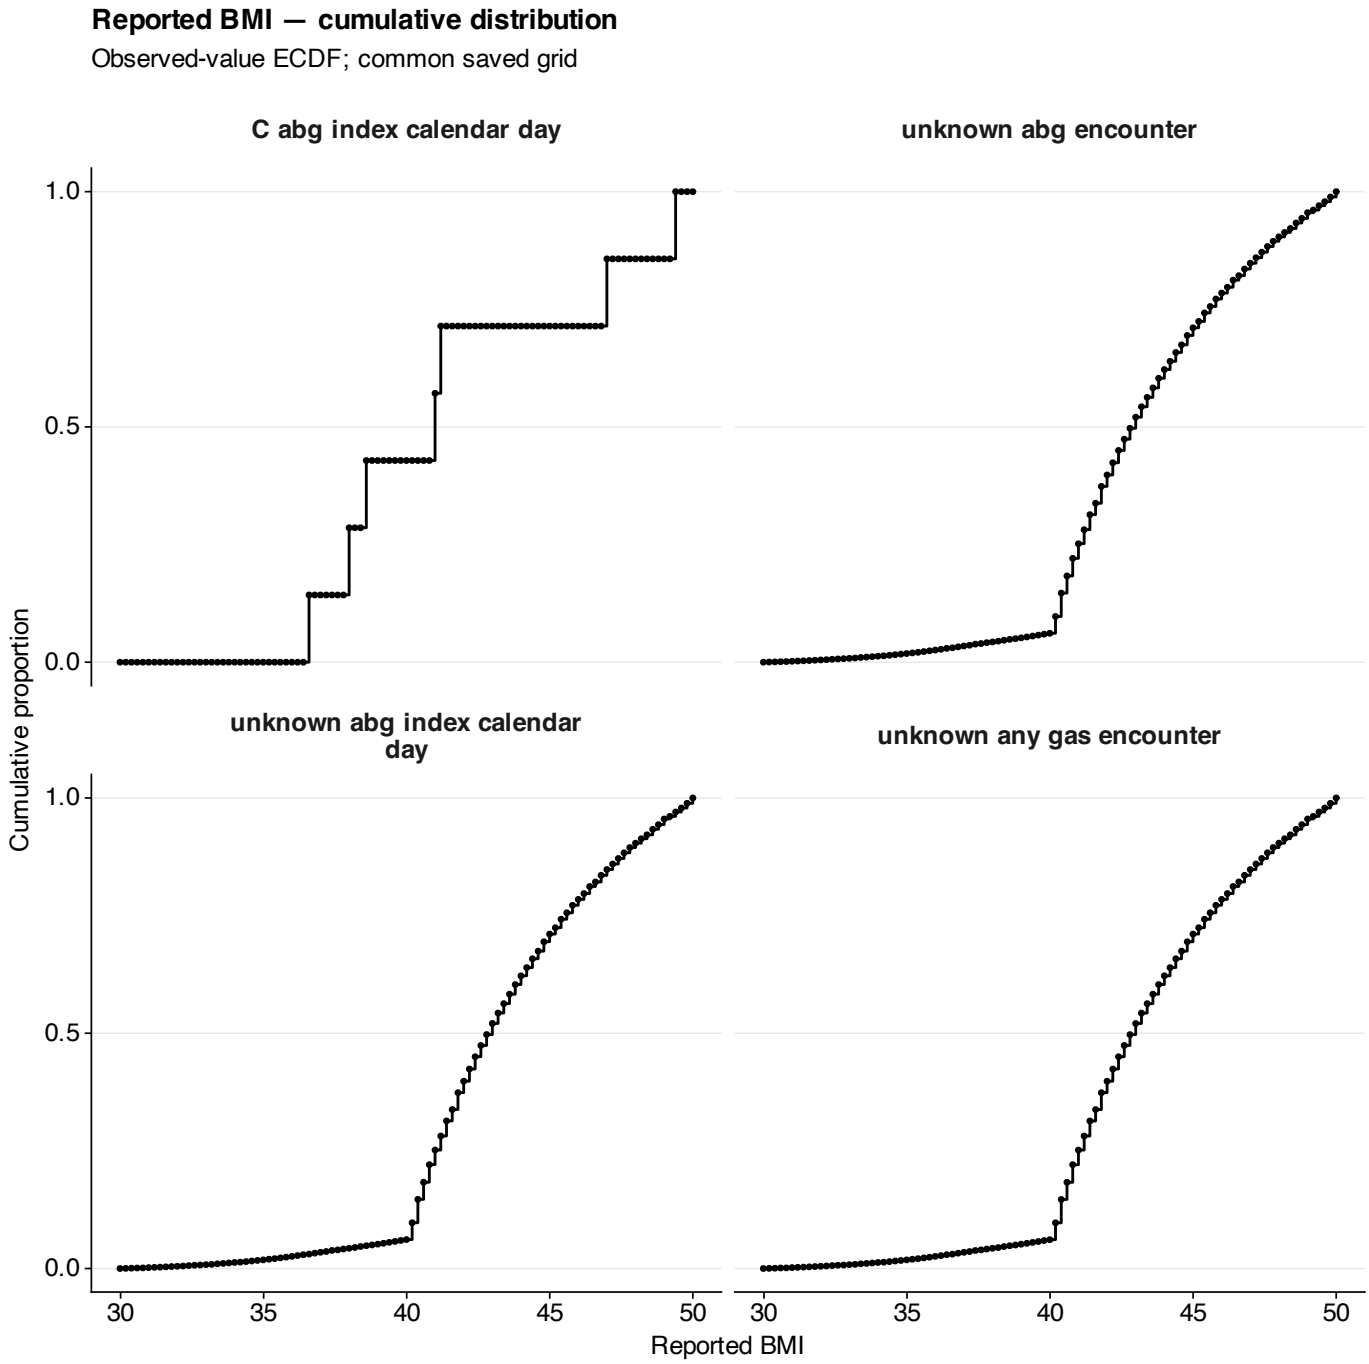

Figure 679: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. reported_bmi ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

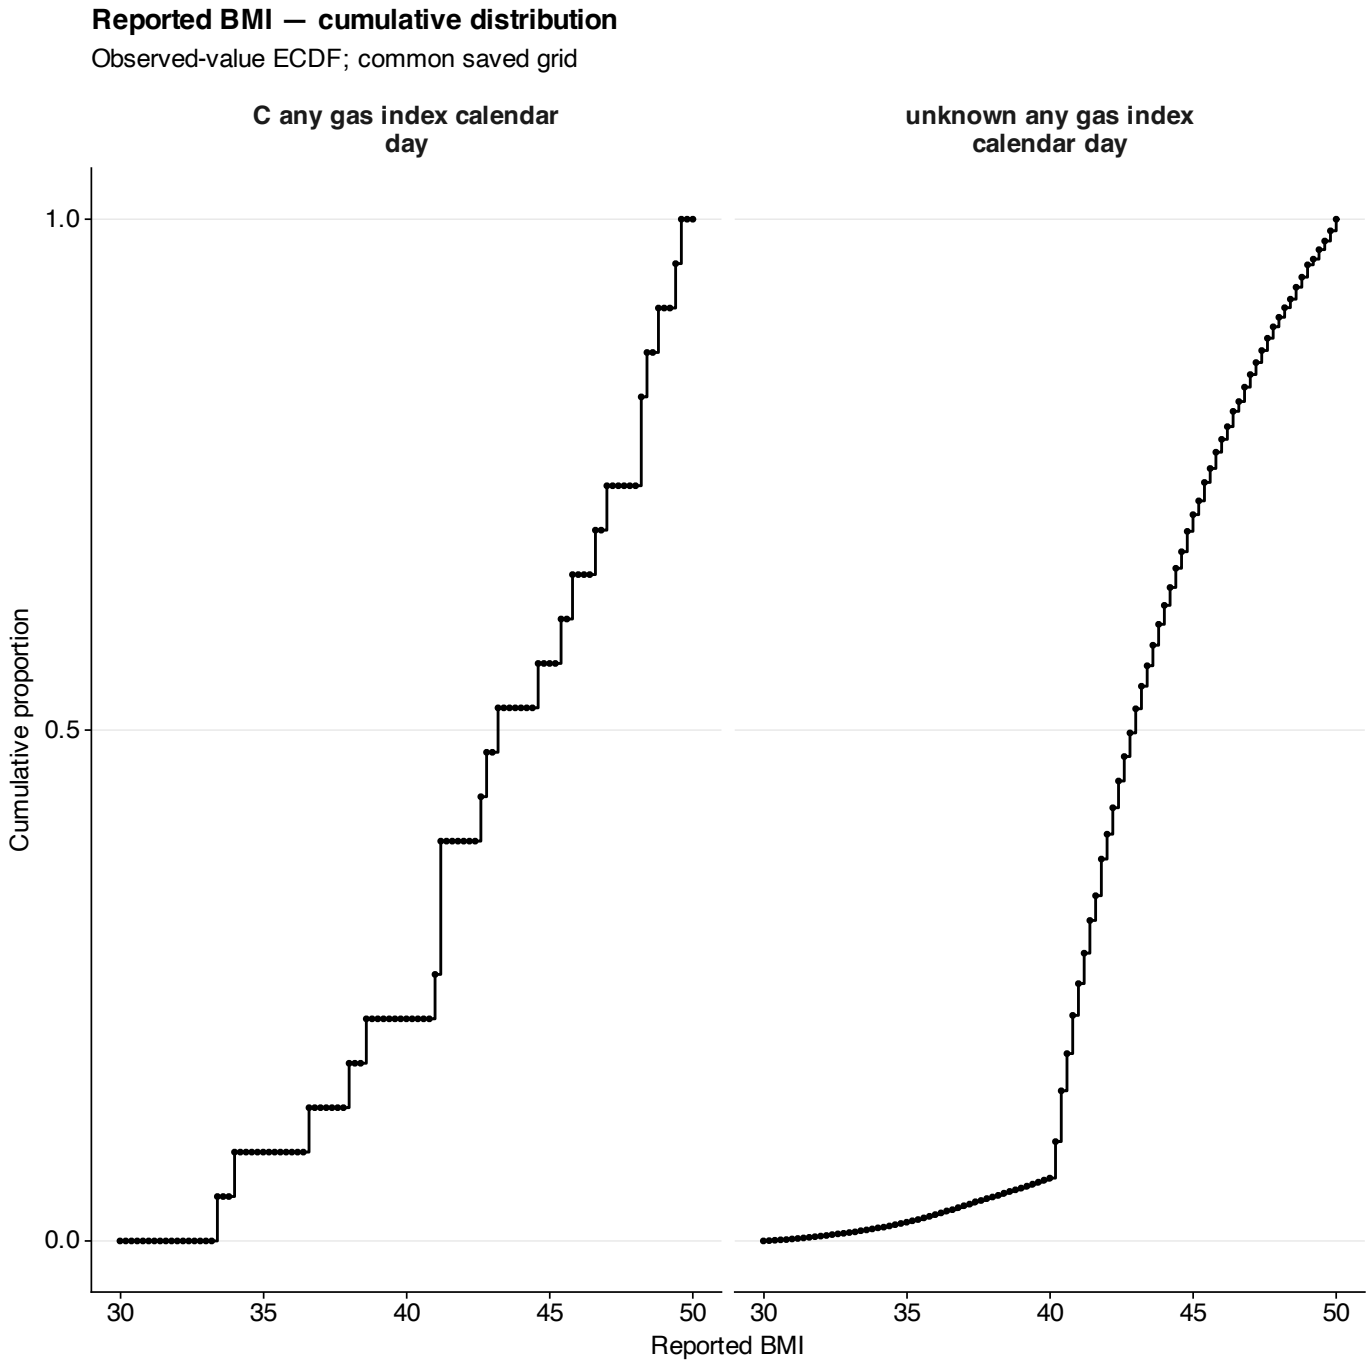

Figure 680: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. reported_bmi ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

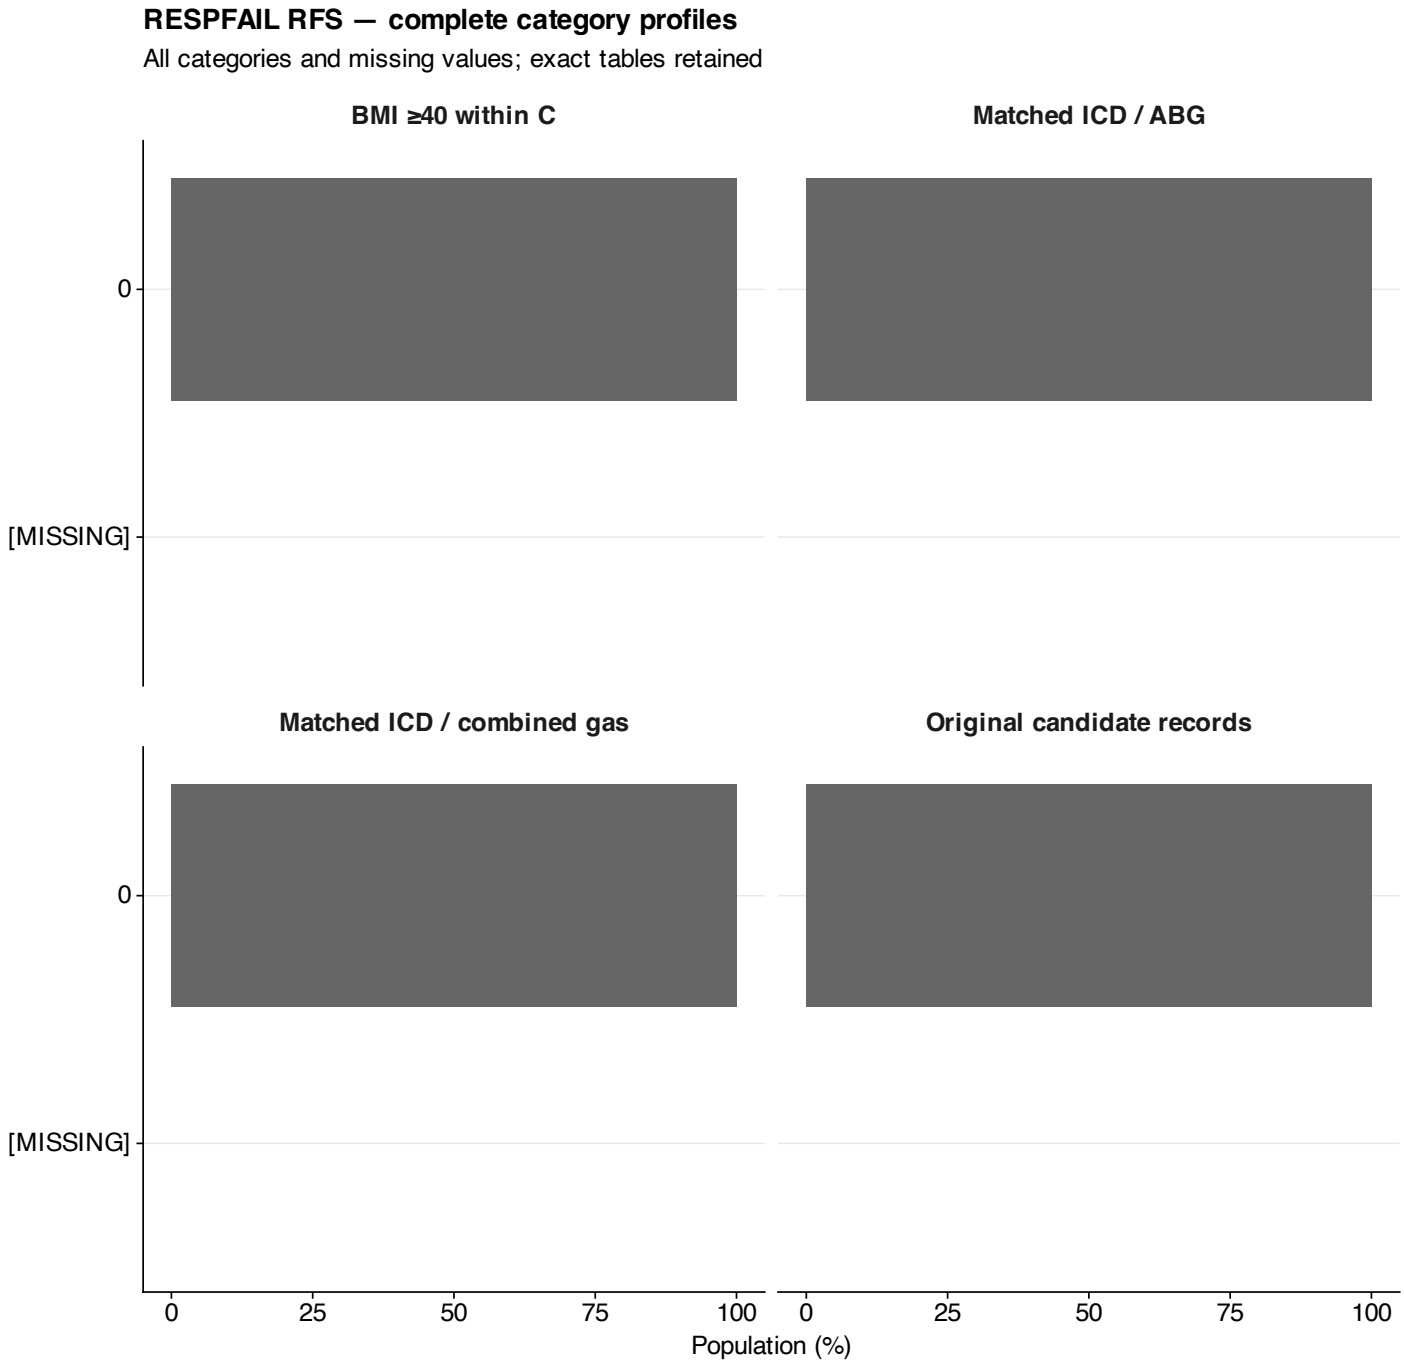

Figure 681: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete RESPFAIL_rfs stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

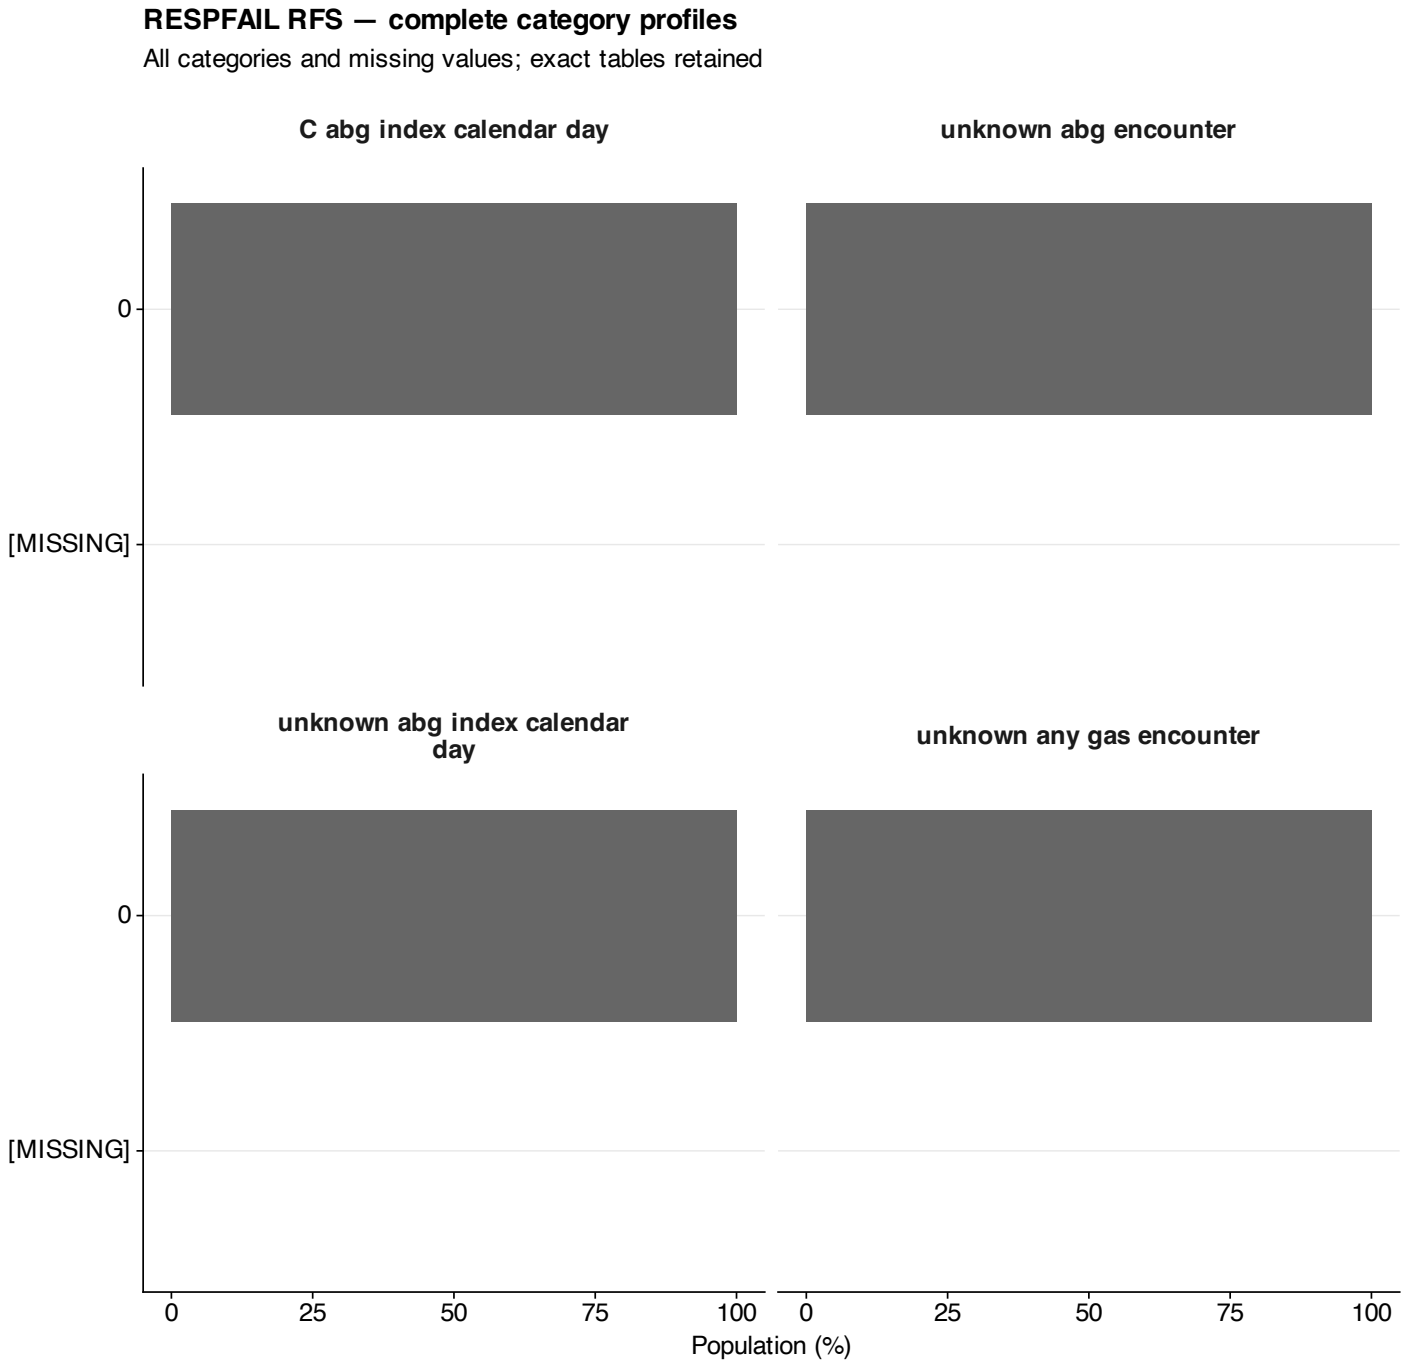

Figure 682: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete RESPFAIL_rfs stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

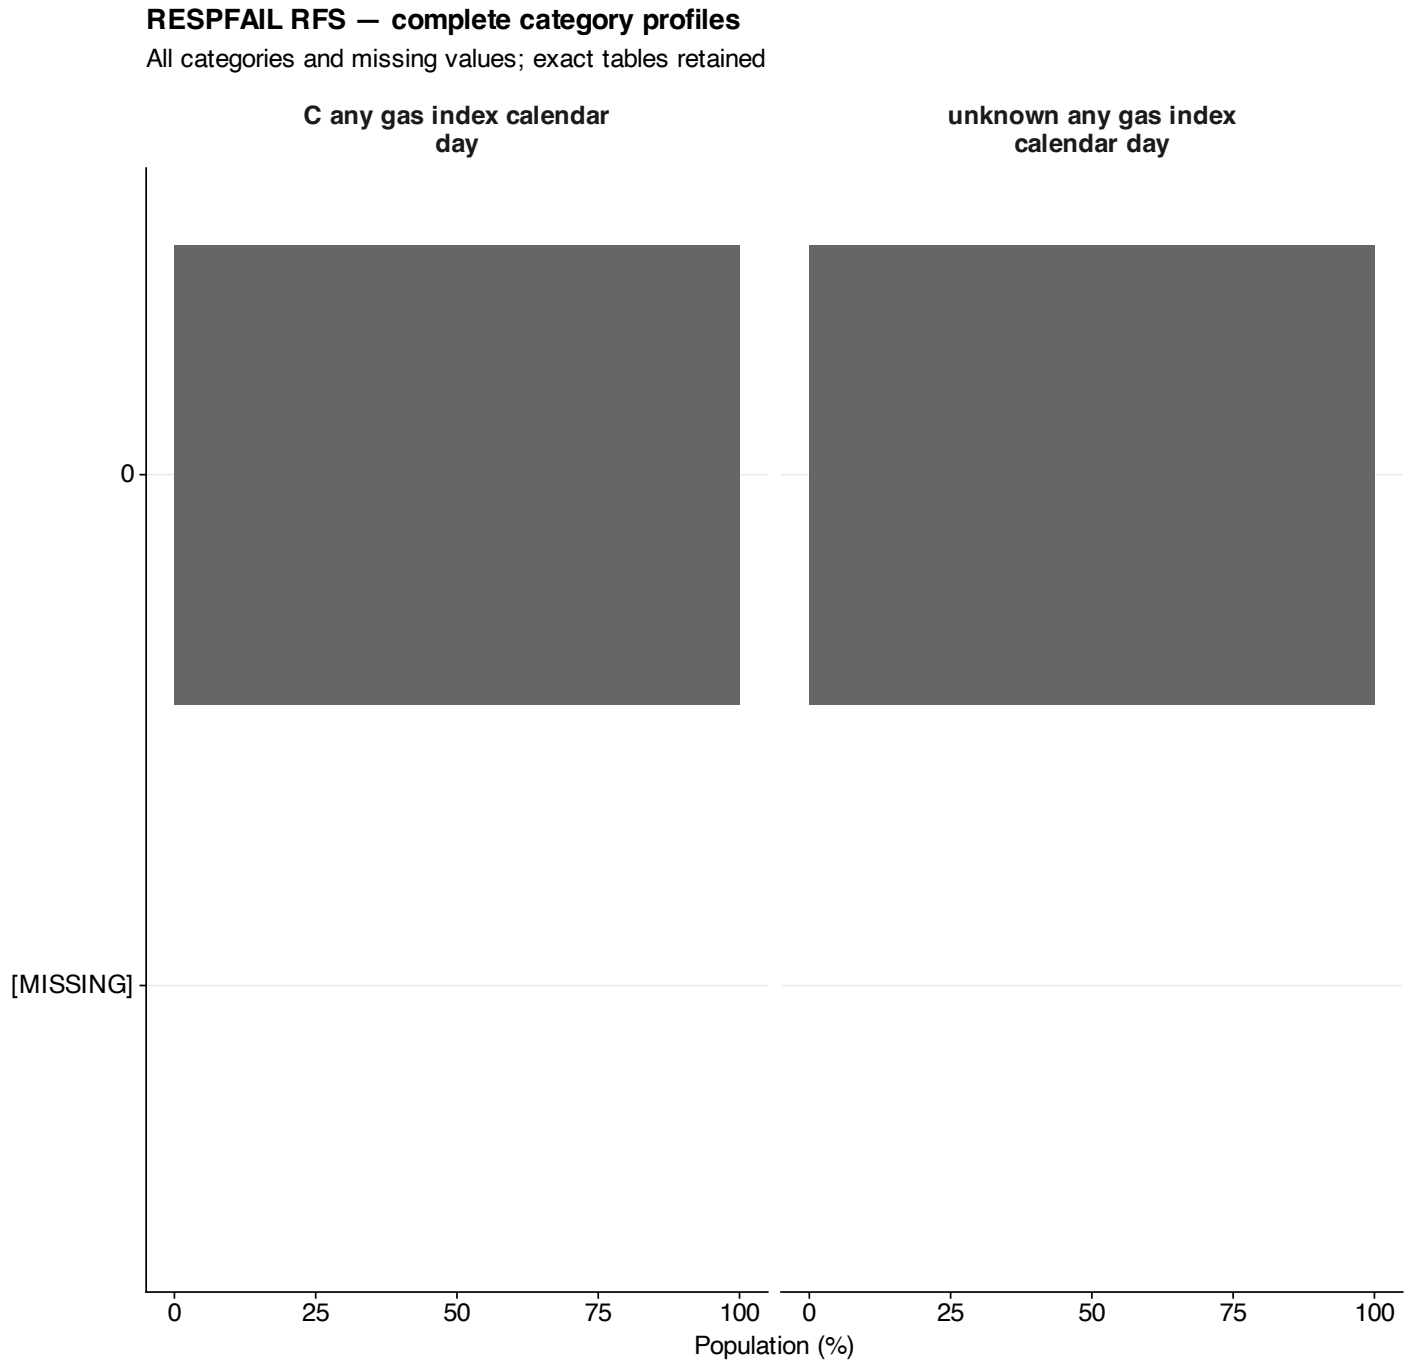

Figure 683: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete RESPFAIL_rfs stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

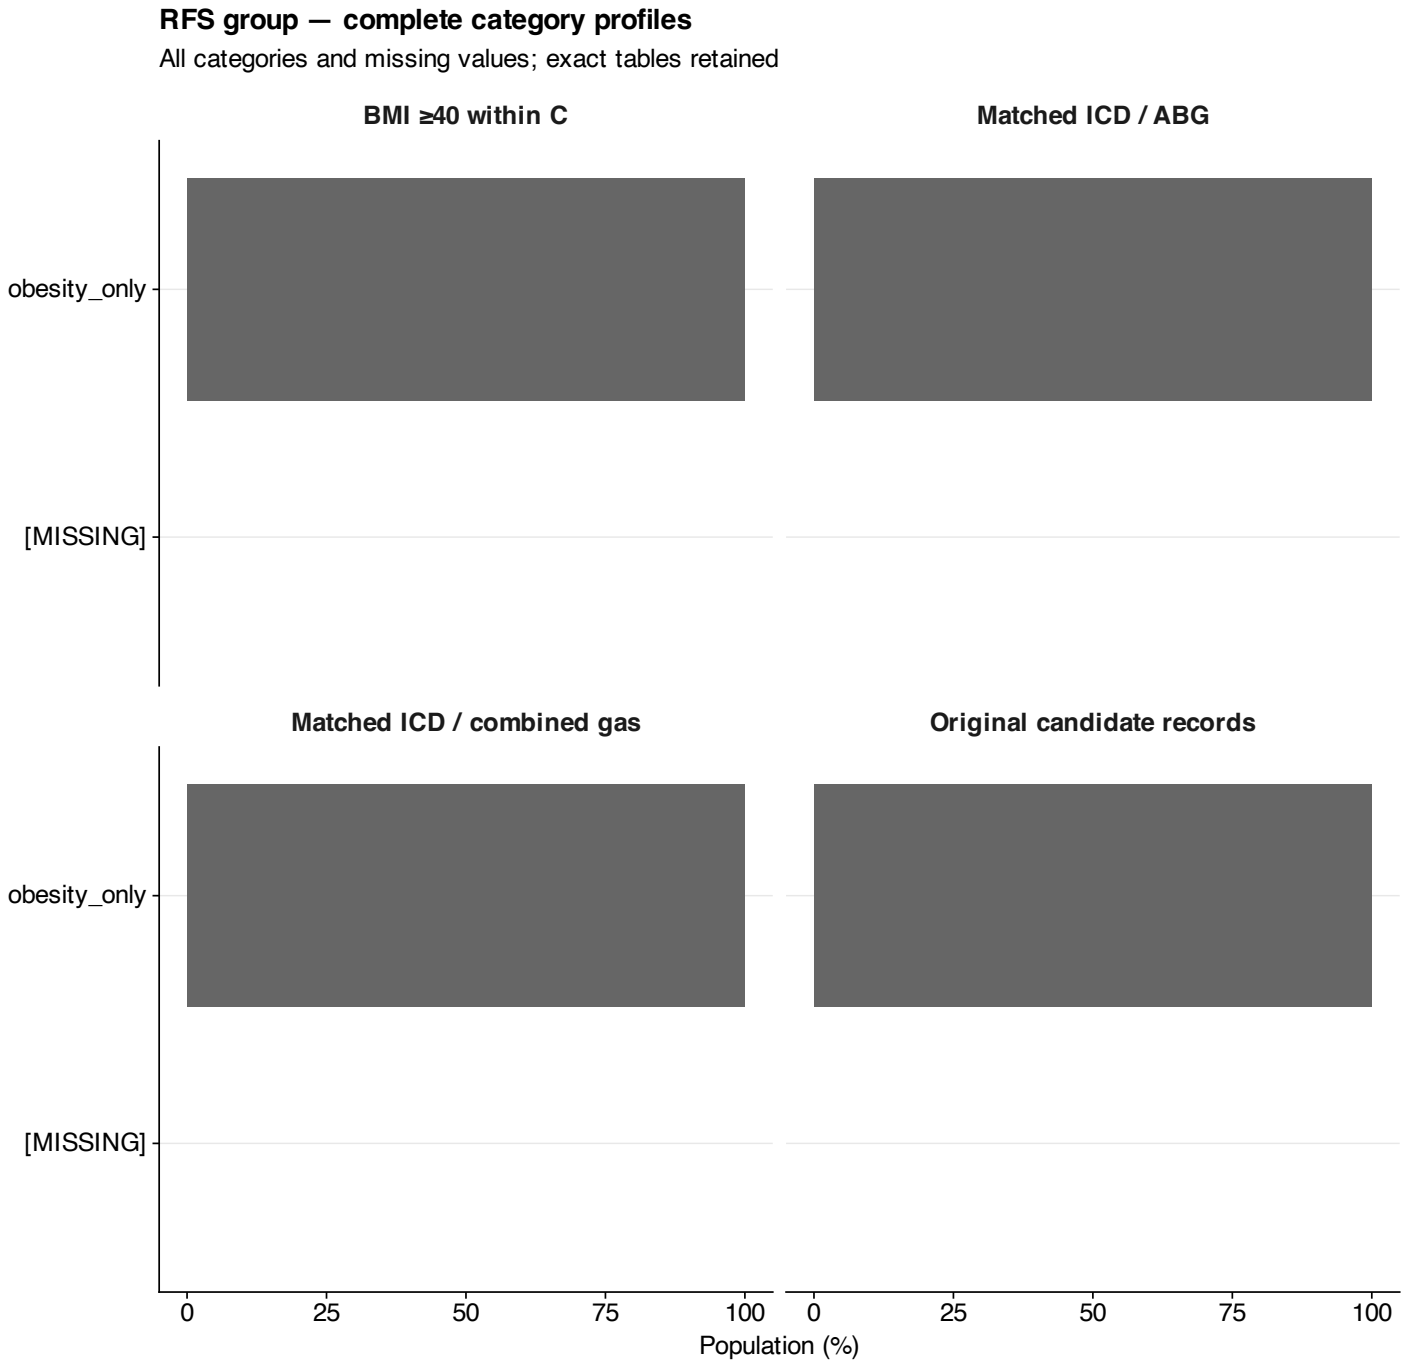

Figure 684: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete rfs_group stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

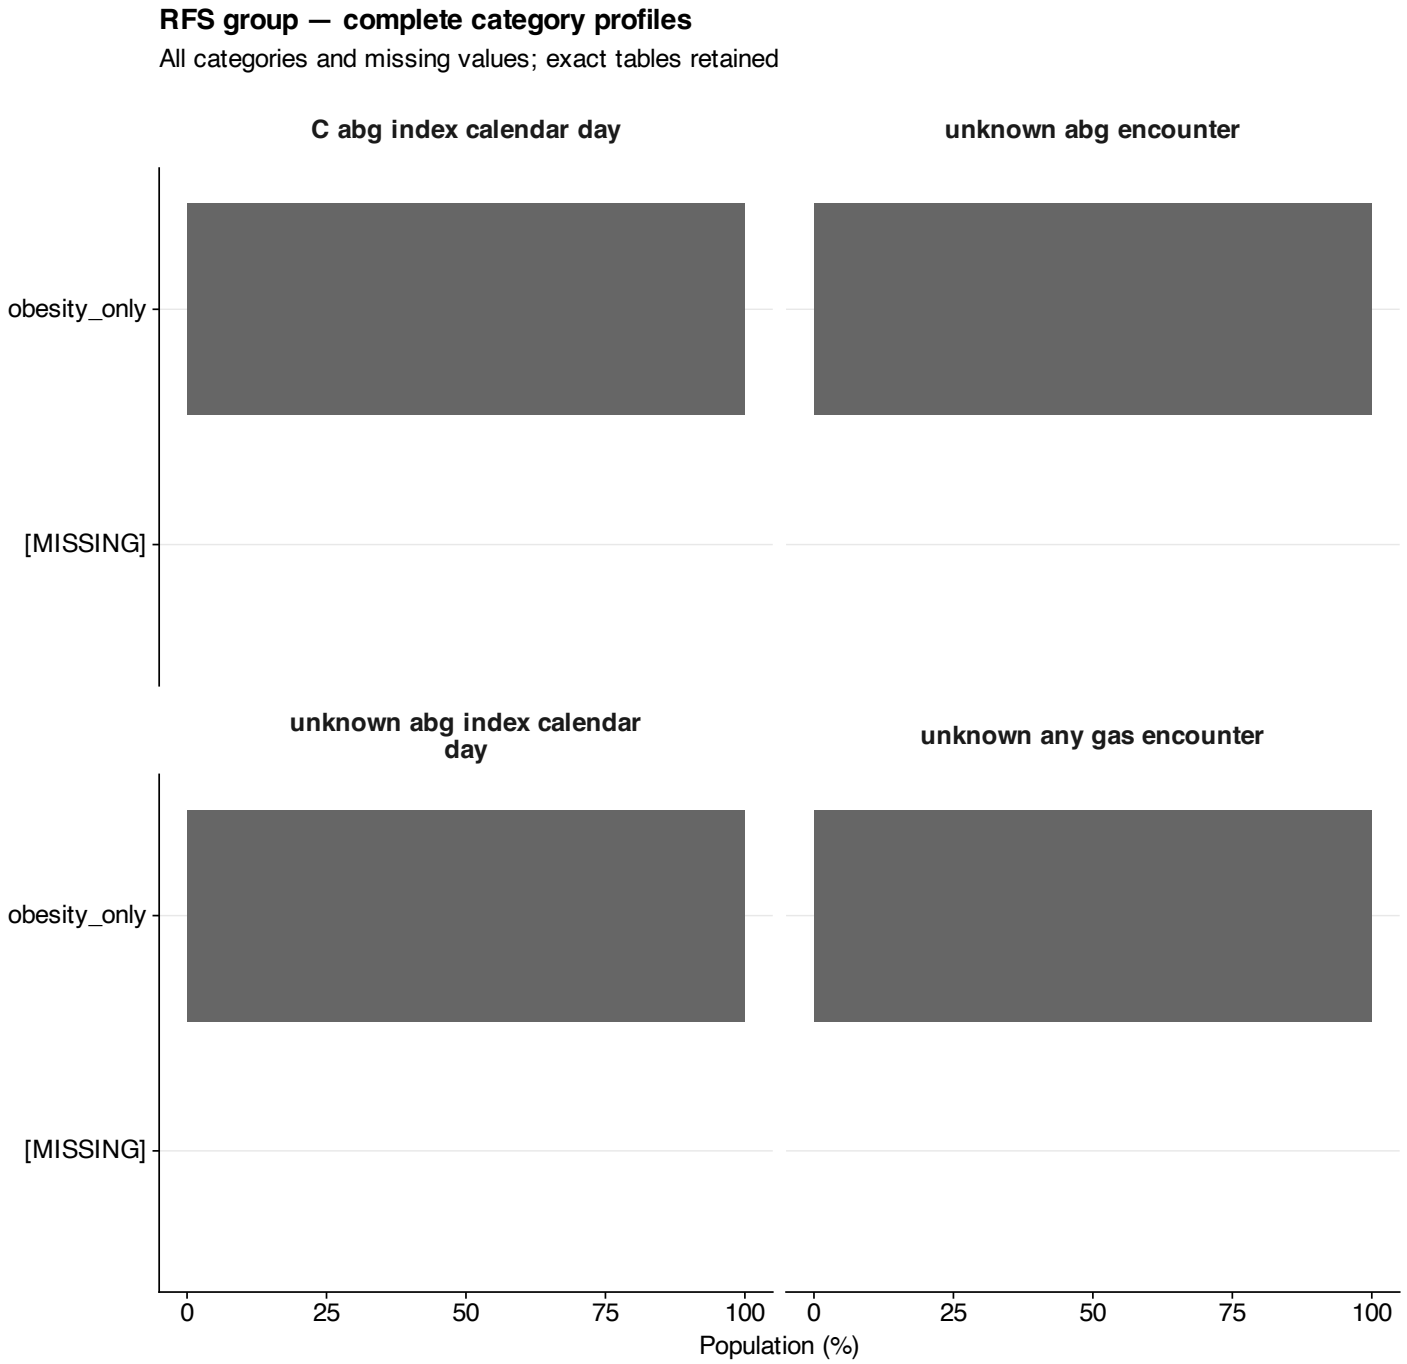

Figure 685: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete rfs_group stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

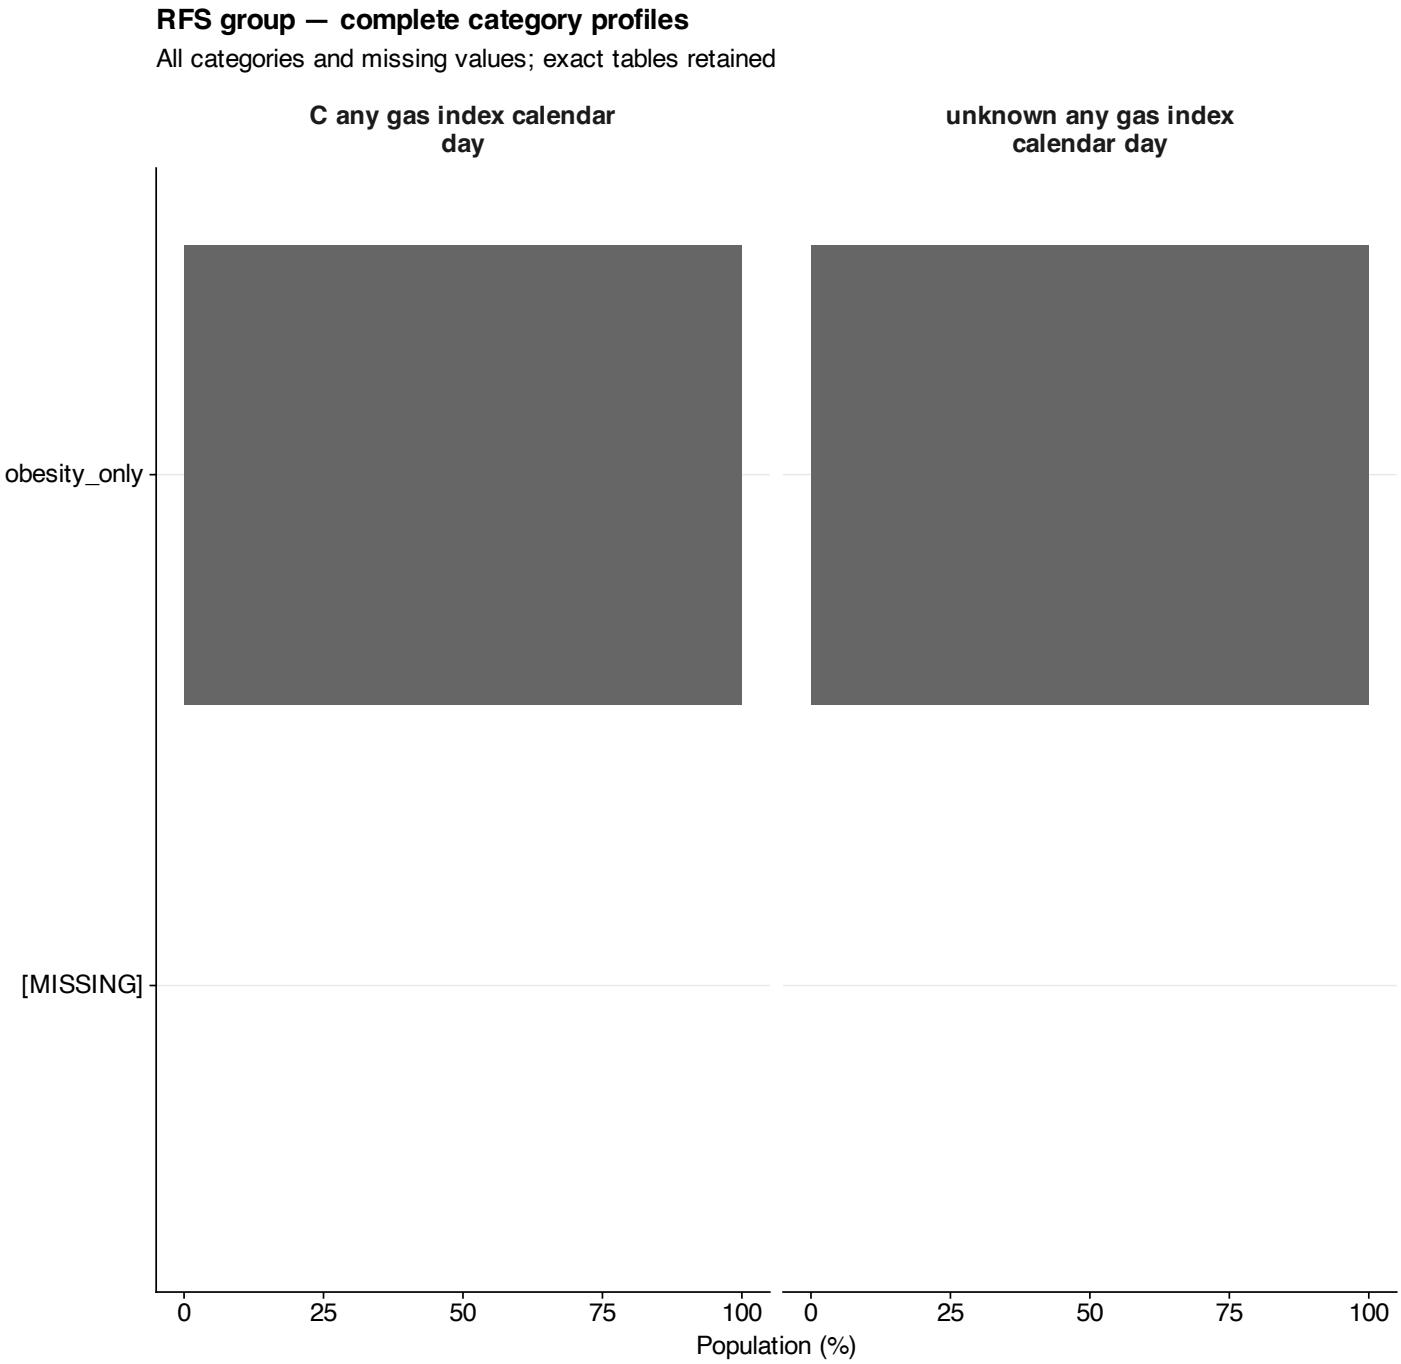

Figure 686: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete rfs_group stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

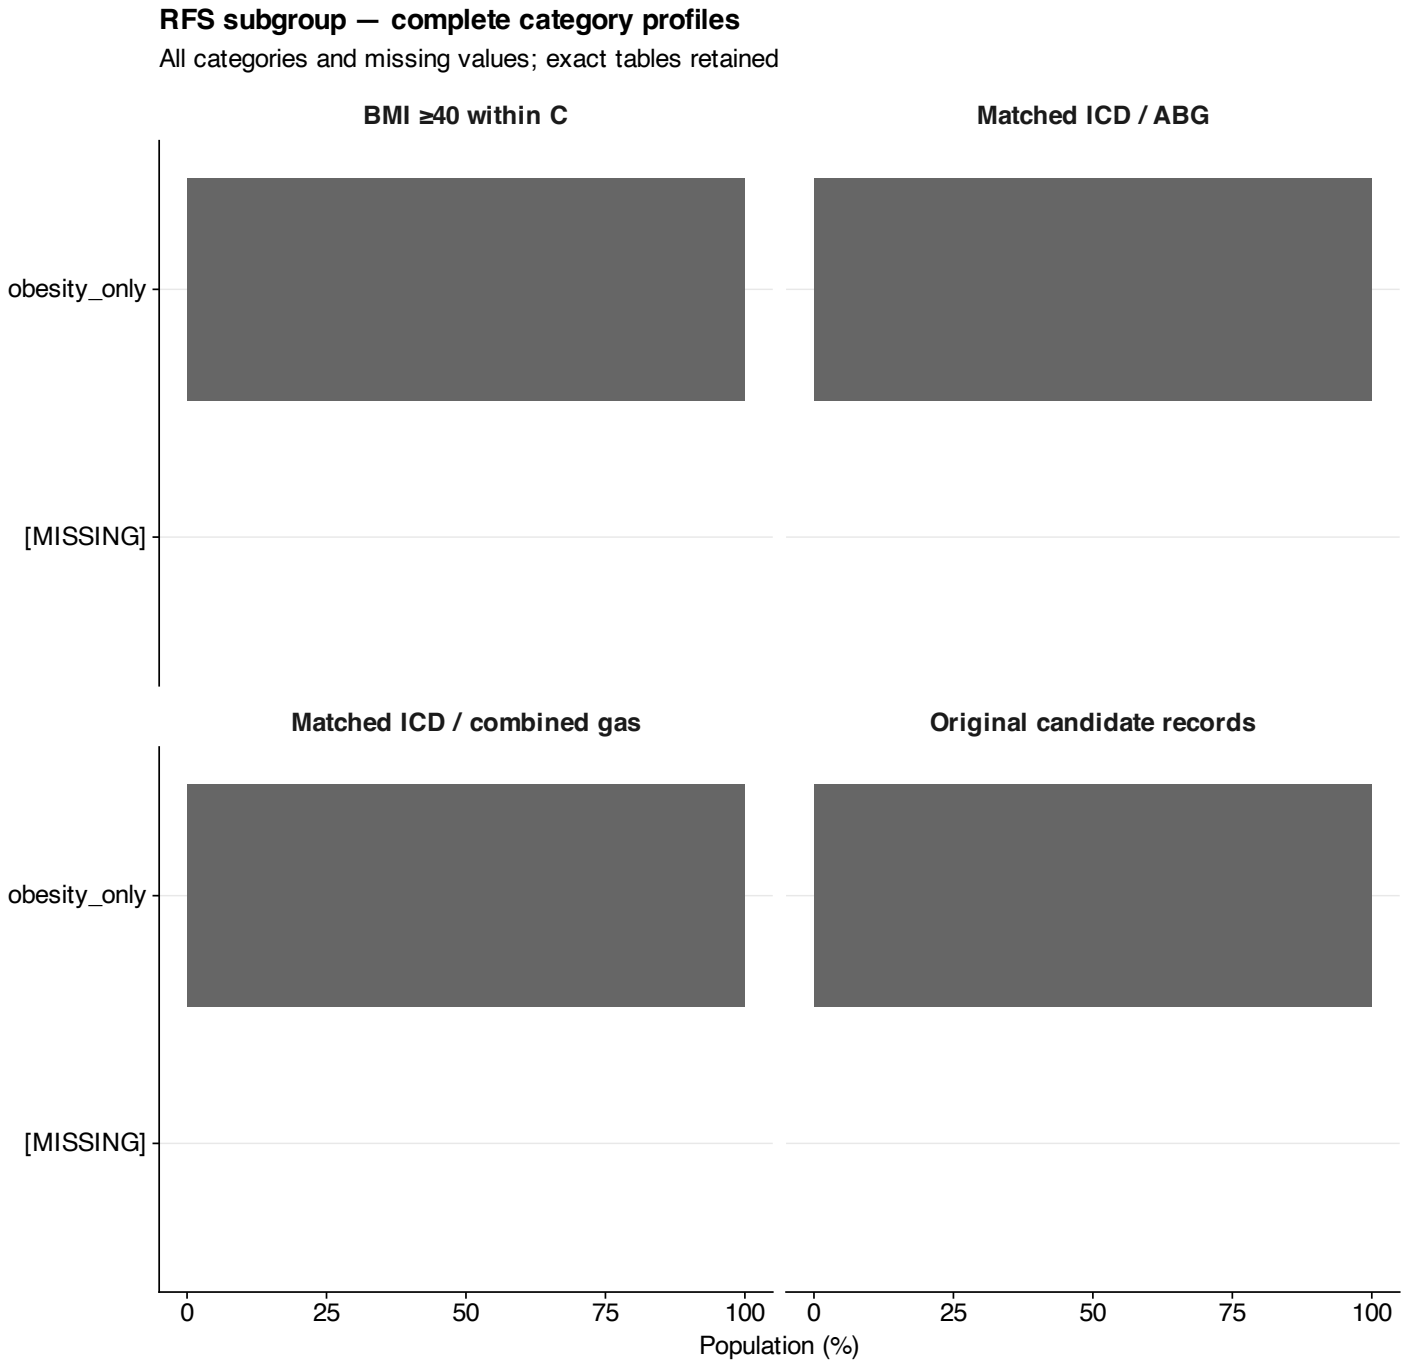

Figure 687: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete rfs_subgroup stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

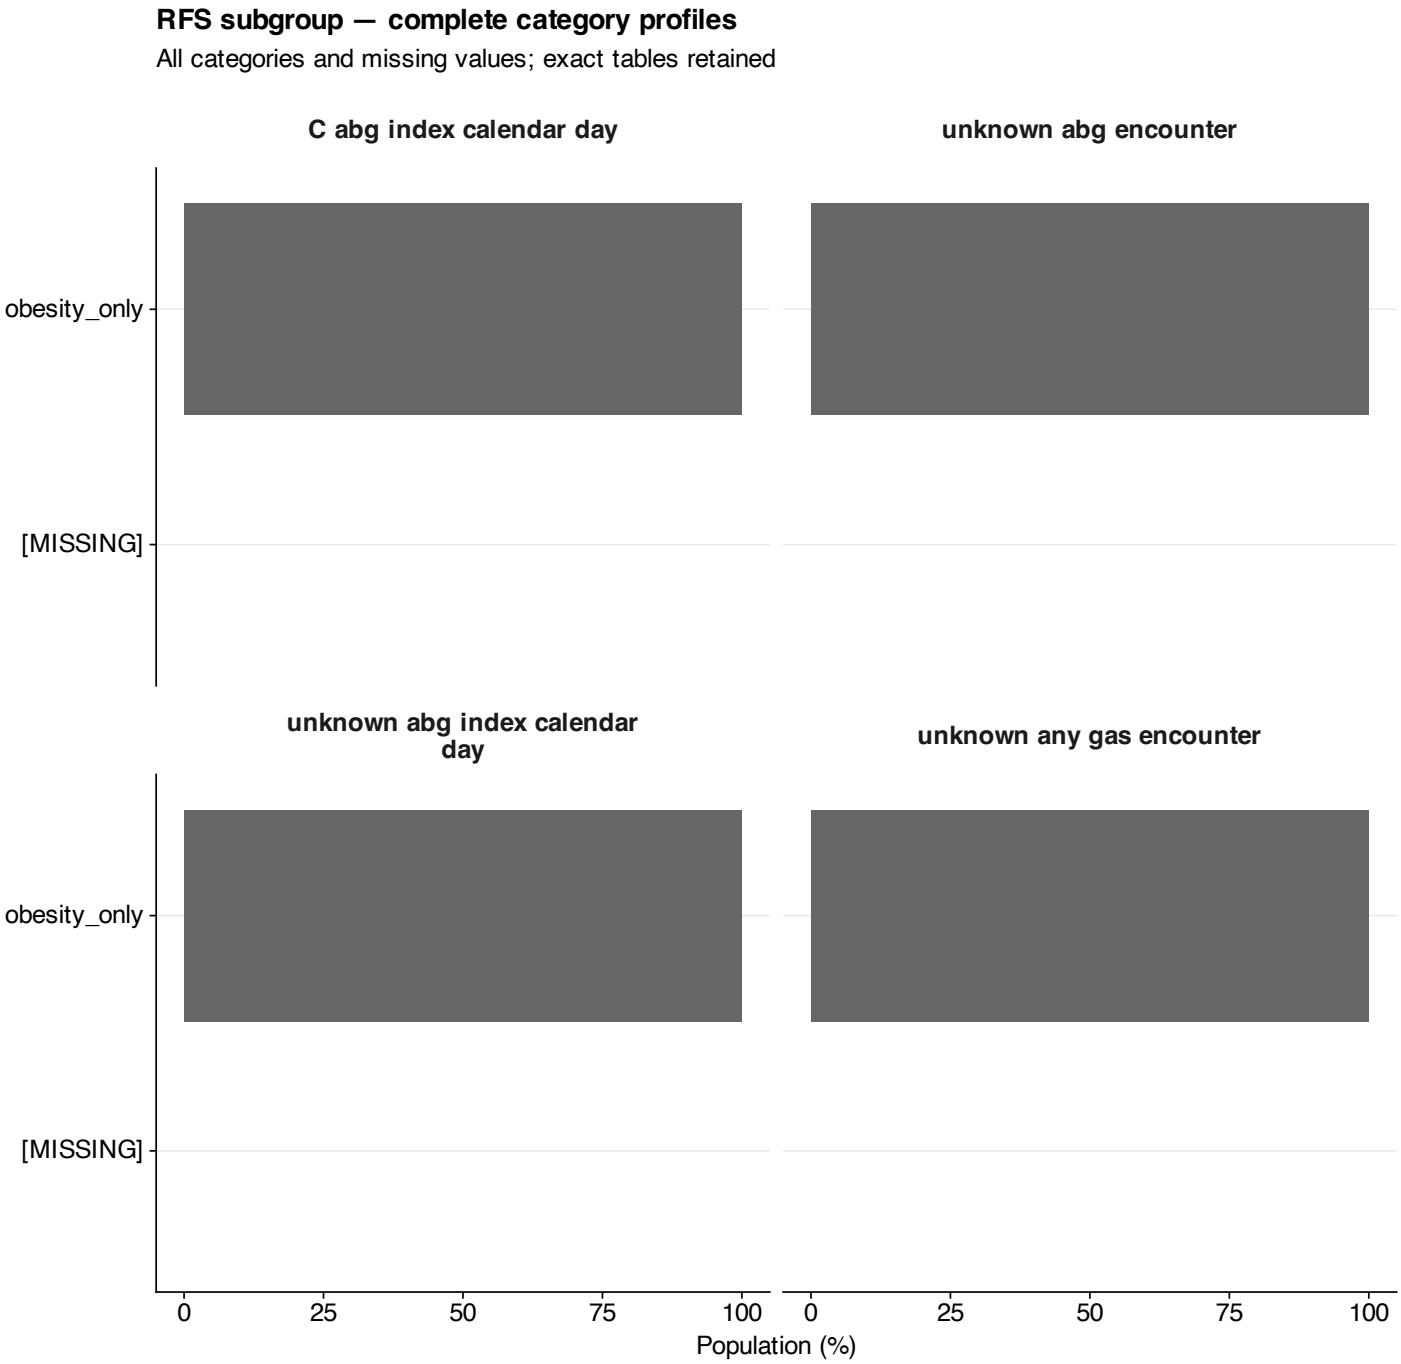

Figure 688: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete rfs_subgroup stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

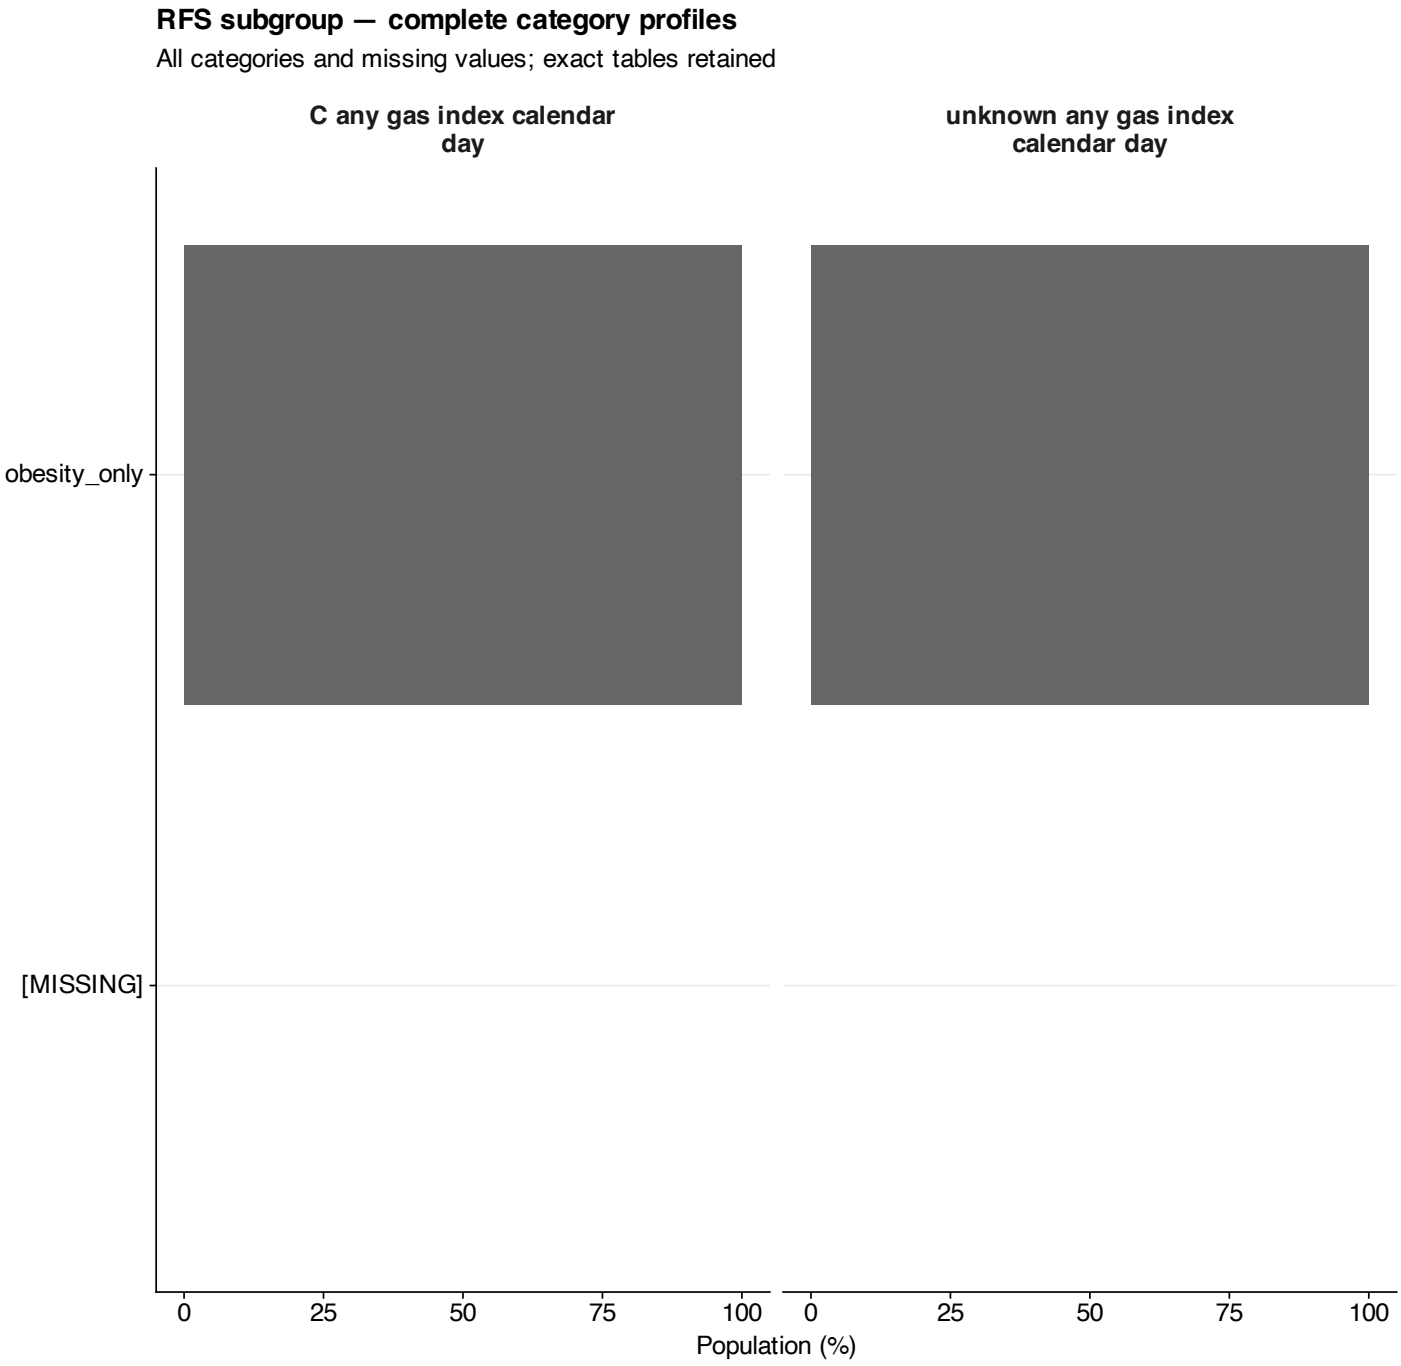

Figure 689: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete rfs_subgroup stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

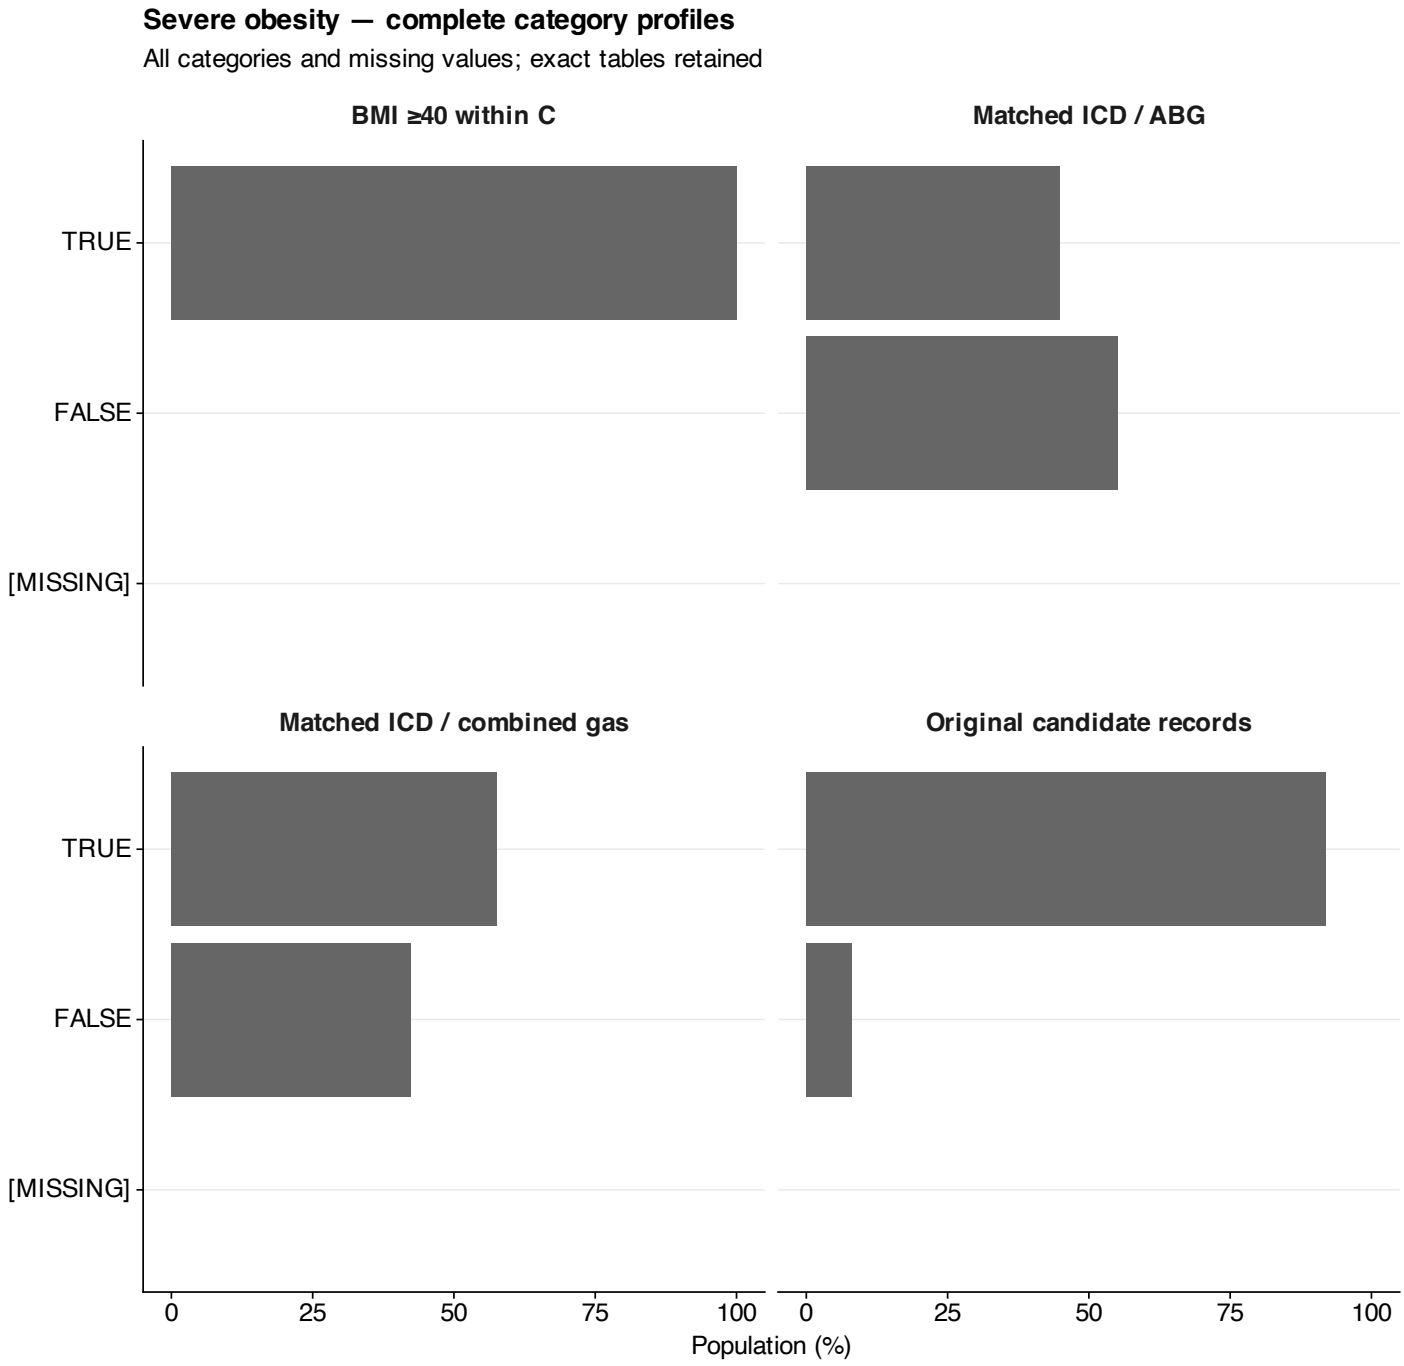

Figure 690: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete severe_obesity stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

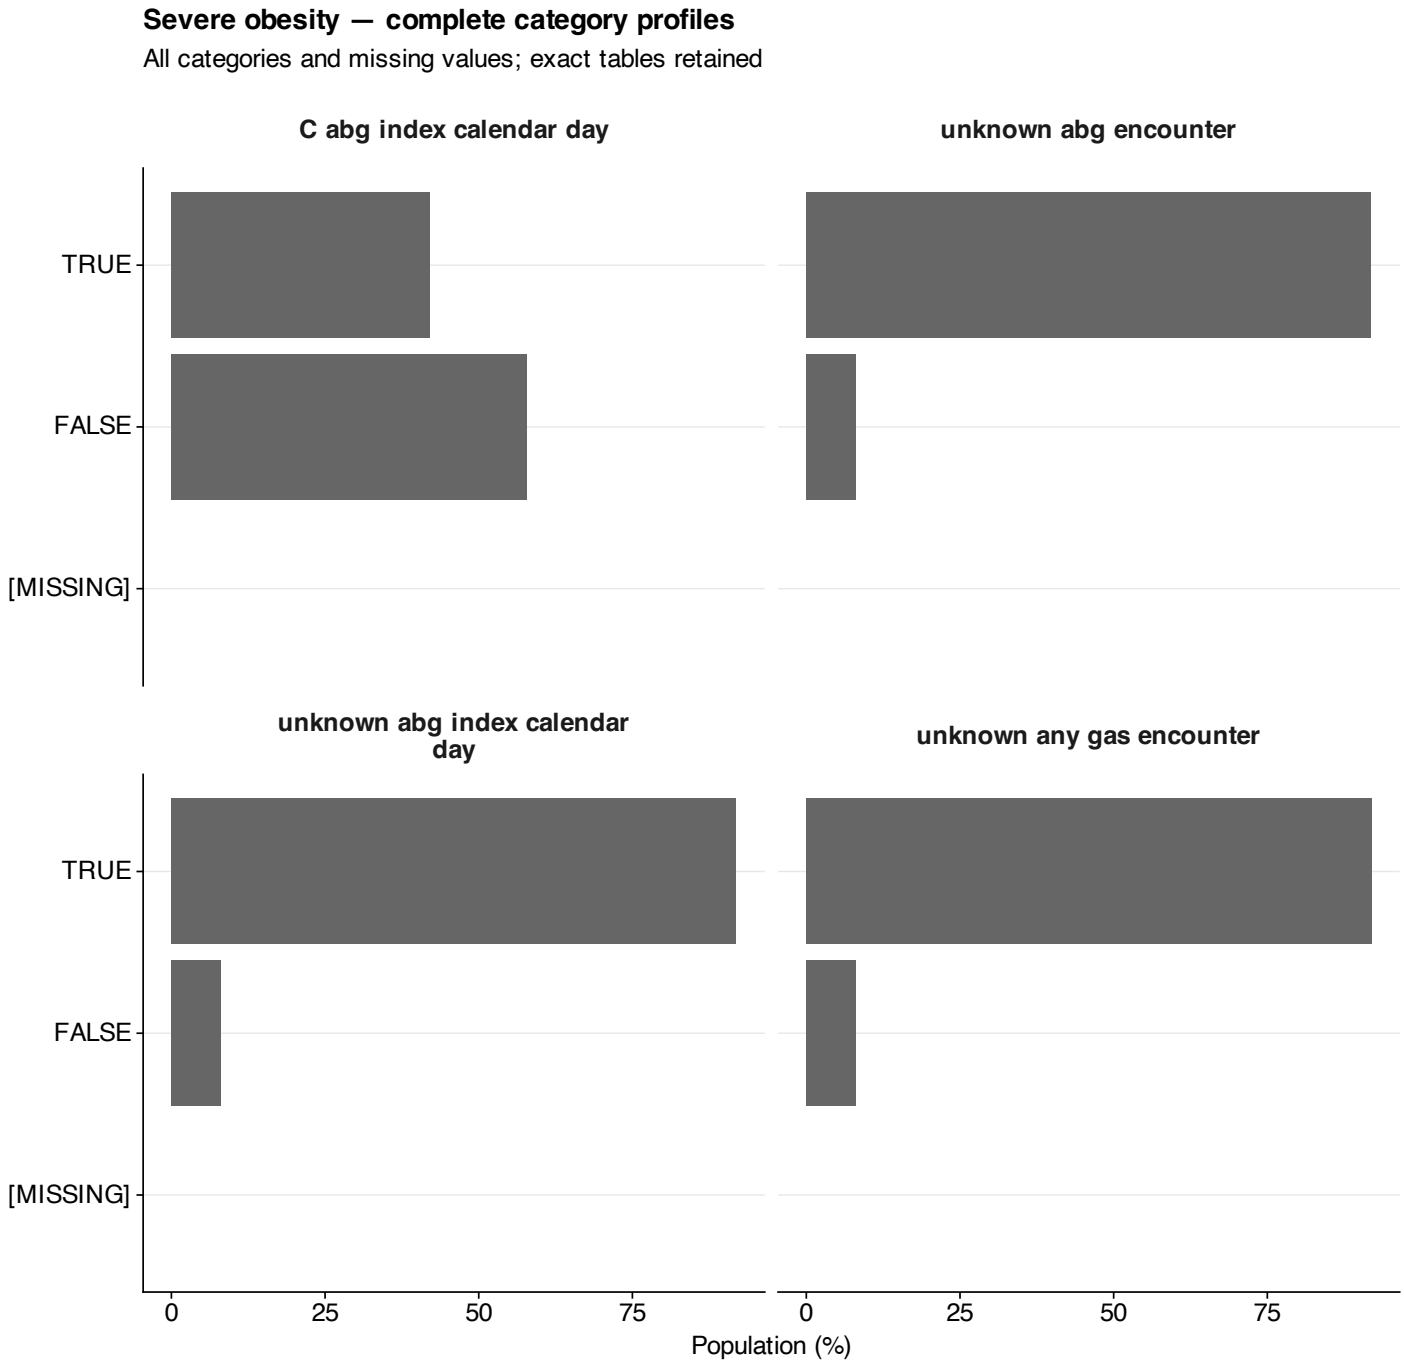

Figure 691: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete severe_obesity stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

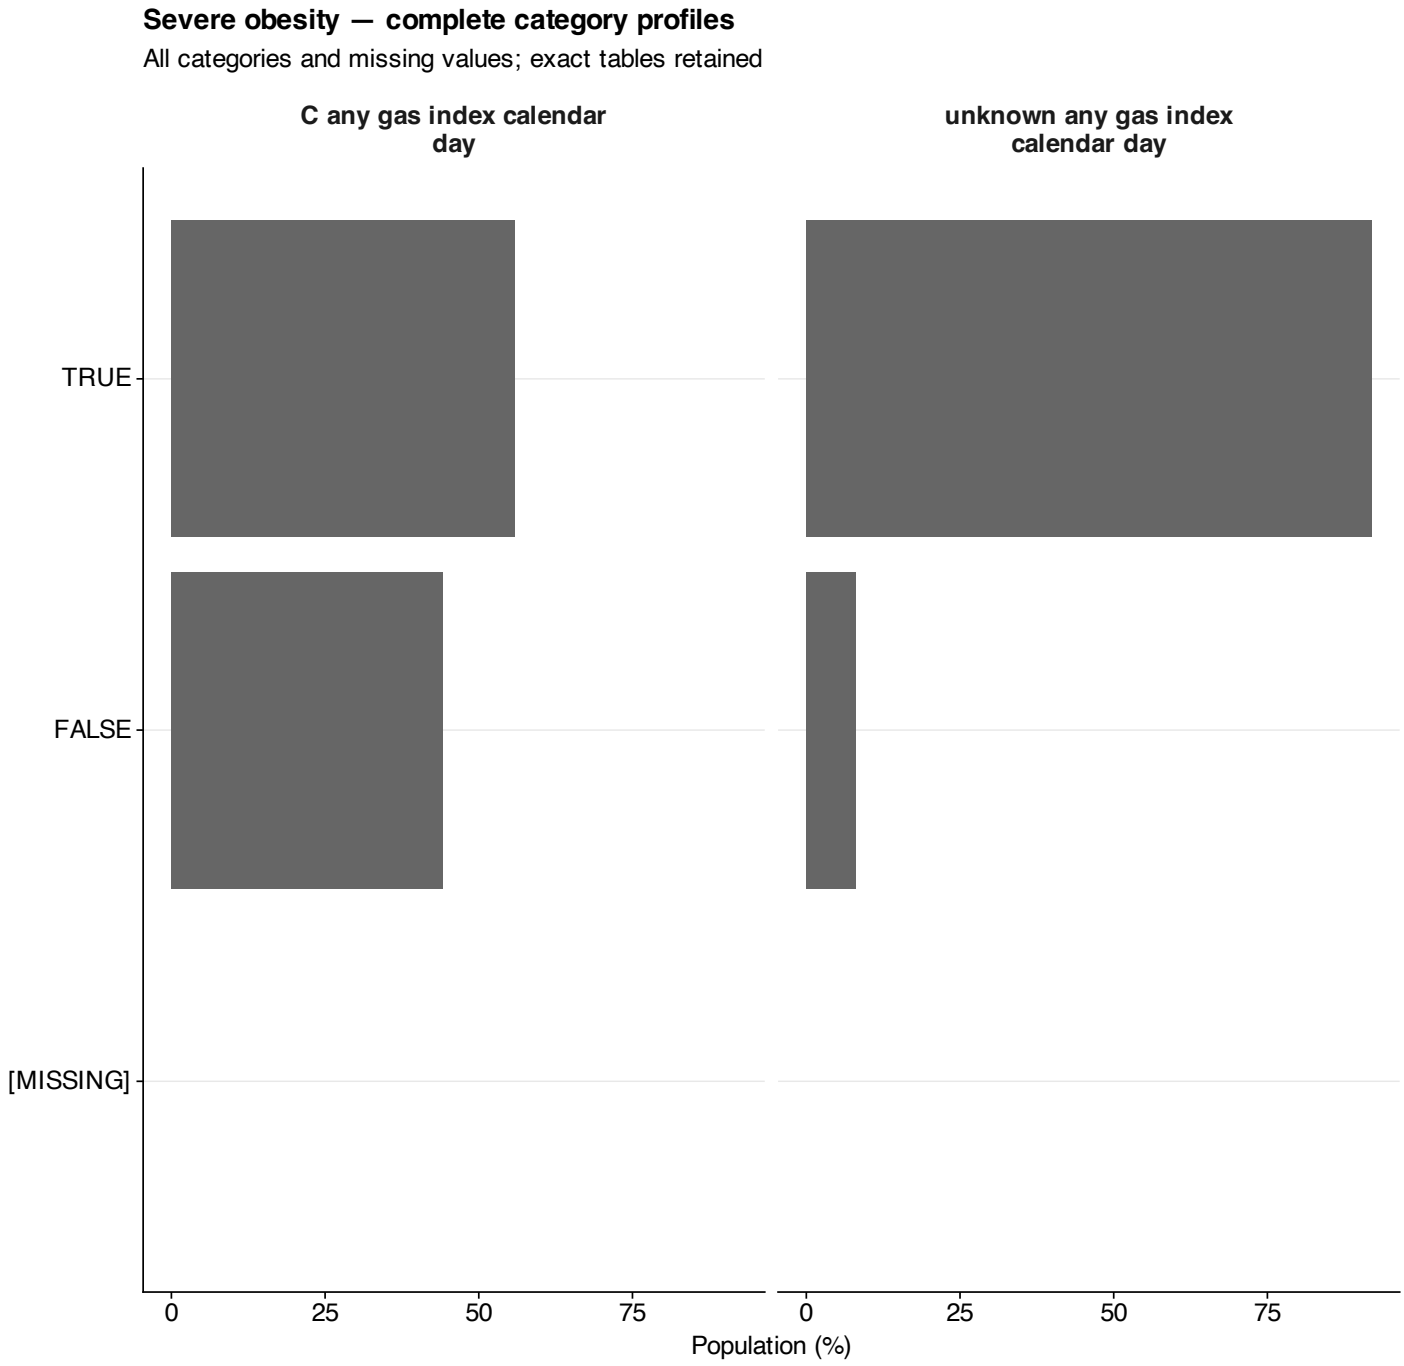

Figure 692: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete severe_obesity stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

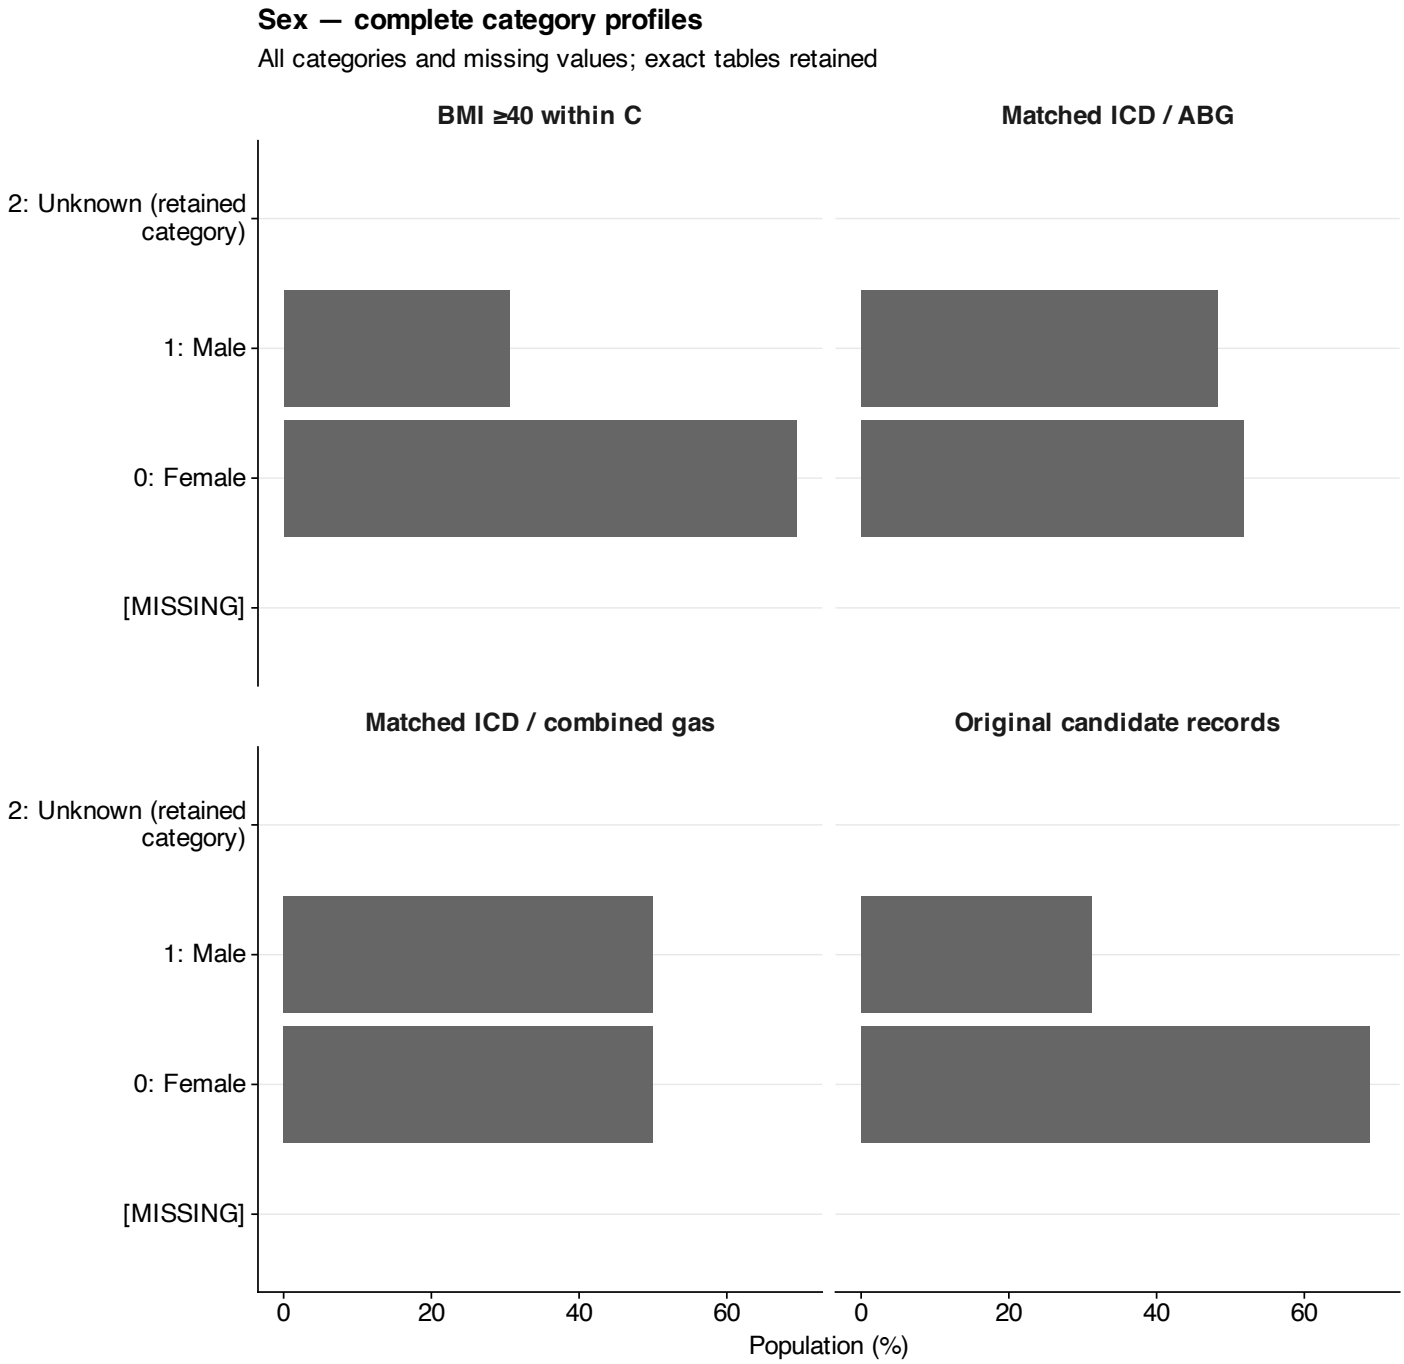

Figure 693: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete sex stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

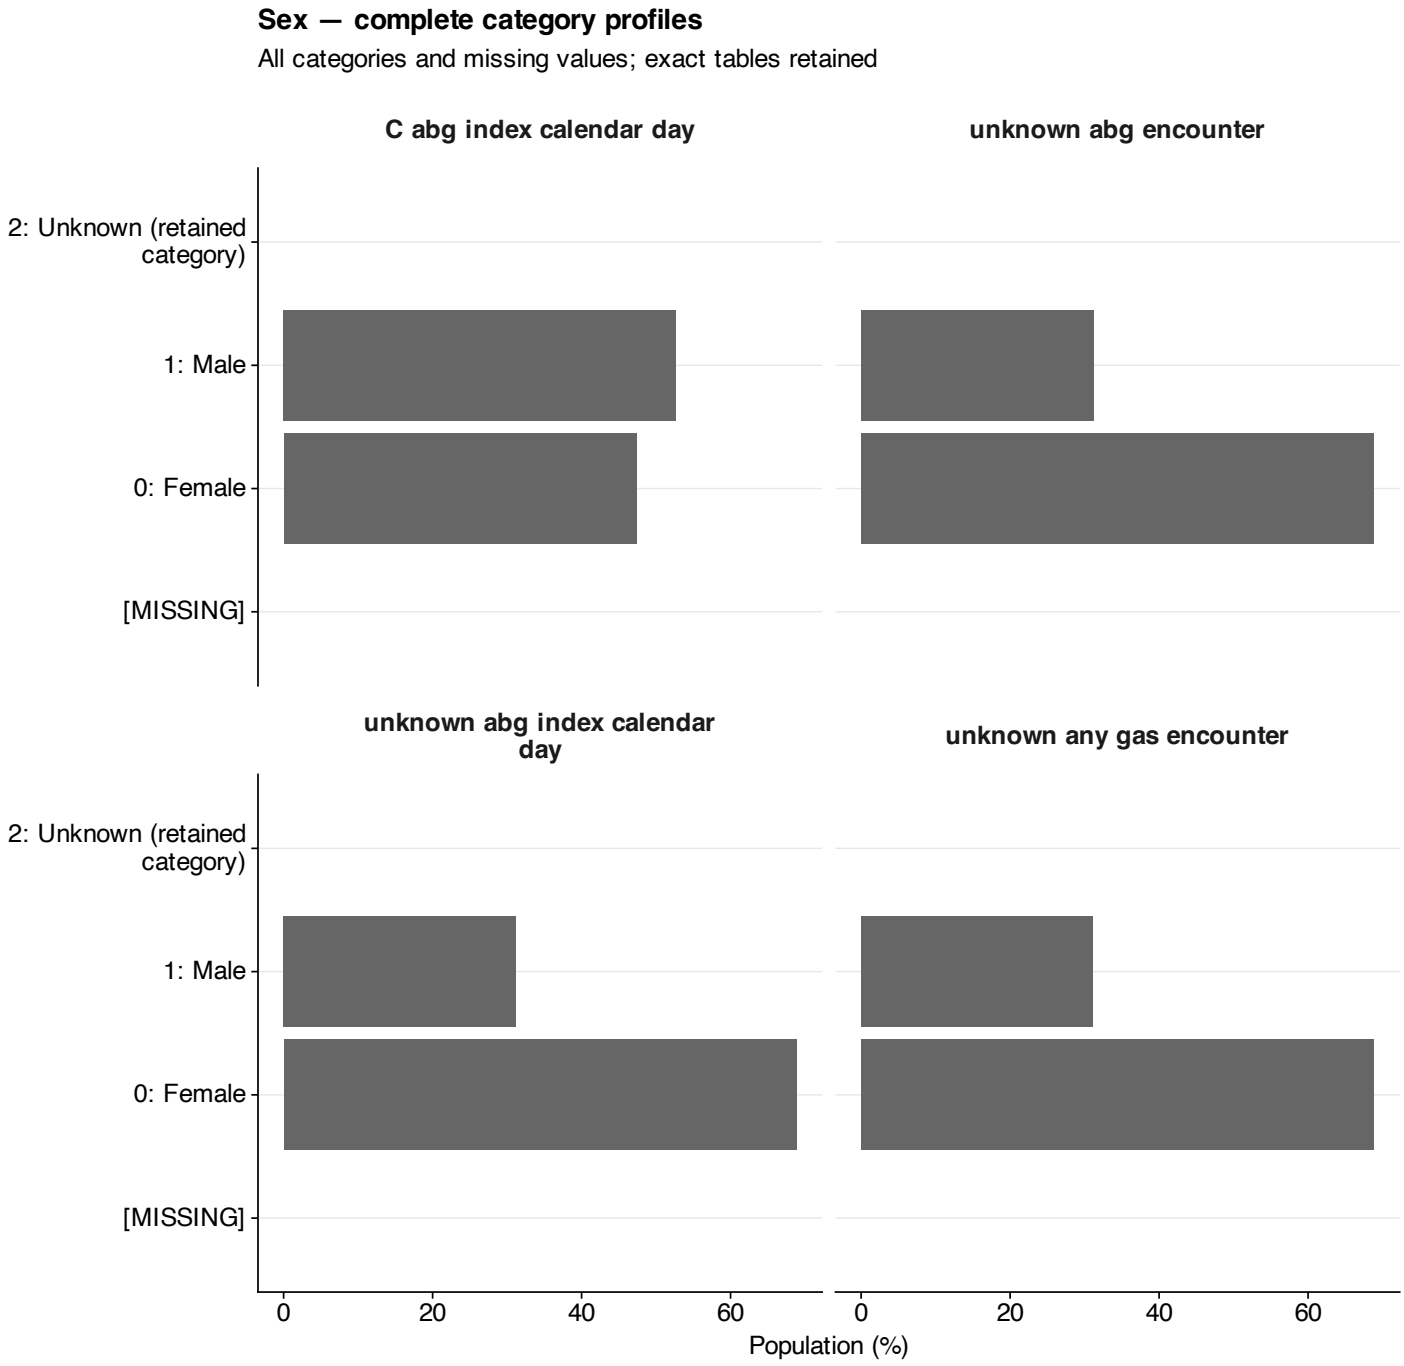

Figure 694: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete sex stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

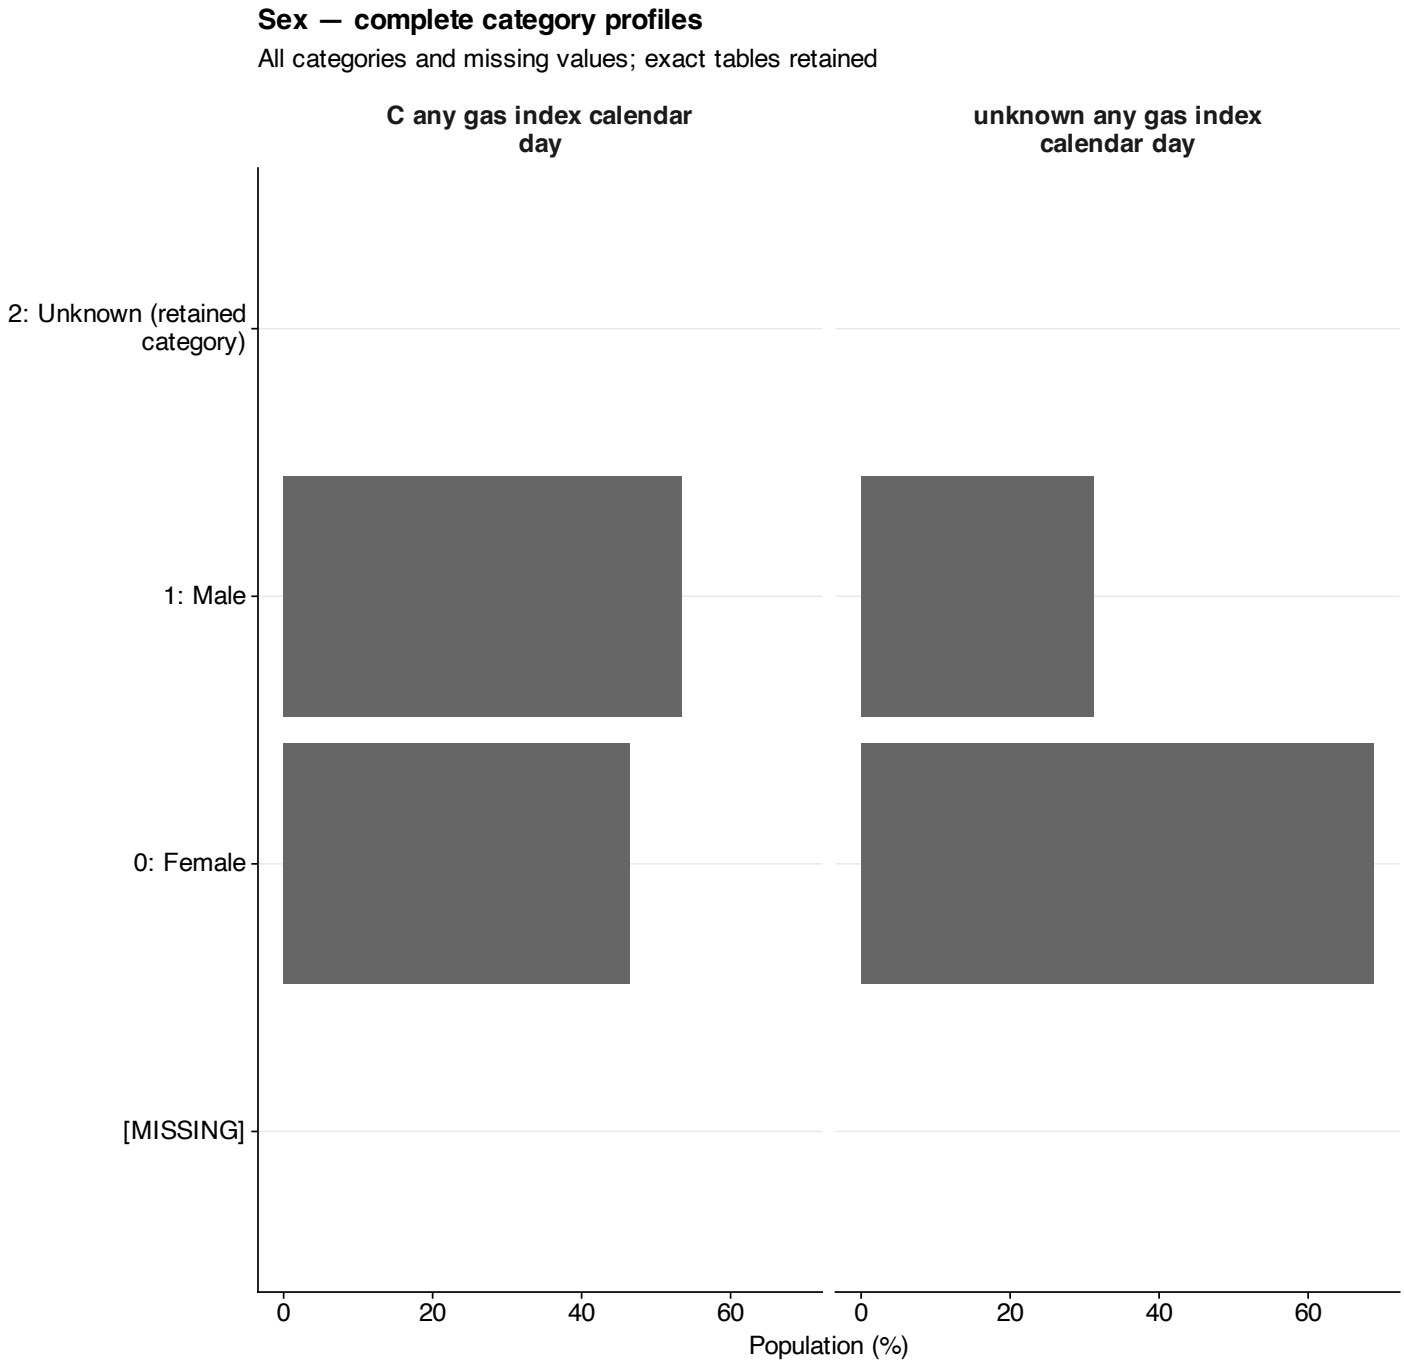

Figure 695: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete sex stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

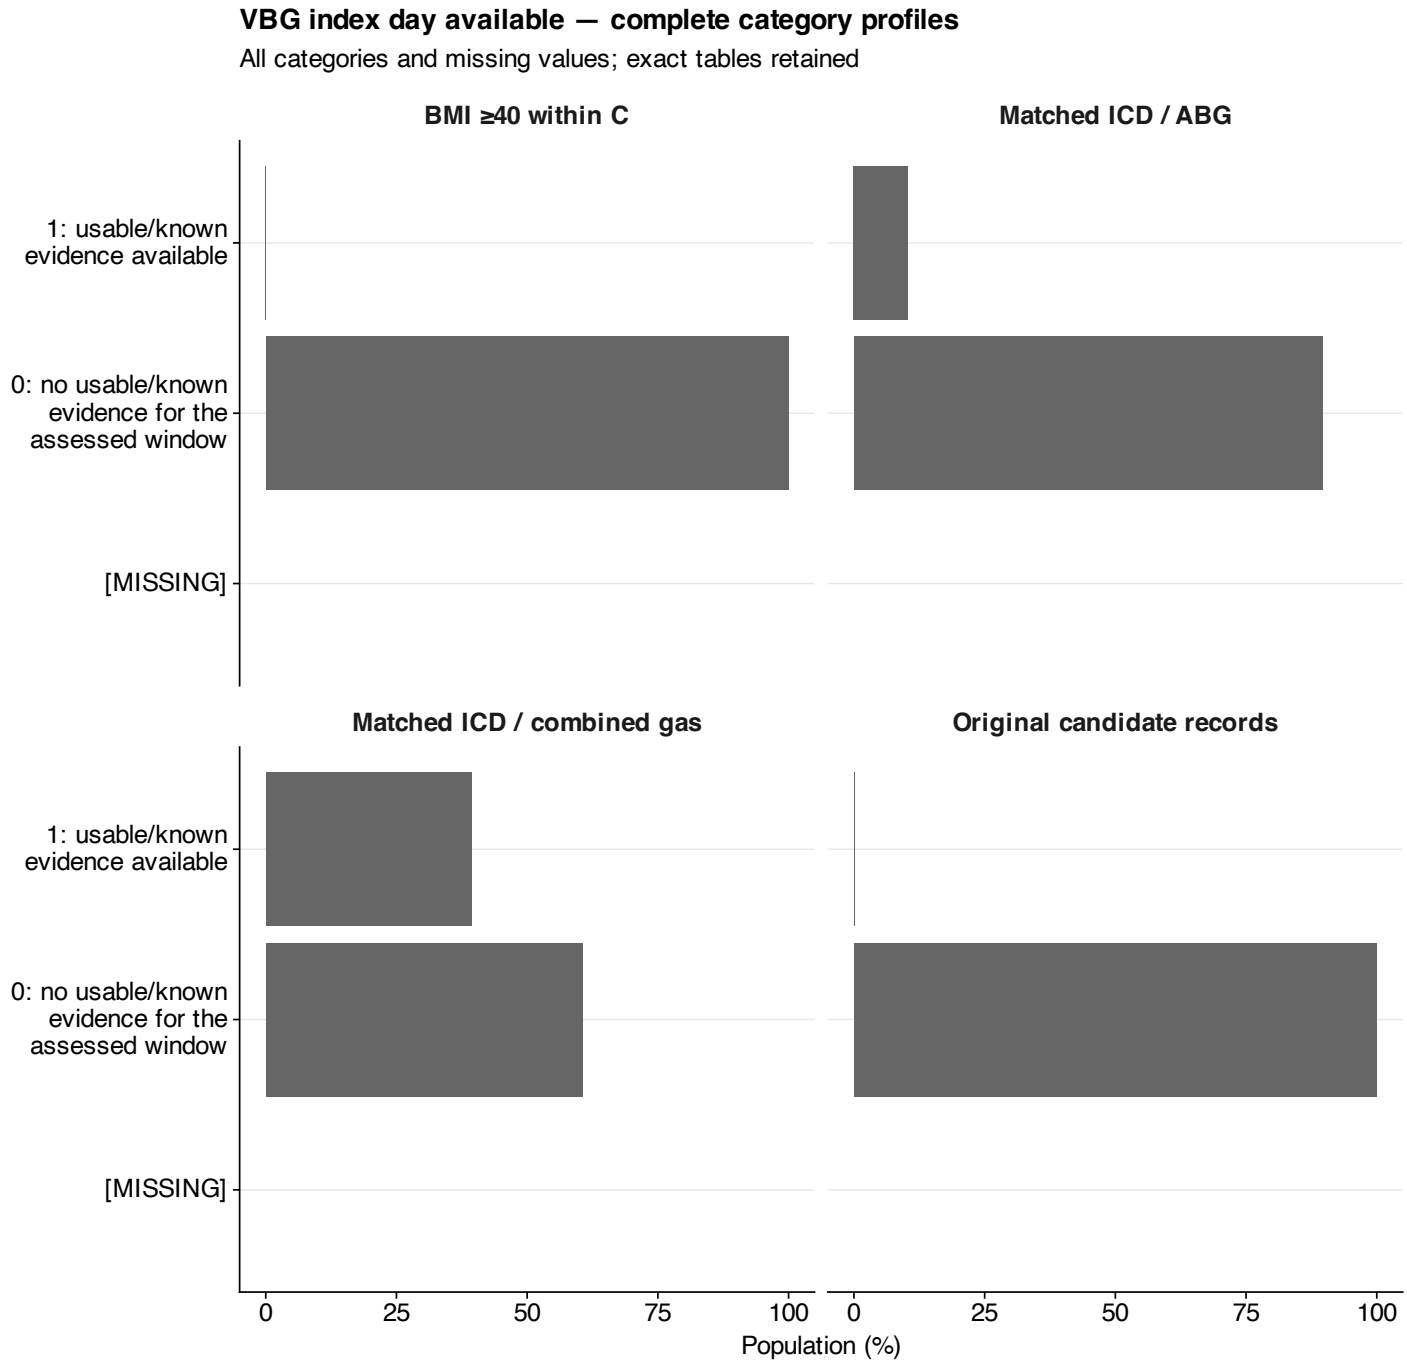

Figure 696: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete vbg_index_day_available stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

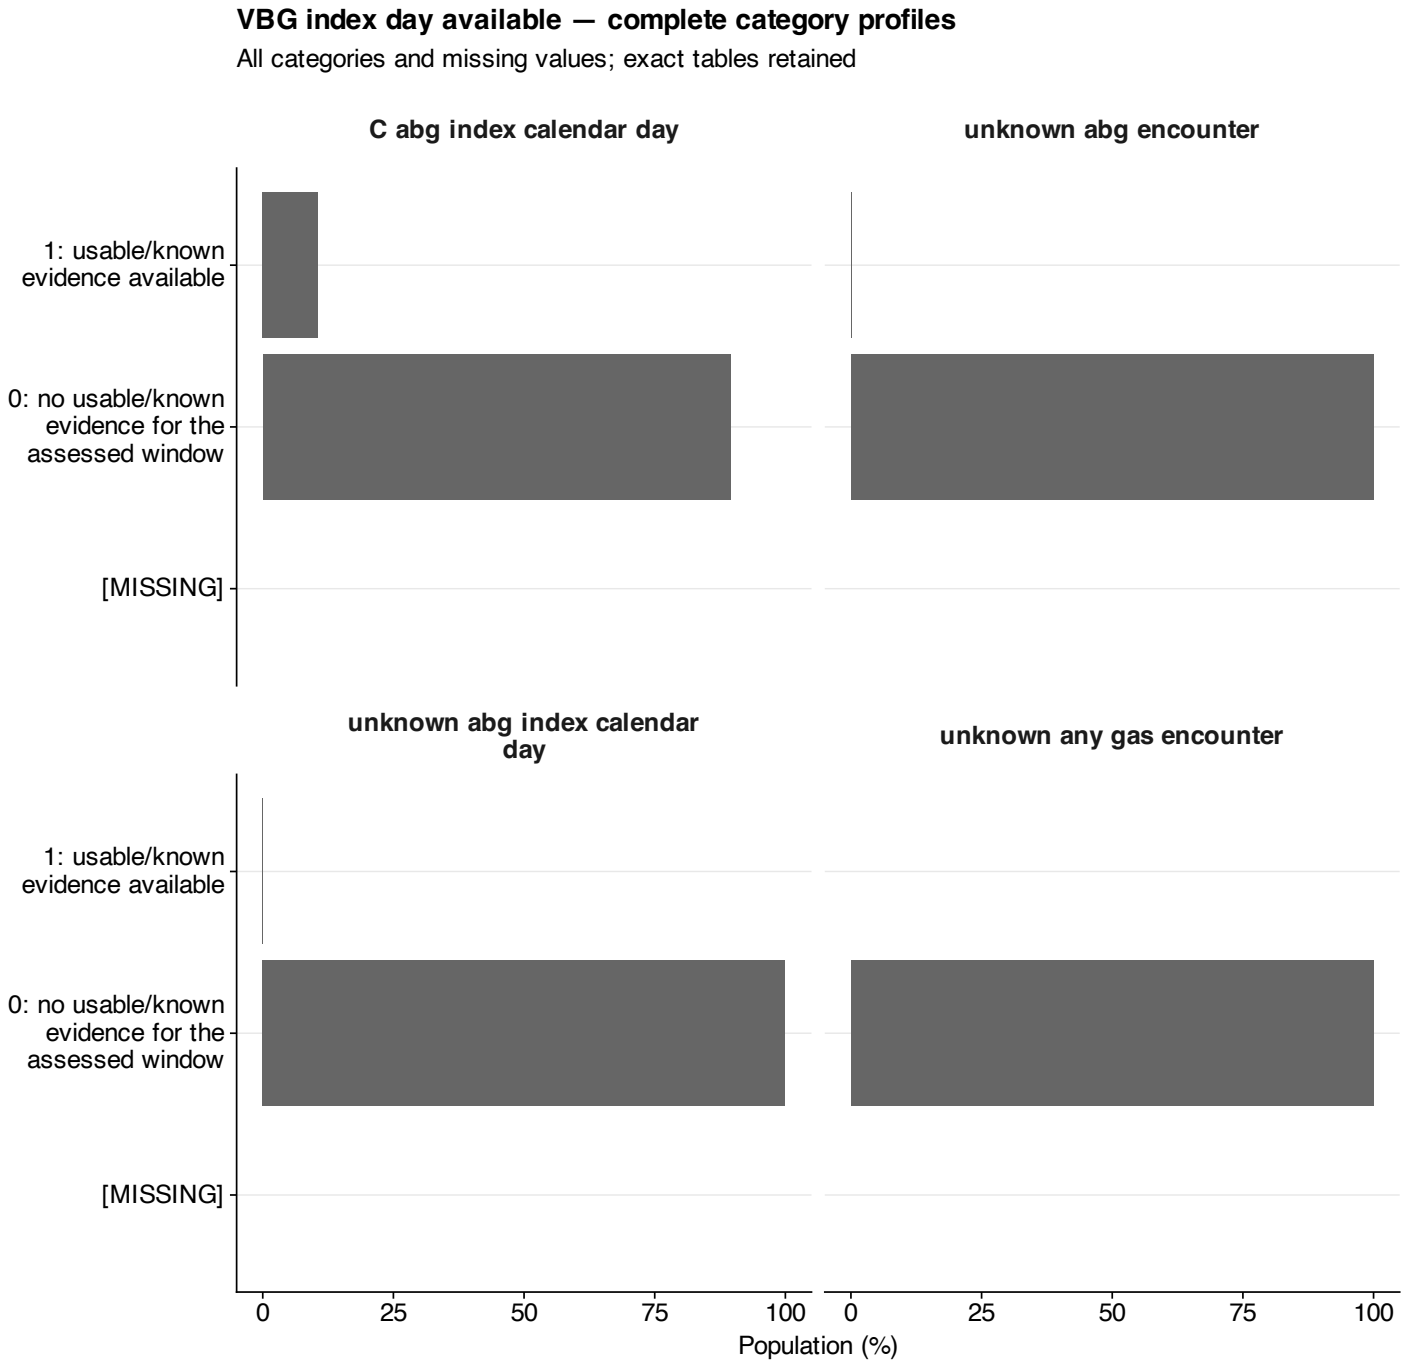

Figure 697: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete vbg_index_day_available stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

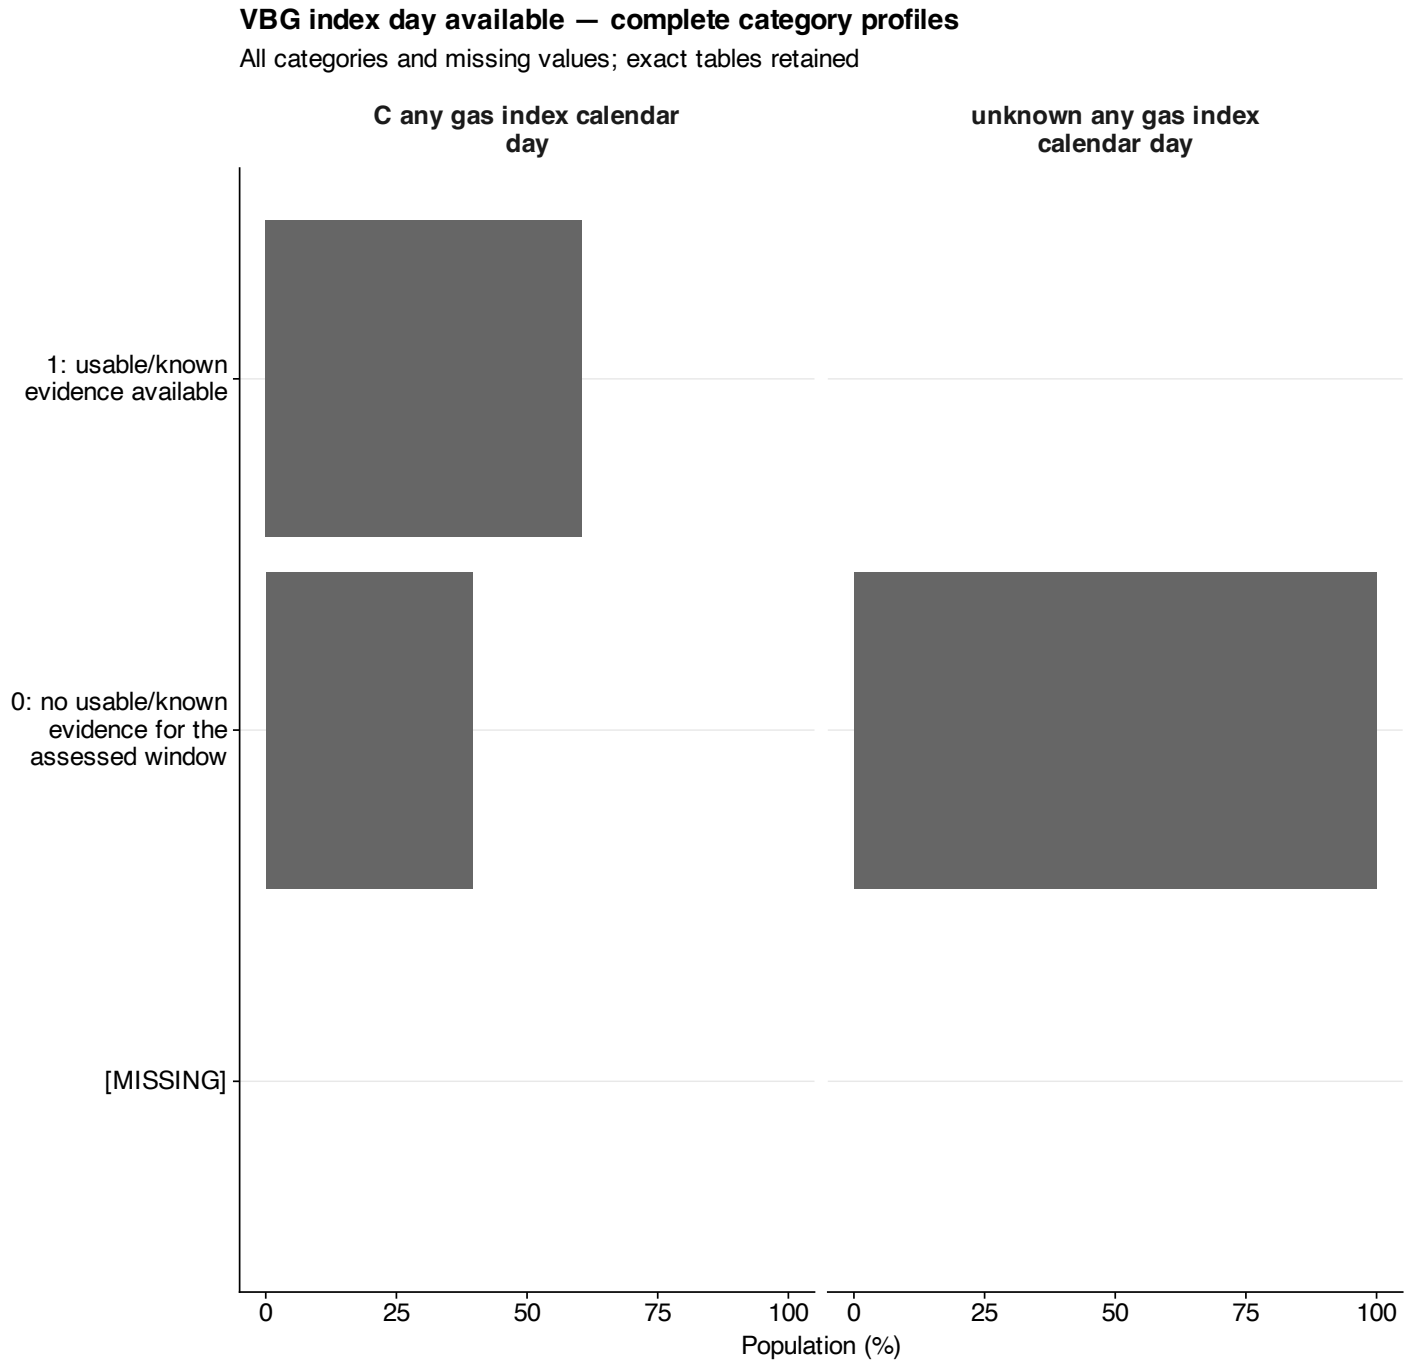

Figure 698: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete vbg_index_day_available stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

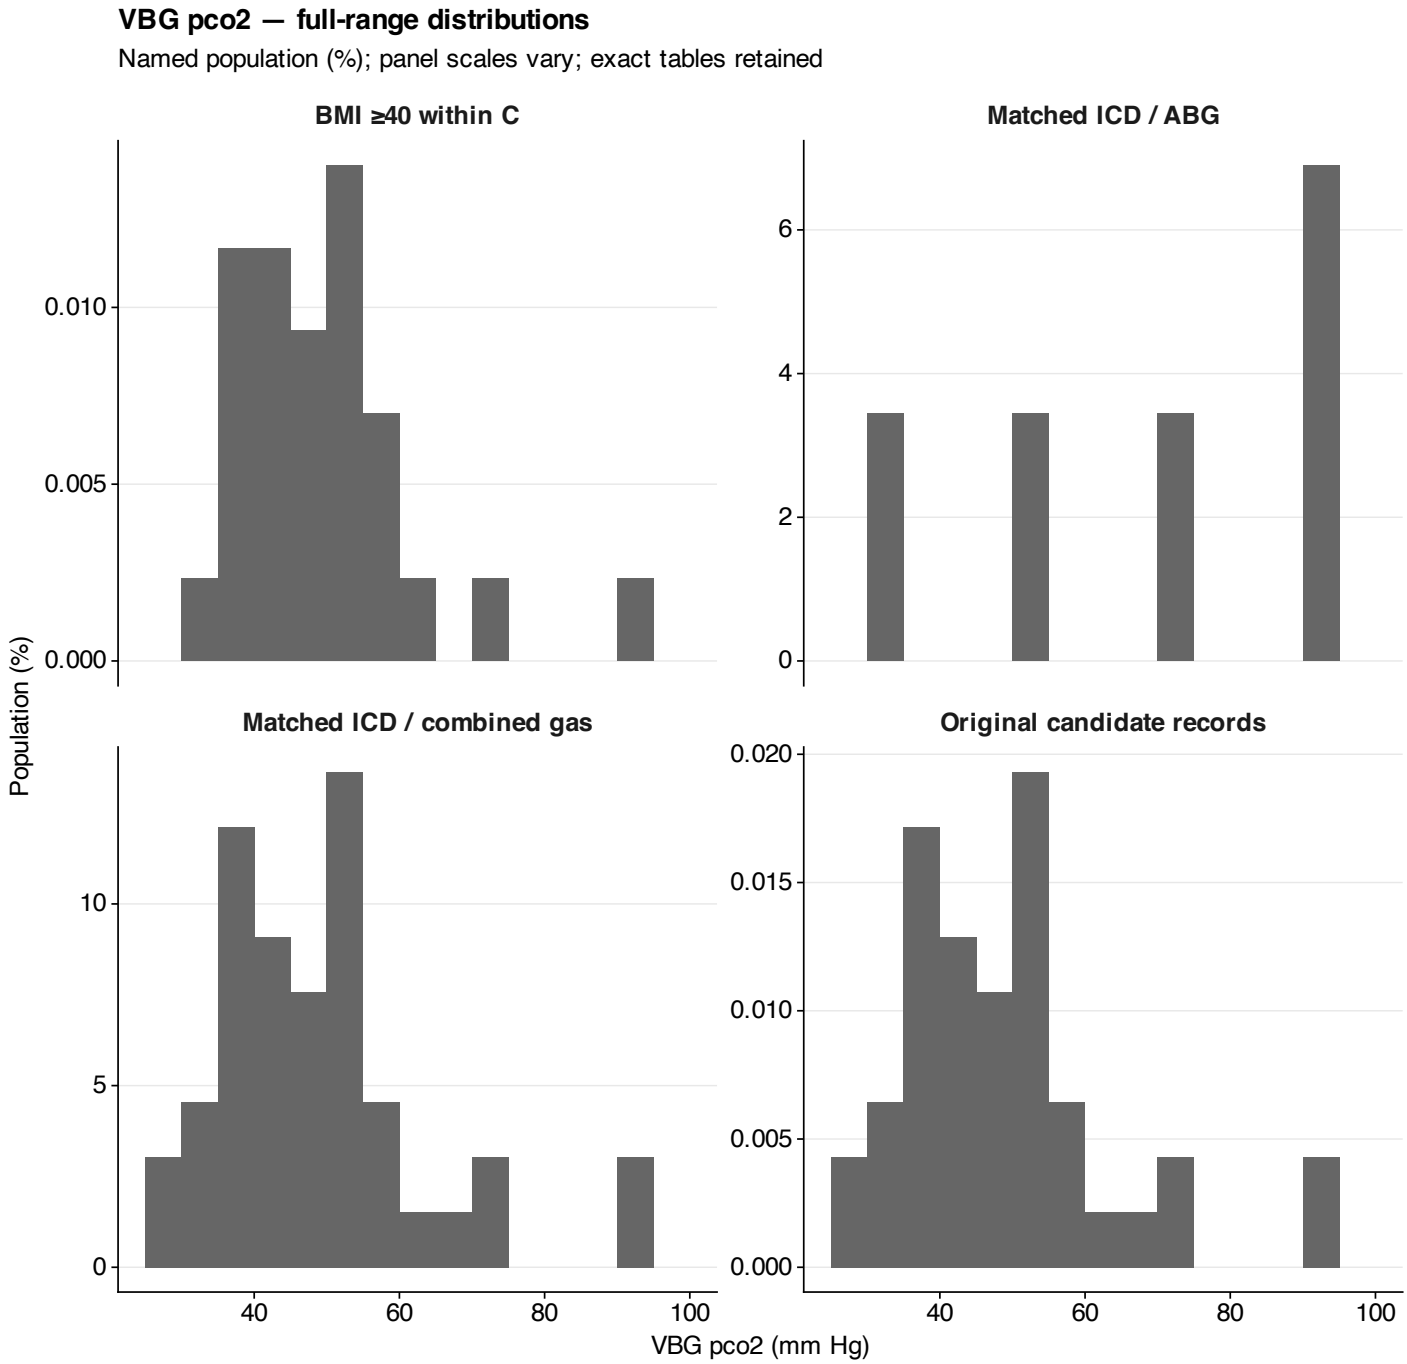

Figure 699: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete vbg_pco2 stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

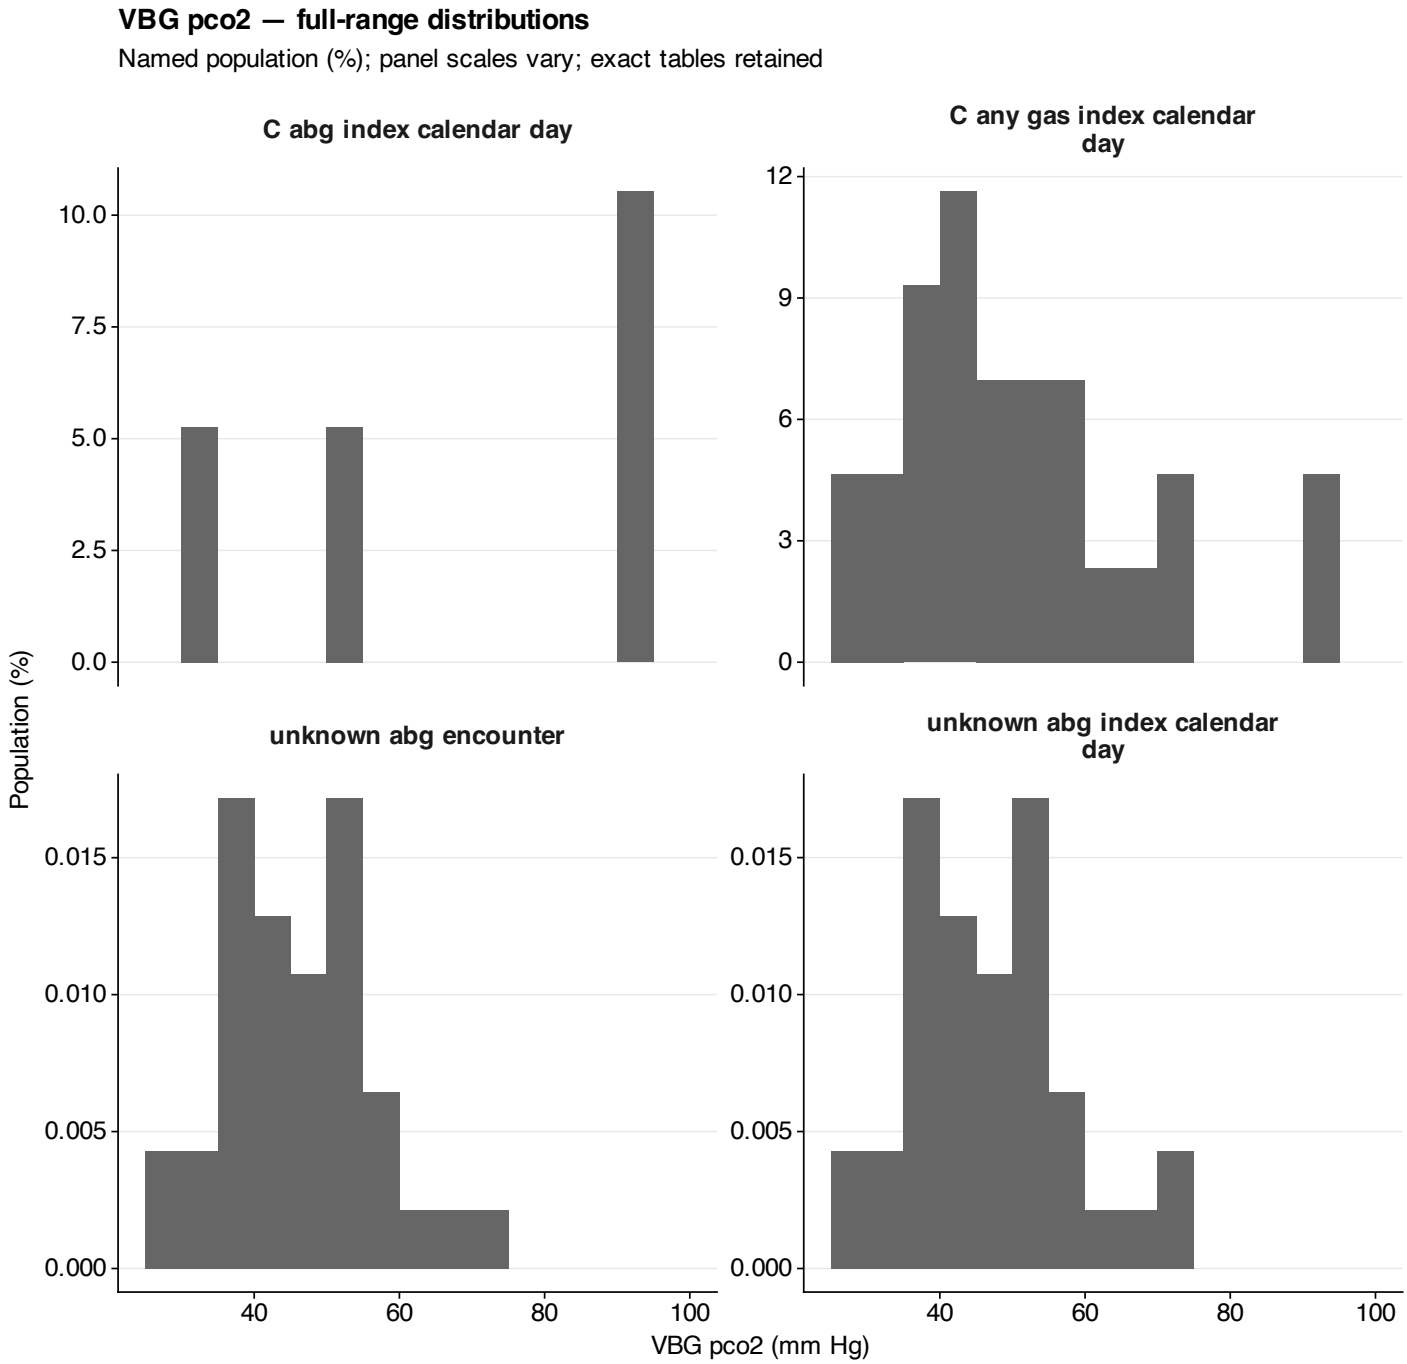

Figure 700: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete vbg_pco2 stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

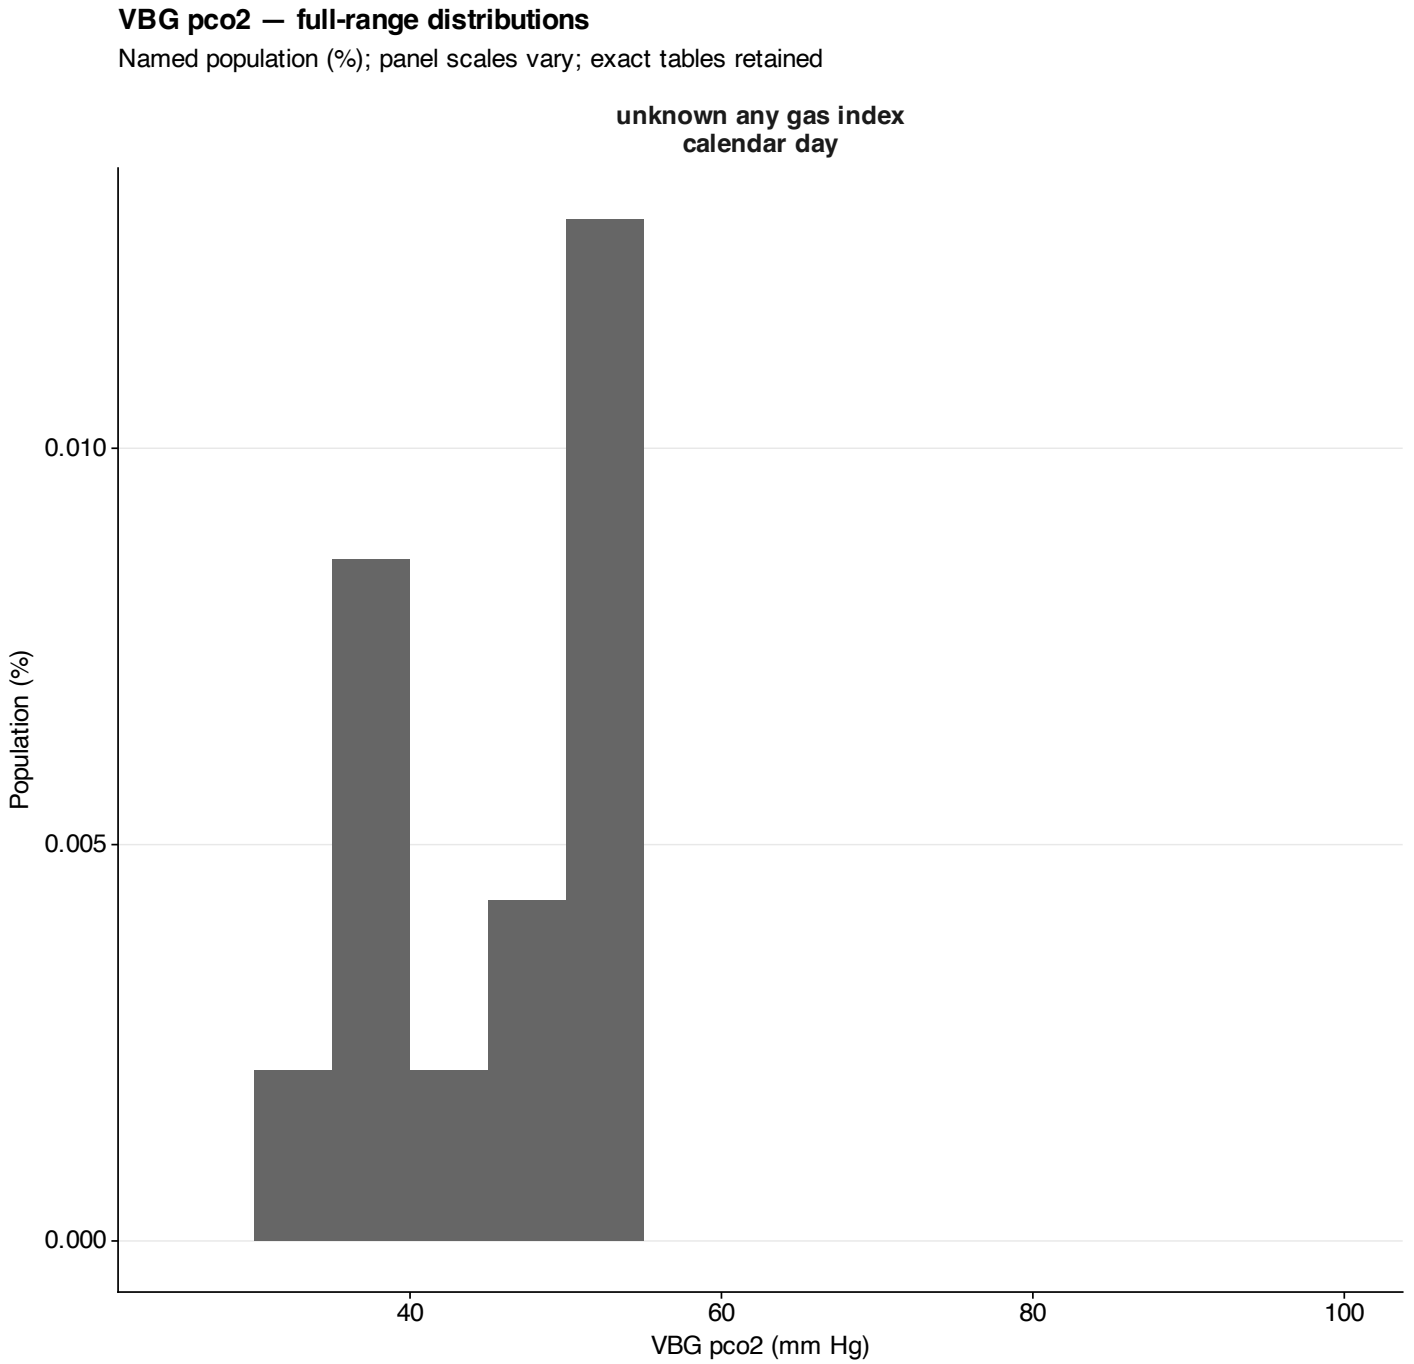

Figure 701: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete vbg_pco2 stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

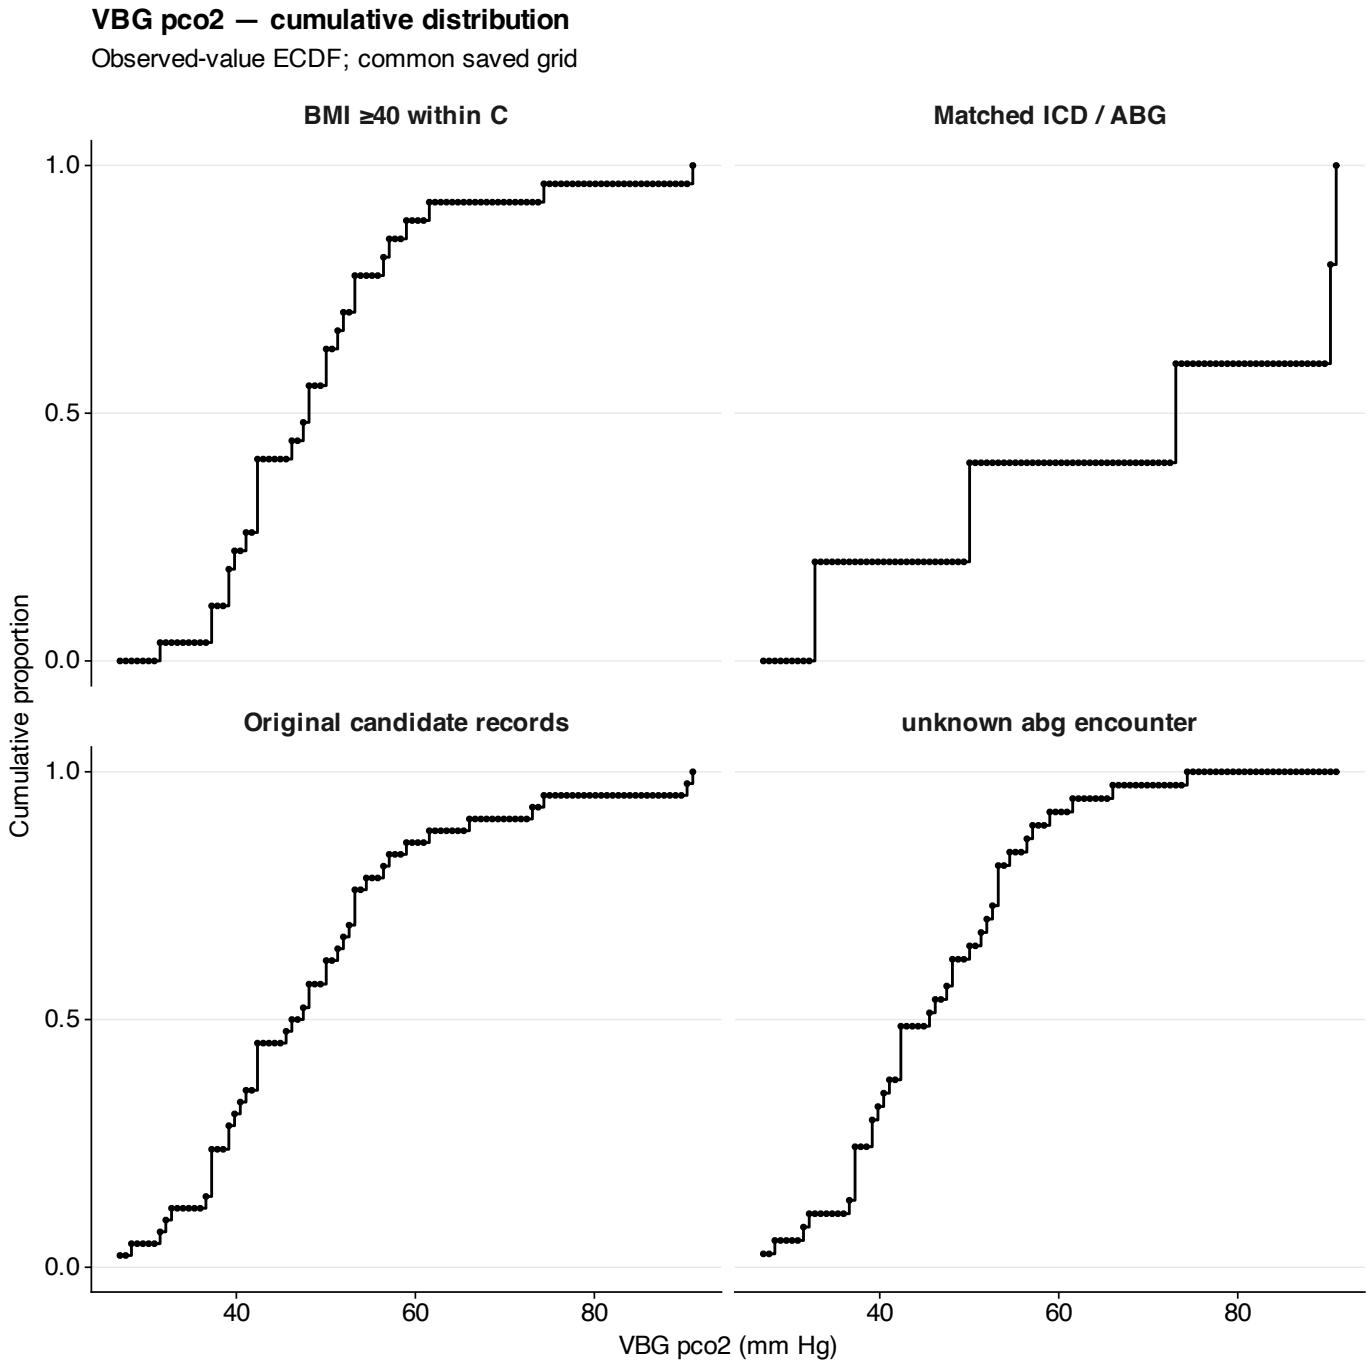

Figure 702: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. vbg_pco2 ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

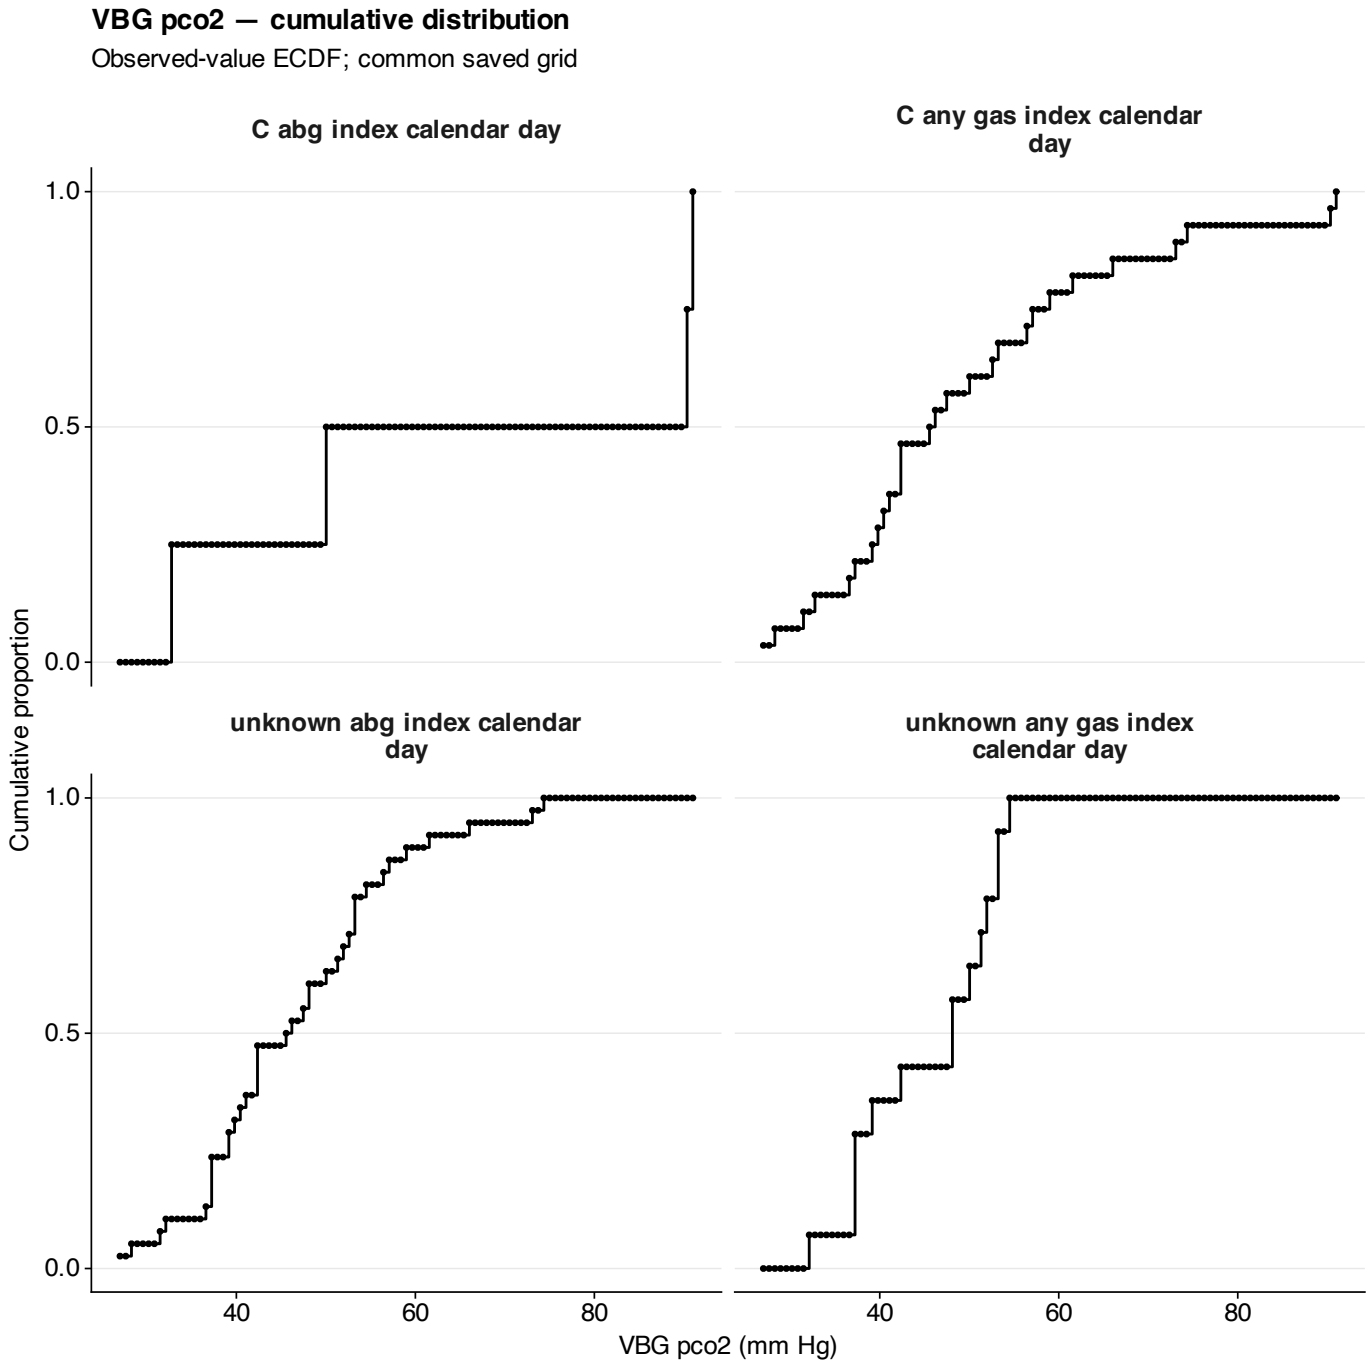

Figure 703: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. vbg_pco2 ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

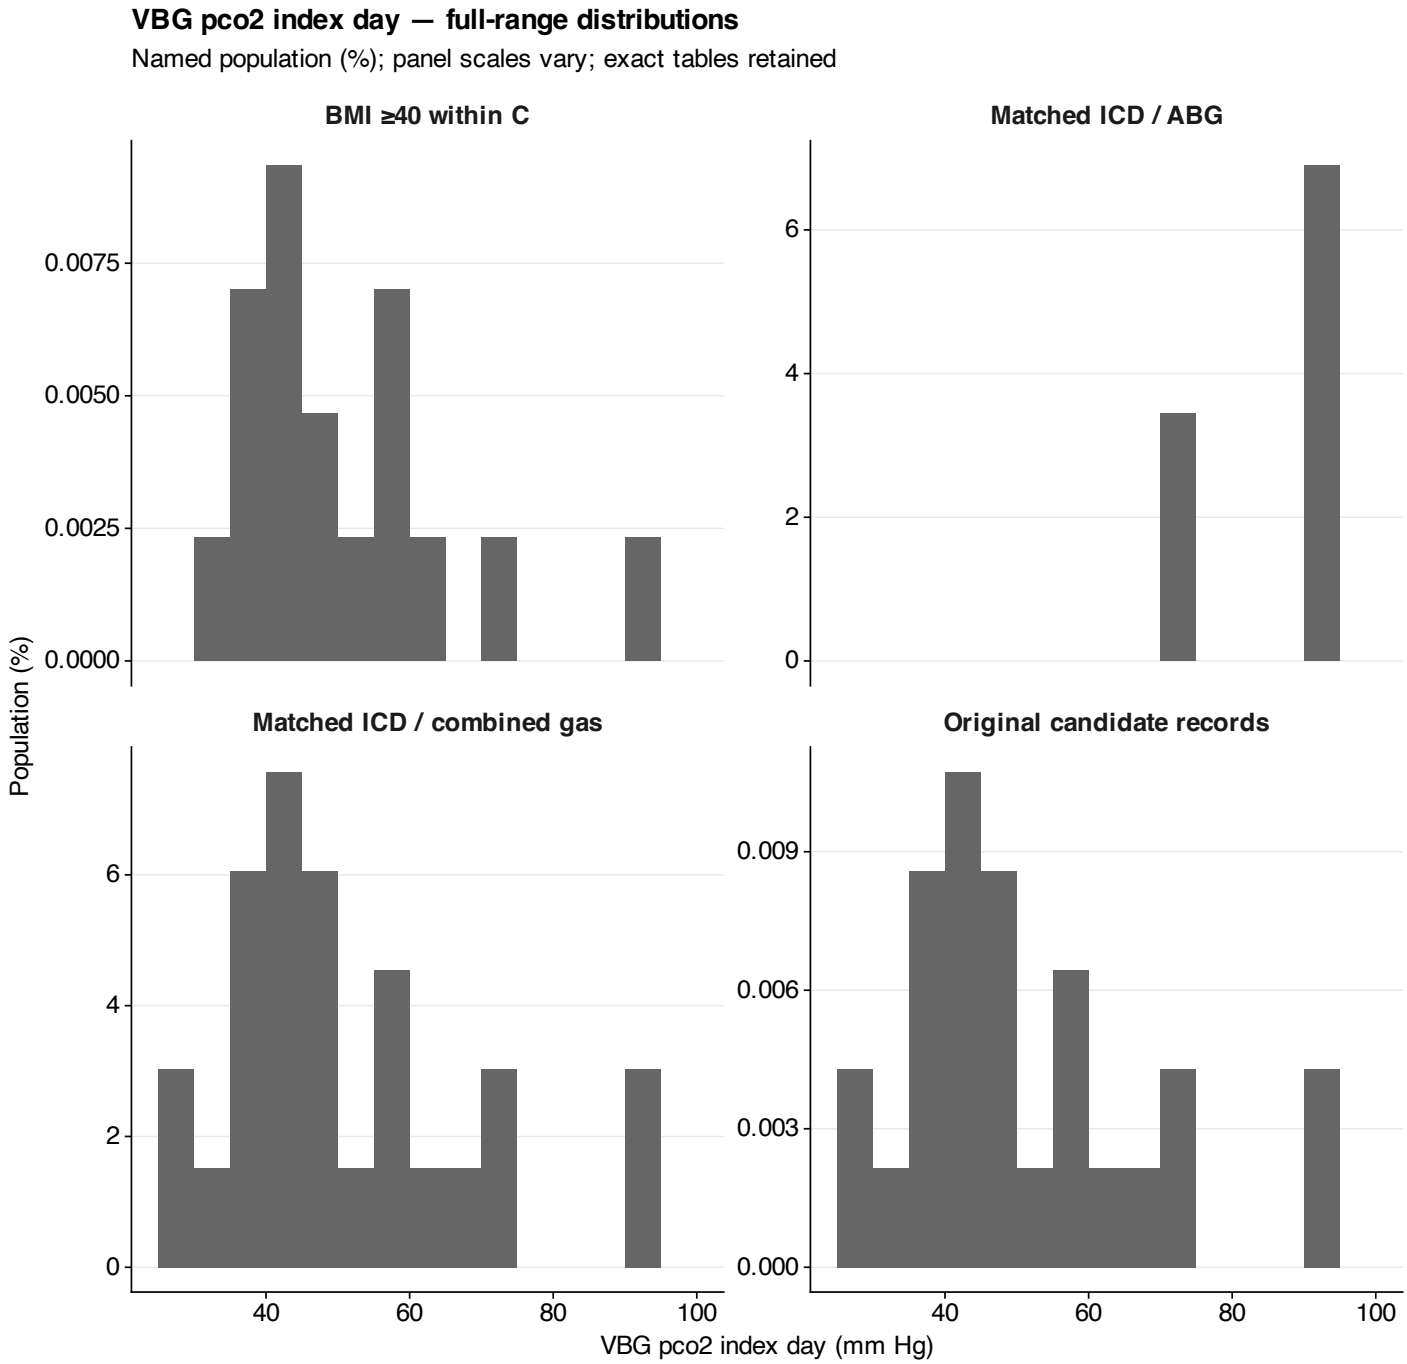

Figure 704: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete vbg_pco2_index_day stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

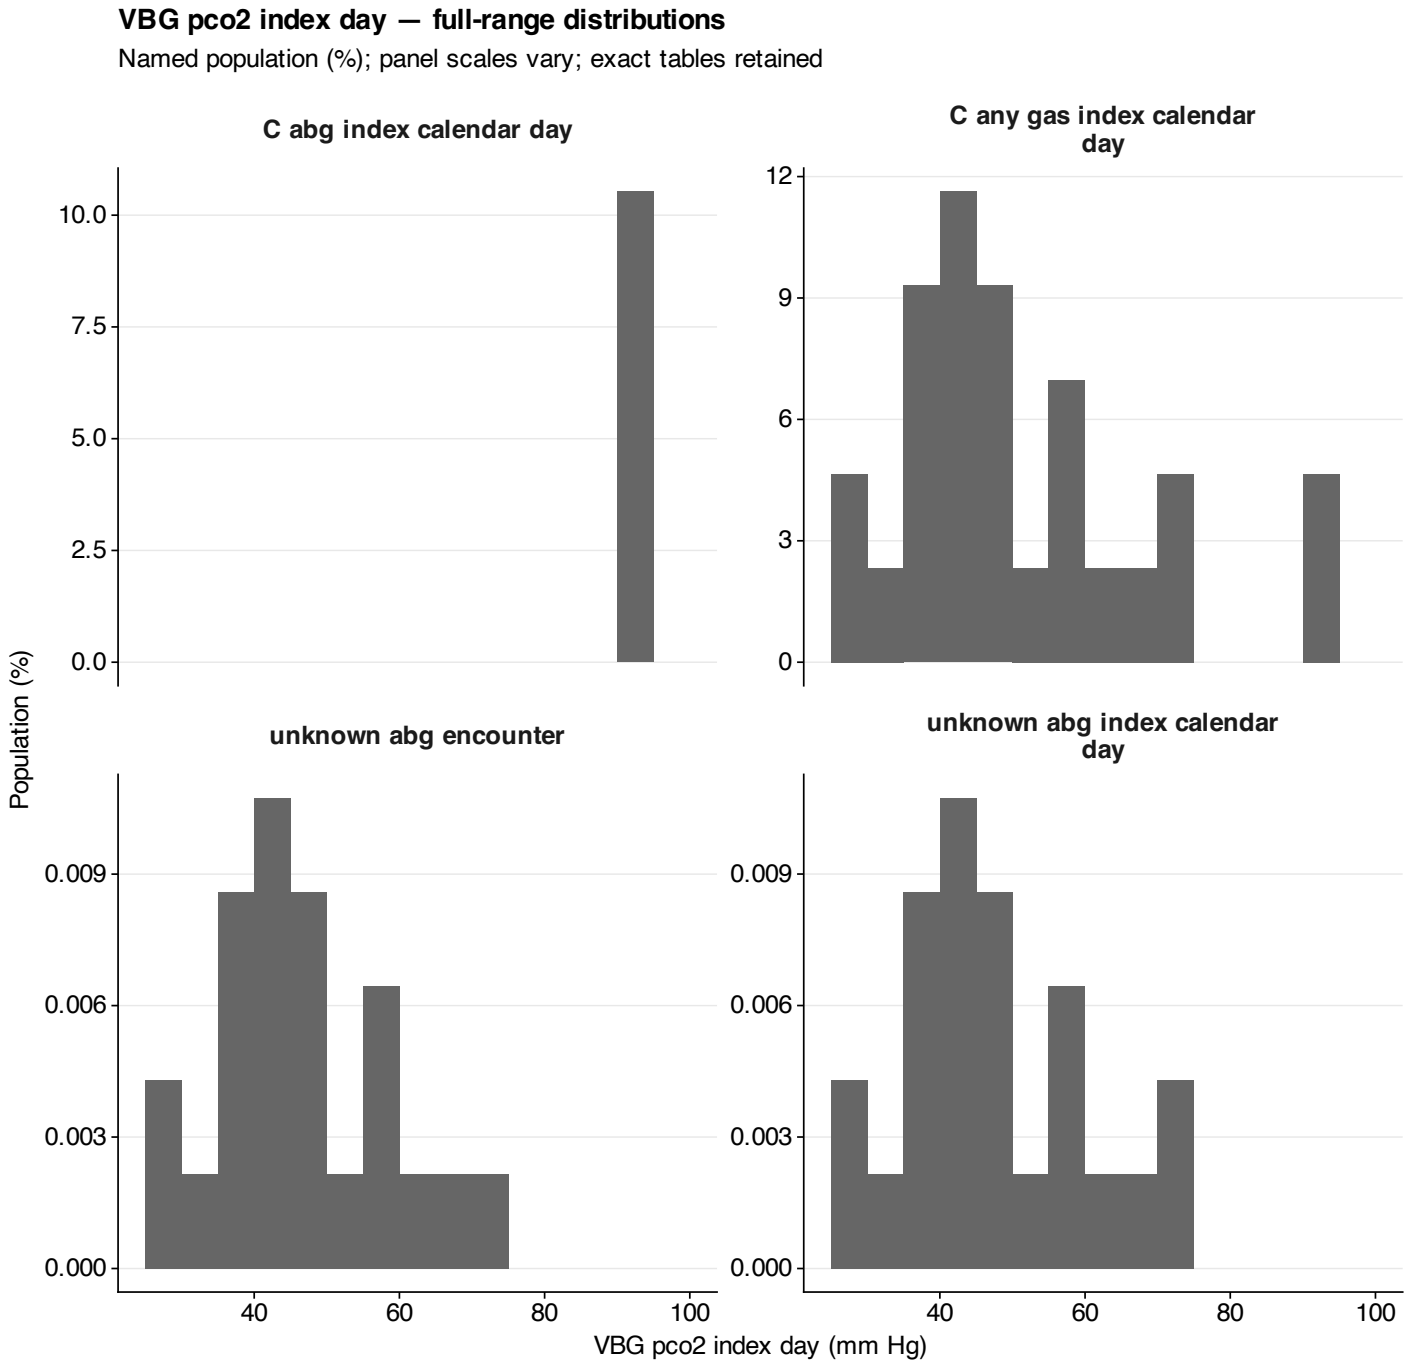

Figure 705: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete vbg_pco2_index_day stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

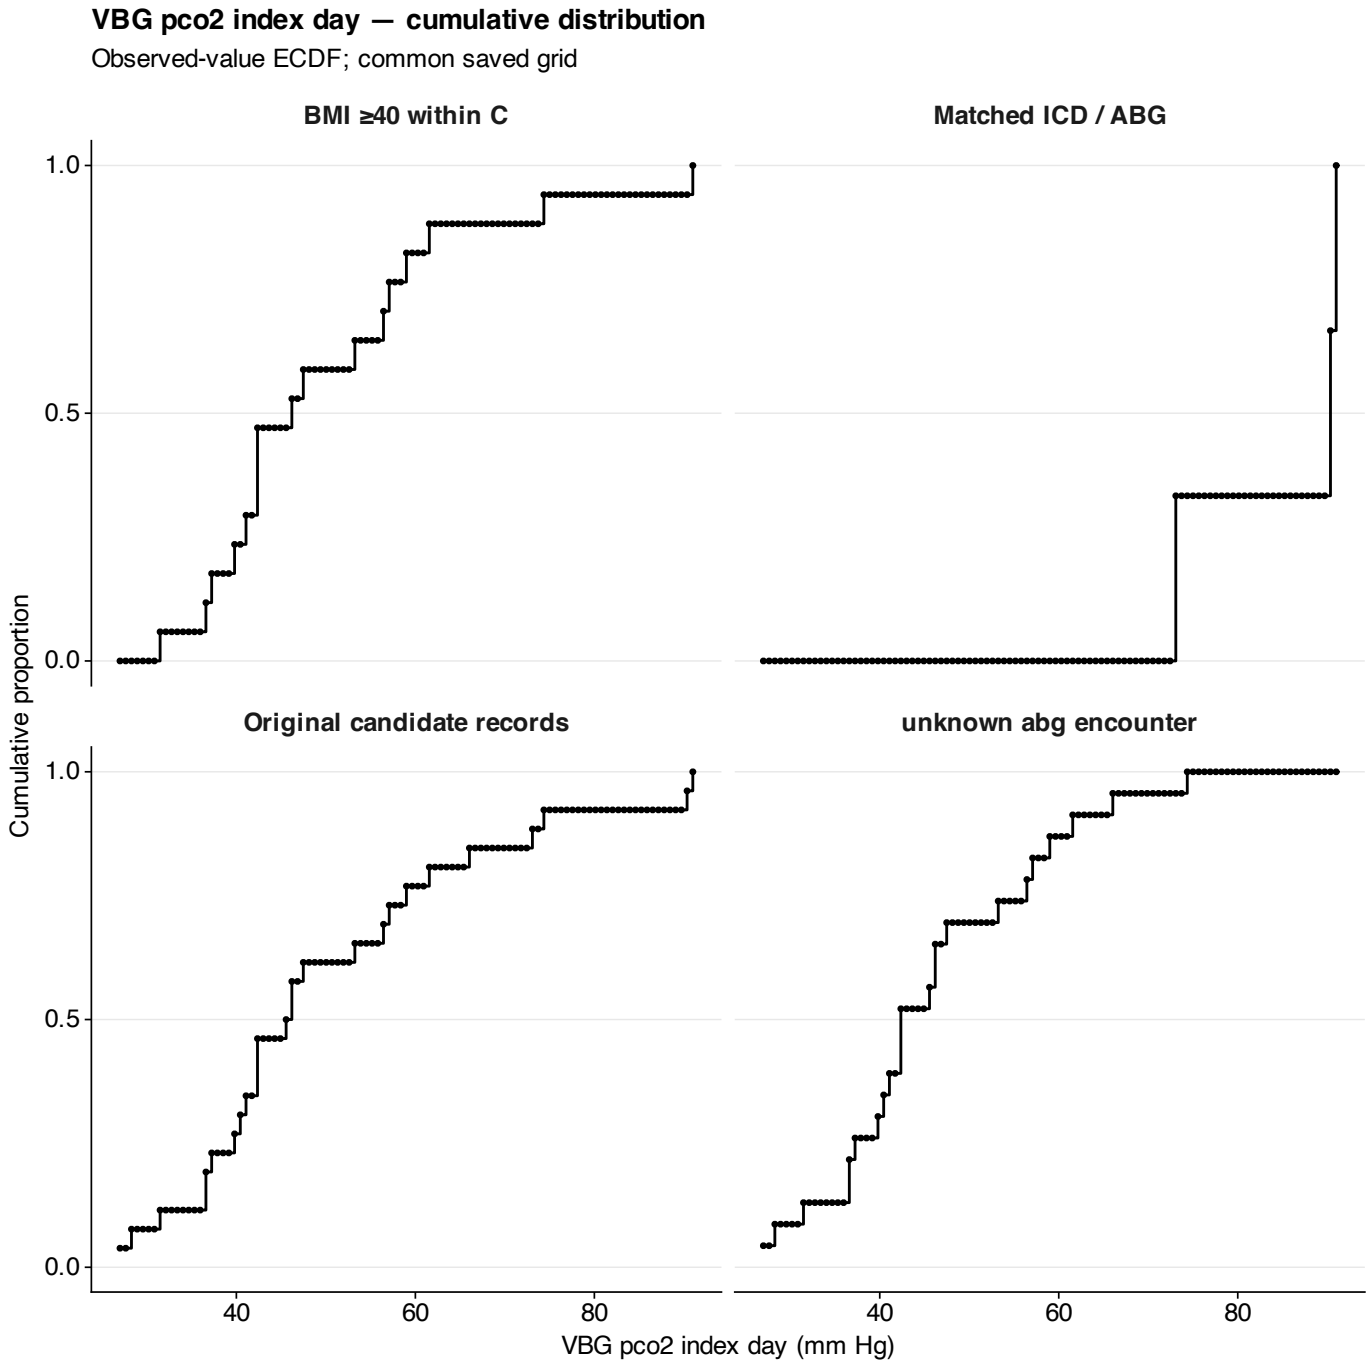

Figure 706: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. vbg_pco2_index_day ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

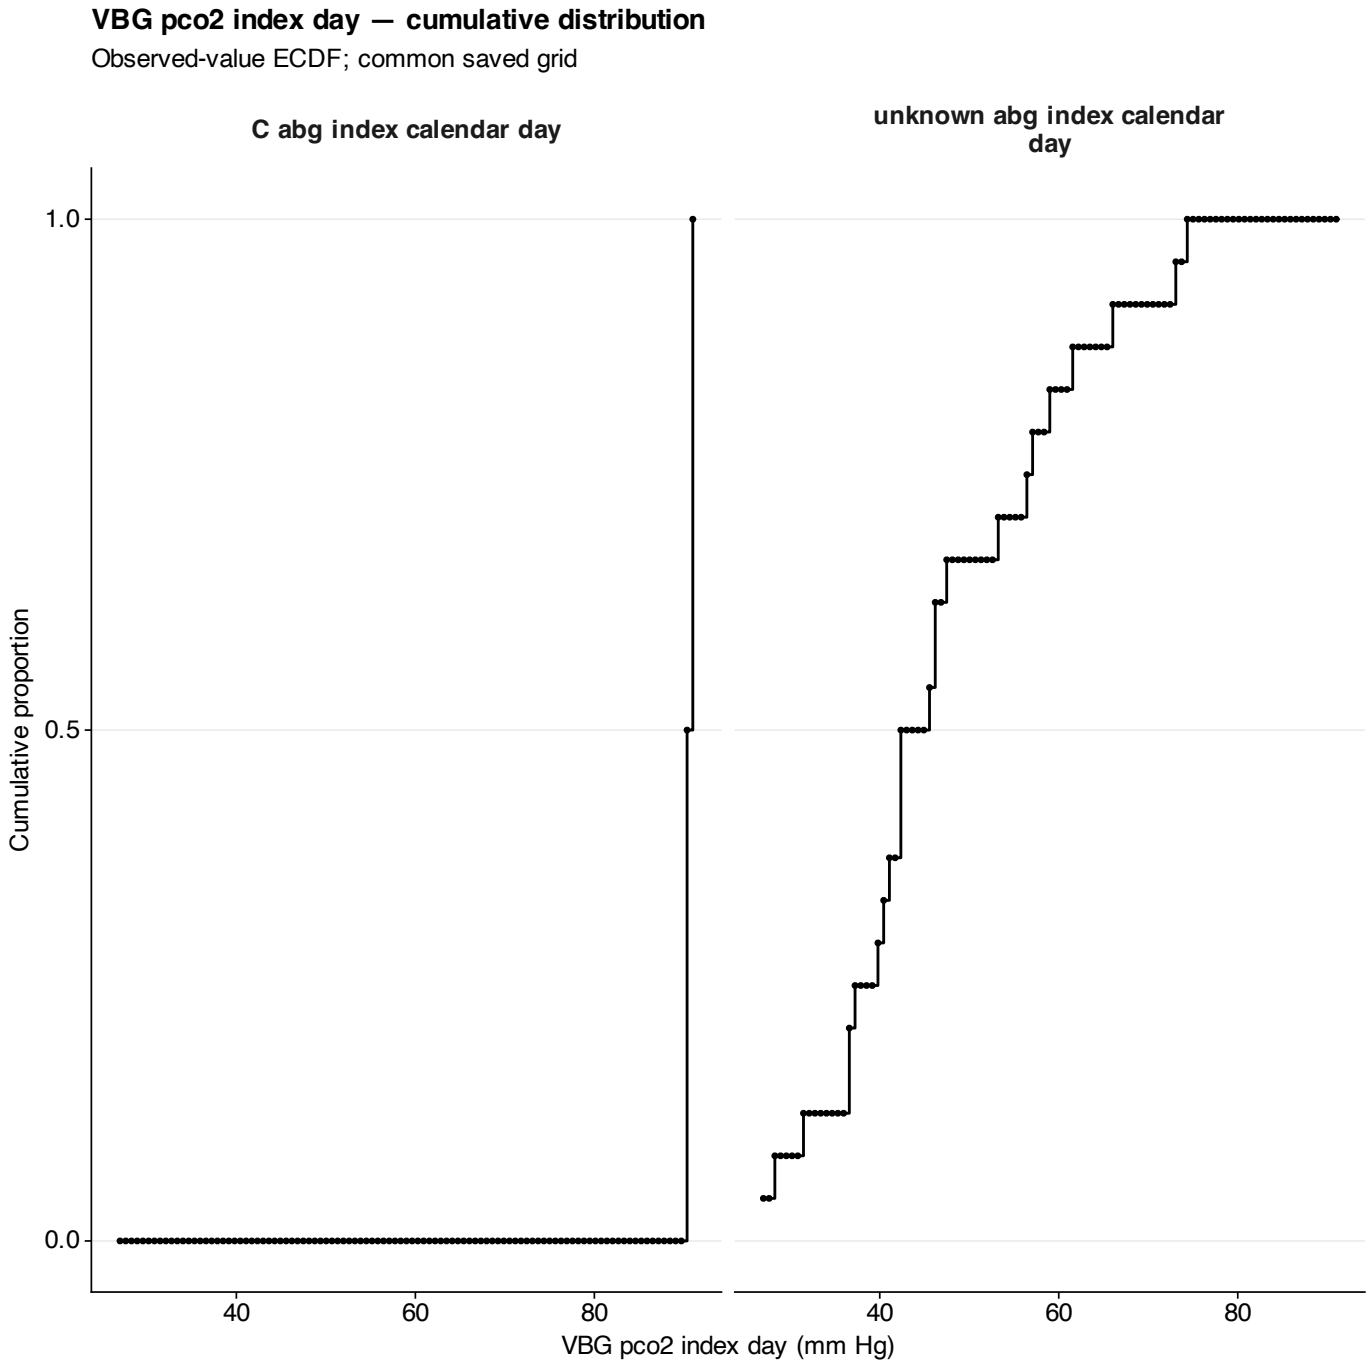

Figure 707: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. vbg_pco2_index_day ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

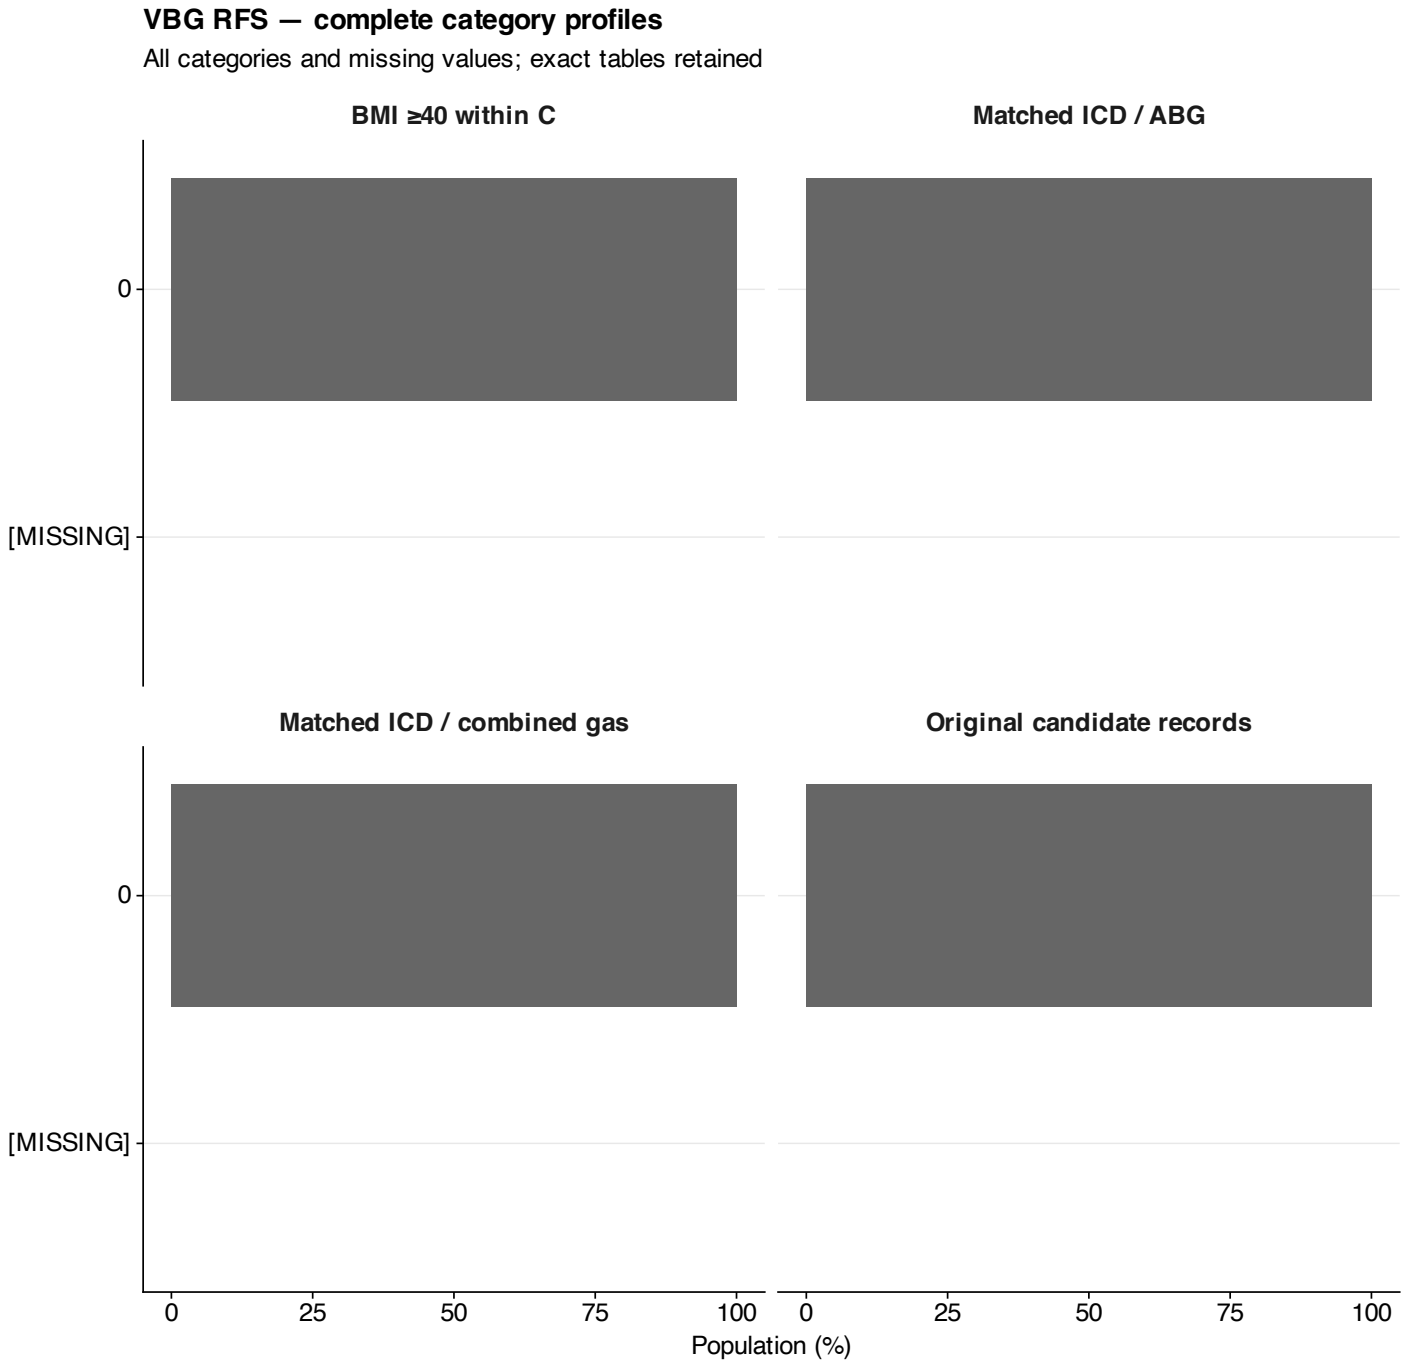

Figure 708: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete VBG_rfs stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

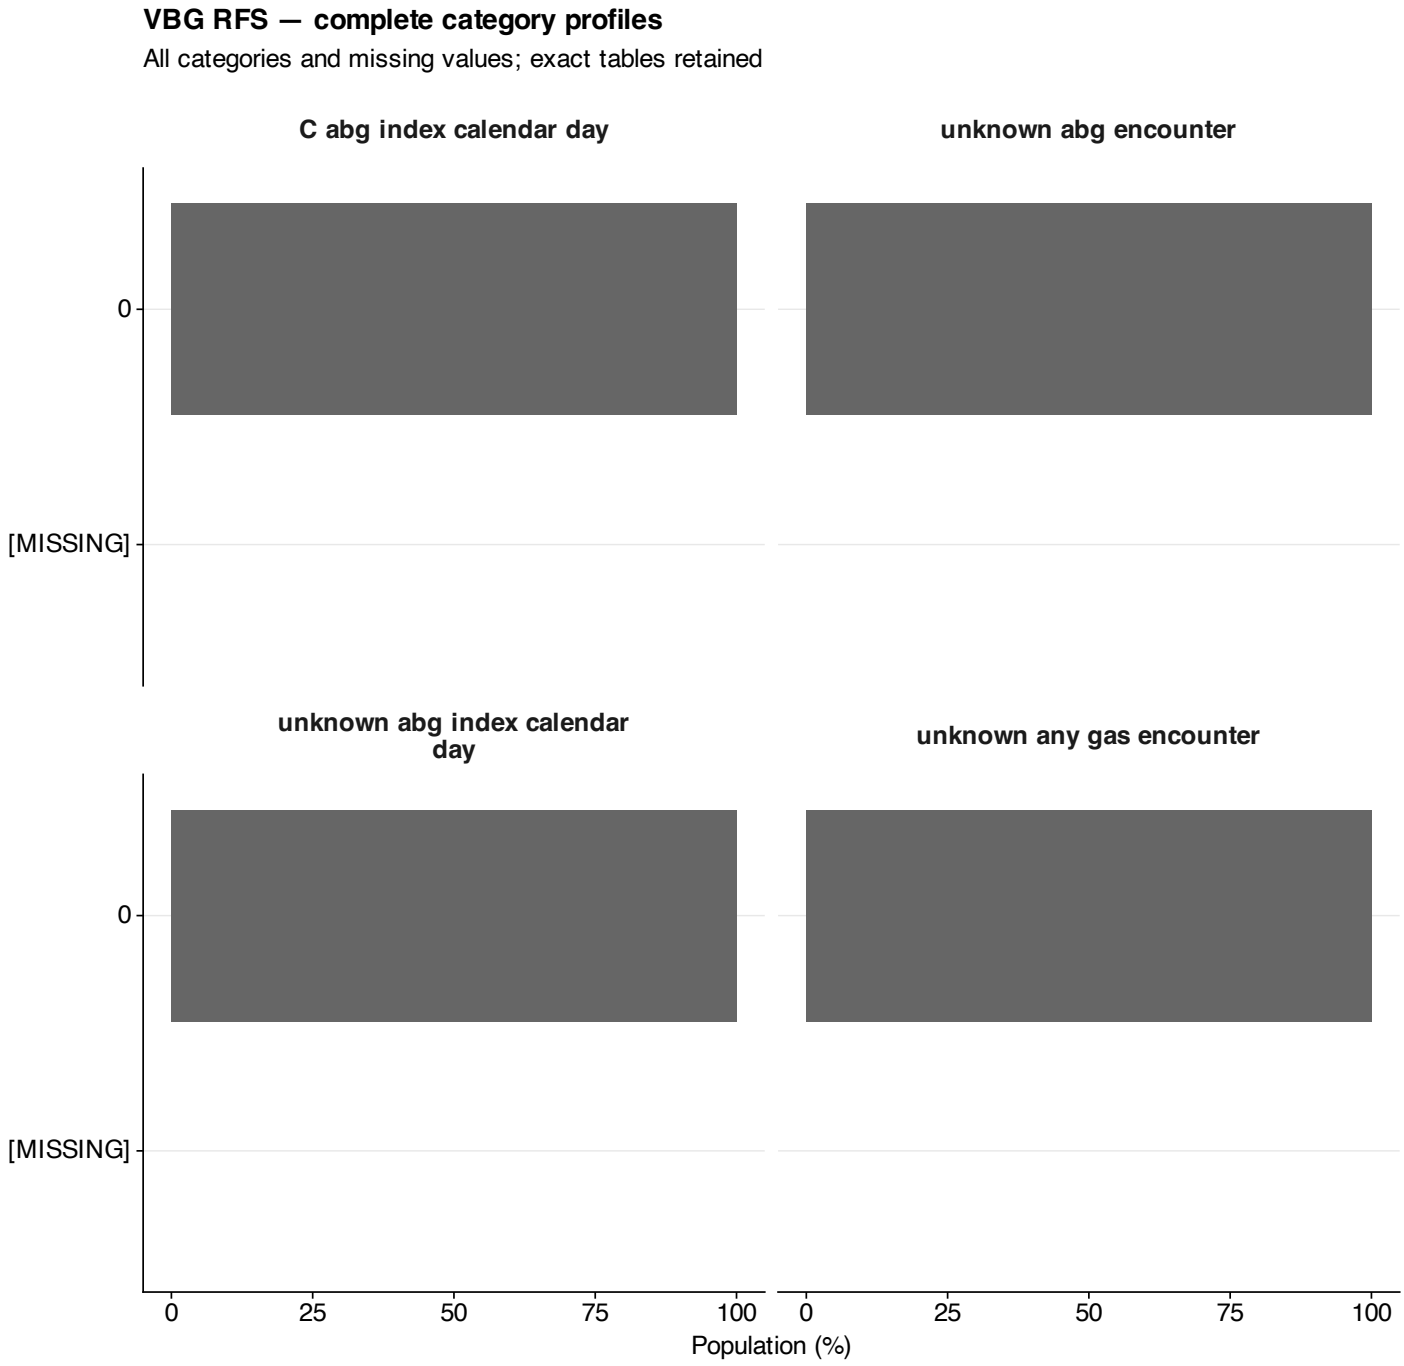

Figure 709: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete VBG_rfs stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

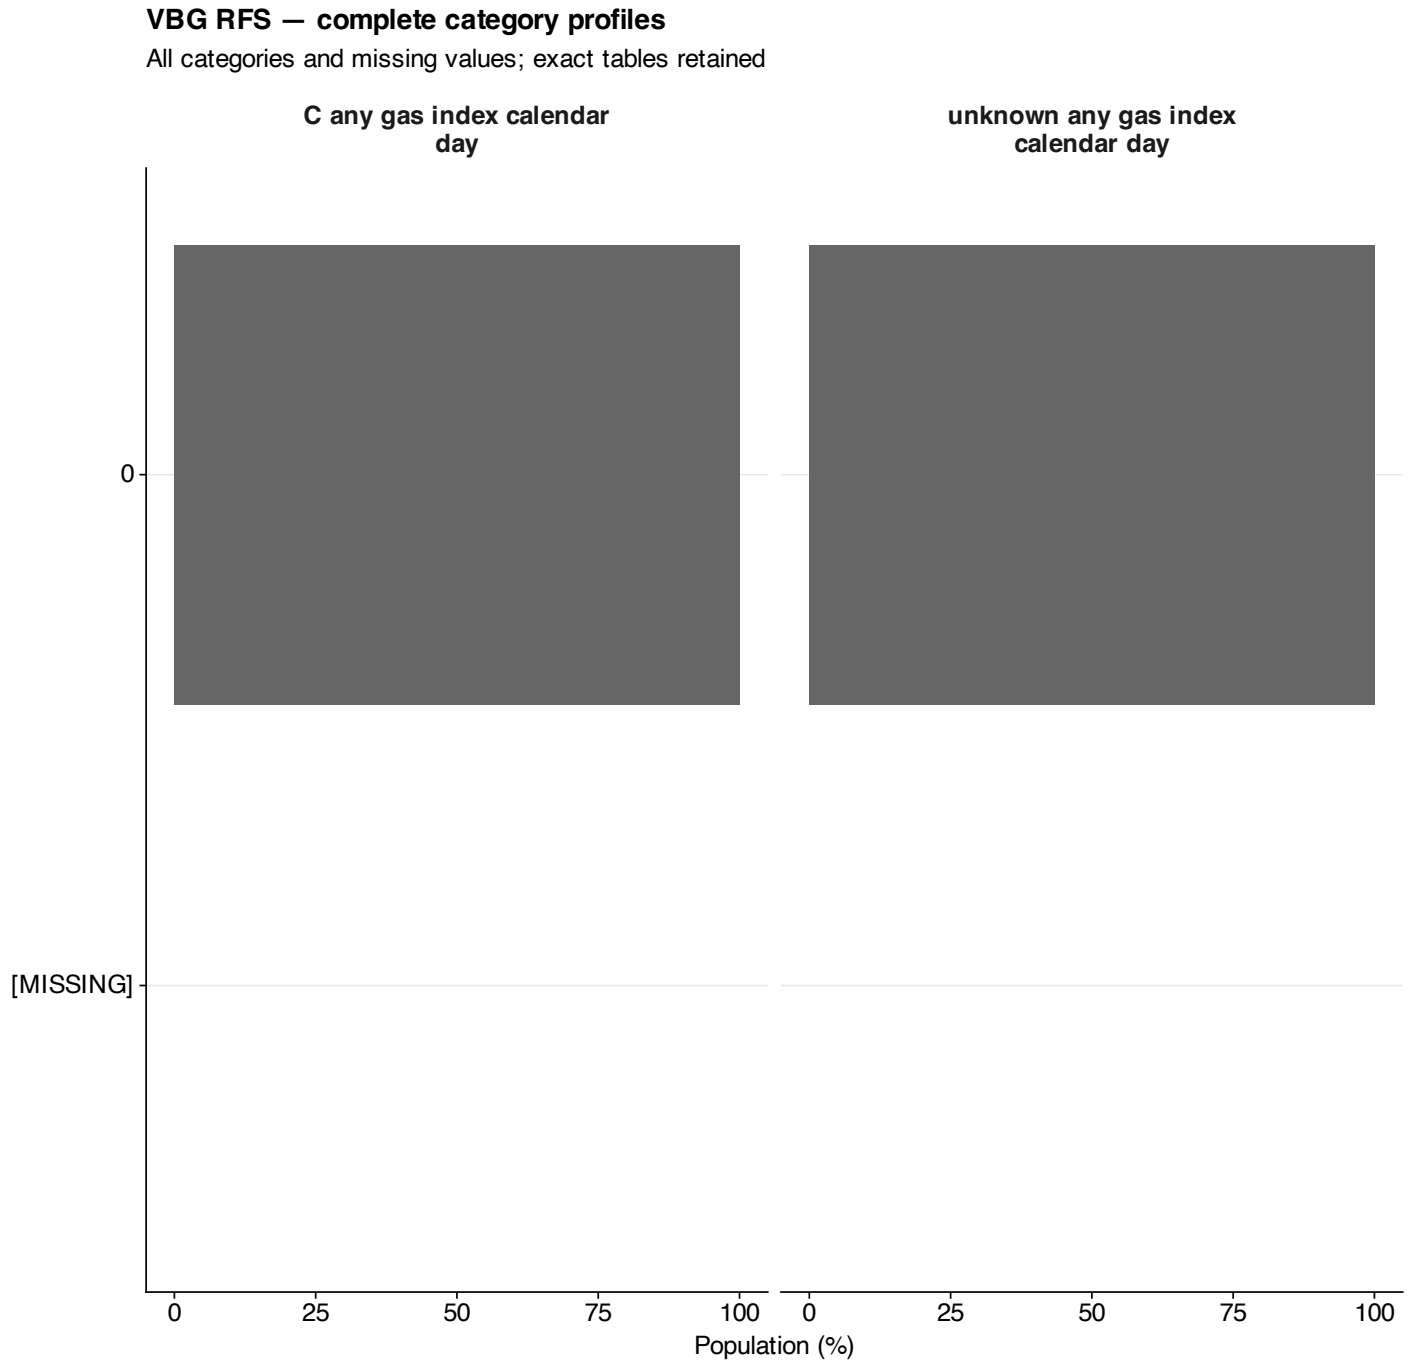

Figure 710: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete VBG_rfs stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

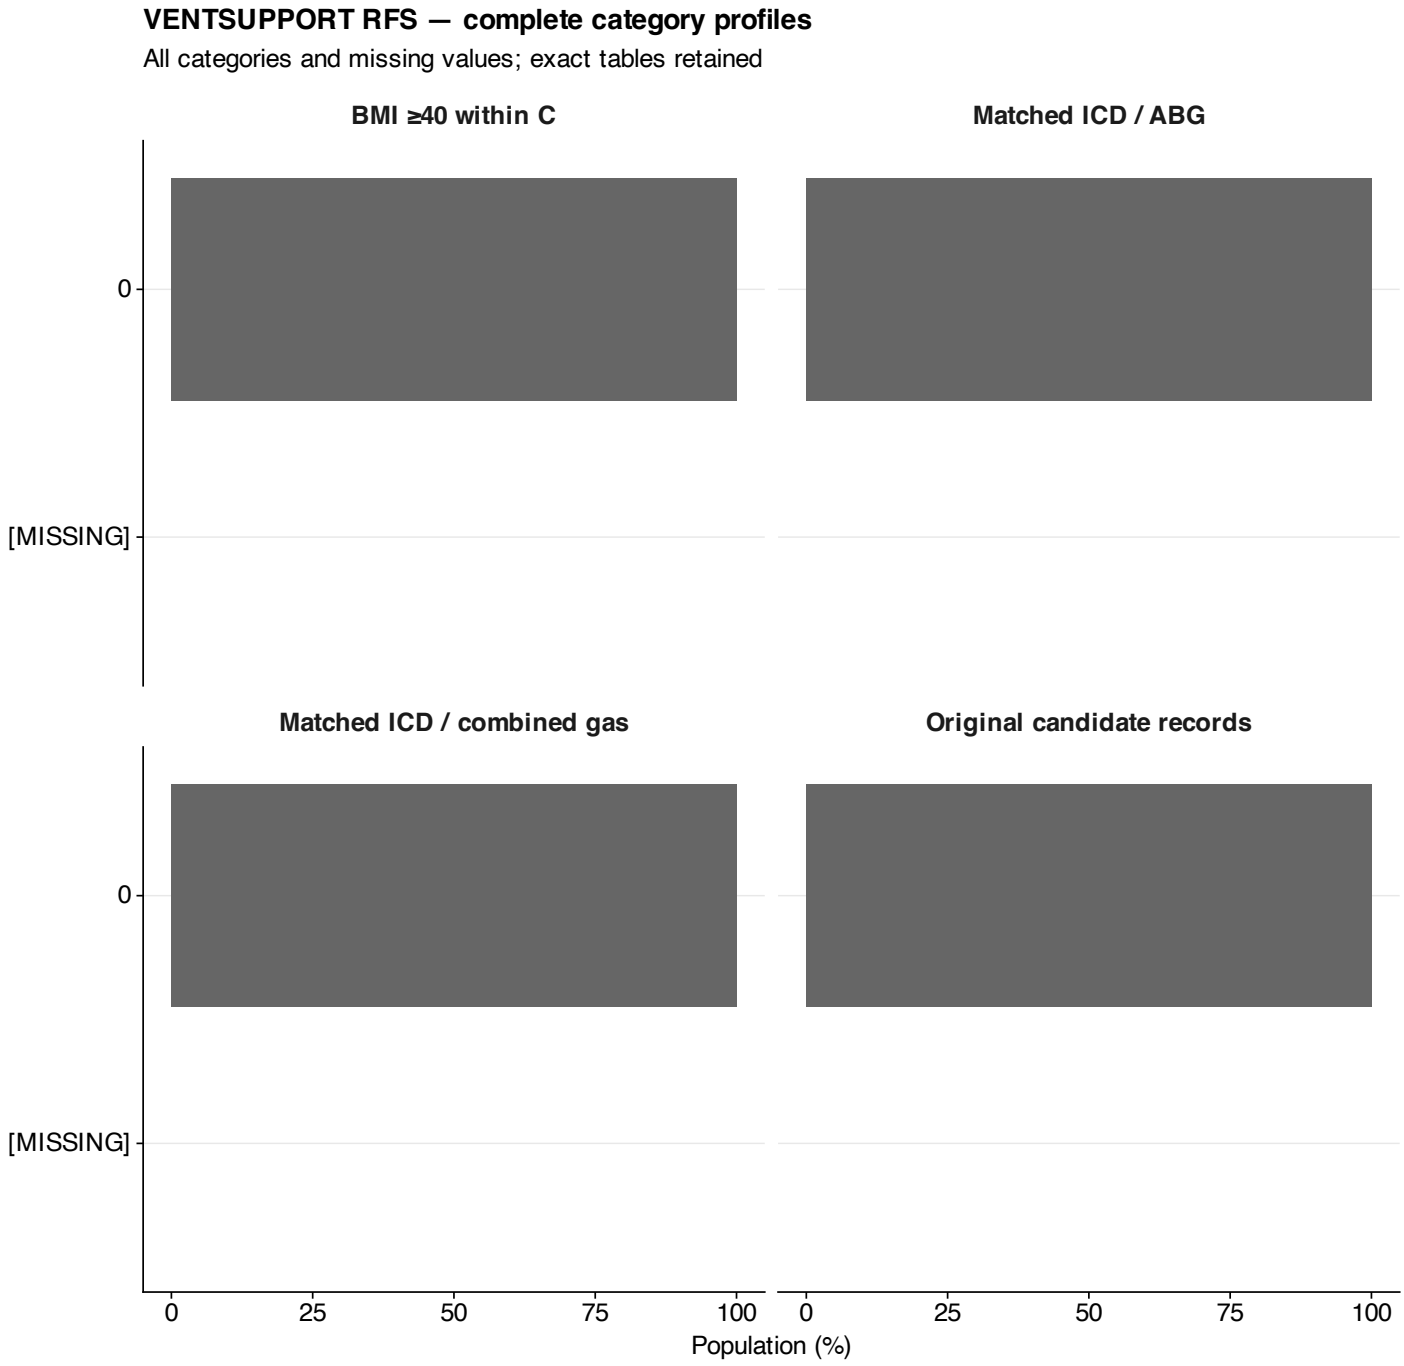

Figure 711: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete VENTSUPPORT_rfs stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

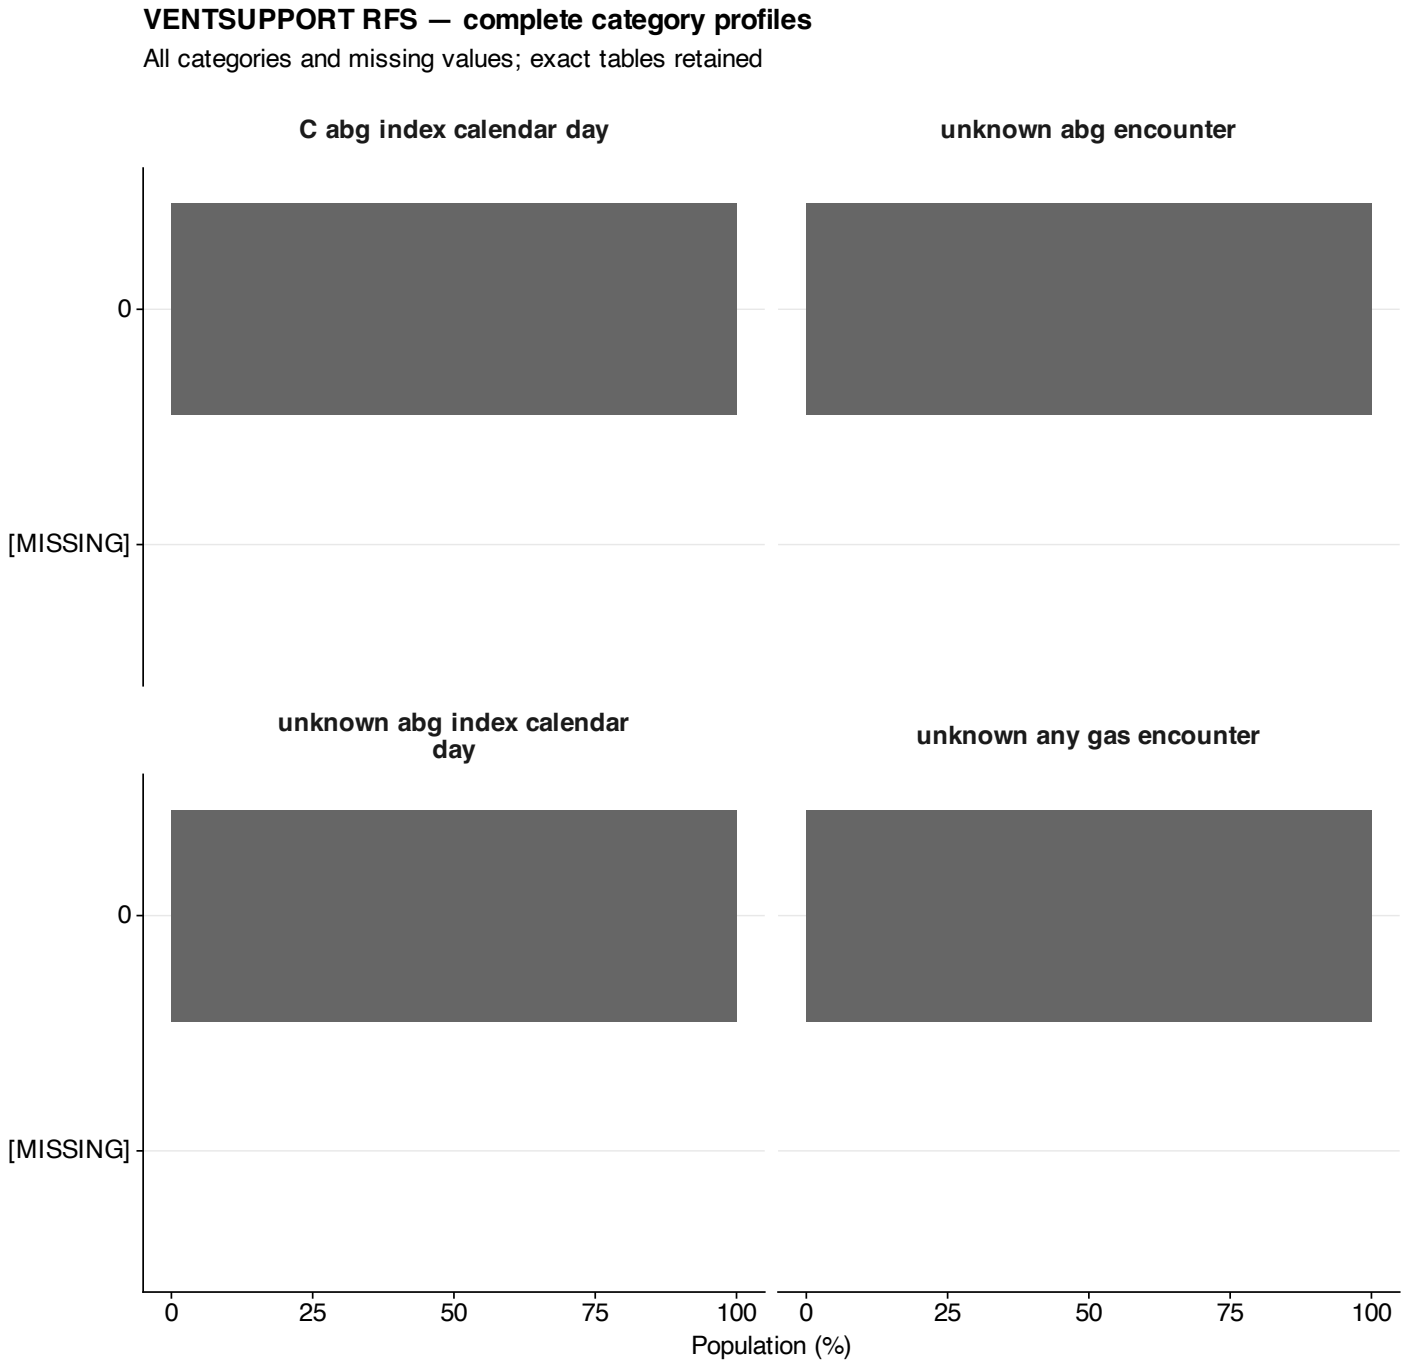

Figure 712: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete VENTSUPPORT_rfs stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

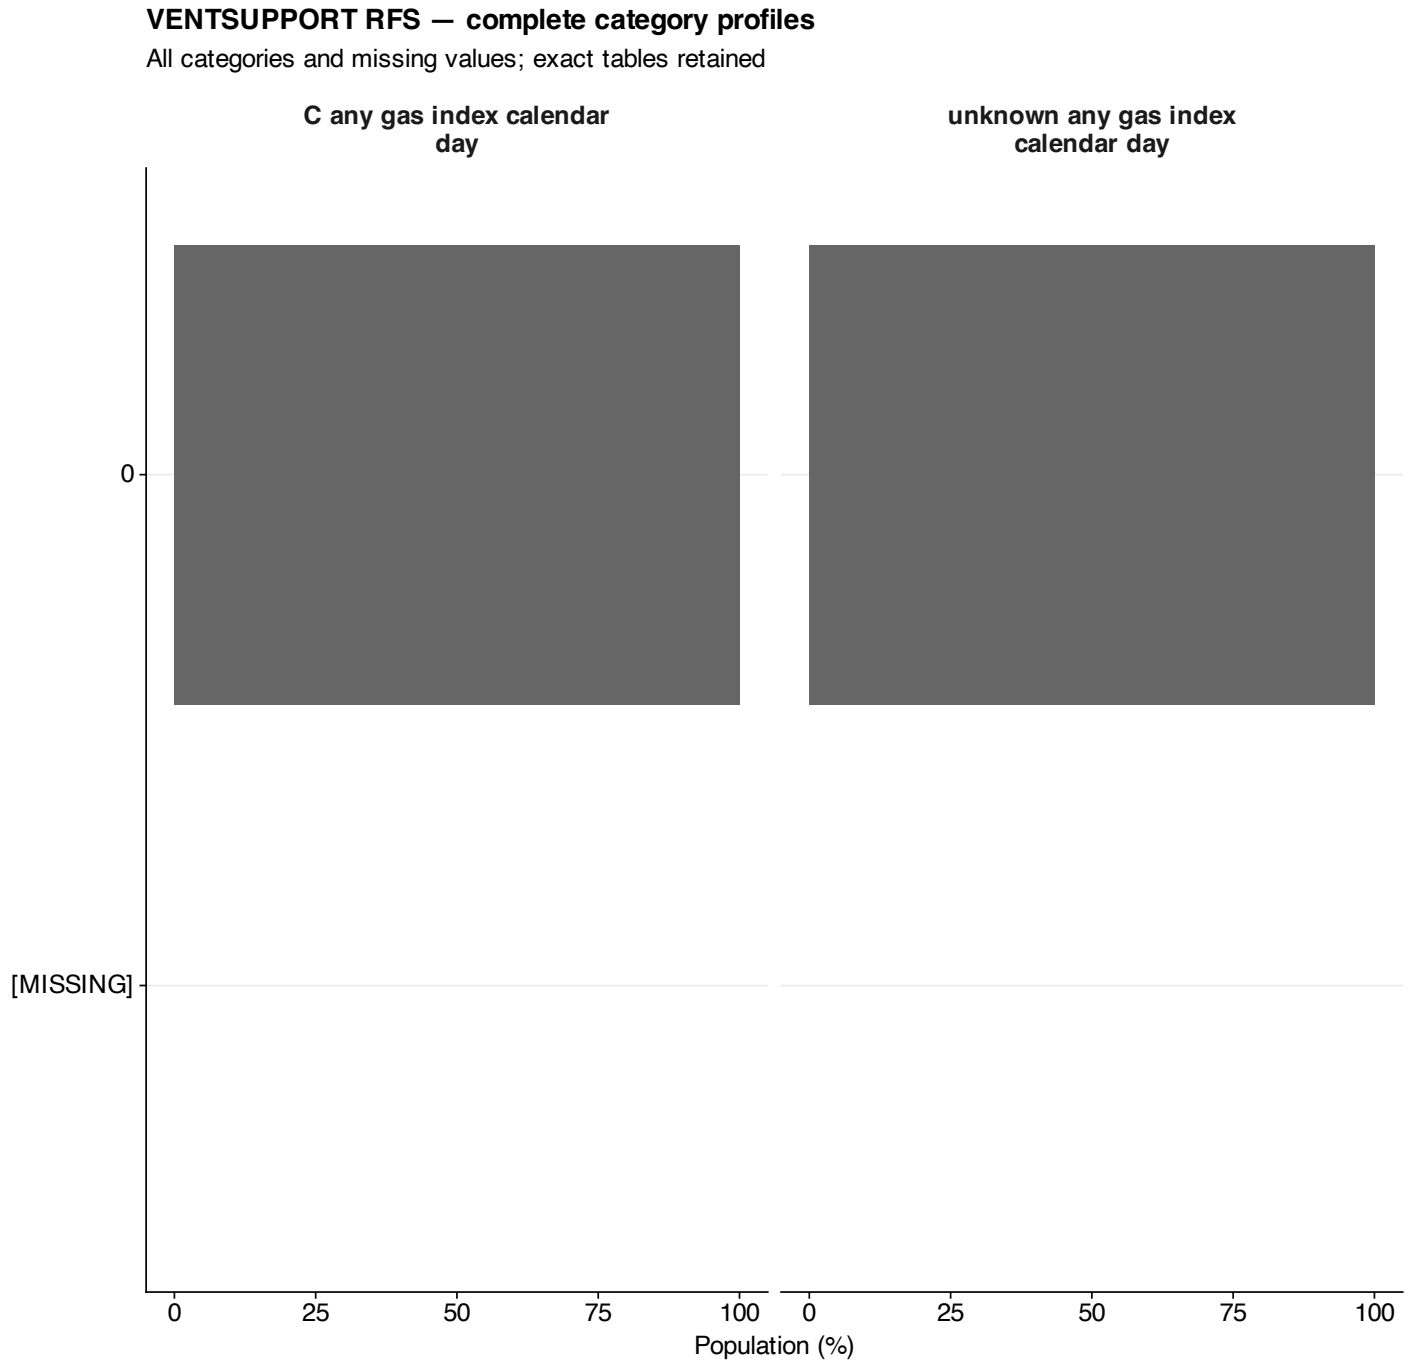

Figure 713: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete VENTSUPPORT_rfs stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

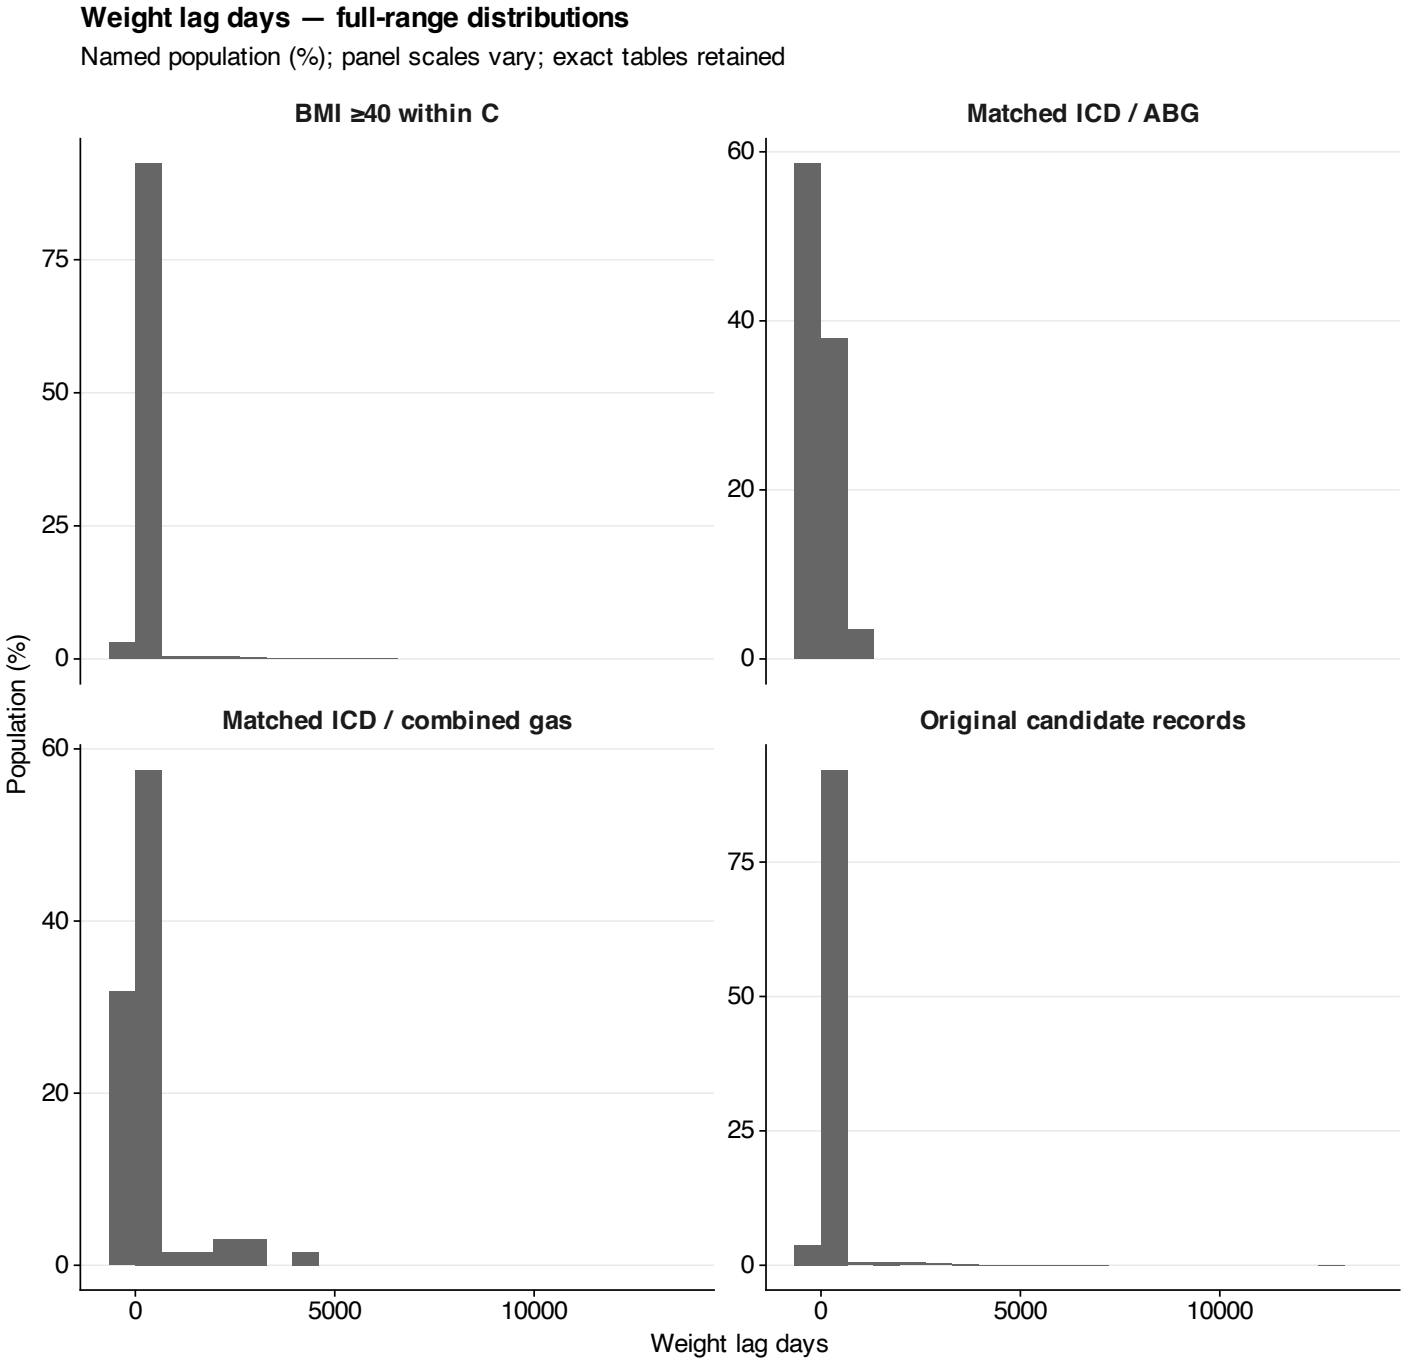

Figure 714: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete weight_lag_days stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

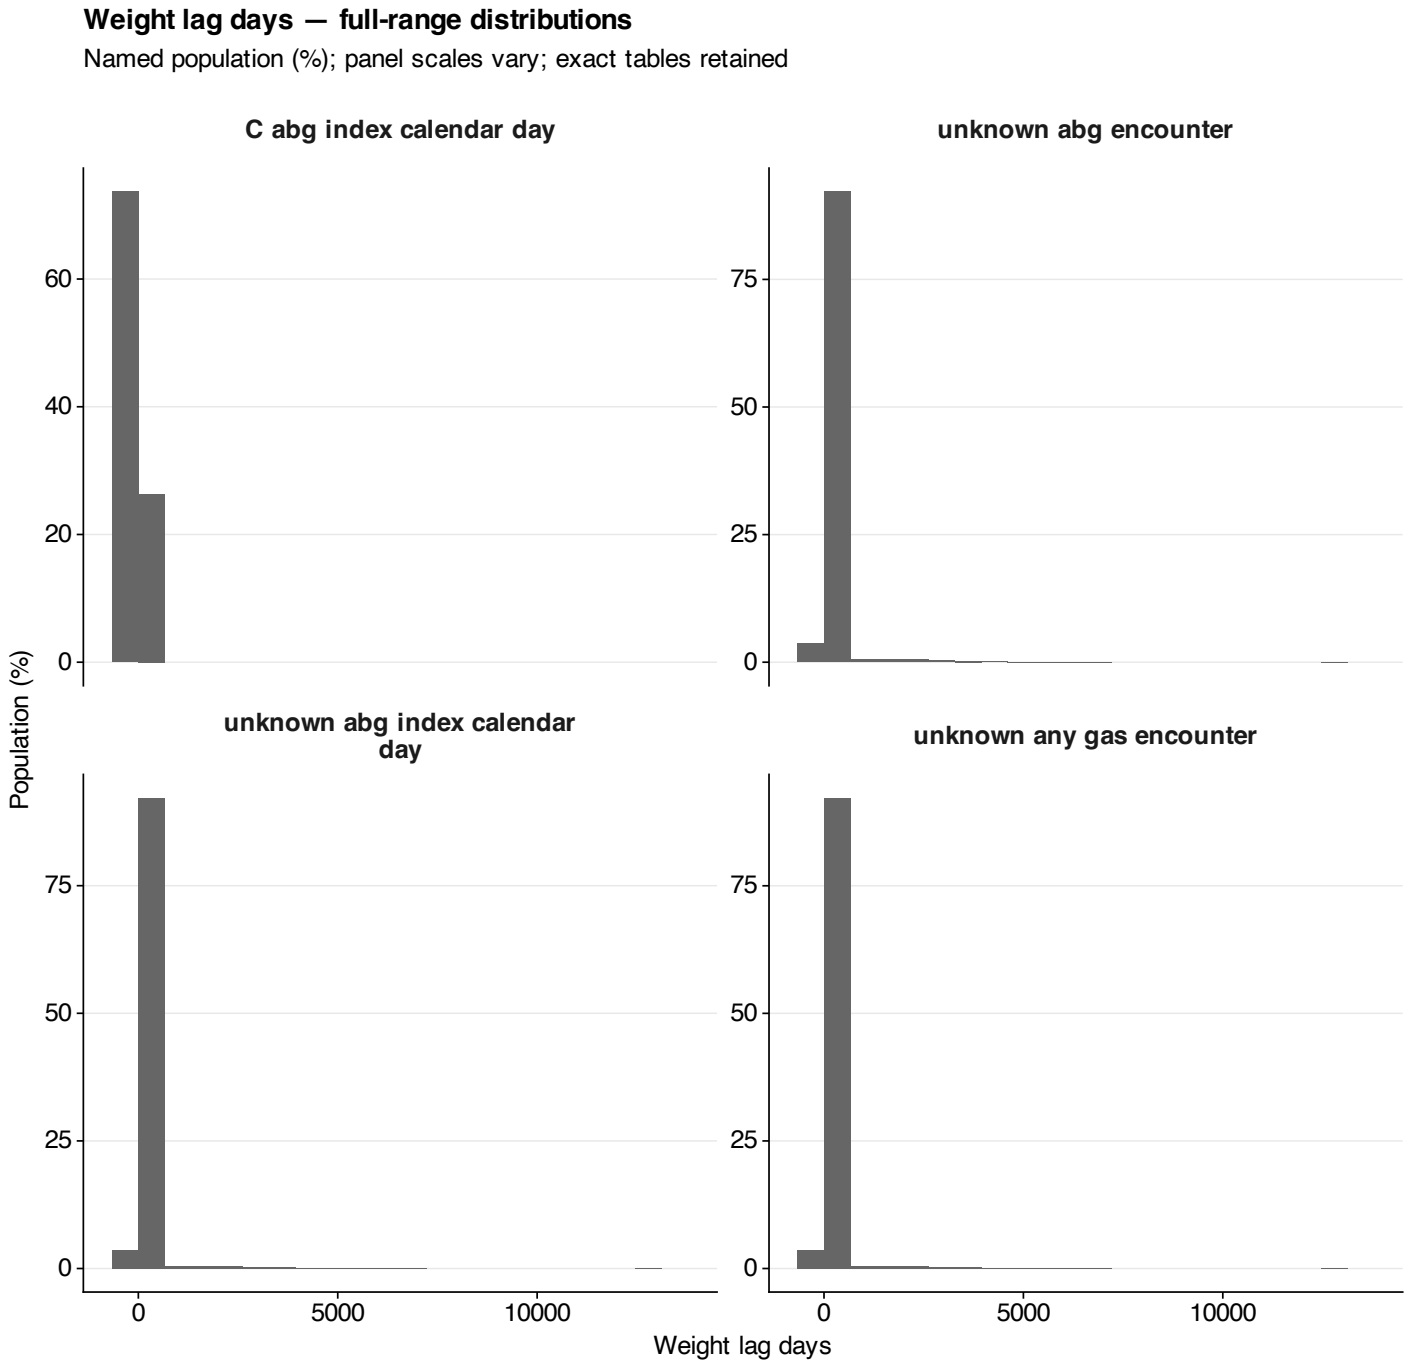

Figure 715: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete weight_lag_days stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

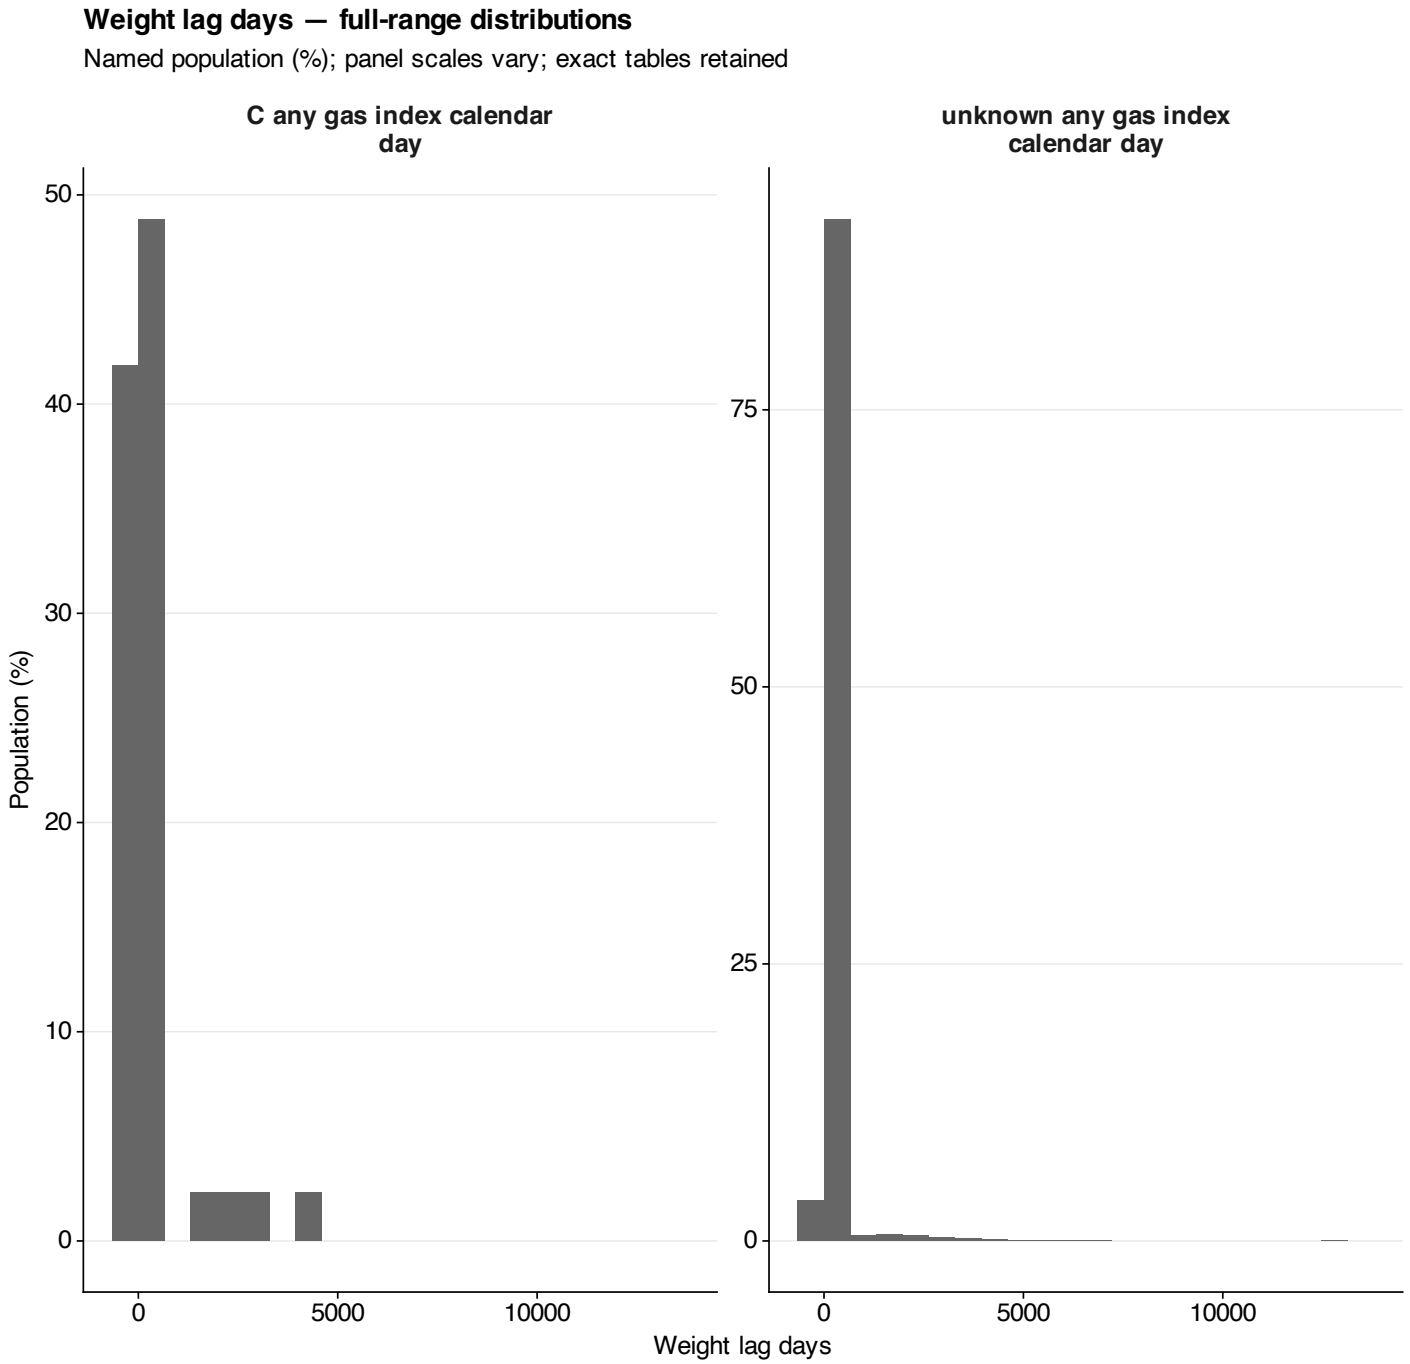

Figure 716: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete weight_lag_days stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

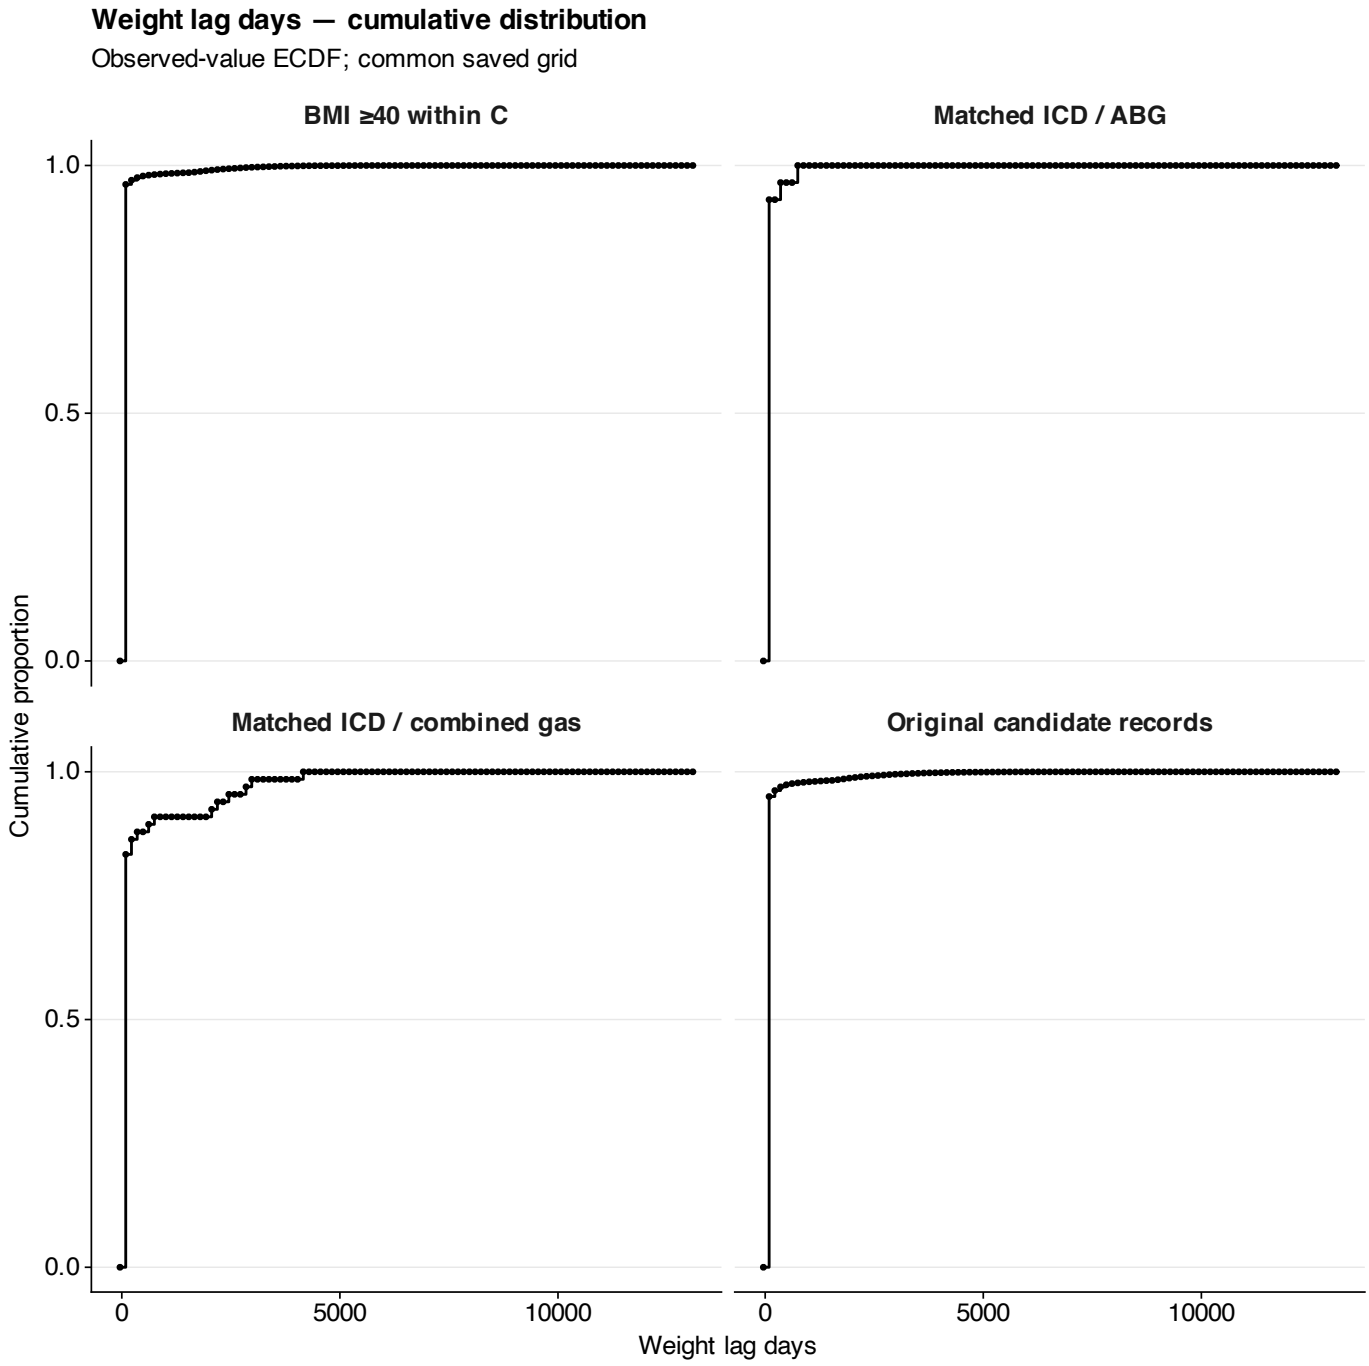

Figure 717: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. weight_lag_days ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

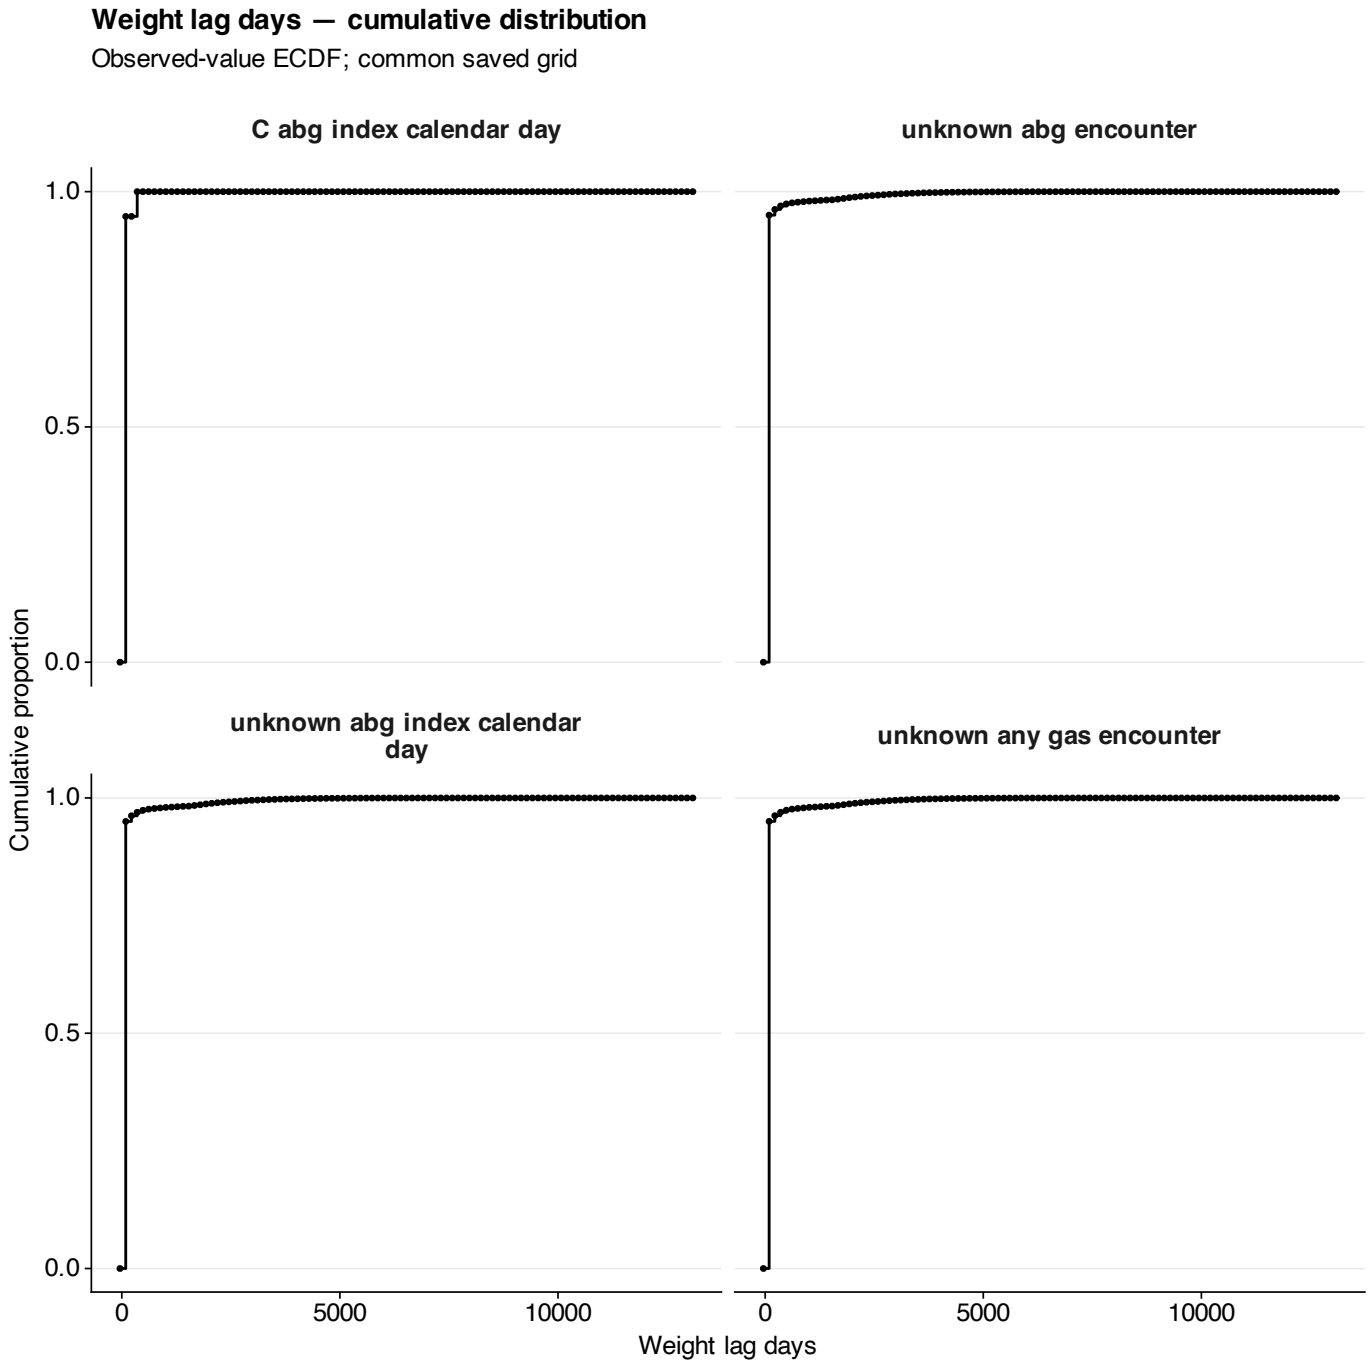

Figure 718: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. weight_lag_days ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

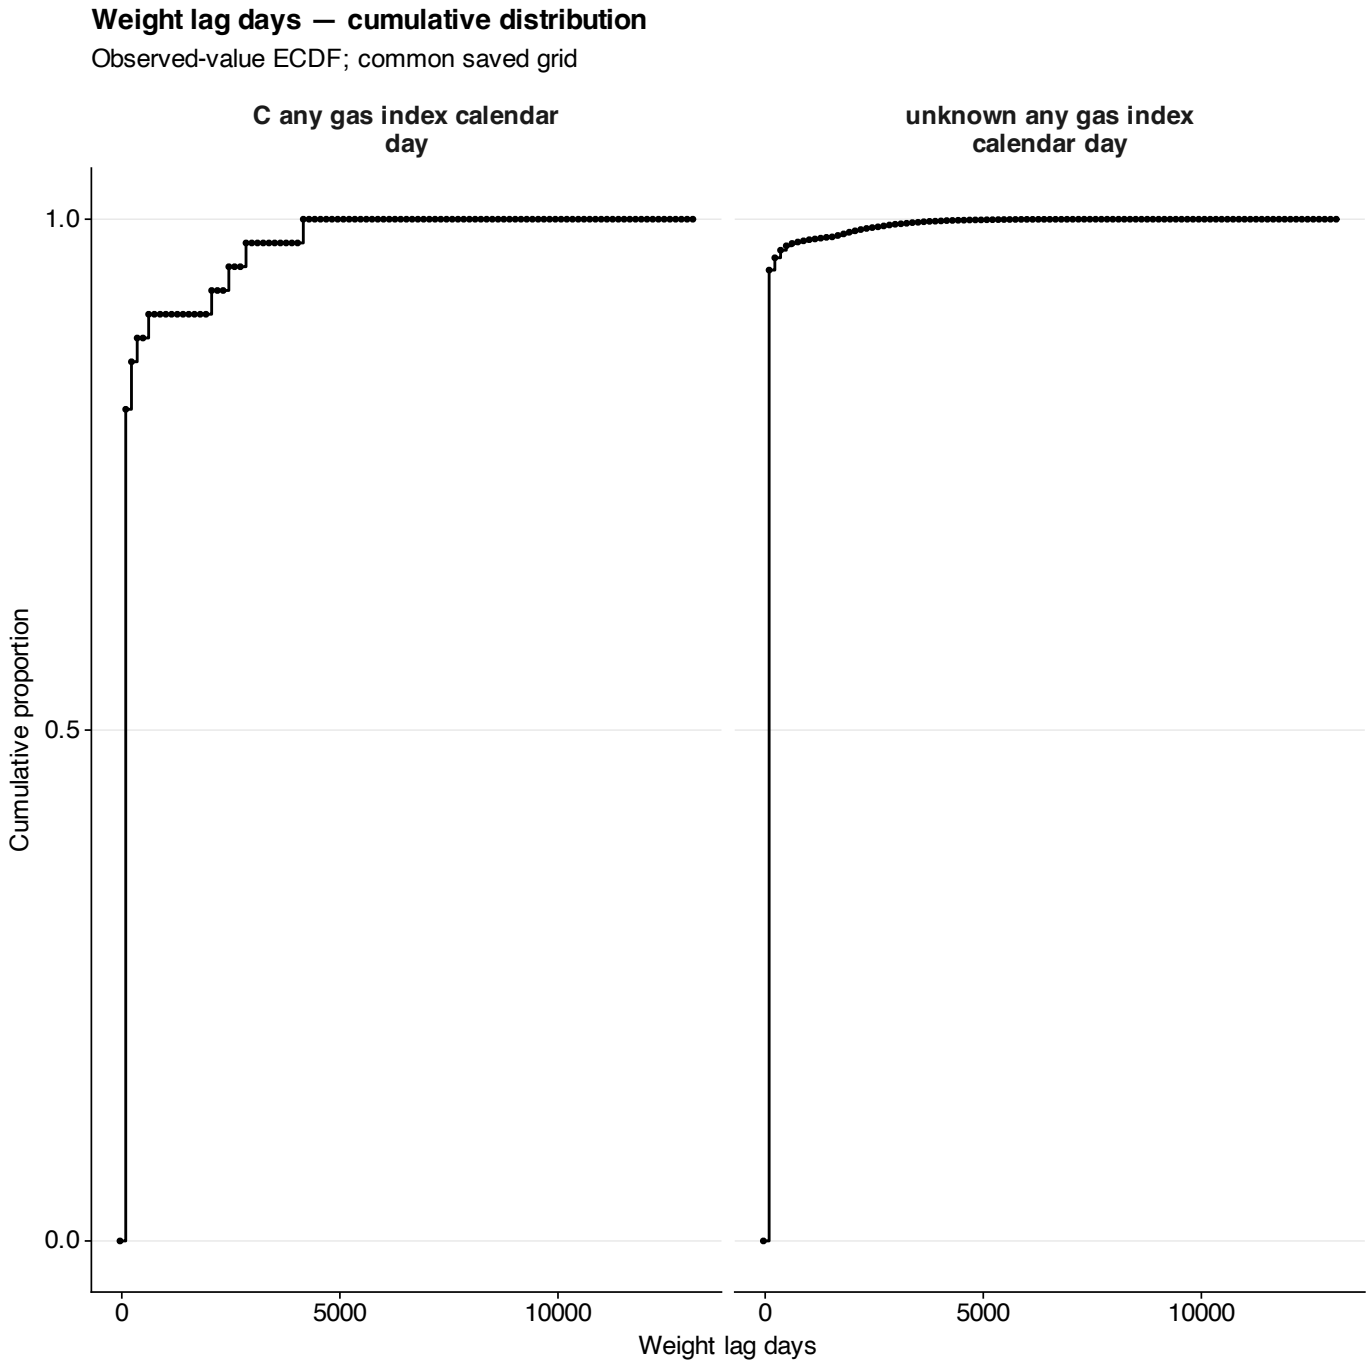

Figure 719: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. weight_lag_days ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

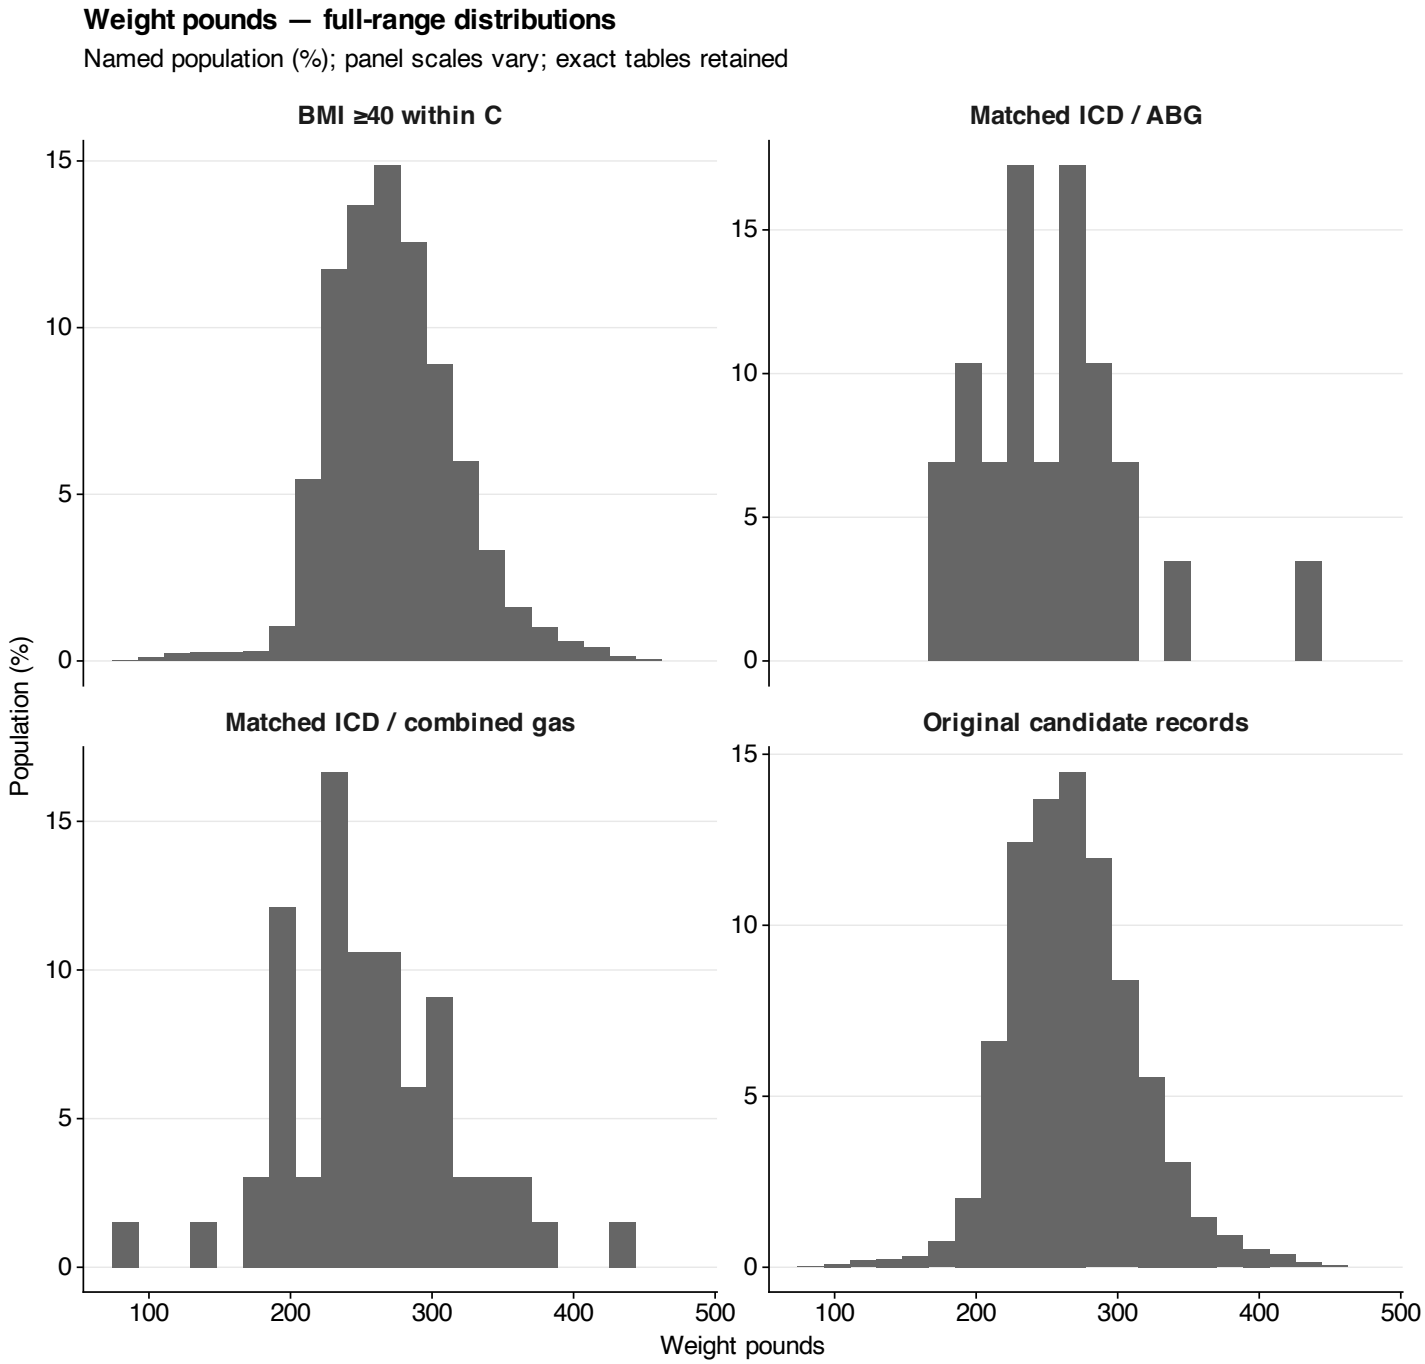

Figure 720: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete weight_pounds stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

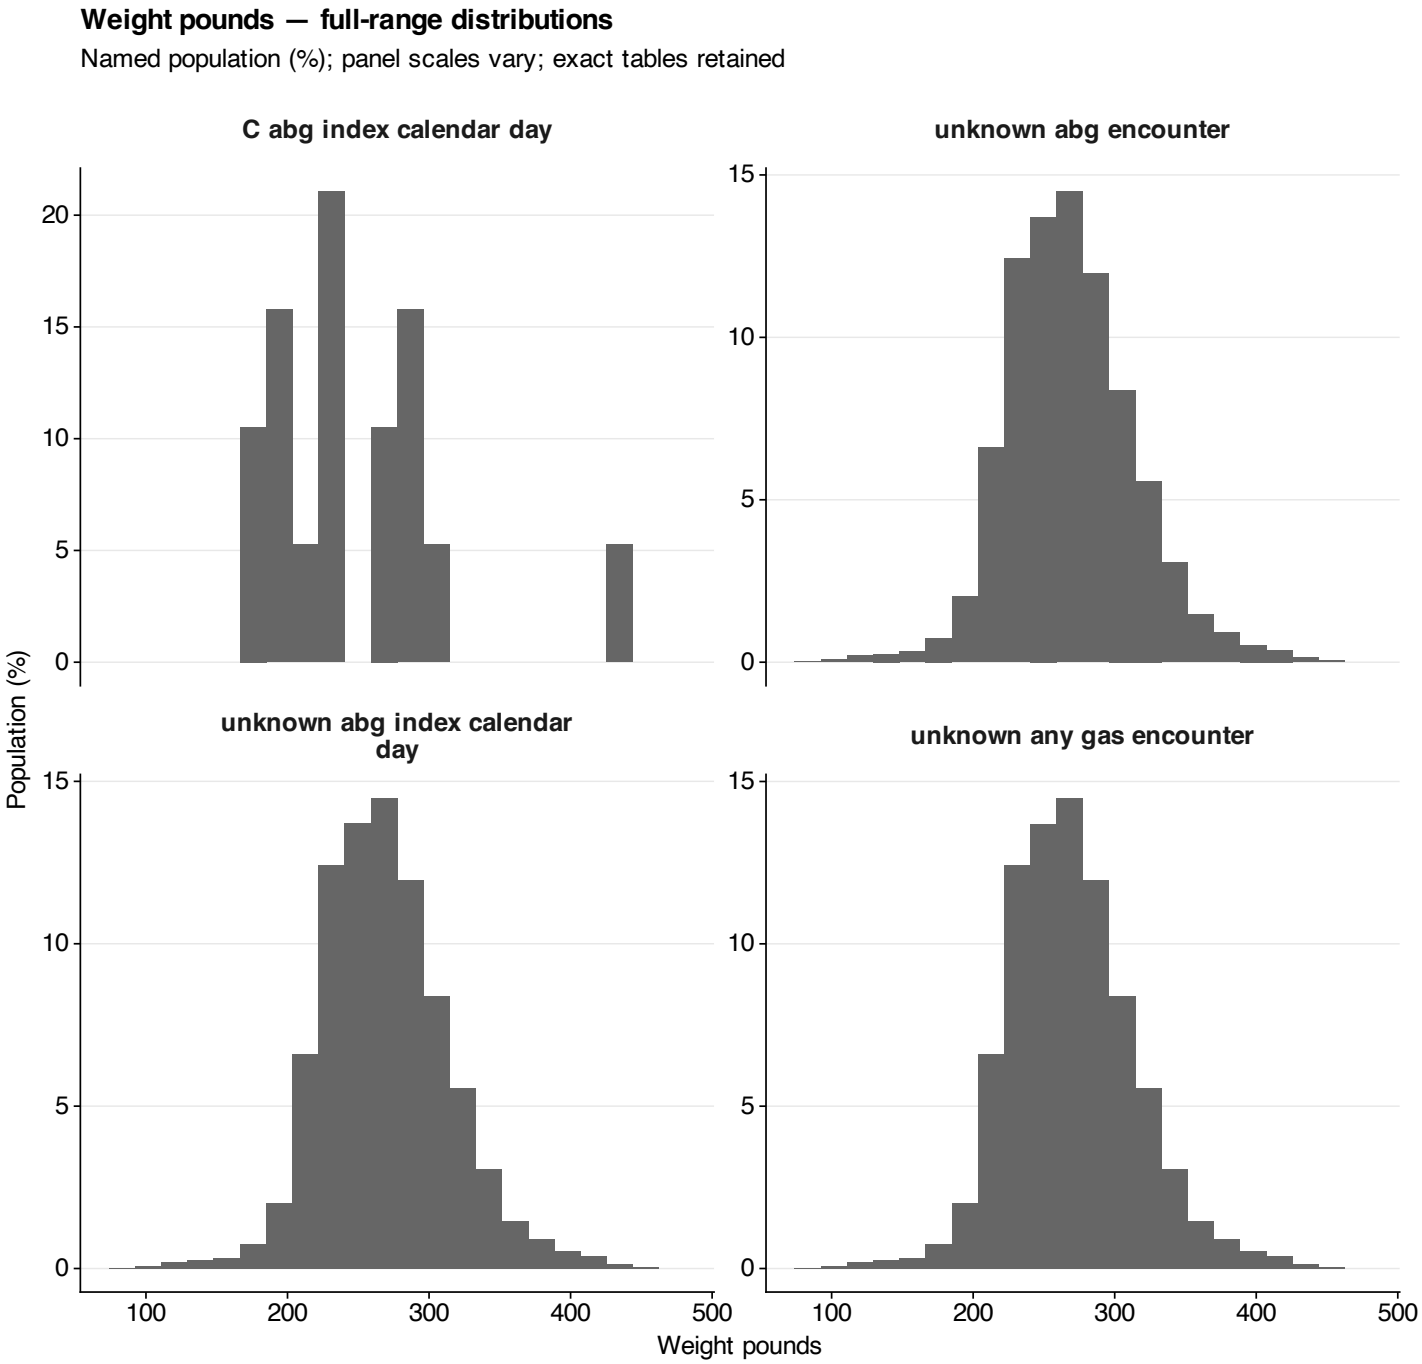

Figure 721: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete weight_pounds stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

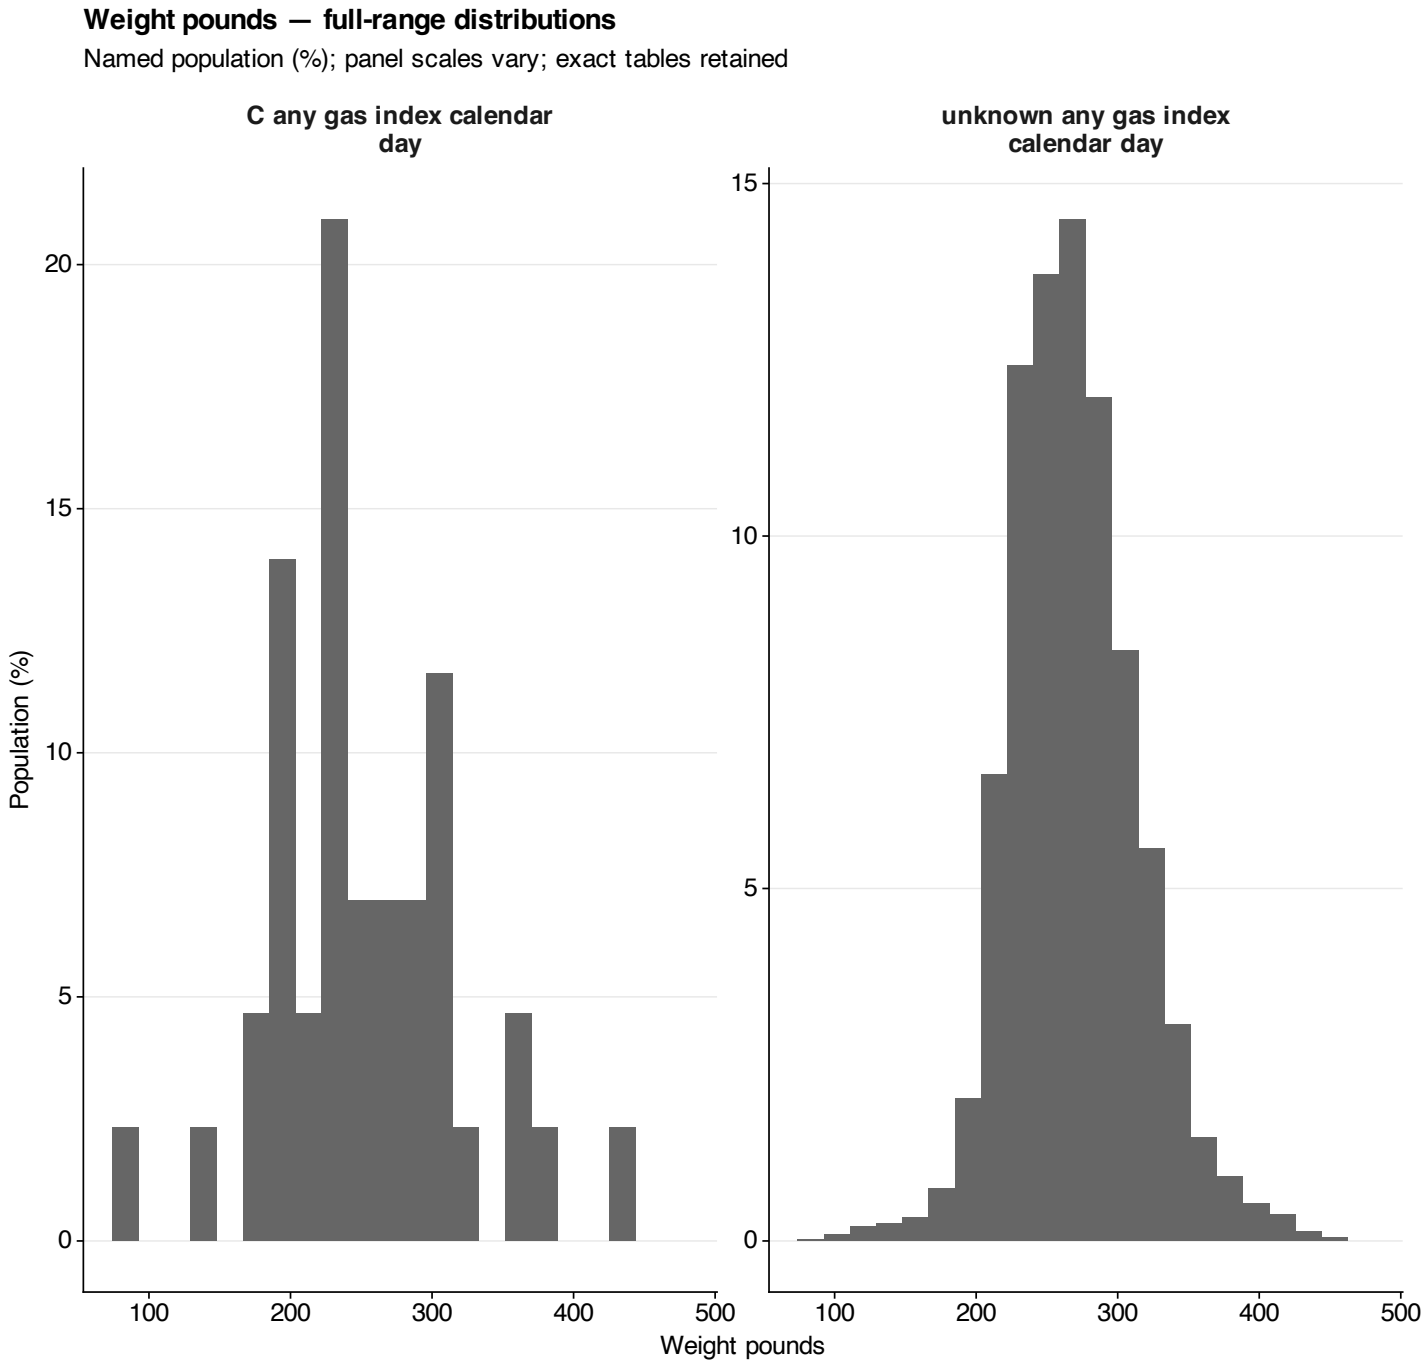

Figure 722: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete weight_pounds stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

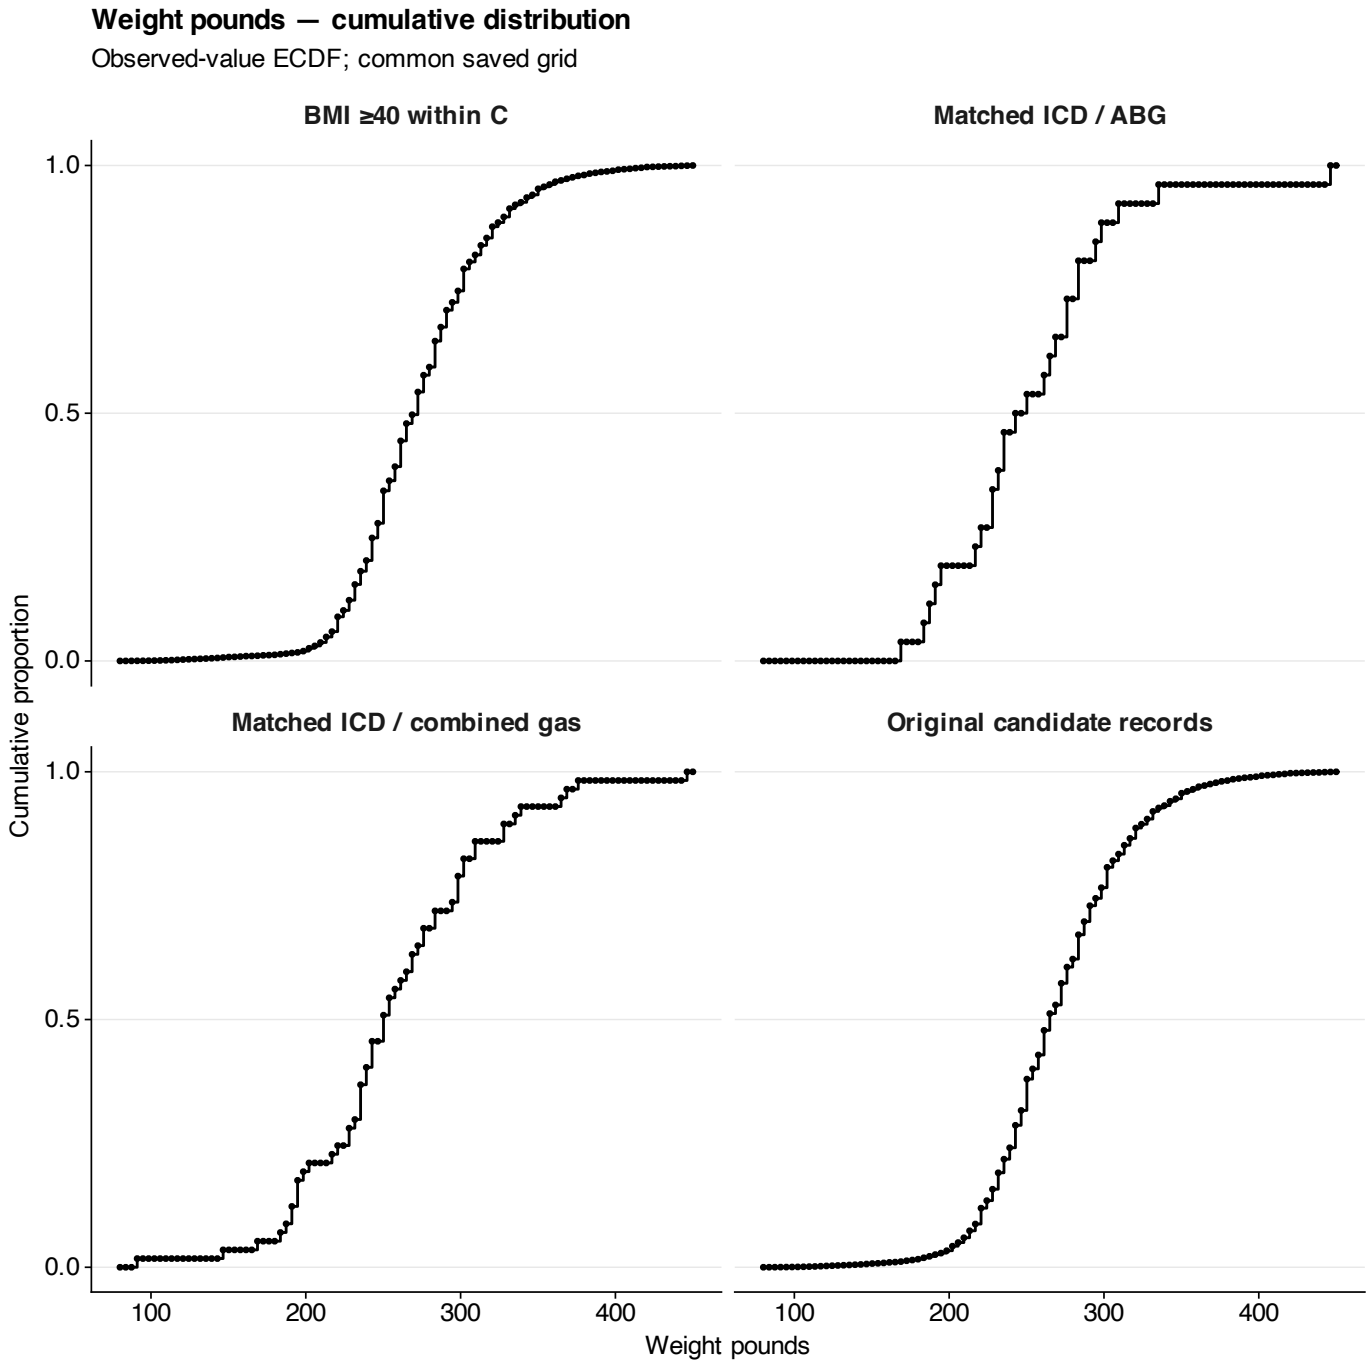

Figure 723: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. weight_pounds ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

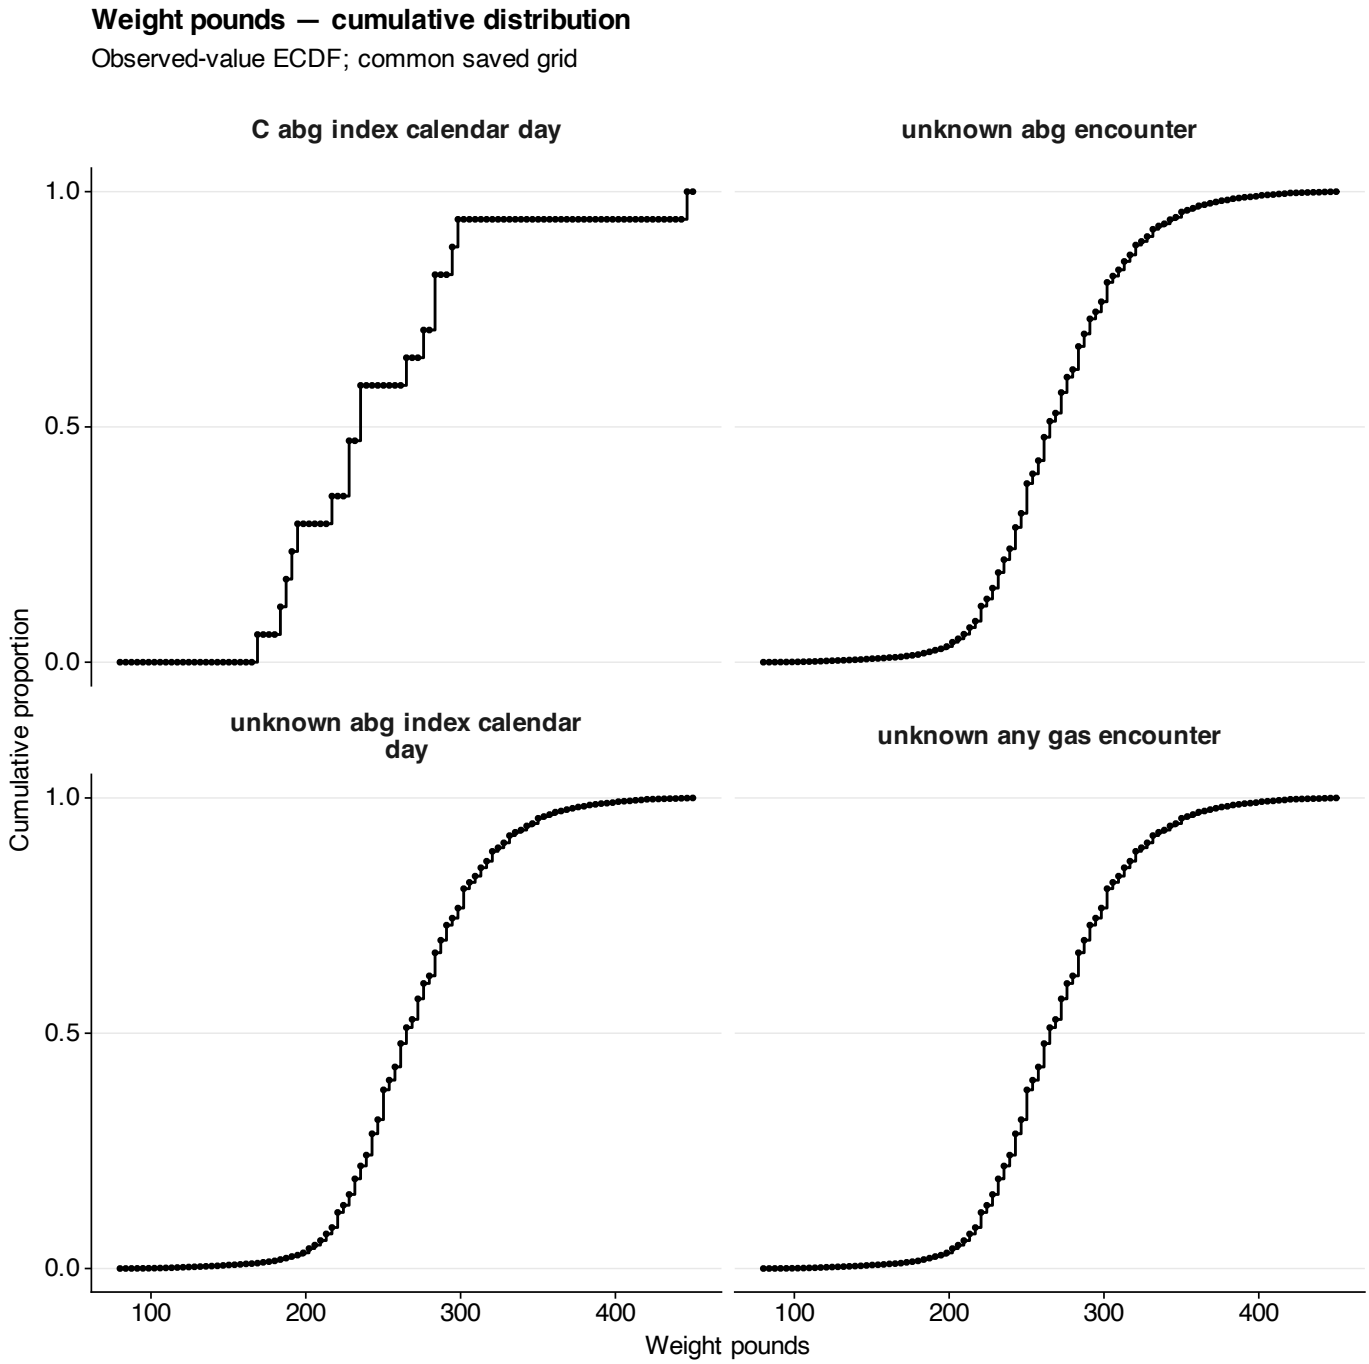

Figure 724: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. weight_pounds ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

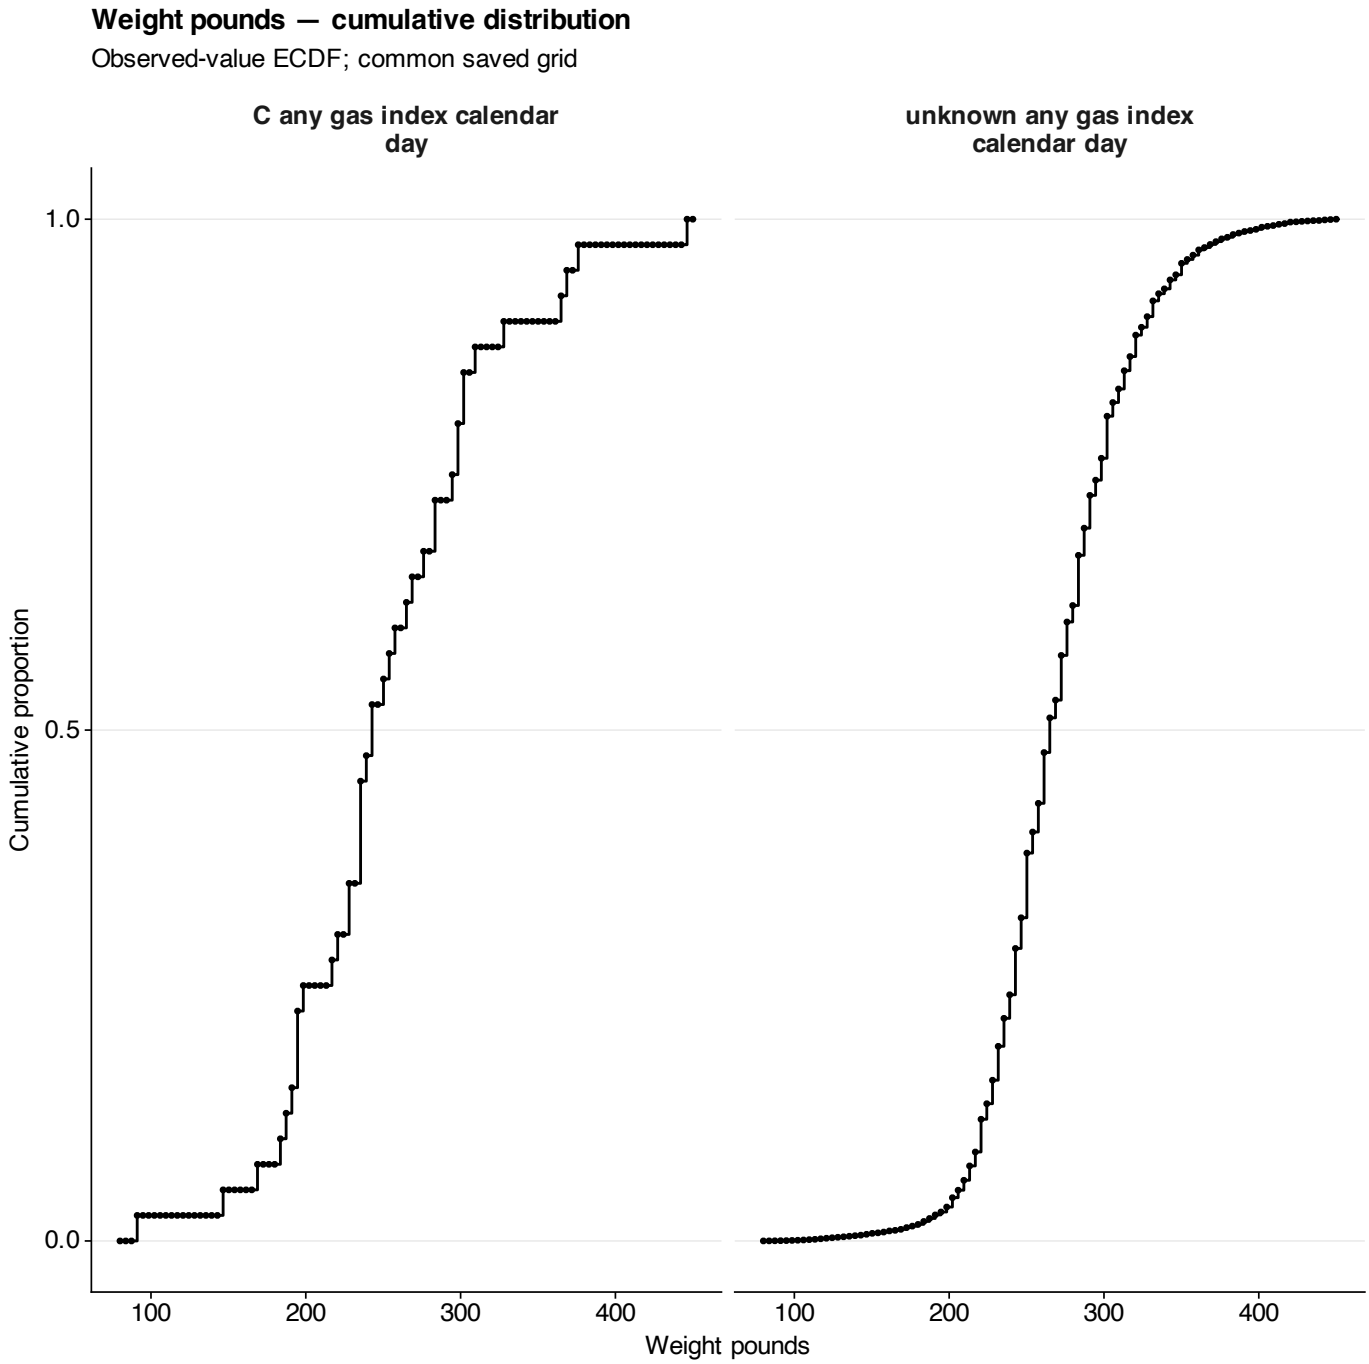

Figure 725: Source-entry population: obesity_only. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. weight_pounds ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

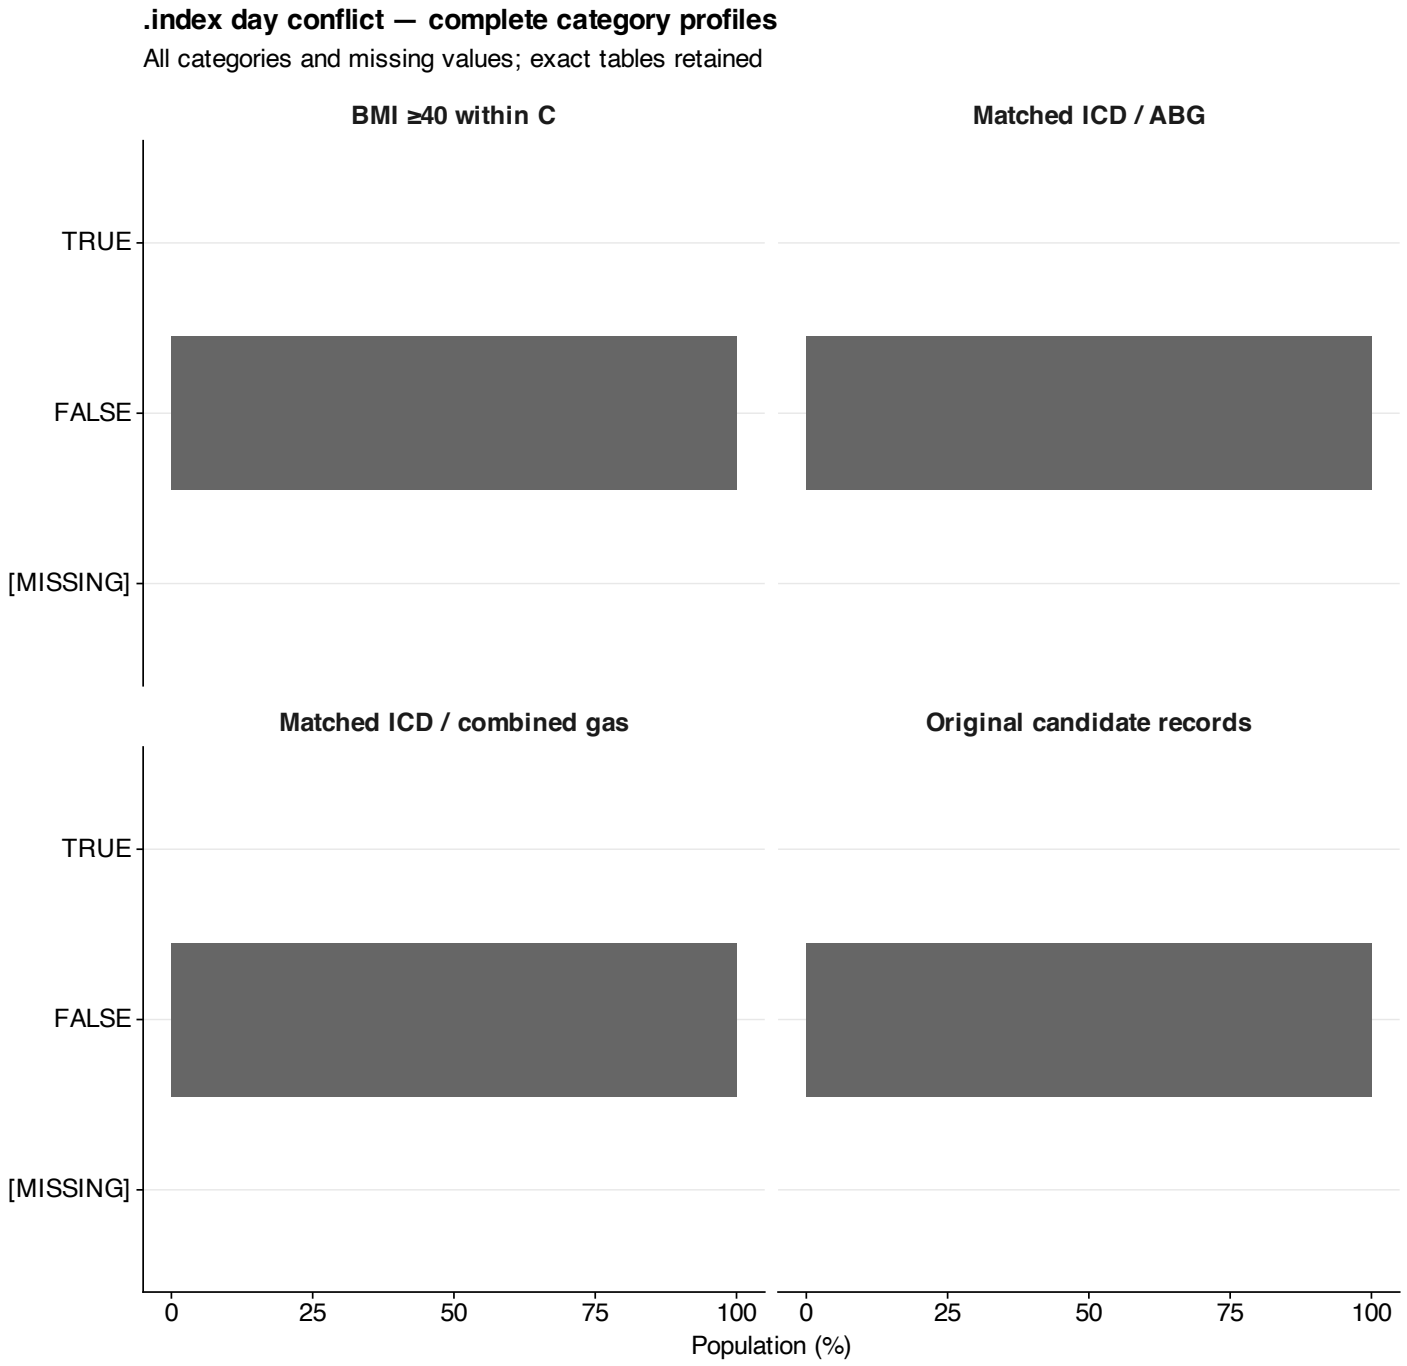

Figure 726: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete .index_day_conflict stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

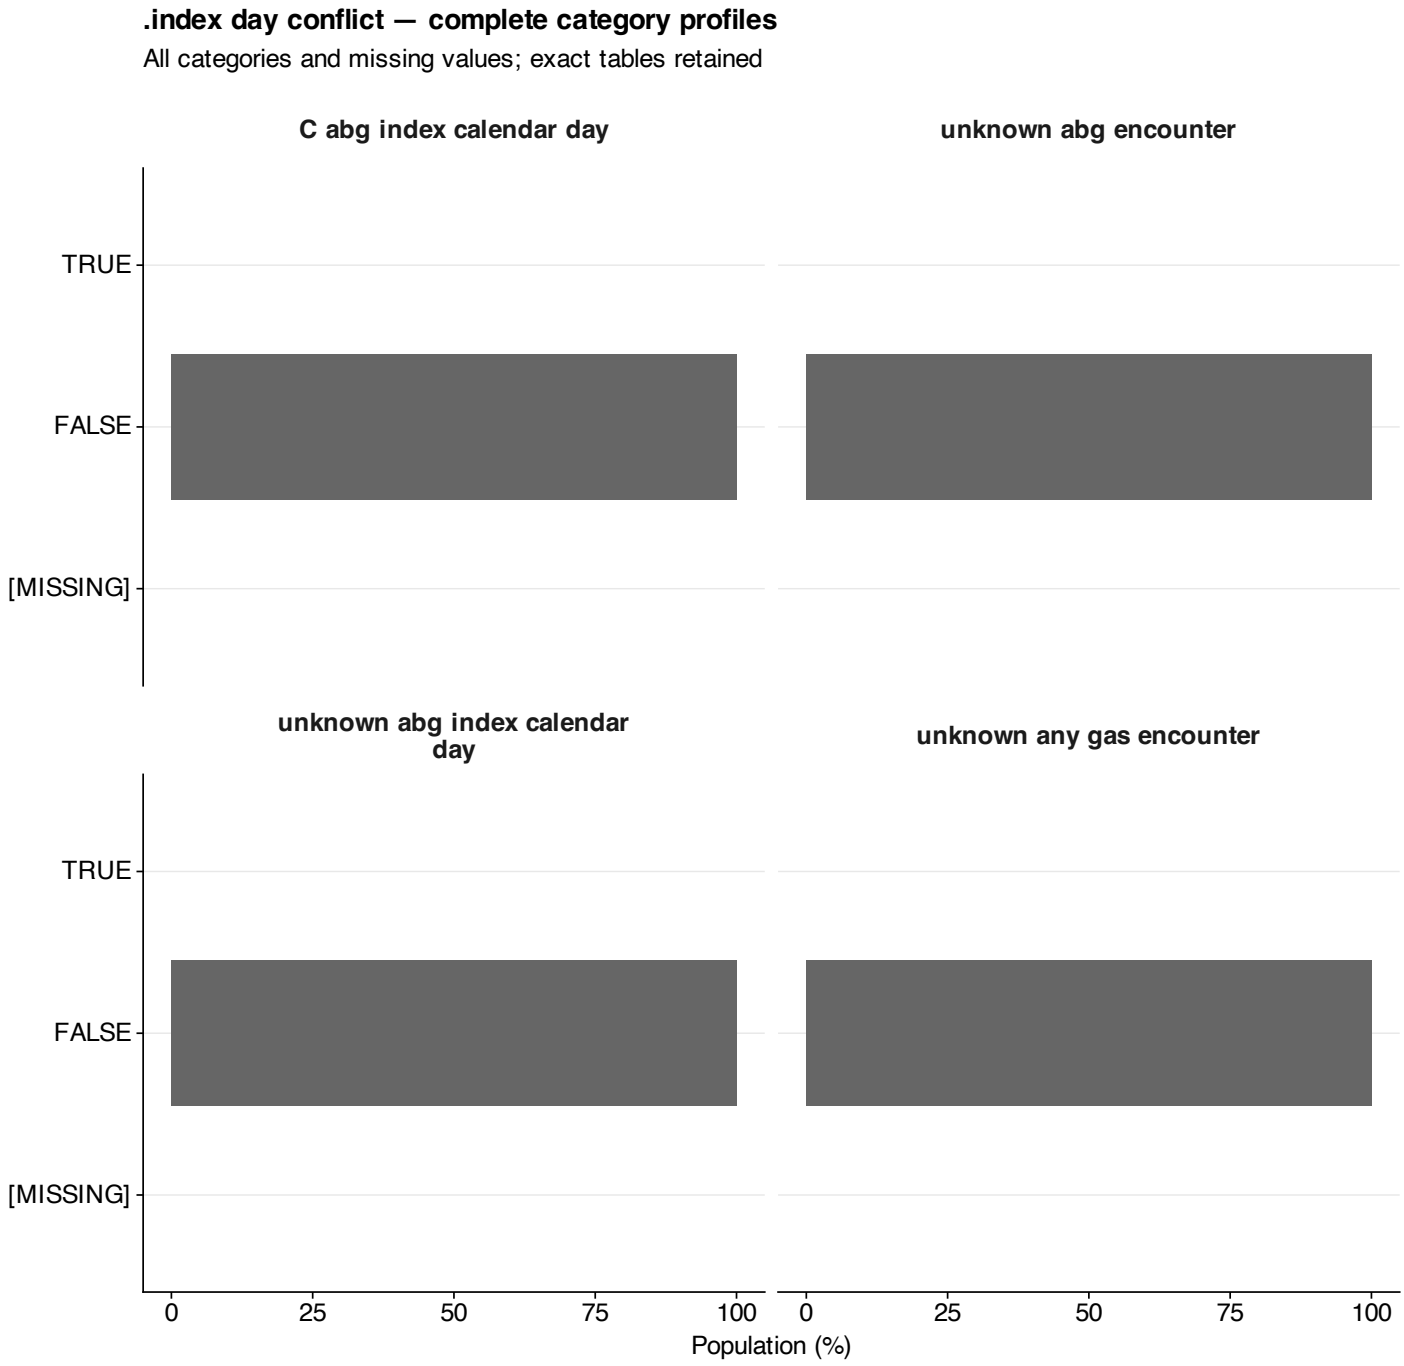

Figure 727: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete .index_day_conflict stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

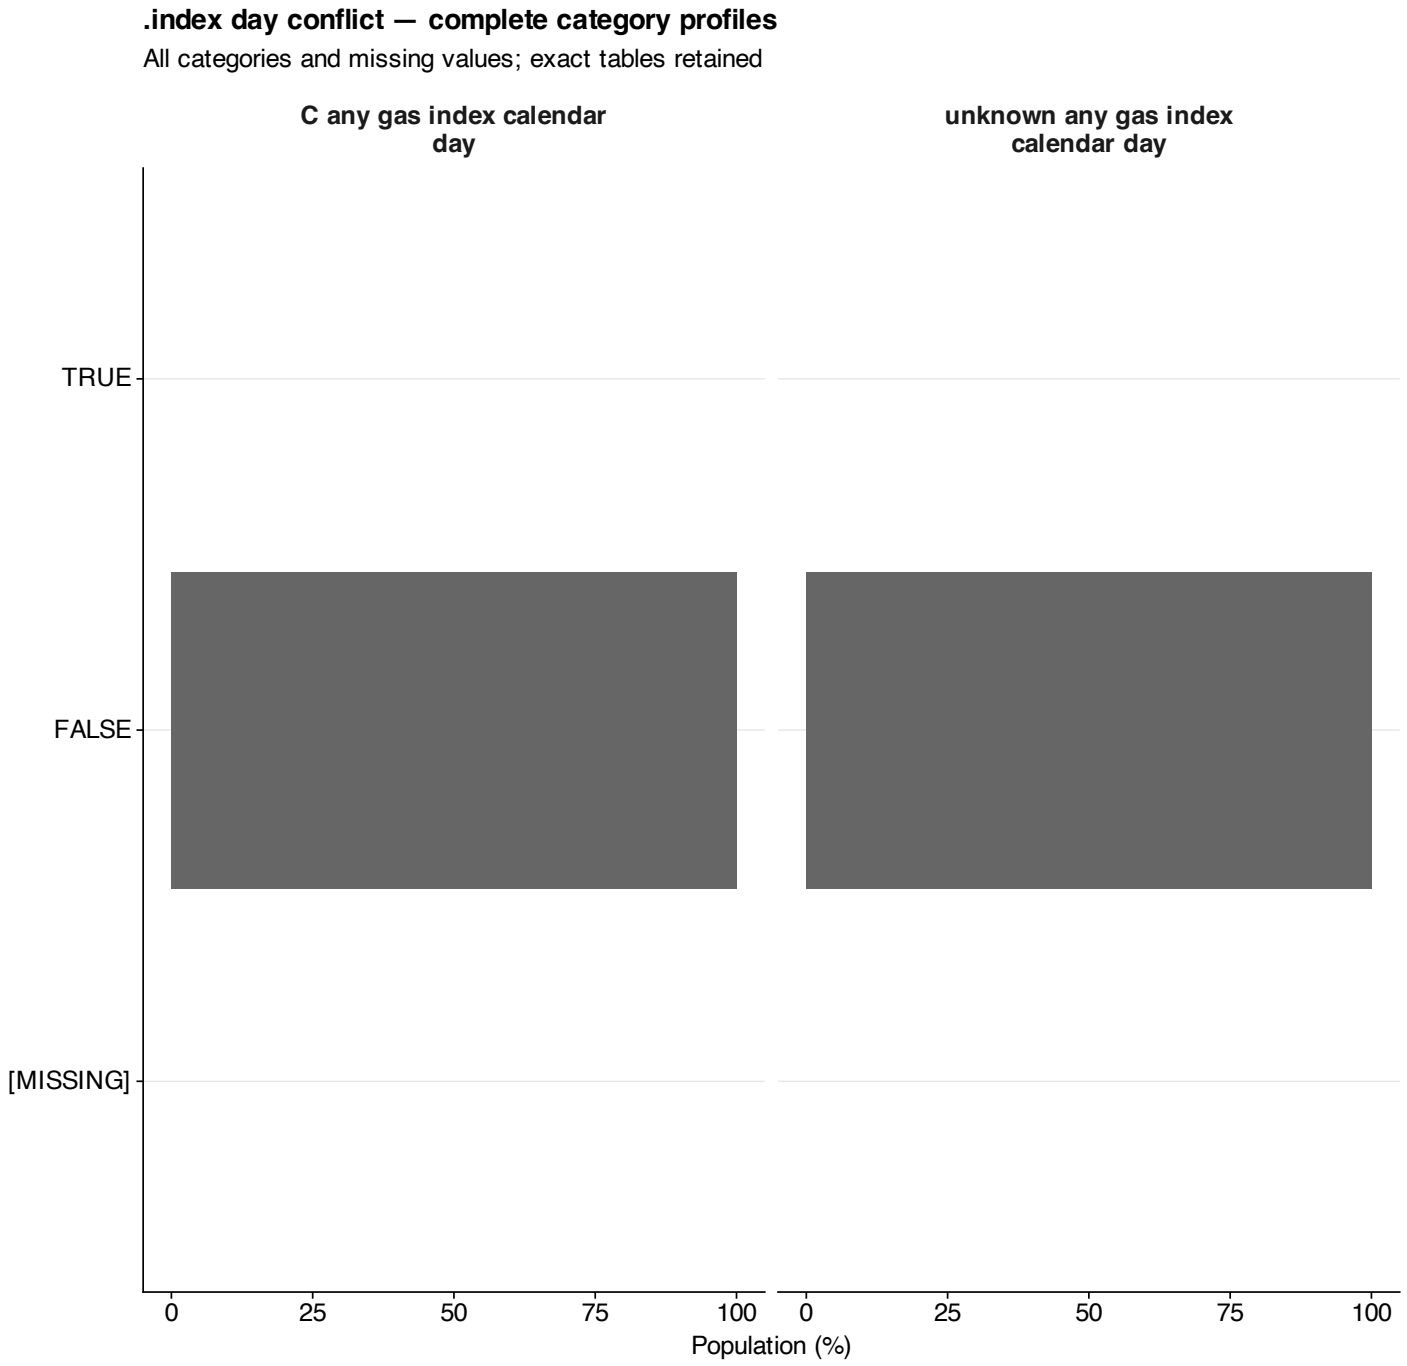

Figure 728: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete .index_day_conflict stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

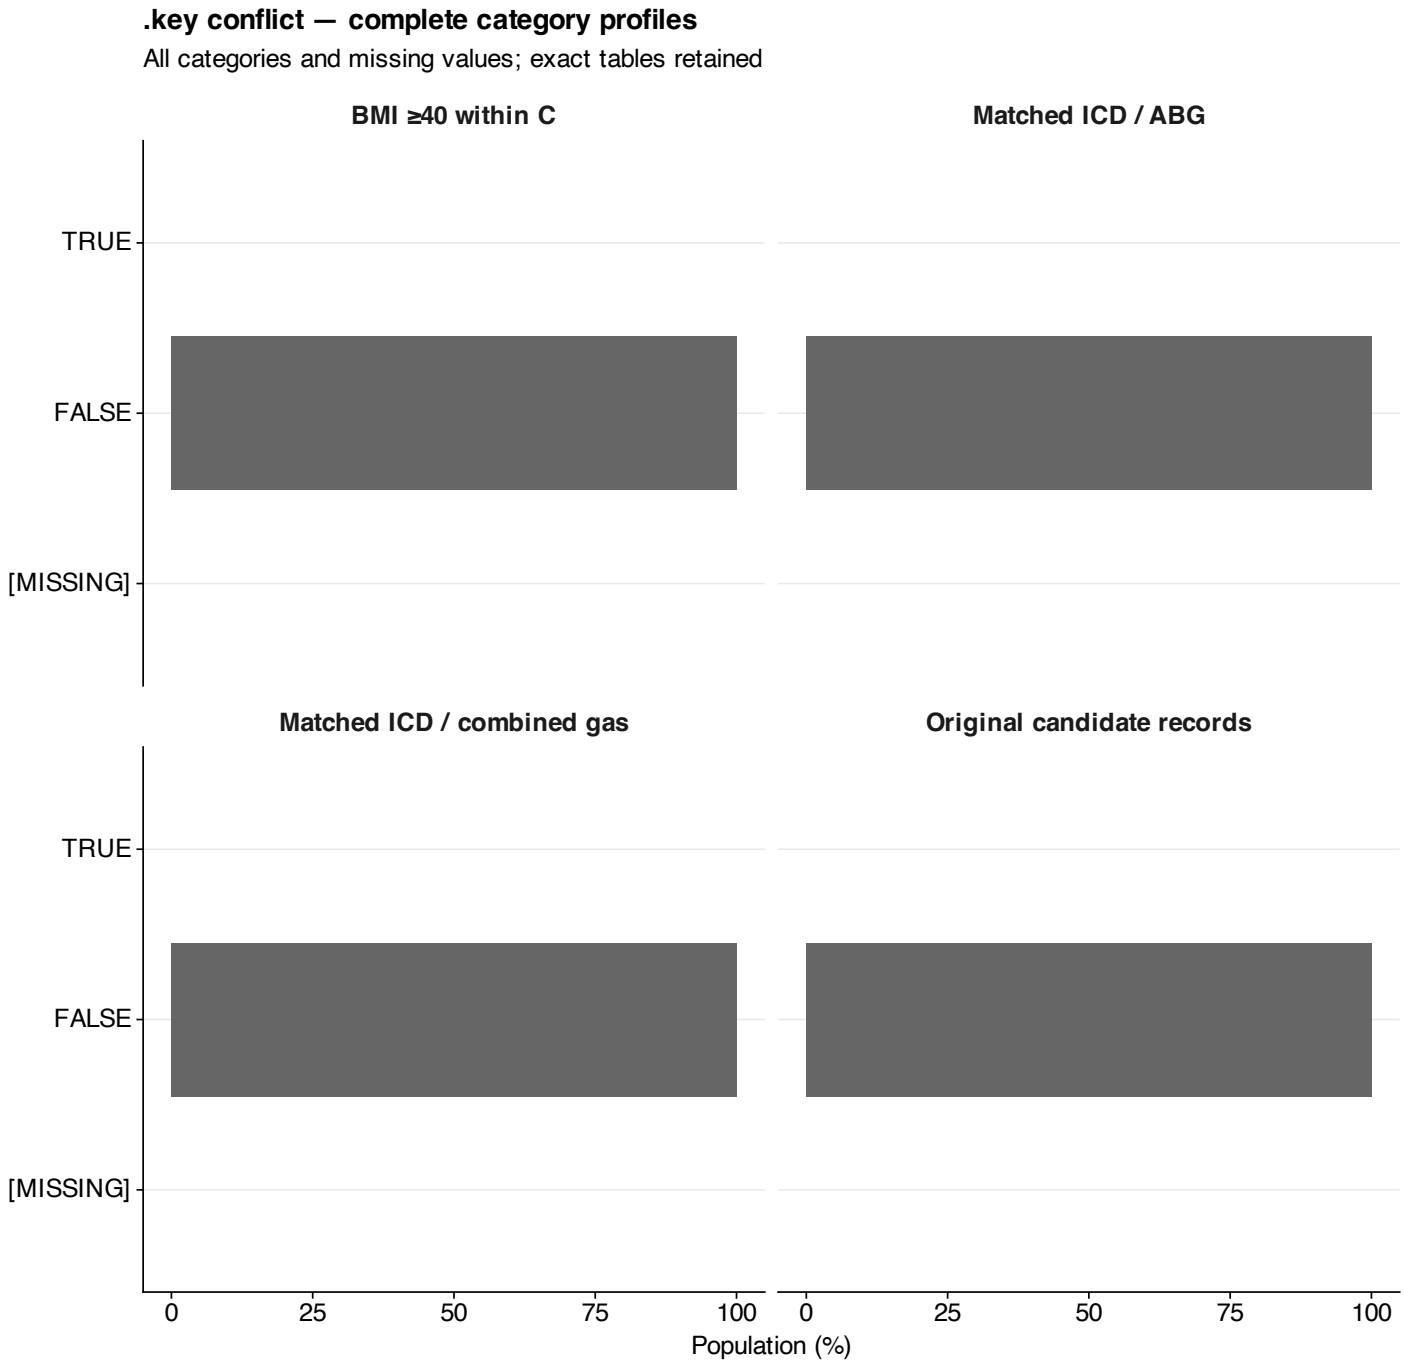

Figure 729: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete .key_conflict stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

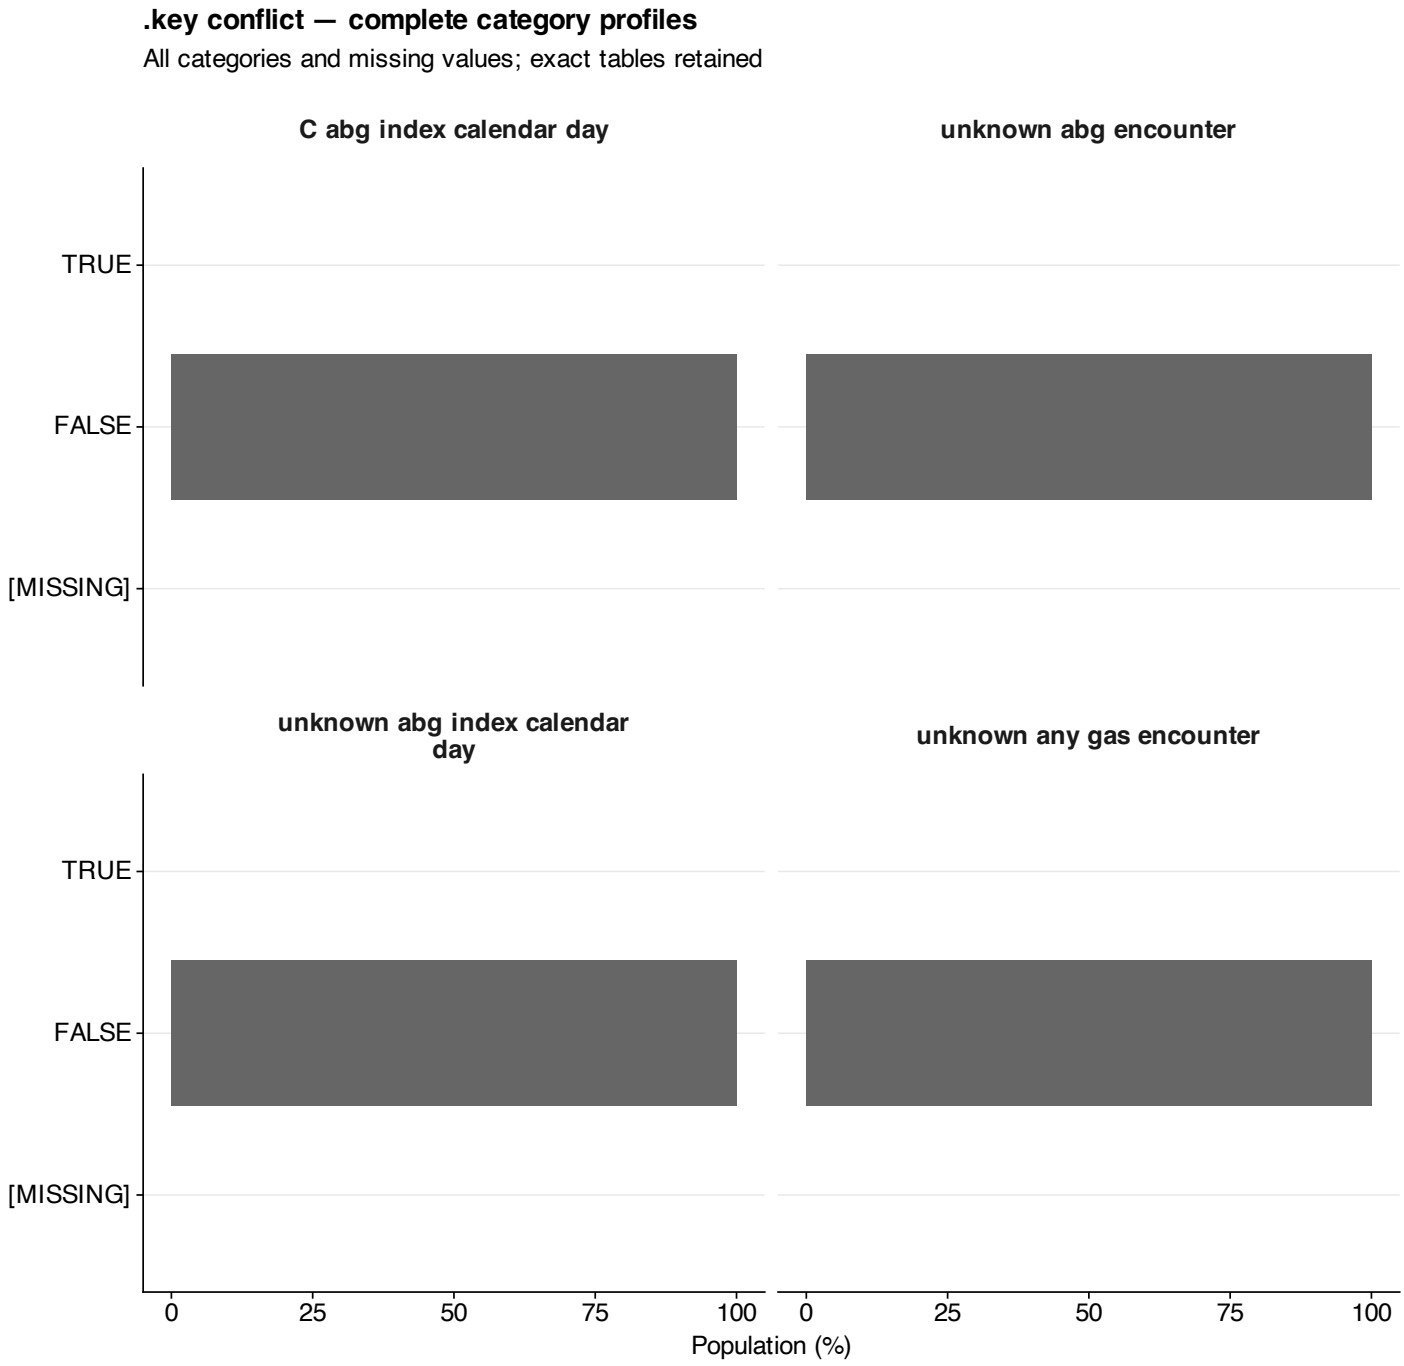

Figure 730: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete .key_conflict stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

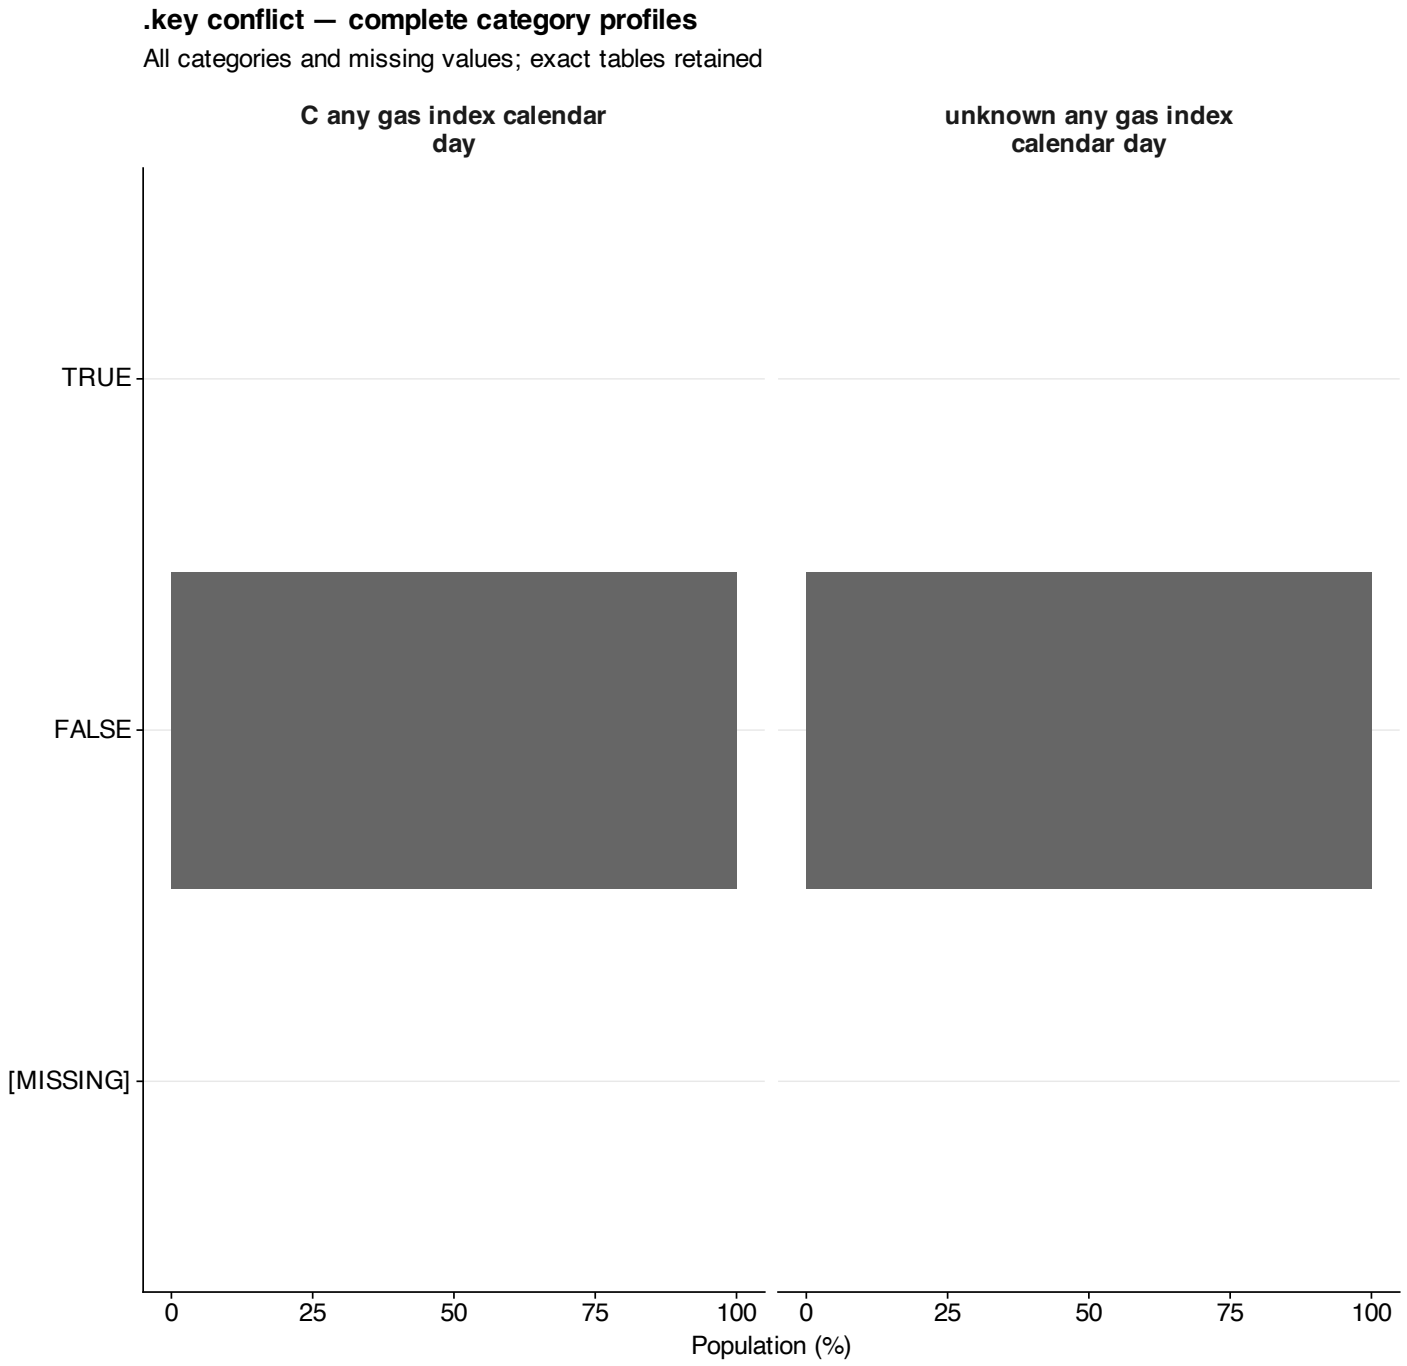

Figure 731: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete .key_conflict stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

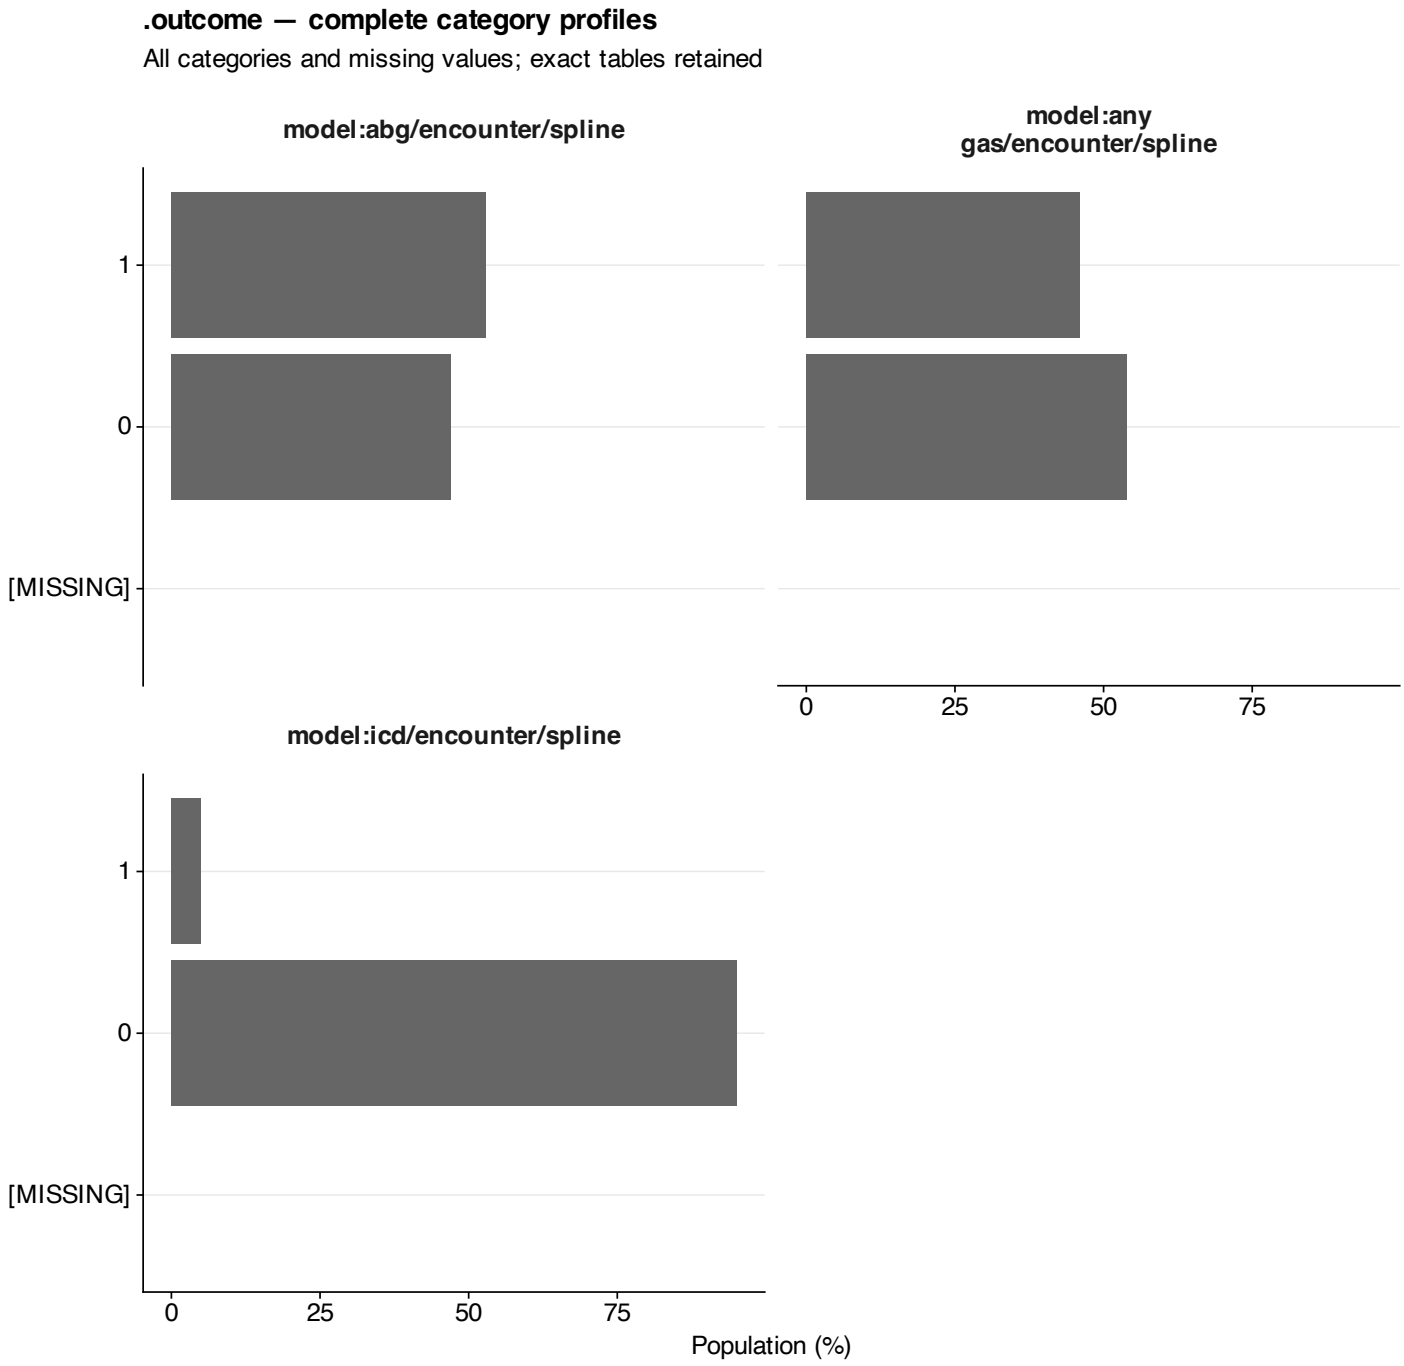

Figure 732: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete .outcome stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

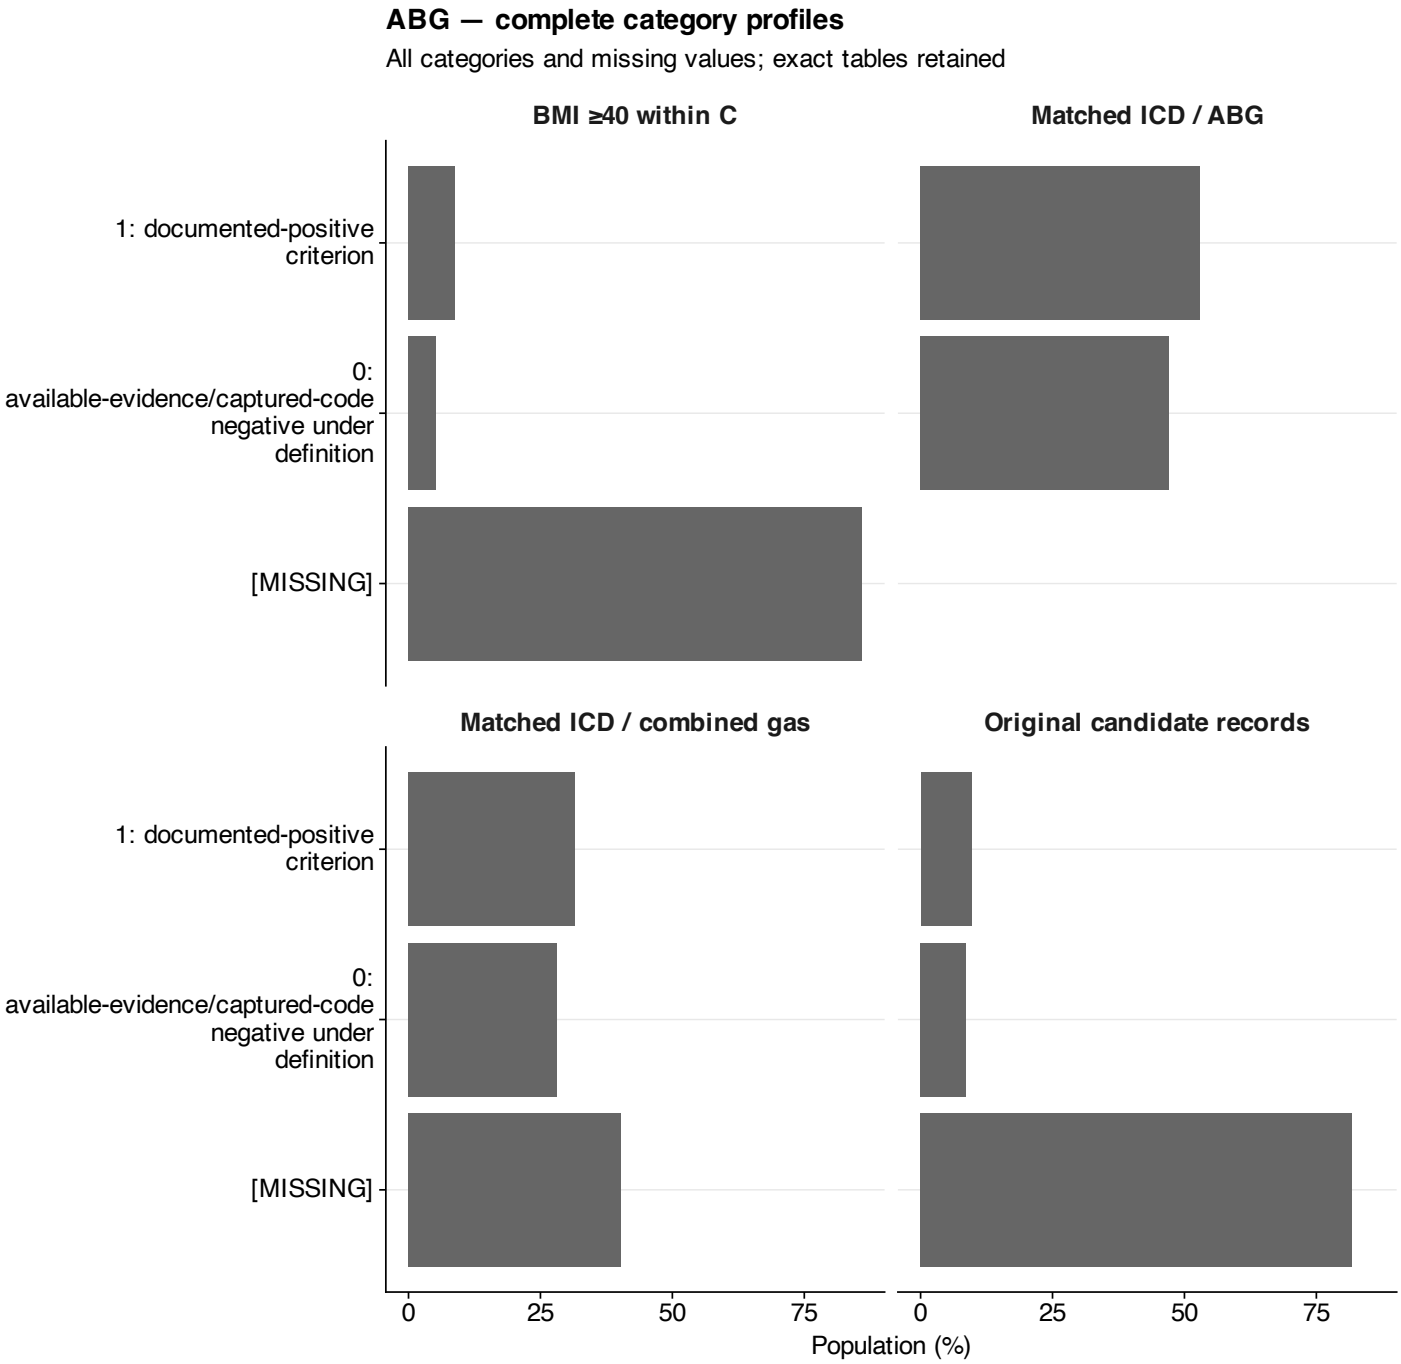

Figure 733: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete abg stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

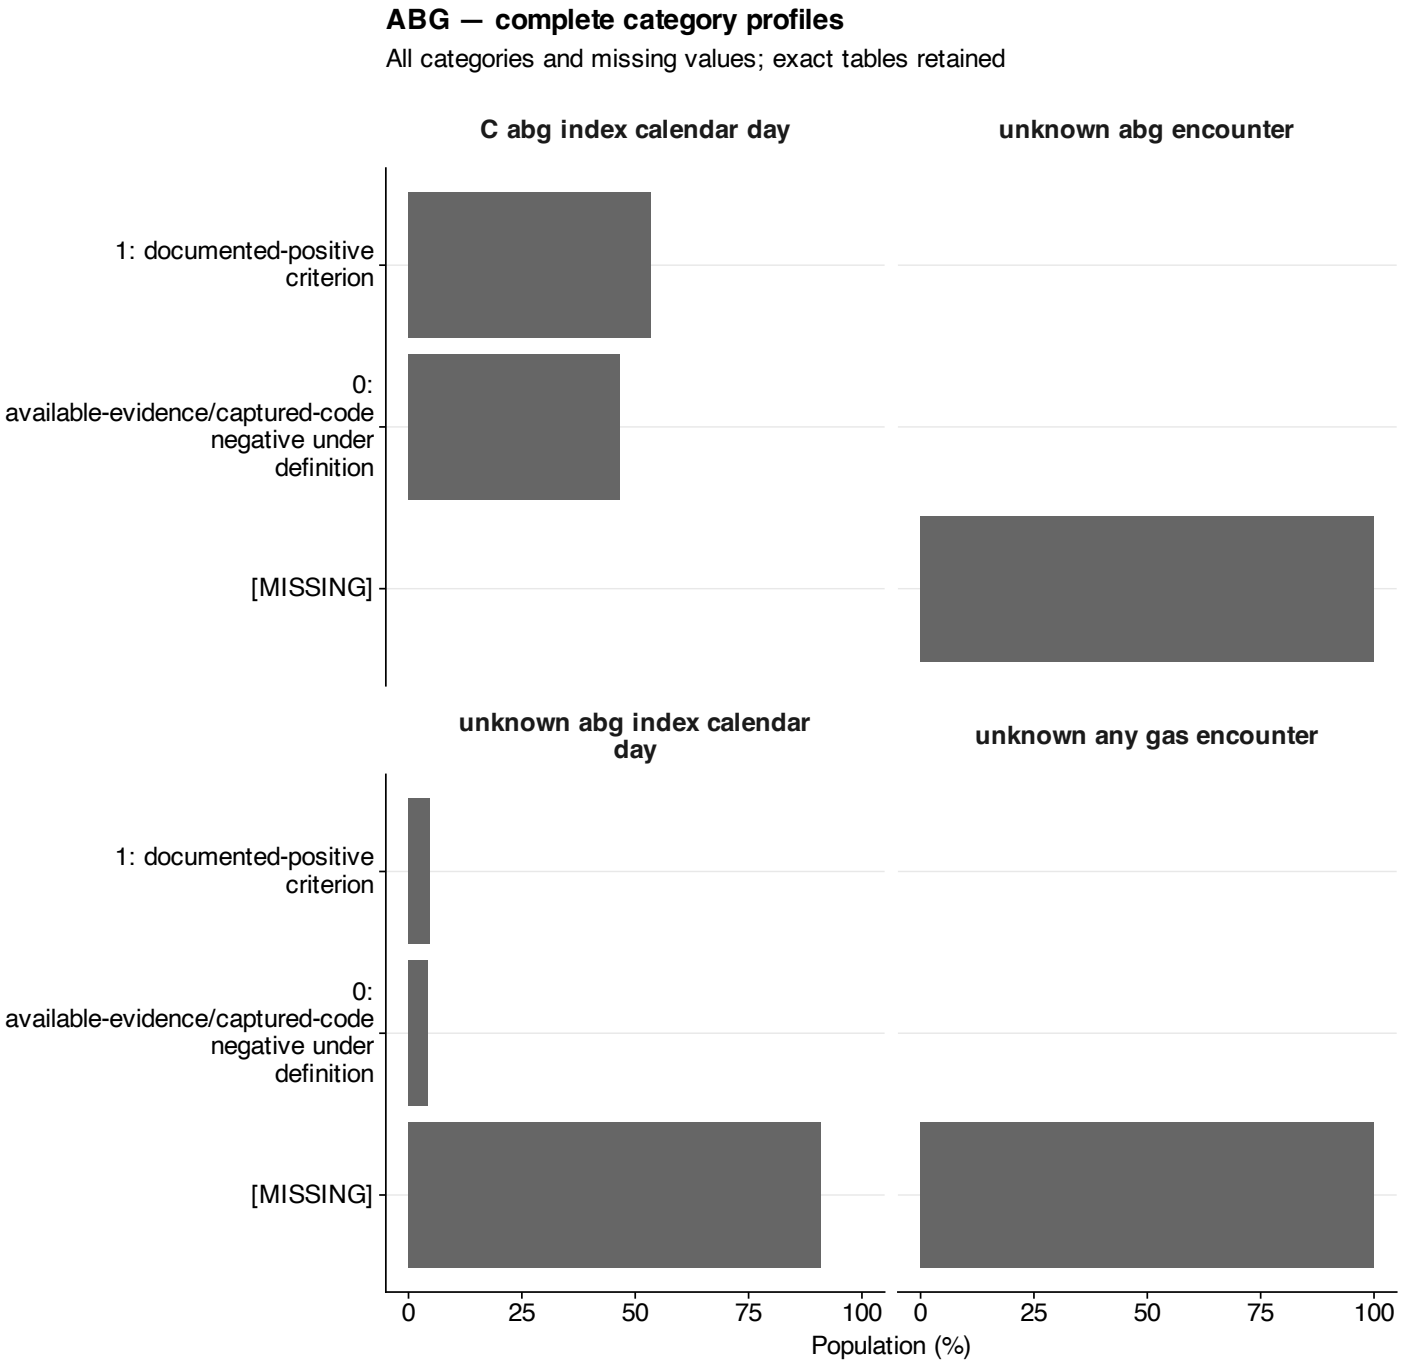

Figure 734: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete abg stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

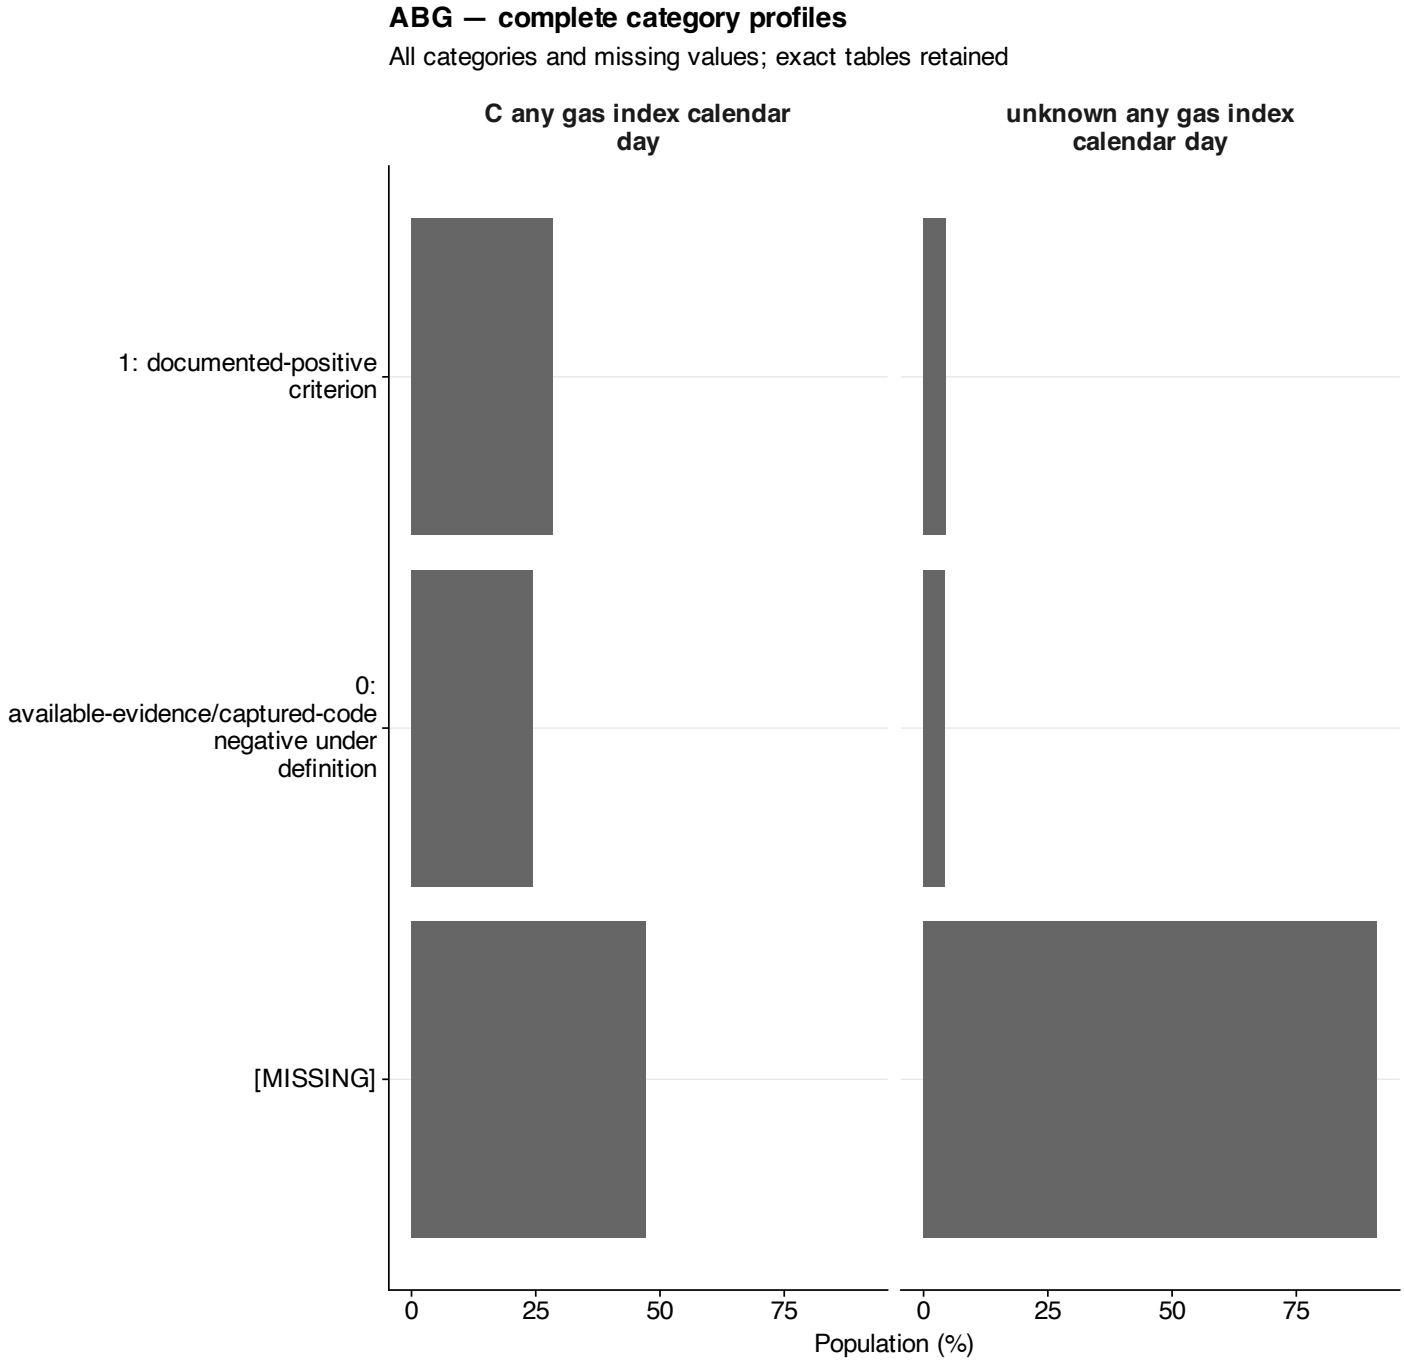

Figure 735: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete abg stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

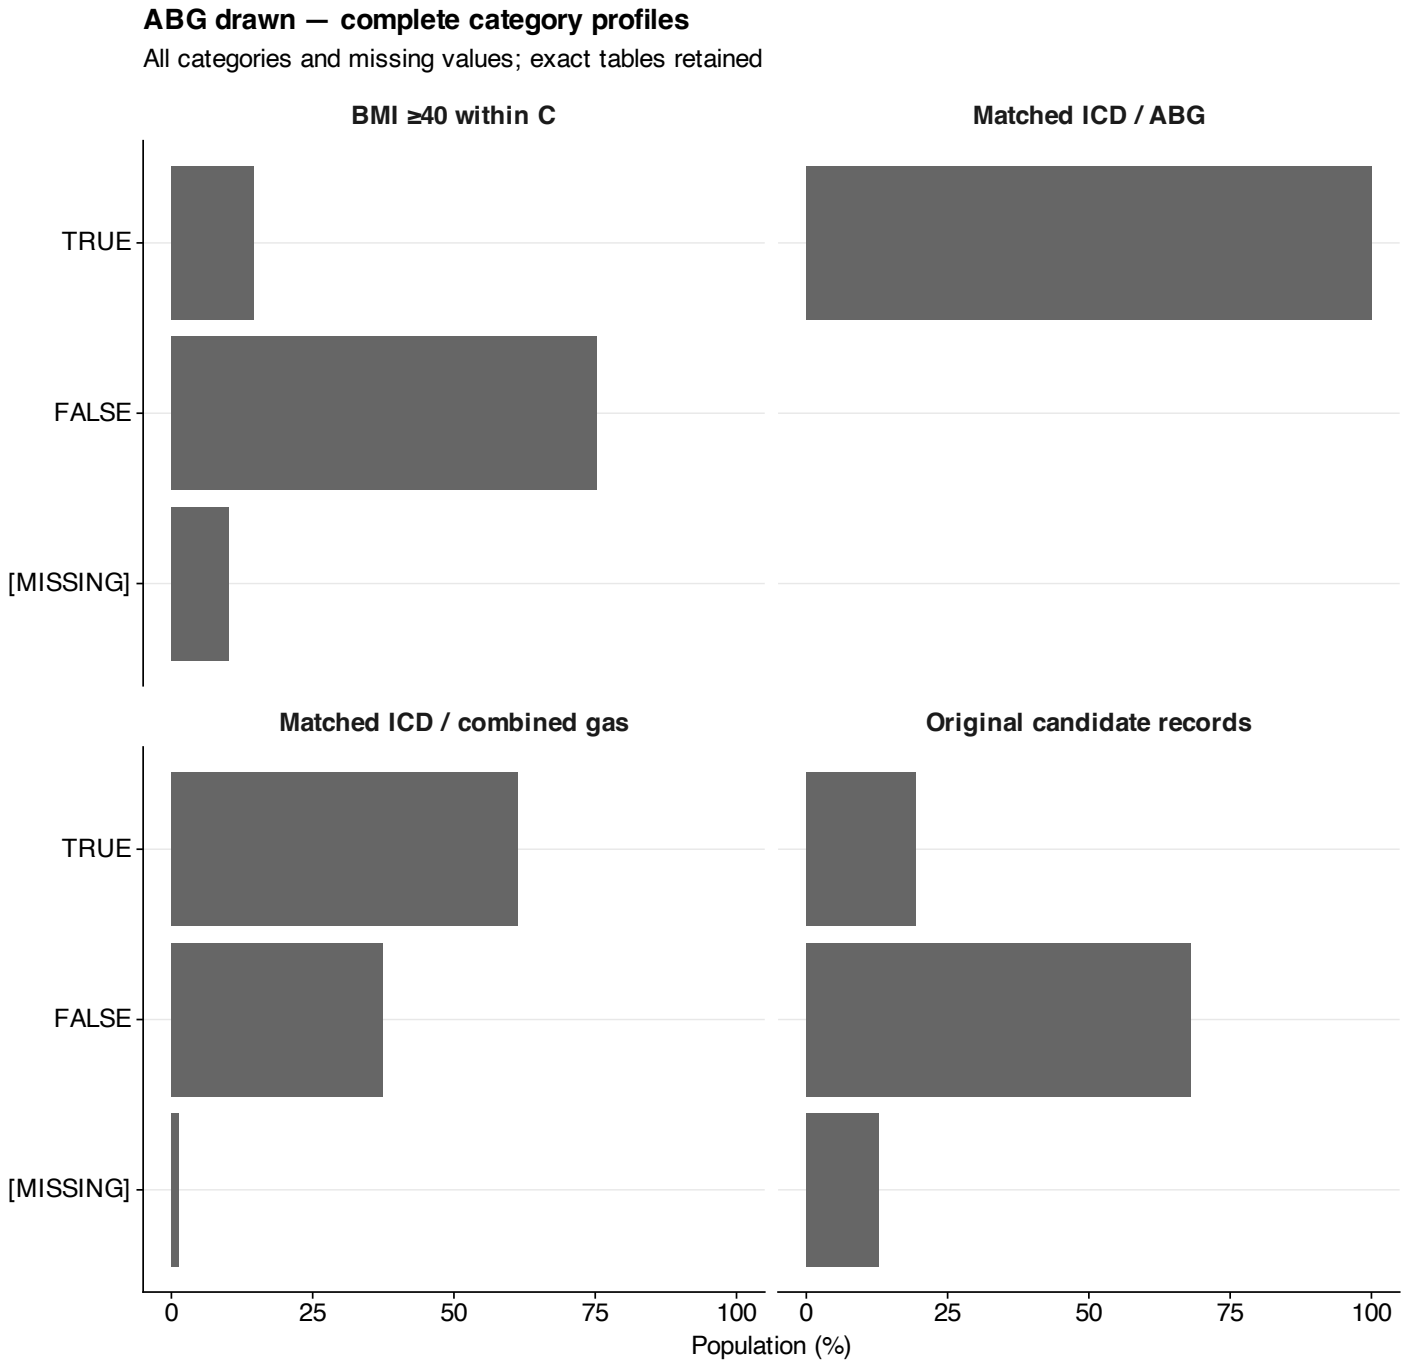

Figure 736: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete abg_drawn stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

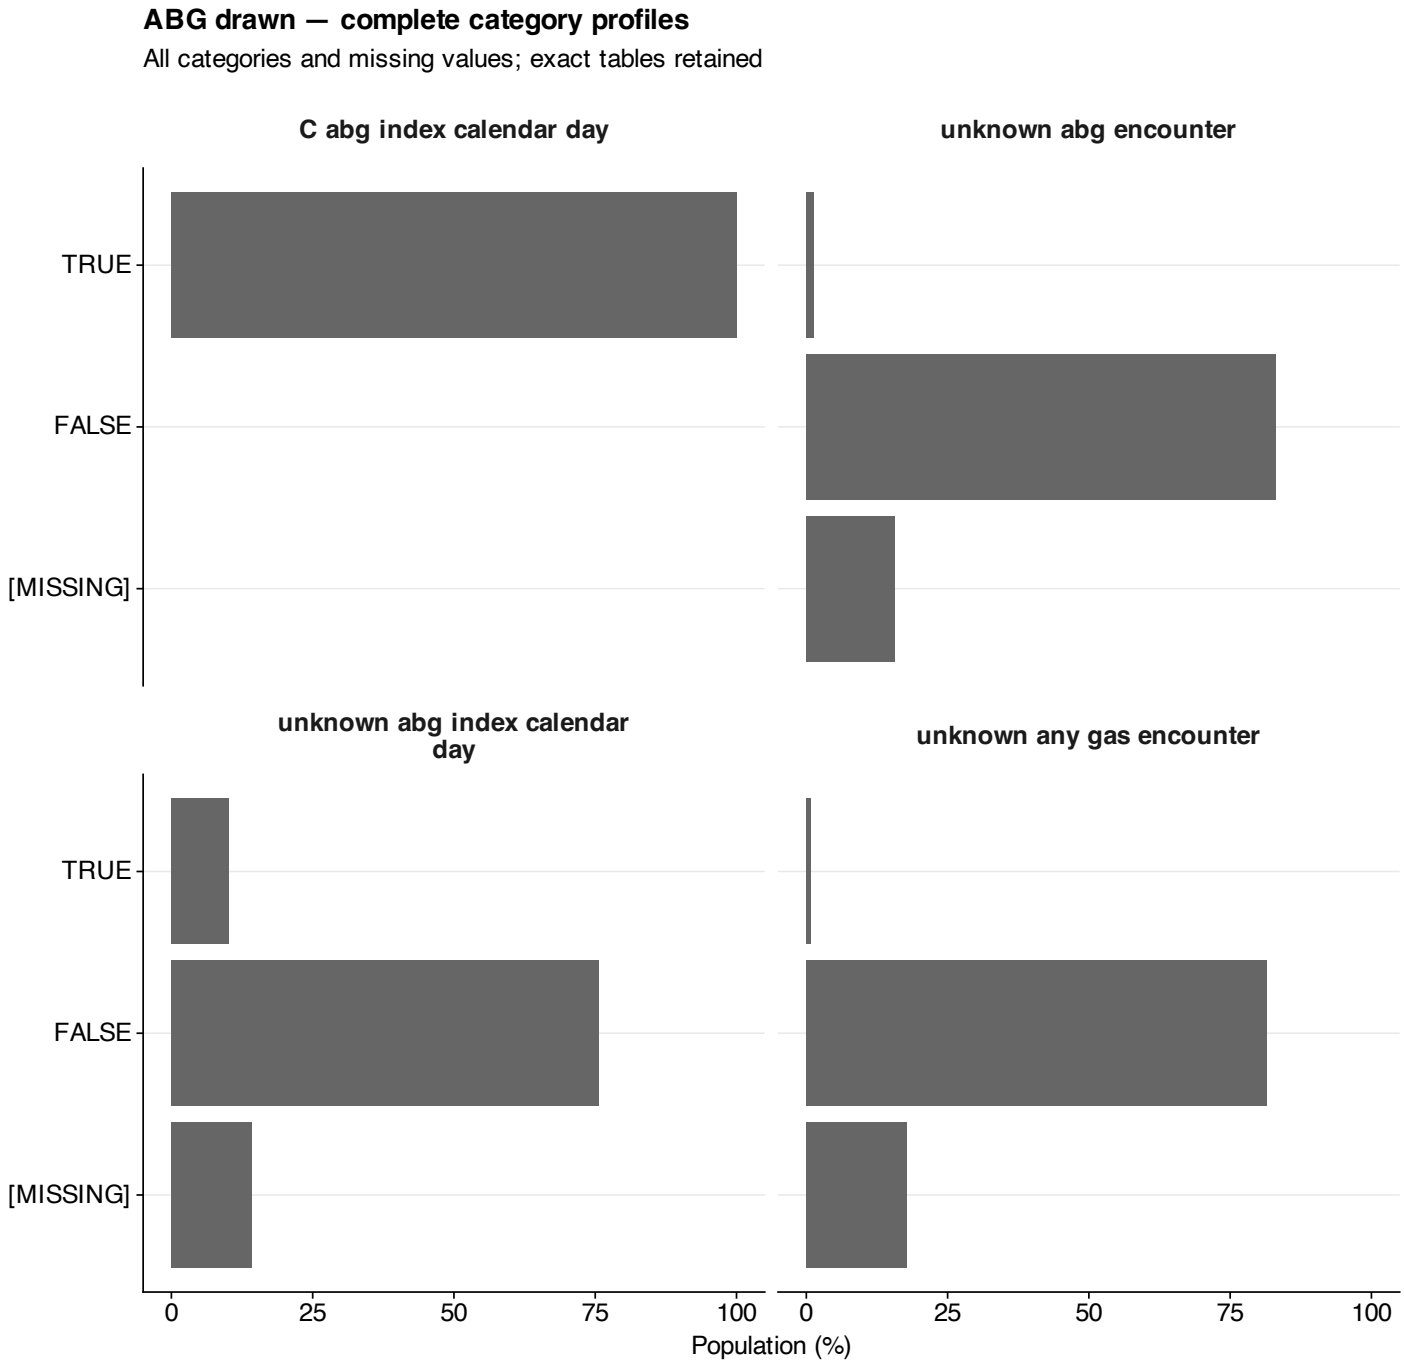

Figure 737: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete abg_drawn stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

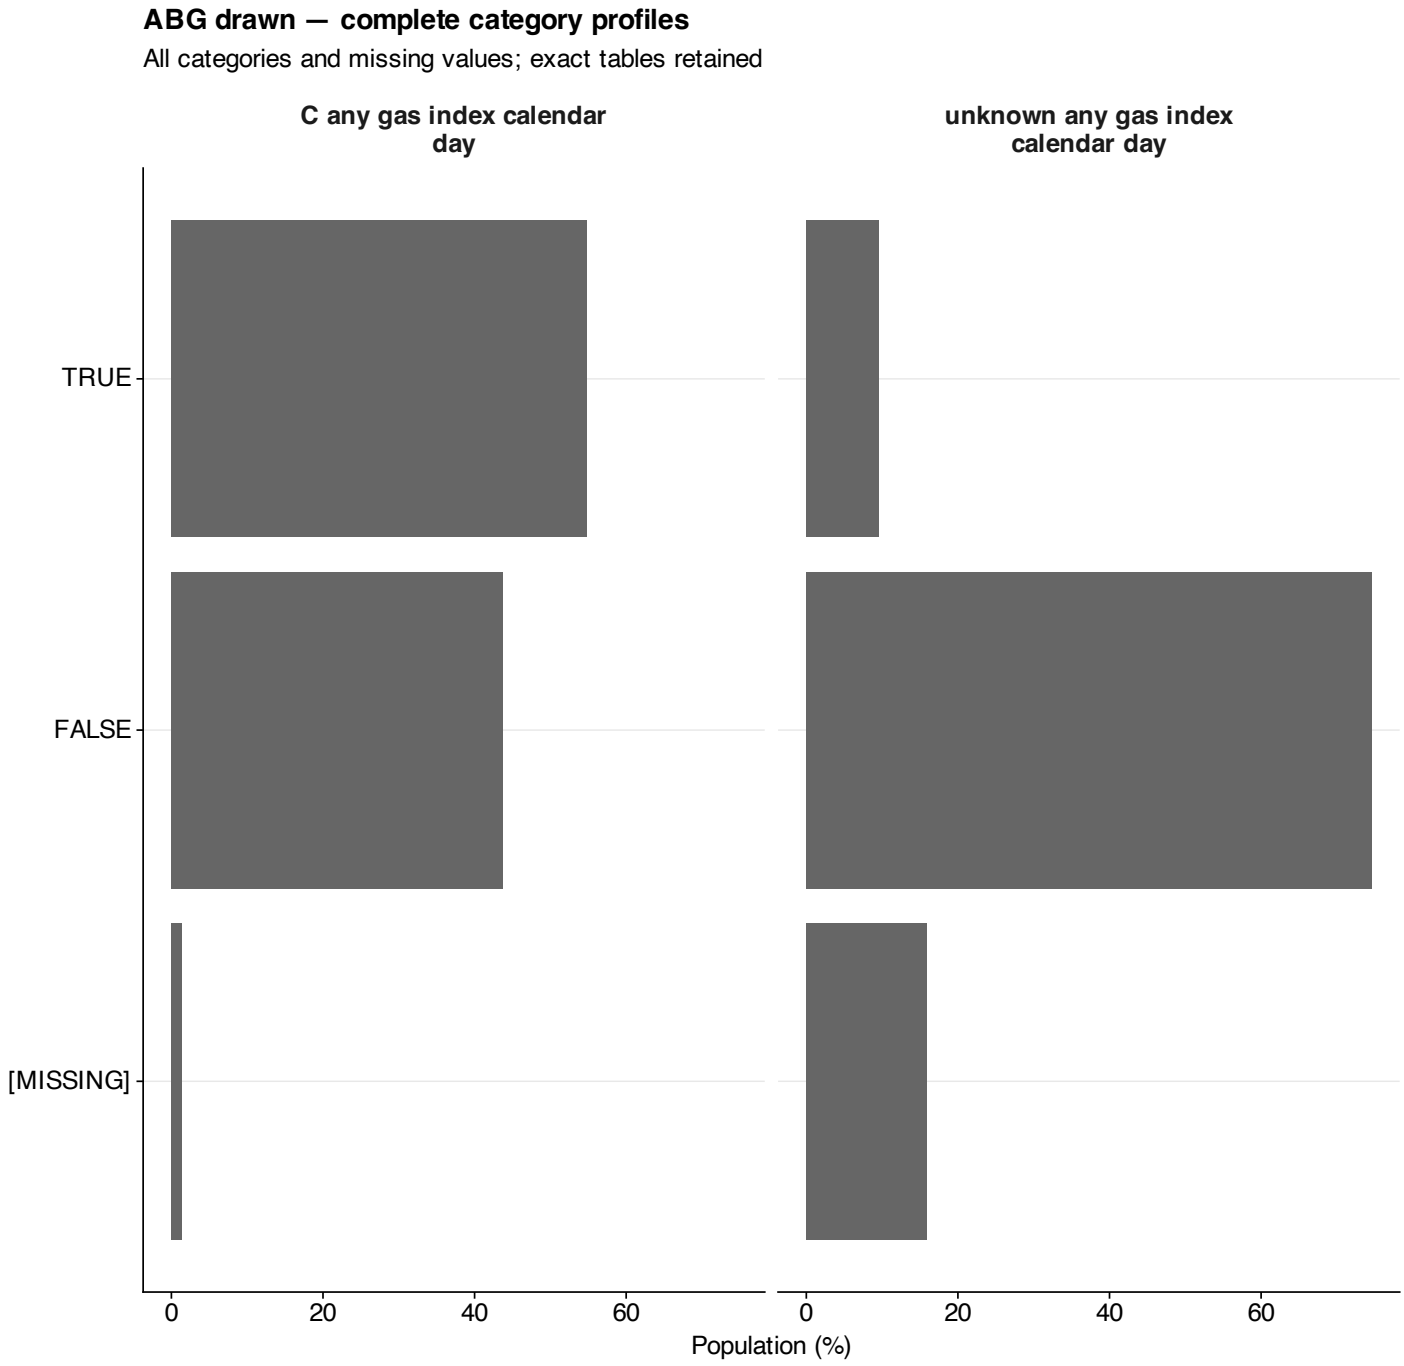

Figure 738: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete abg_drawn stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

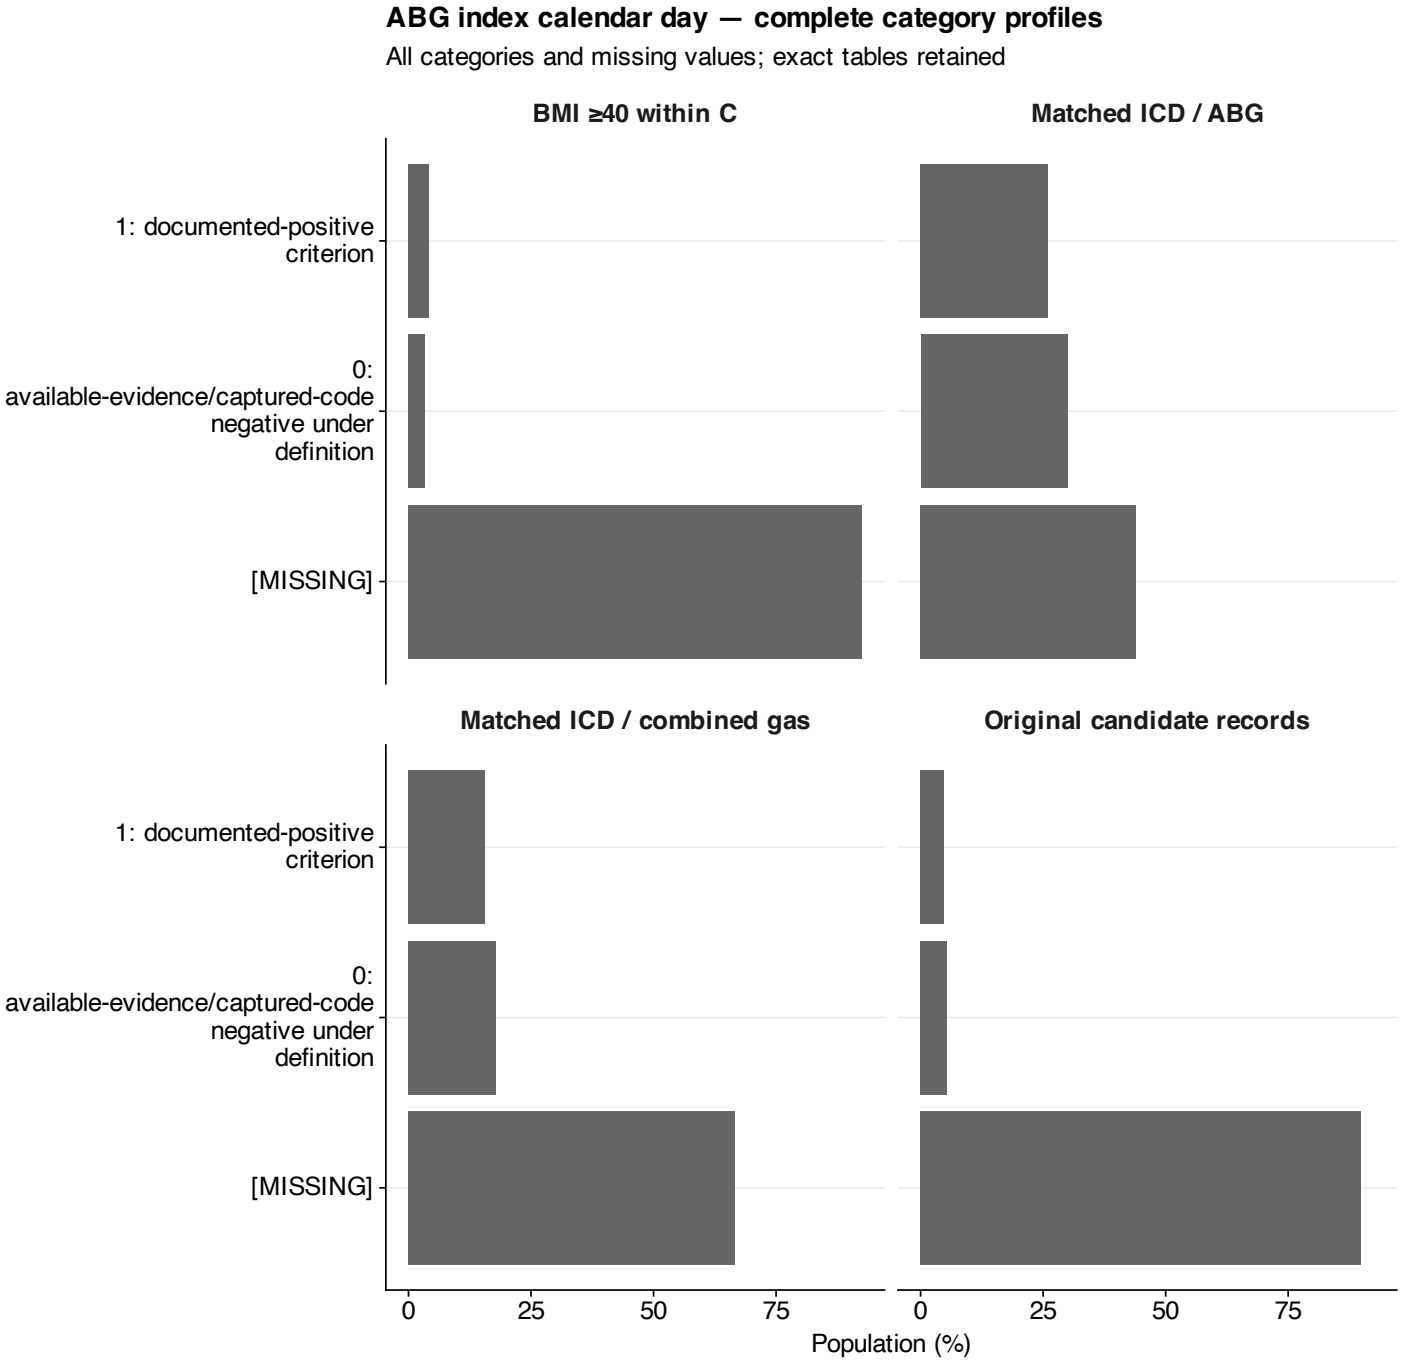

Figure 739: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete abg_index_calendar_day stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

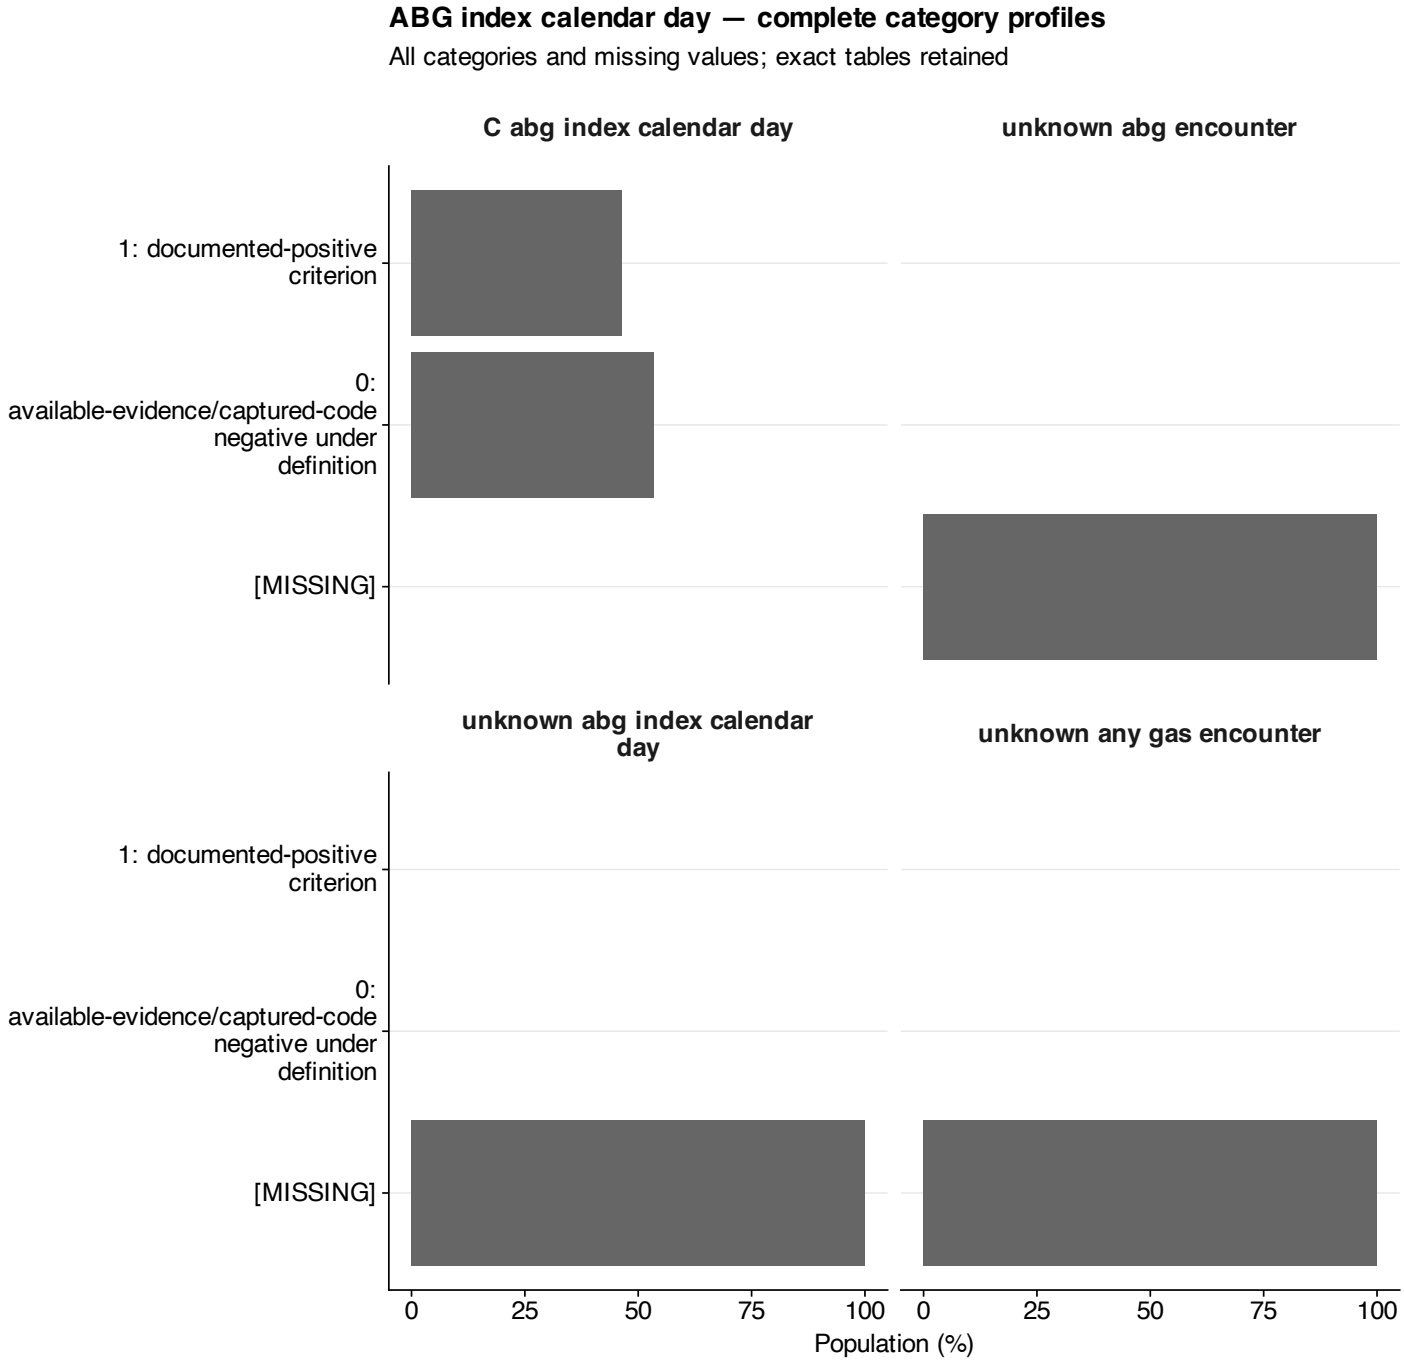

Figure 740: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete abg_index_calendar_day stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

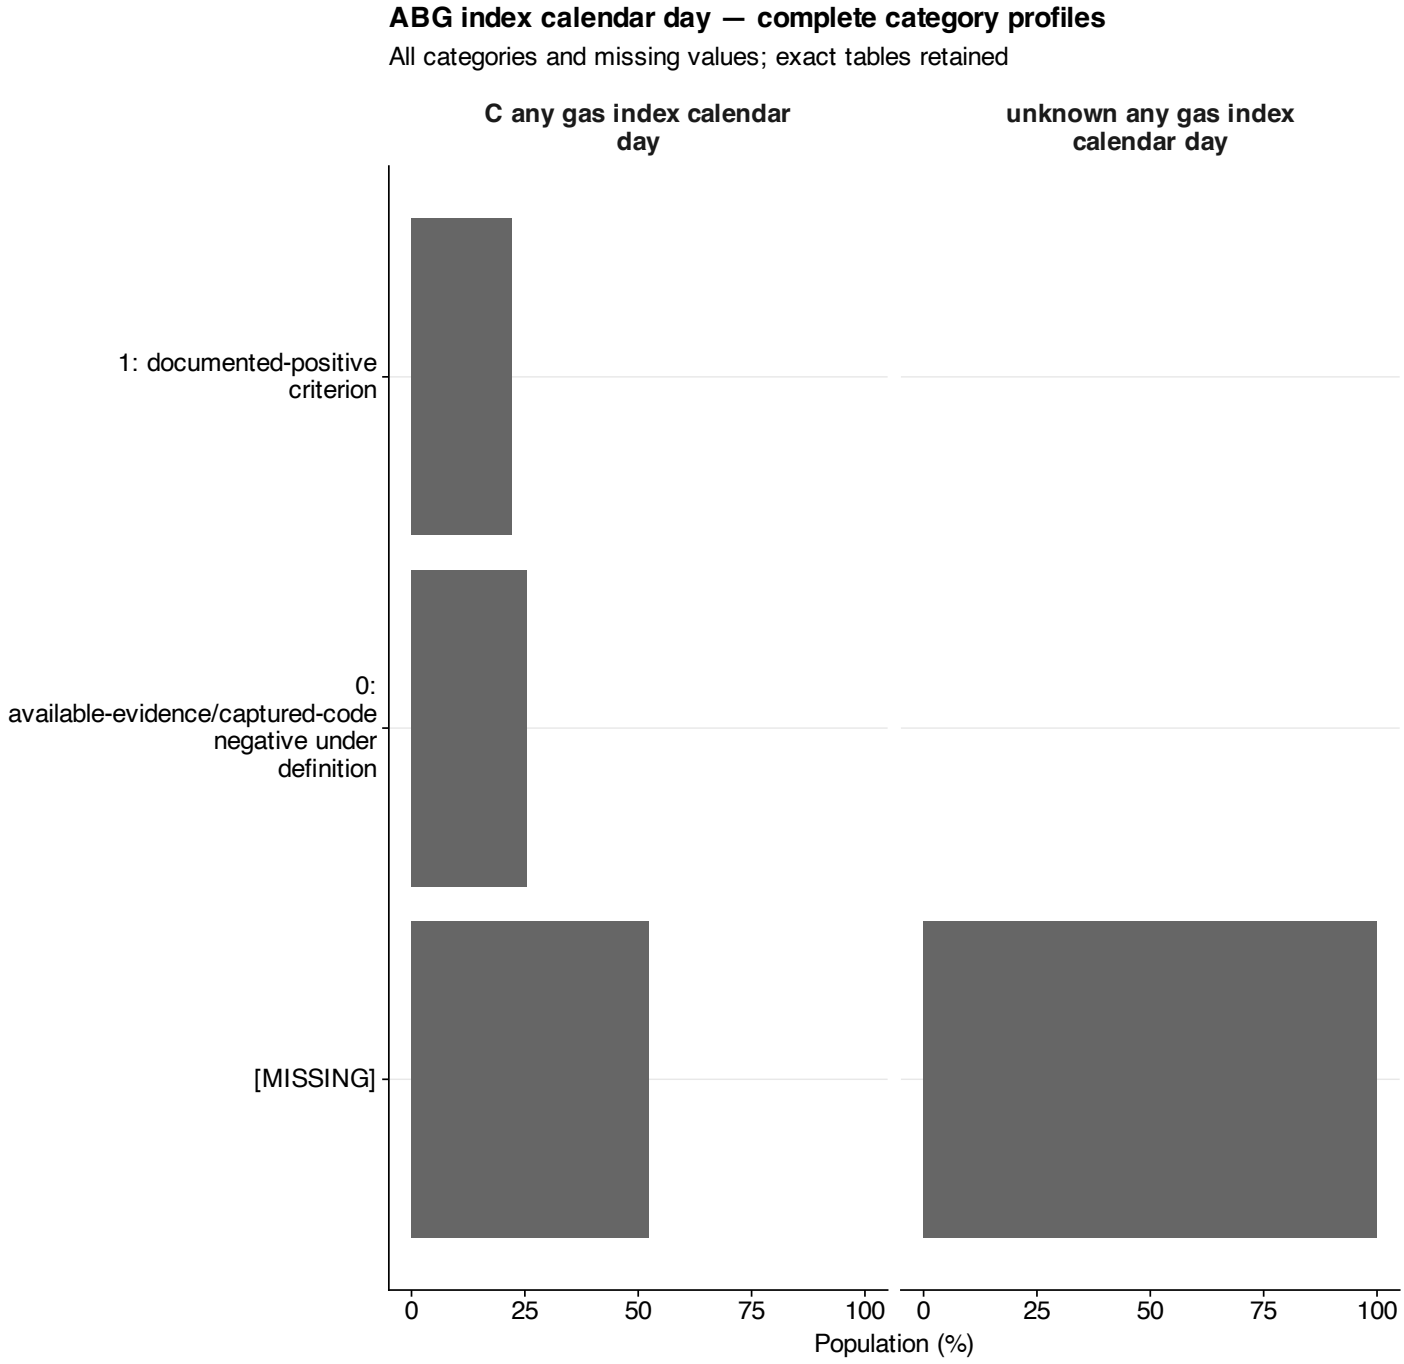

Figure 741: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete abg_index_calendar_day stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

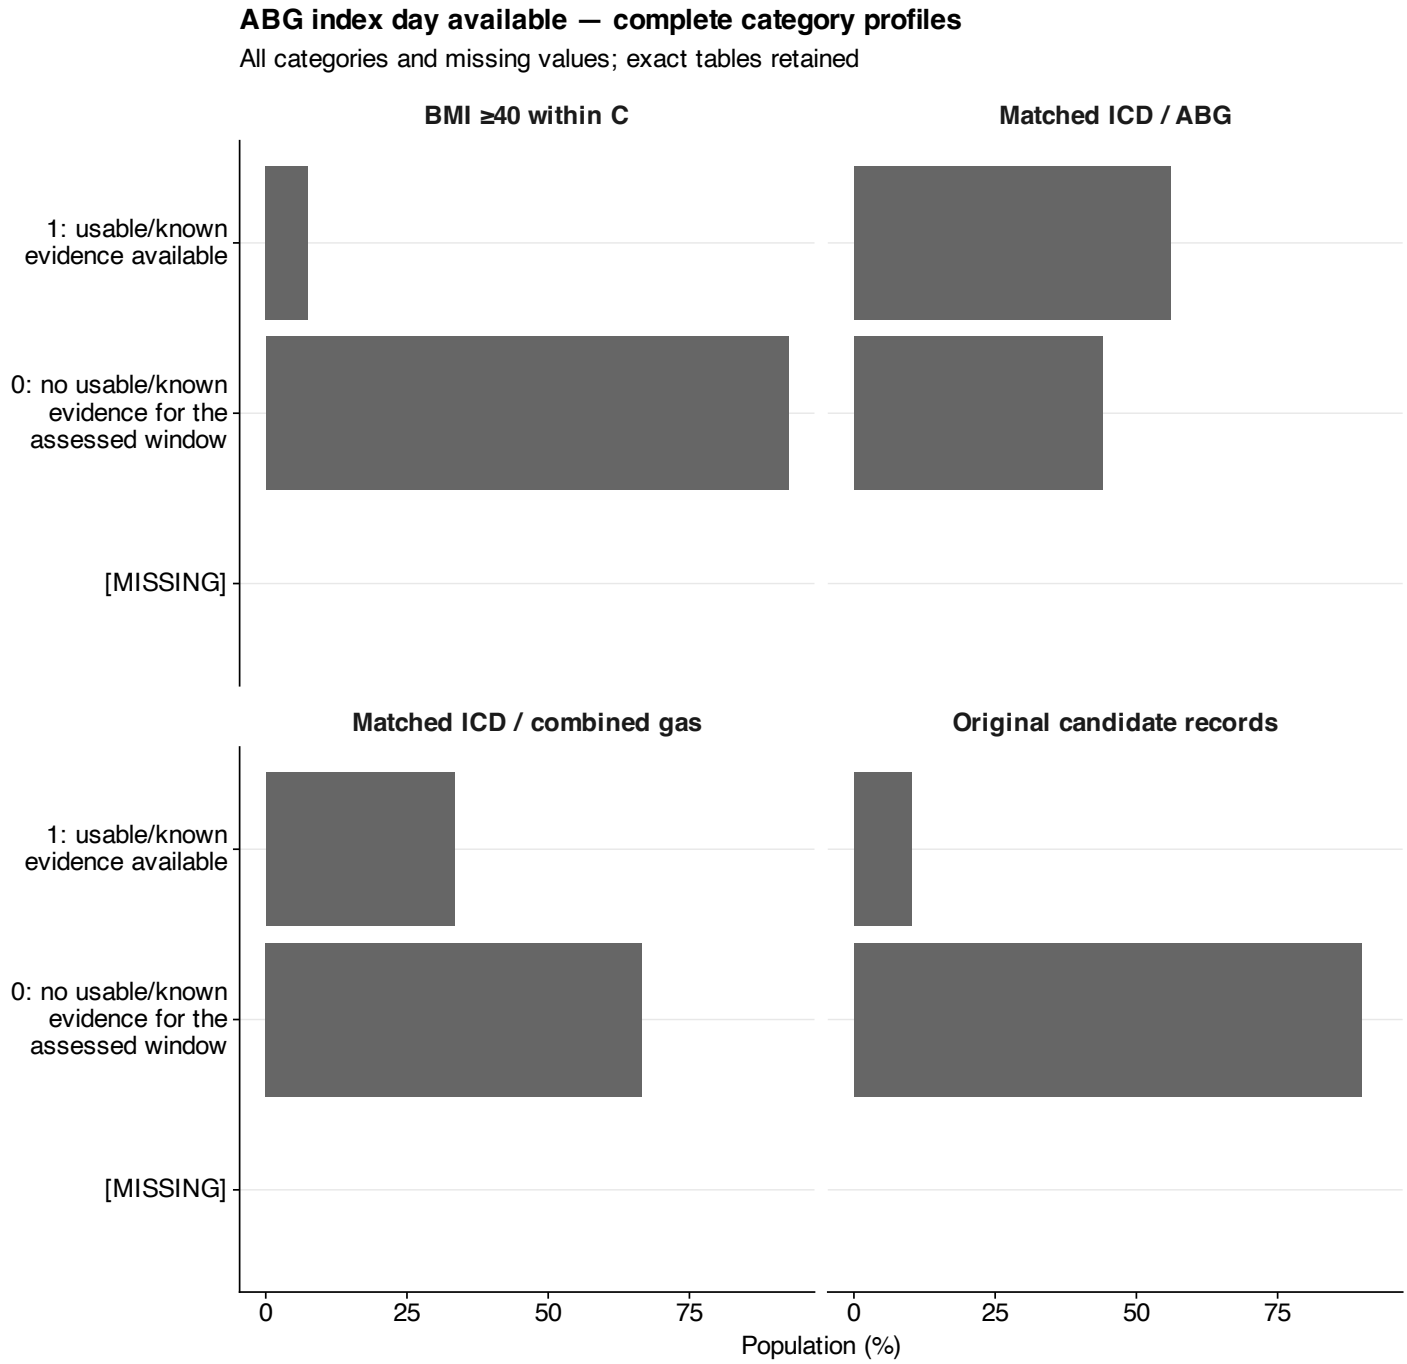

Figure 742: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete abg_index_day_available stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

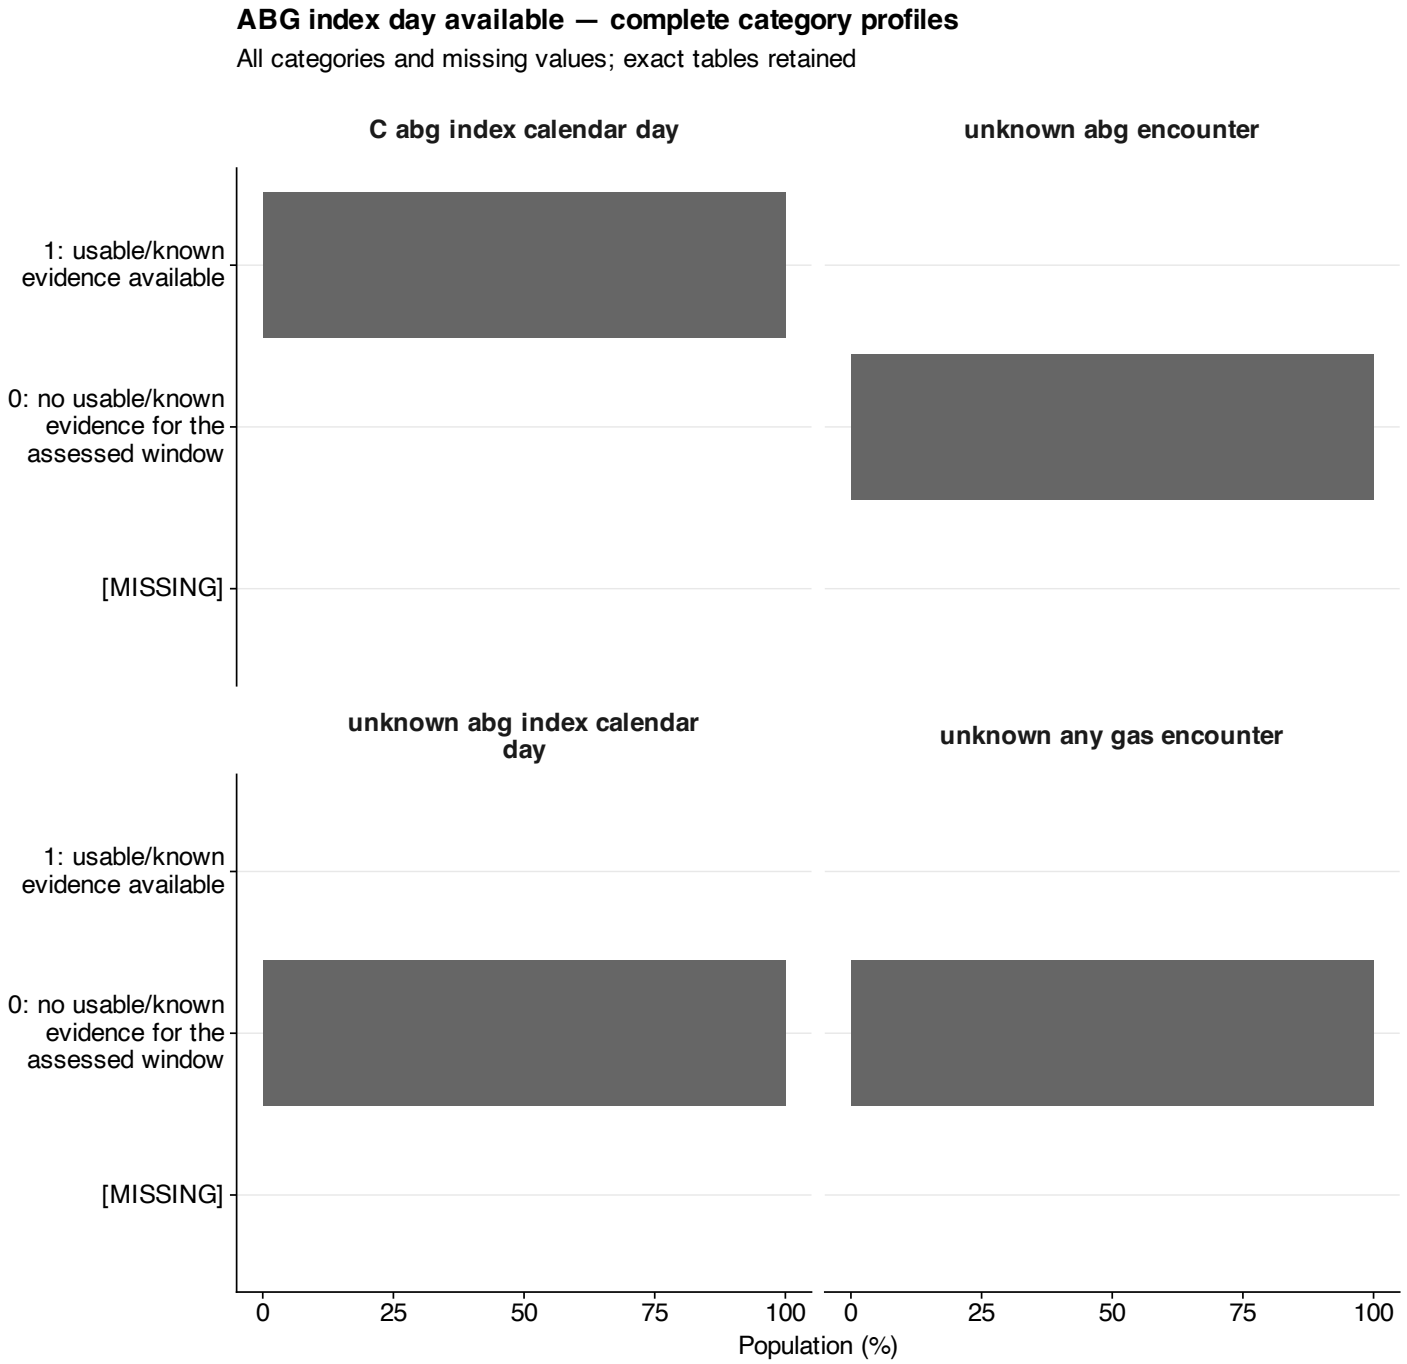

Figure 743: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete abg_index_day_available stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

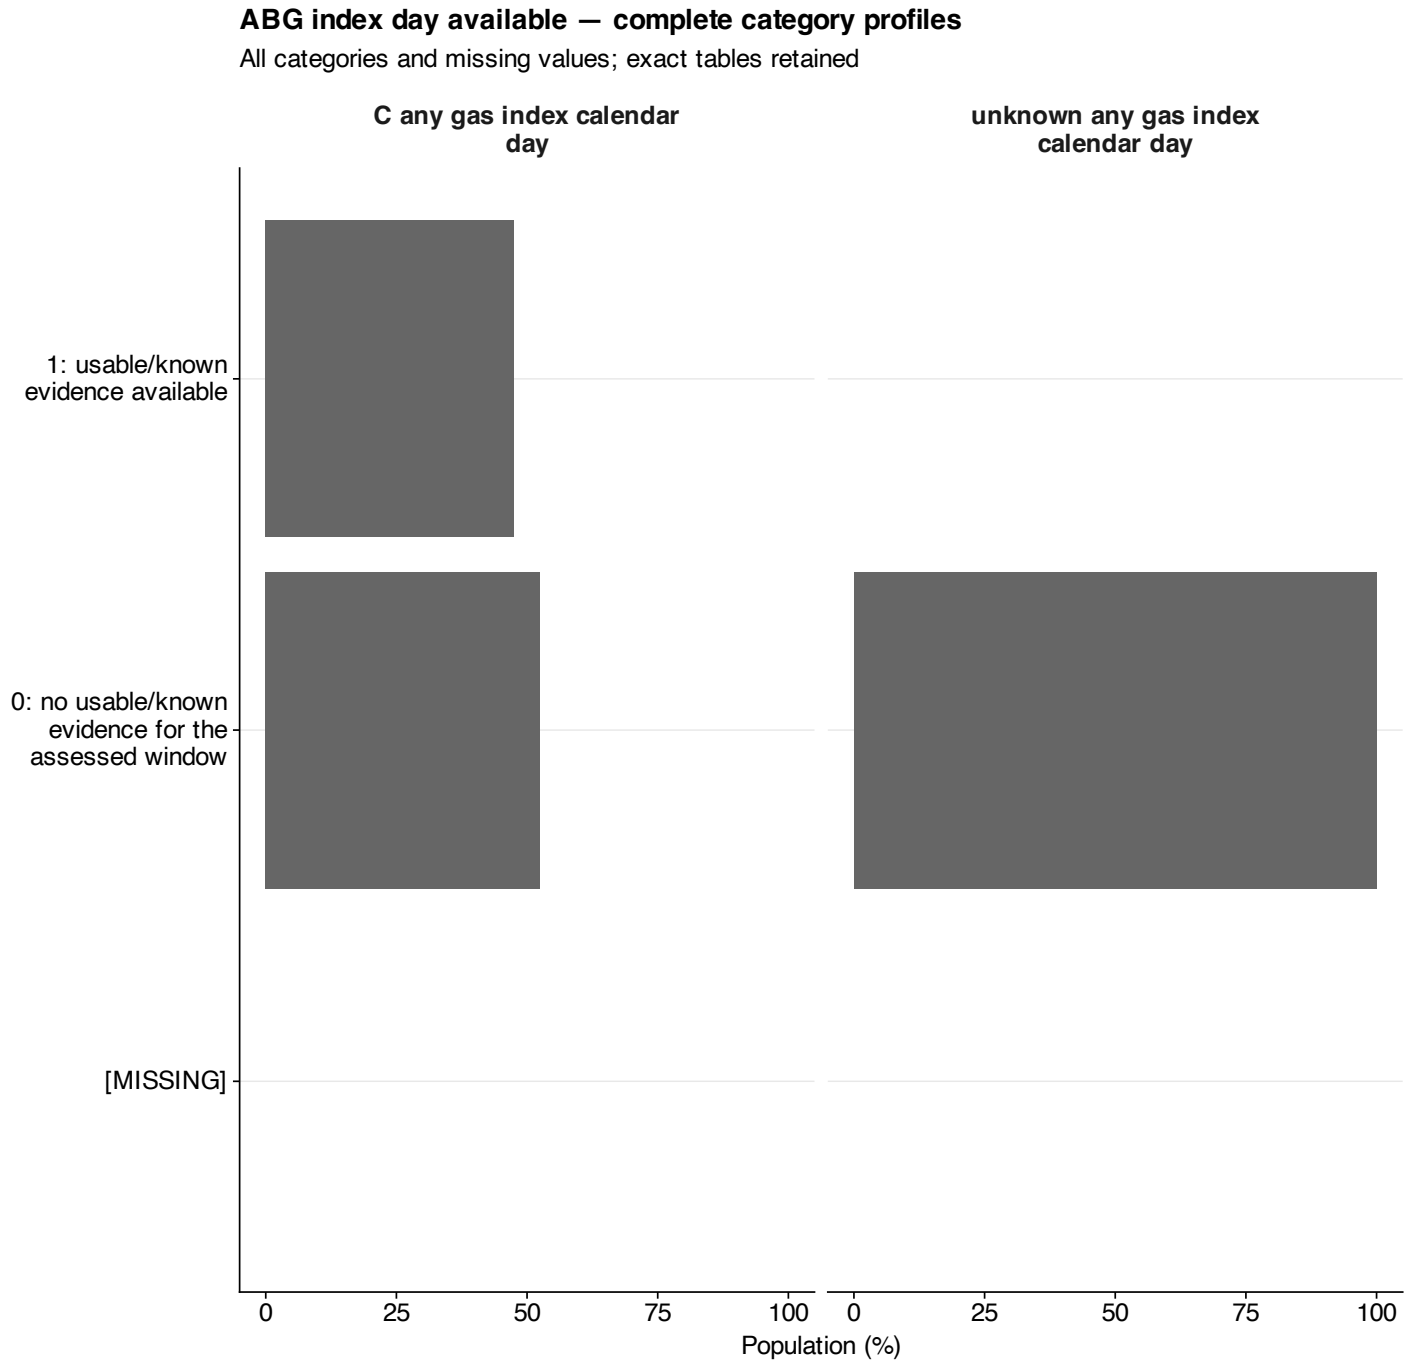

Figure 744: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete abg_index_day_available stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

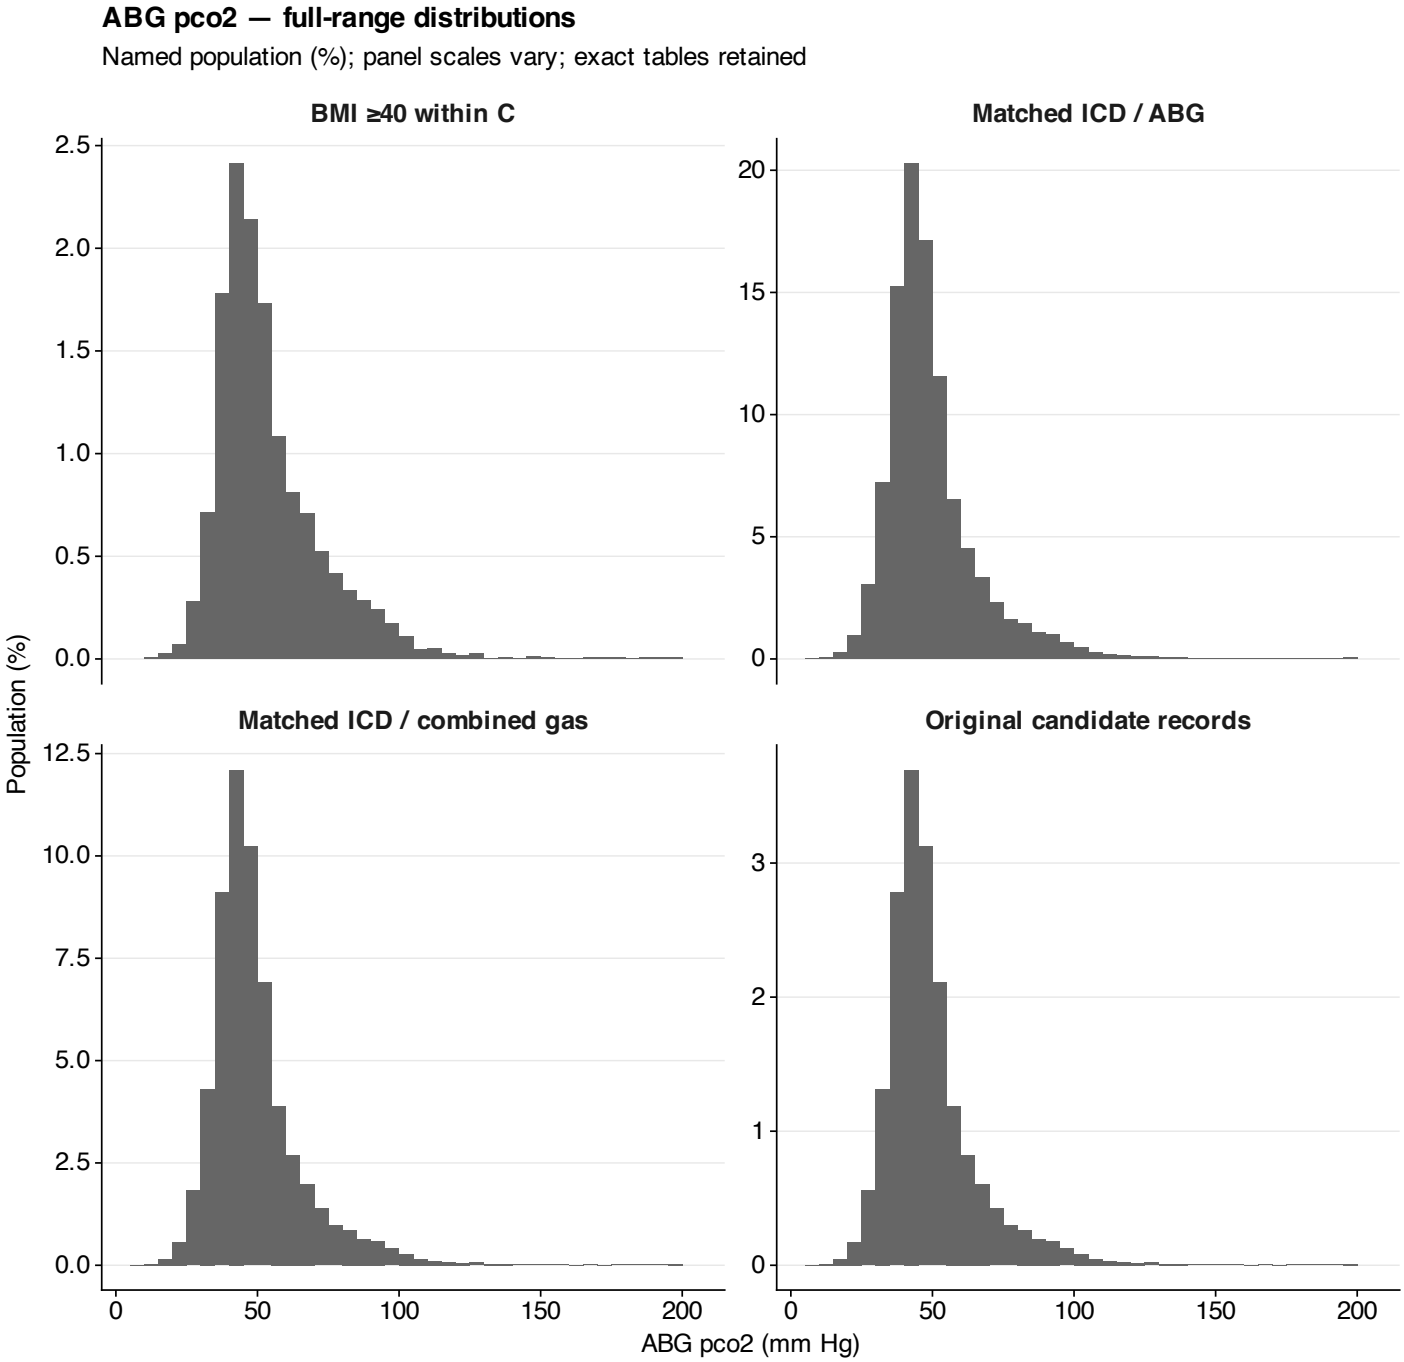

Figure 745: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete abg_pco2 stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

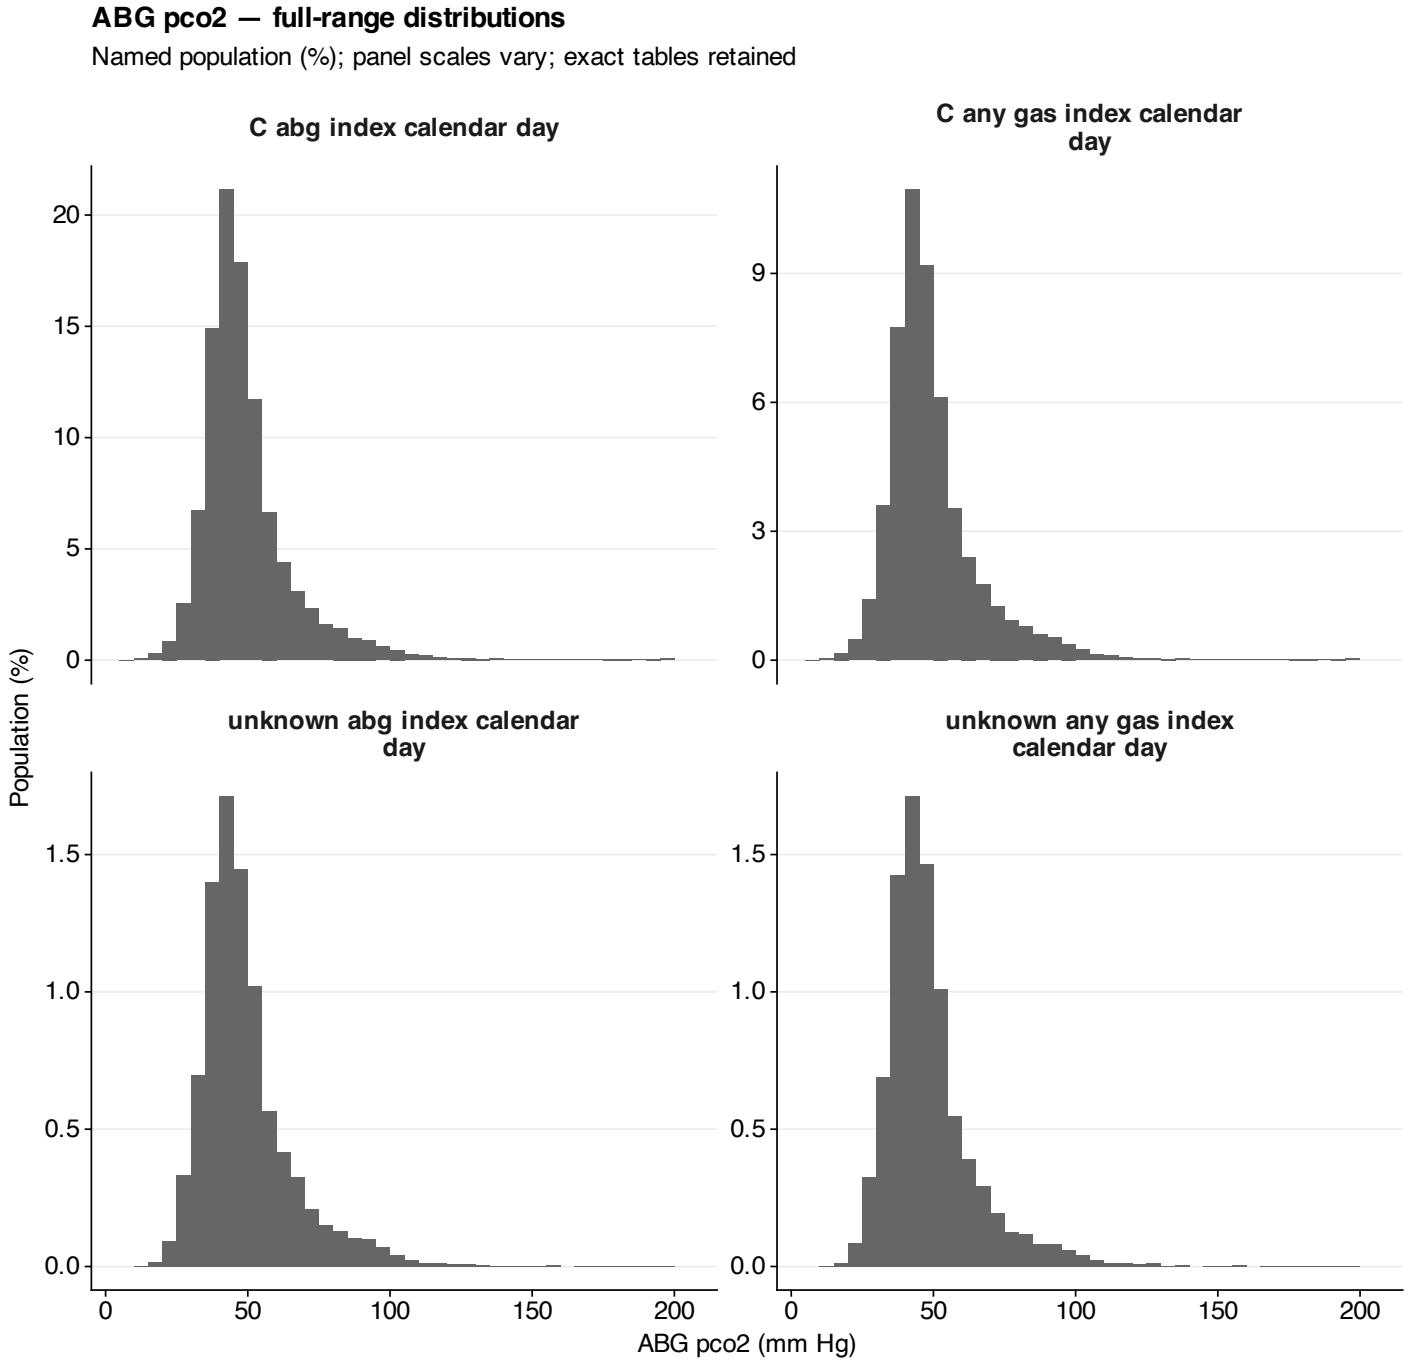

Figure 746: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete abg_pco2 stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

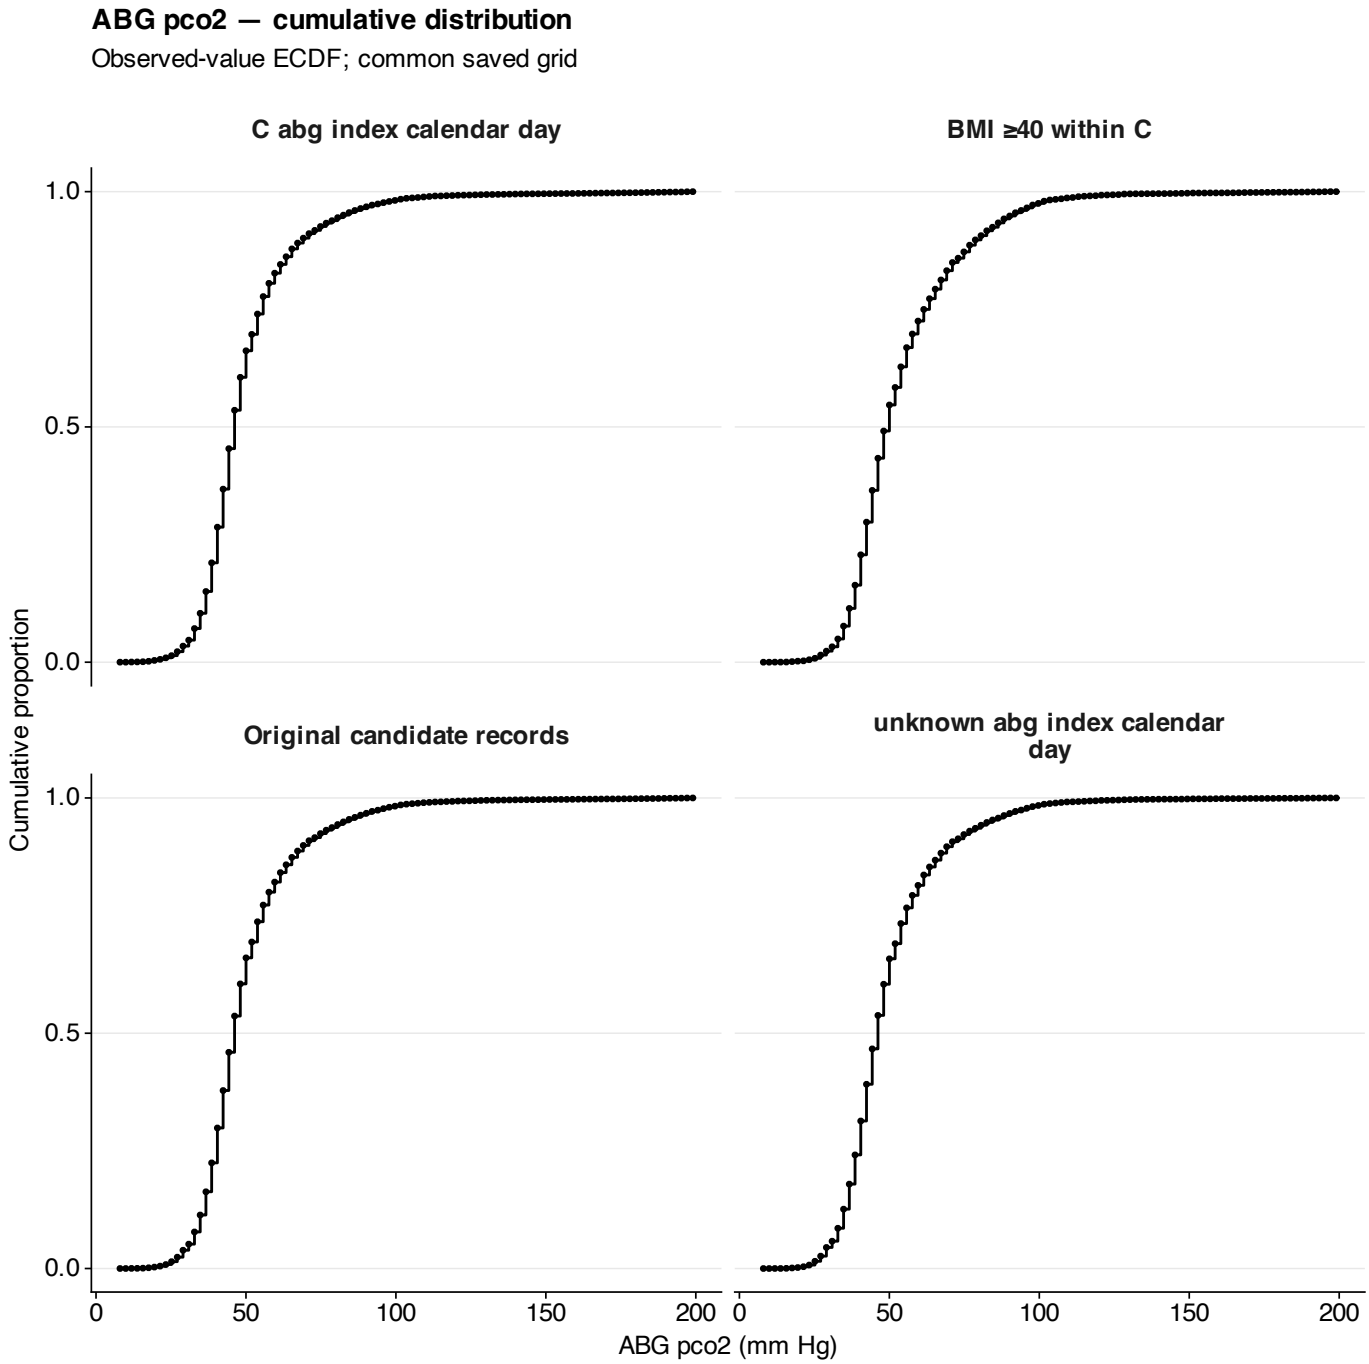

Figure 747: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. abg_pco2 ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

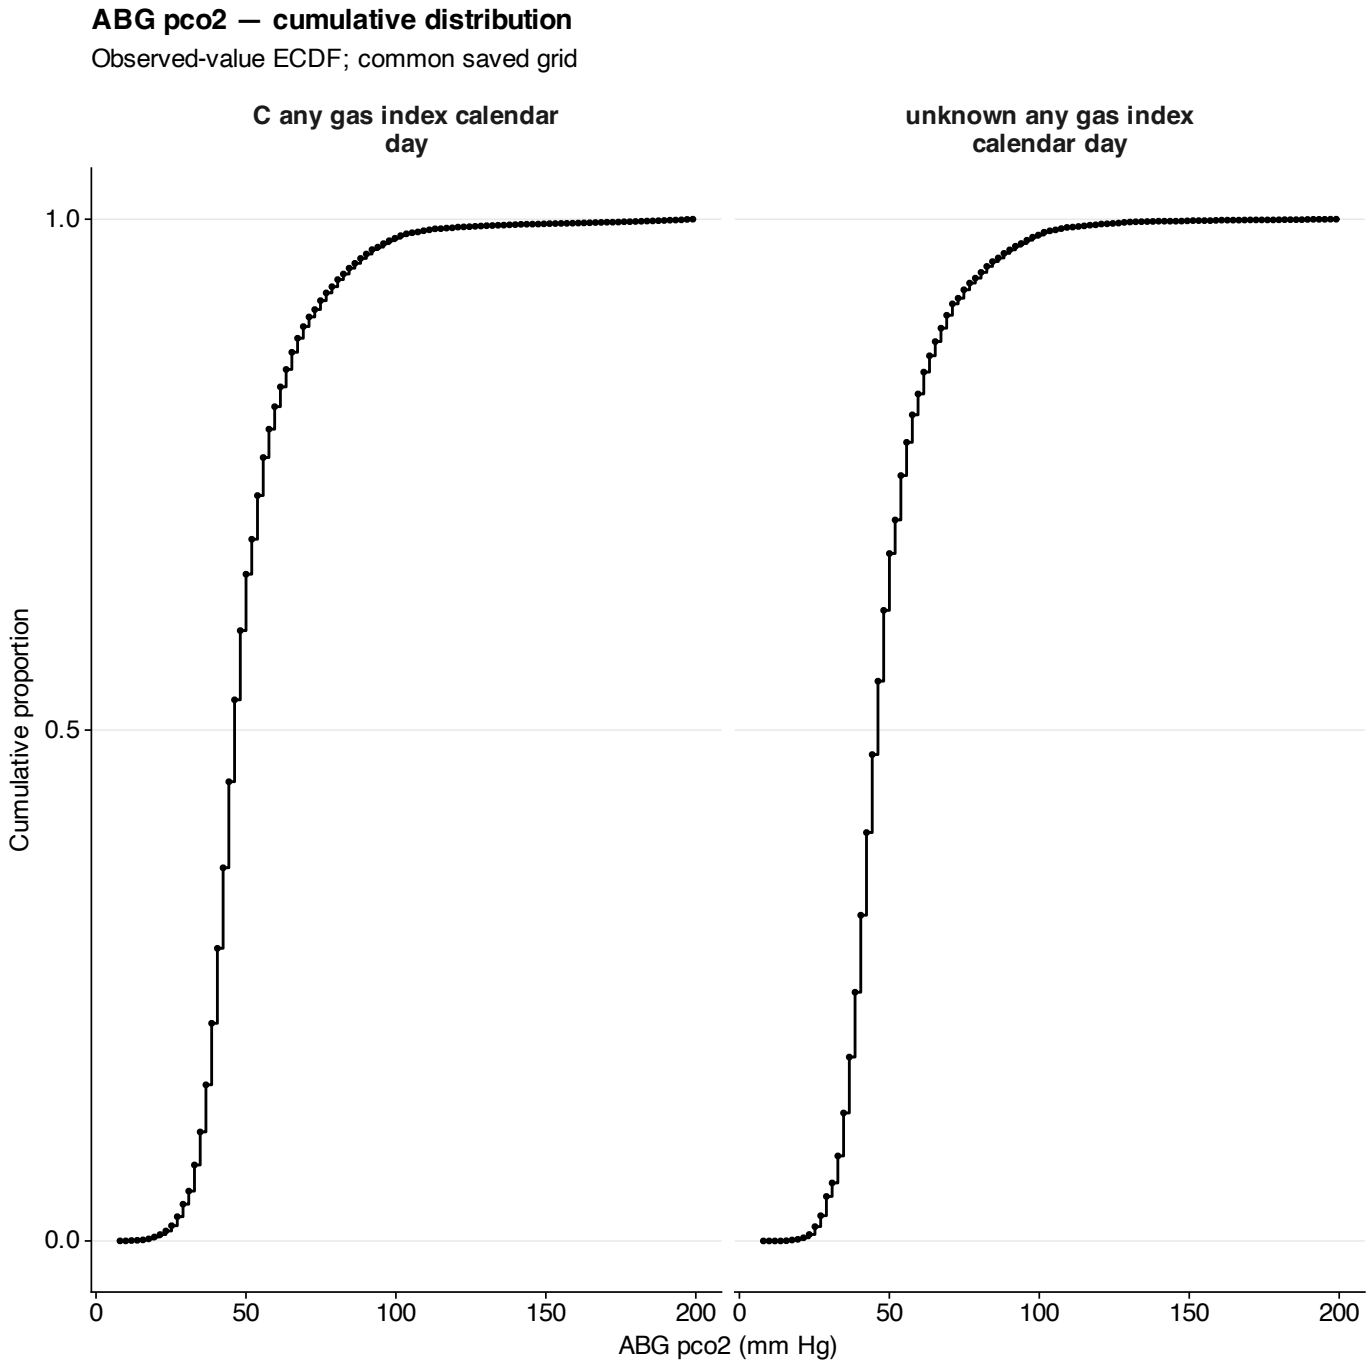

Figure 748: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. abg_pco2 ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

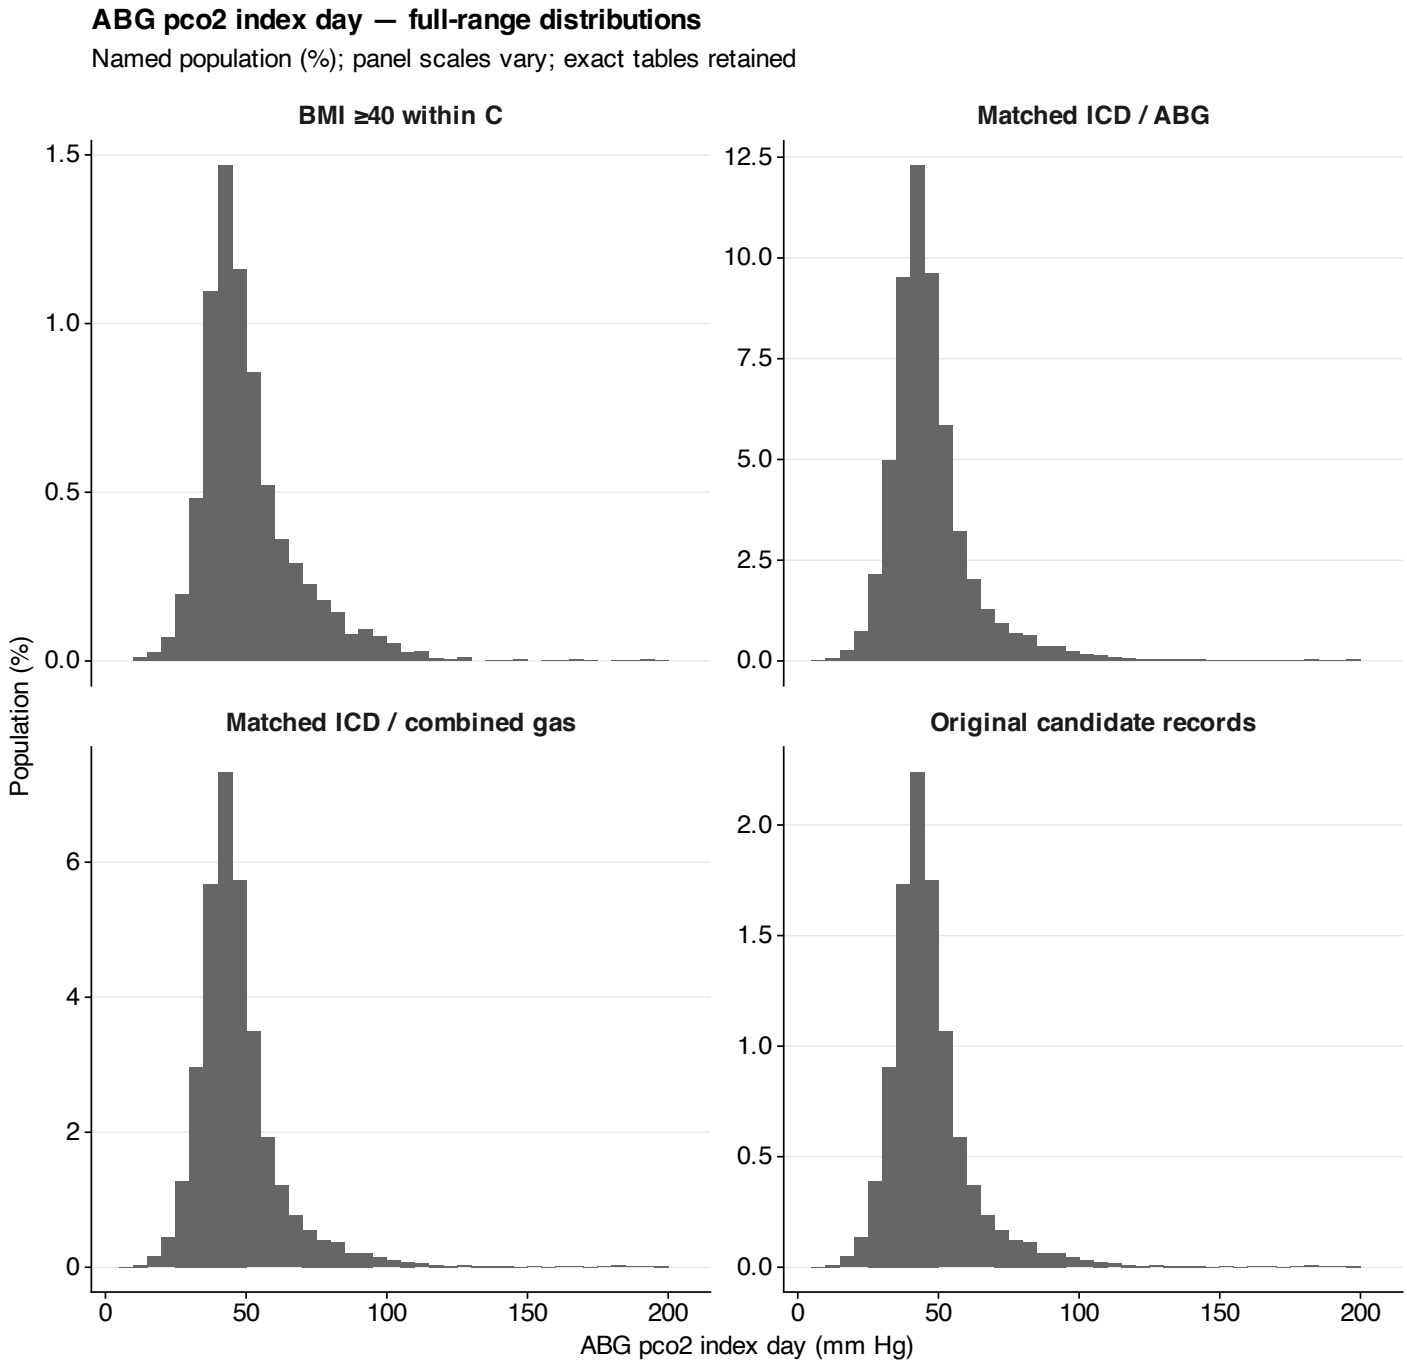

Figure 749: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete abg_pco2_index_day stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

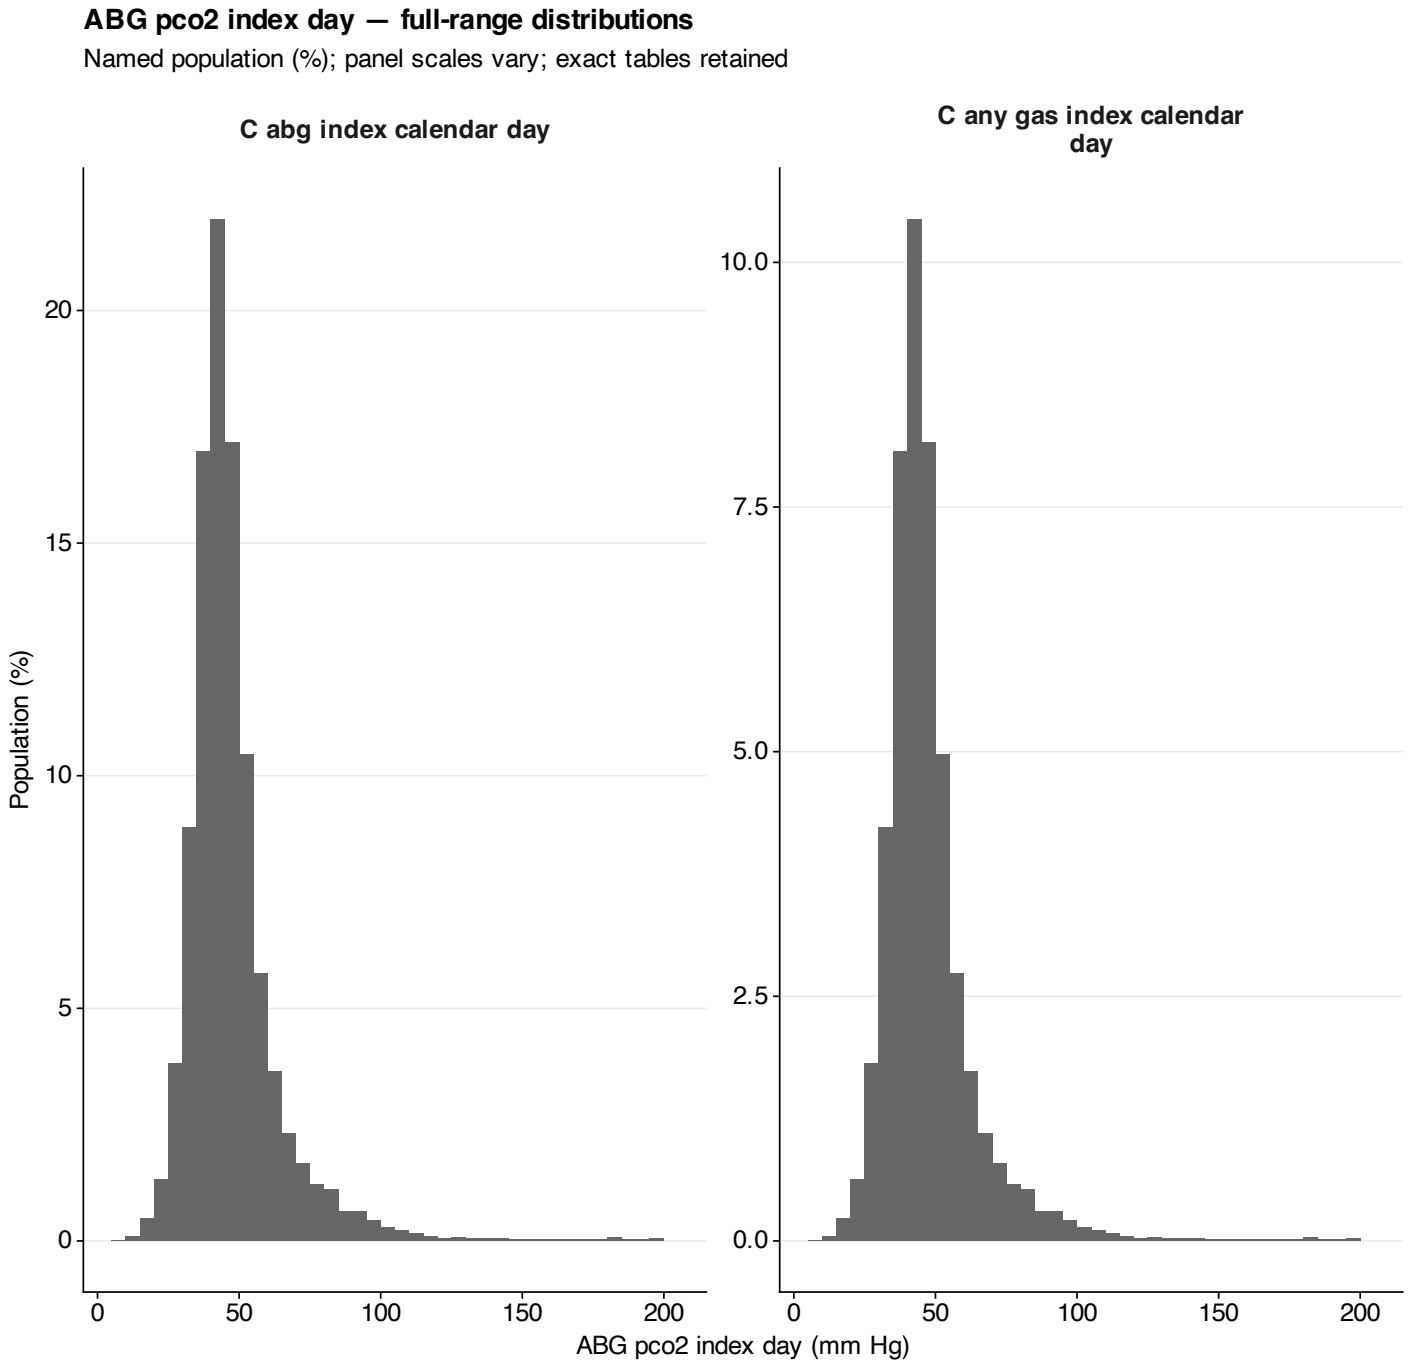

Figure 750: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete abg_pco2_index_day stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

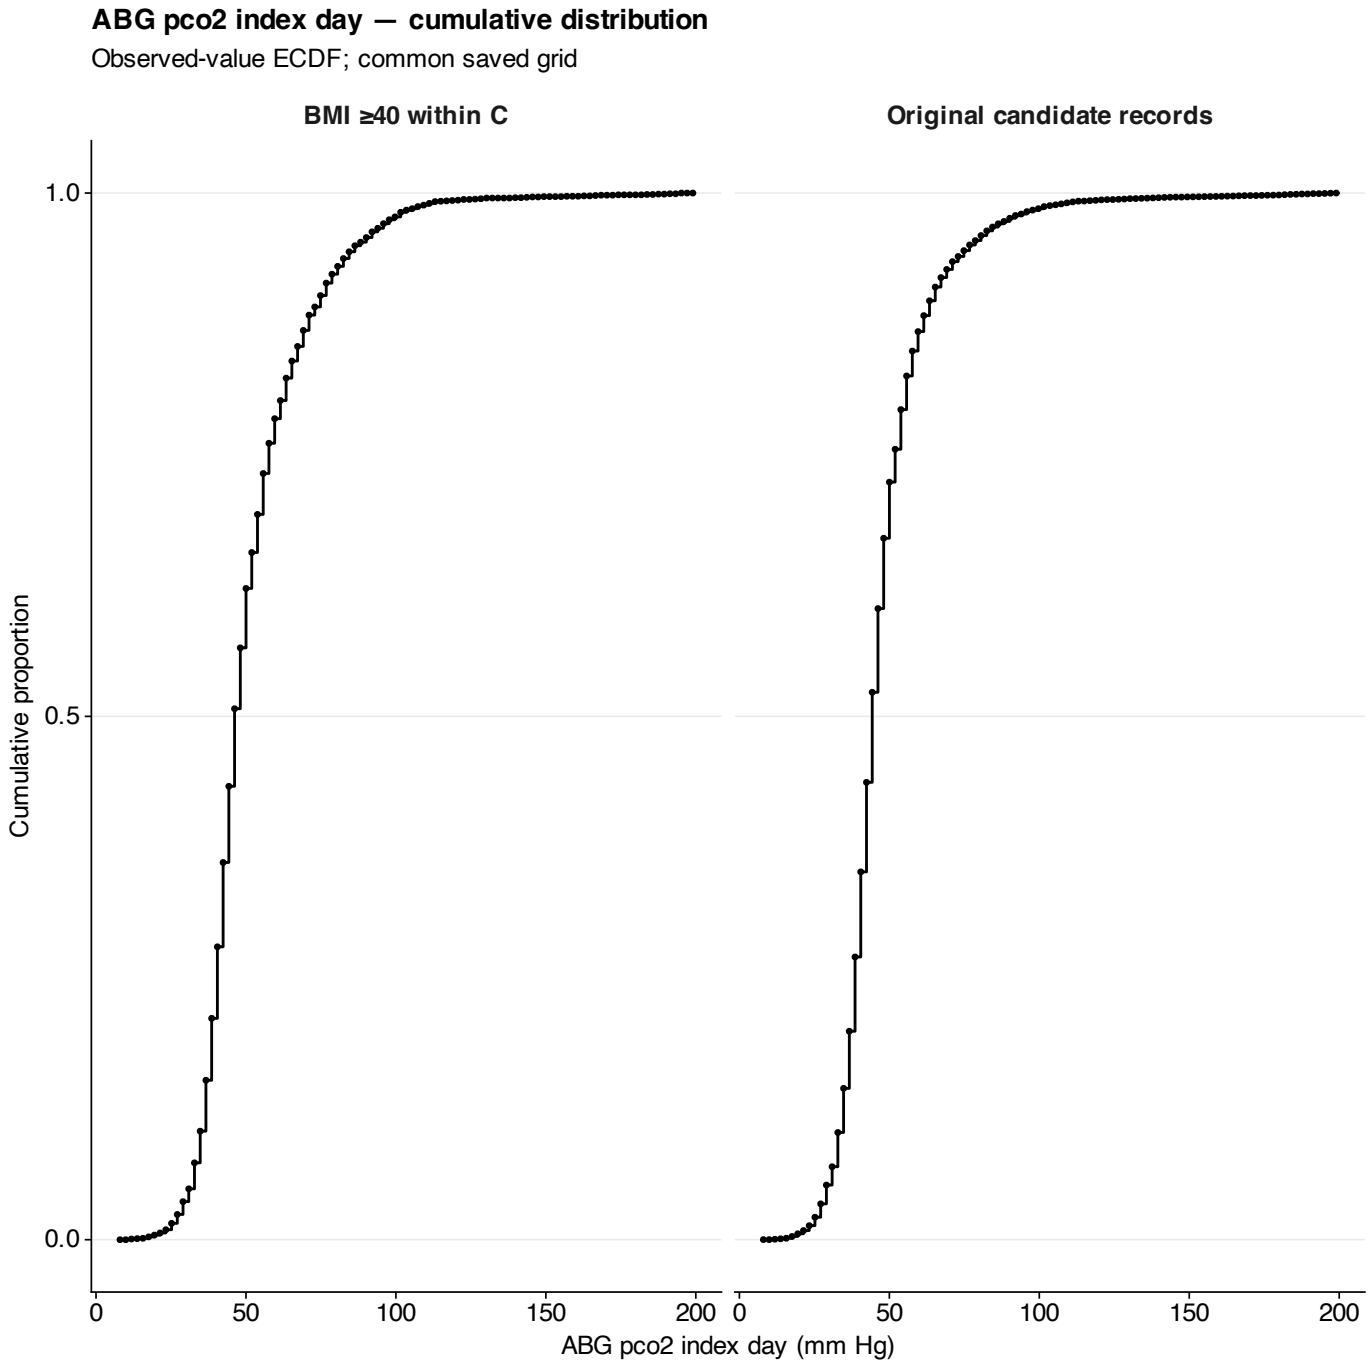

Figure 751: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. abg_pco2_index_day ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

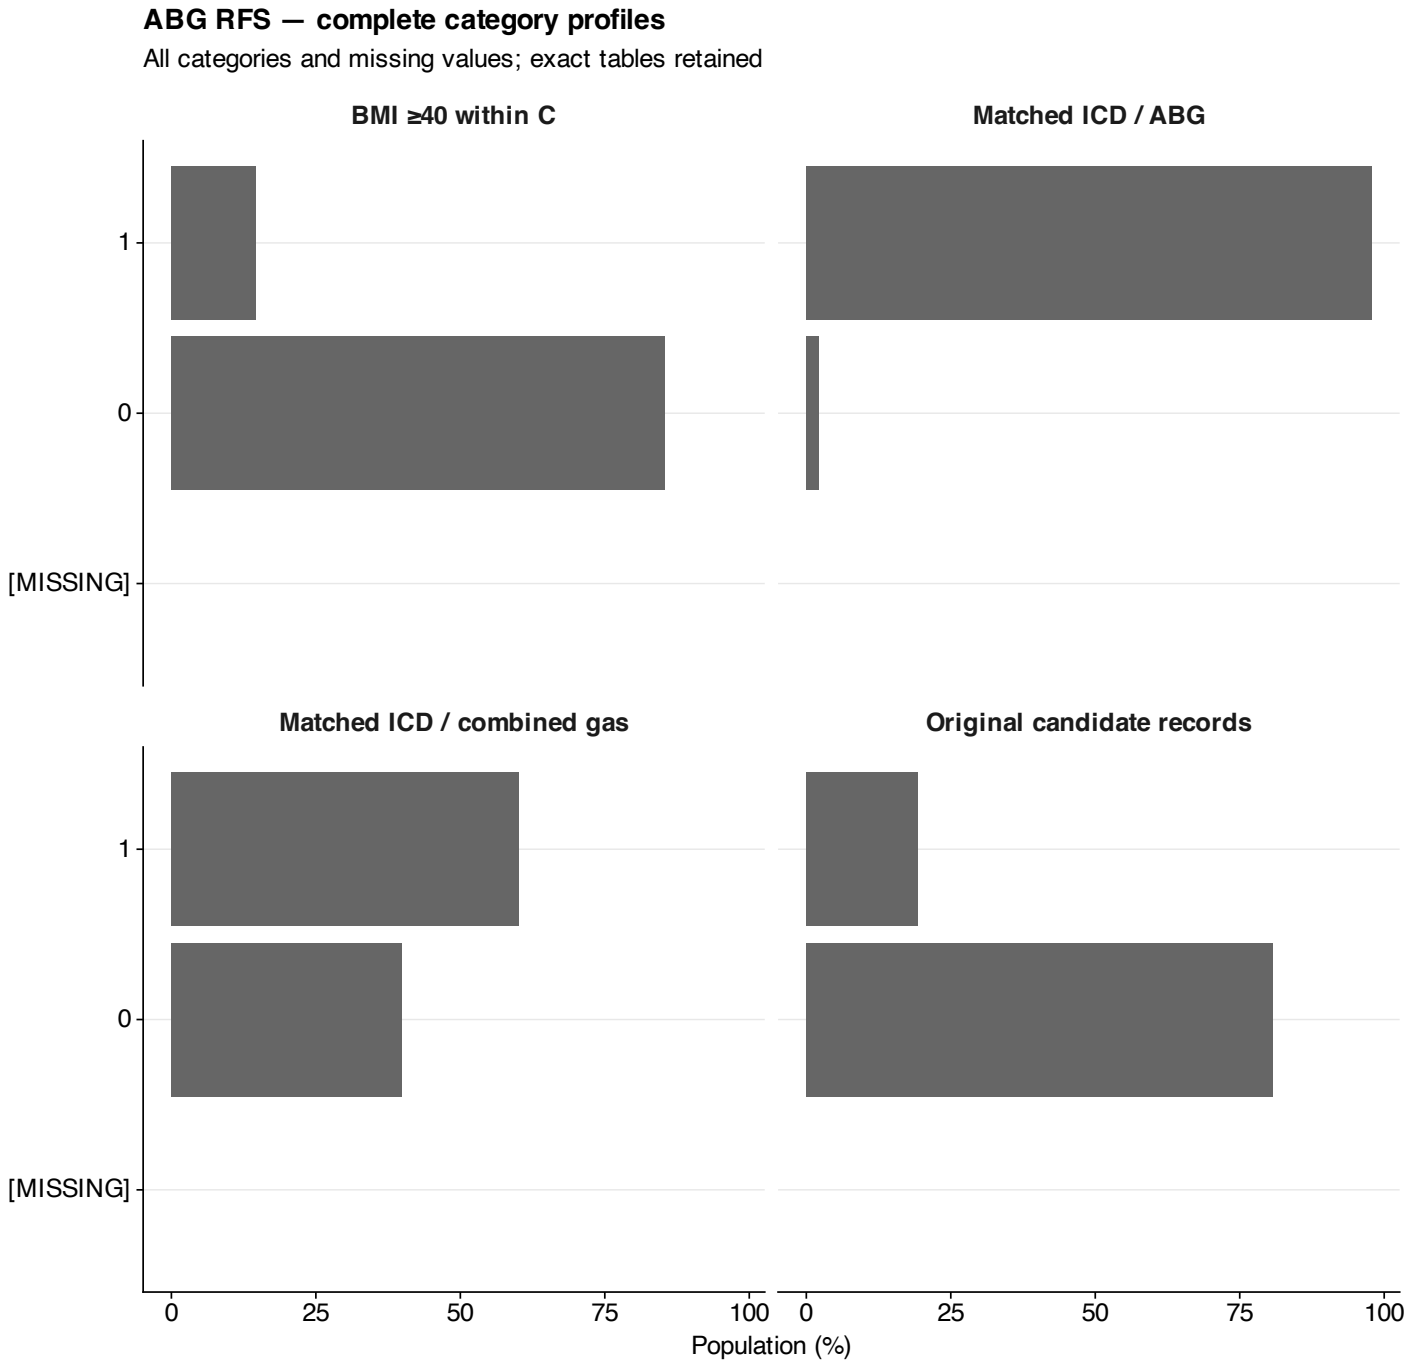

Figure 752: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete ABG_rfs stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

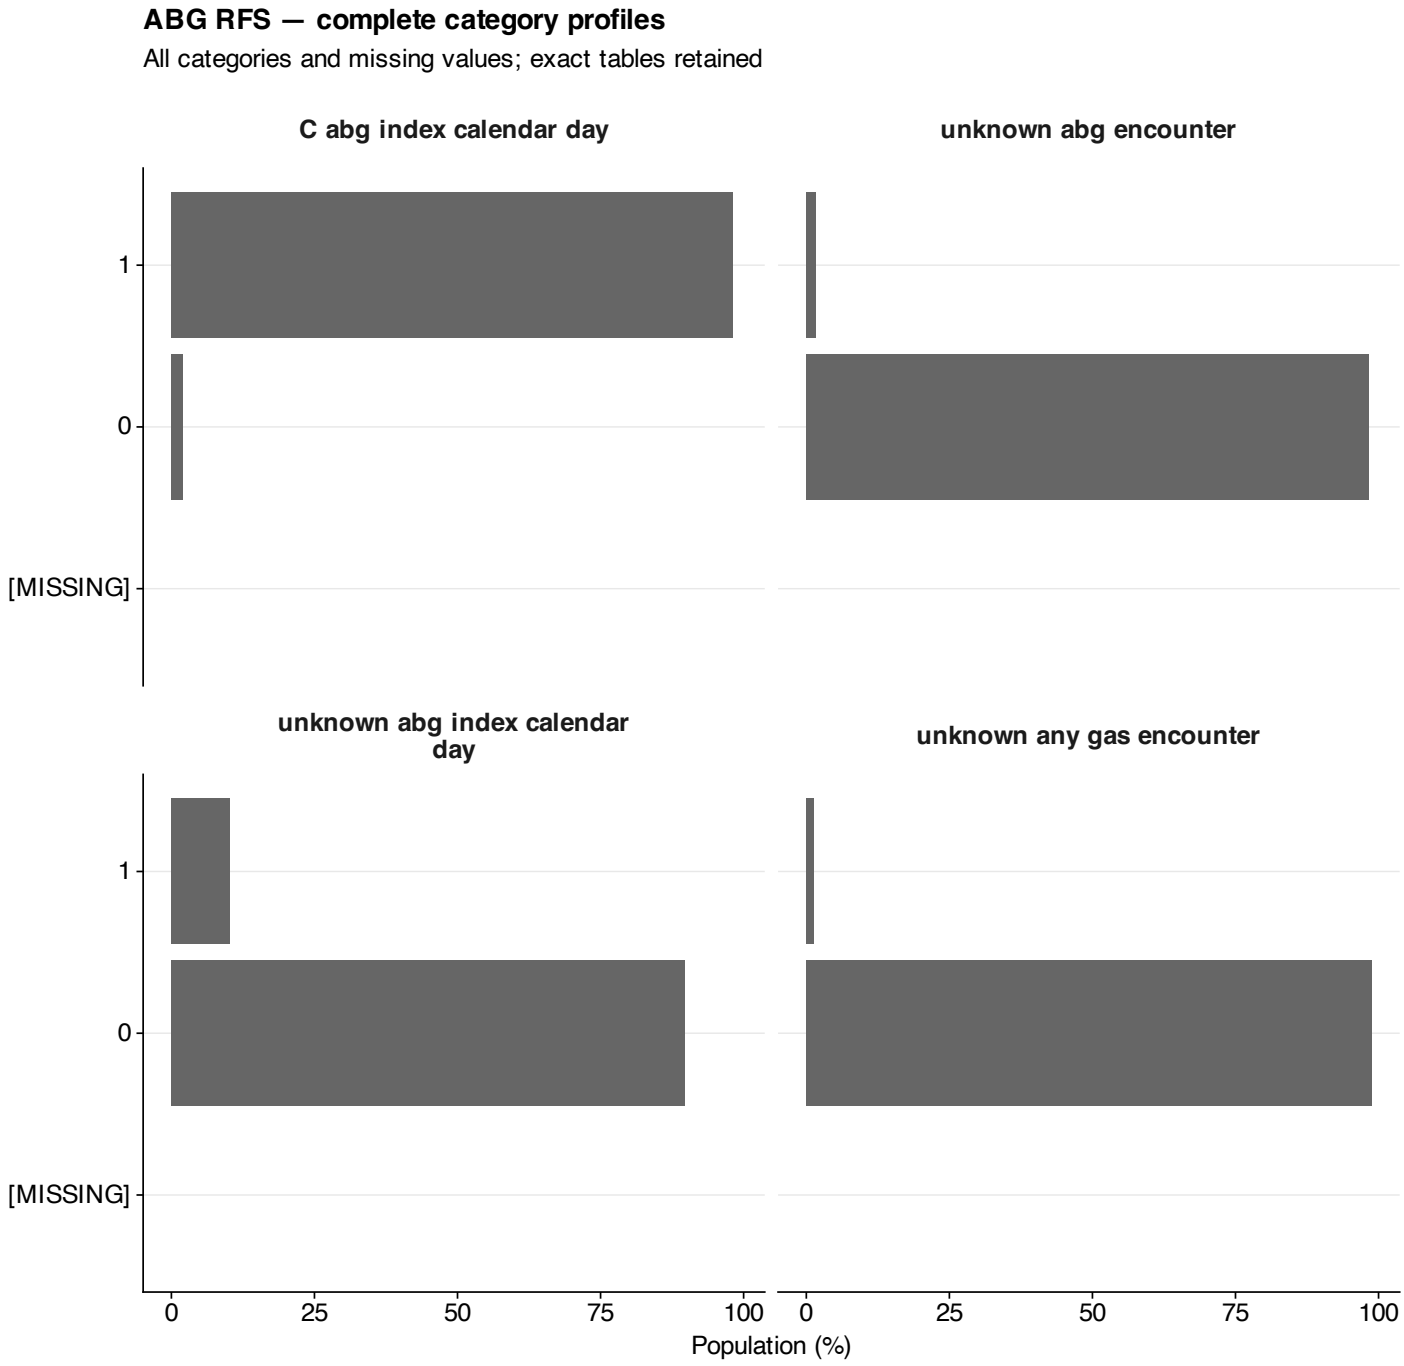

Figure 753: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete ABG_rfs stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

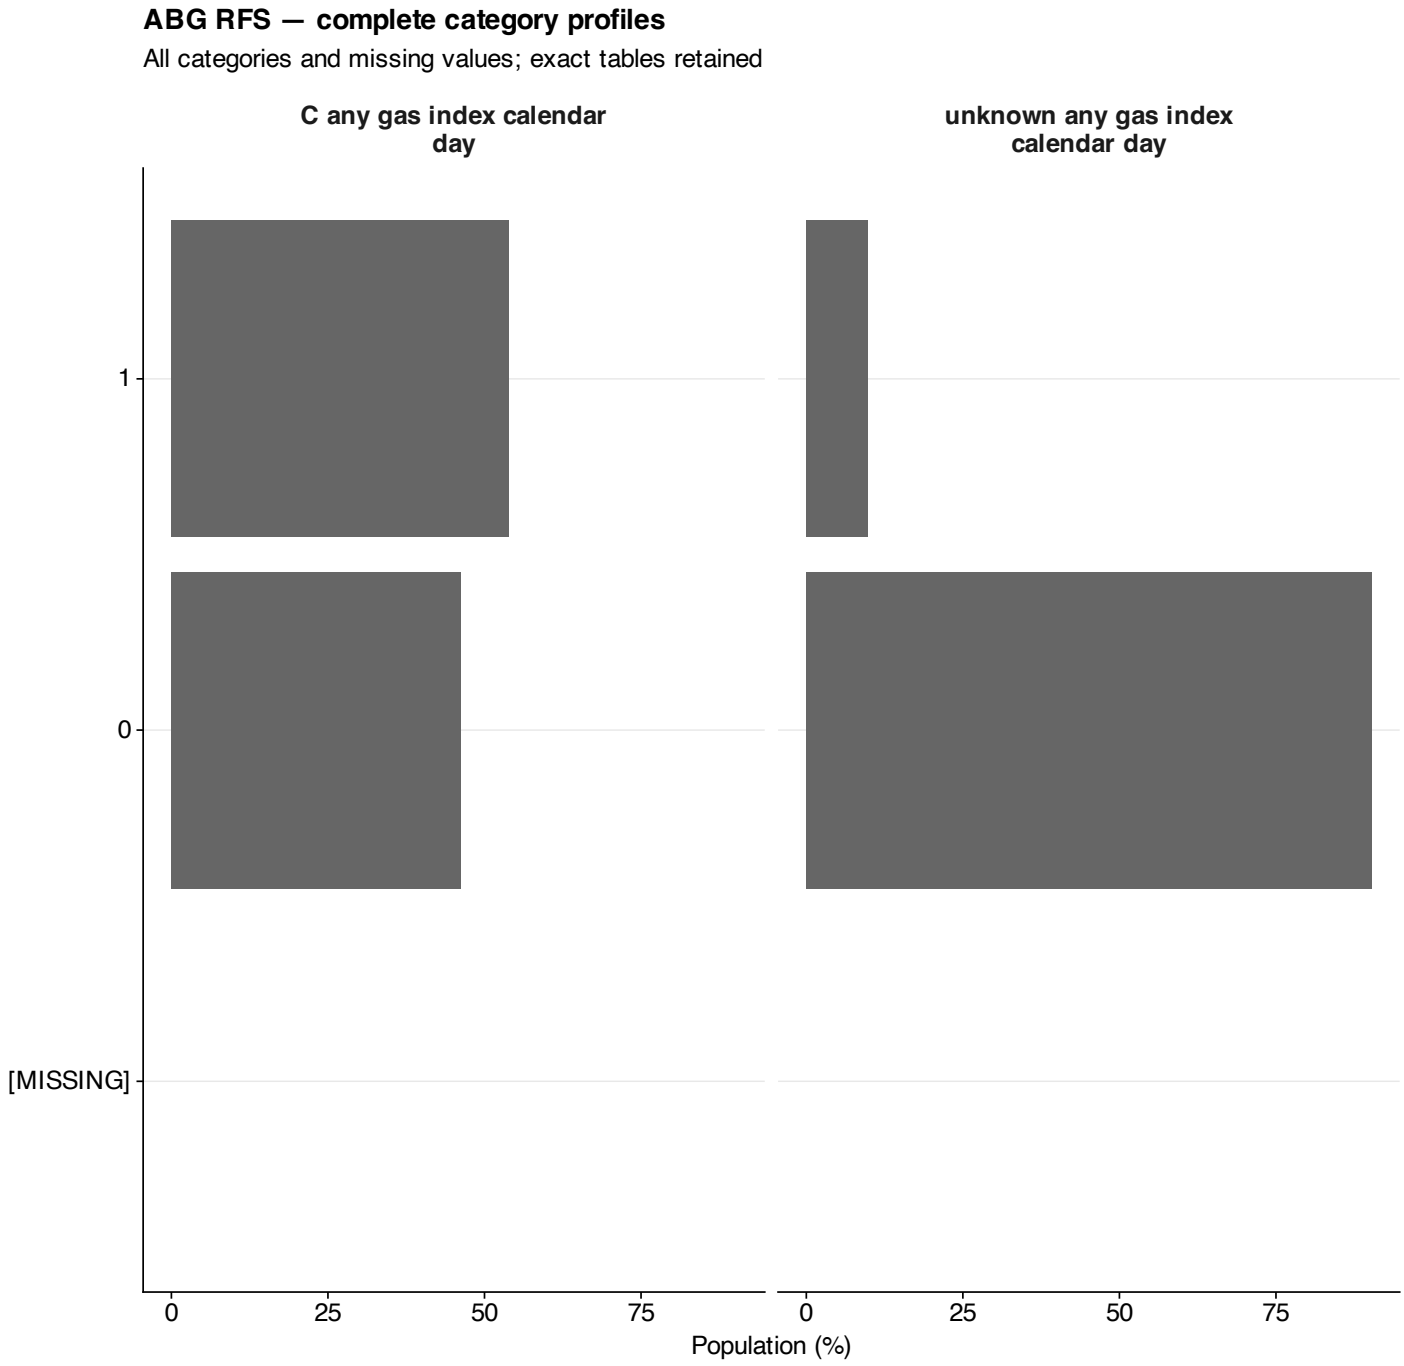

Figure 754: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete ABG_rfs stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

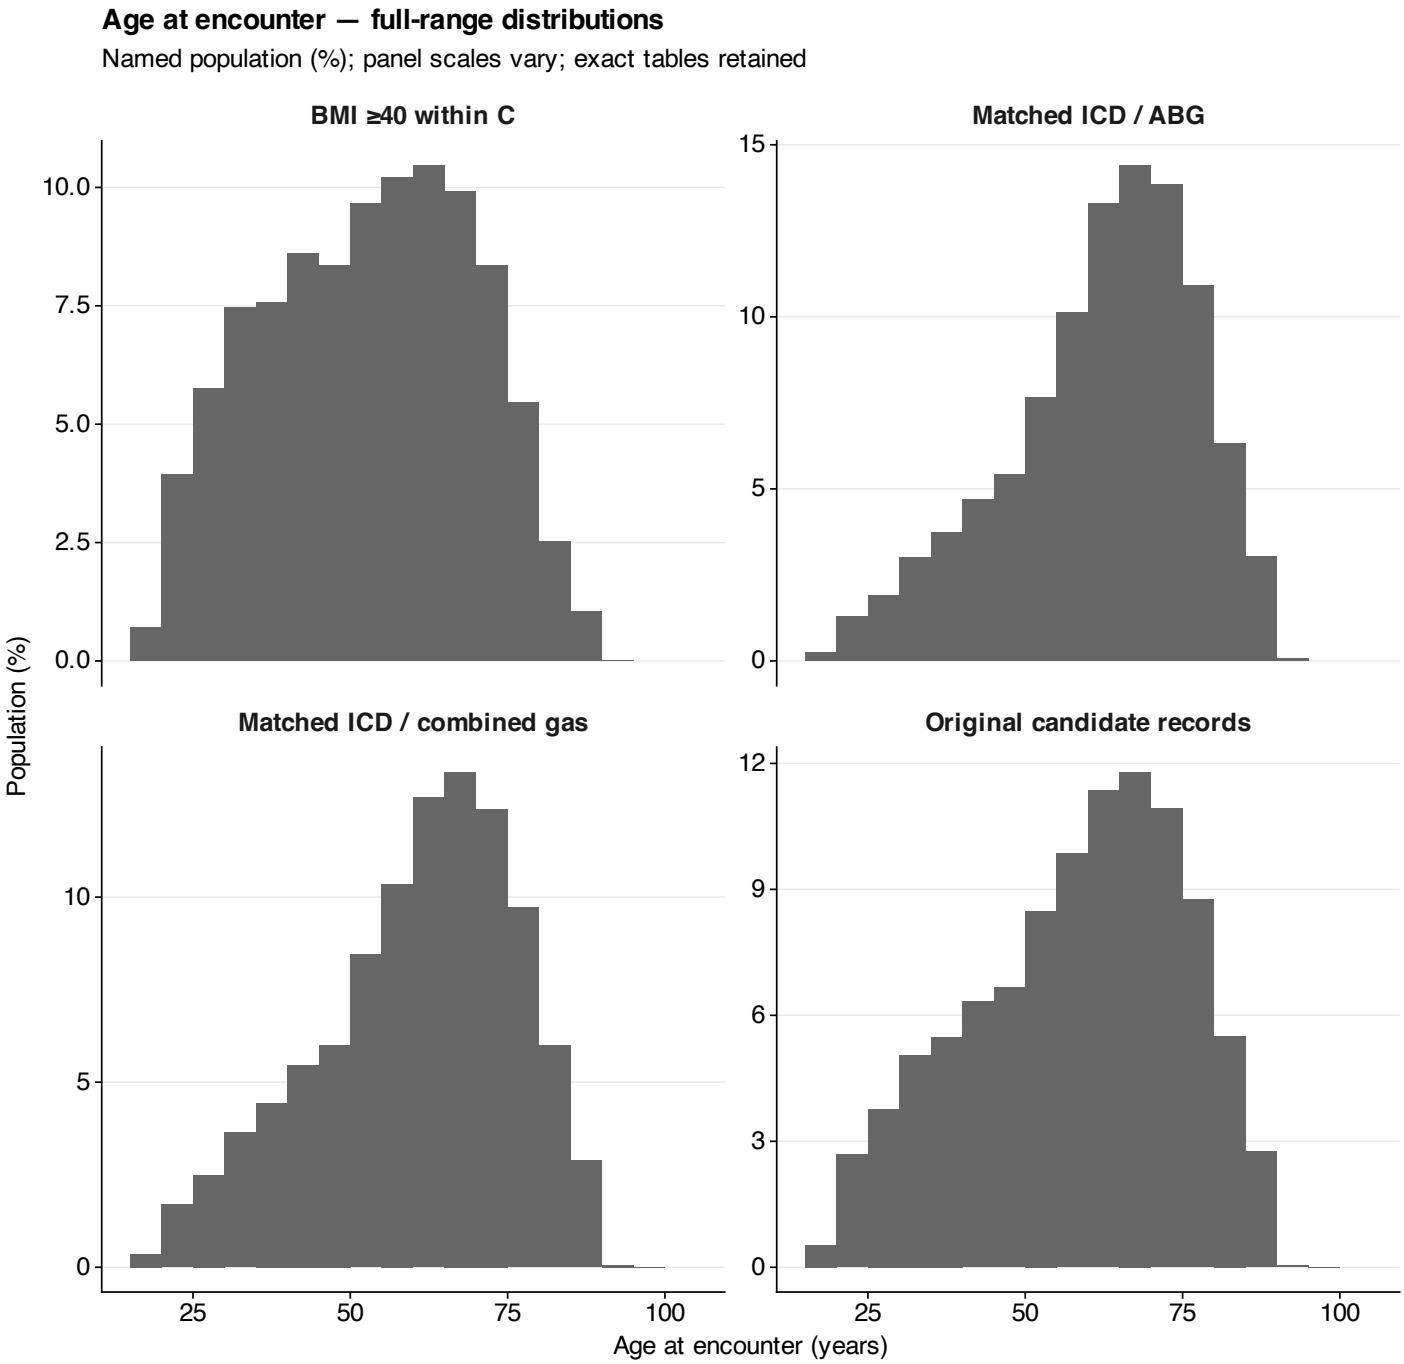

Figure 755: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete age_at_encounter stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

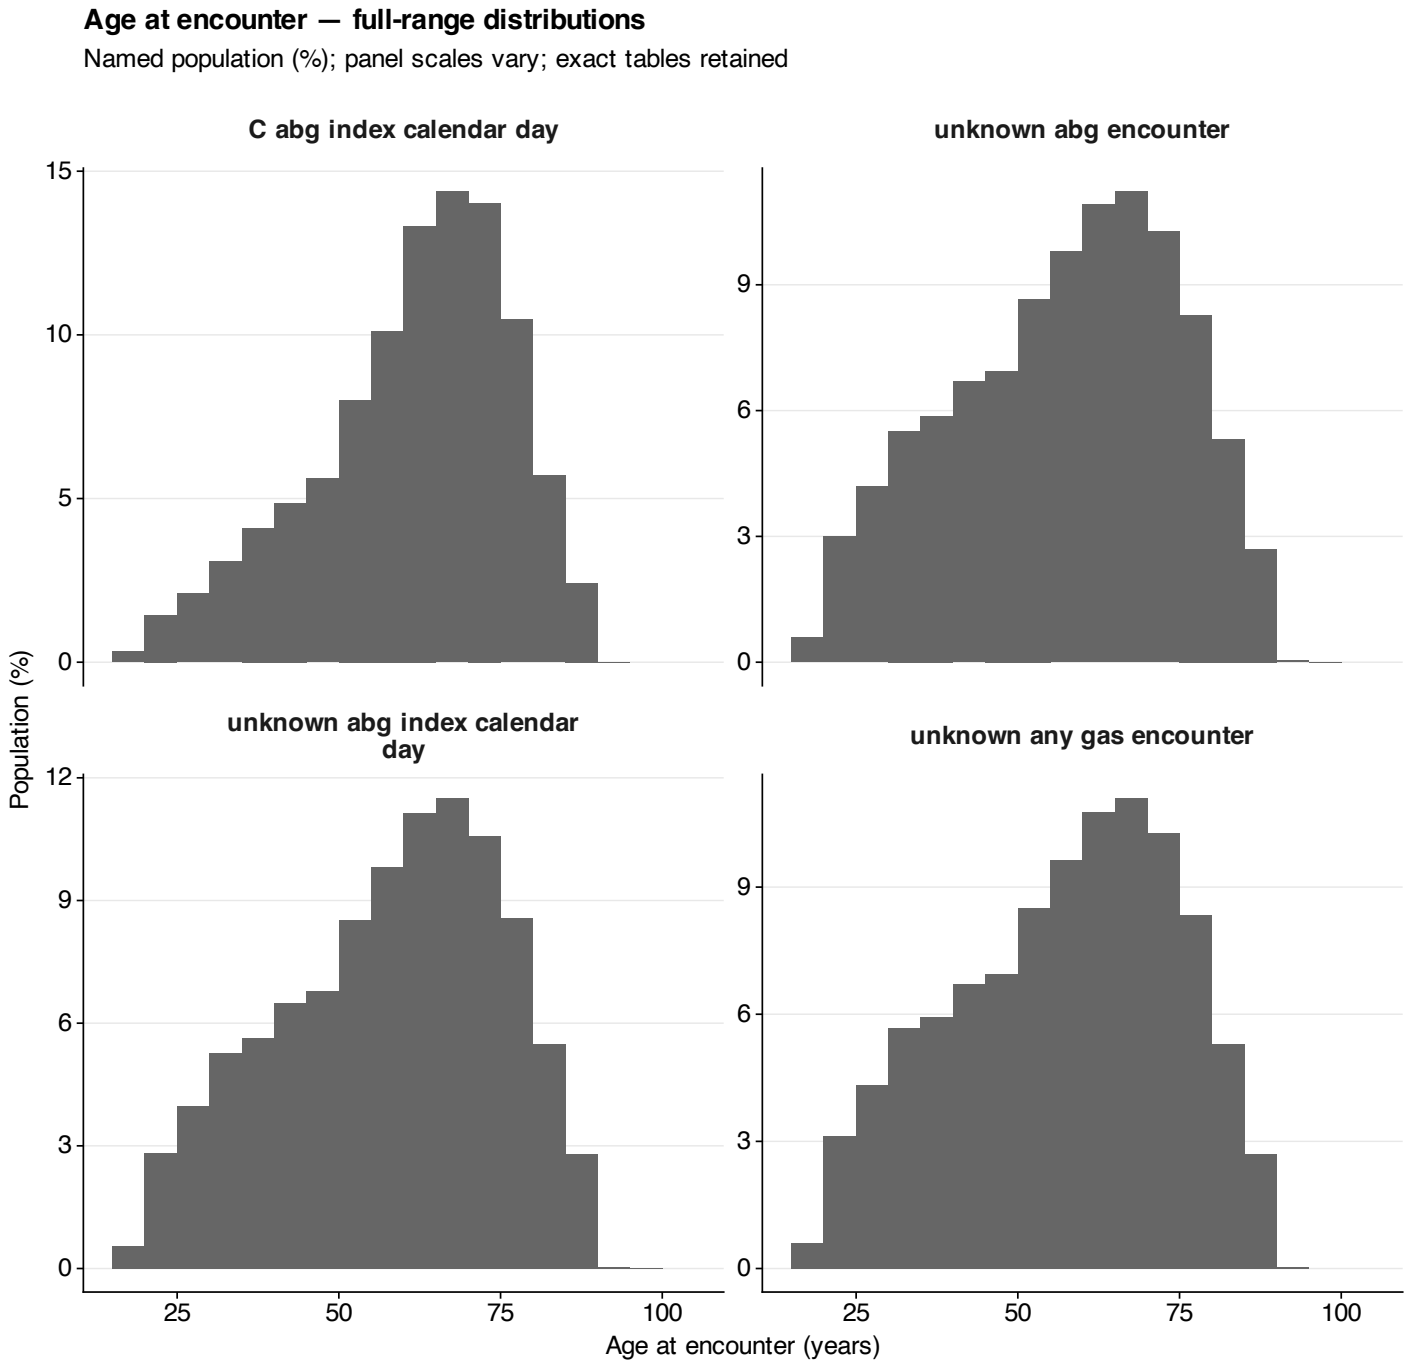

Figure 756: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete age_at_encounter stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

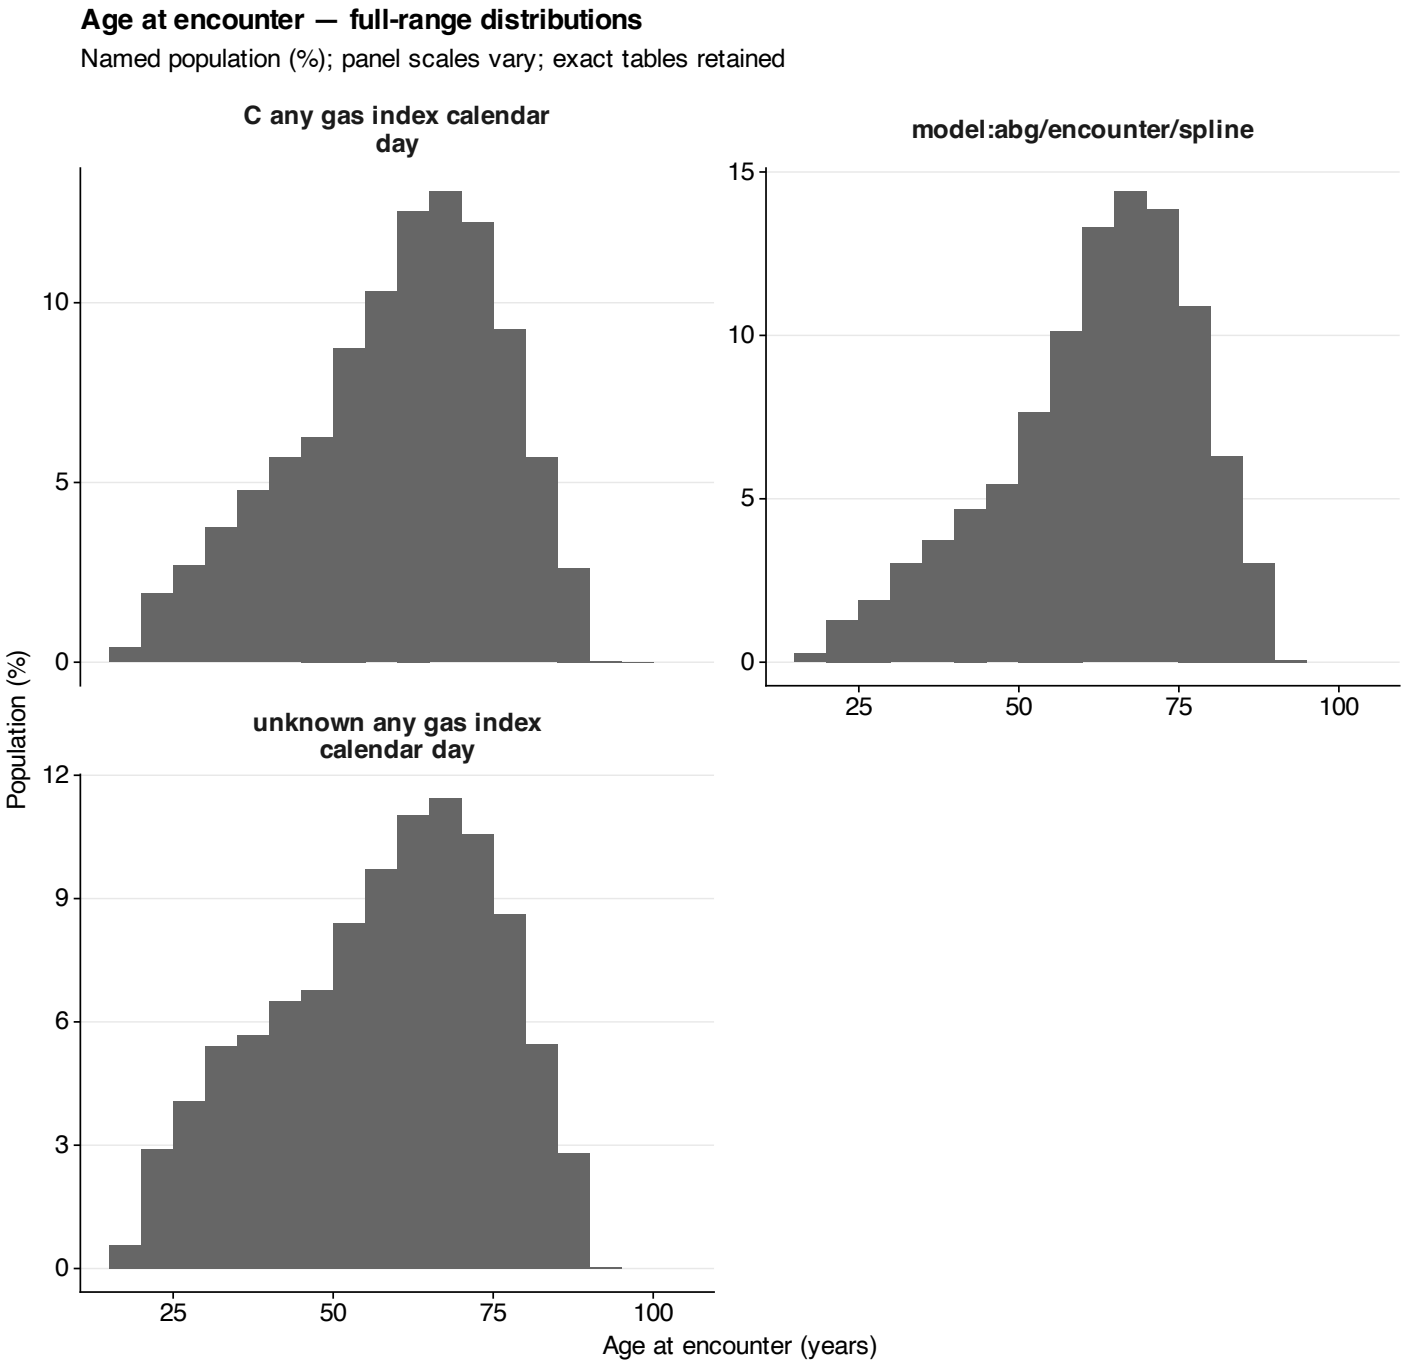

Figure 757: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete age_at_encounter stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

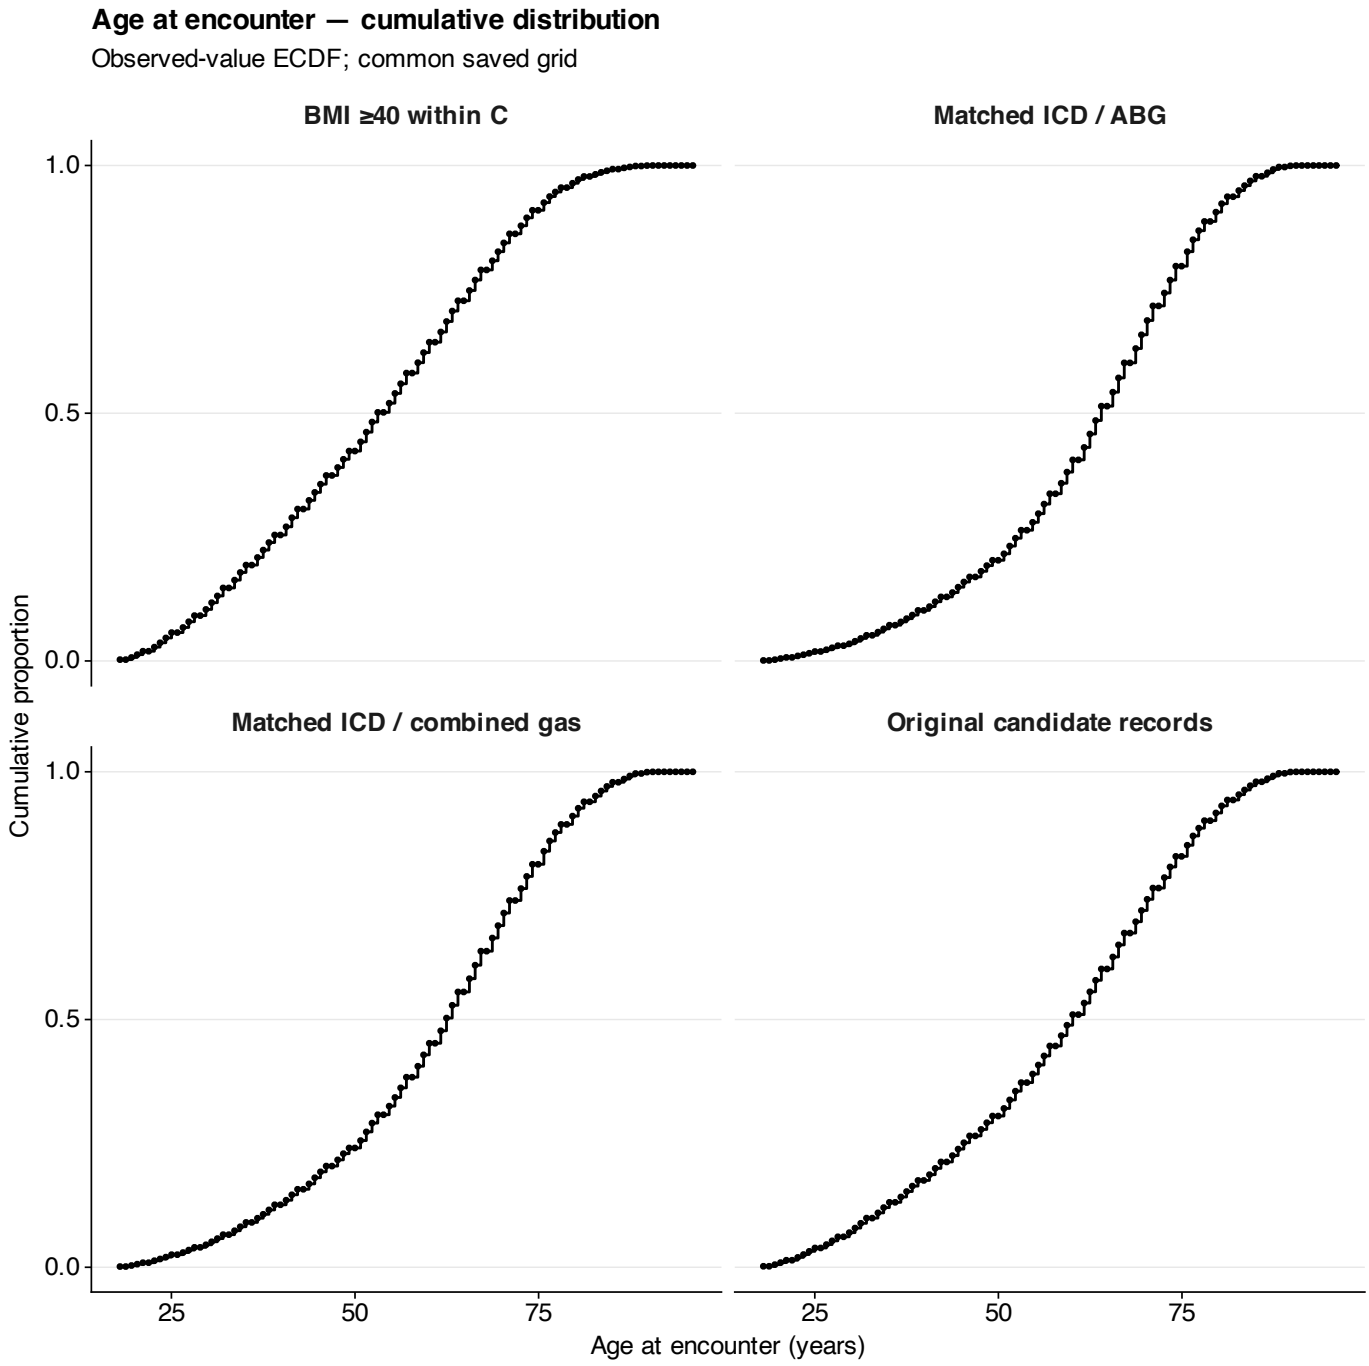

Figure 758: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. age_at_encounter ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

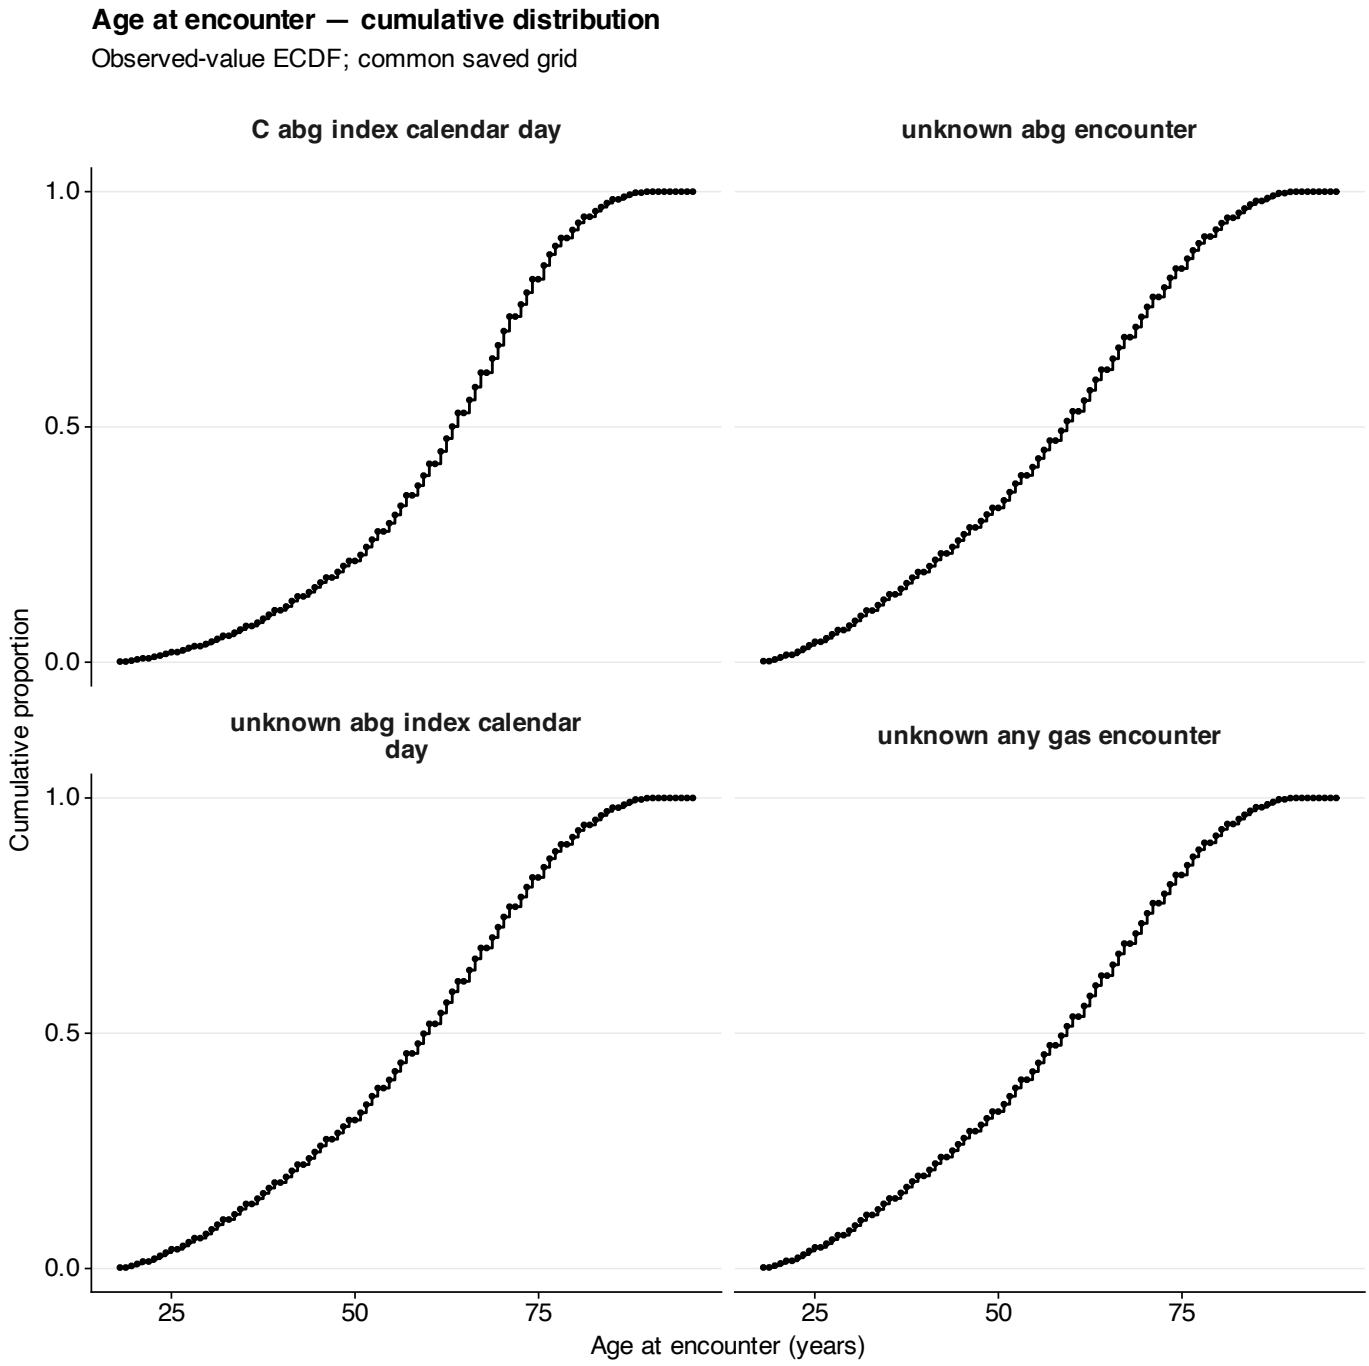

Figure 759: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. age_at_encounter ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

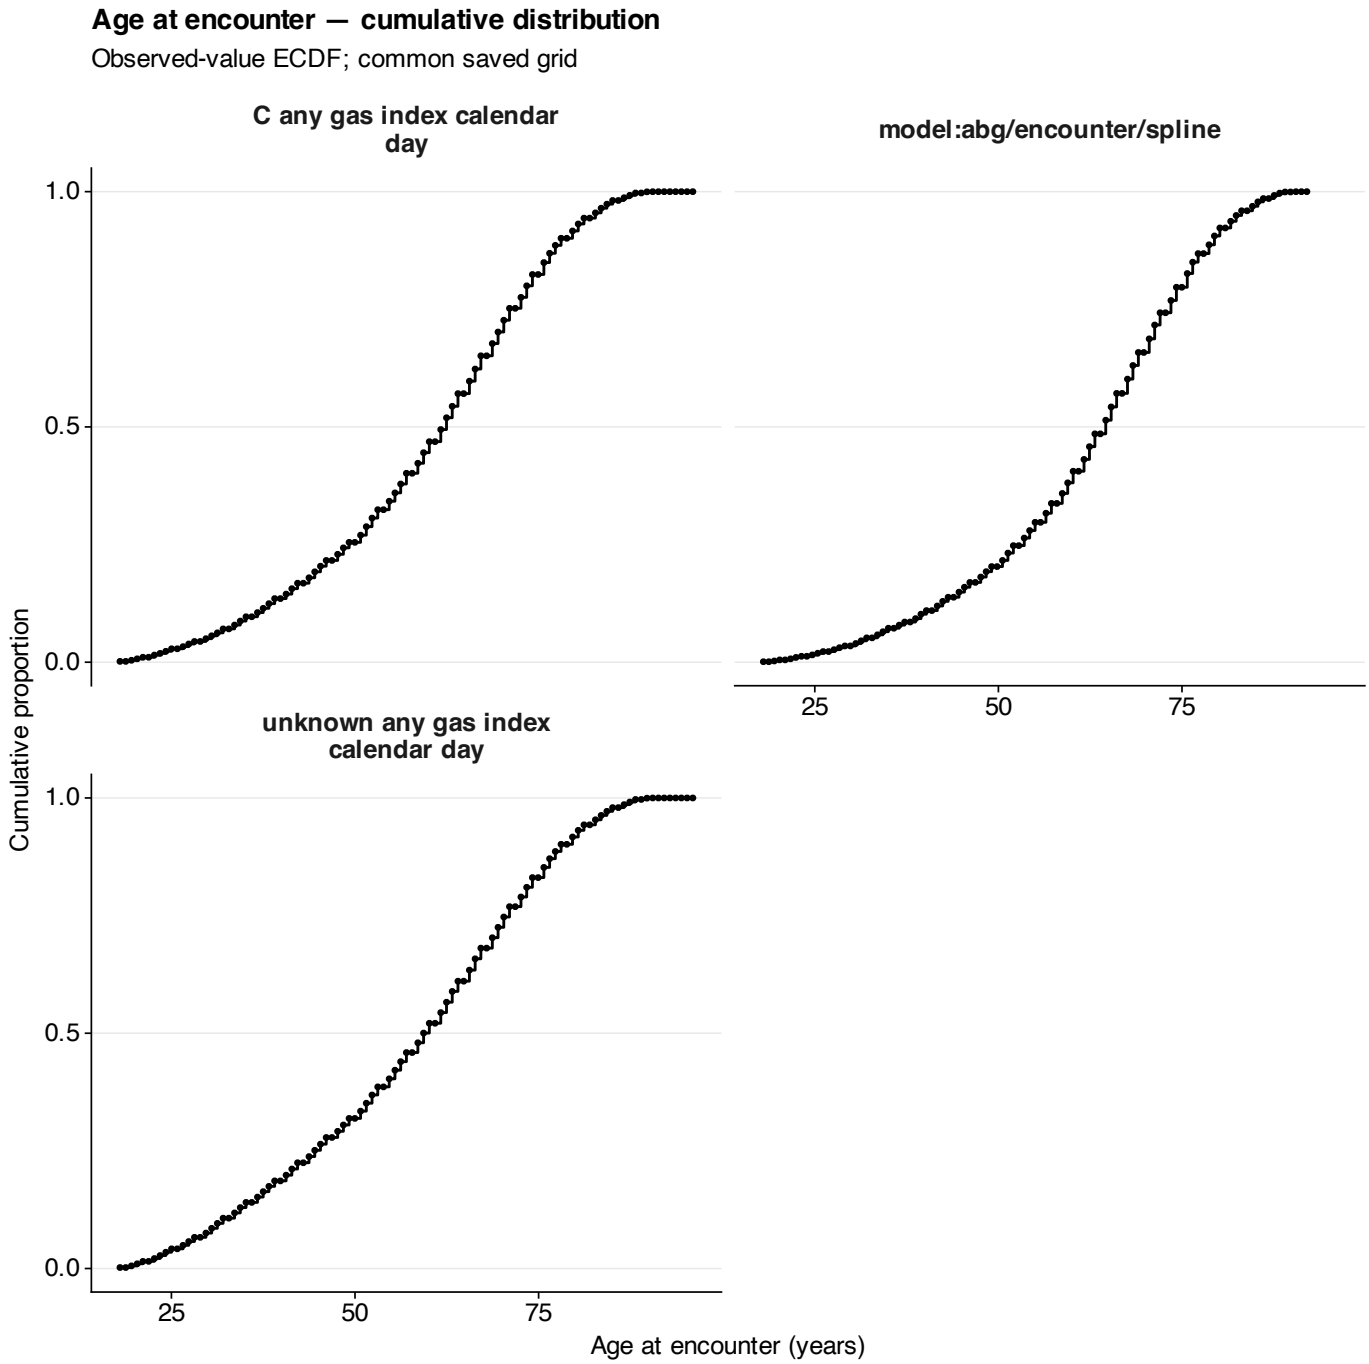

Figure 760: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. age_at_encounter ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

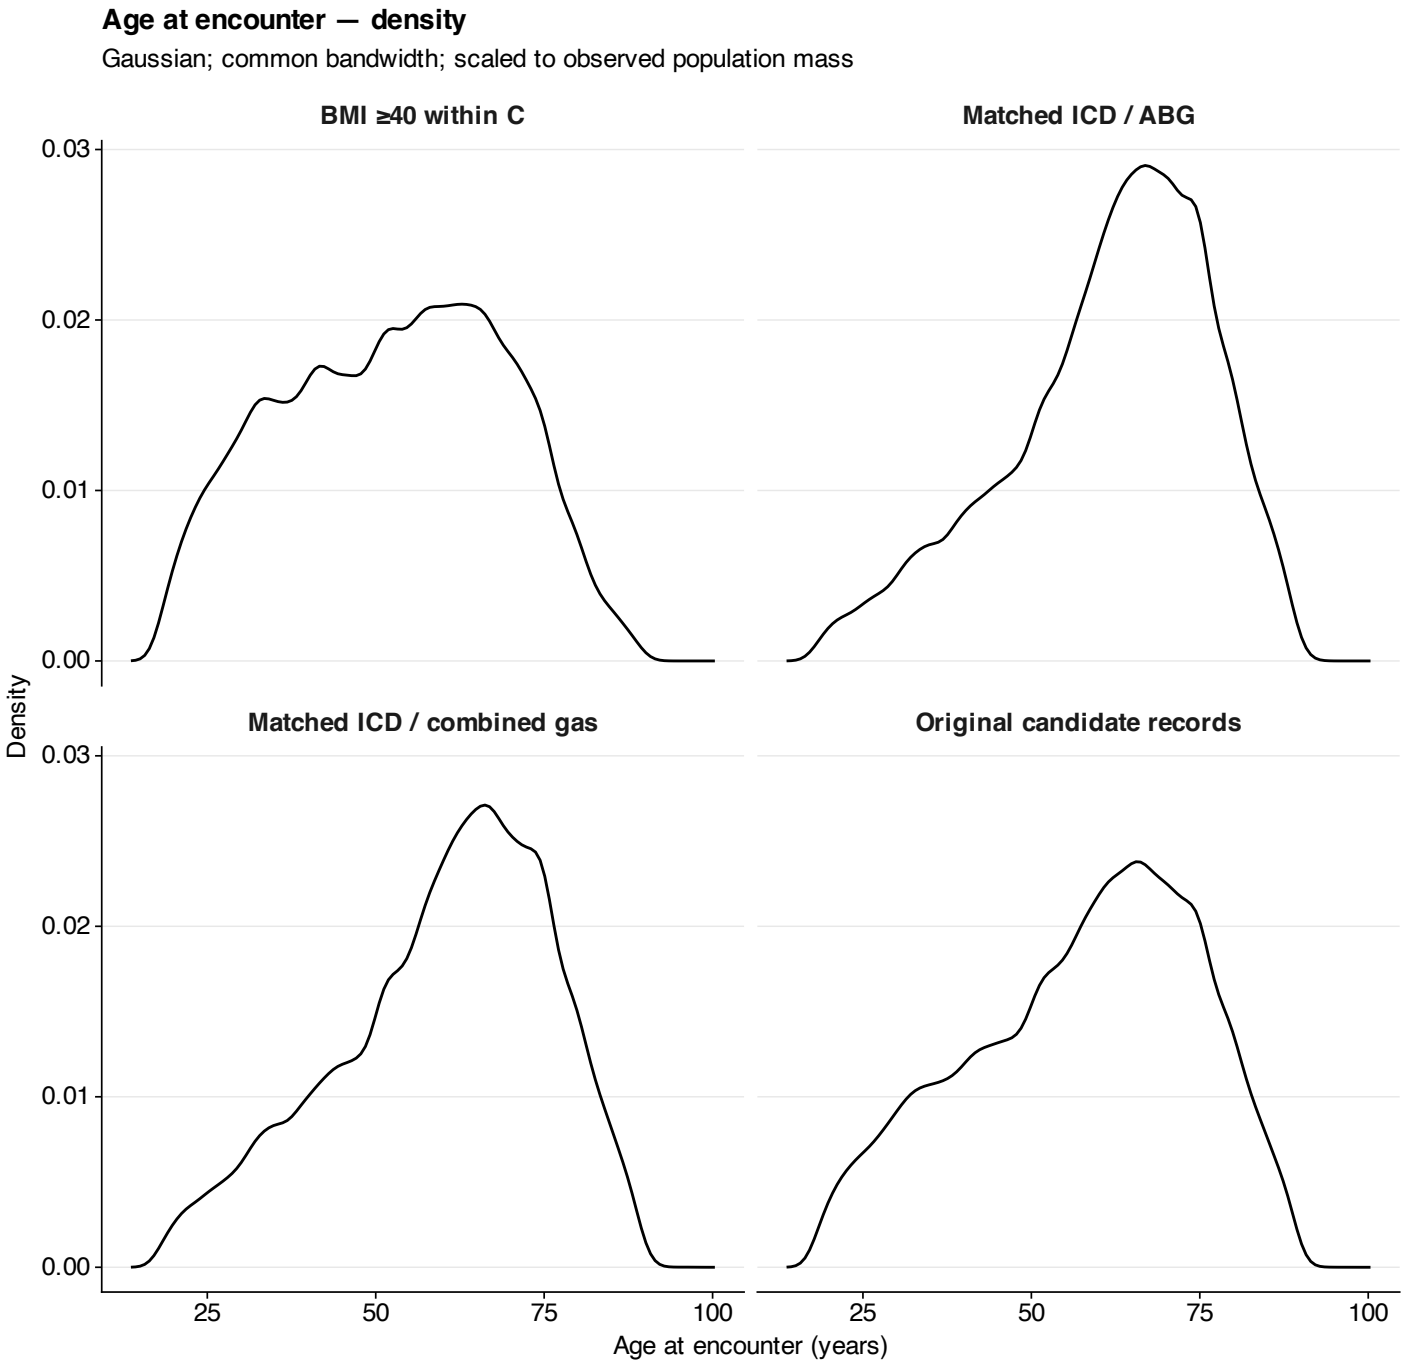

Figure 761: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. age_at_encounter kde across named stages; full coordinate export and normalization metadata in distribution_curves.

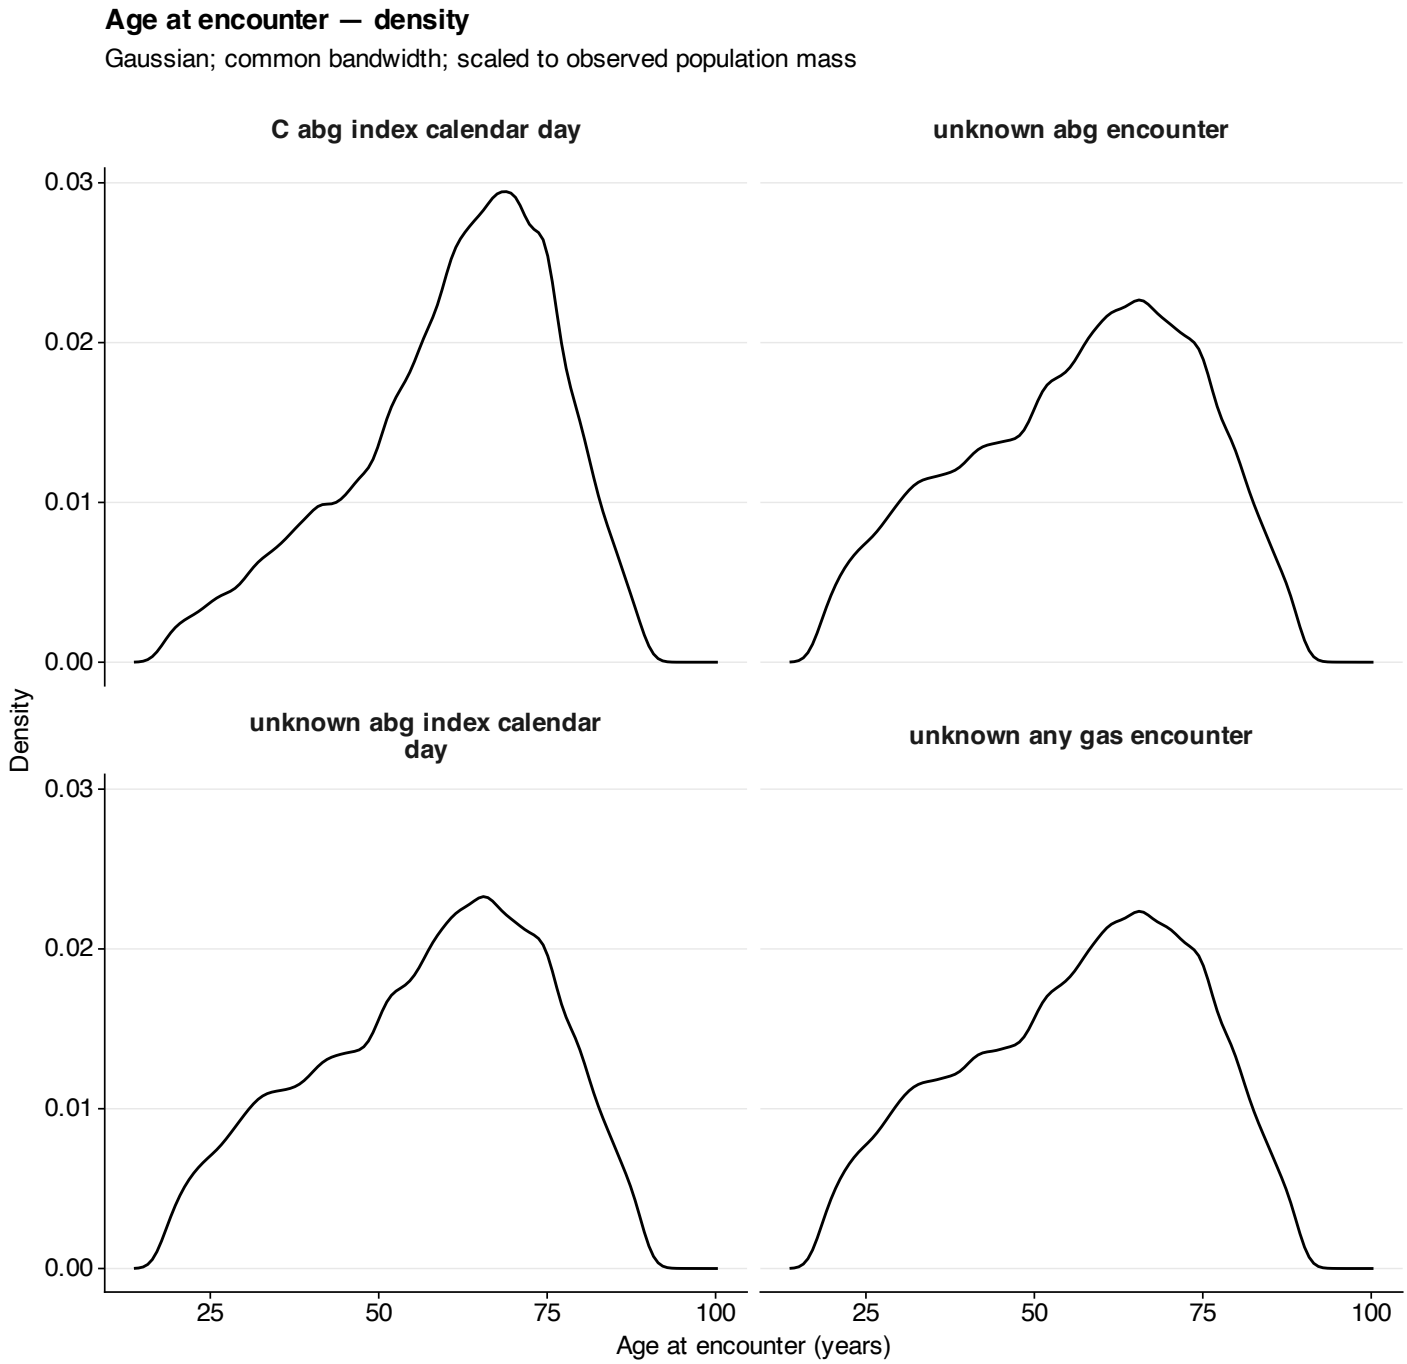

Figure 762: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. age_at_encounter kde across named stages; full coordinate export and normalization metadata in distribution_curves.

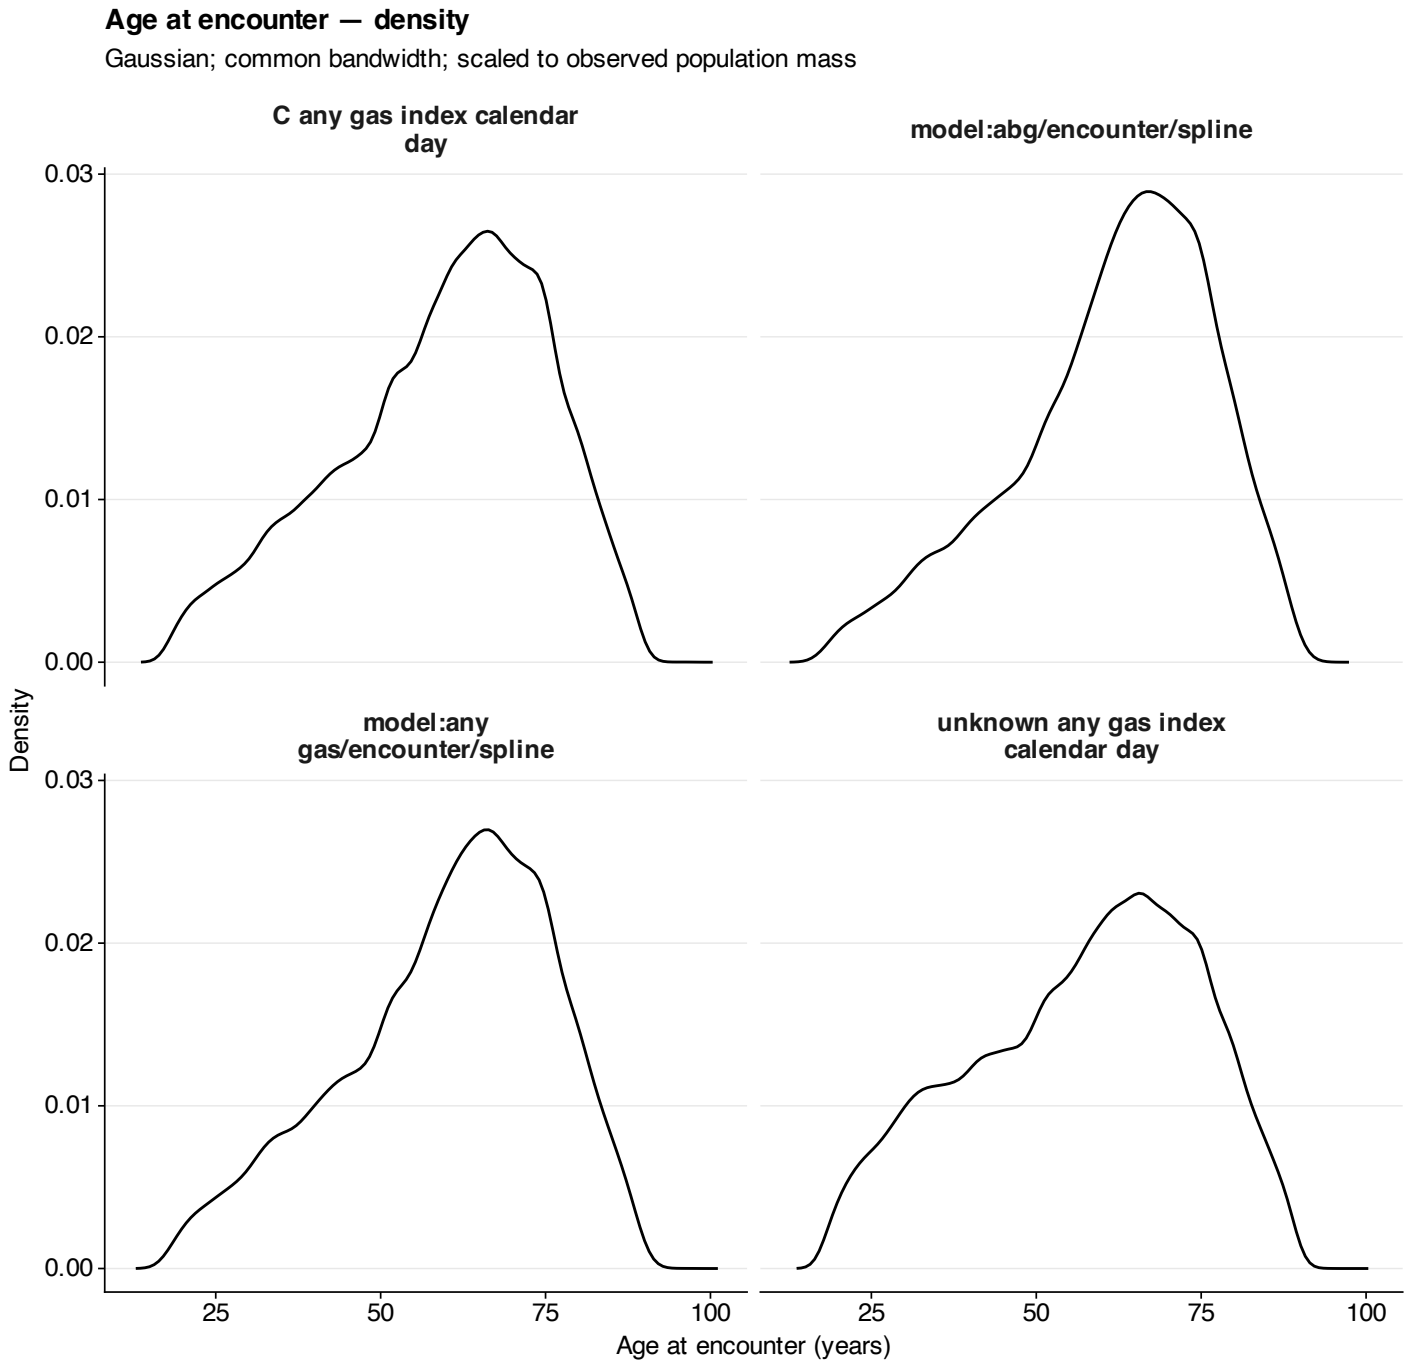

Figure 763: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. age_at_encounter kde across named stages; full coordinate export and normalization metadata in distribution_curves.

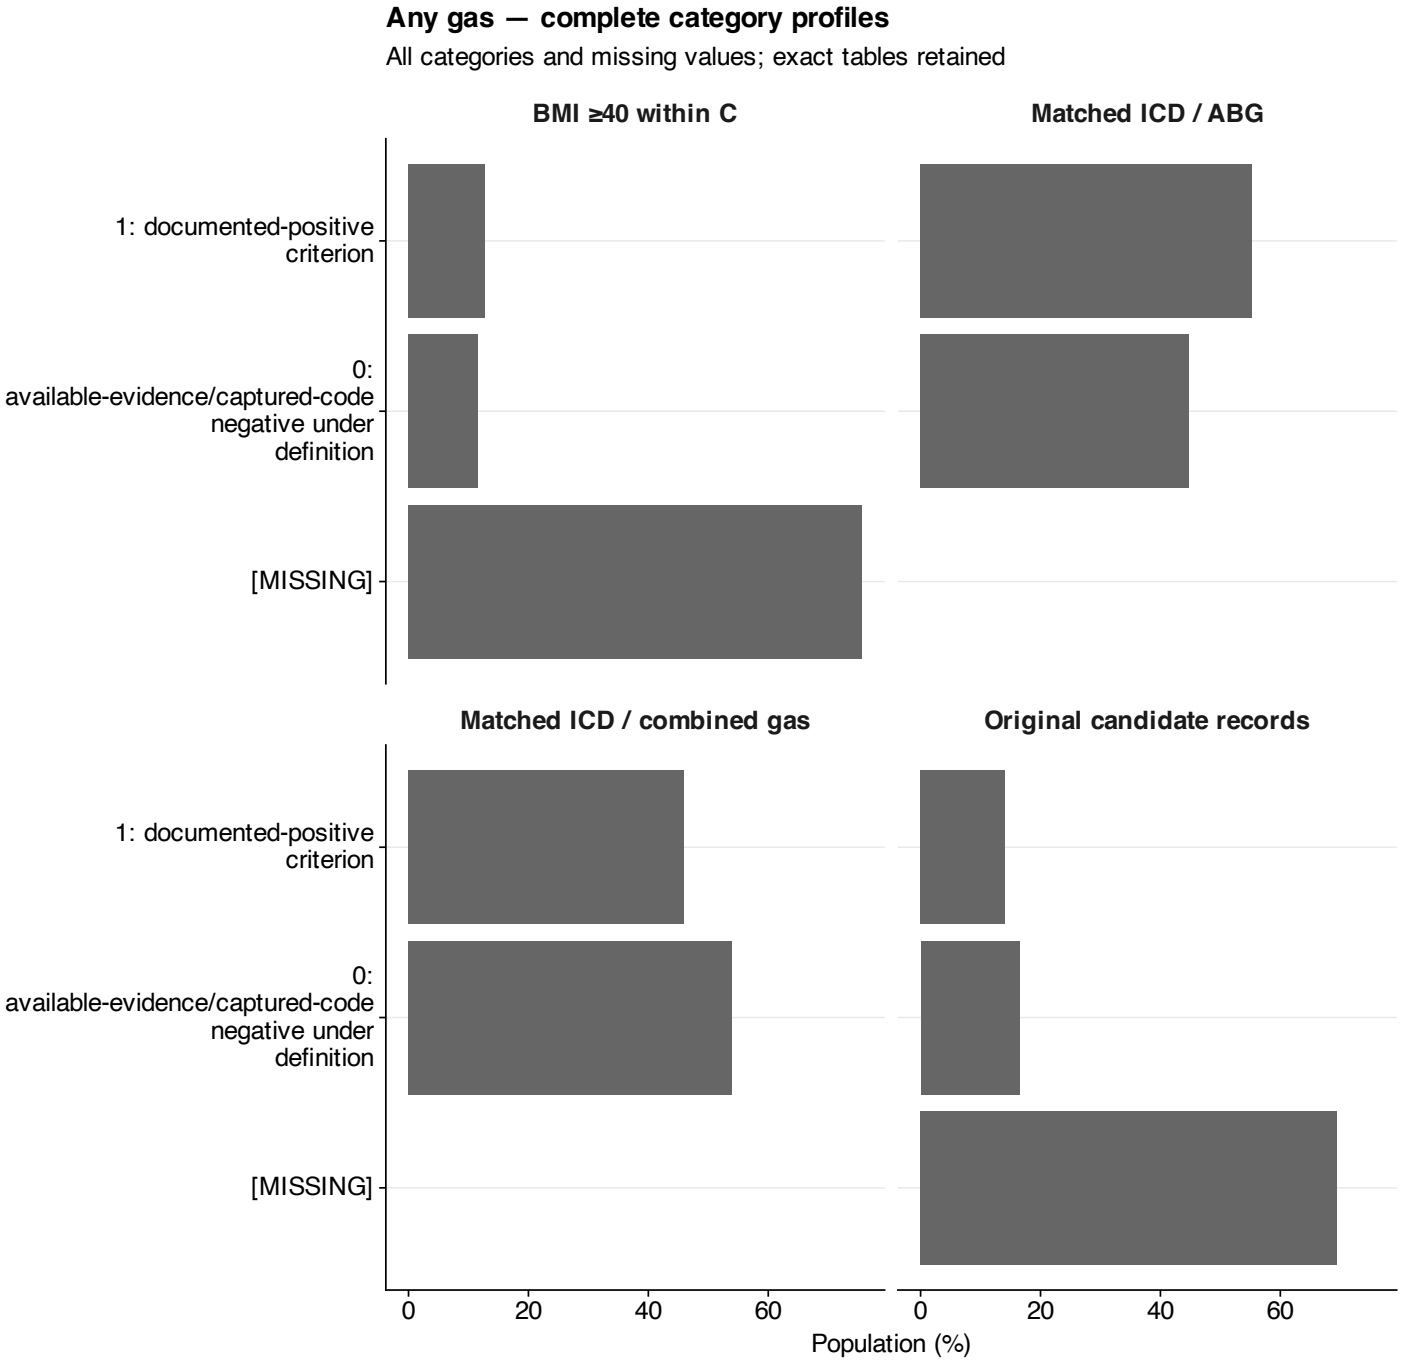

Figure 764: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete any_gas stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

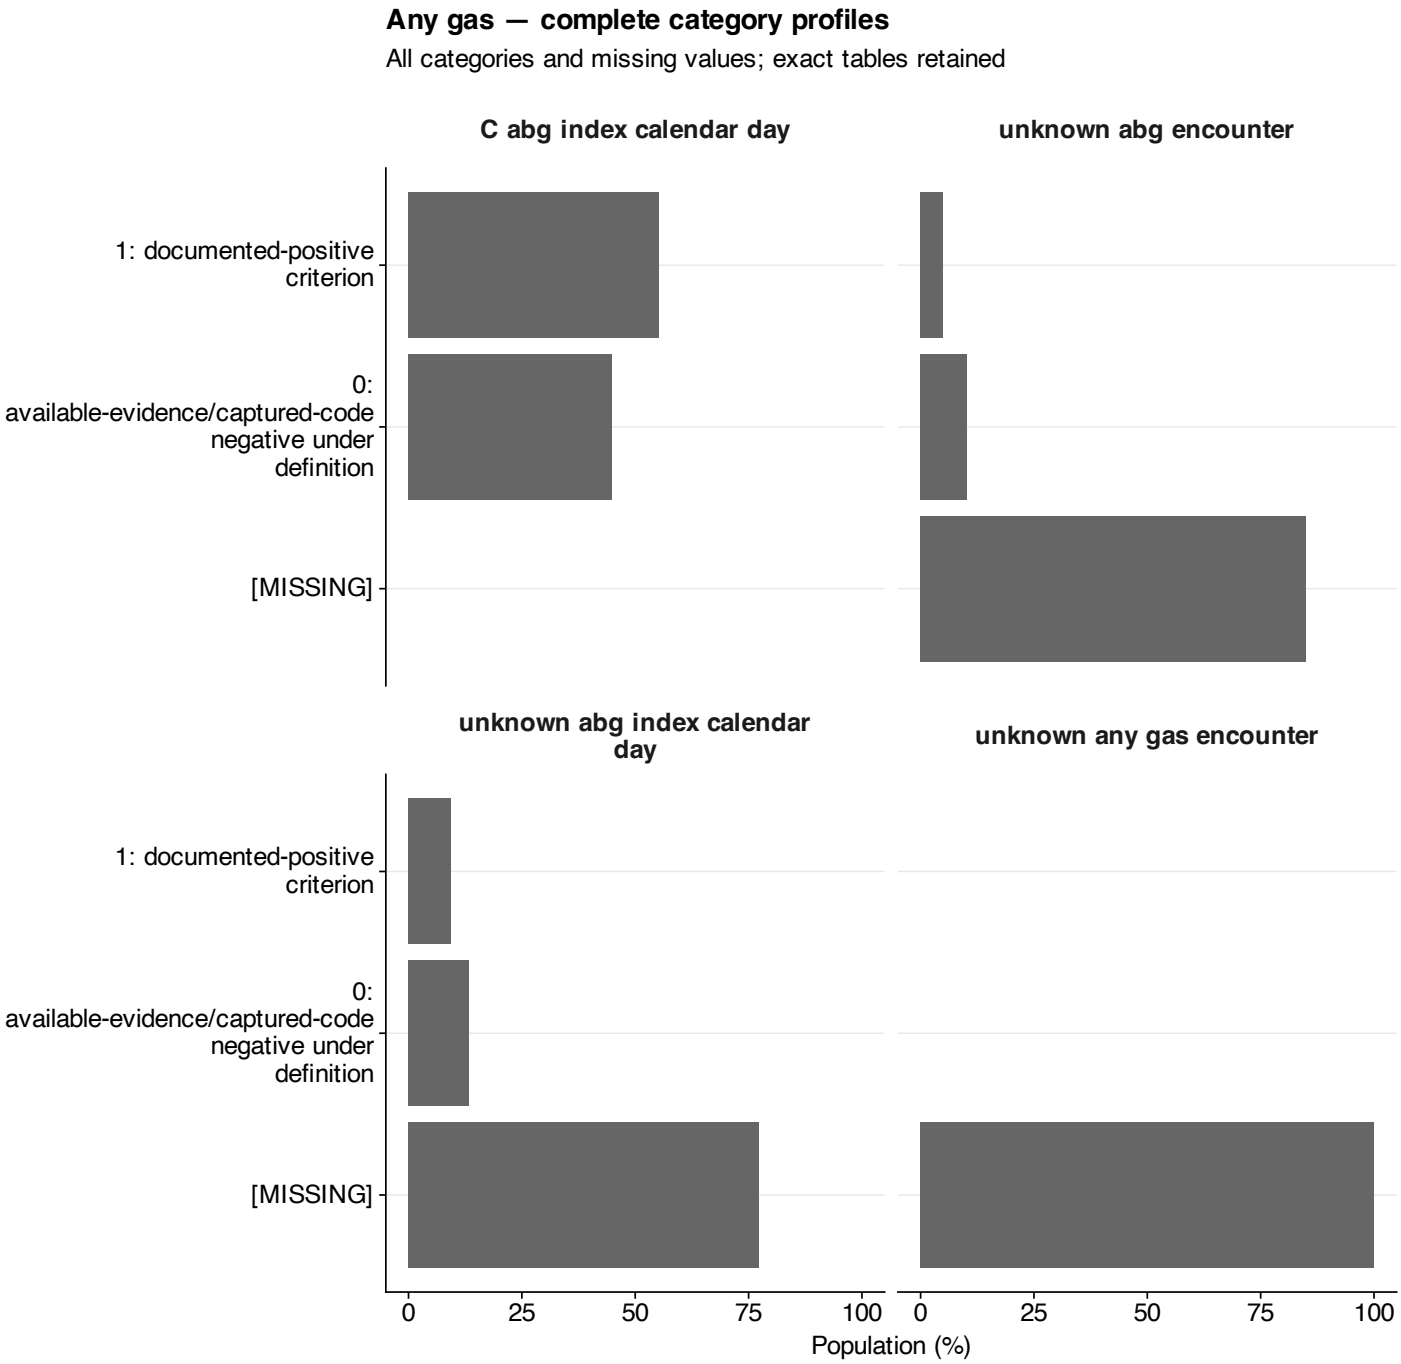

Figure 765: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete any_gas stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

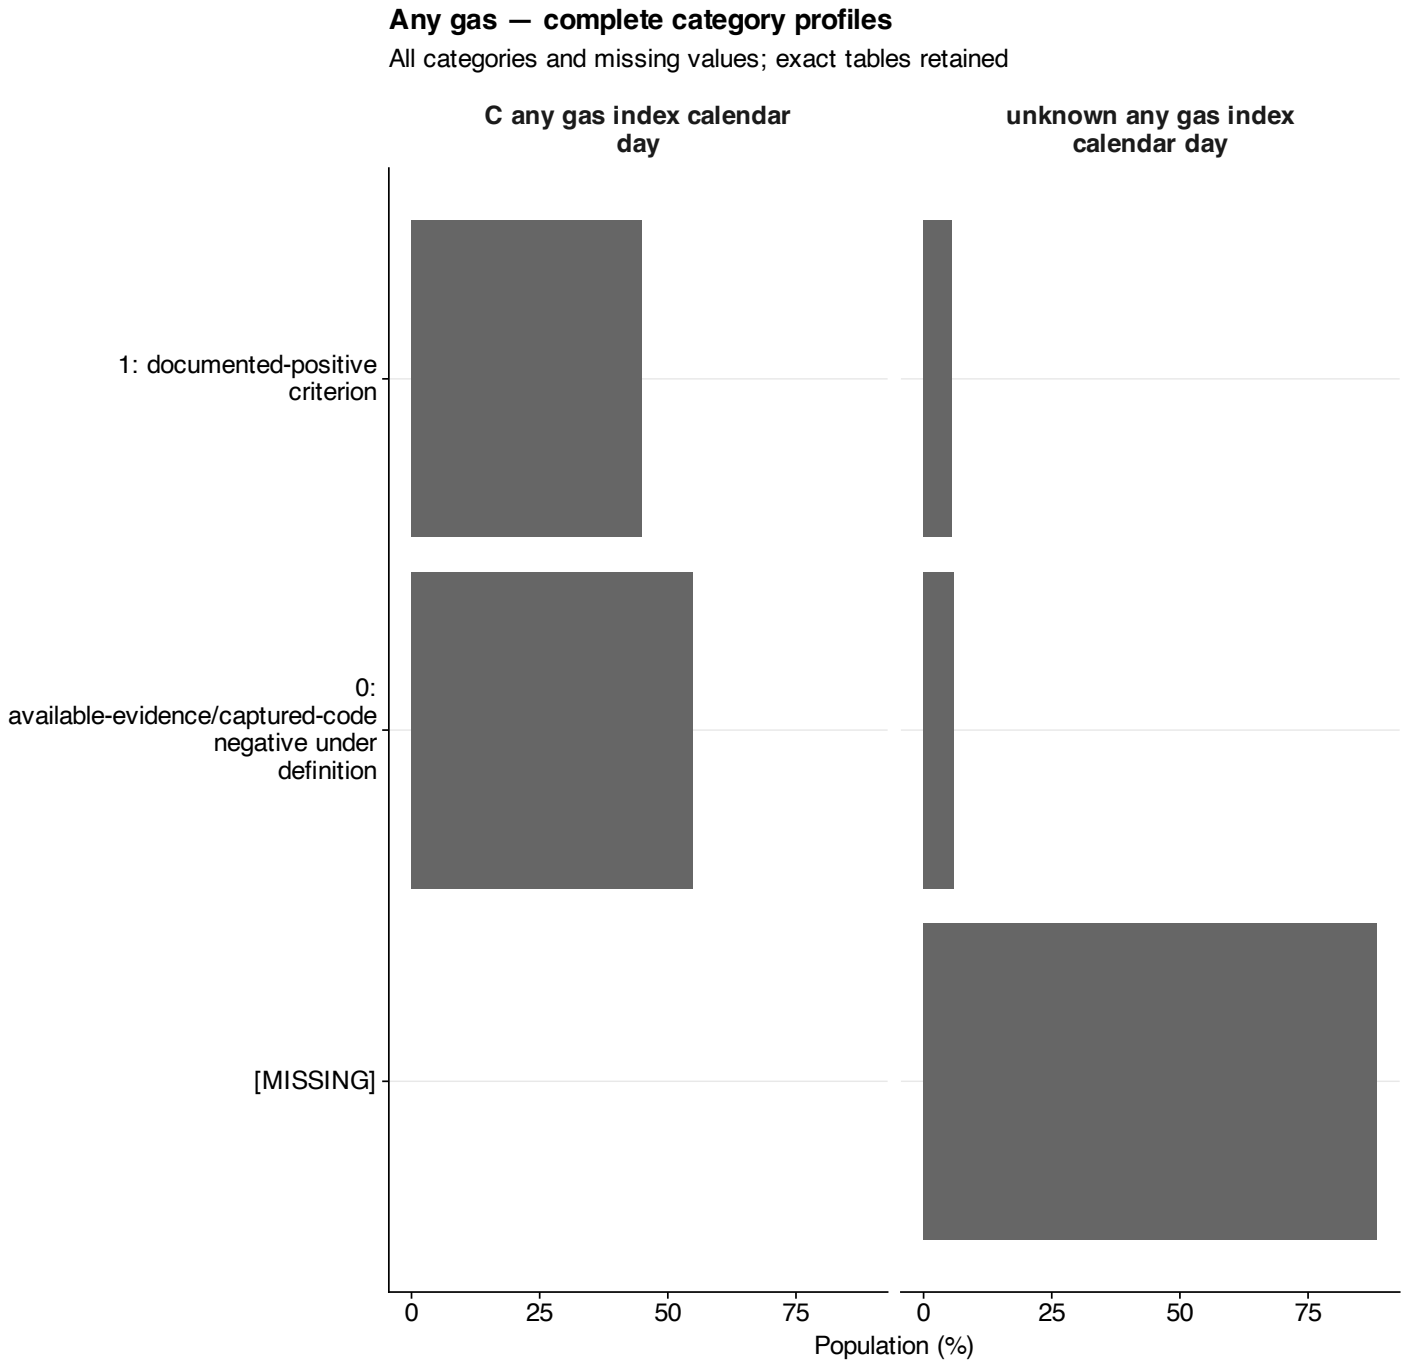

Figure 766: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete any_gas stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

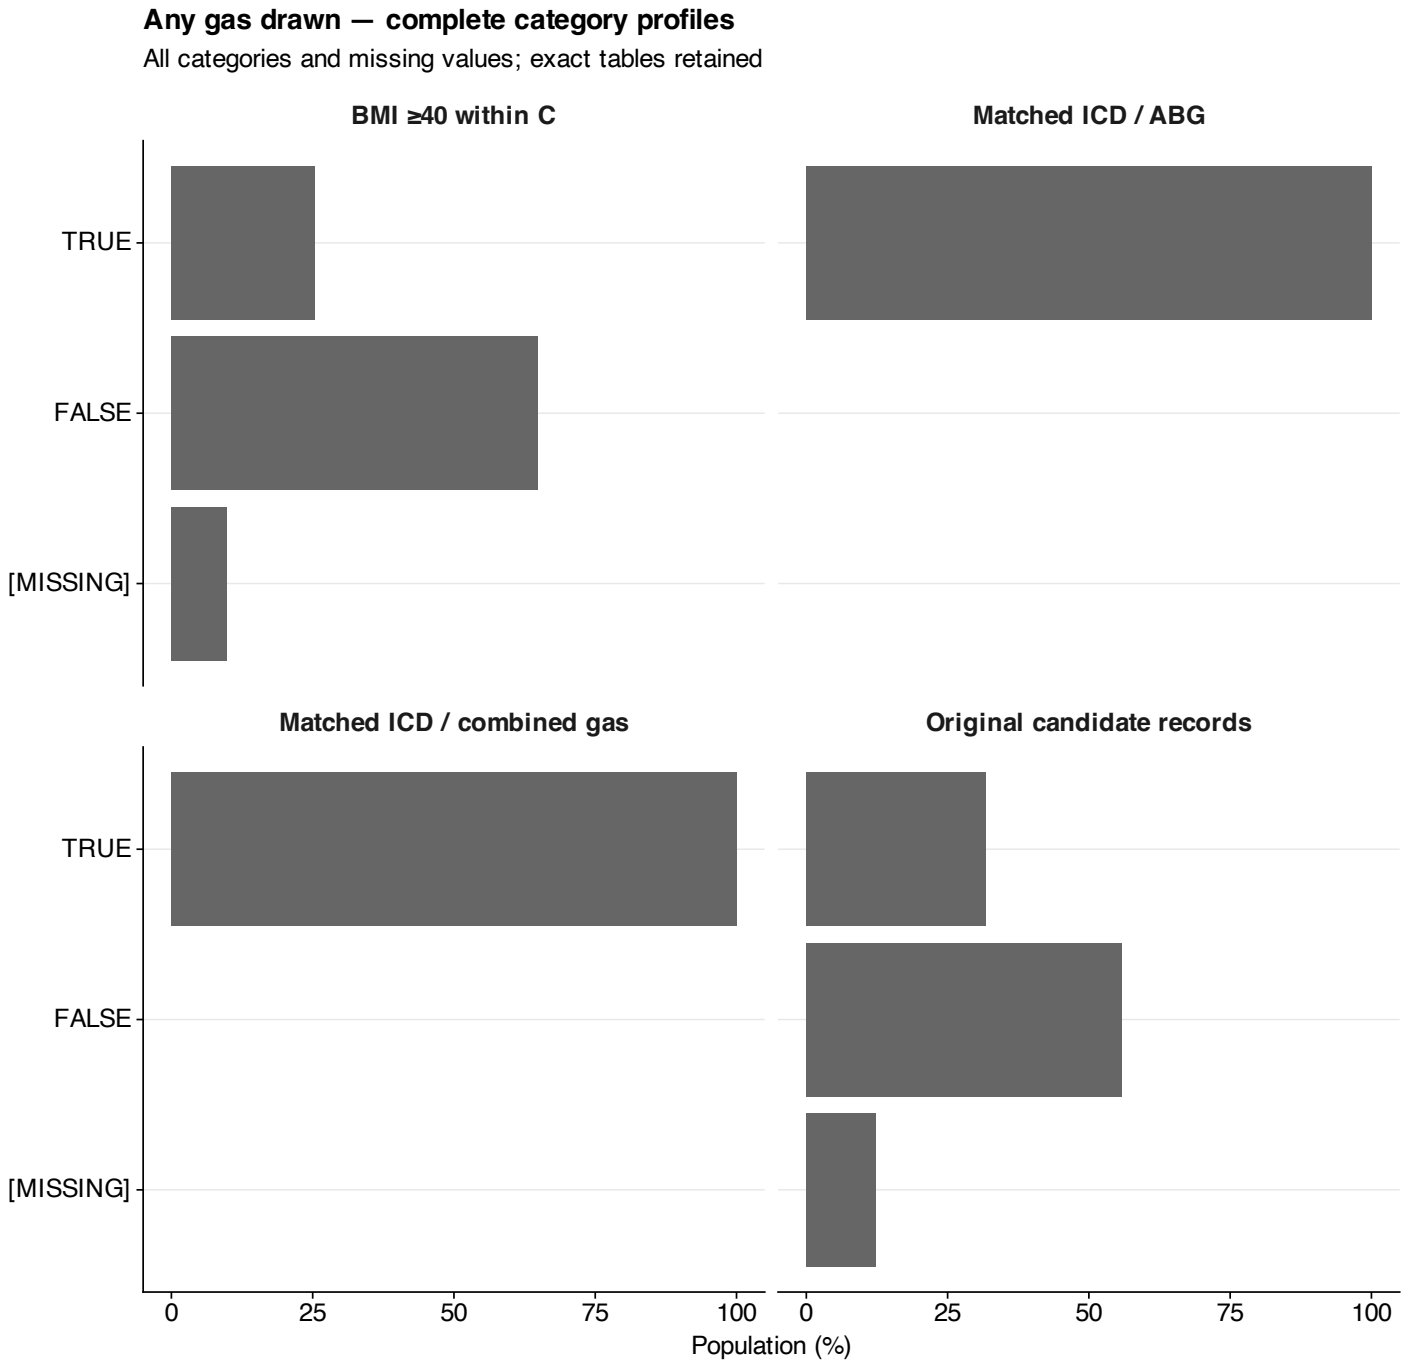

Figure 767: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete any_gas_drawn stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

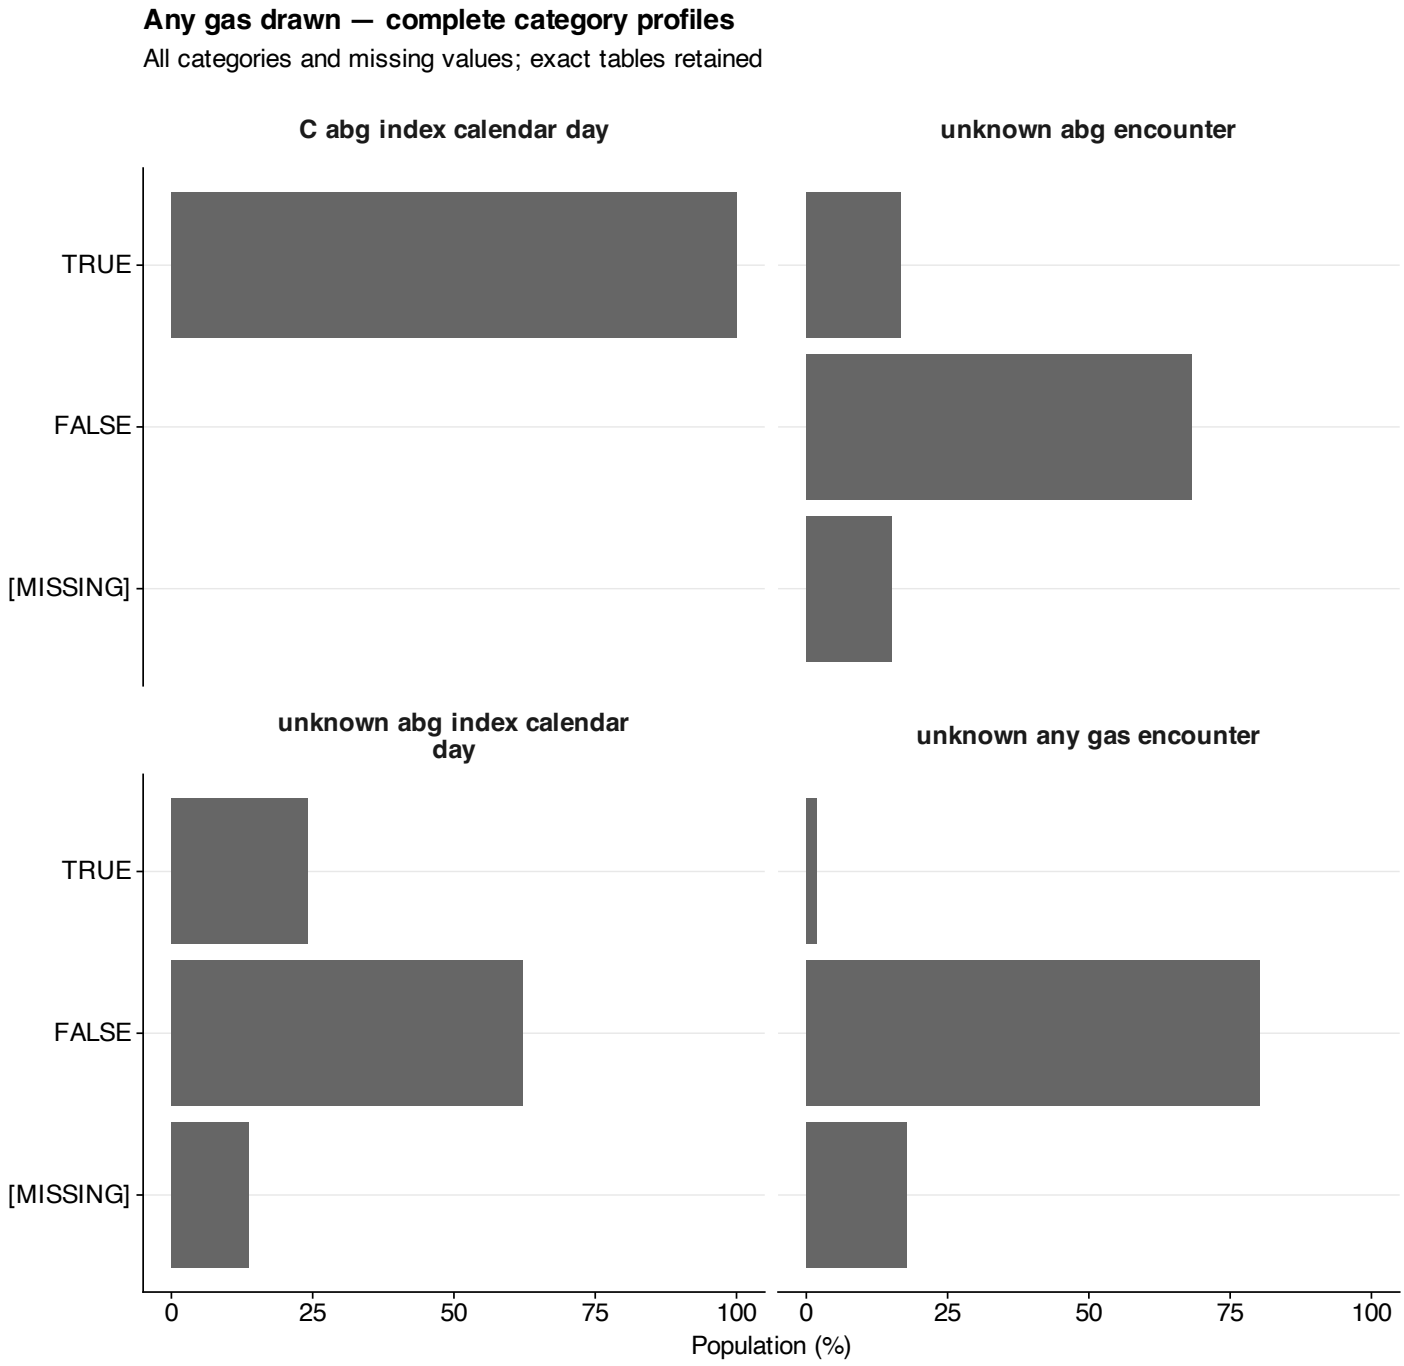

Figure 768: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete any_gas_drawn stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

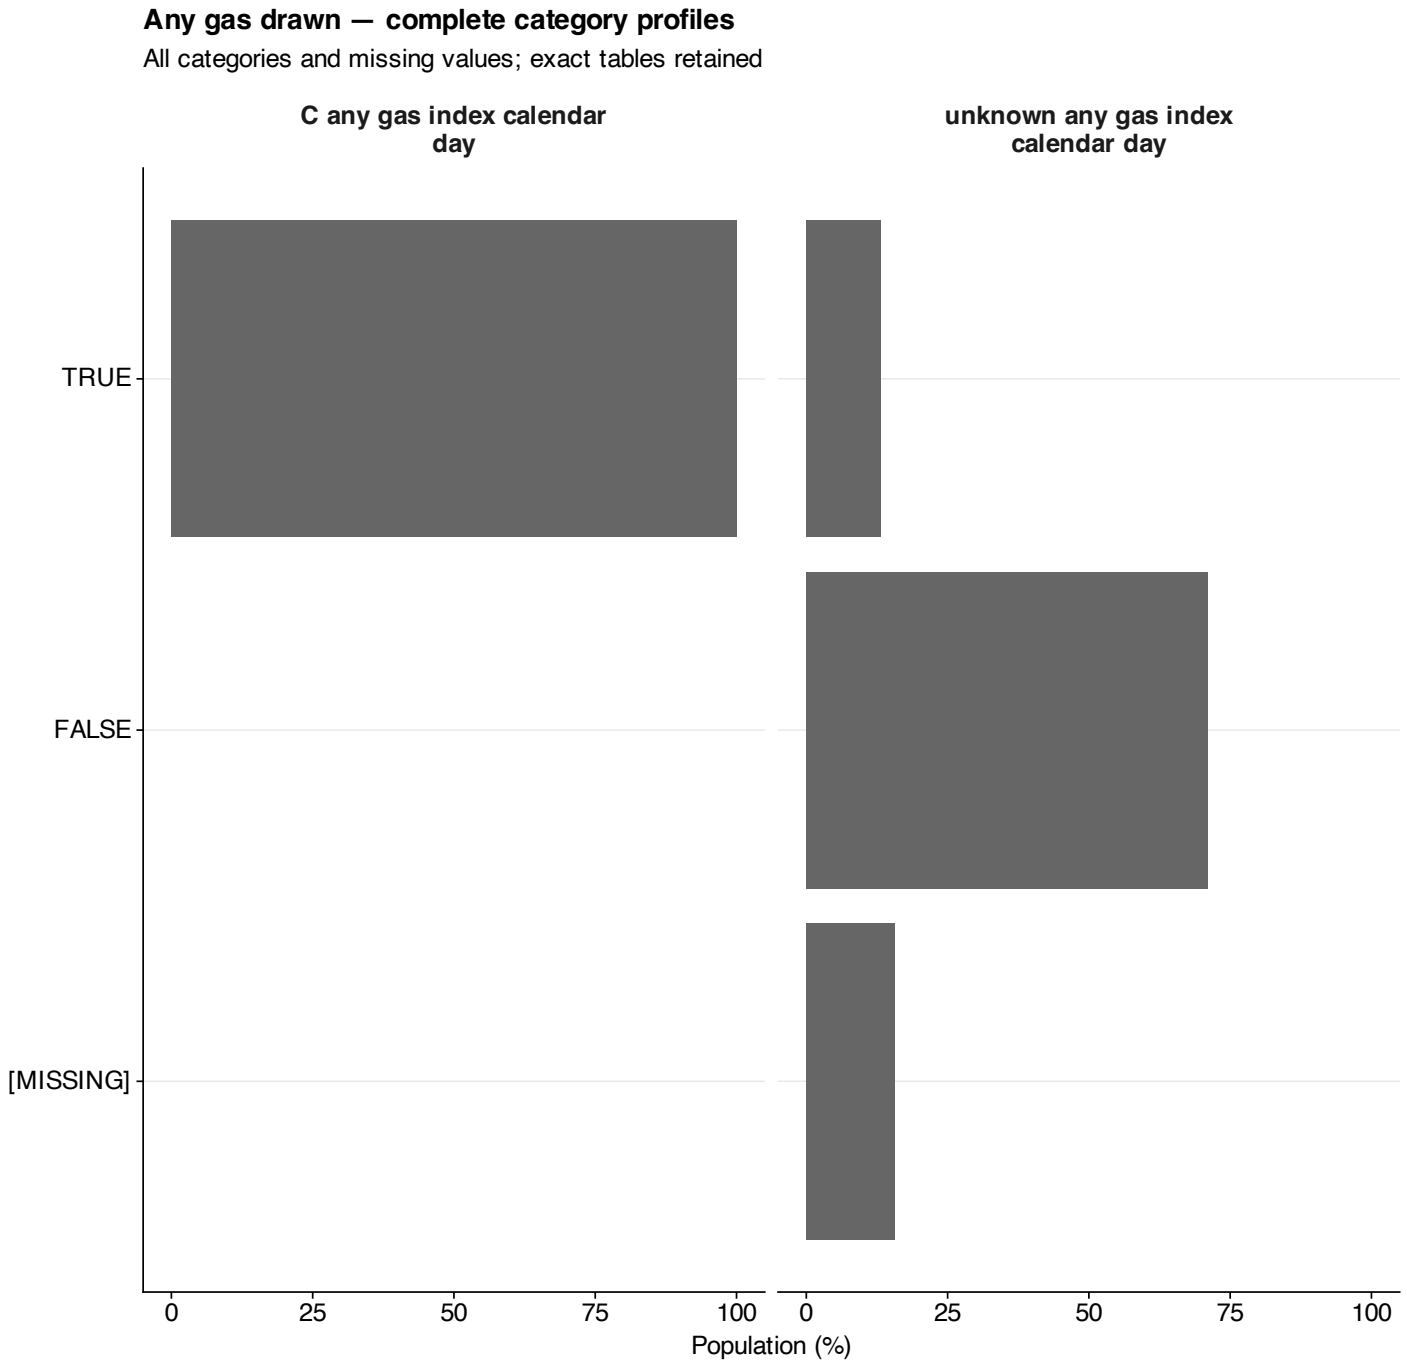

Figure 769: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete any_gas_drawn stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

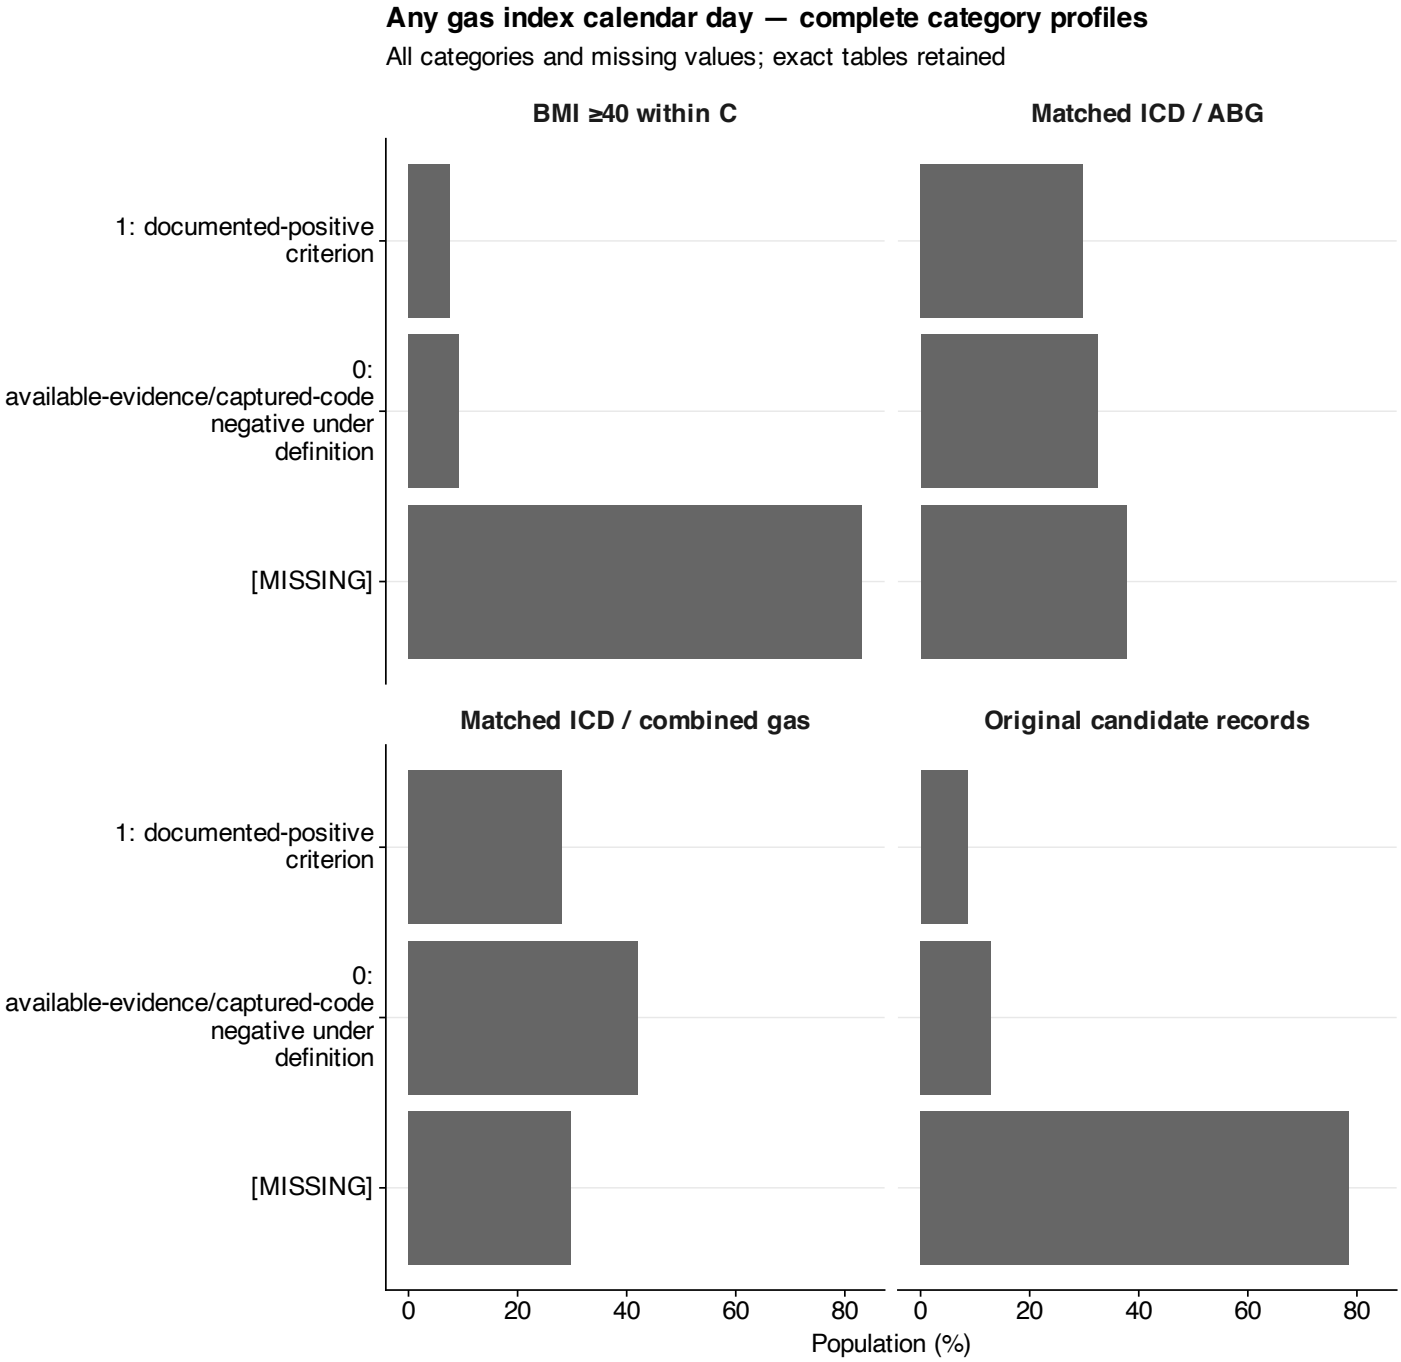

Figure 770: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete any_gas_index_calendar_day stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

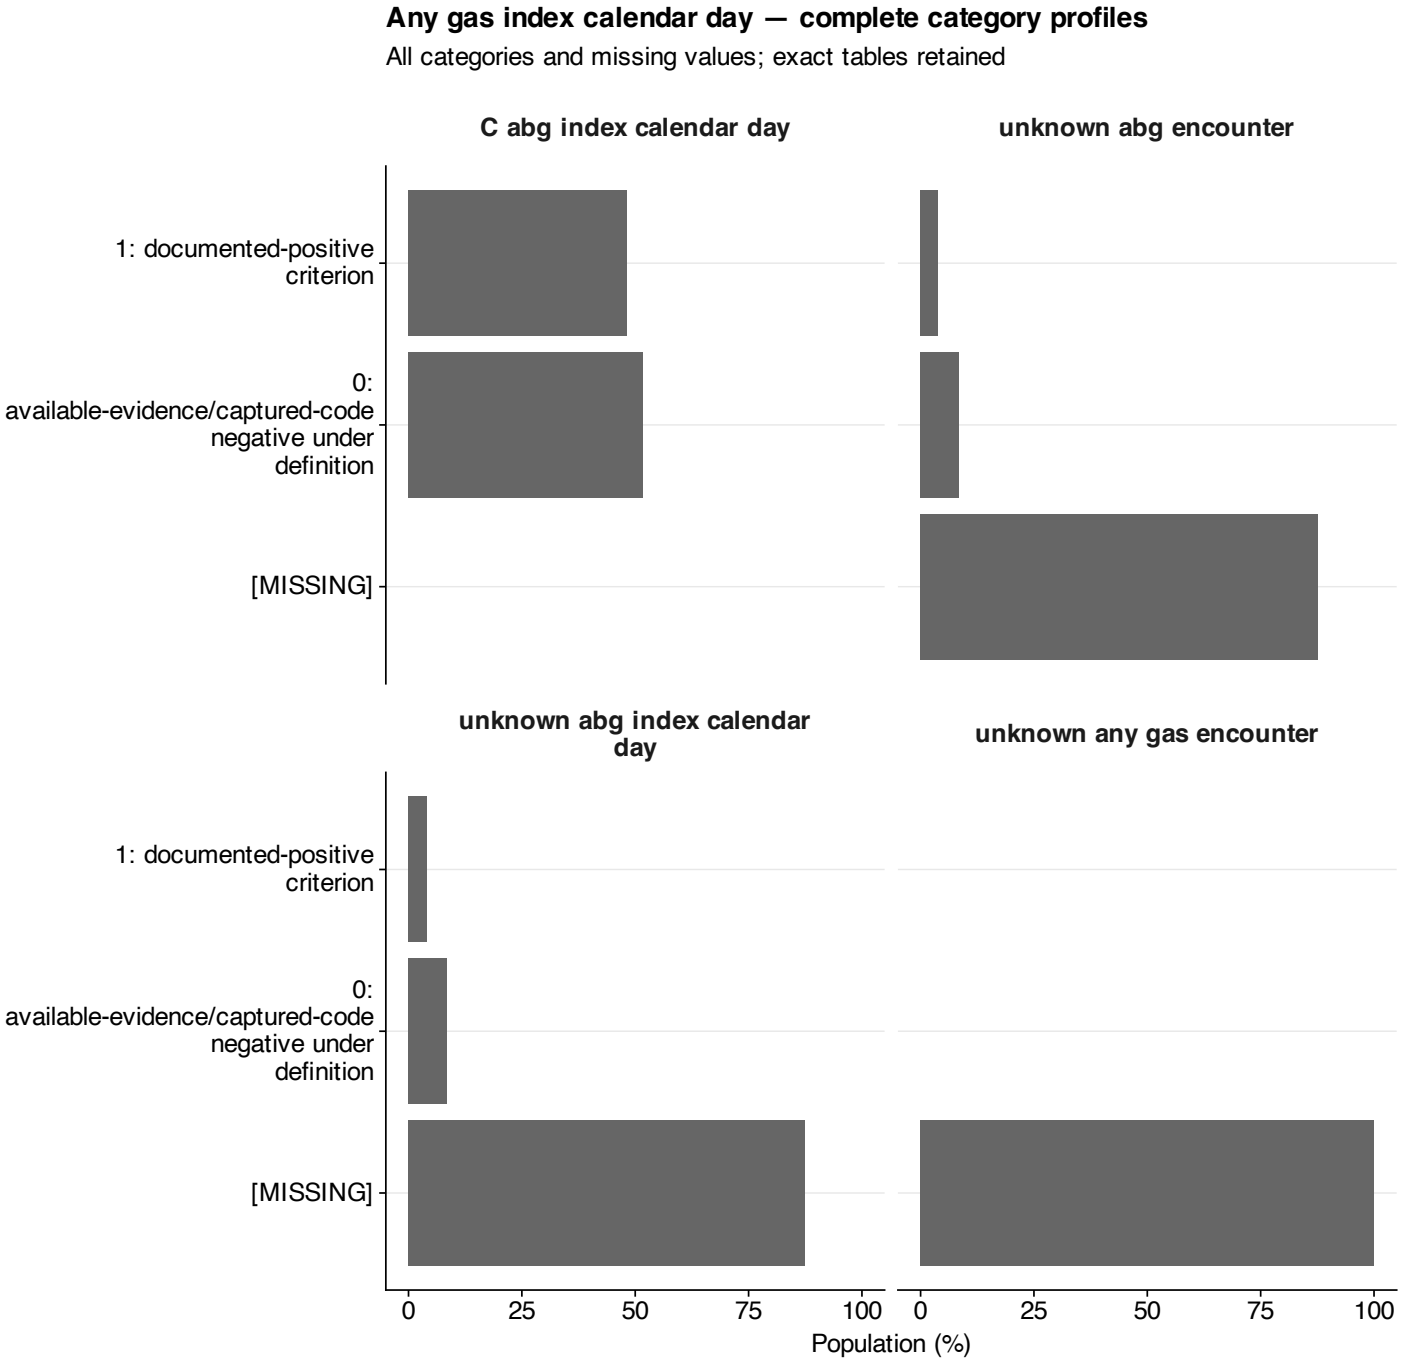

Figure 771: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete any_gas_index_calendar_day stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

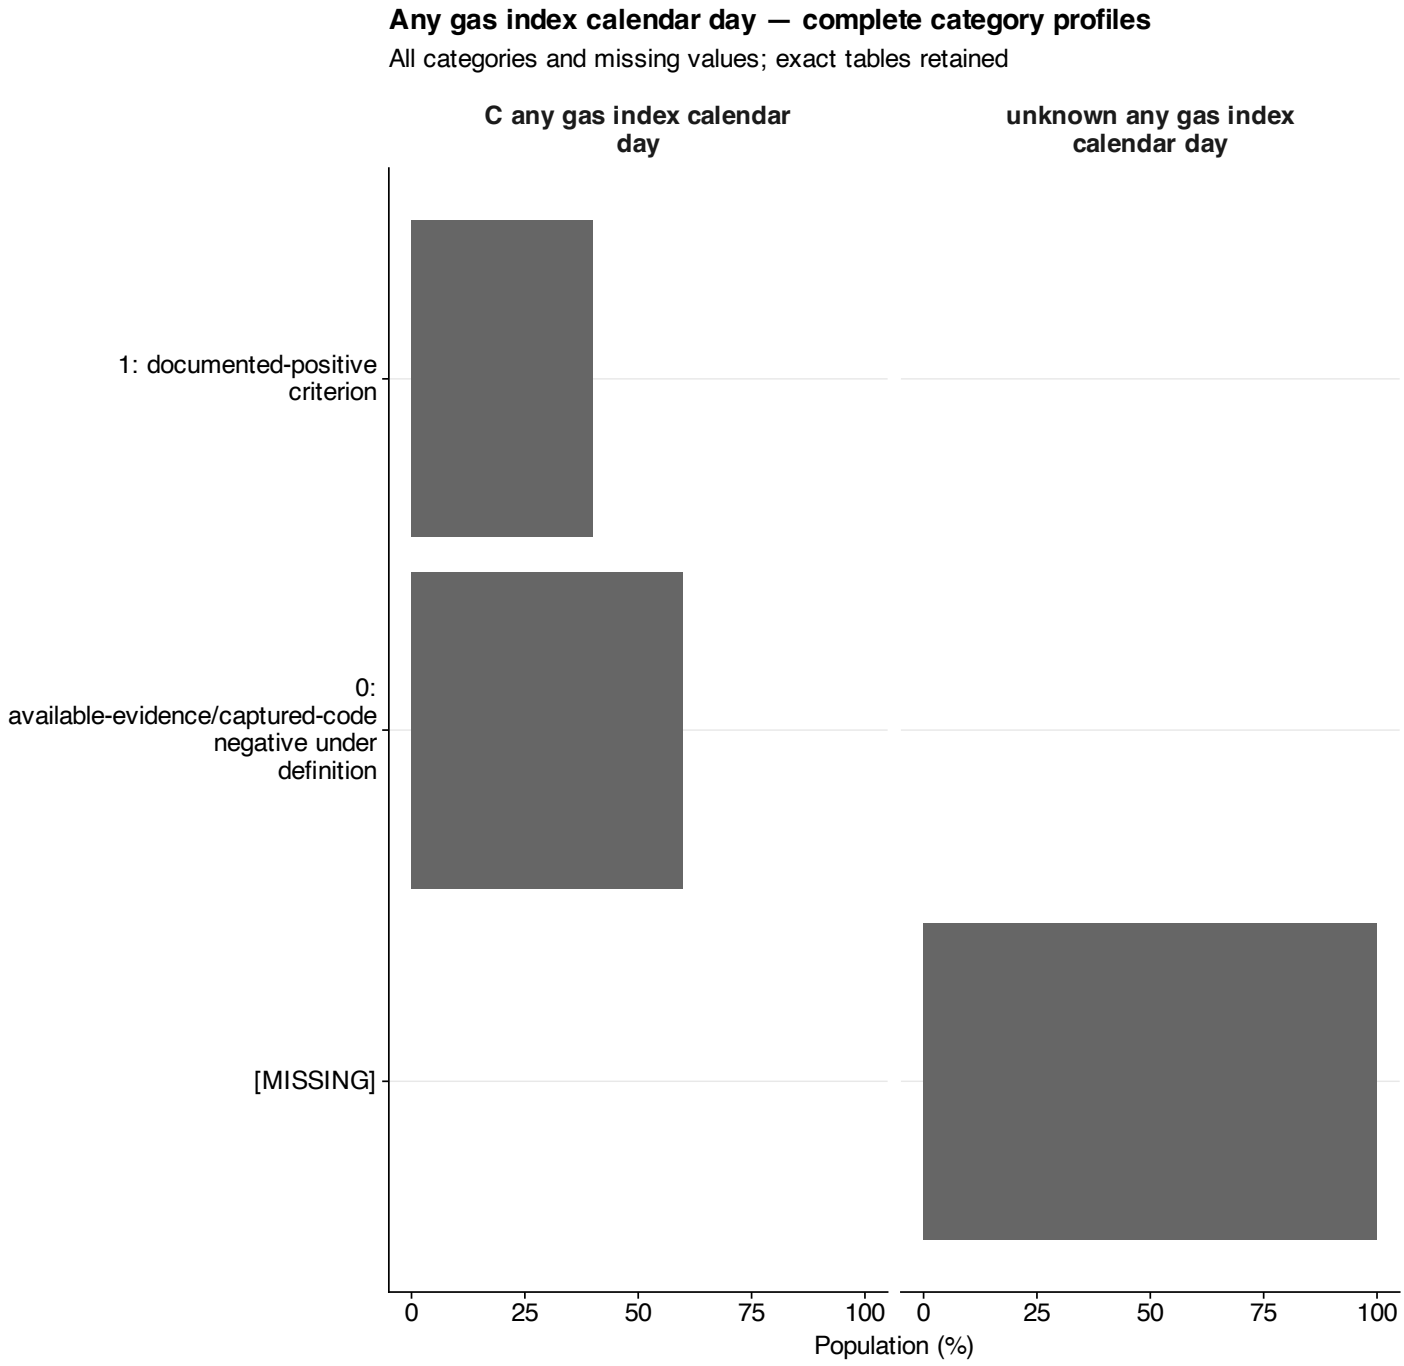

Figure 772: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete any_gas_index_calendar_day stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

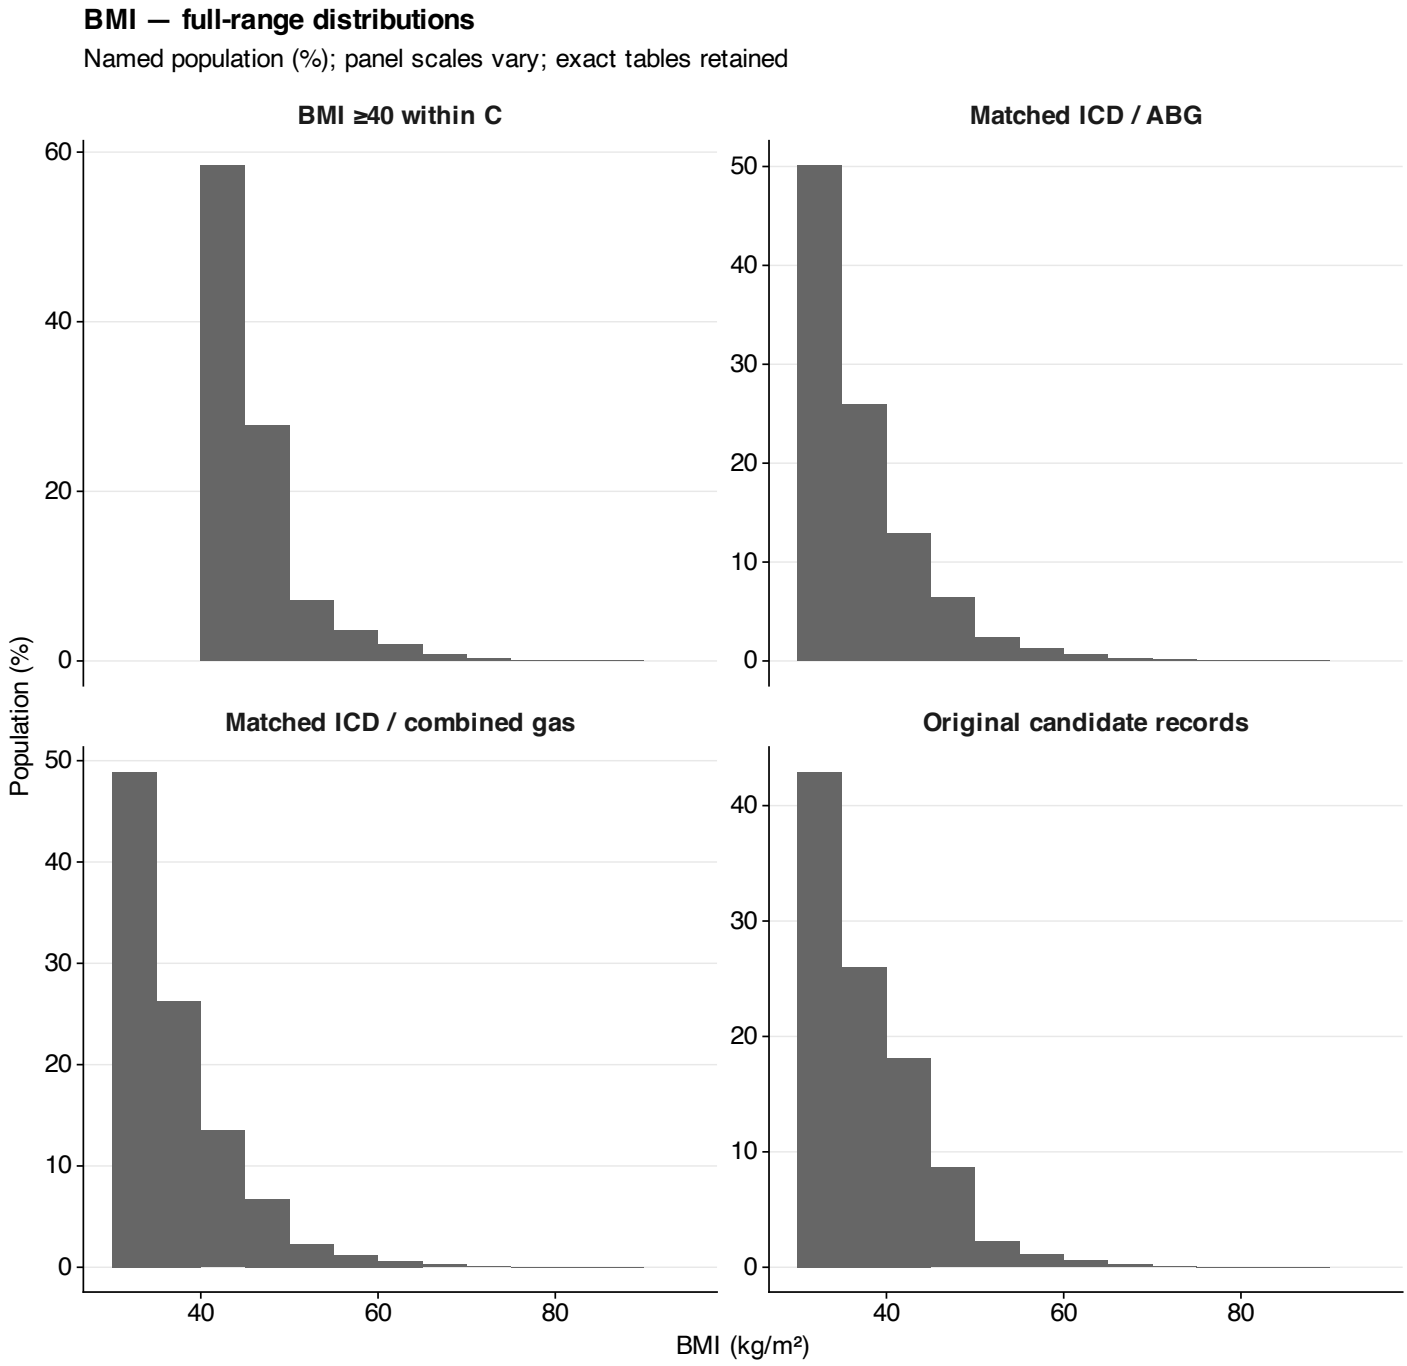

Figure 773: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete bmi stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

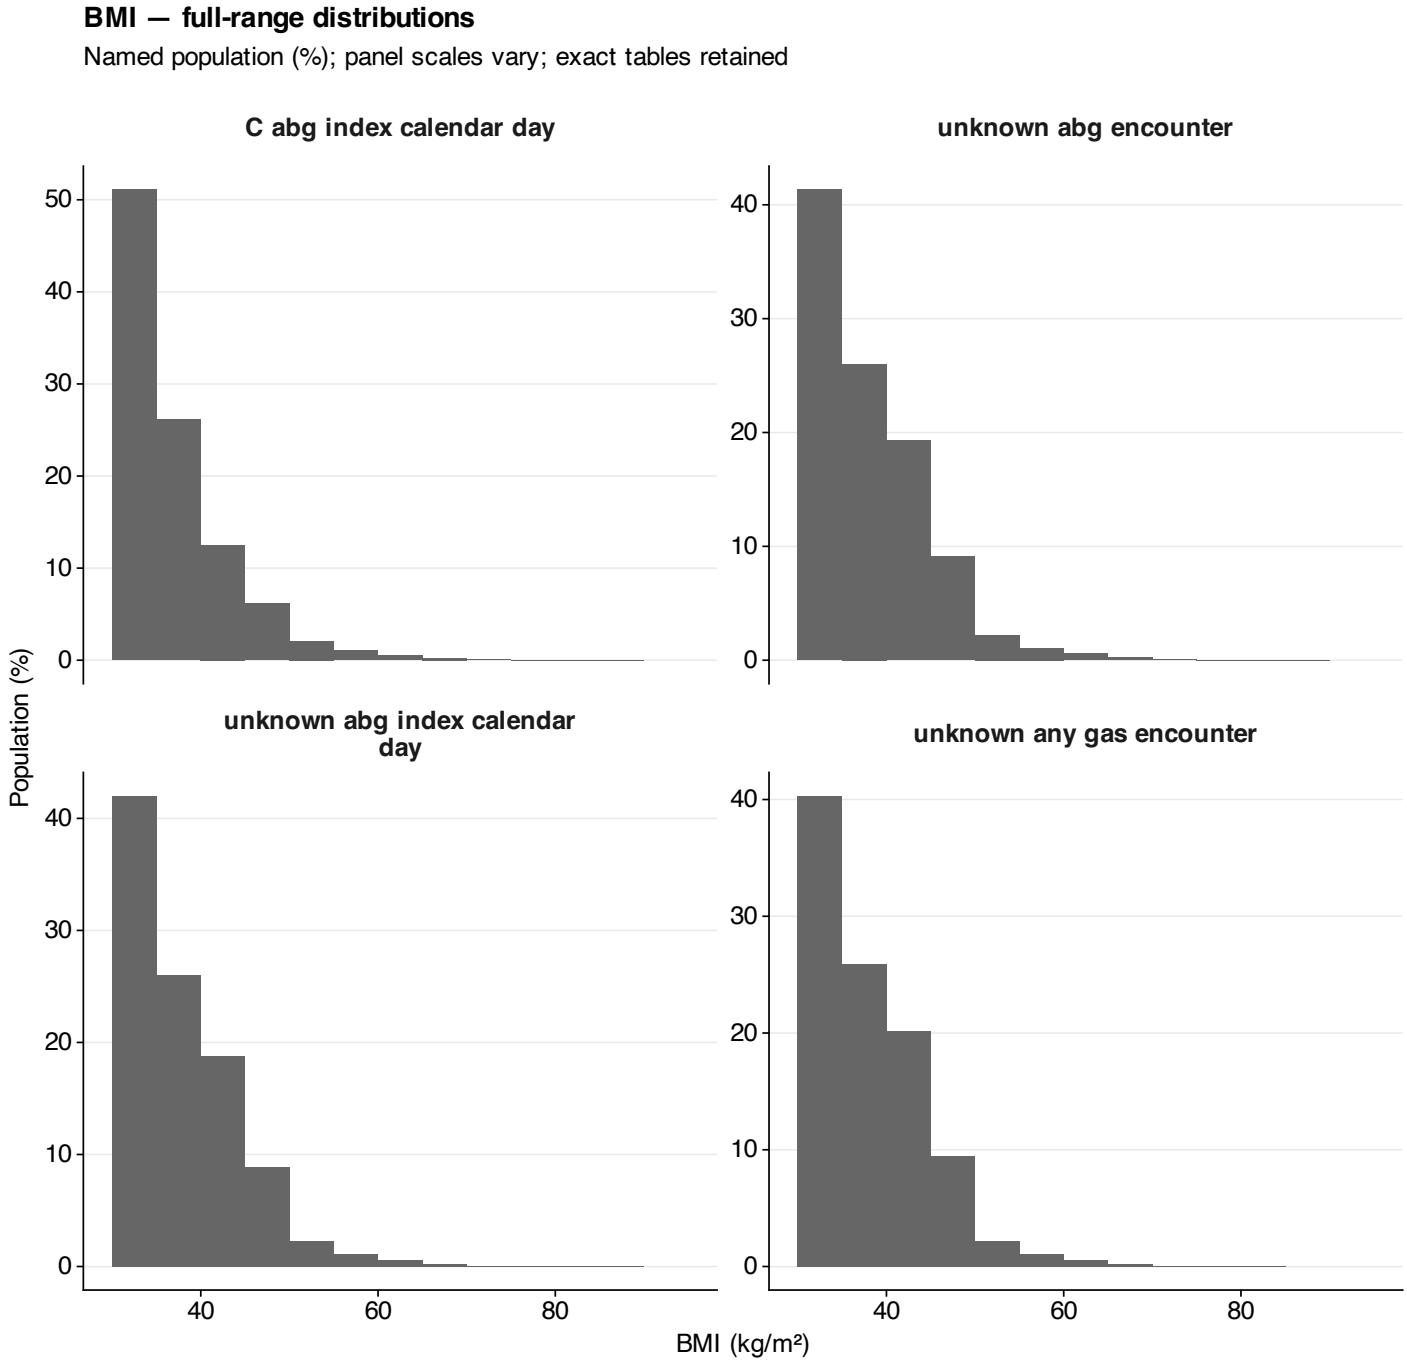

Figure 774: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete bmi stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

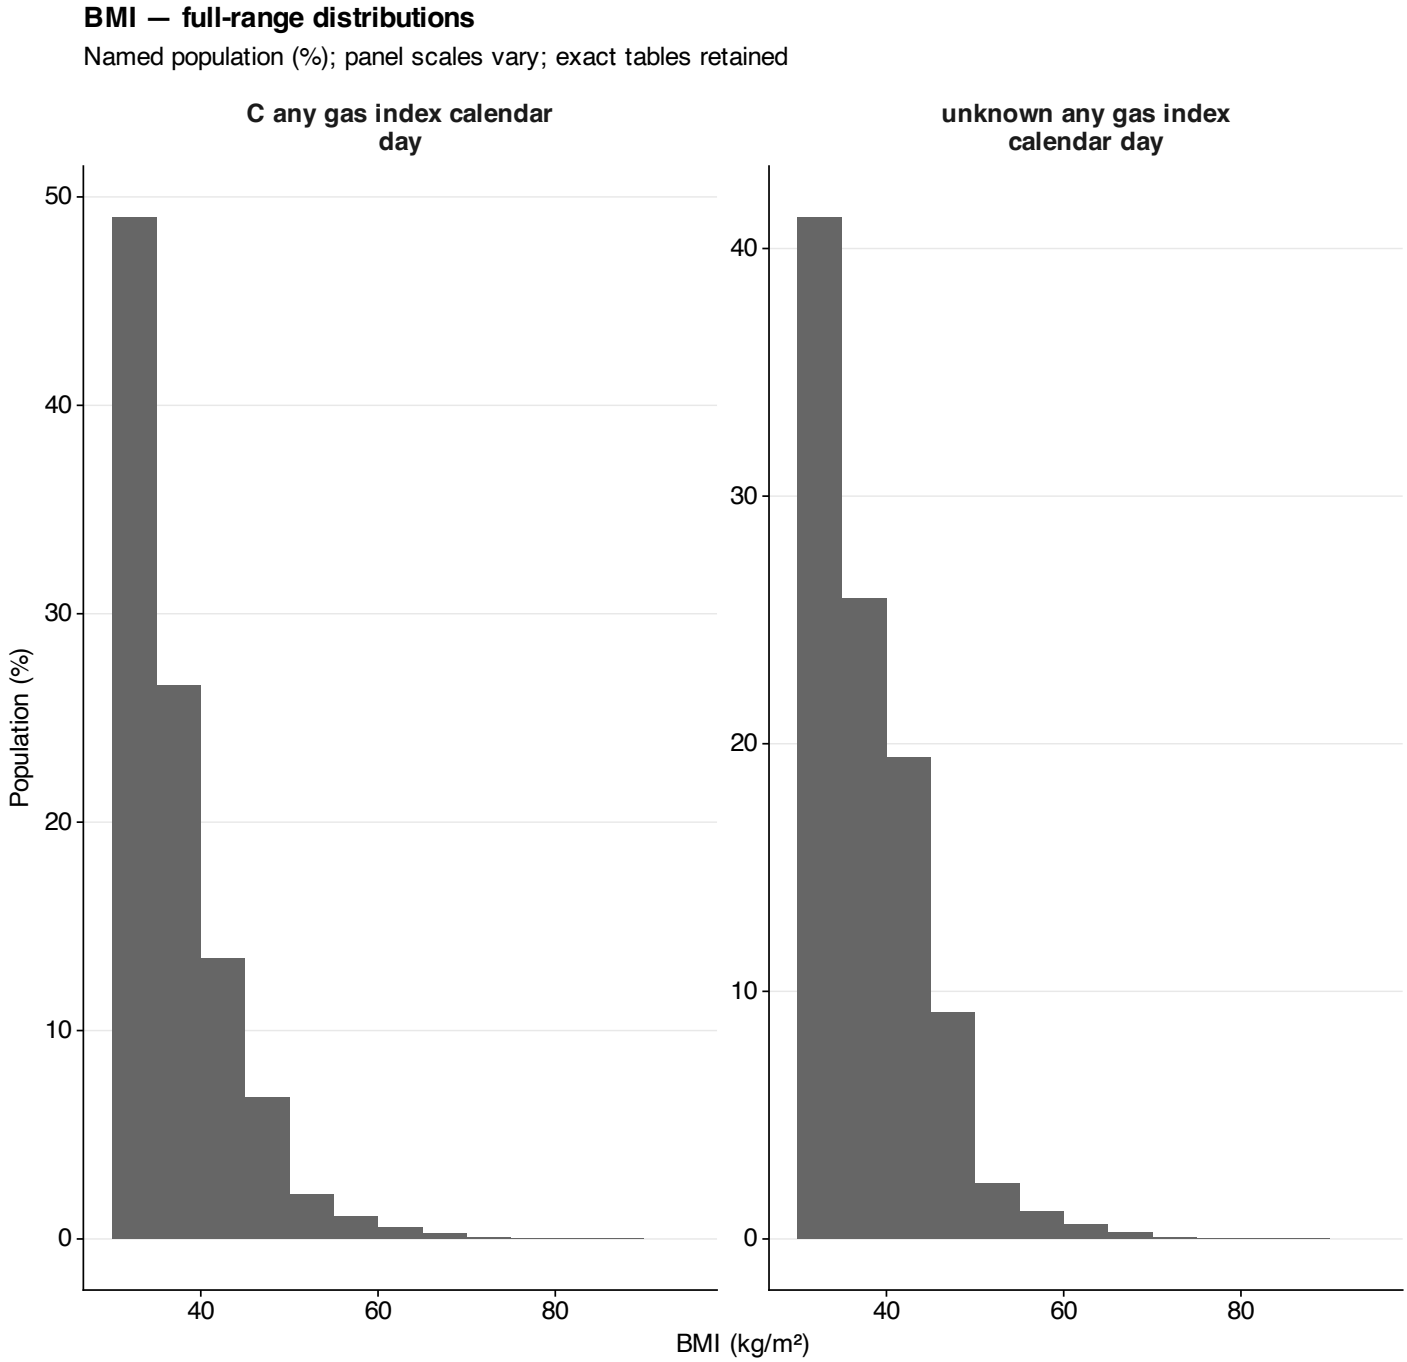

Figure 775: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete bmi stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

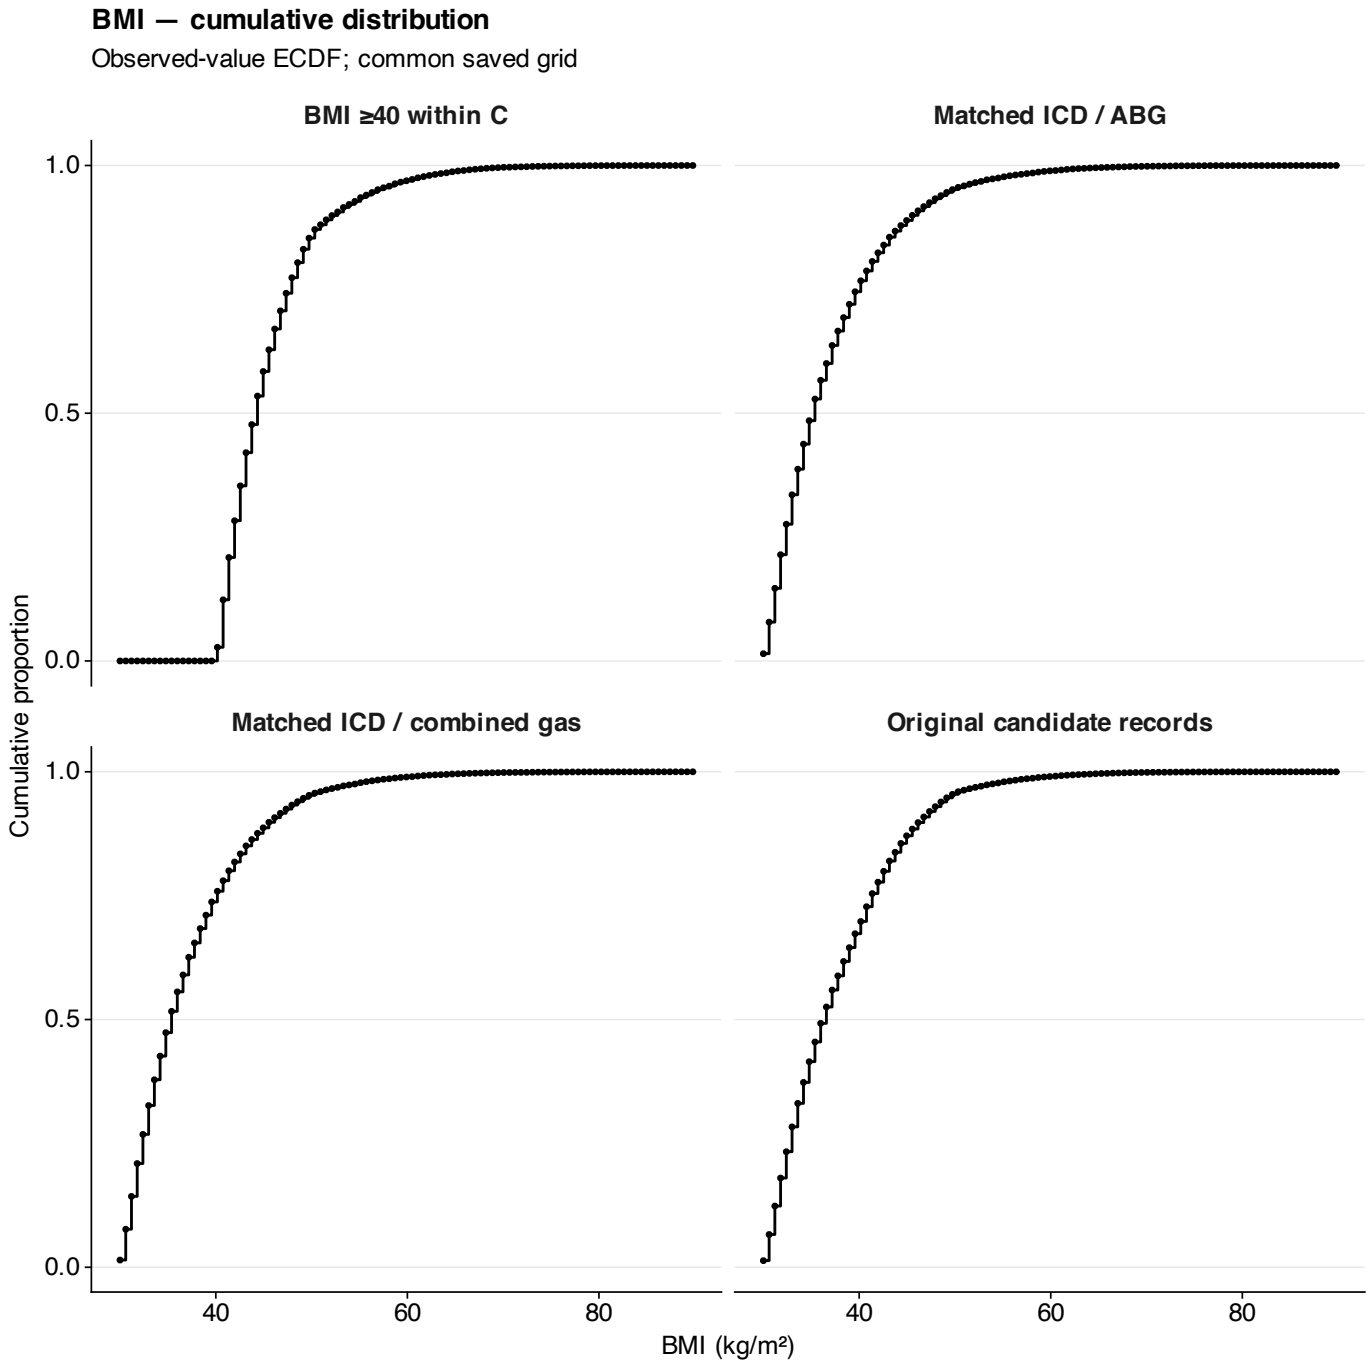

Figure 776: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. bmi ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

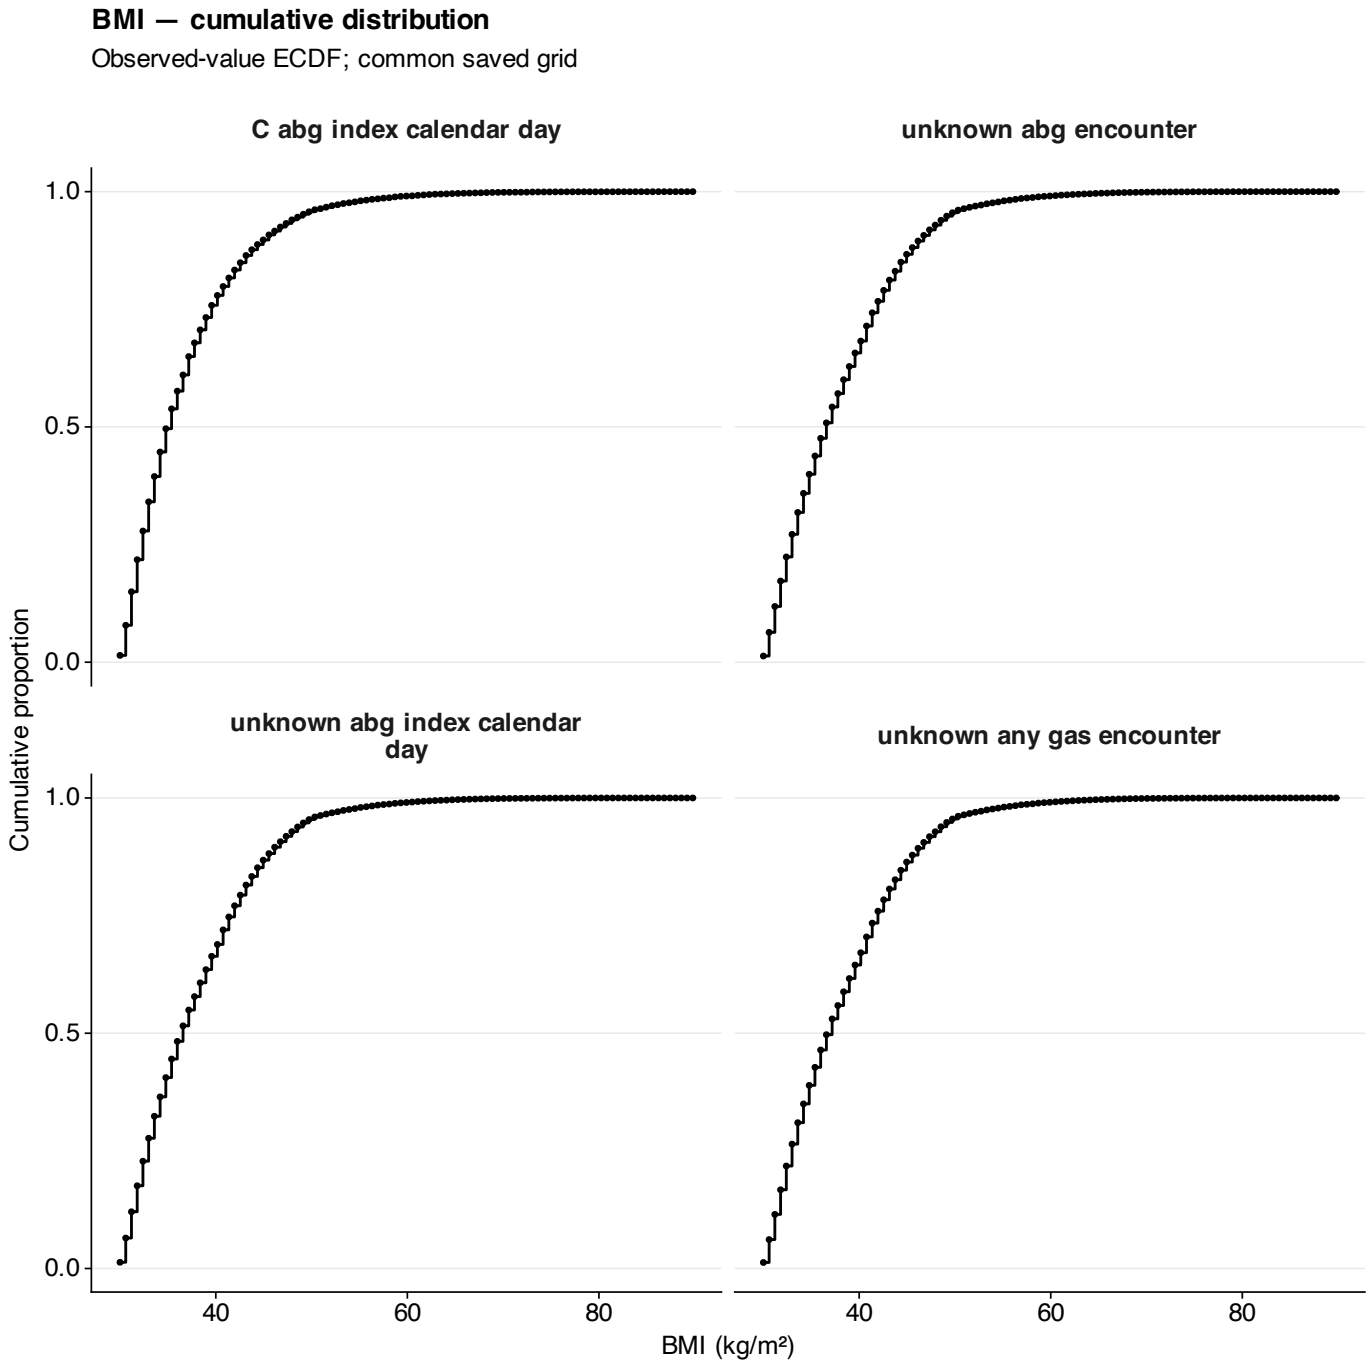

Figure 777: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. bmi ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

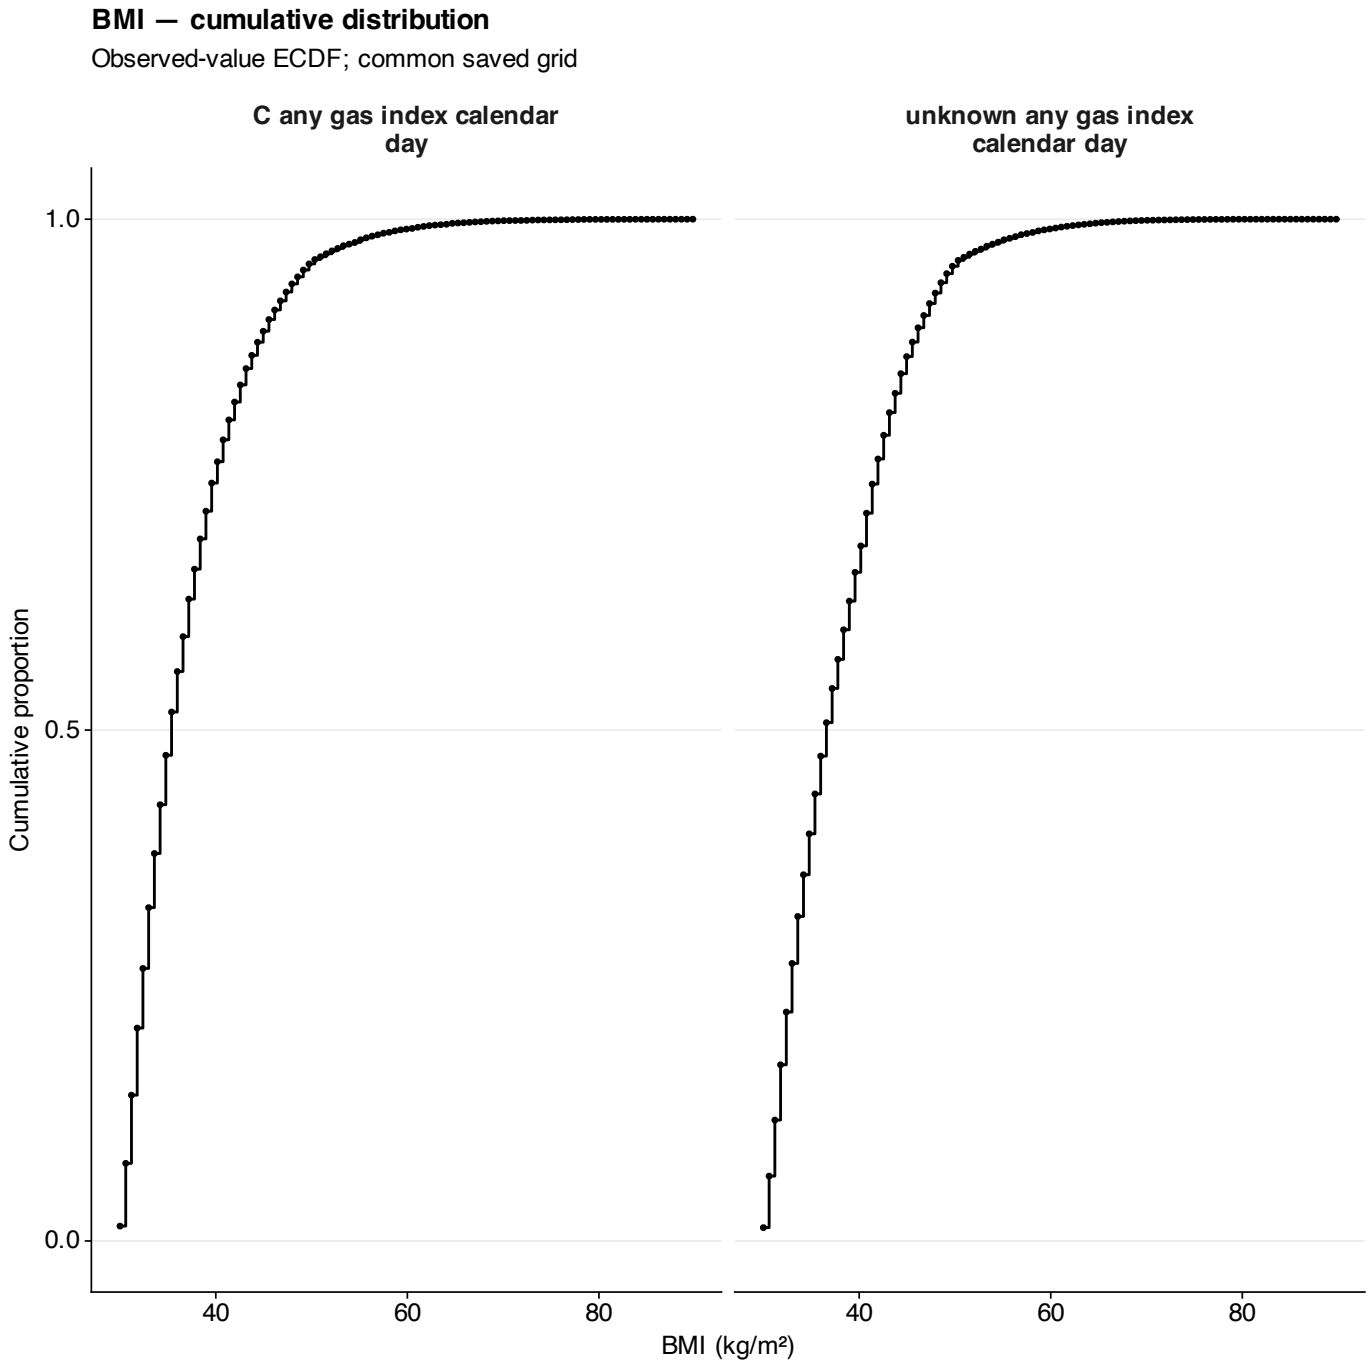

Figure 778: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. bmi ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

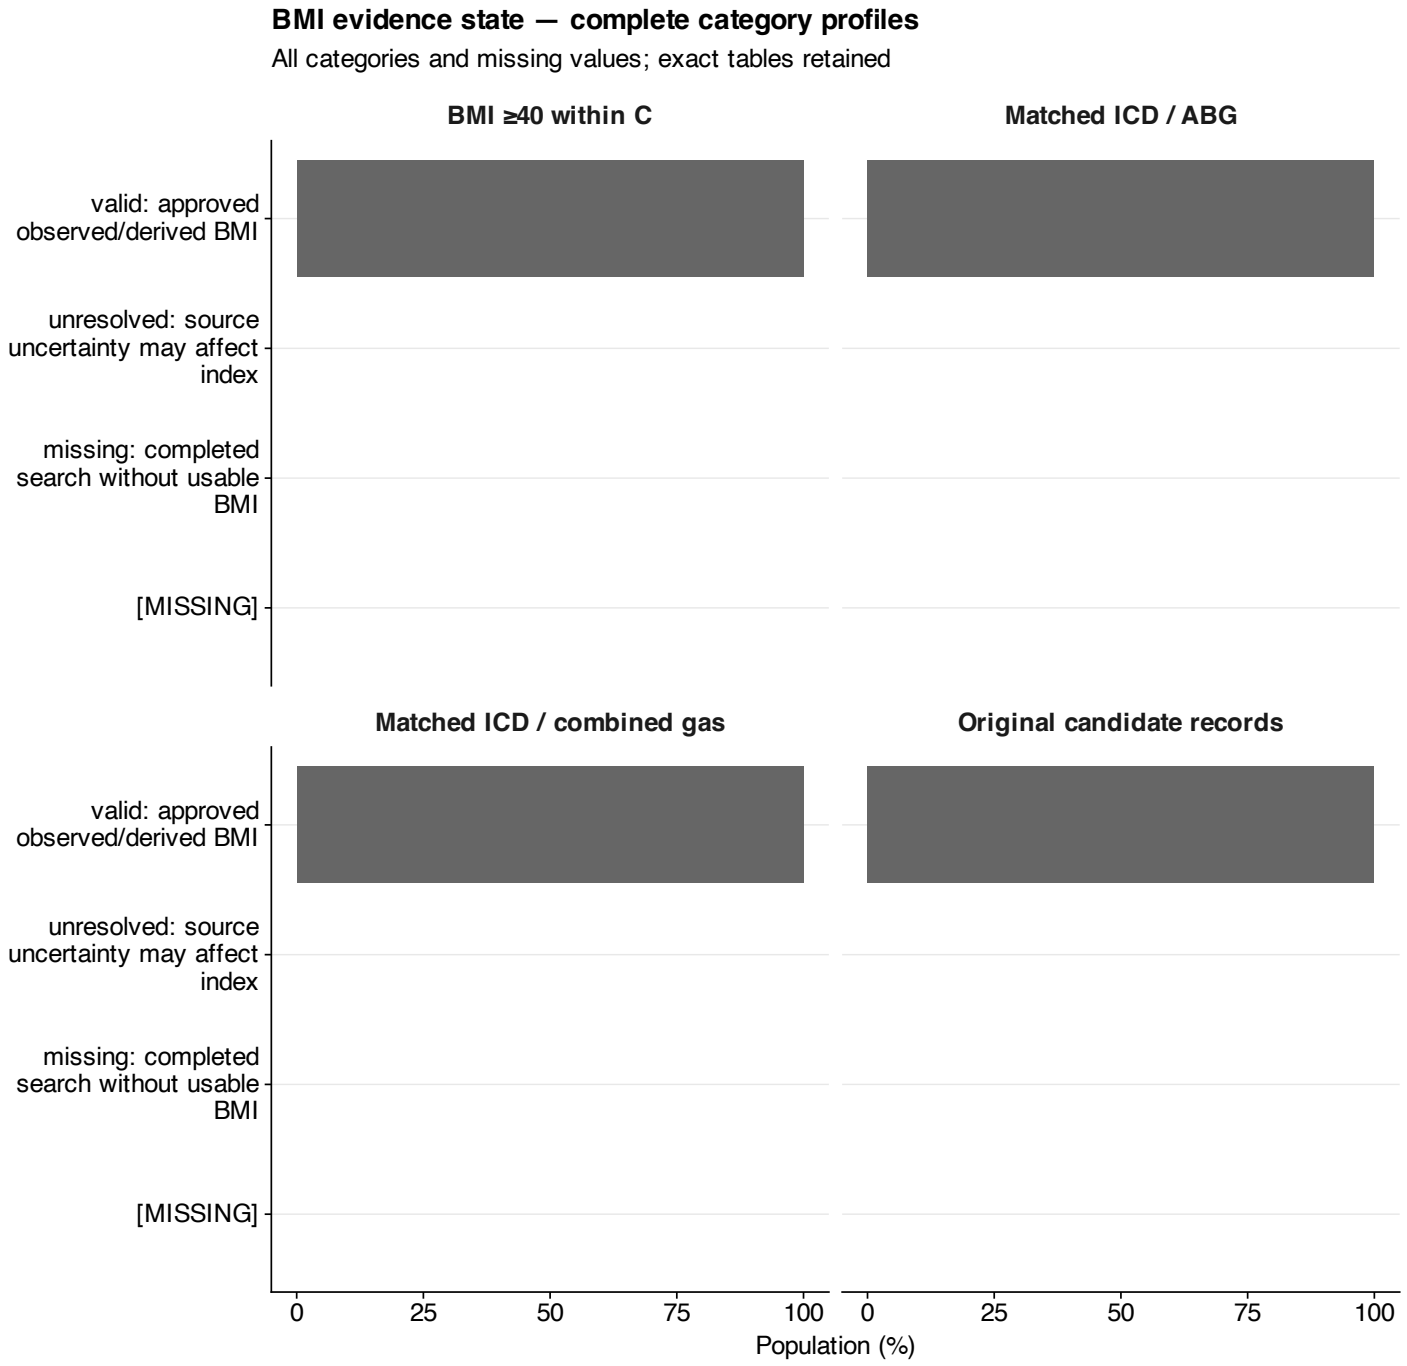

Figure 779: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete bmi_evidence_state stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

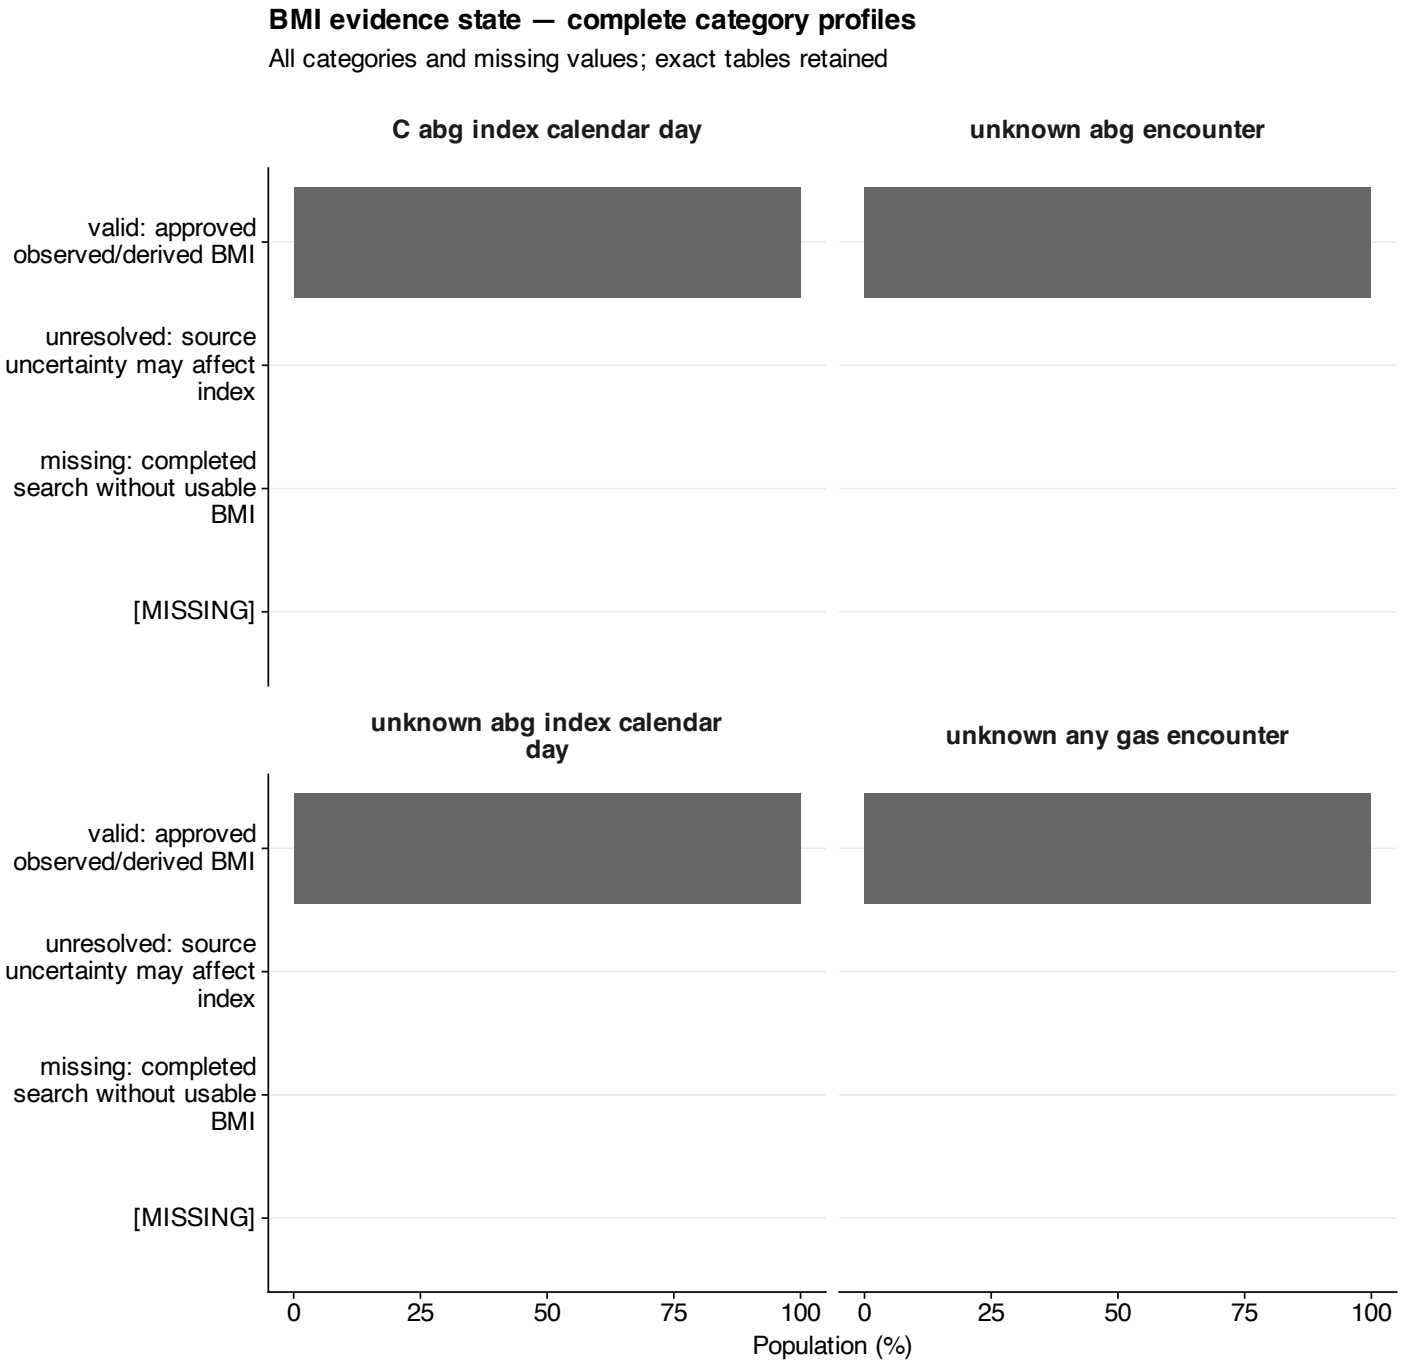

Figure 780: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete bmi_evidence_state stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

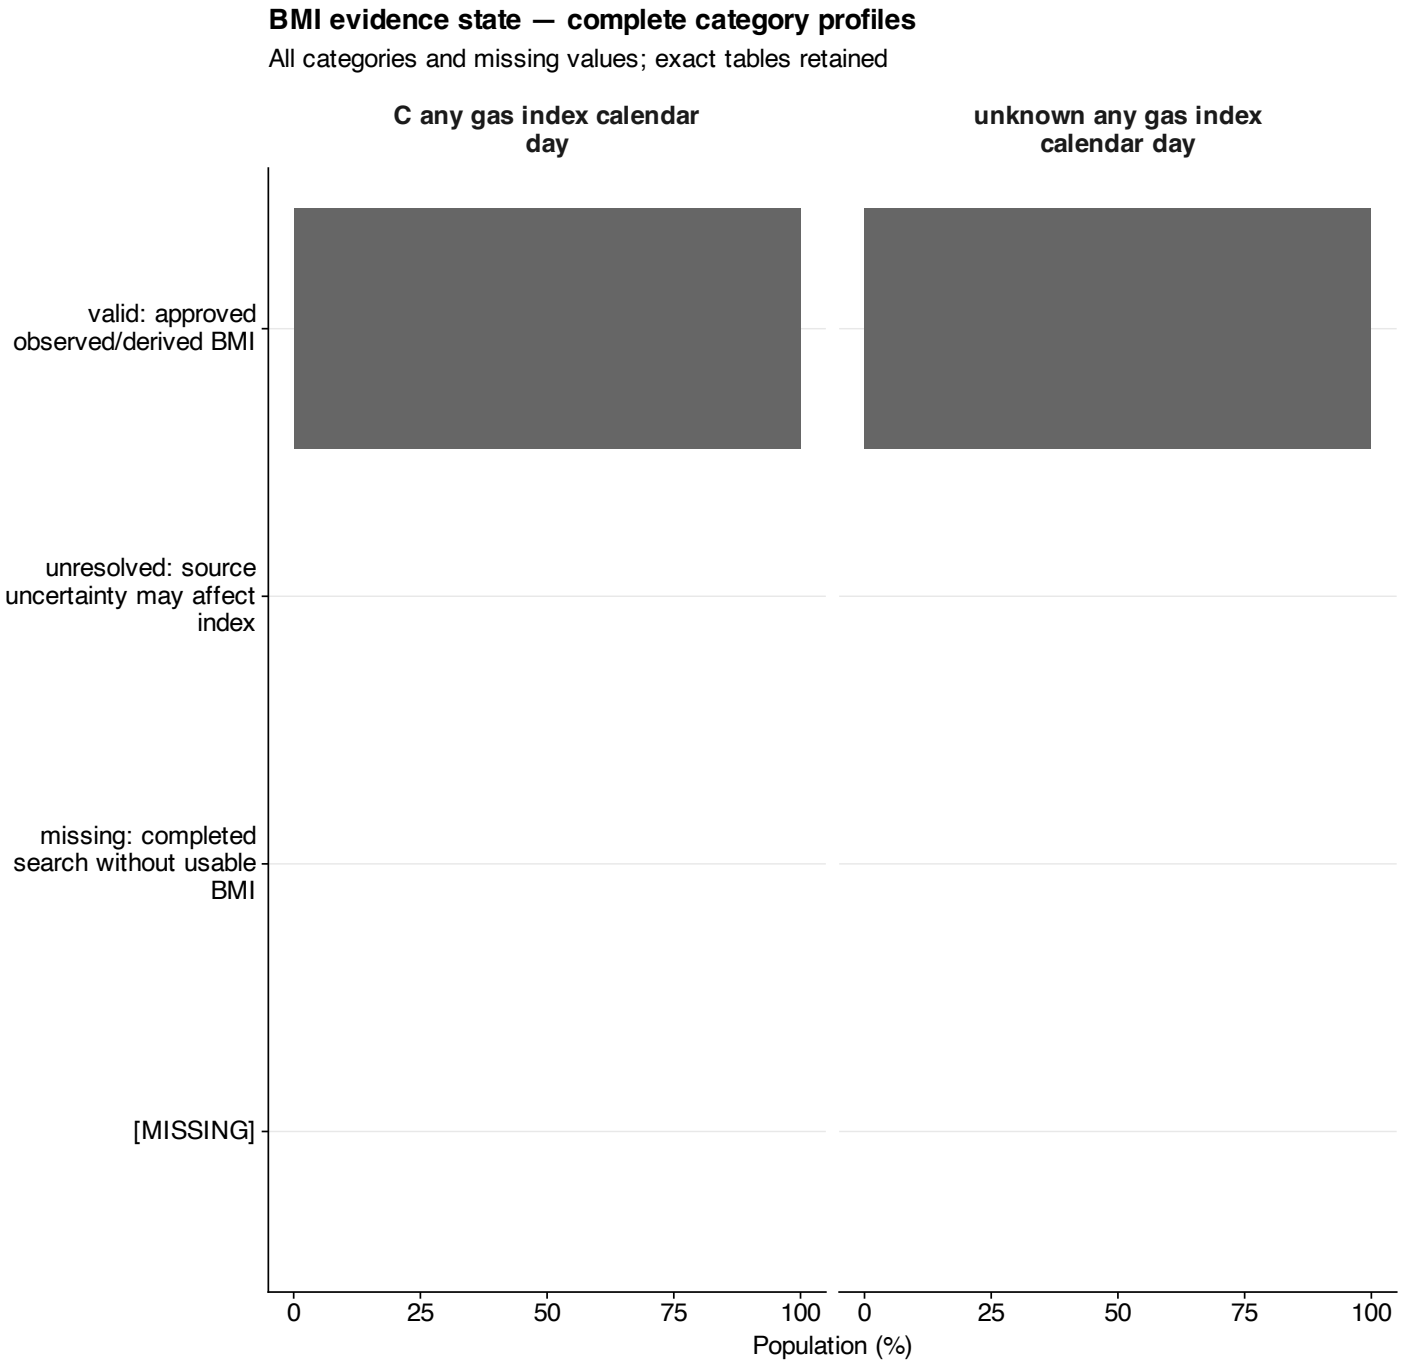

Figure 781: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete bmi_evidence_state stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

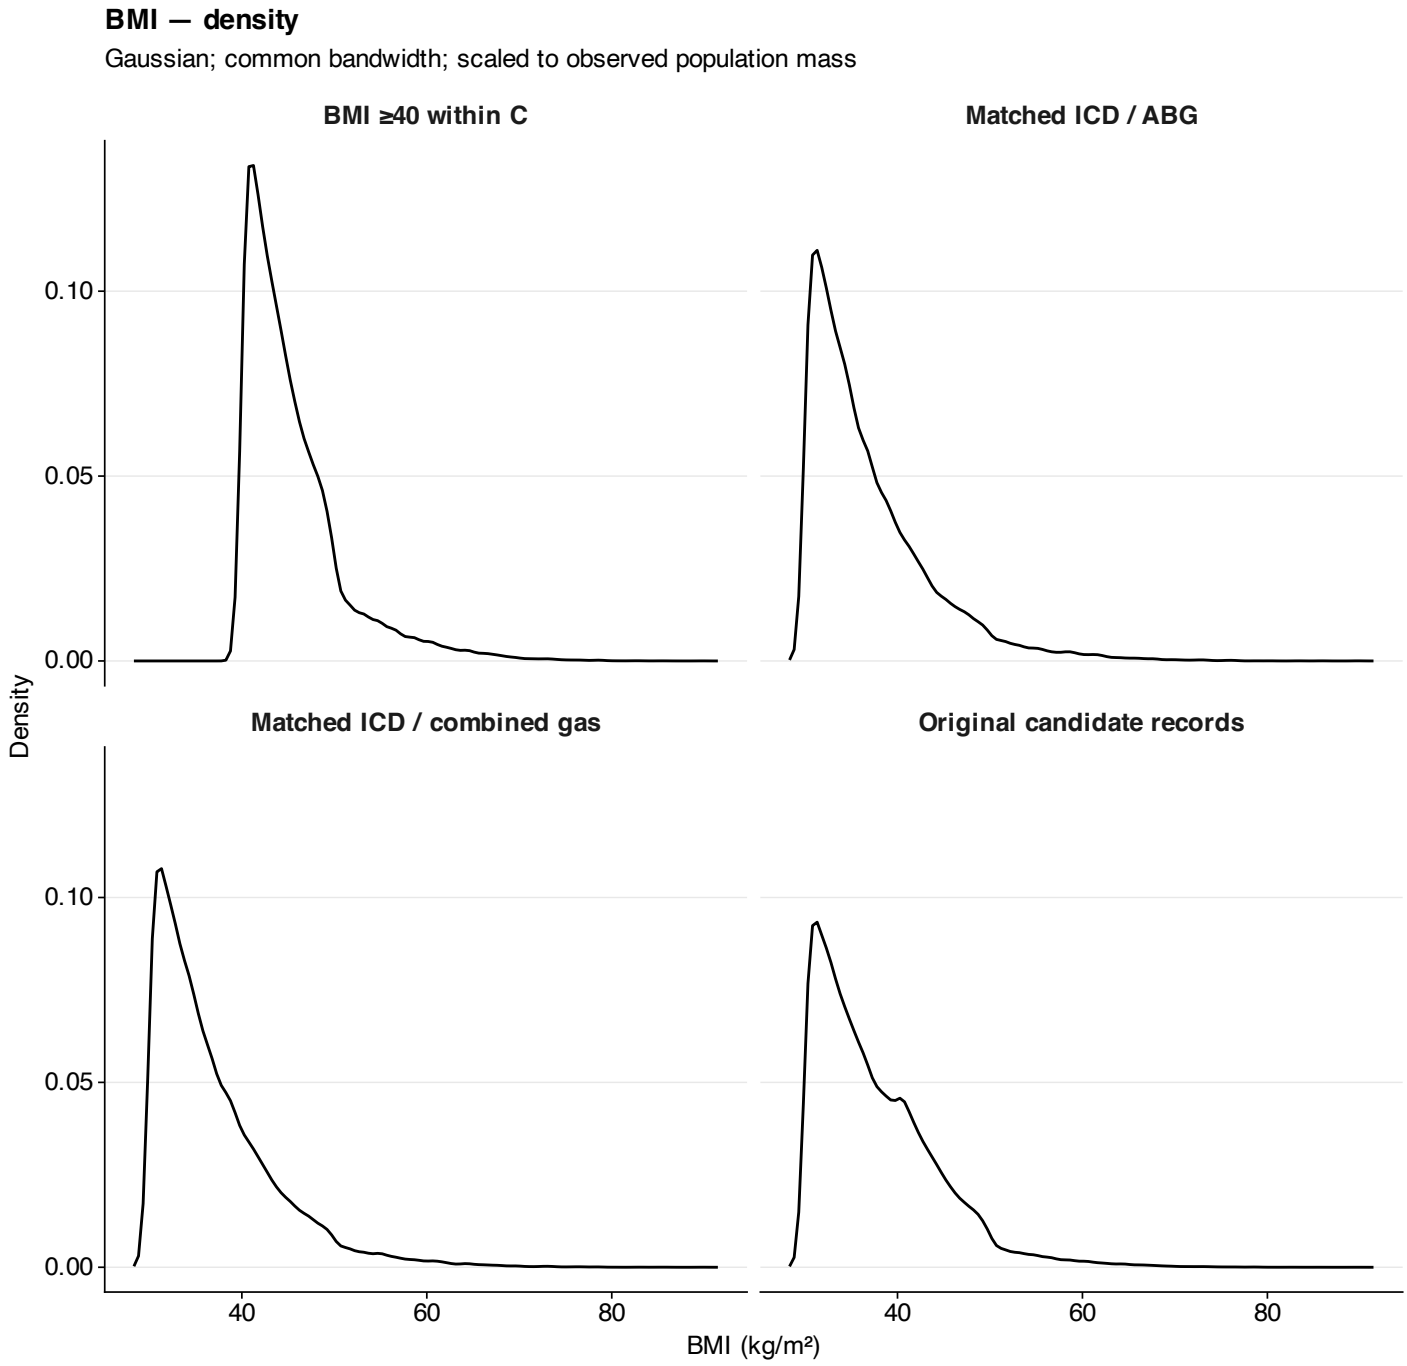

Figure 782: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. bmi kde across named stages; full coordinate export and normalization metadata in distribution_curves.

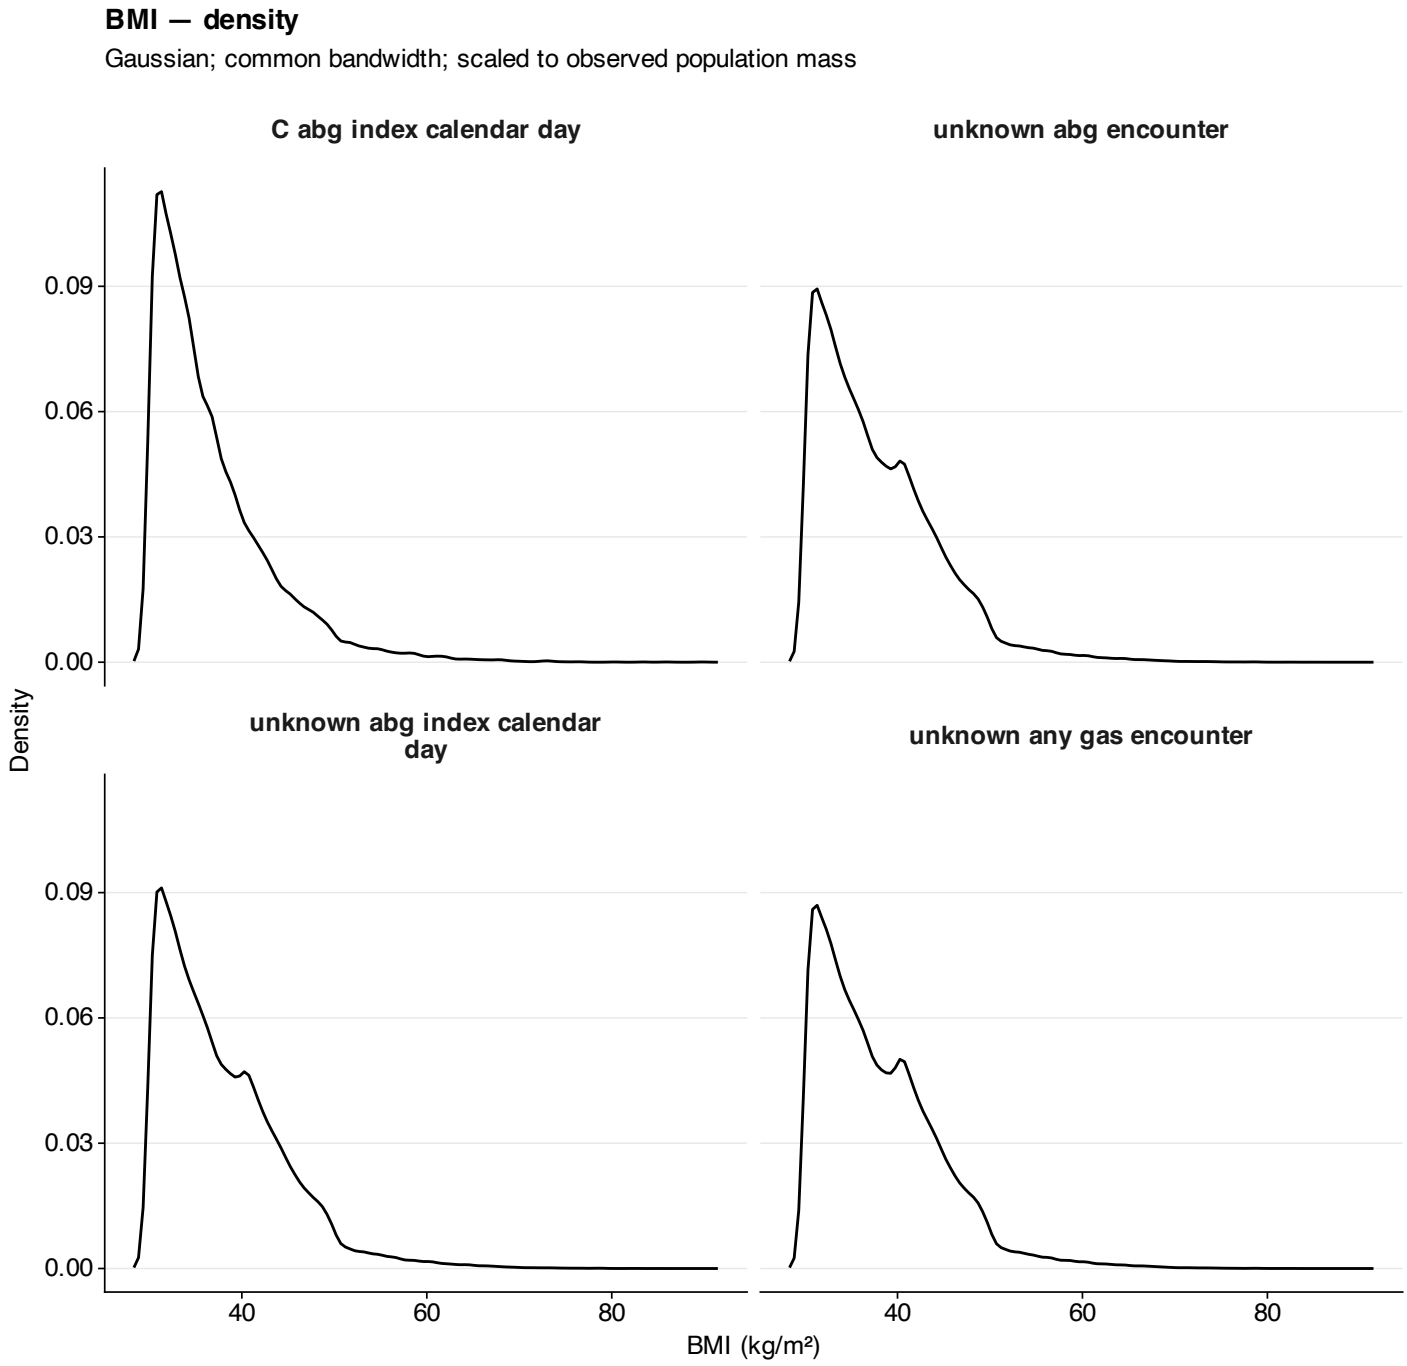

Figure 783: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. bmi kde across named stages; full coordinate export and normalization metadata in distribution_curves.

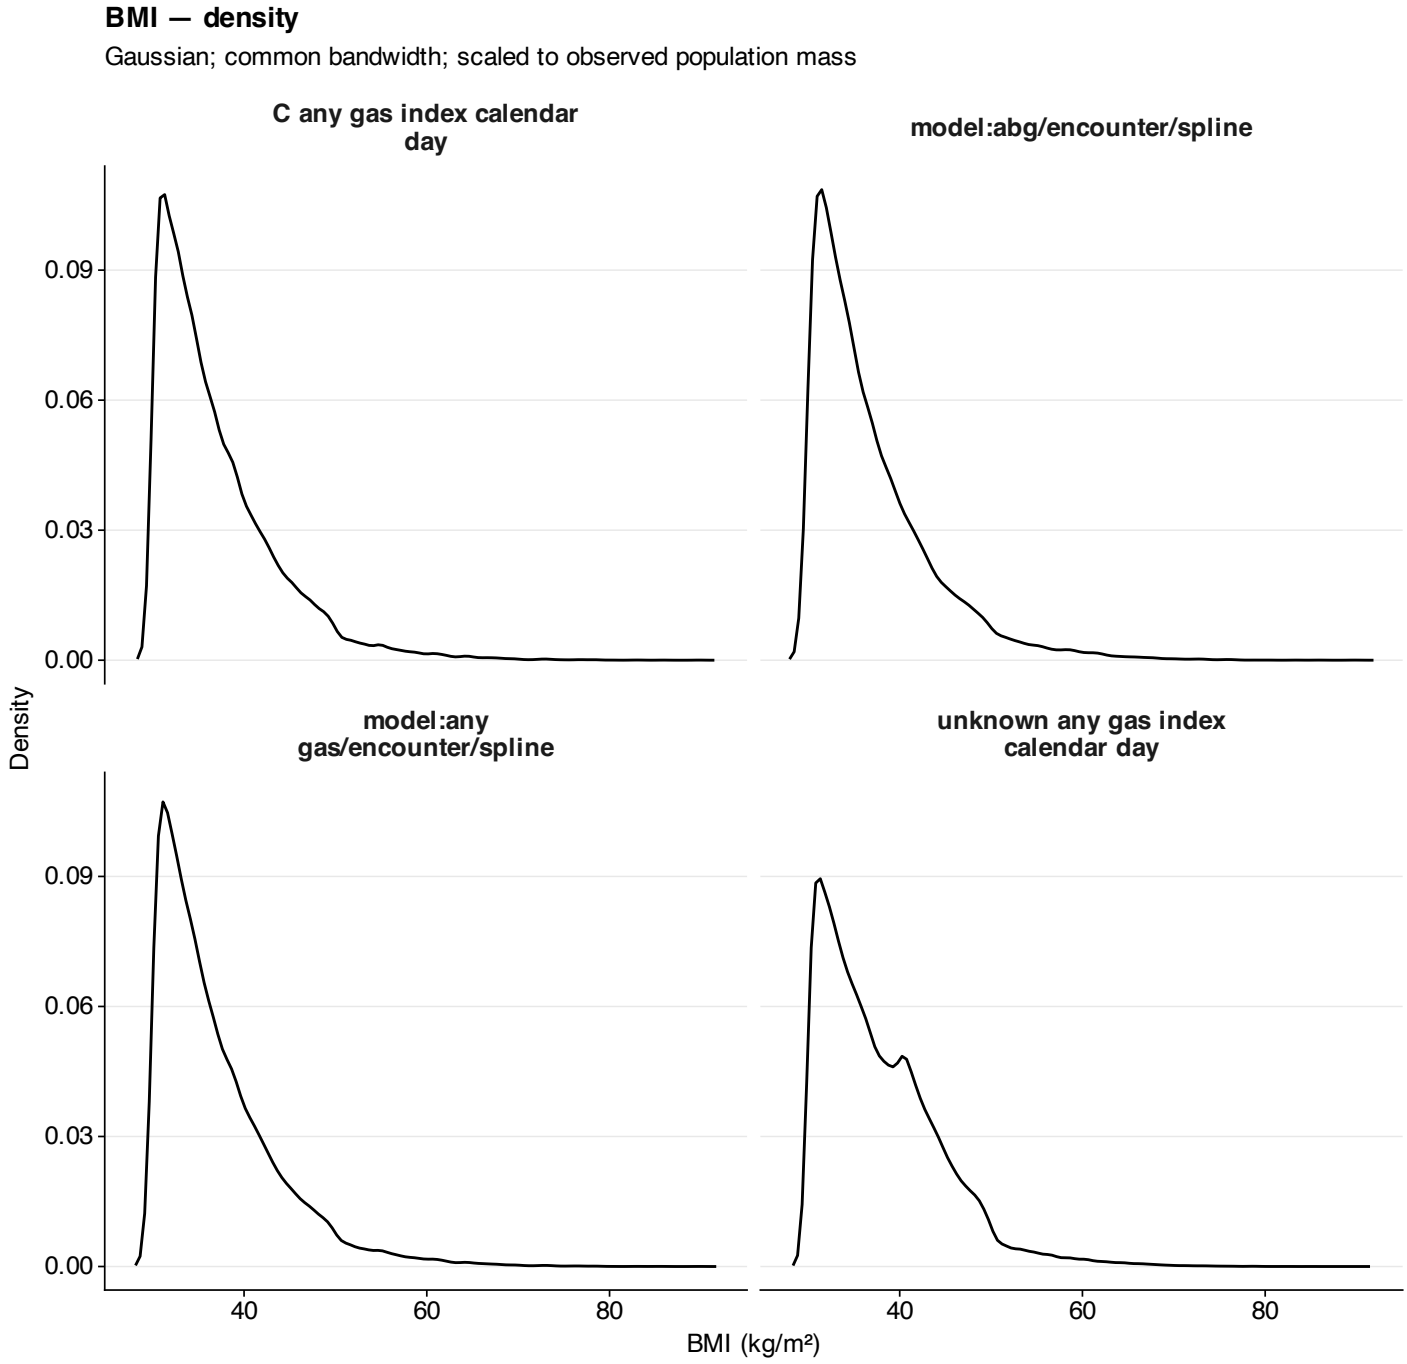

Figure 784: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. bmi kde across named stages; full coordinate export and normalization metadata in distribution_curves.

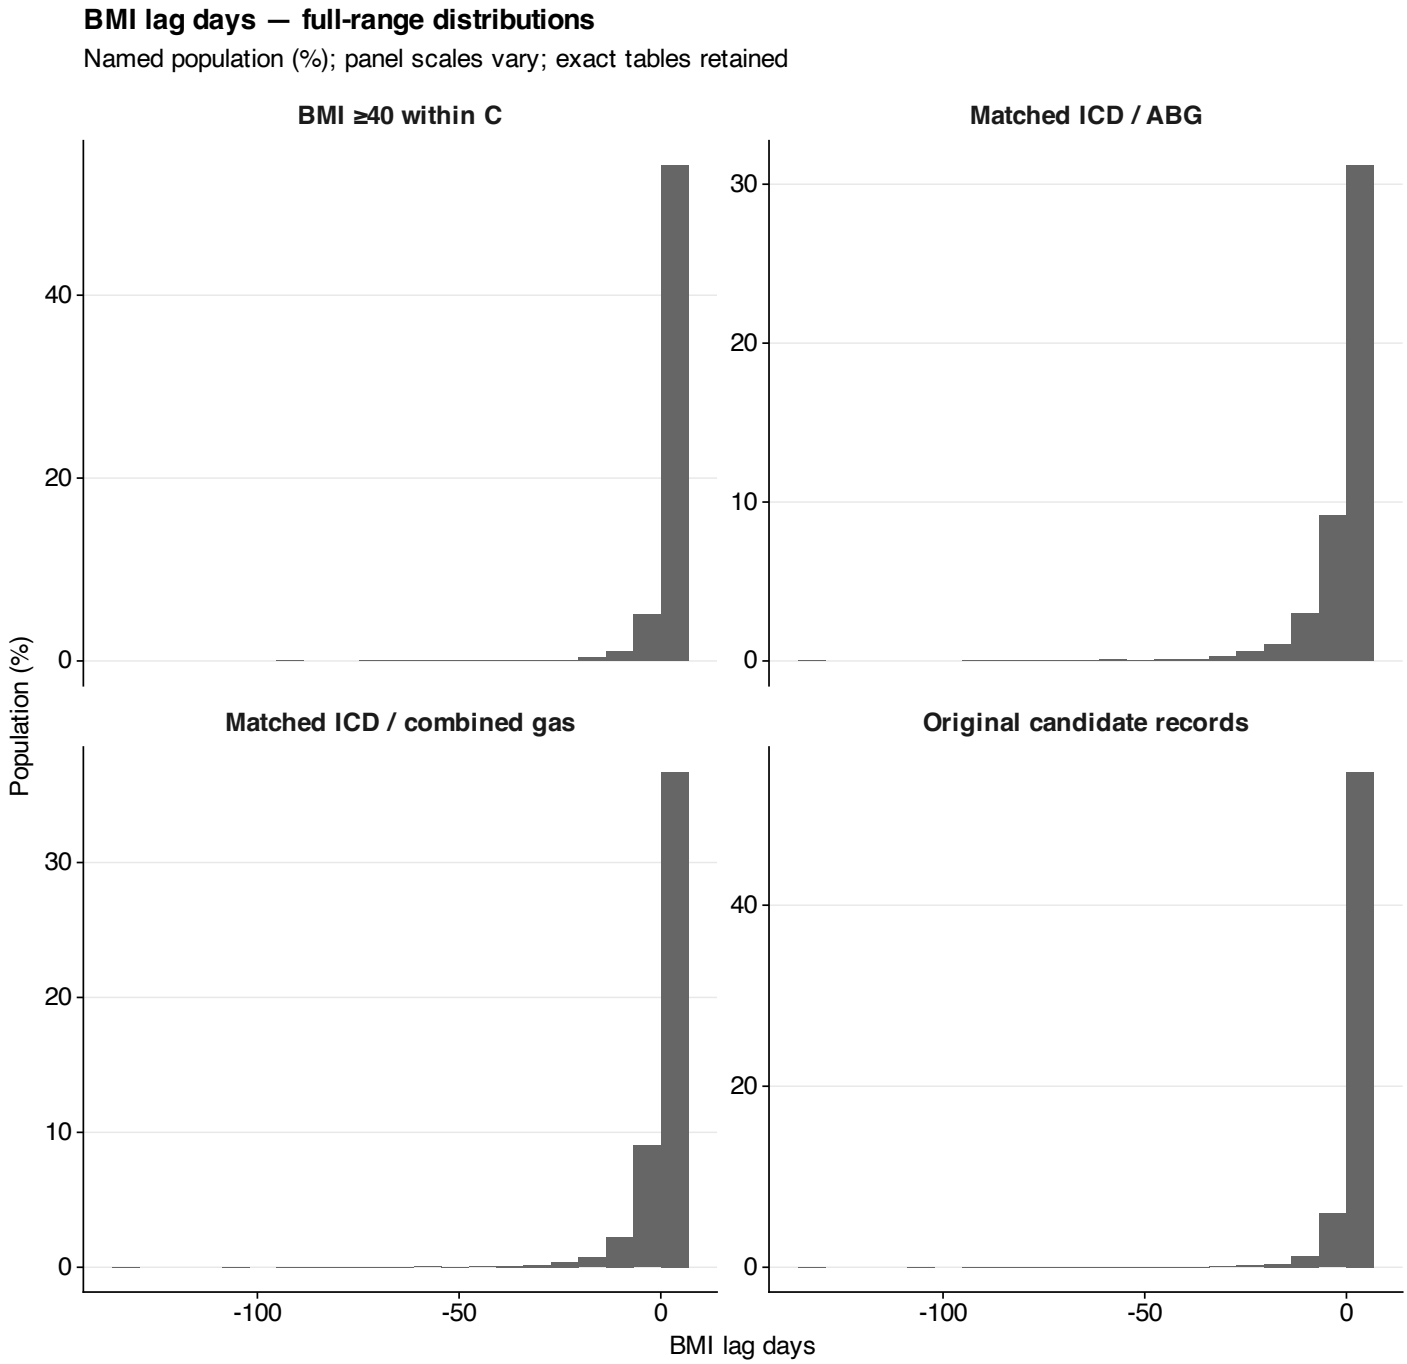

Figure 785: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete bmi_lag_days stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

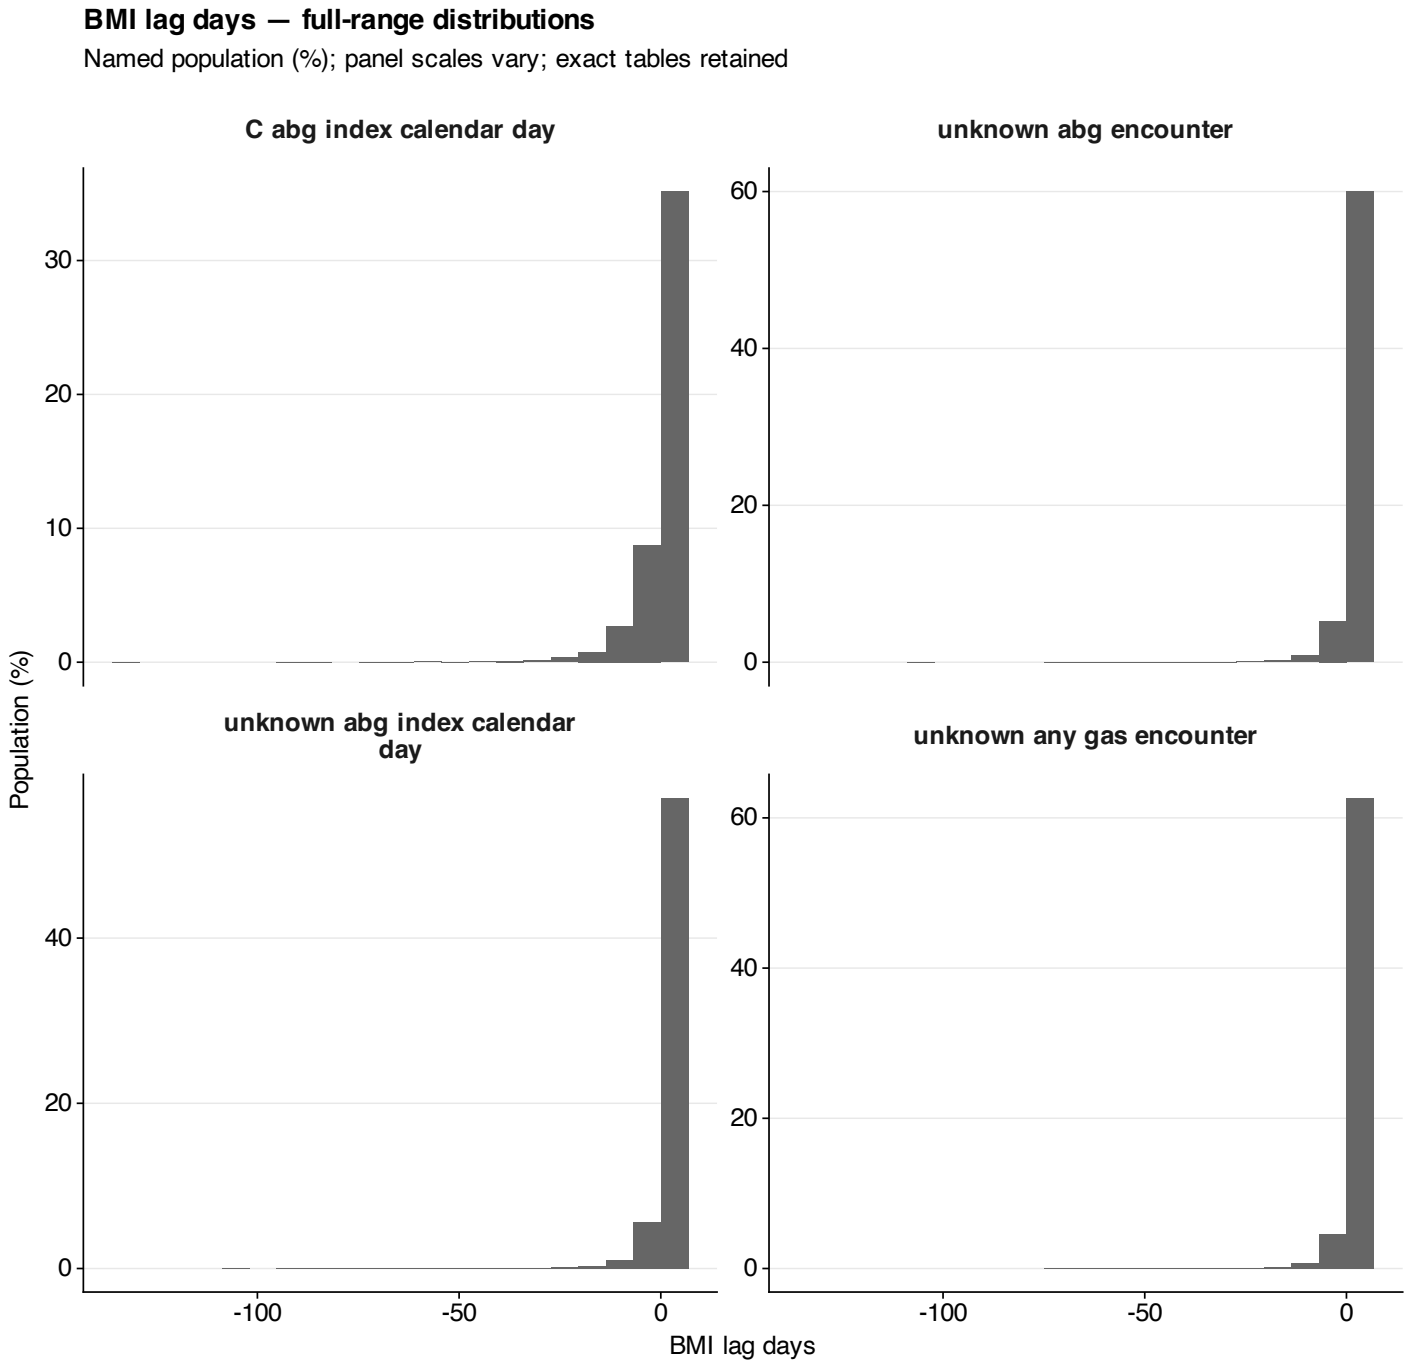

Figure 786: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete bmi_lag_days stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

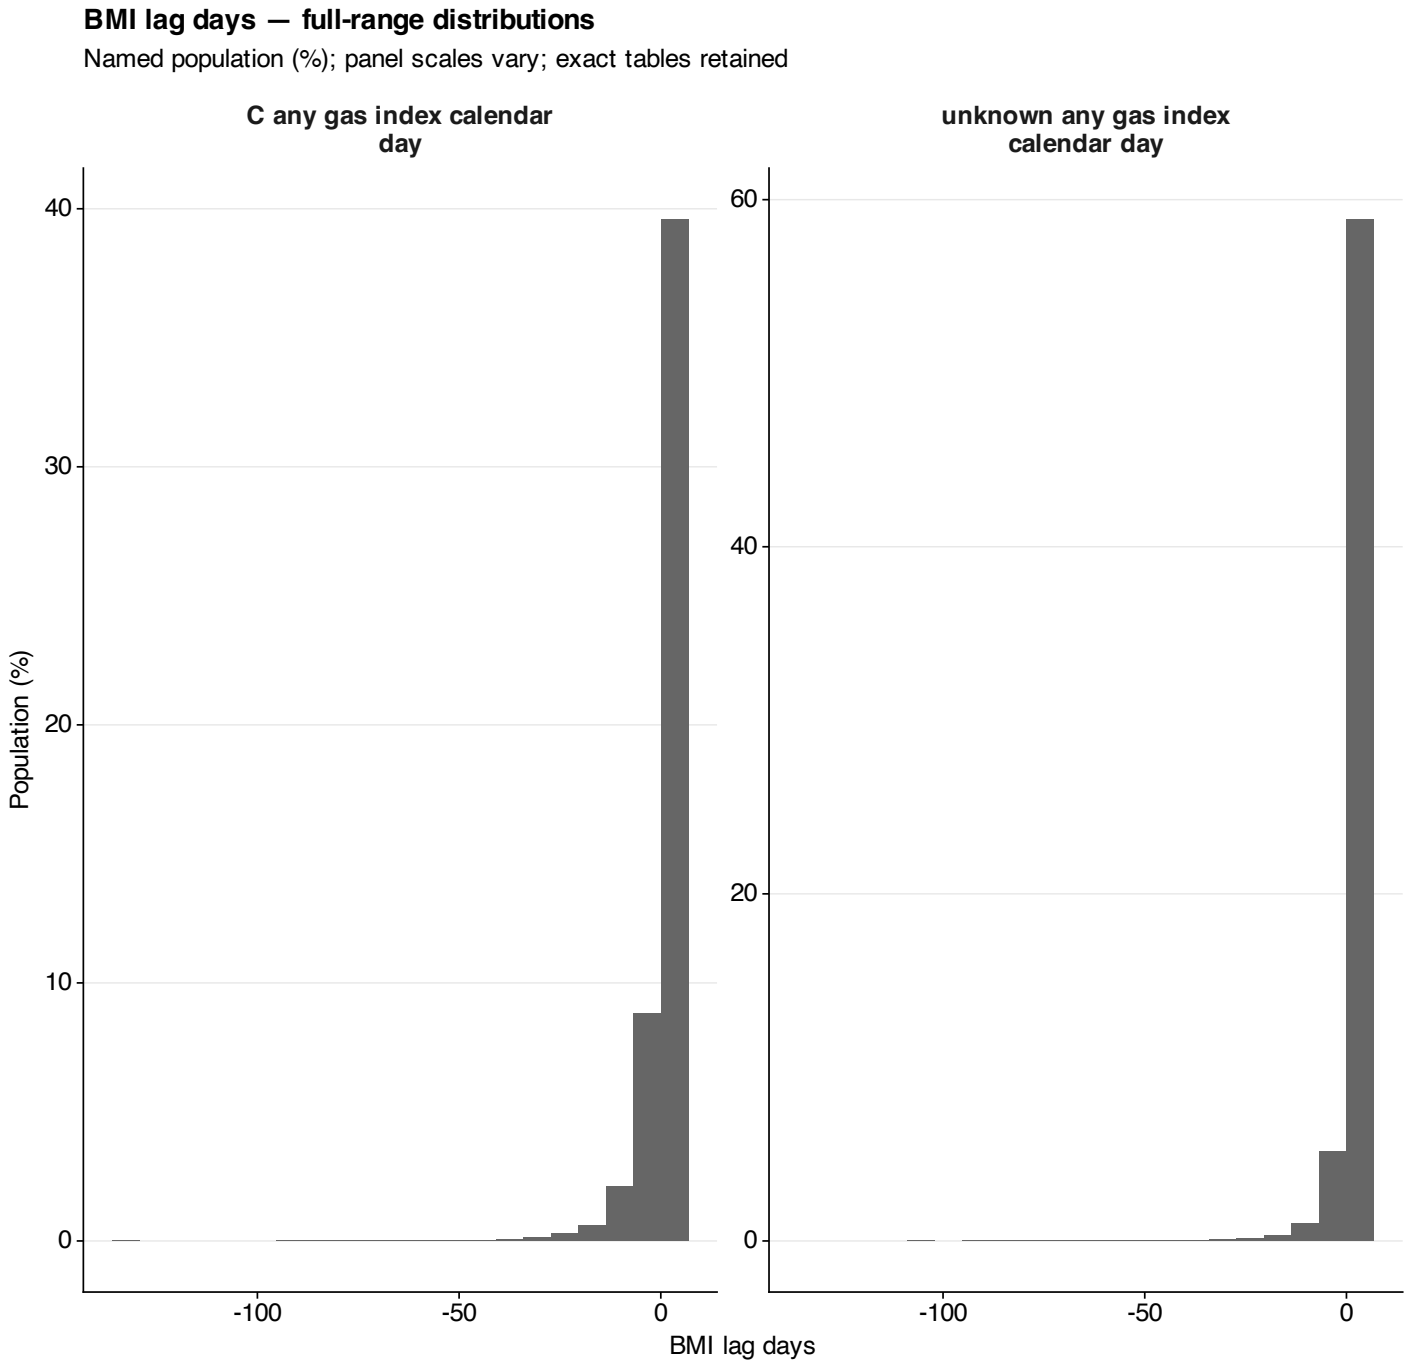

Figure 787: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete bmi_lag_days stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

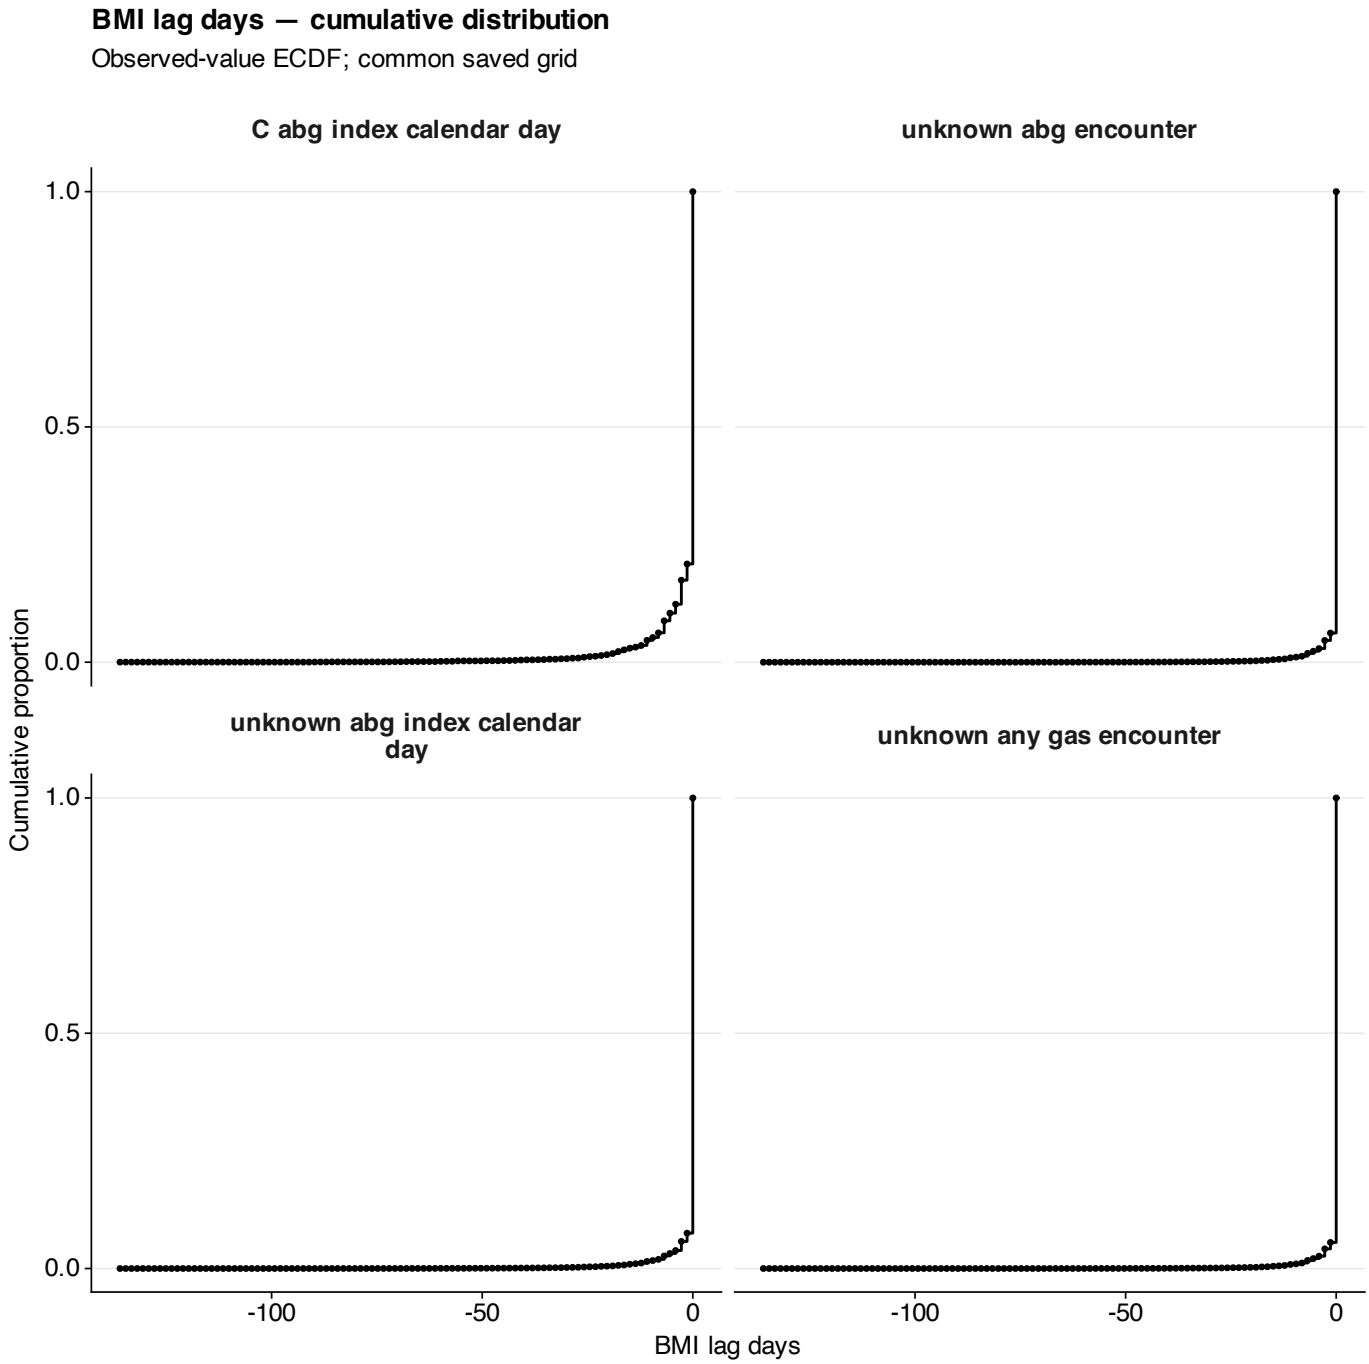

Figure 789: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. bmi_lag_days ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

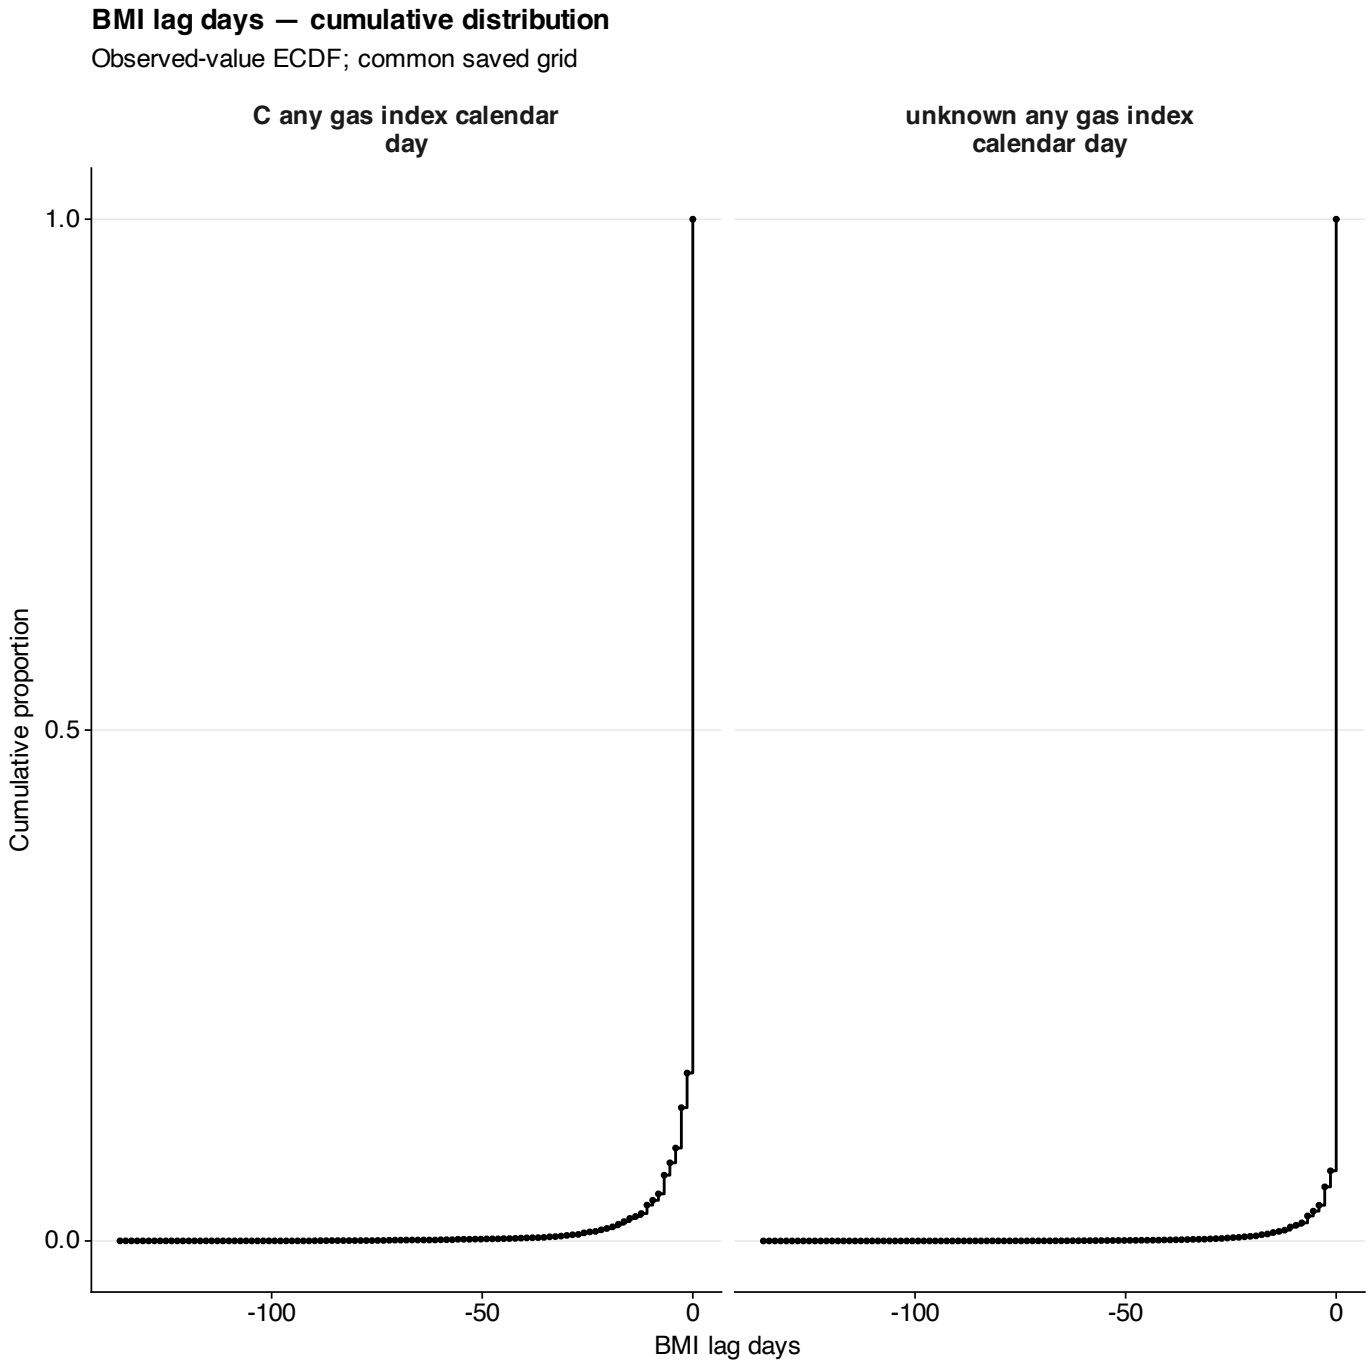

Figure 790: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. bmi_lag_days ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

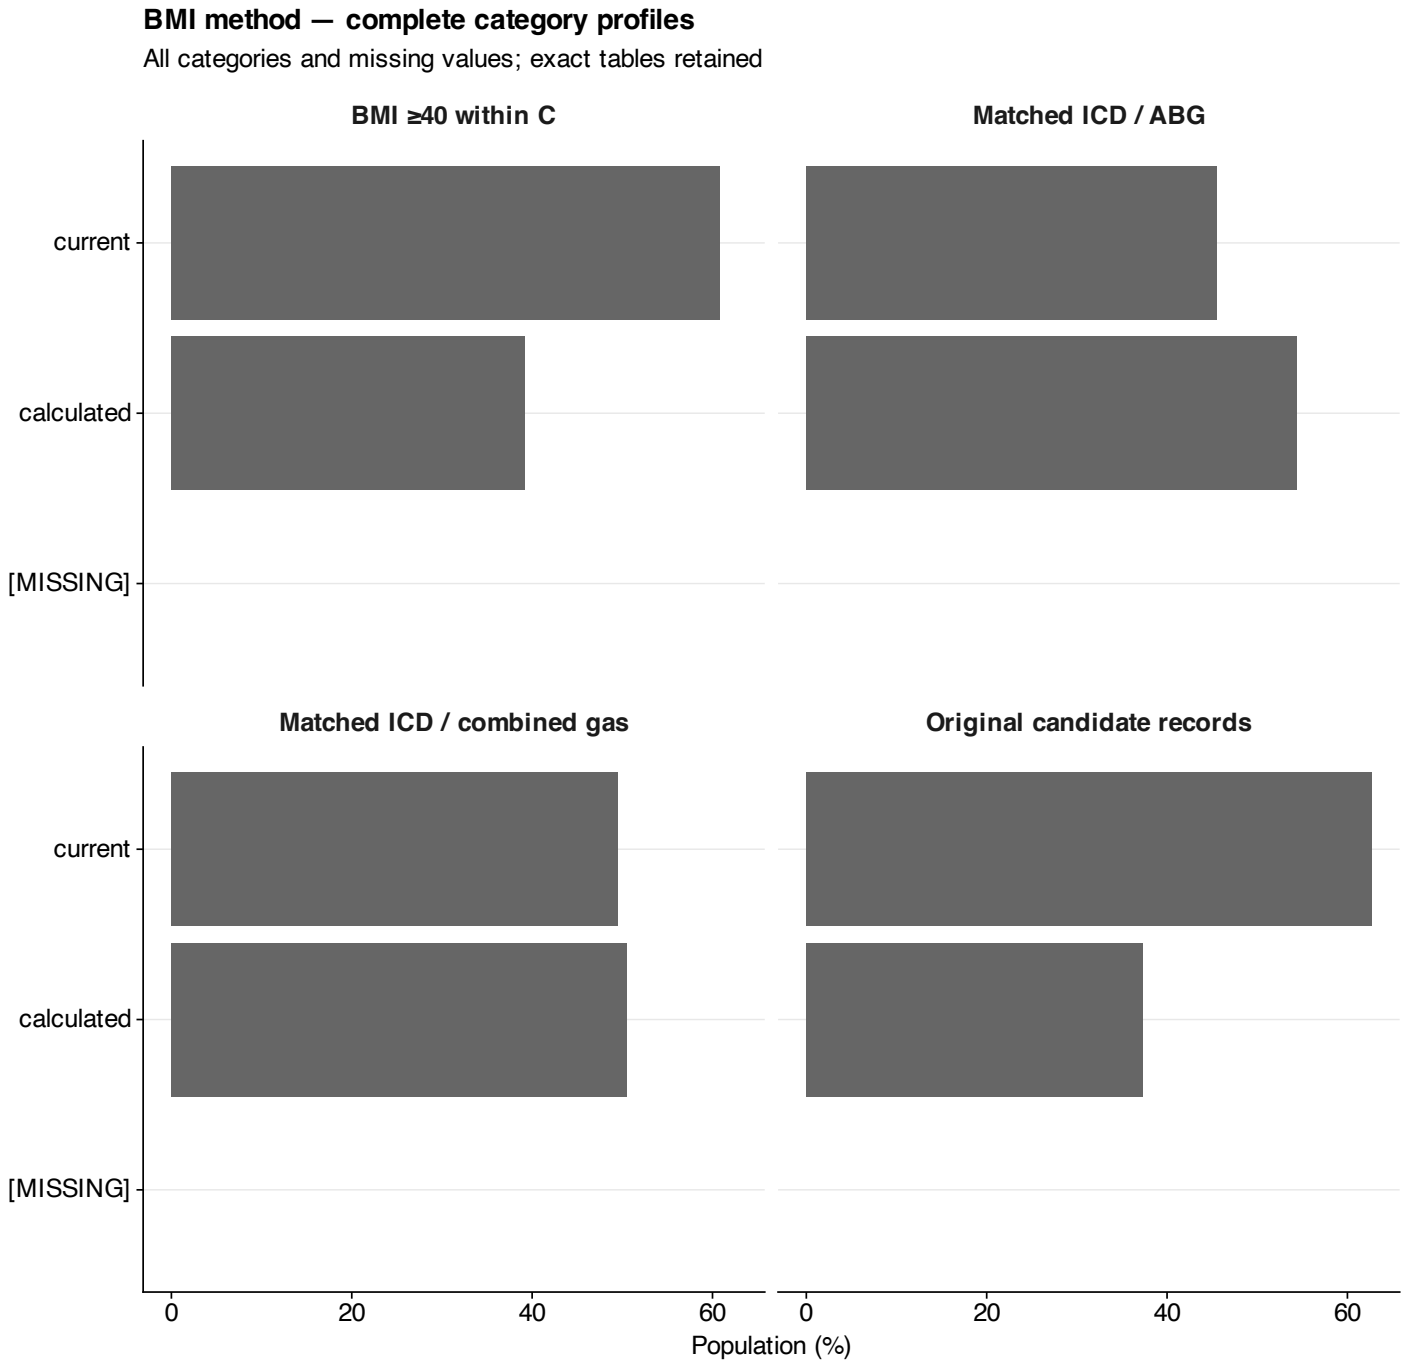

Figure 791: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete bmi_method stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

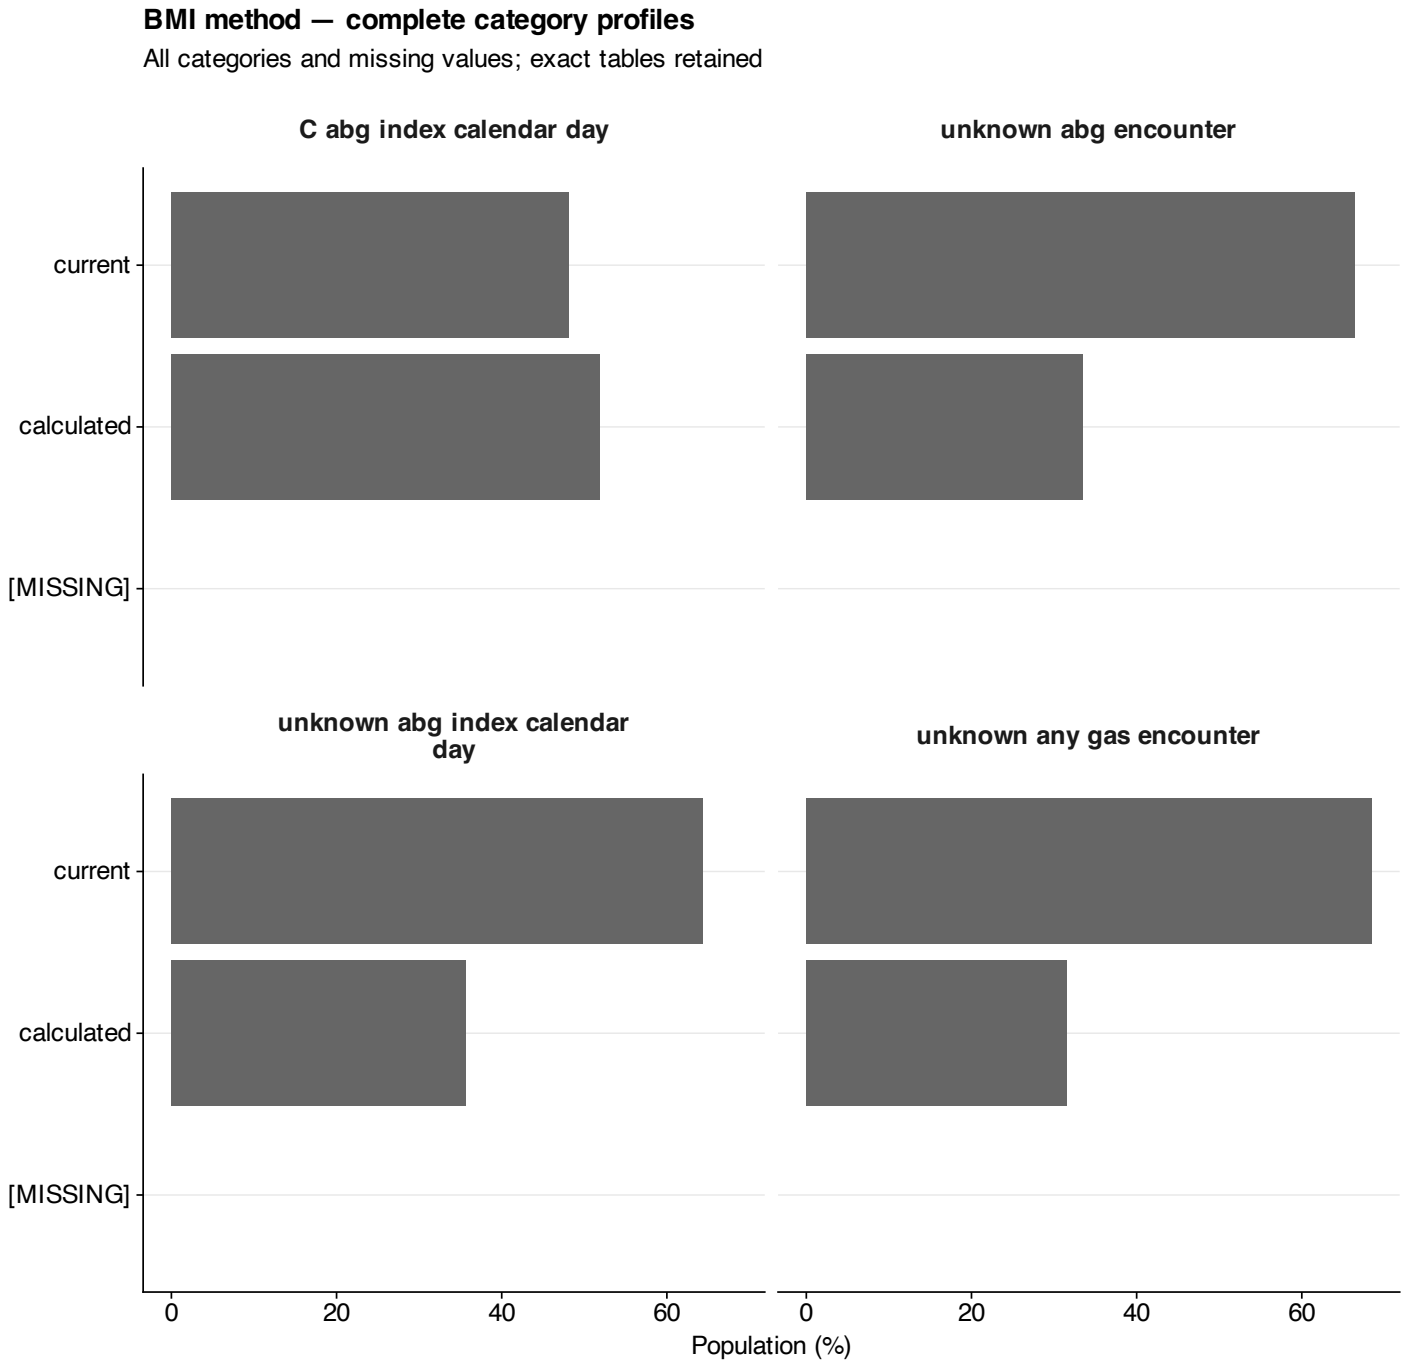

Figure 792: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete bmi_method stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

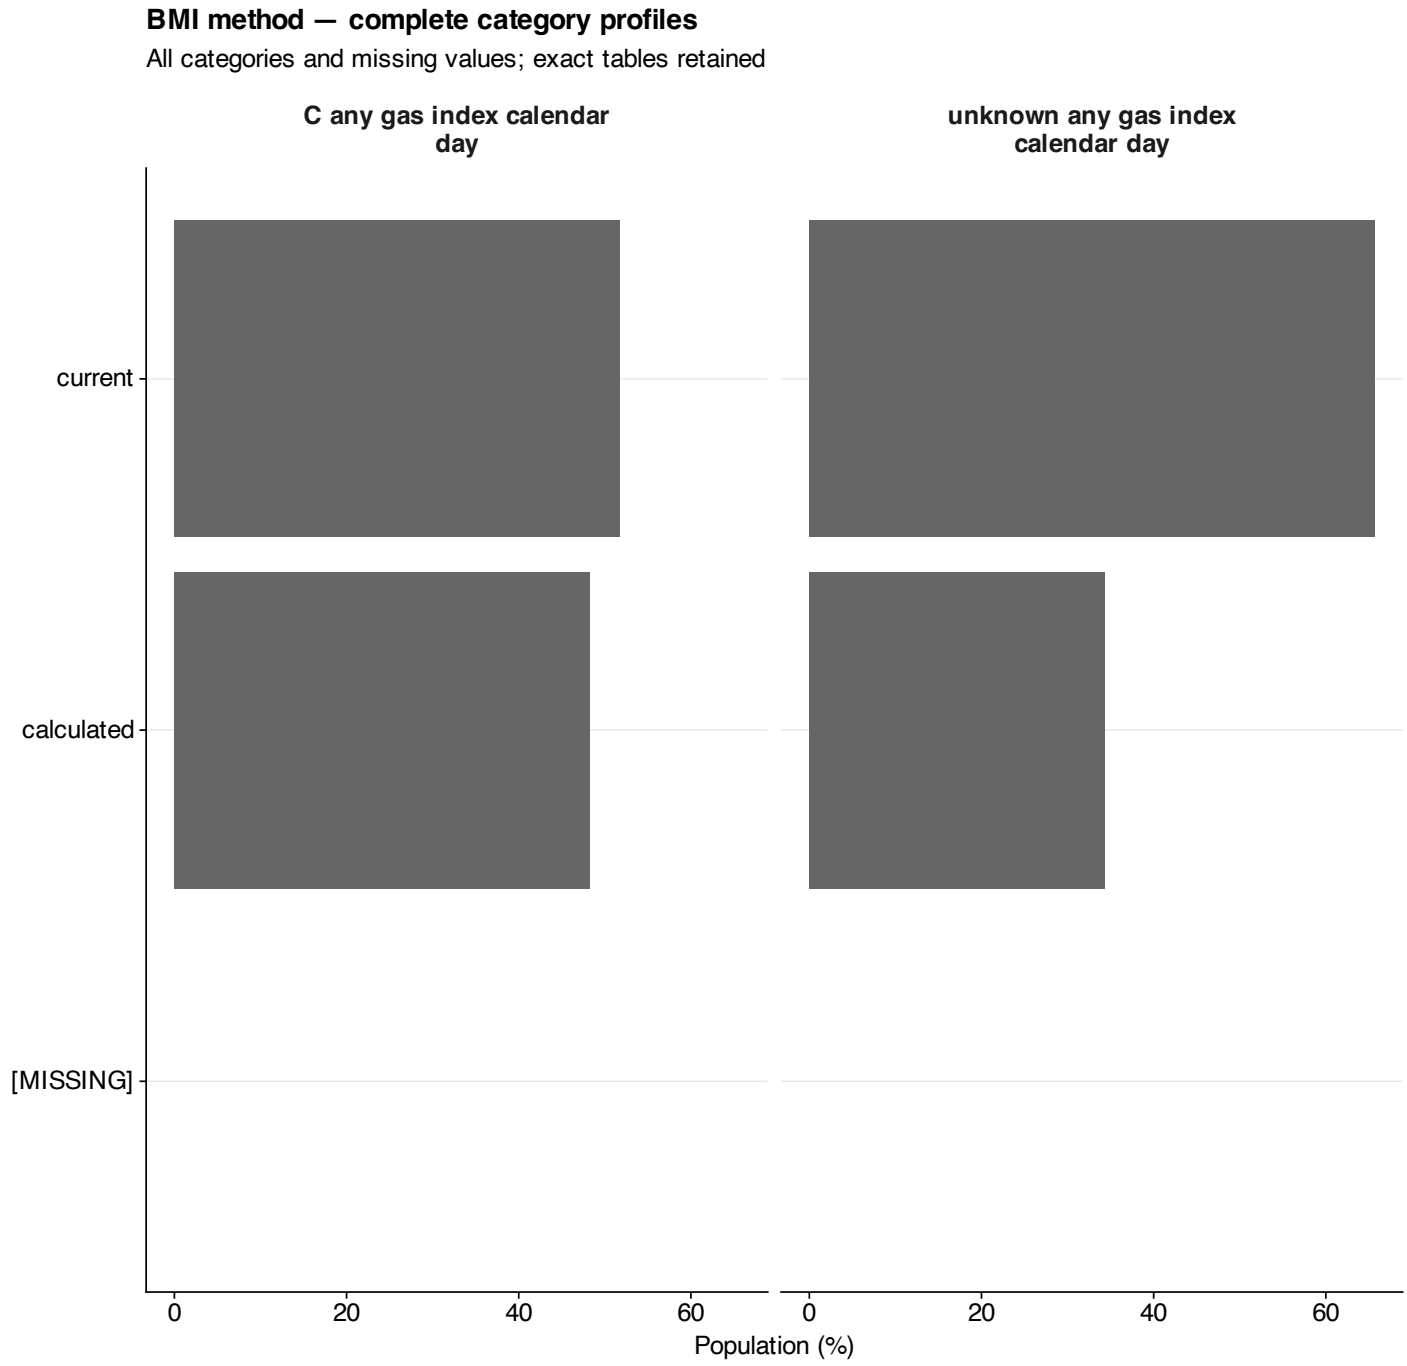

Figure 793: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete bmi_method stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

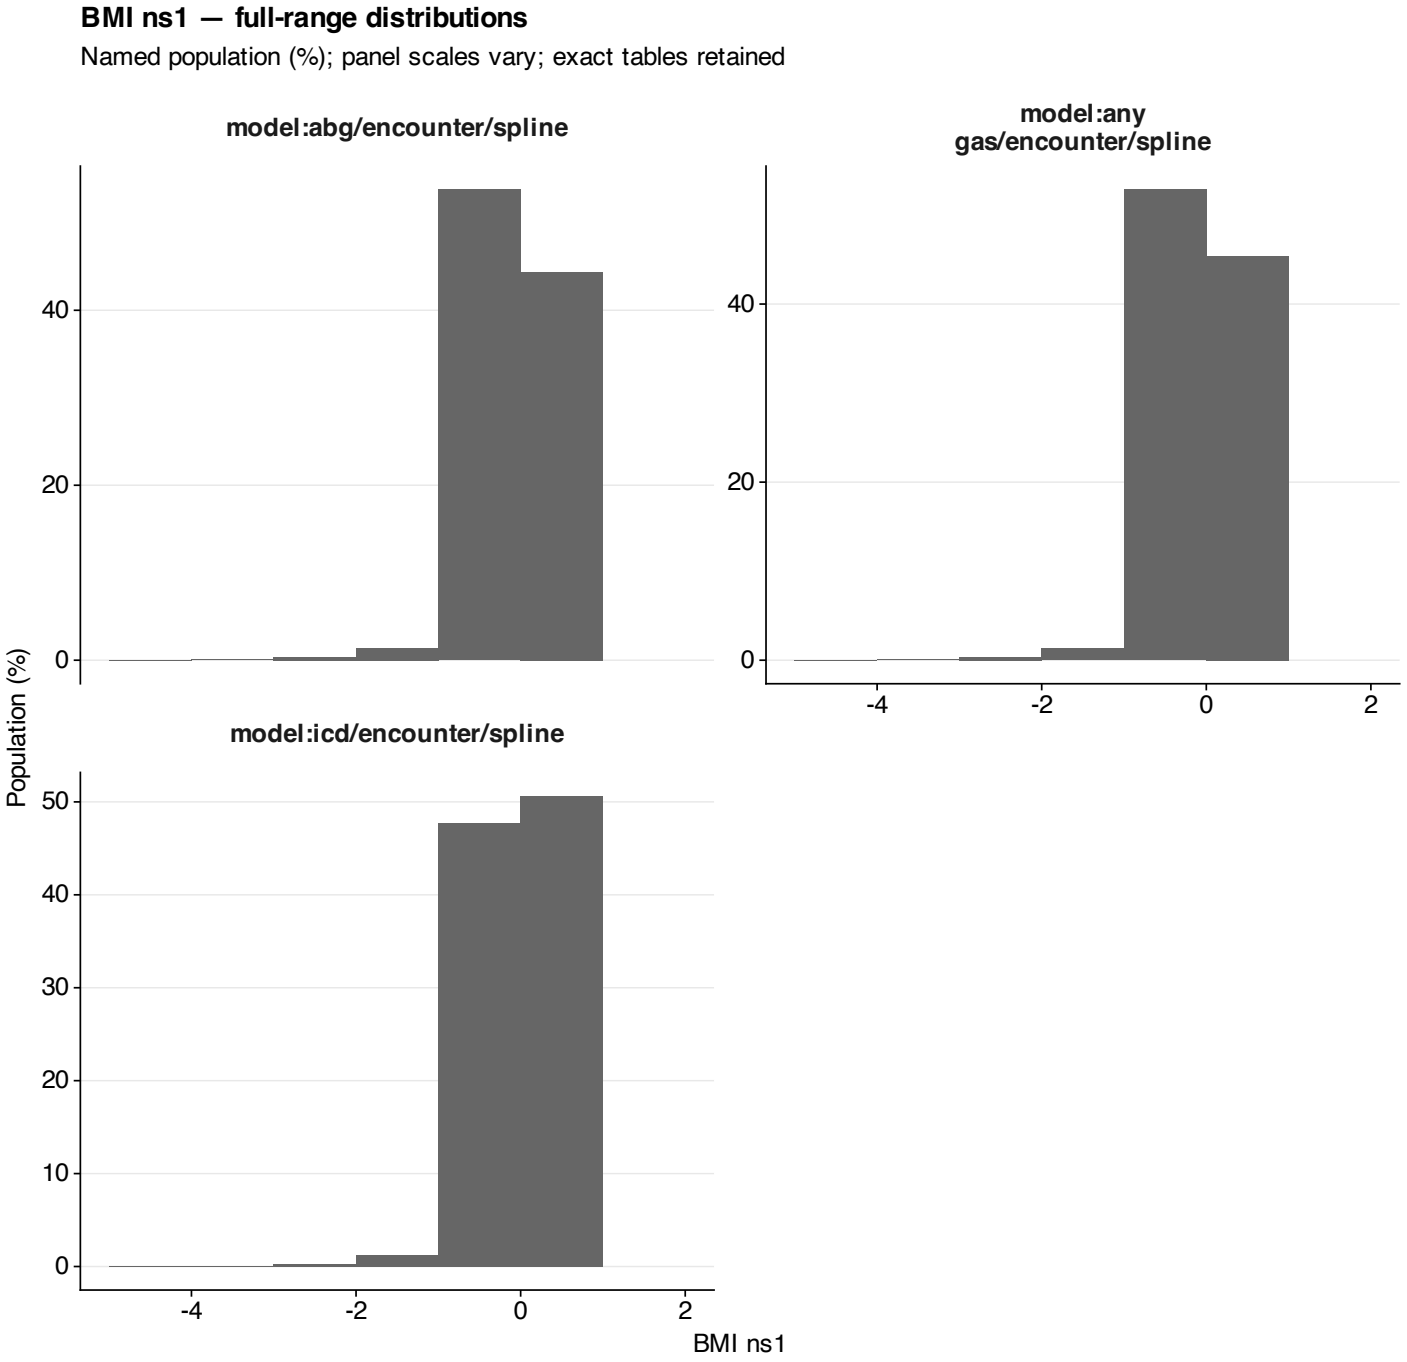

Figure 794: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete bmi_ns1 stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

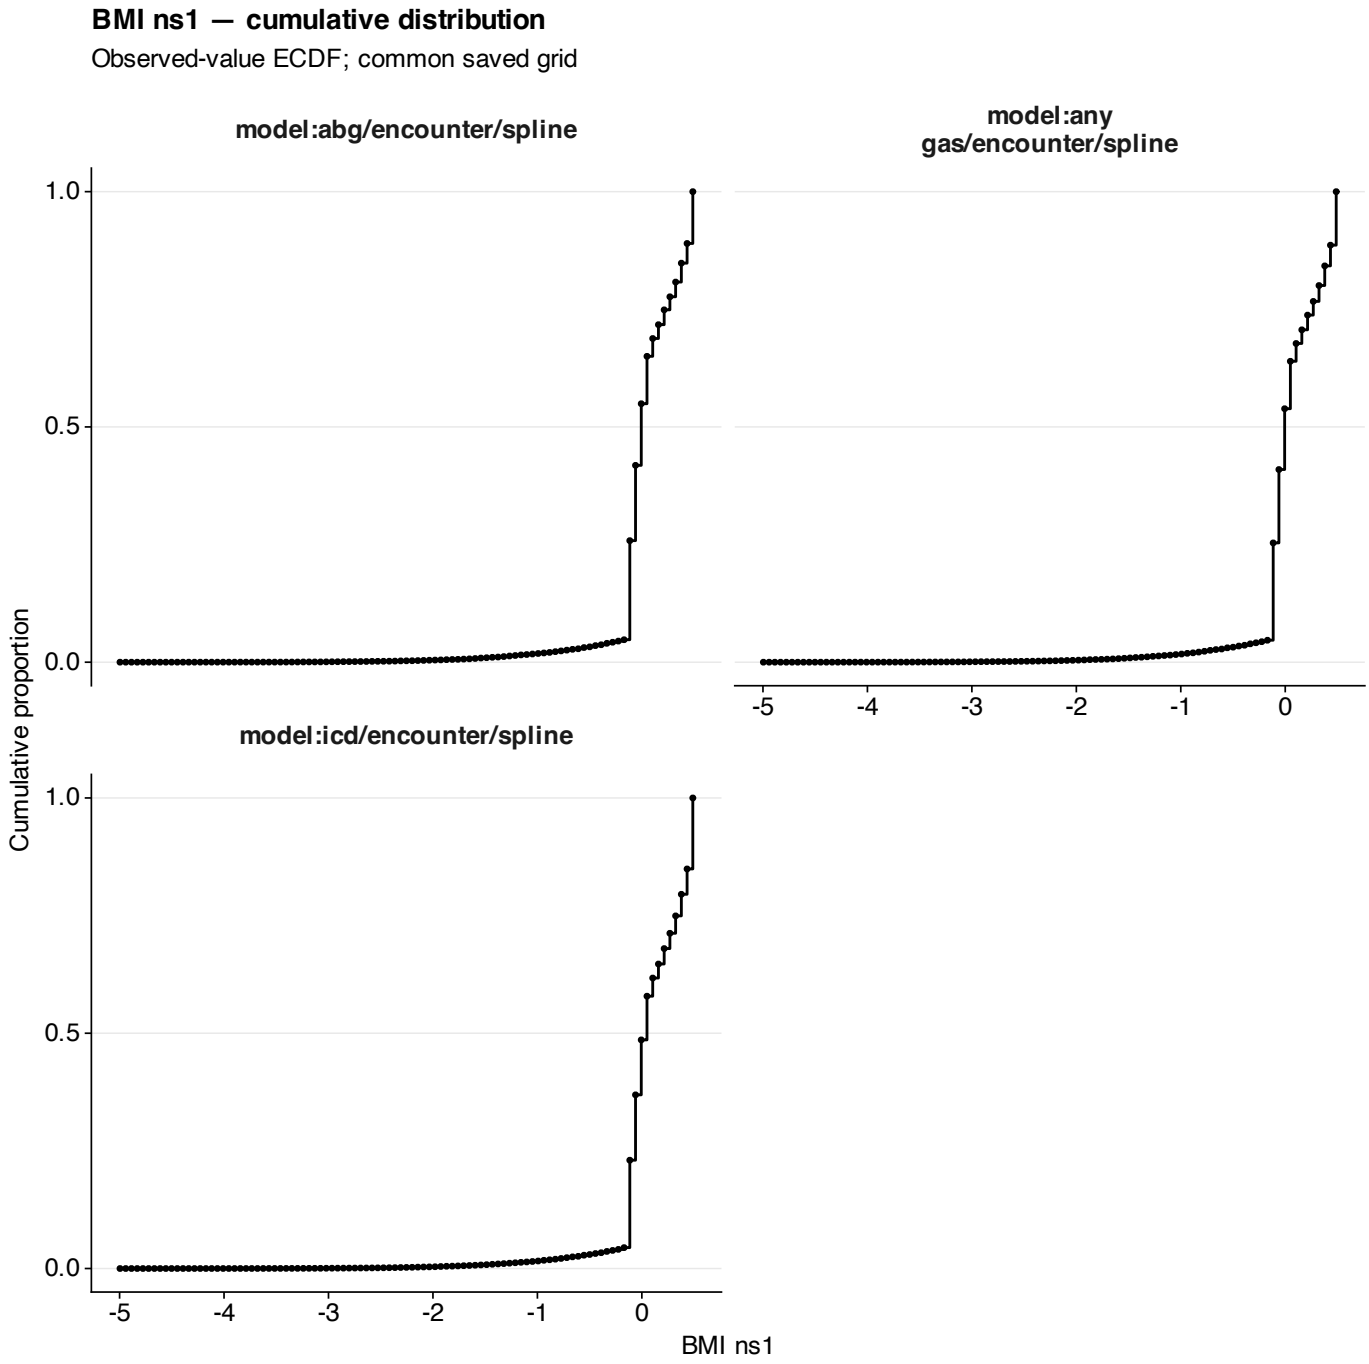

Figure 795: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. bmi_ns1 ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

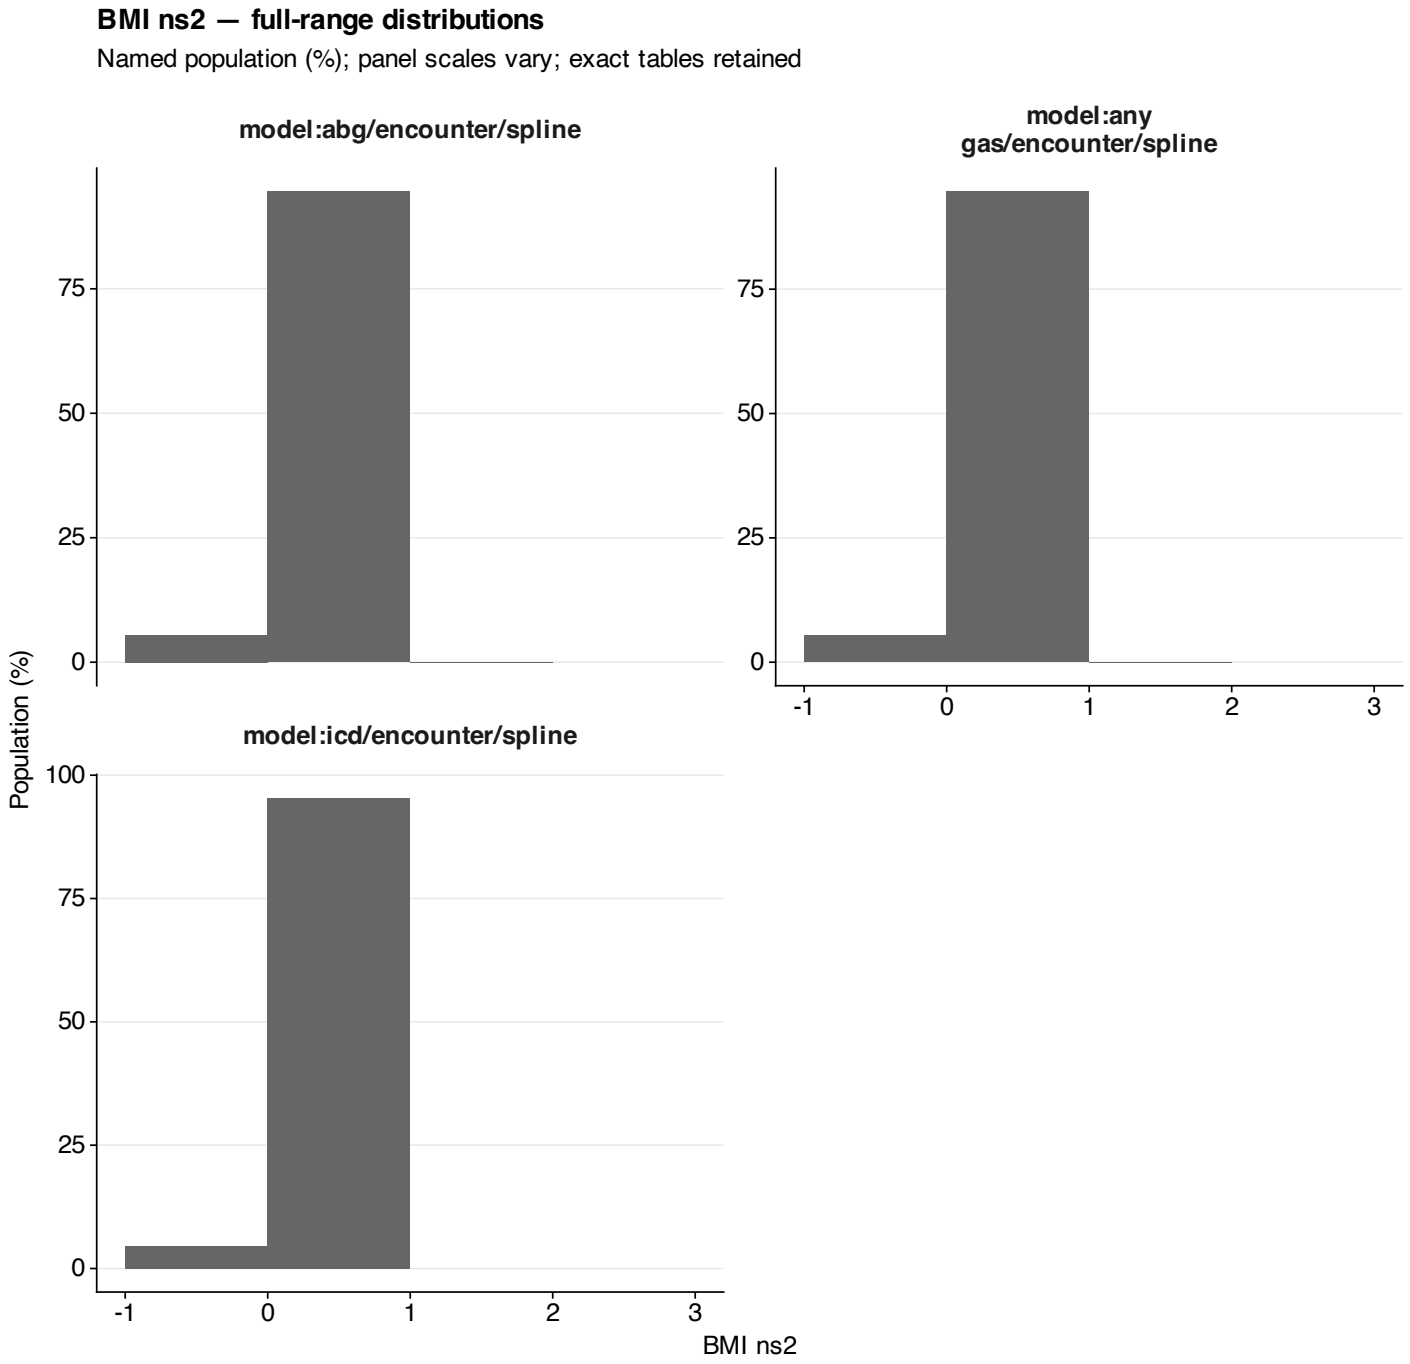

Figure 796: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete bmi_ns2 stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

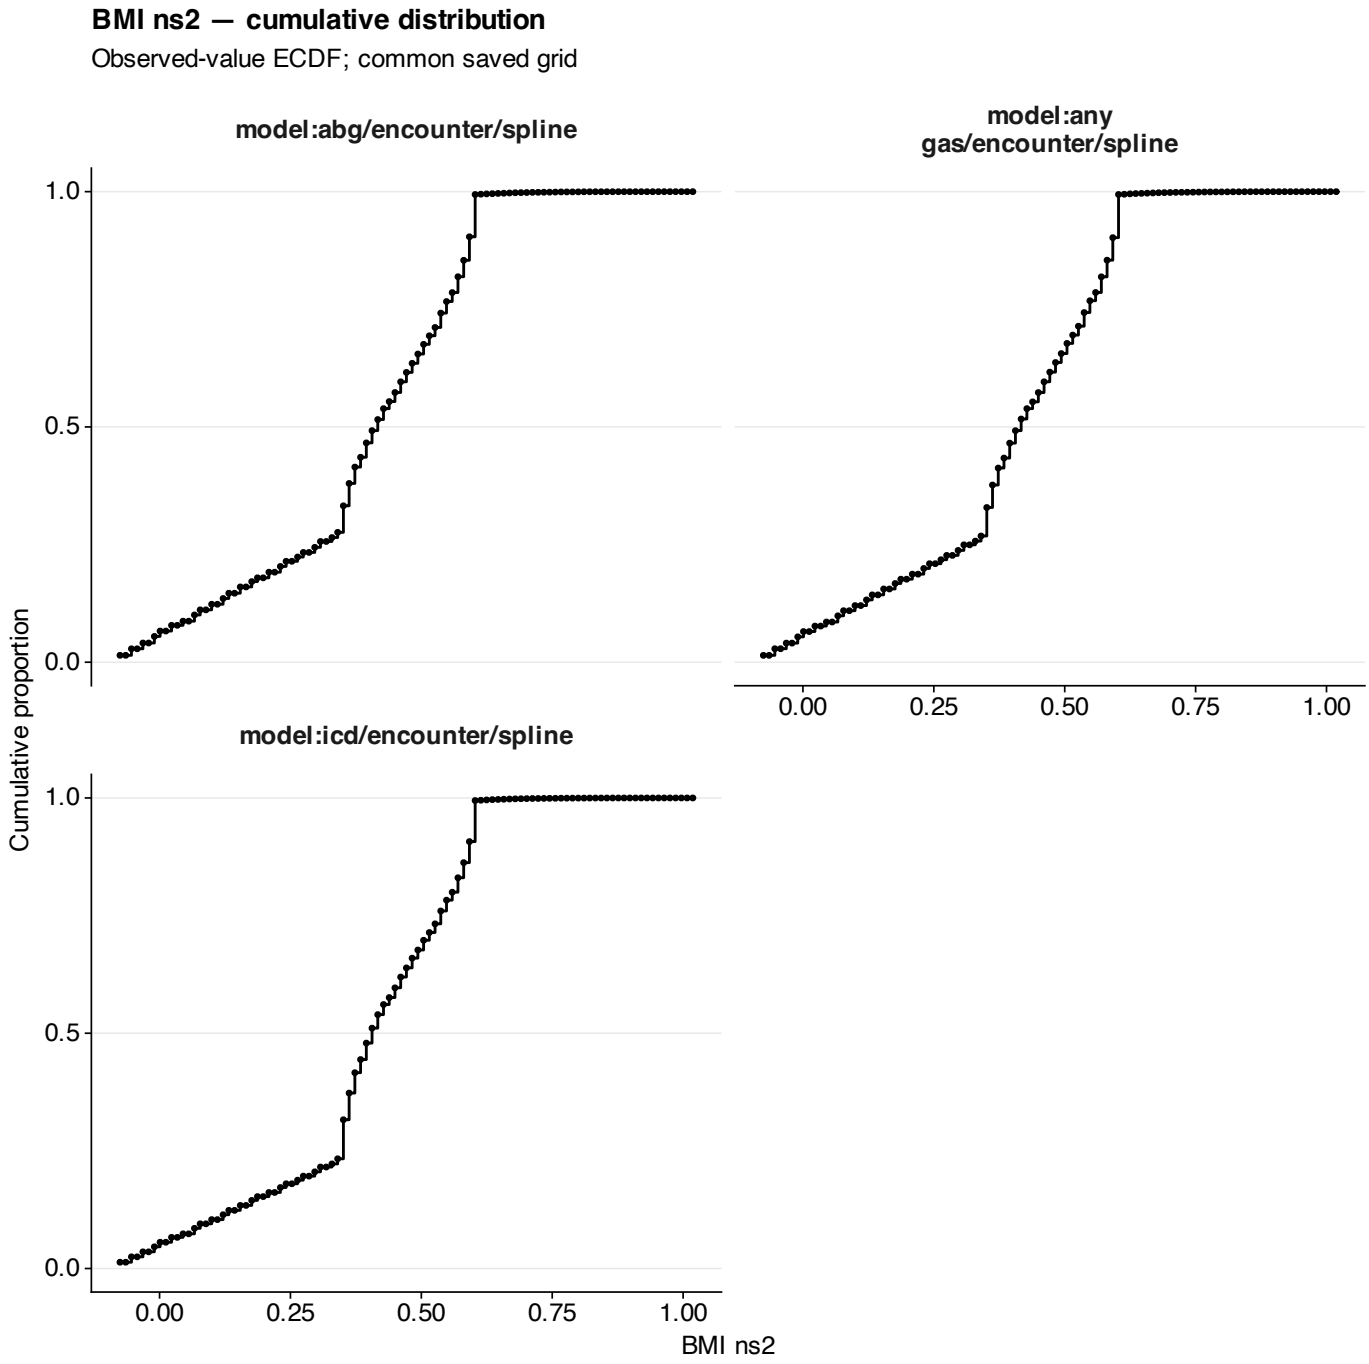

Figure 797: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. bmi_ns2 ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

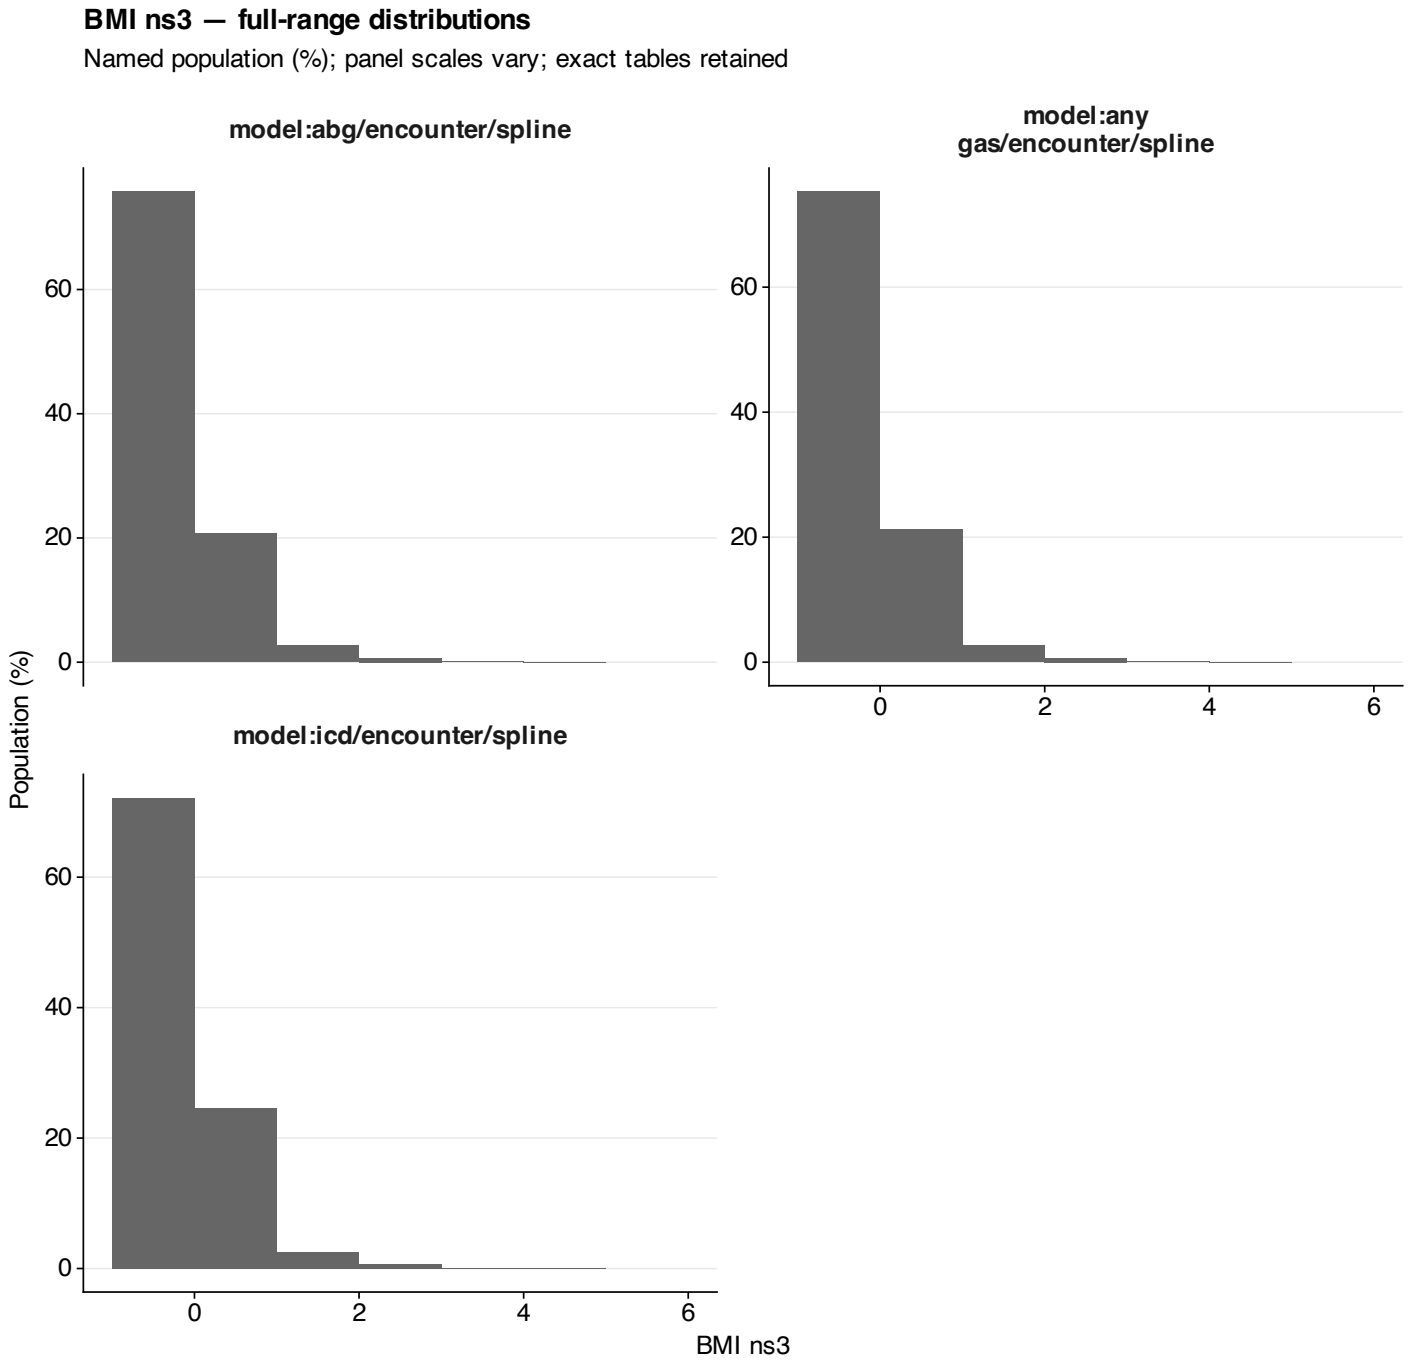

Figure 798: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete bmi_ns3 stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

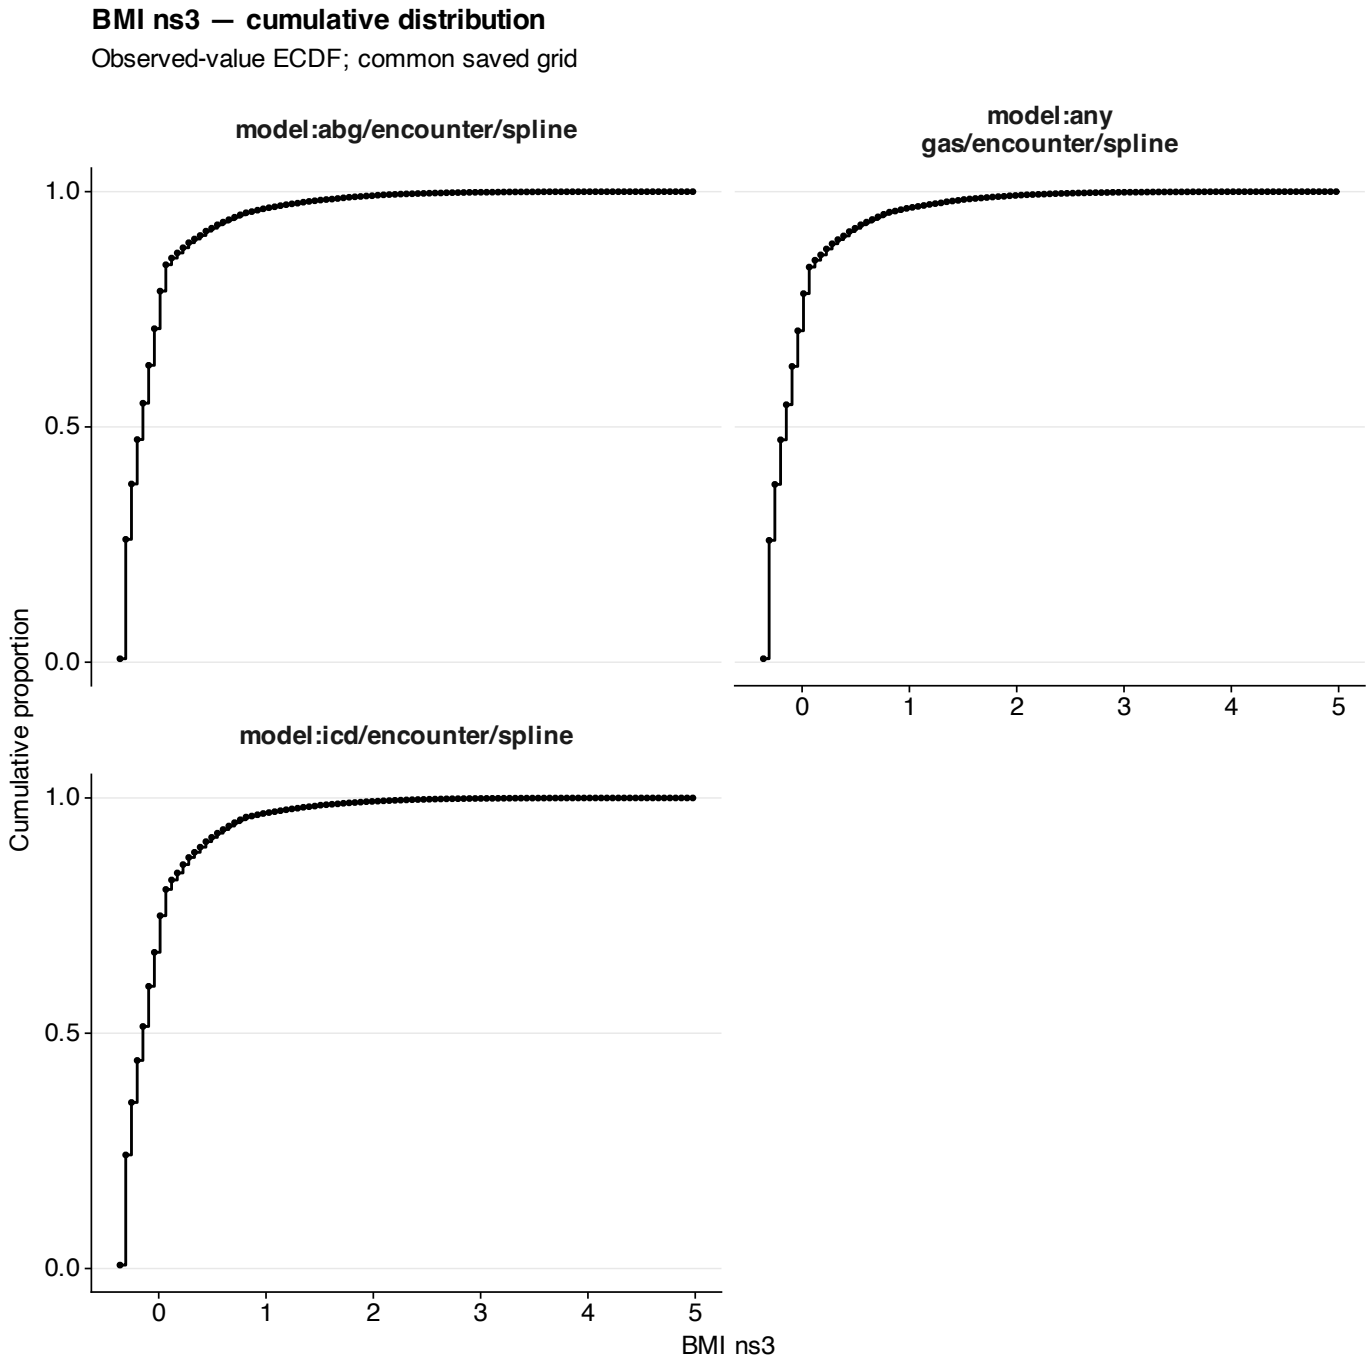

Figure 799: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. bmi_ns3 ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

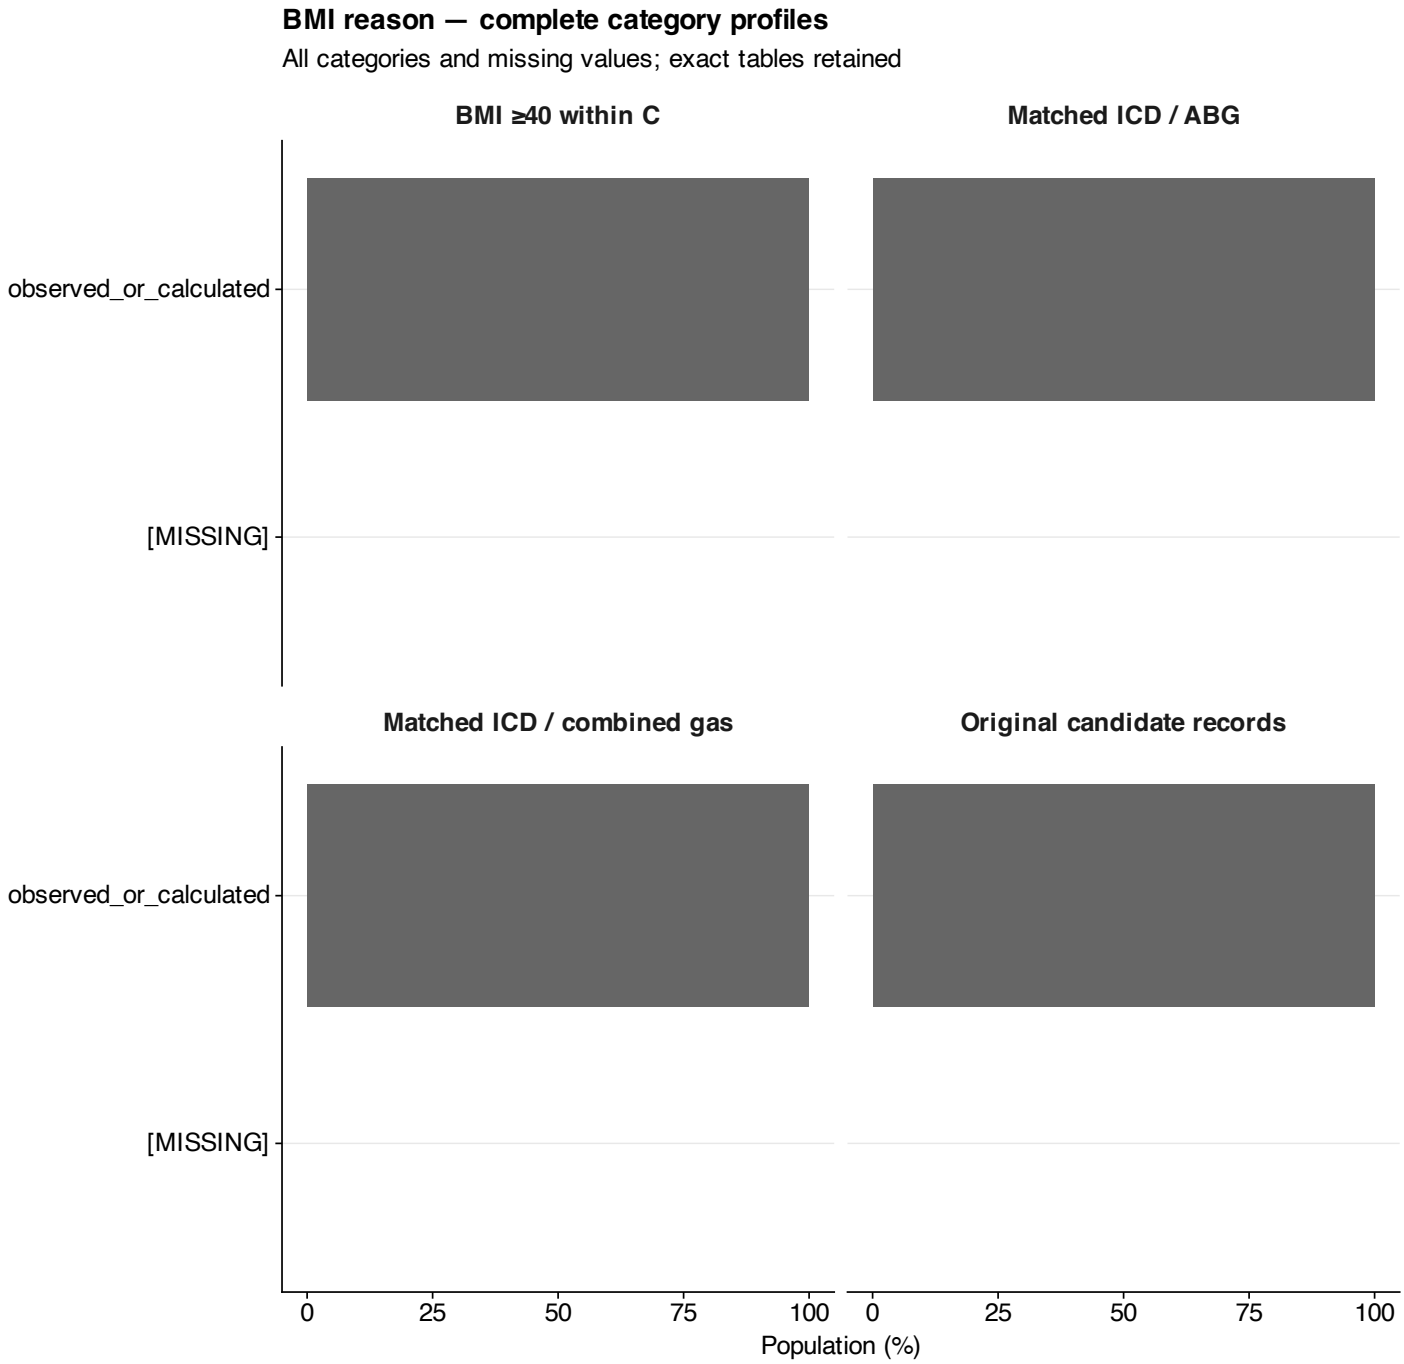

Figure 800: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete bmi_reason stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

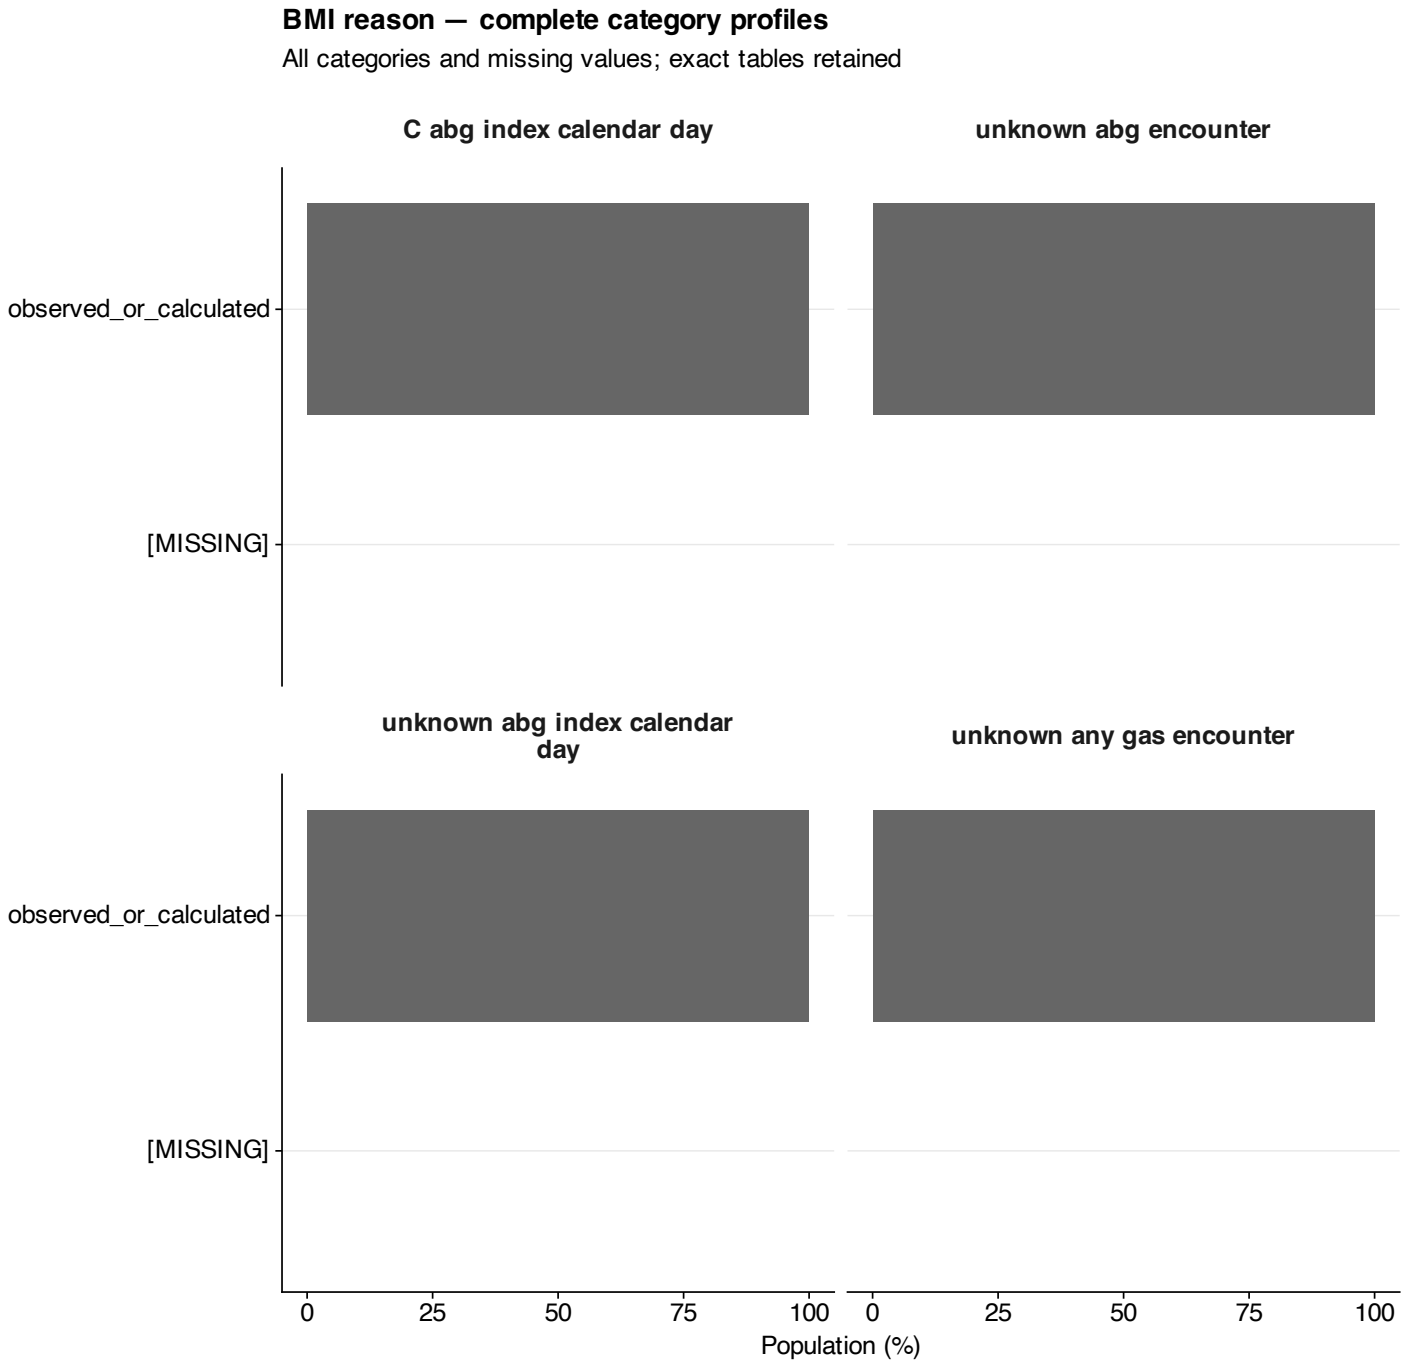

Figure 801: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete bmi_reason stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

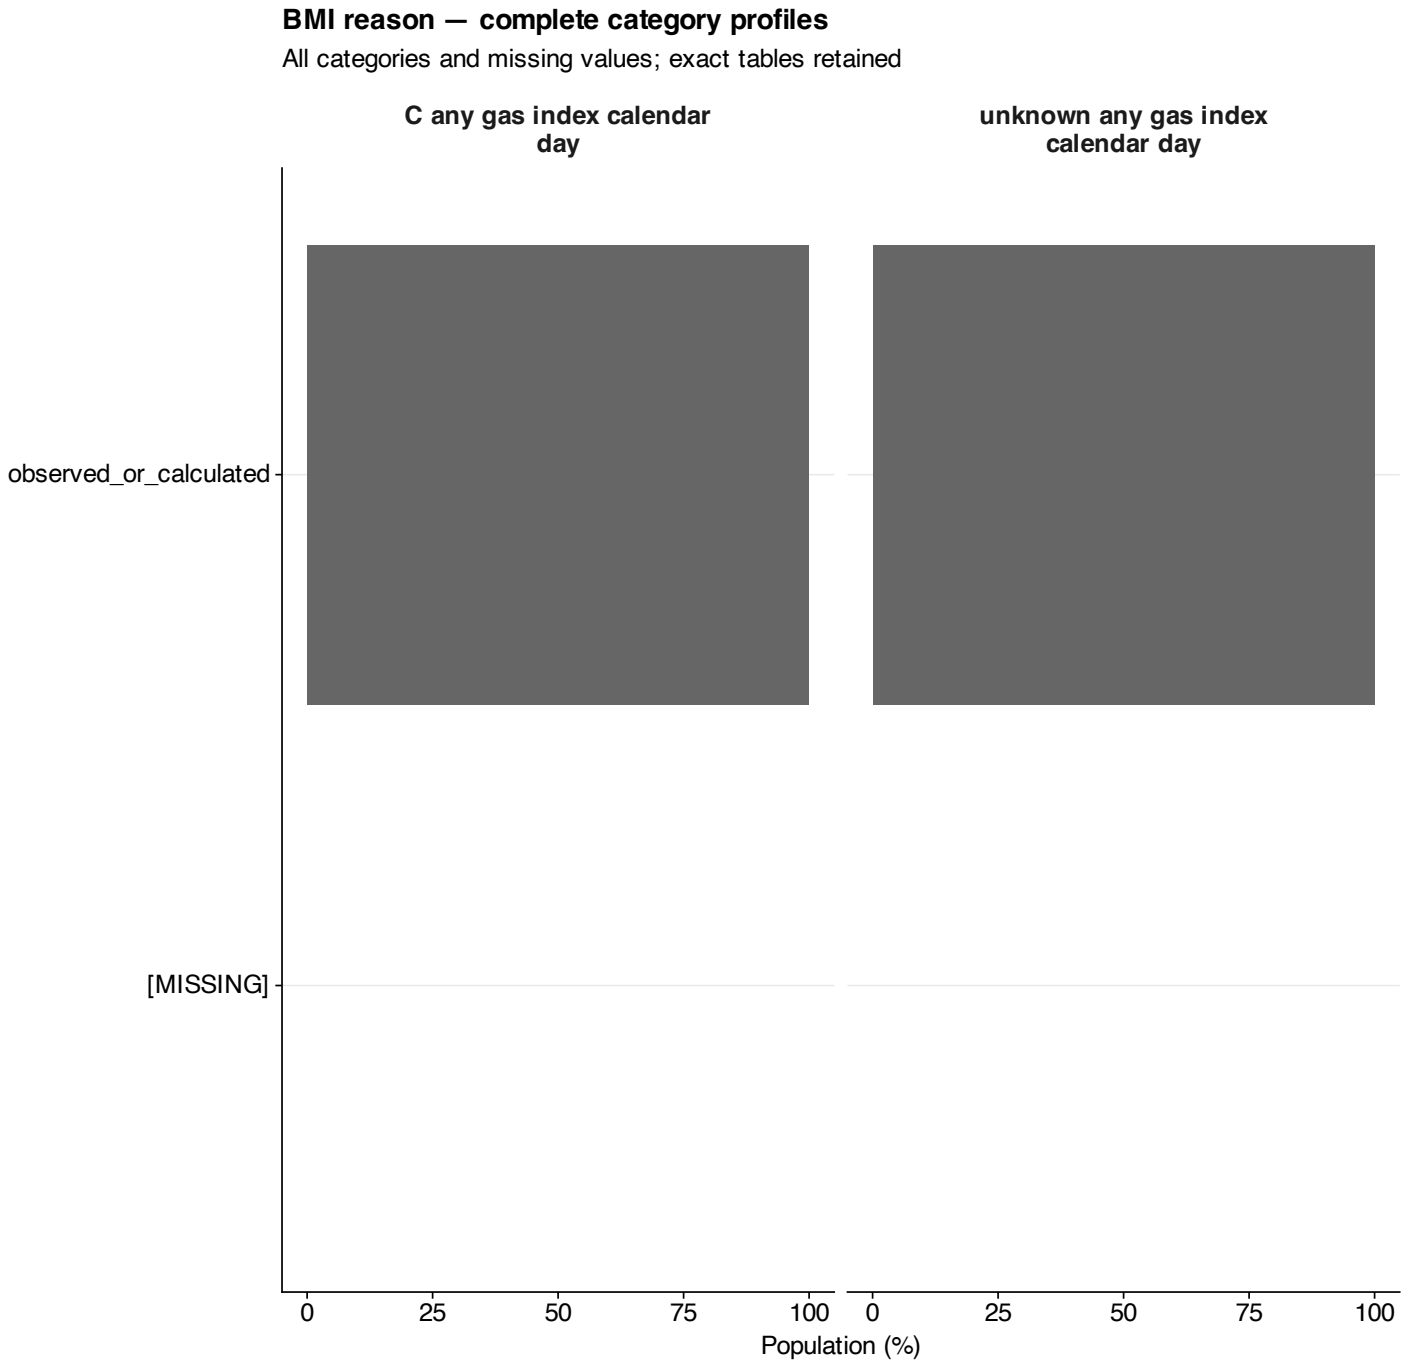

Figure 802: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete bmi_reason stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

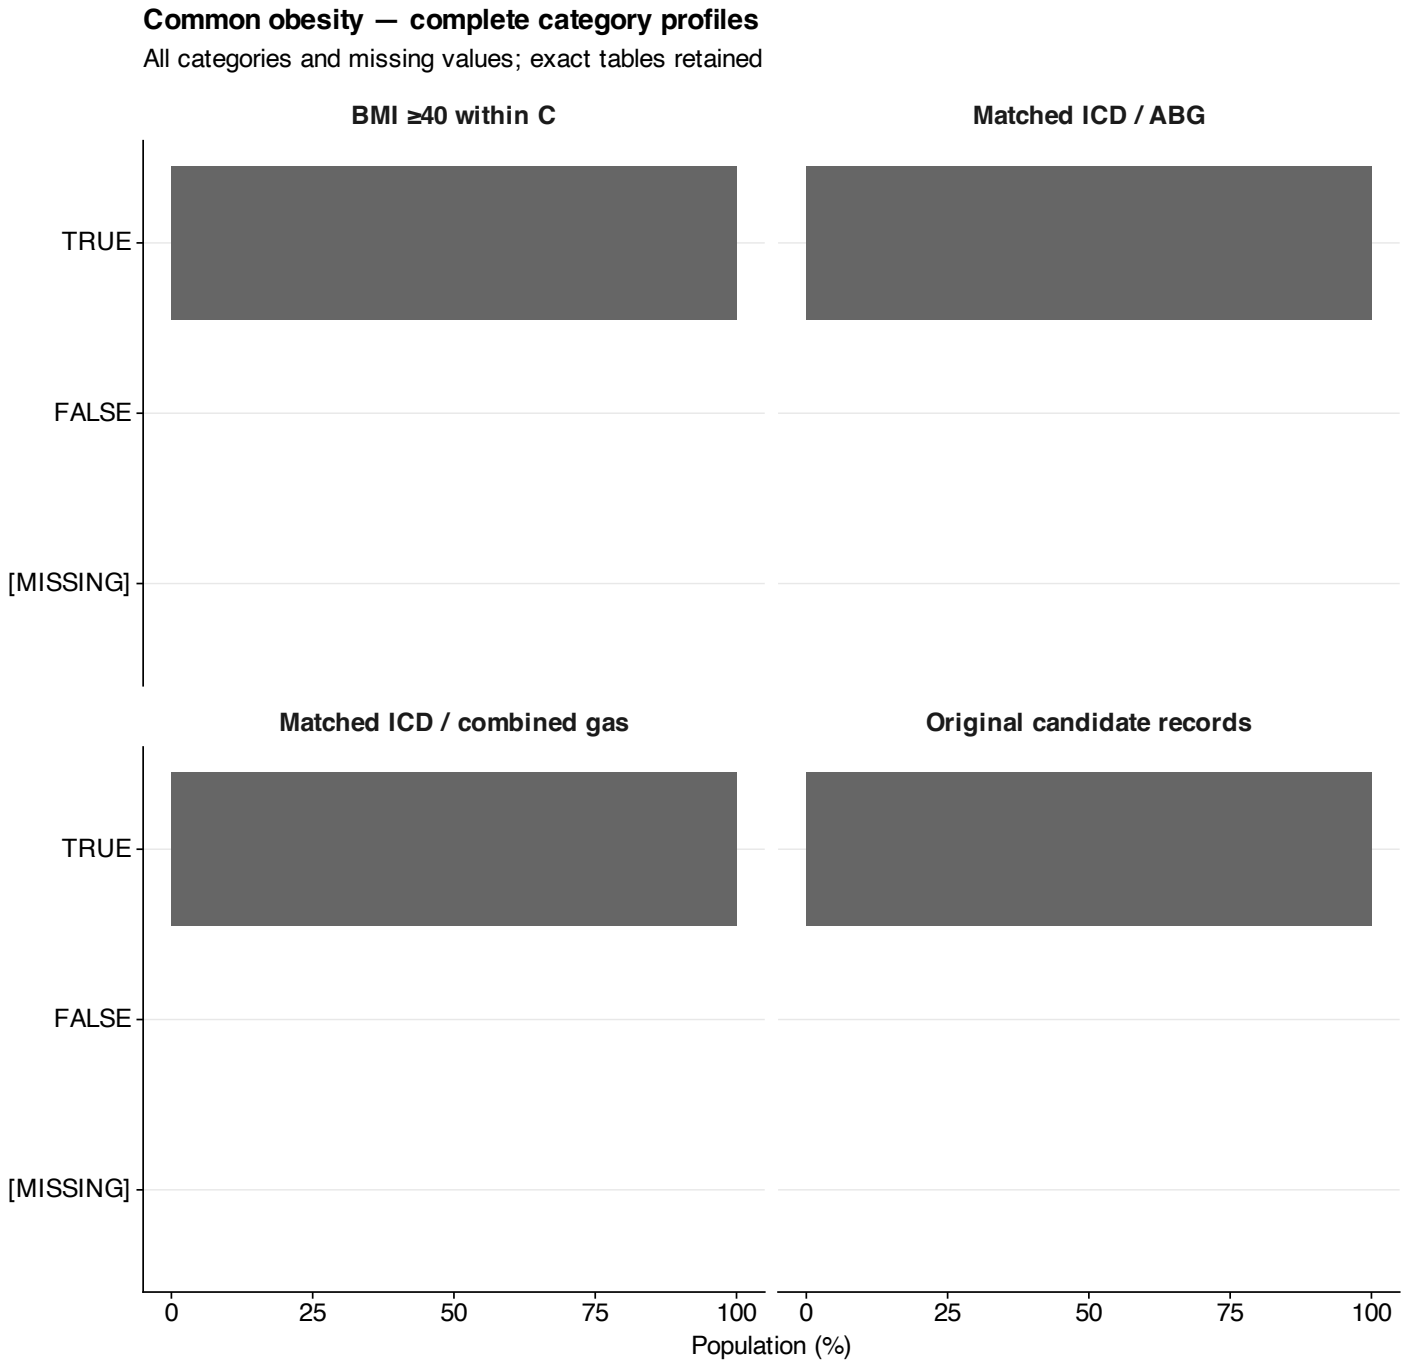

Figure 803: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete common_obesity stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

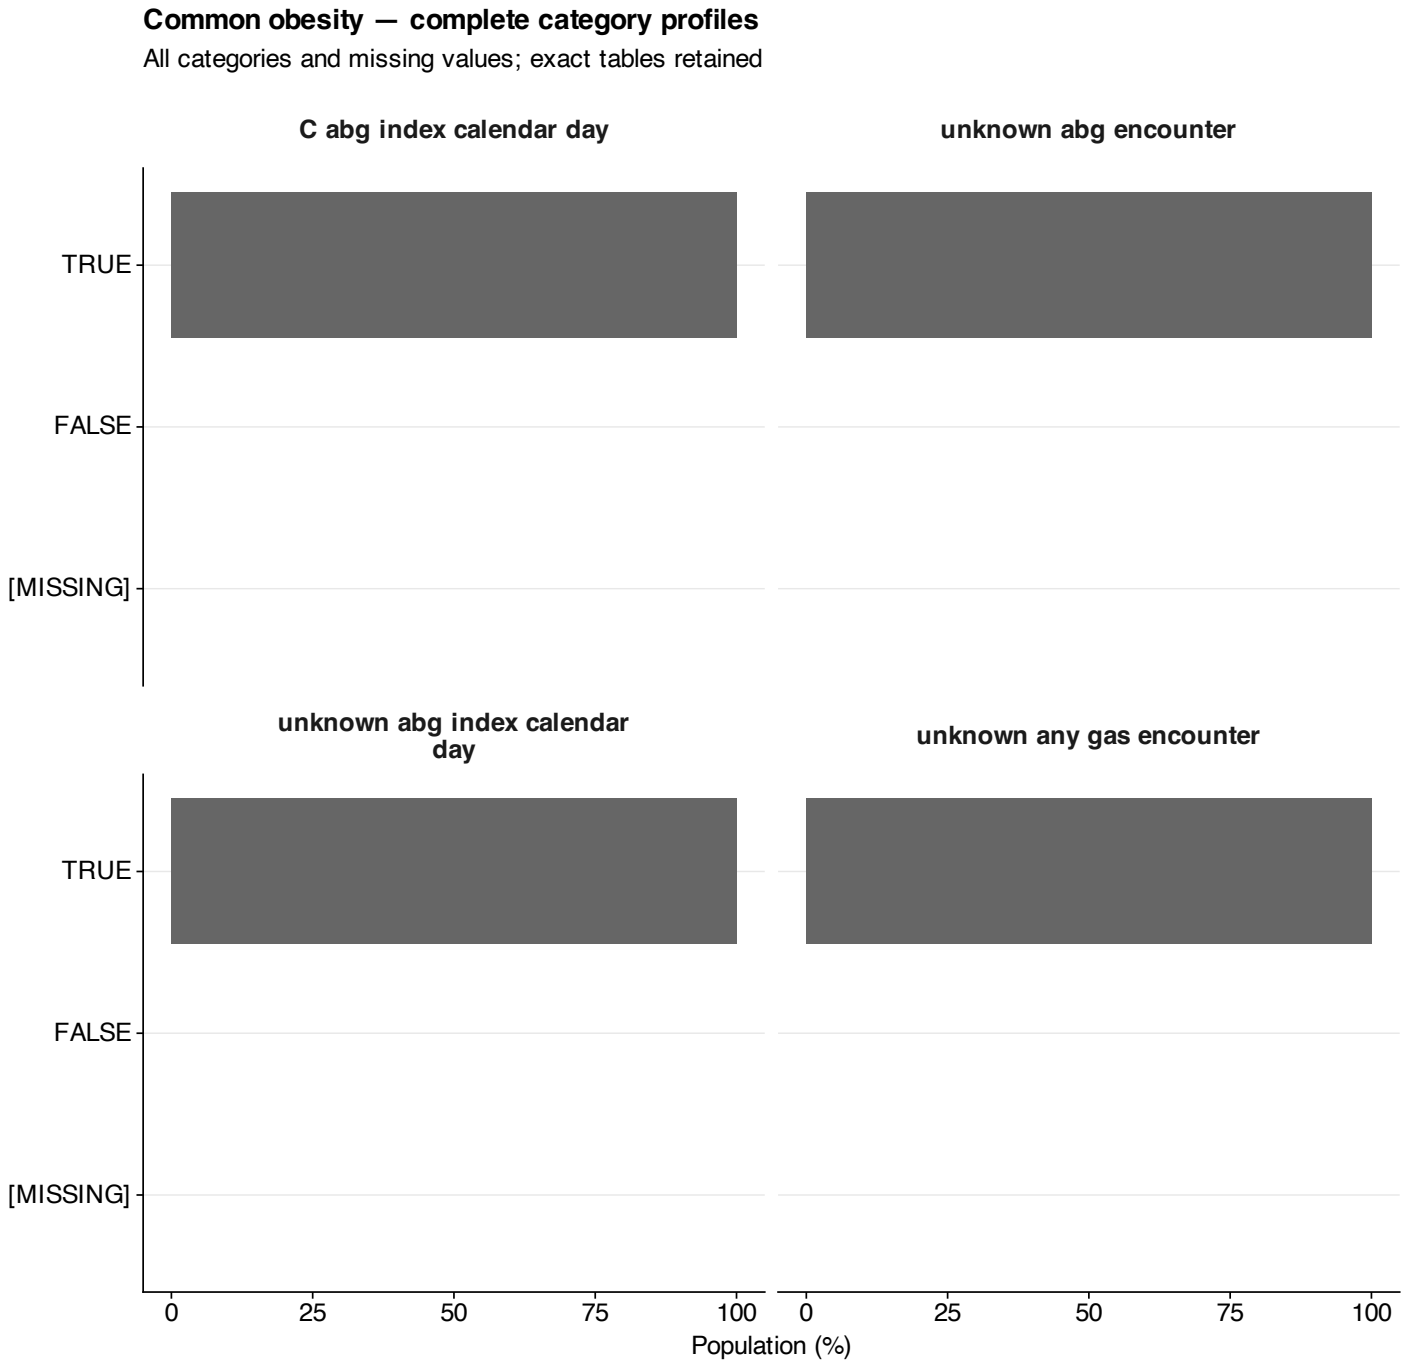

Figure 804: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete common_obesity stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

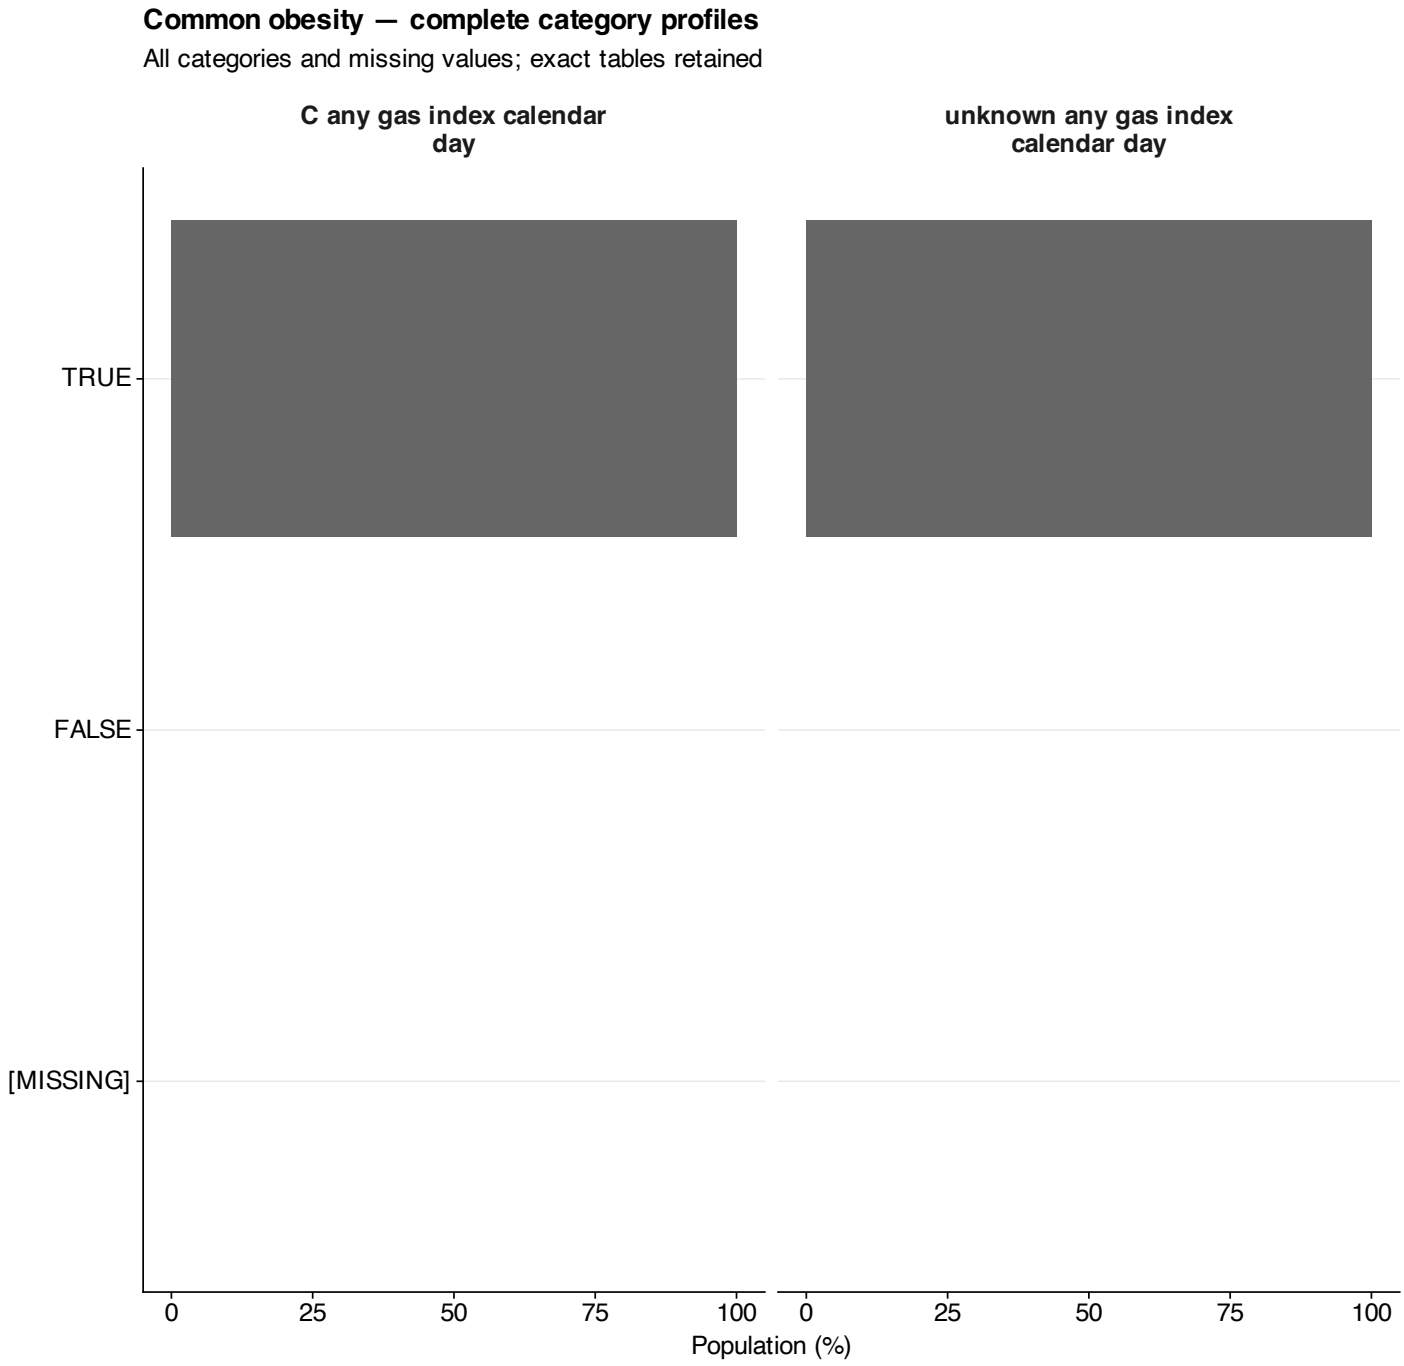

Figure 805: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete common_obesity stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

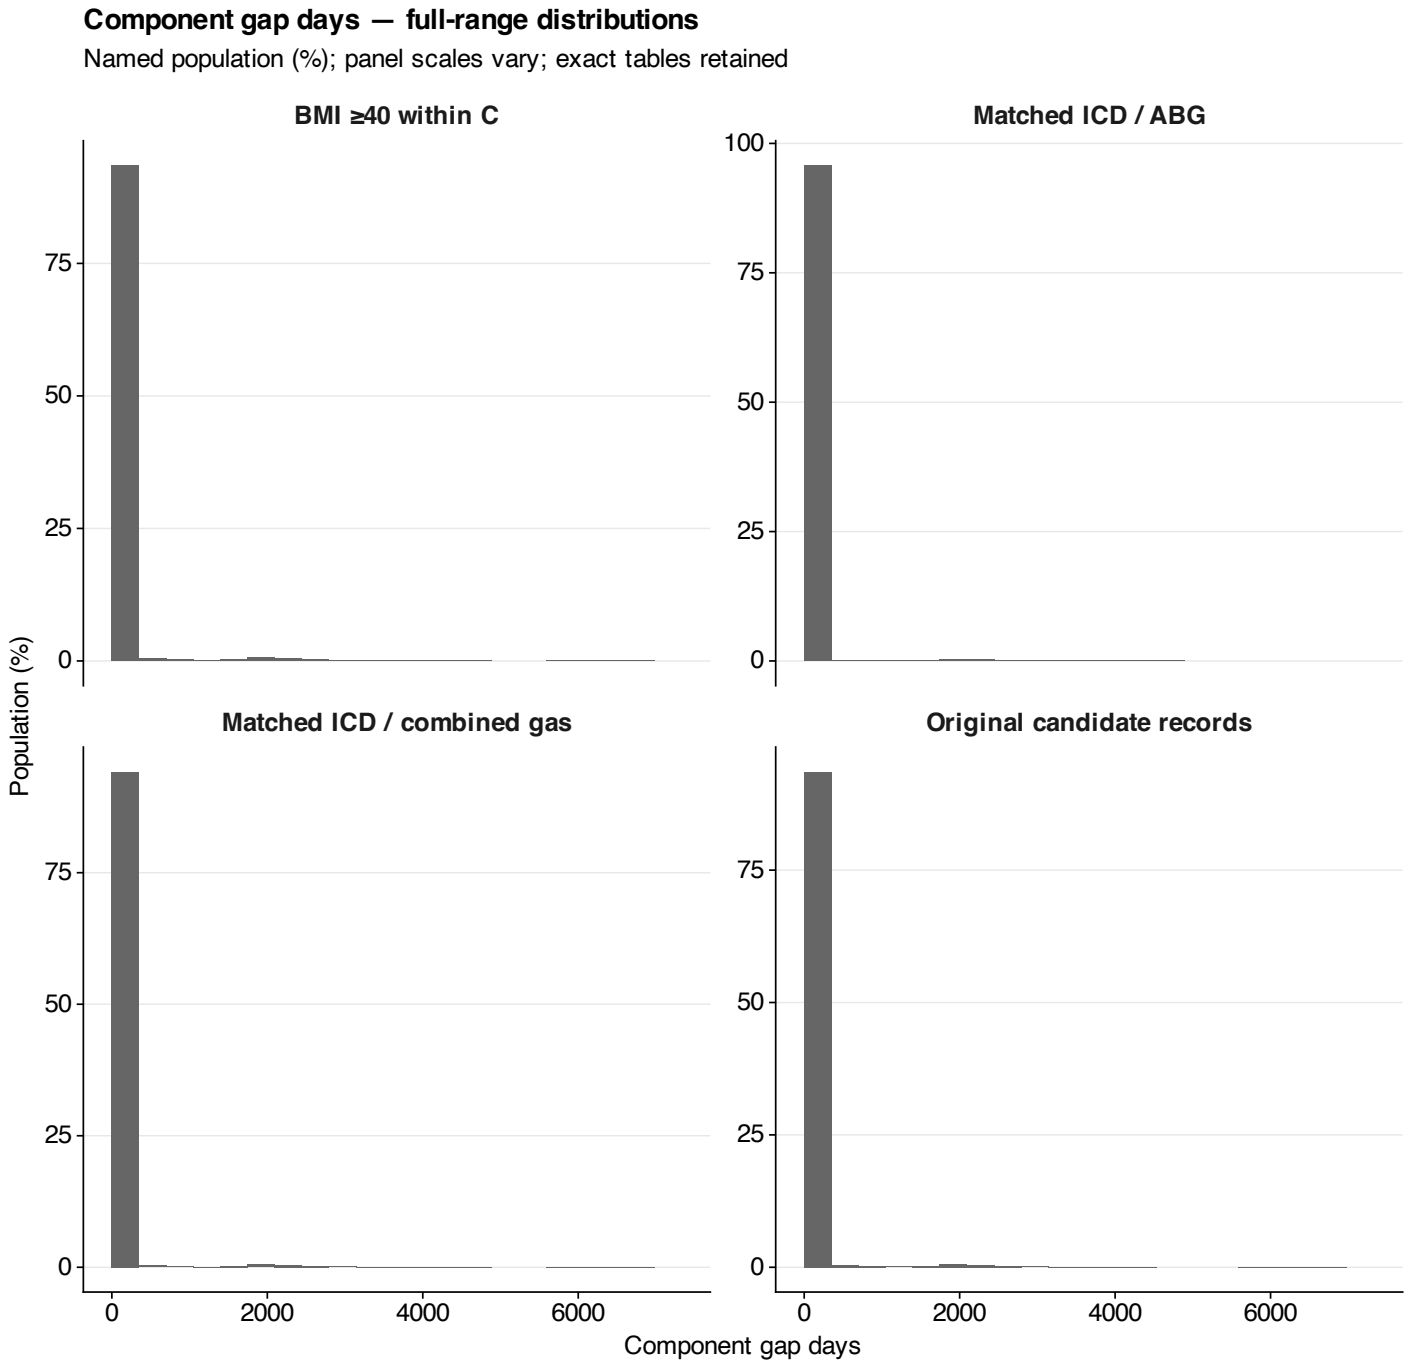

Figure 806: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete component_gap_days stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

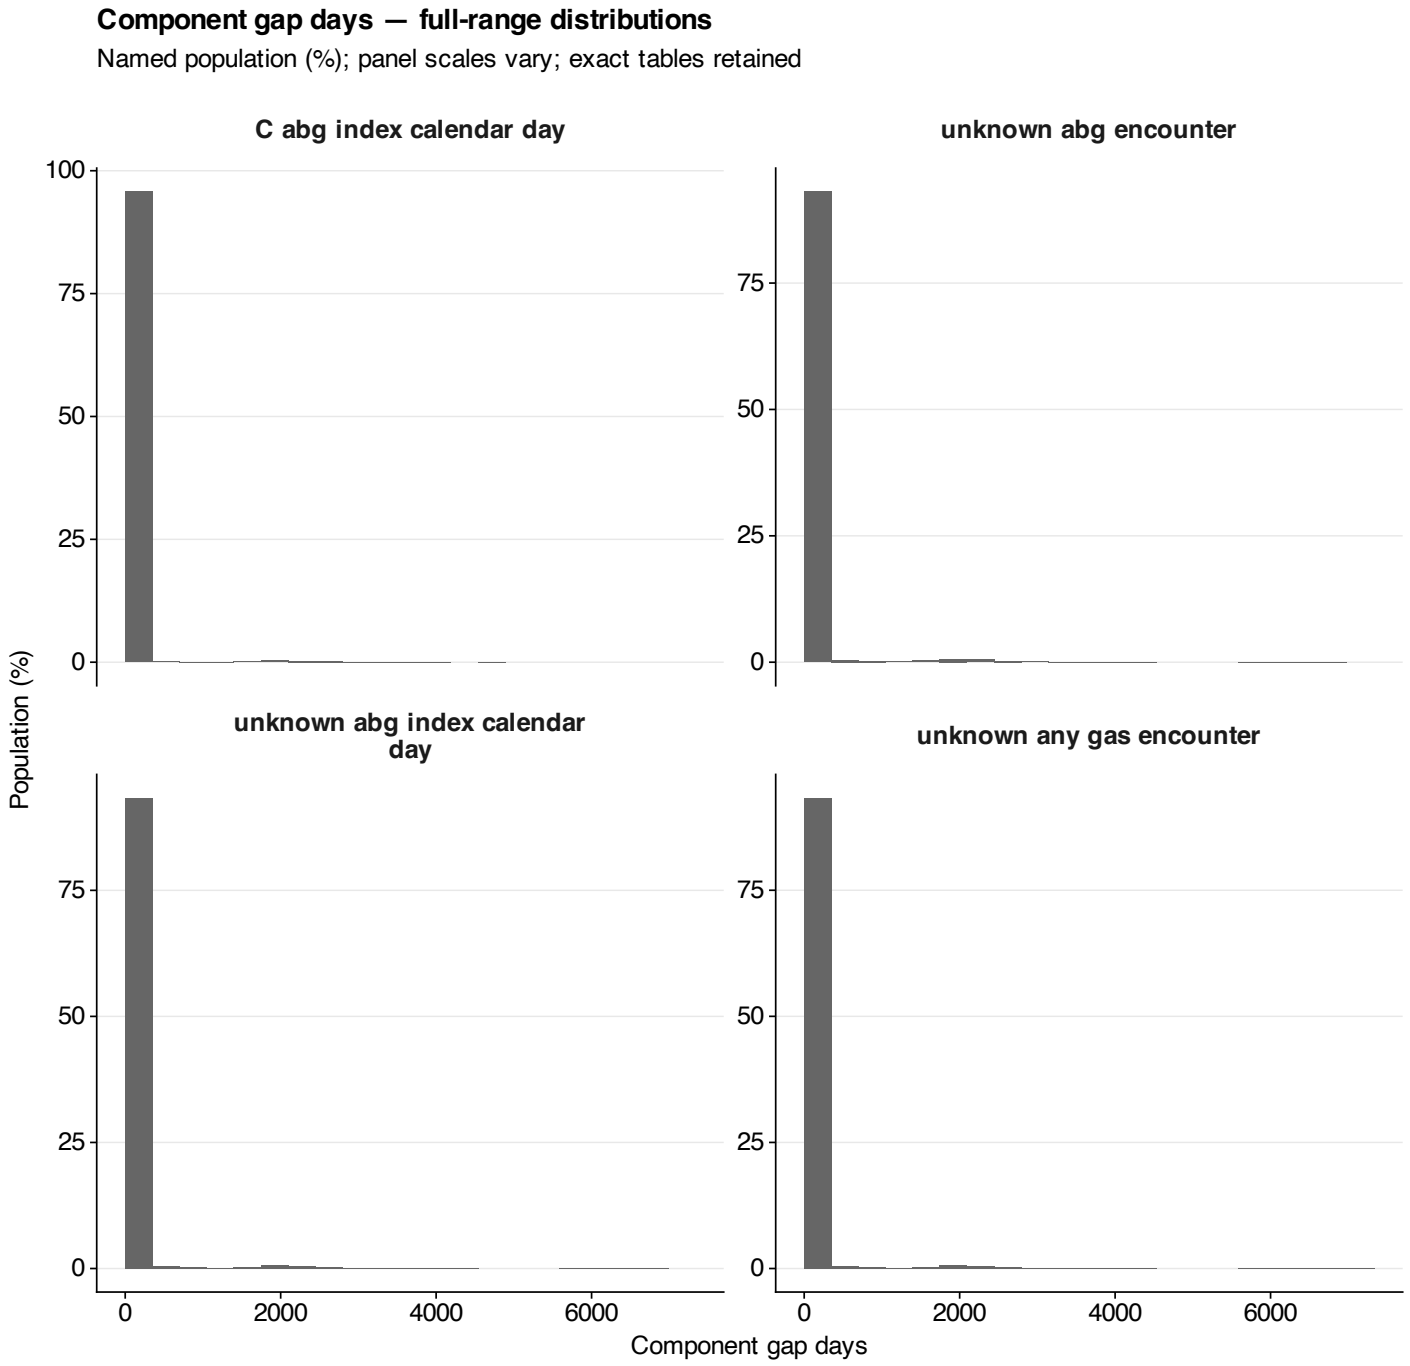

Figure 807: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete component_gap_days stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

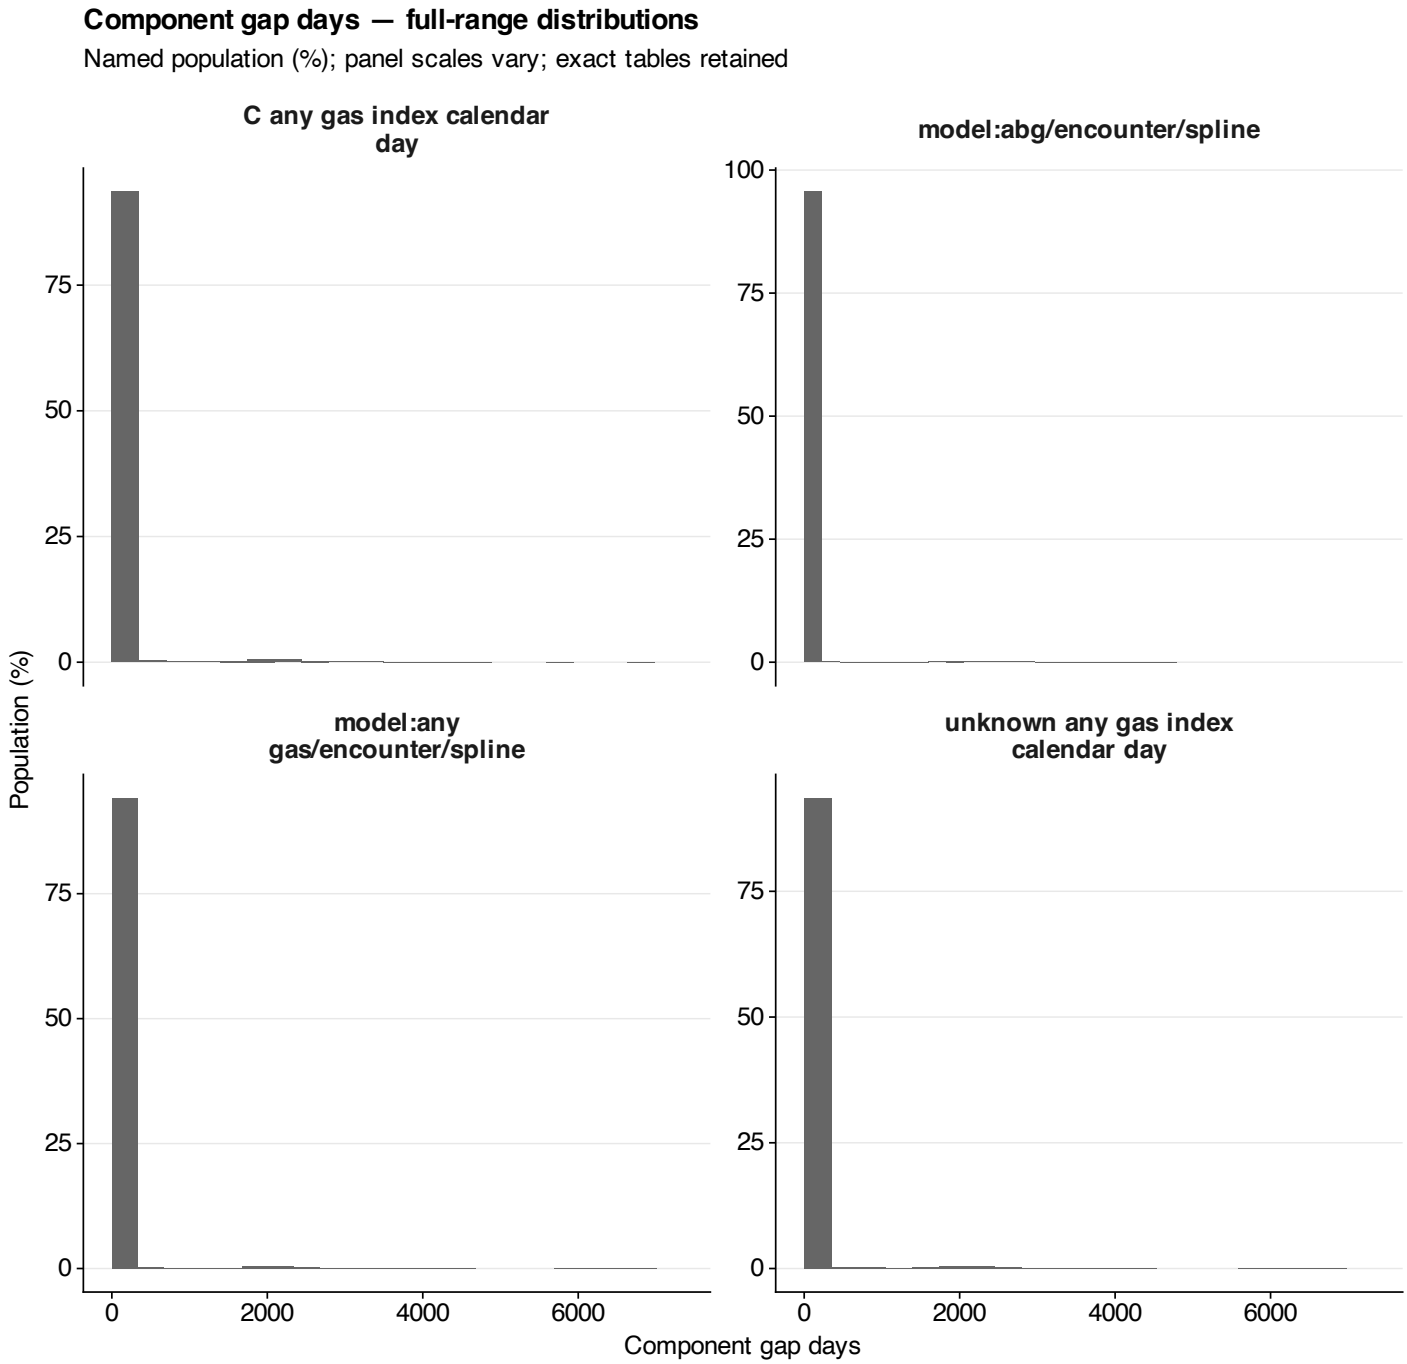

Figure 808: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete component_gap_days stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

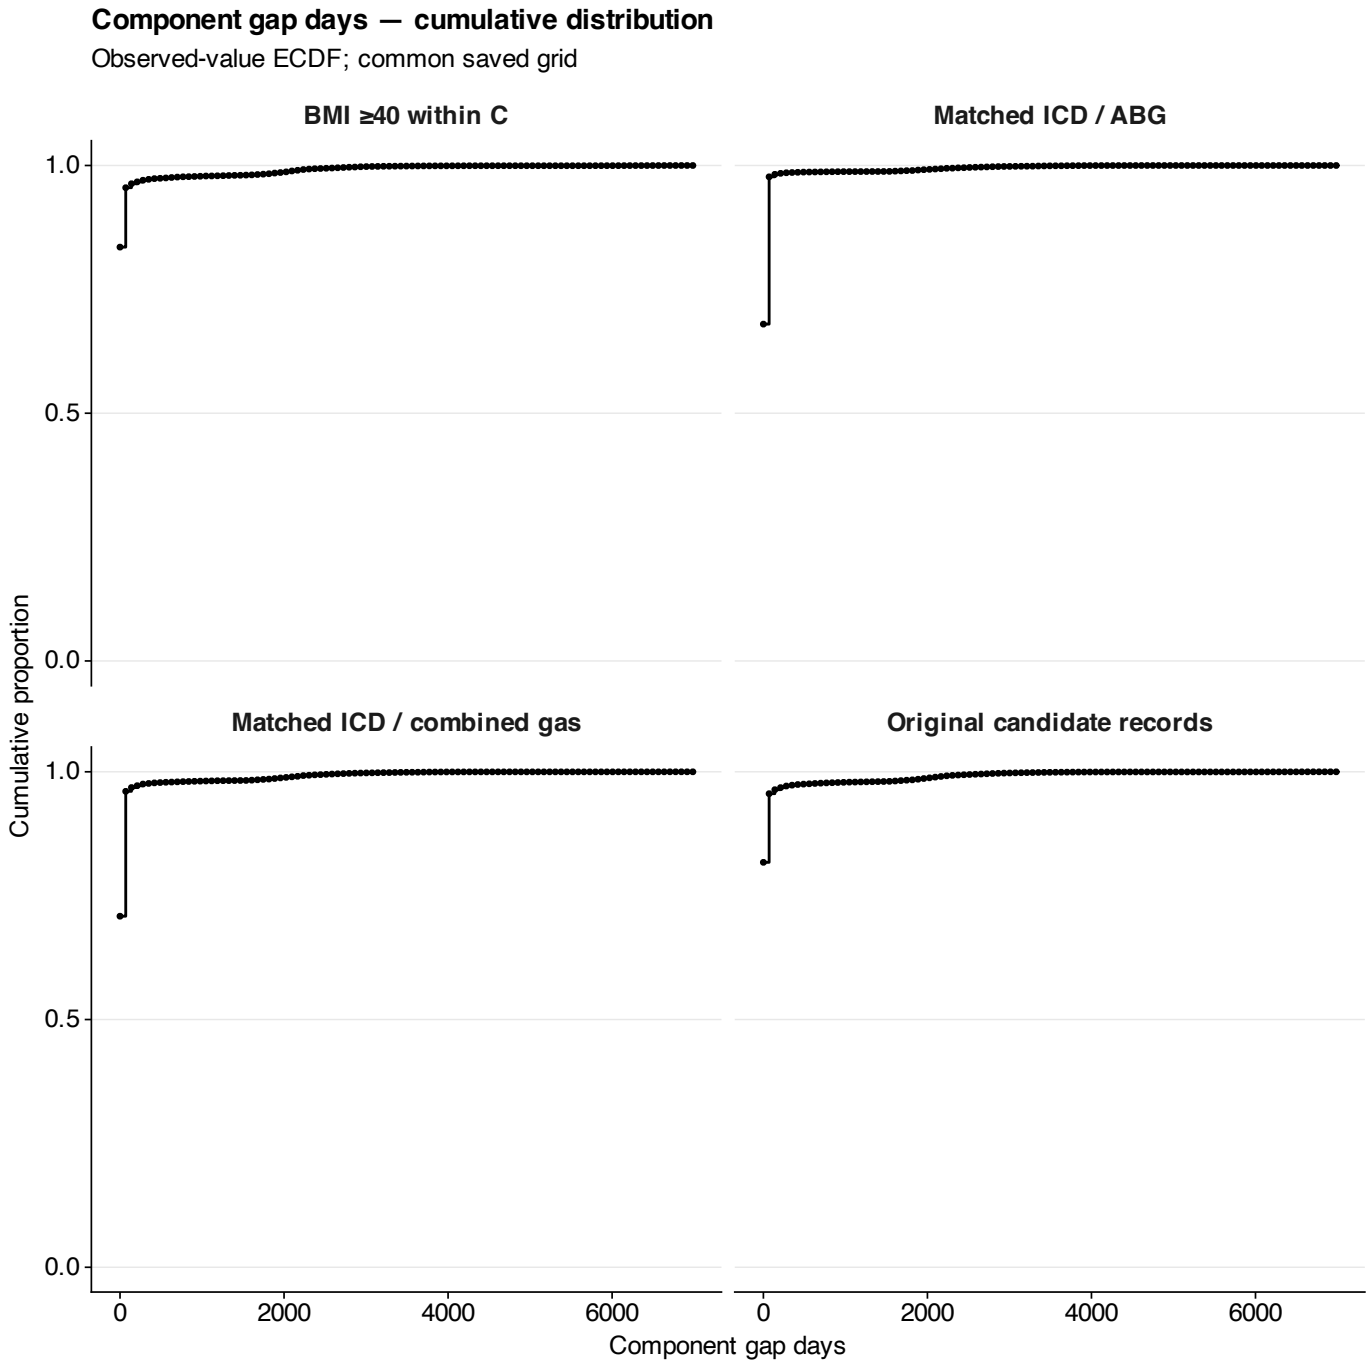

Figure 809: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. component_gap_days ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

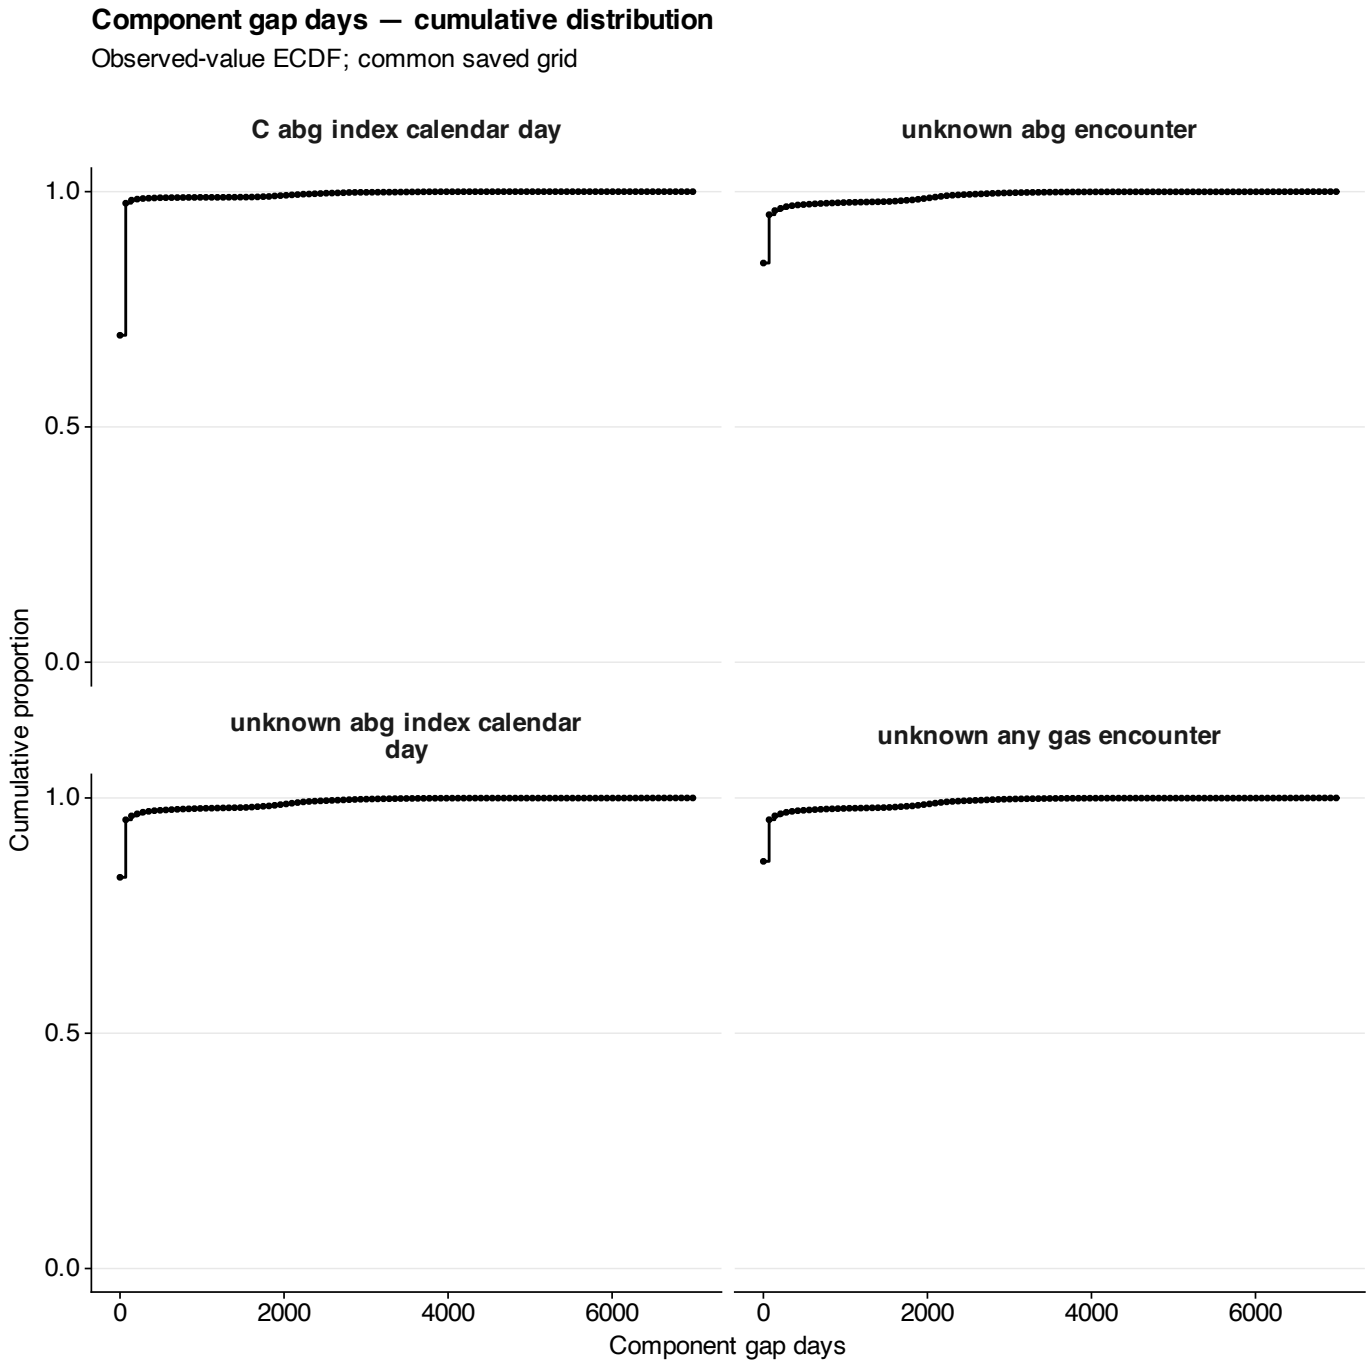

Figure 810: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. component_gap_days ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

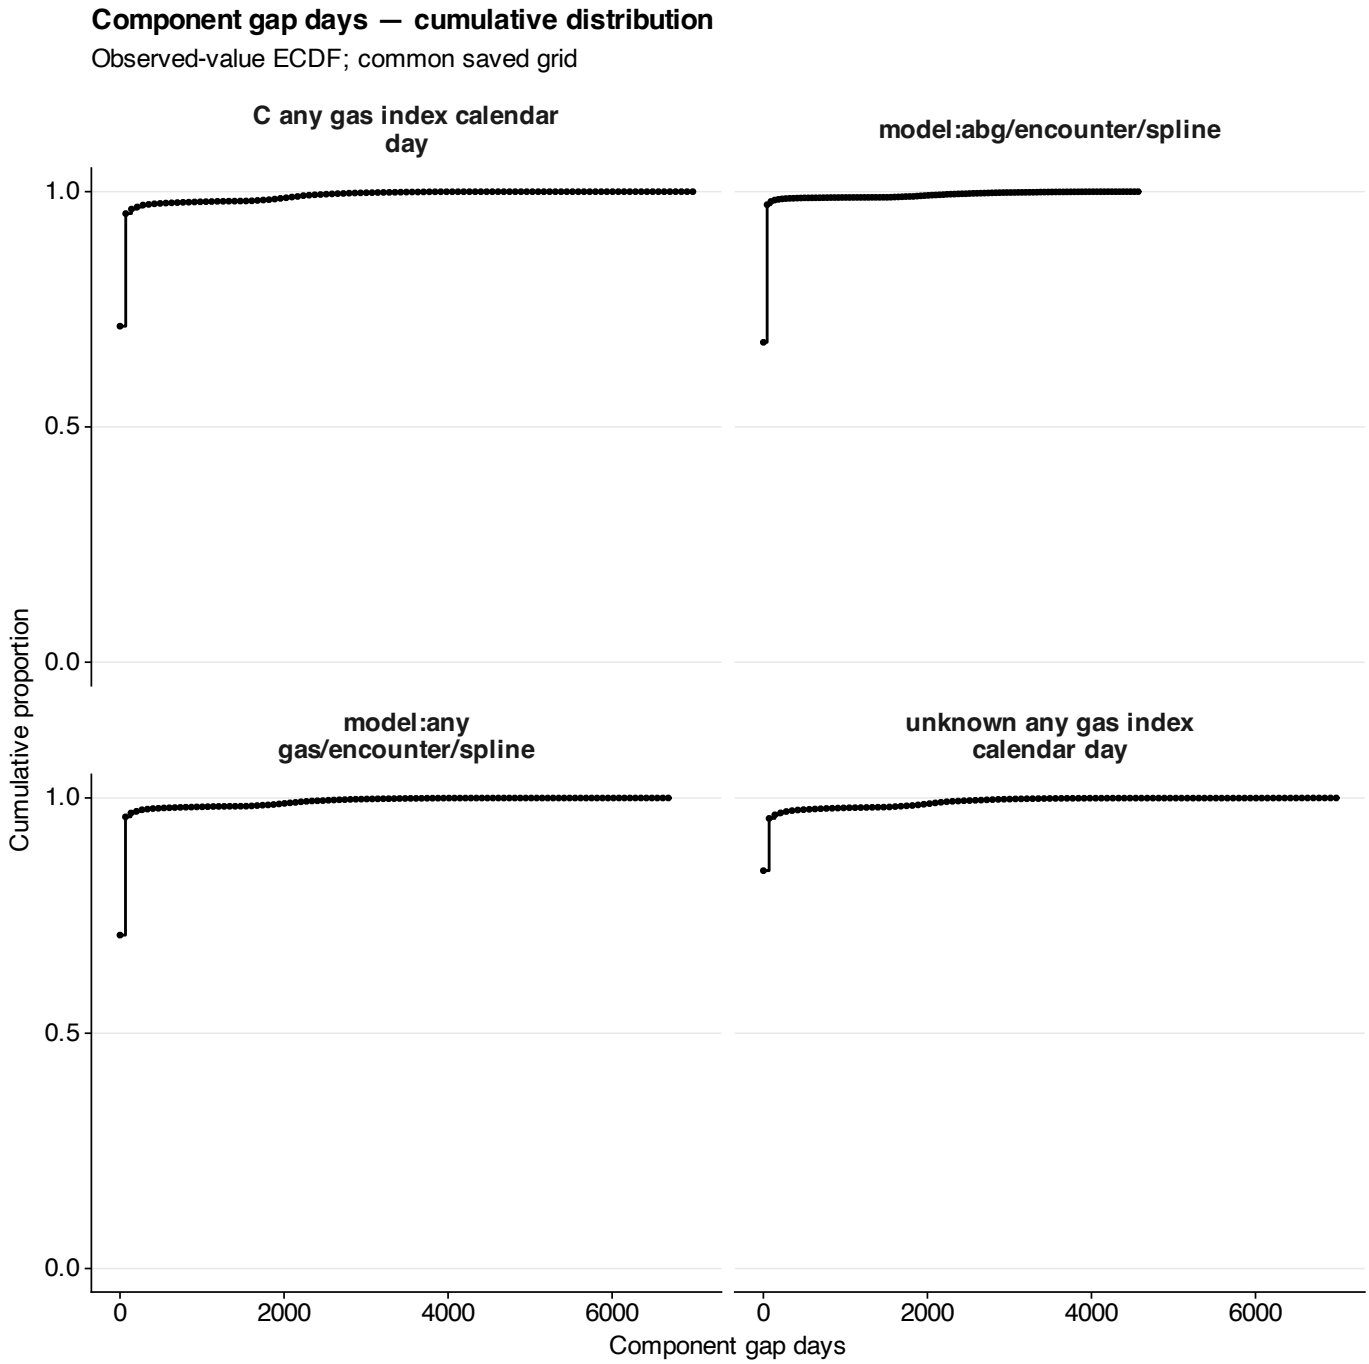

Figure 811: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. component_gap_days ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

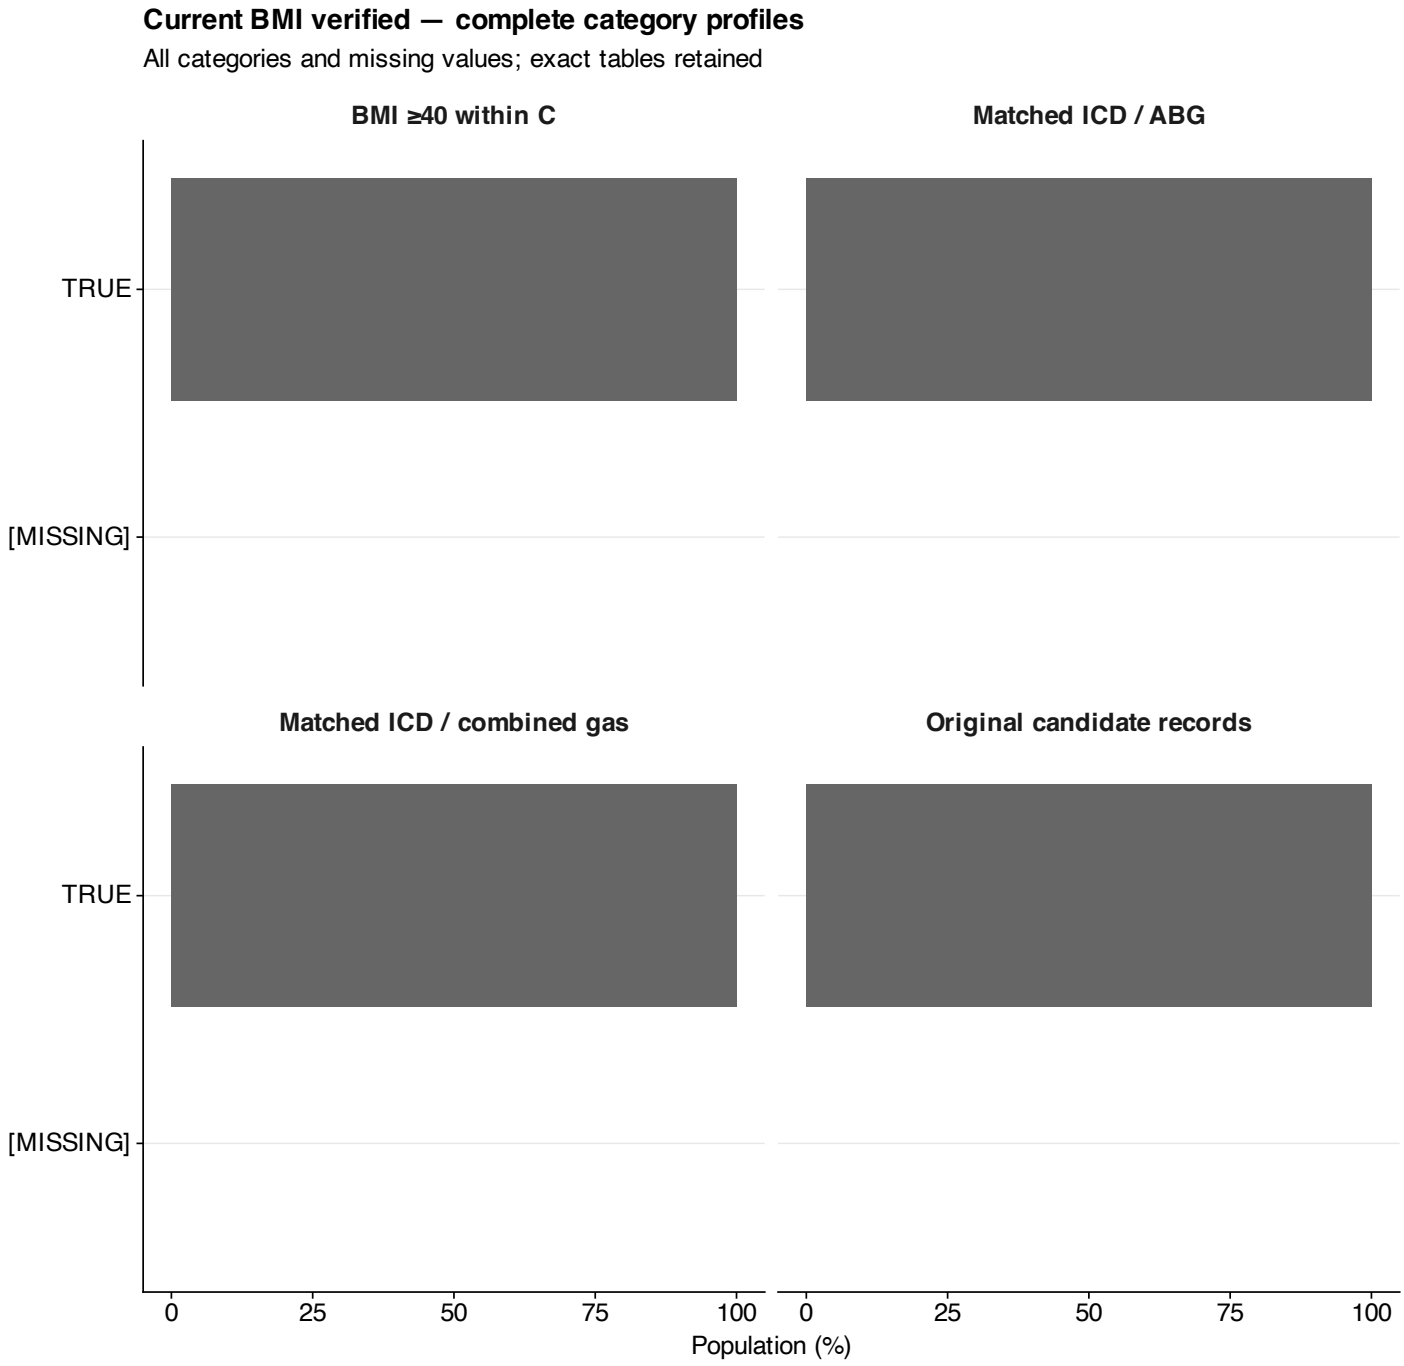

Figure 812: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete current_bmi_verified stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

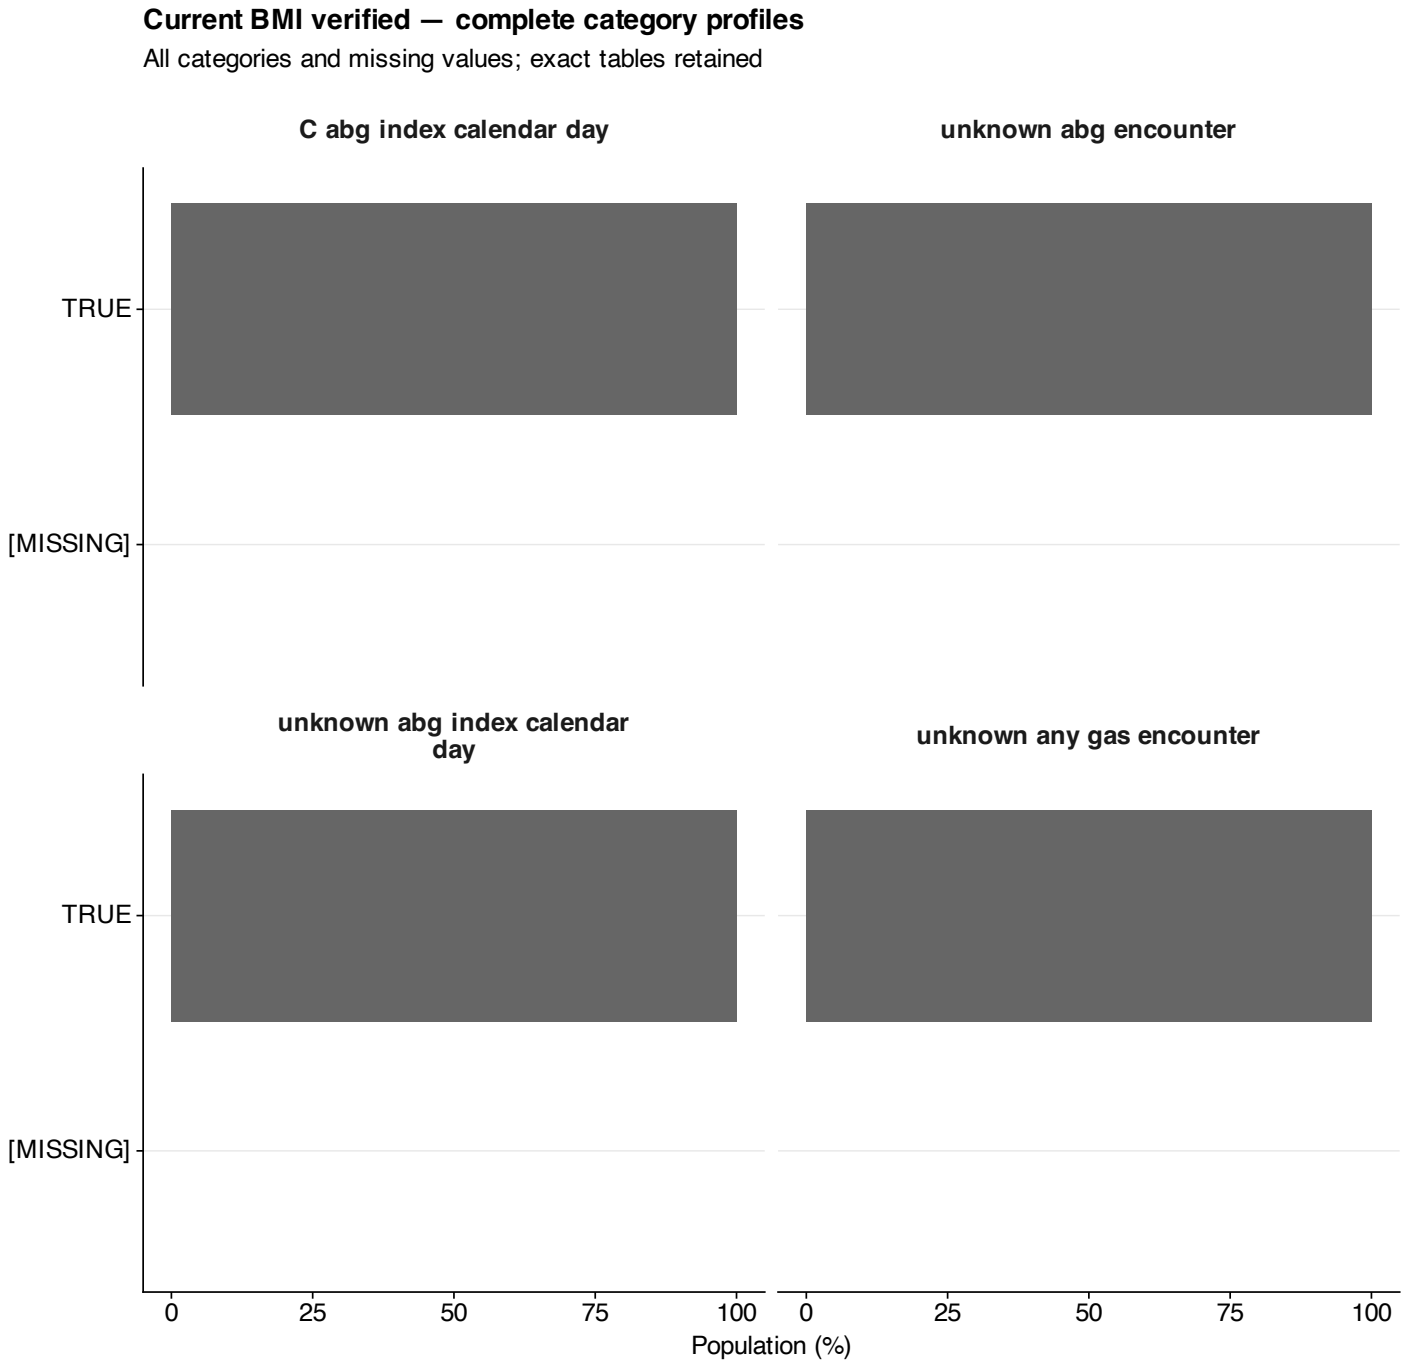

Figure 813: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete current_bmi_verified stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

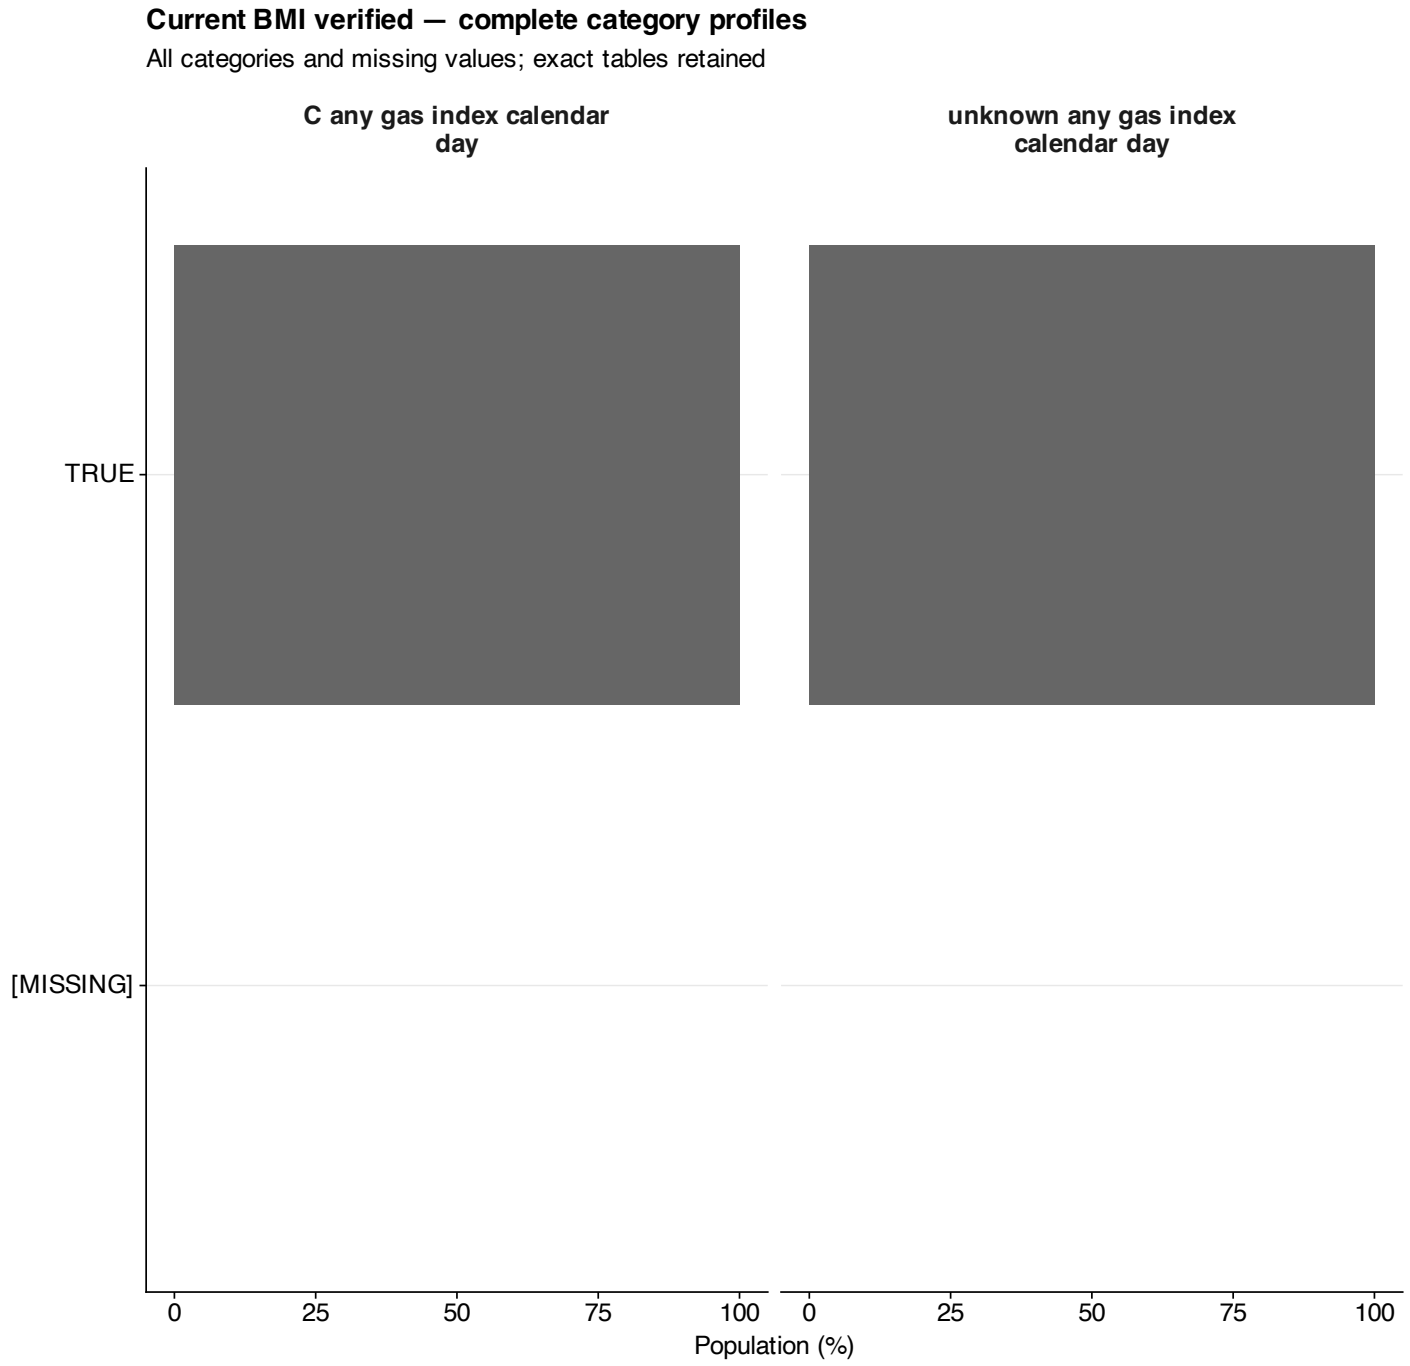

Figure 814: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete current_bmi_verified stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

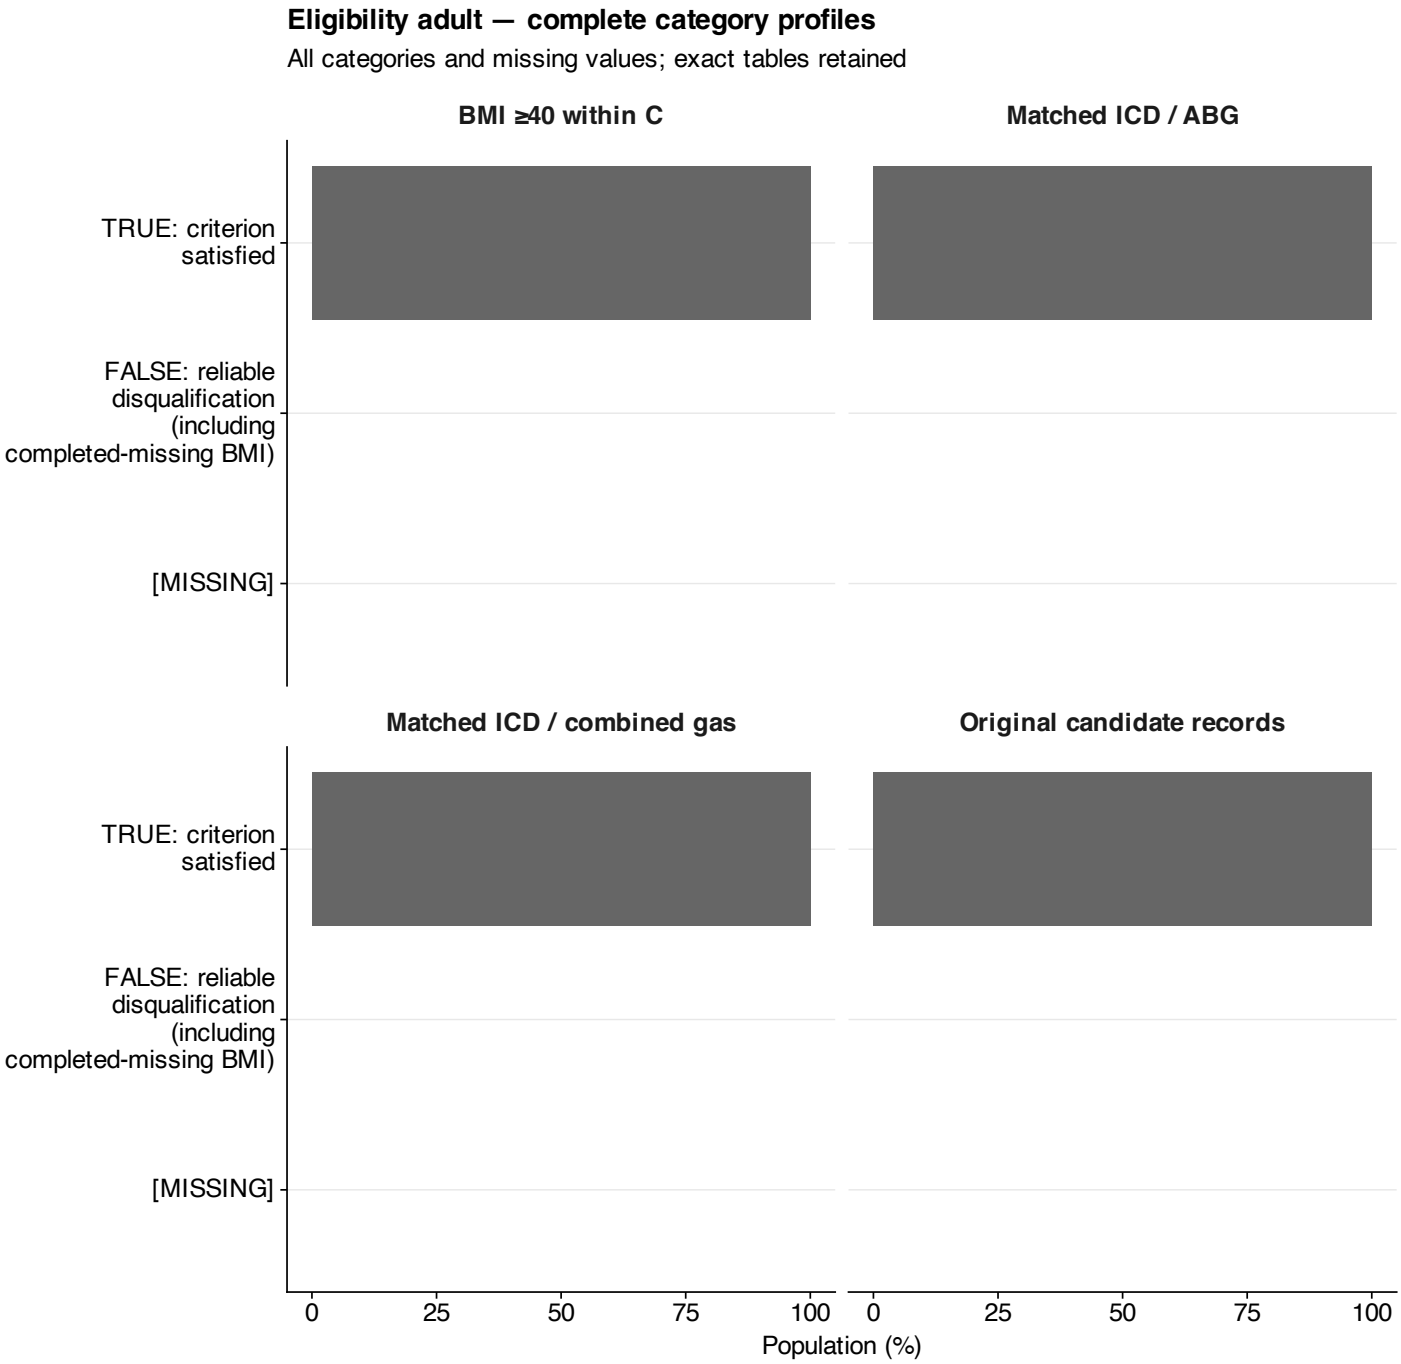

Figure 815: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete eligibility_adult stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

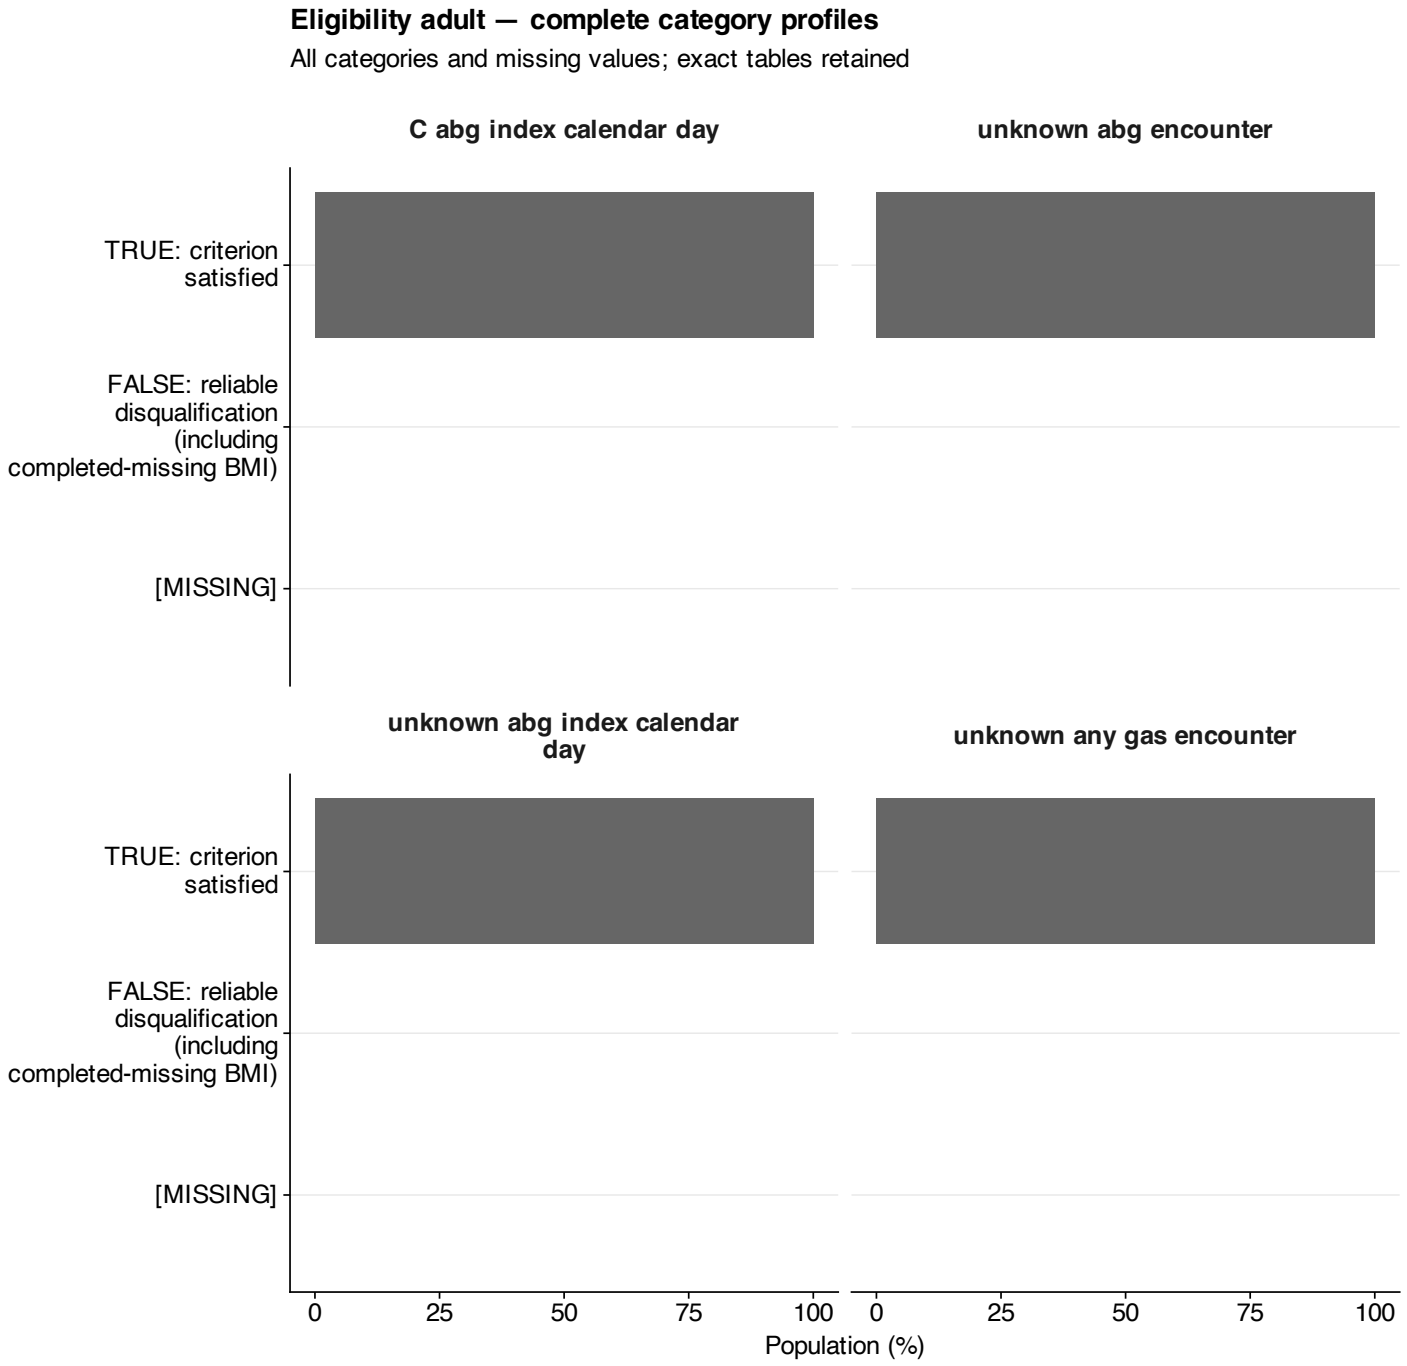

Figure 816: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete eligibility_adult stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

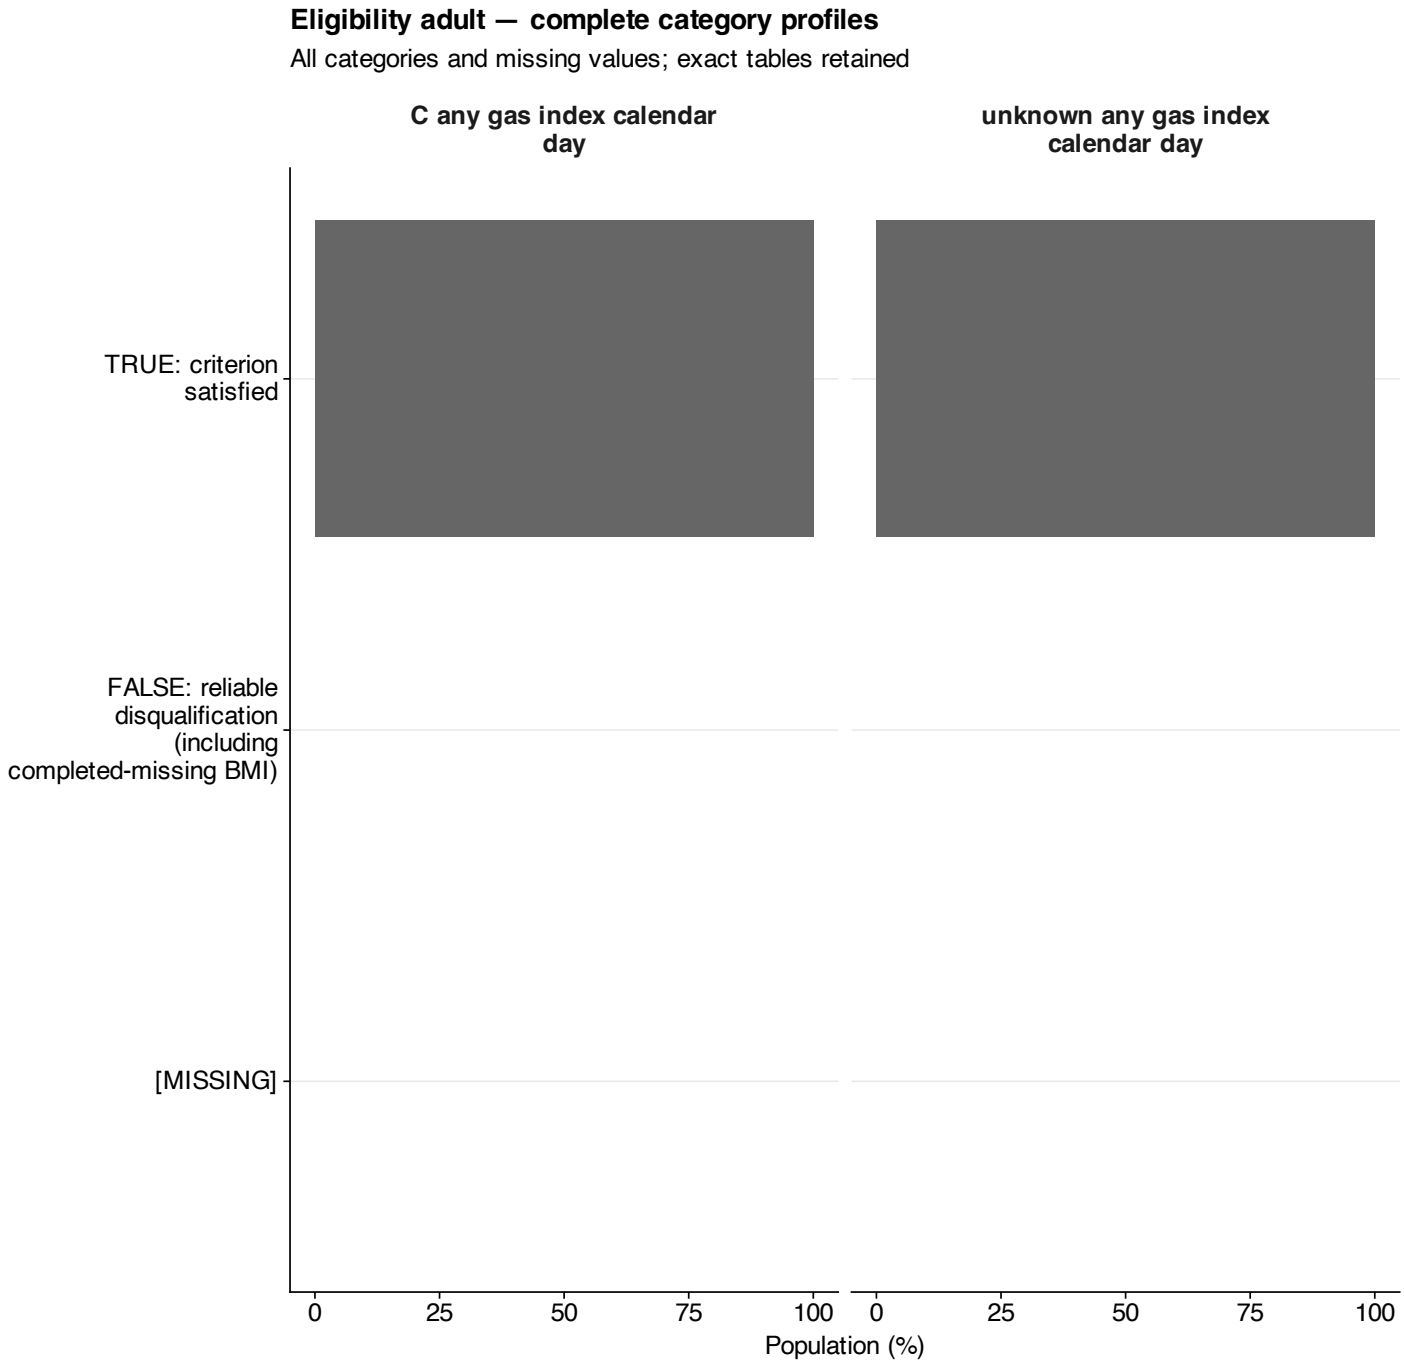

Figure 817: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete eligibility_adult stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

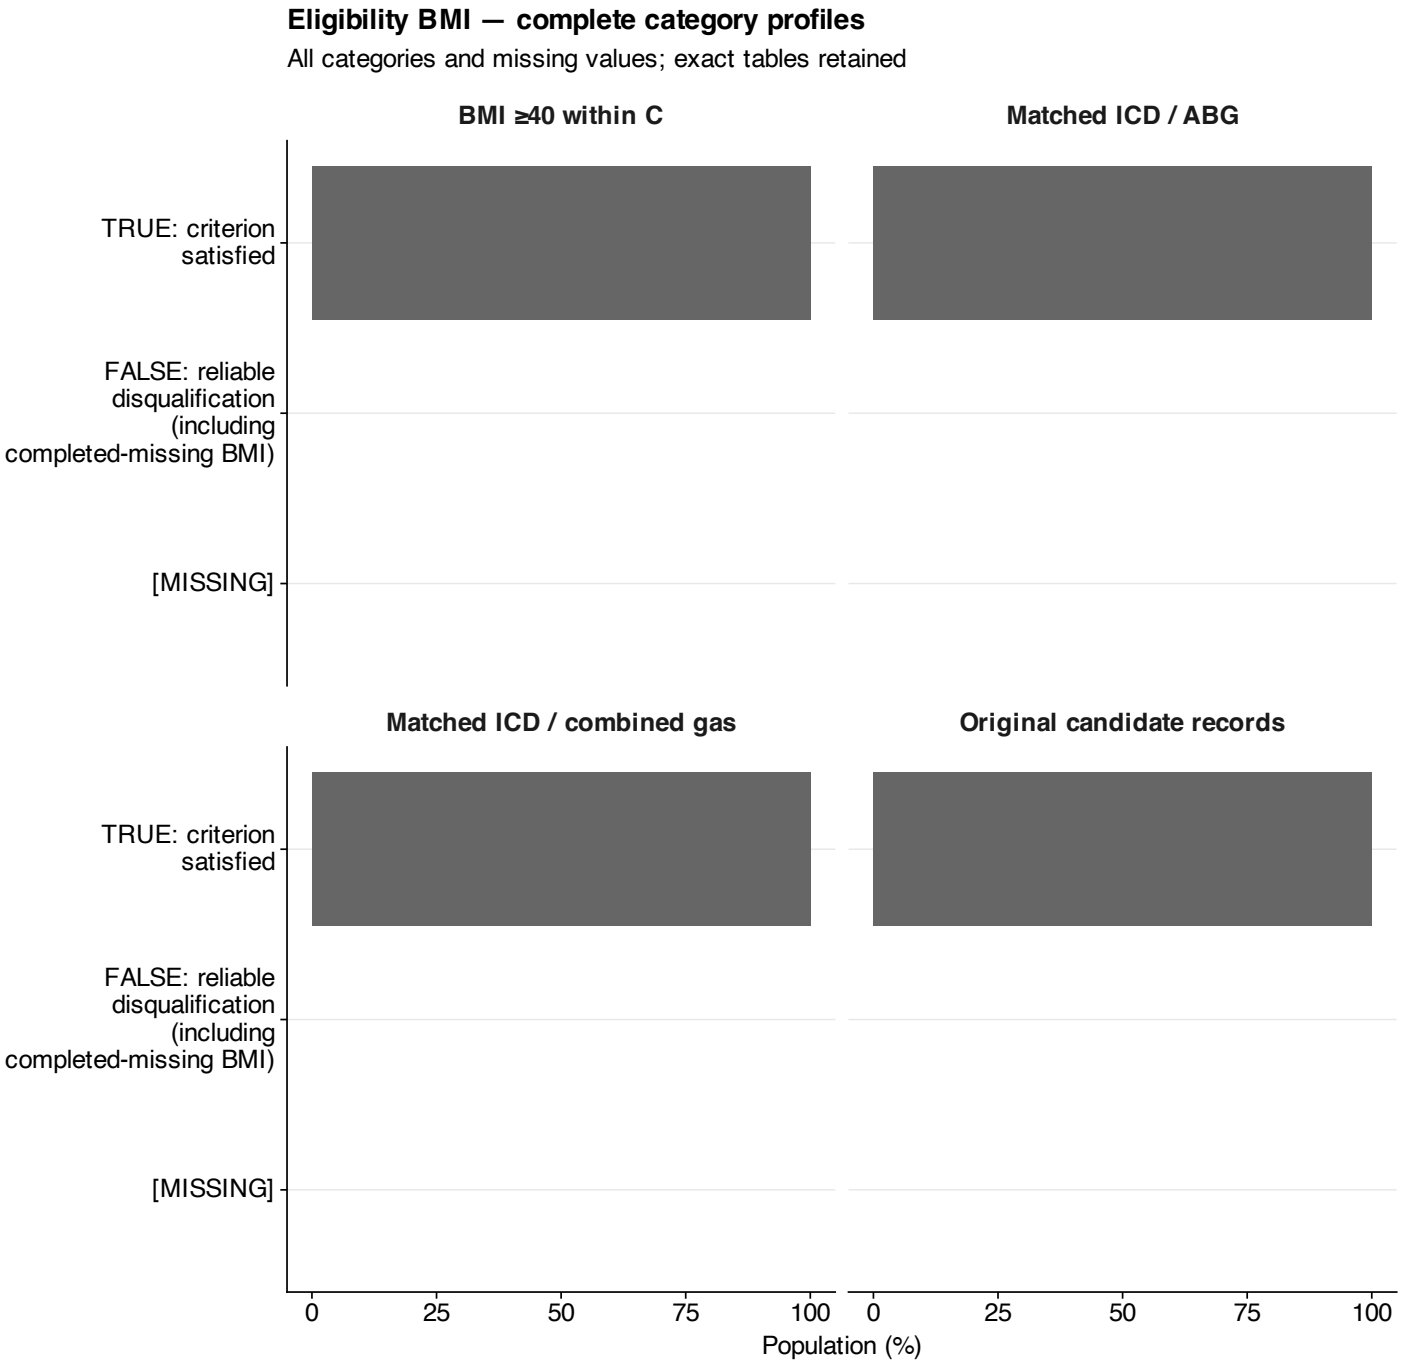

Figure 818: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete eligibility_bmi stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

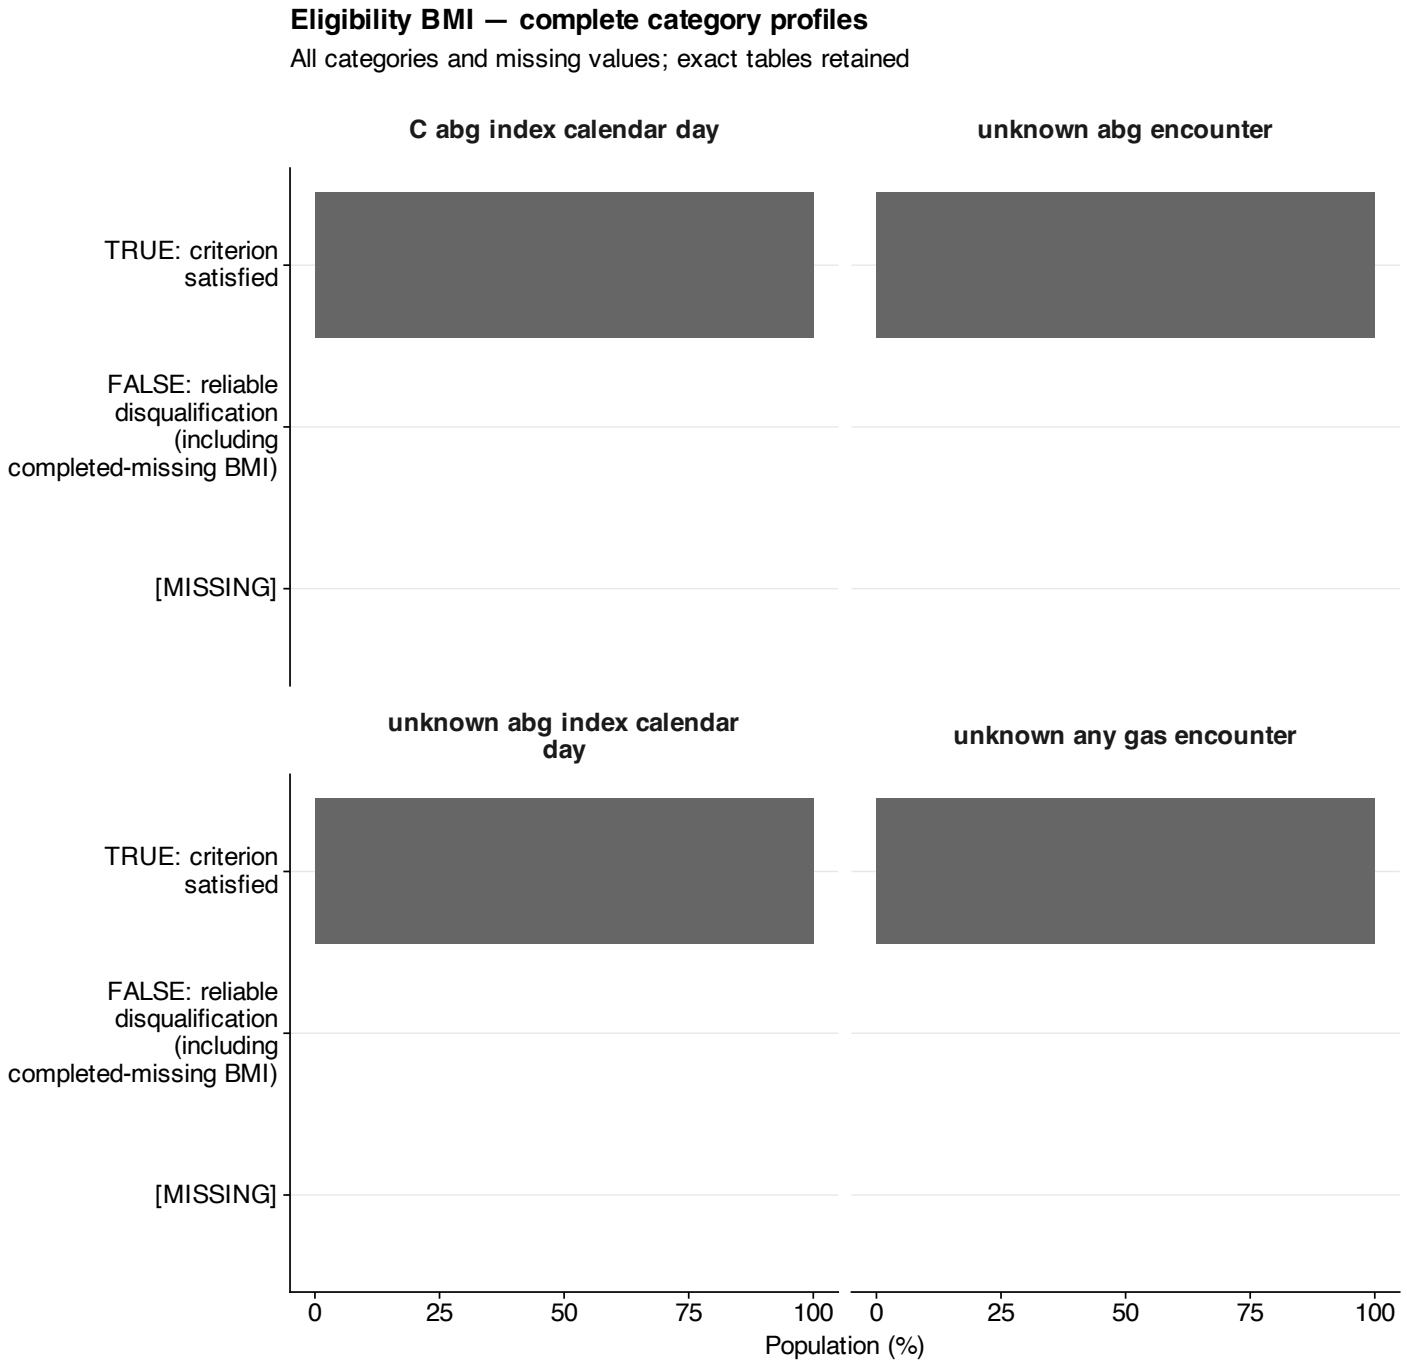

Figure 819: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete eligibility_bmi stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

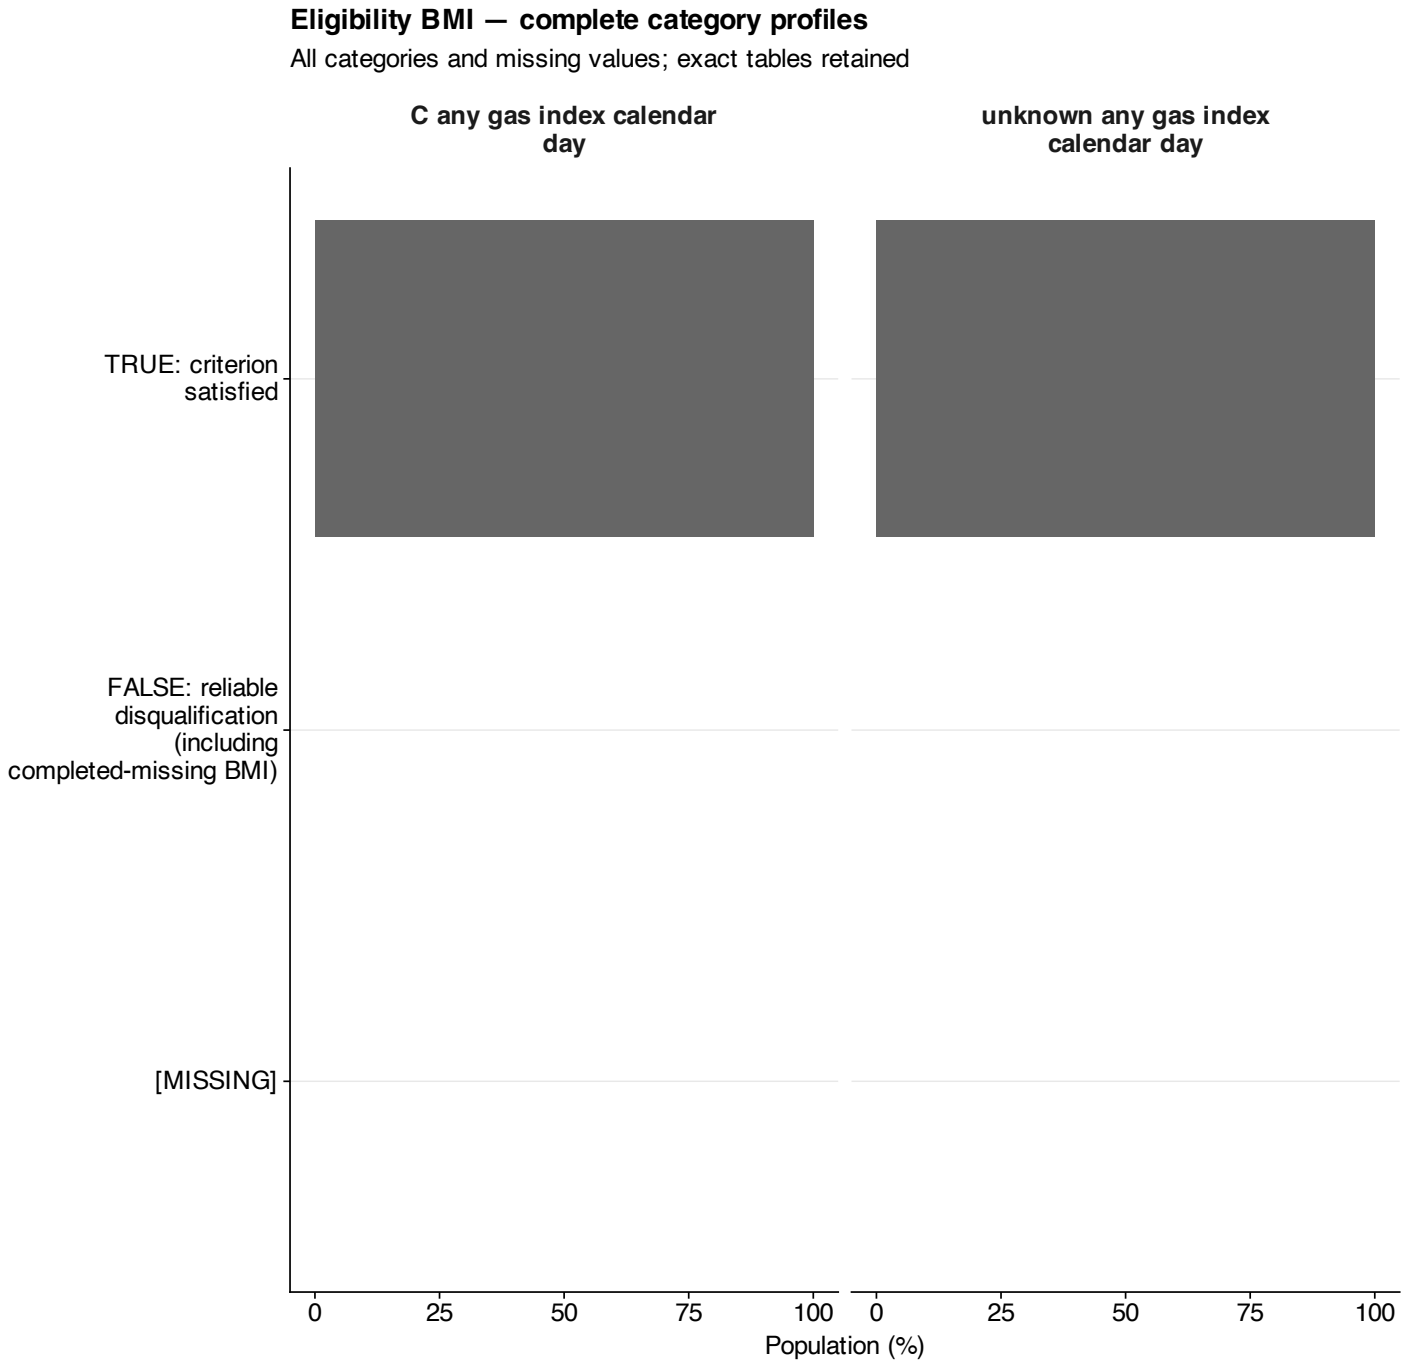

Figure 820: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete eligibility_bmi stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

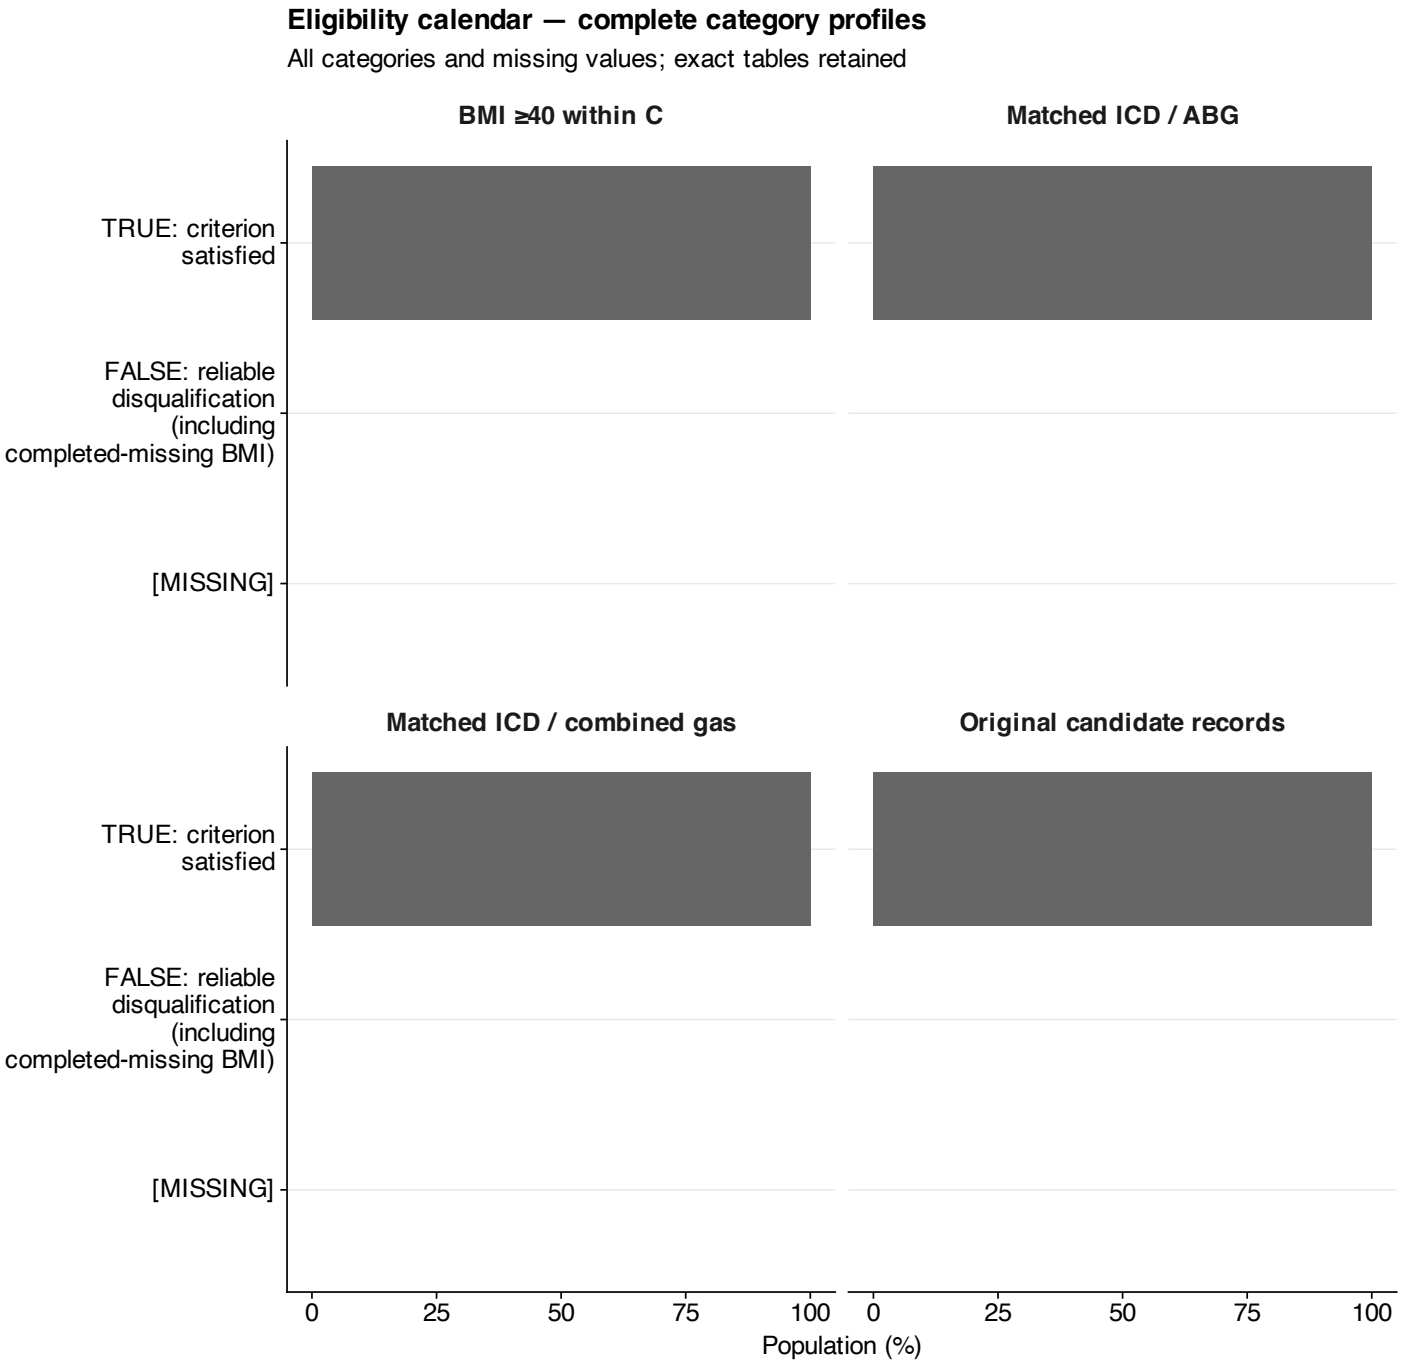

Figure 821: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete eligibility_calendar stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

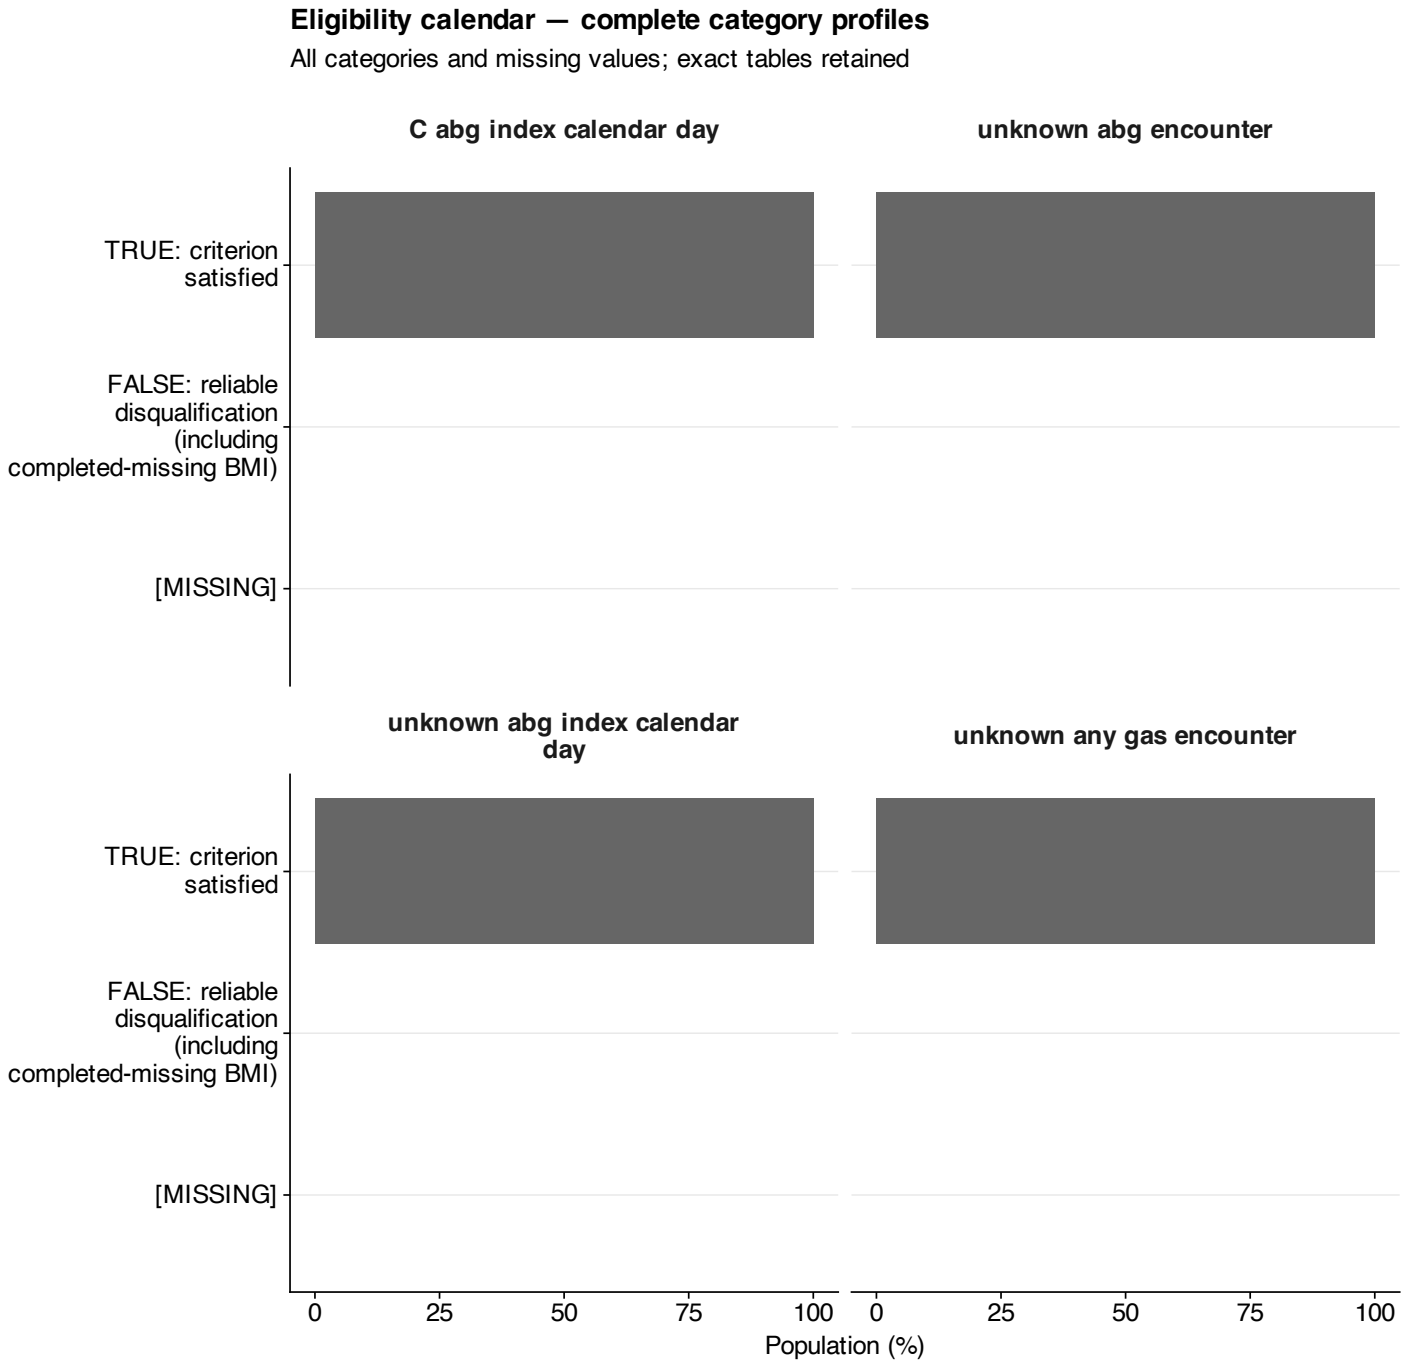

Figure 822: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete eligibility_calendar stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

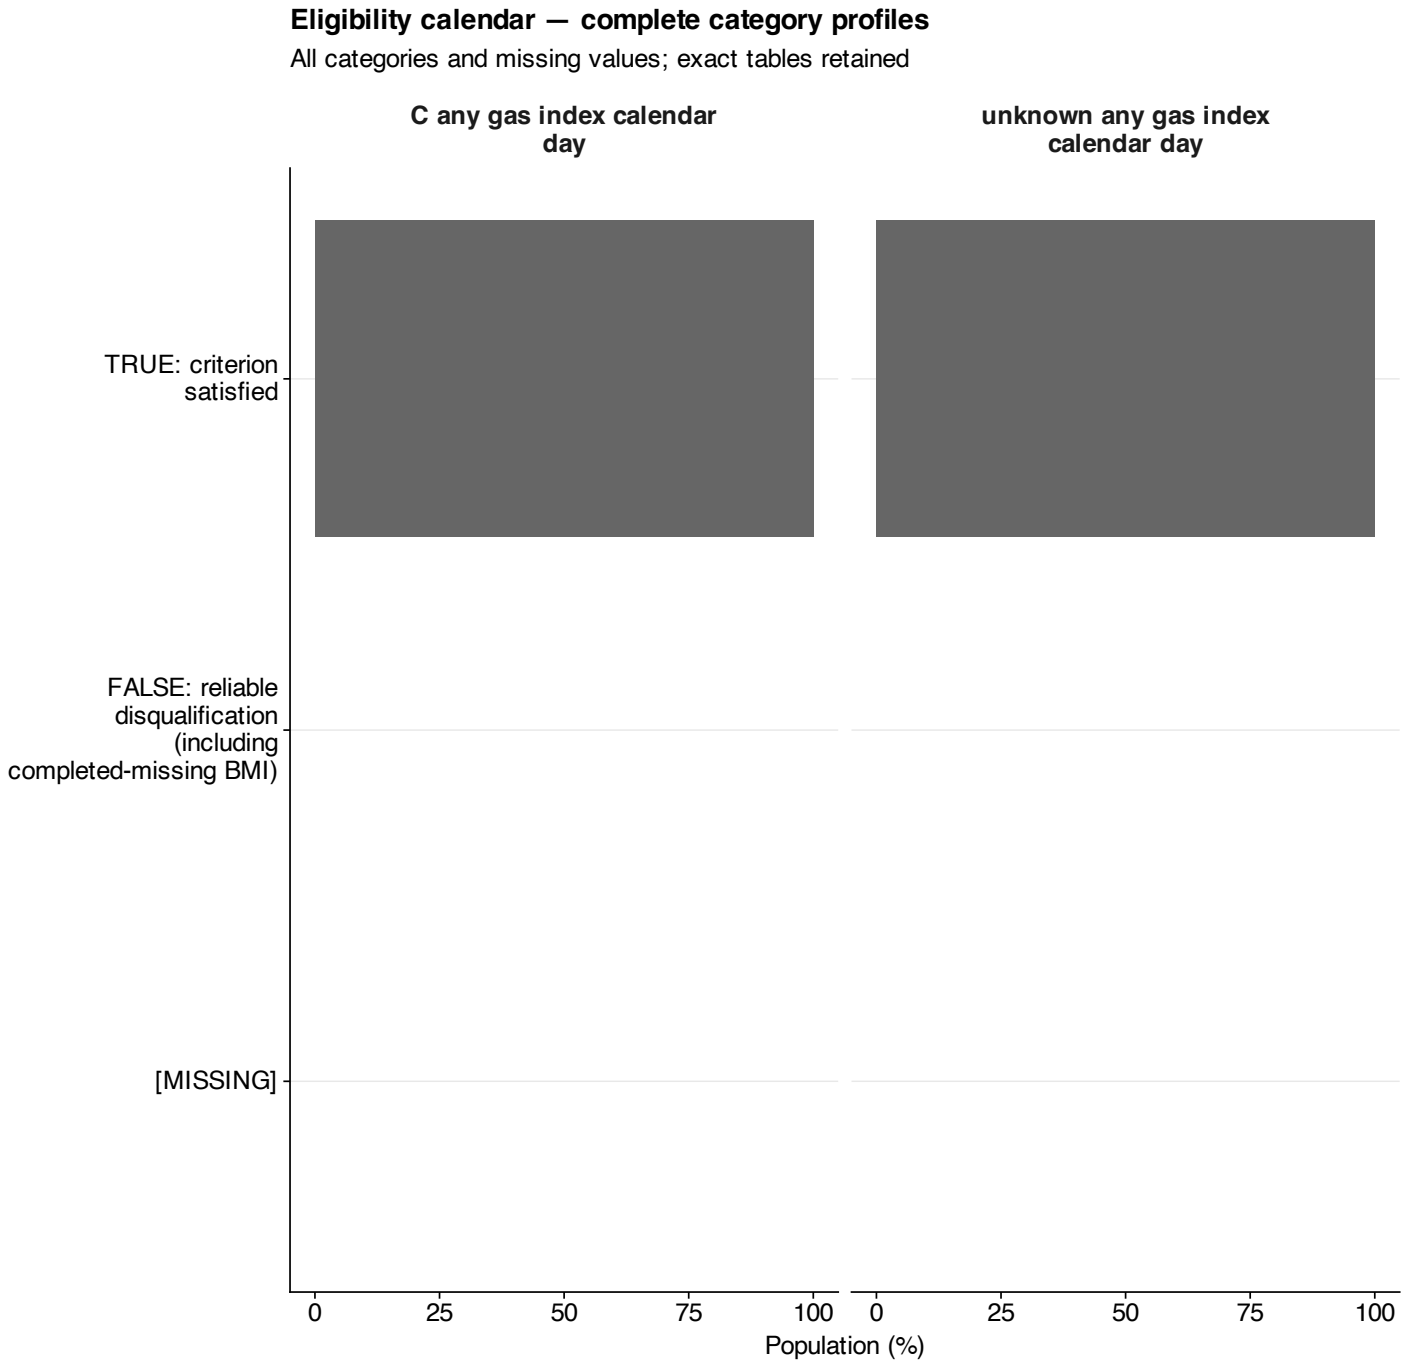

Figure 823: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete eligibility_calendar stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

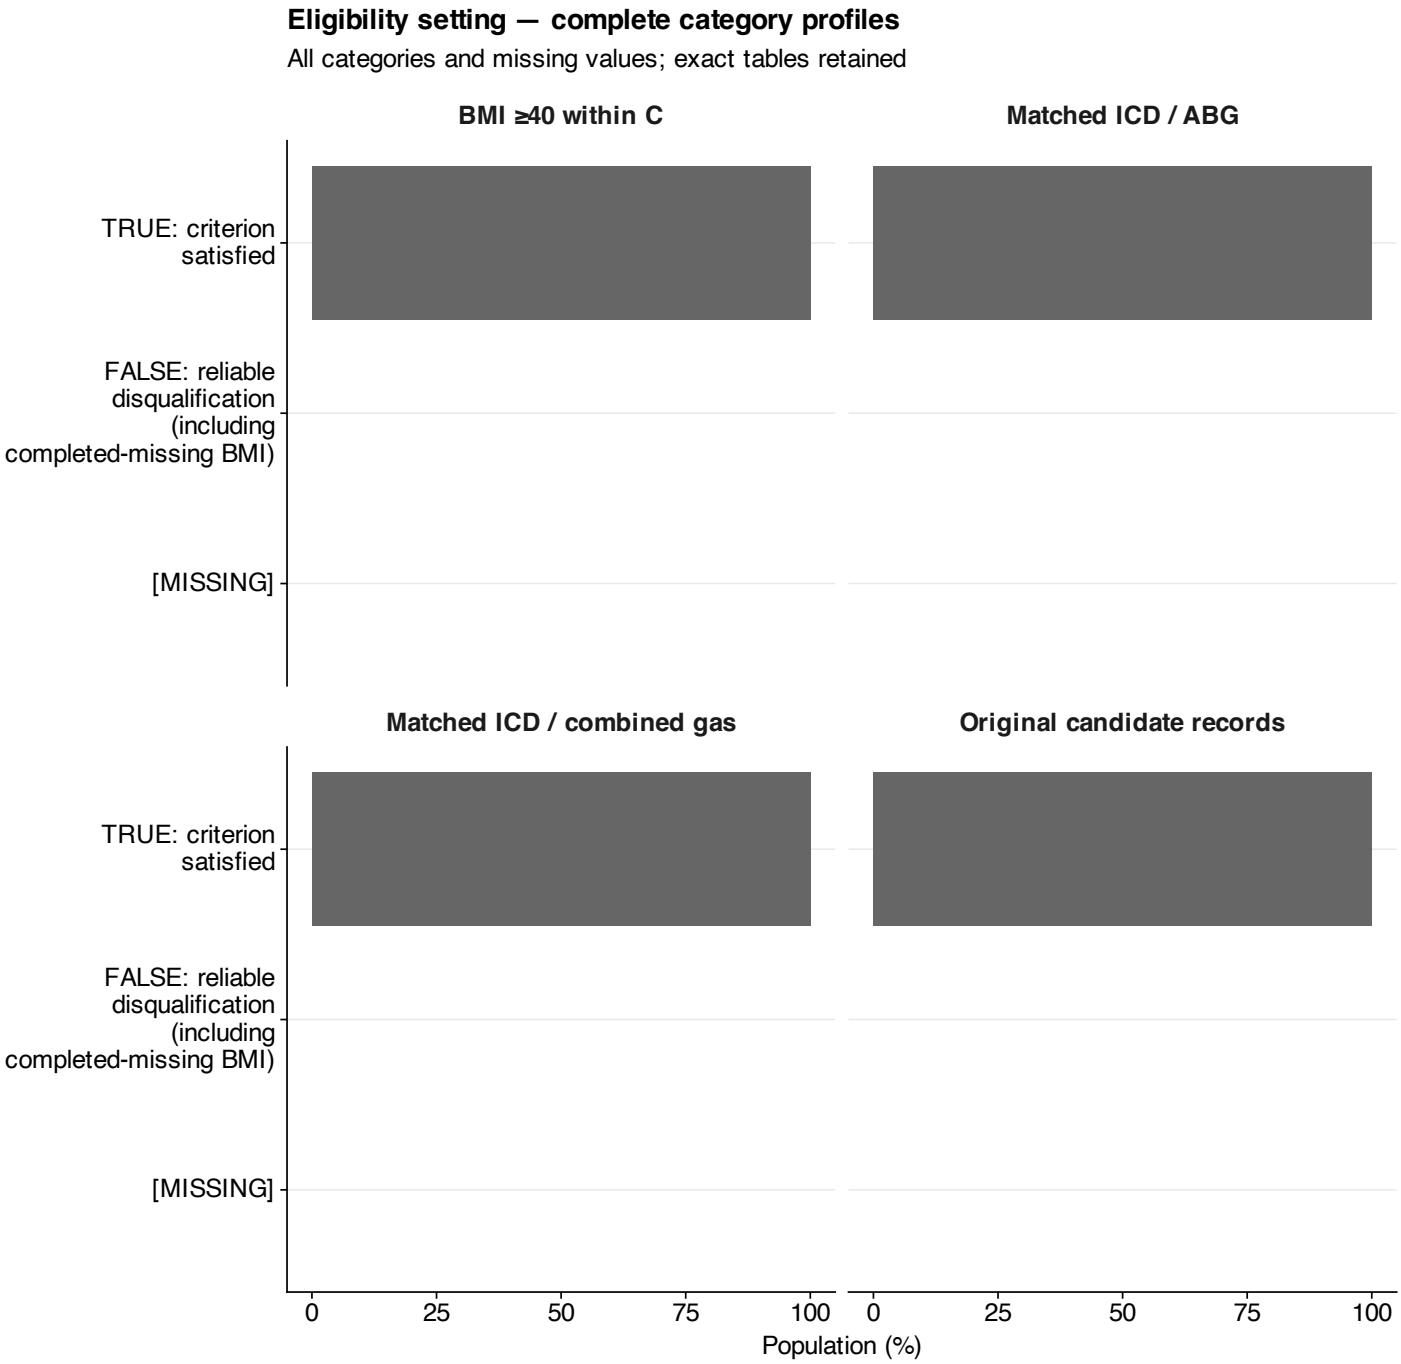

Figure 824: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete eligibility_setting stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

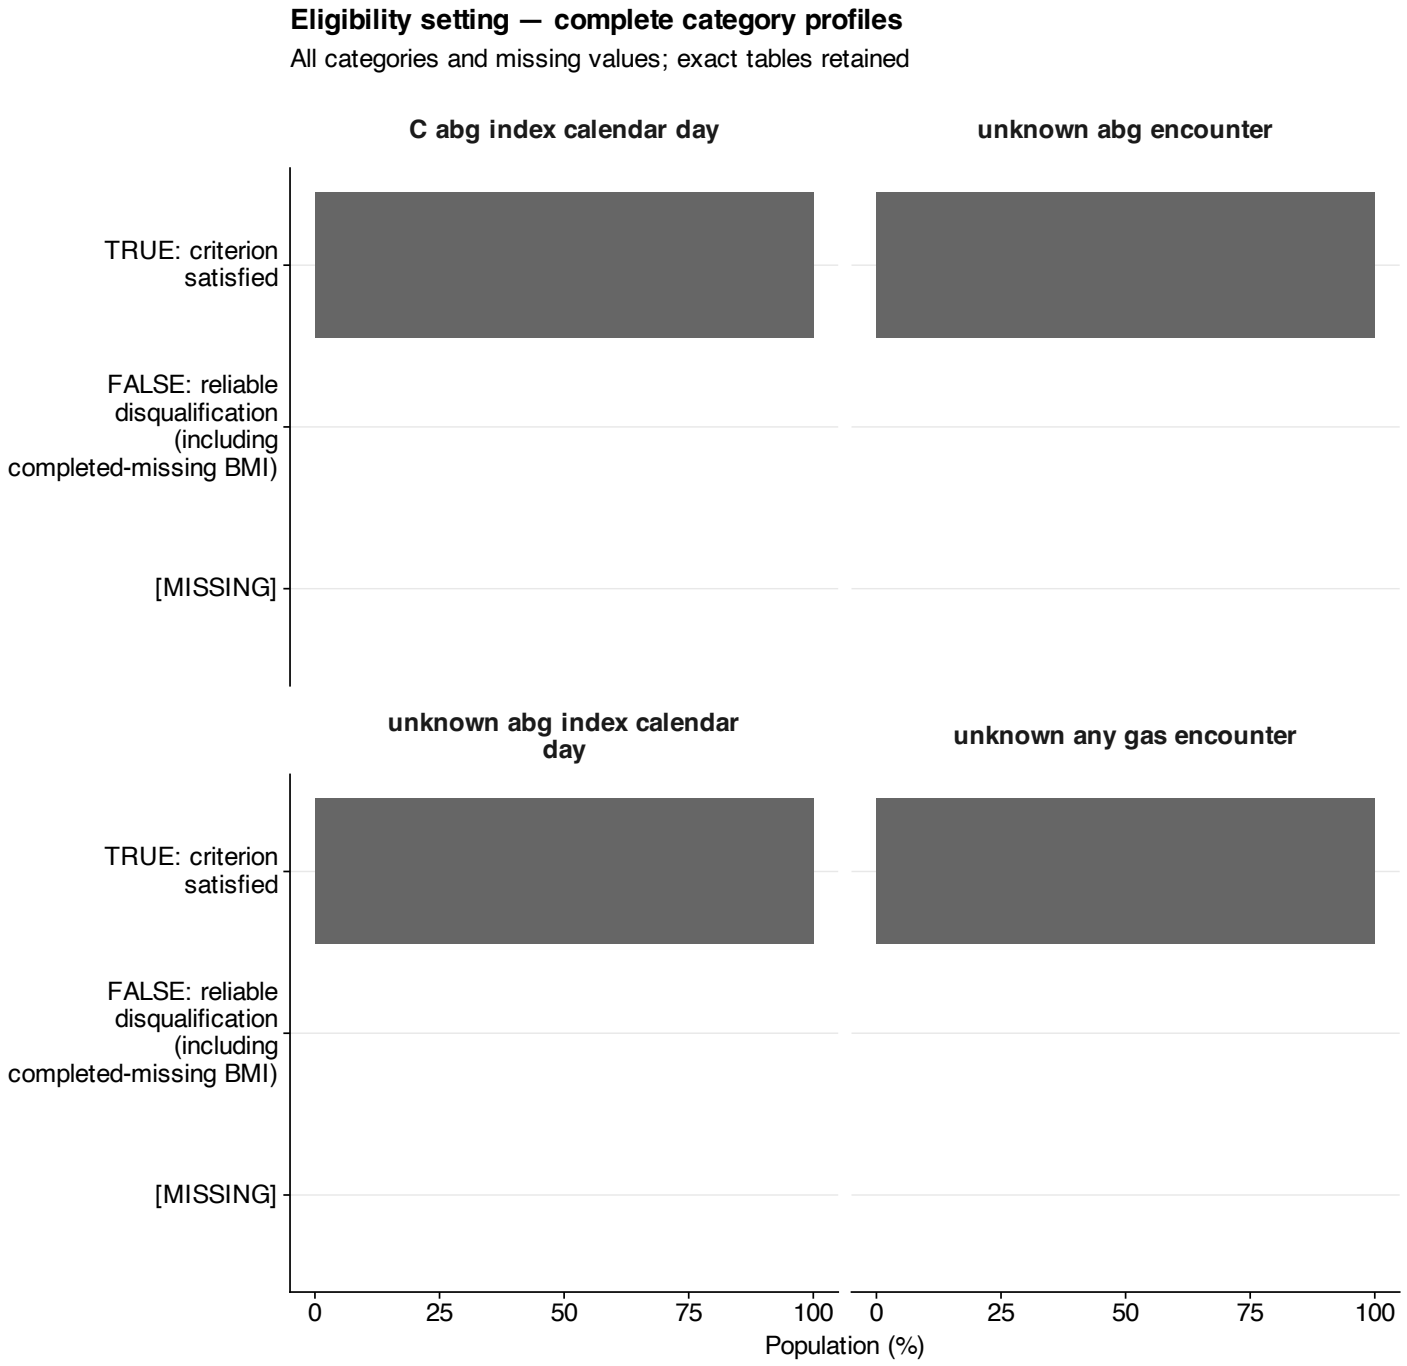

Figure 825: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete eligibility_setting stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

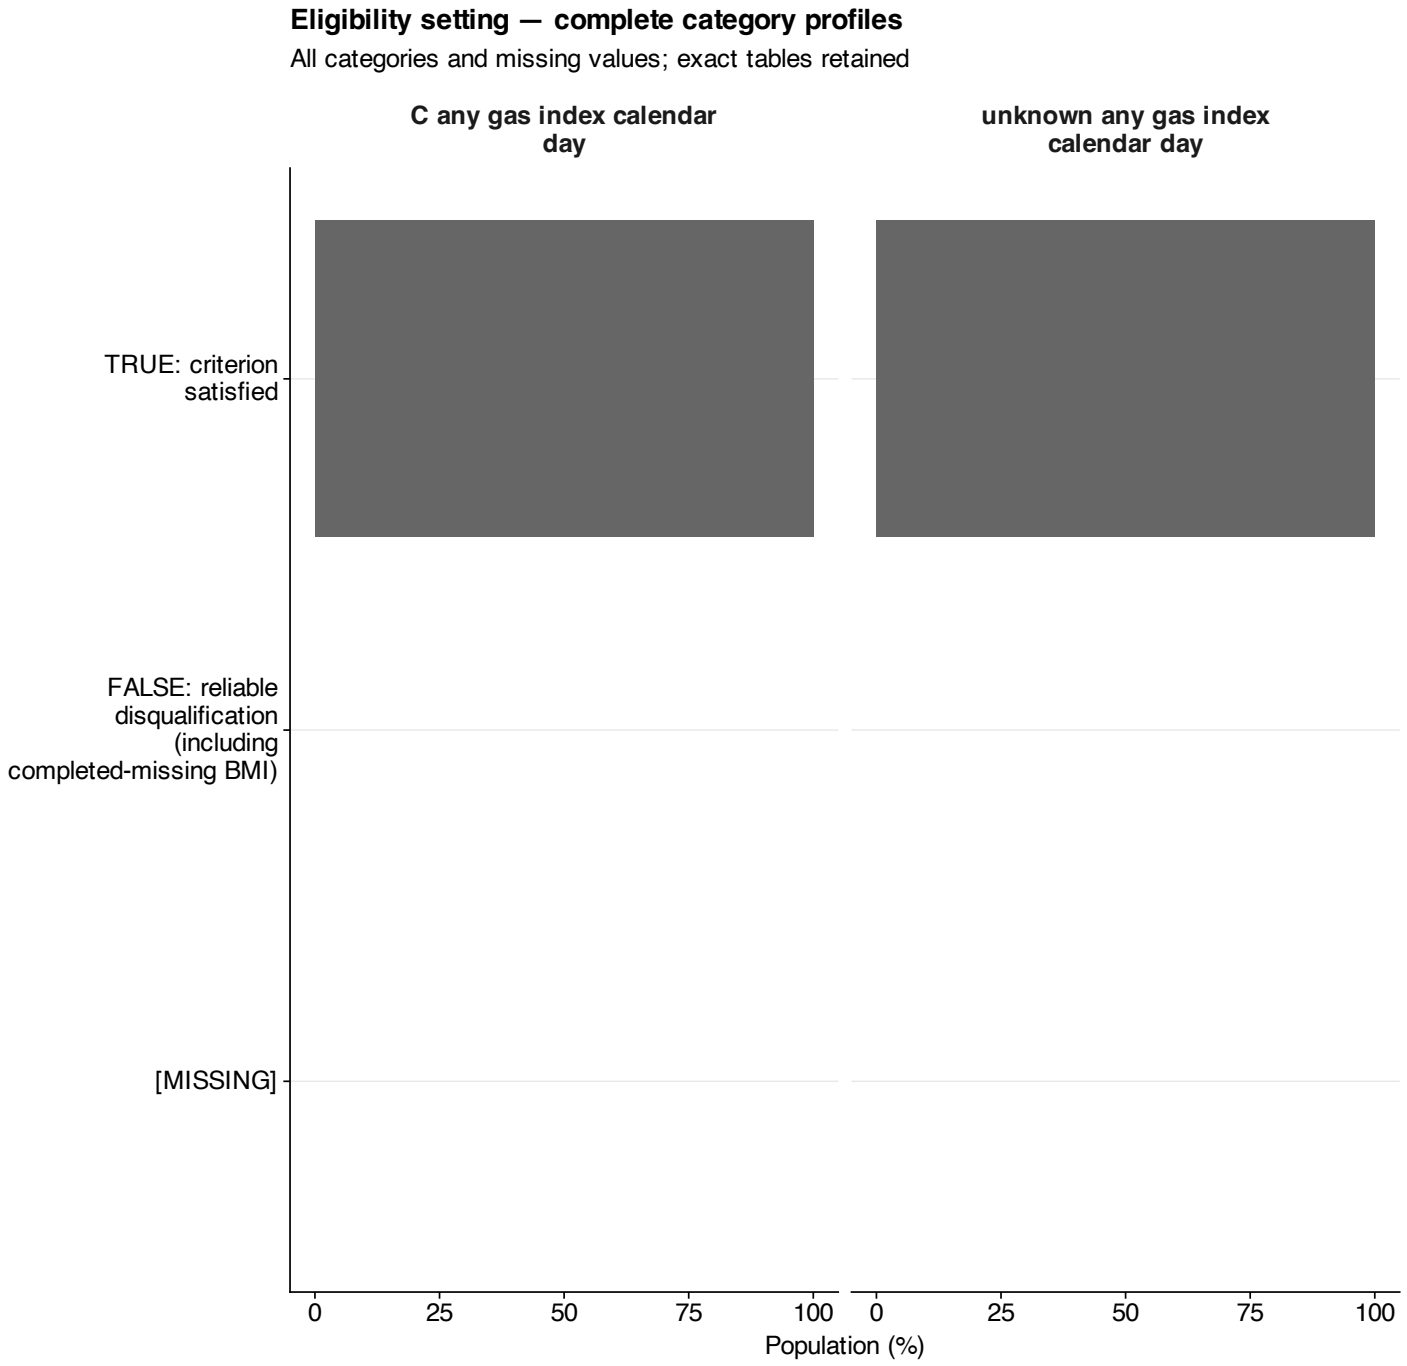

Figure 826: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete eligibility_setting stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

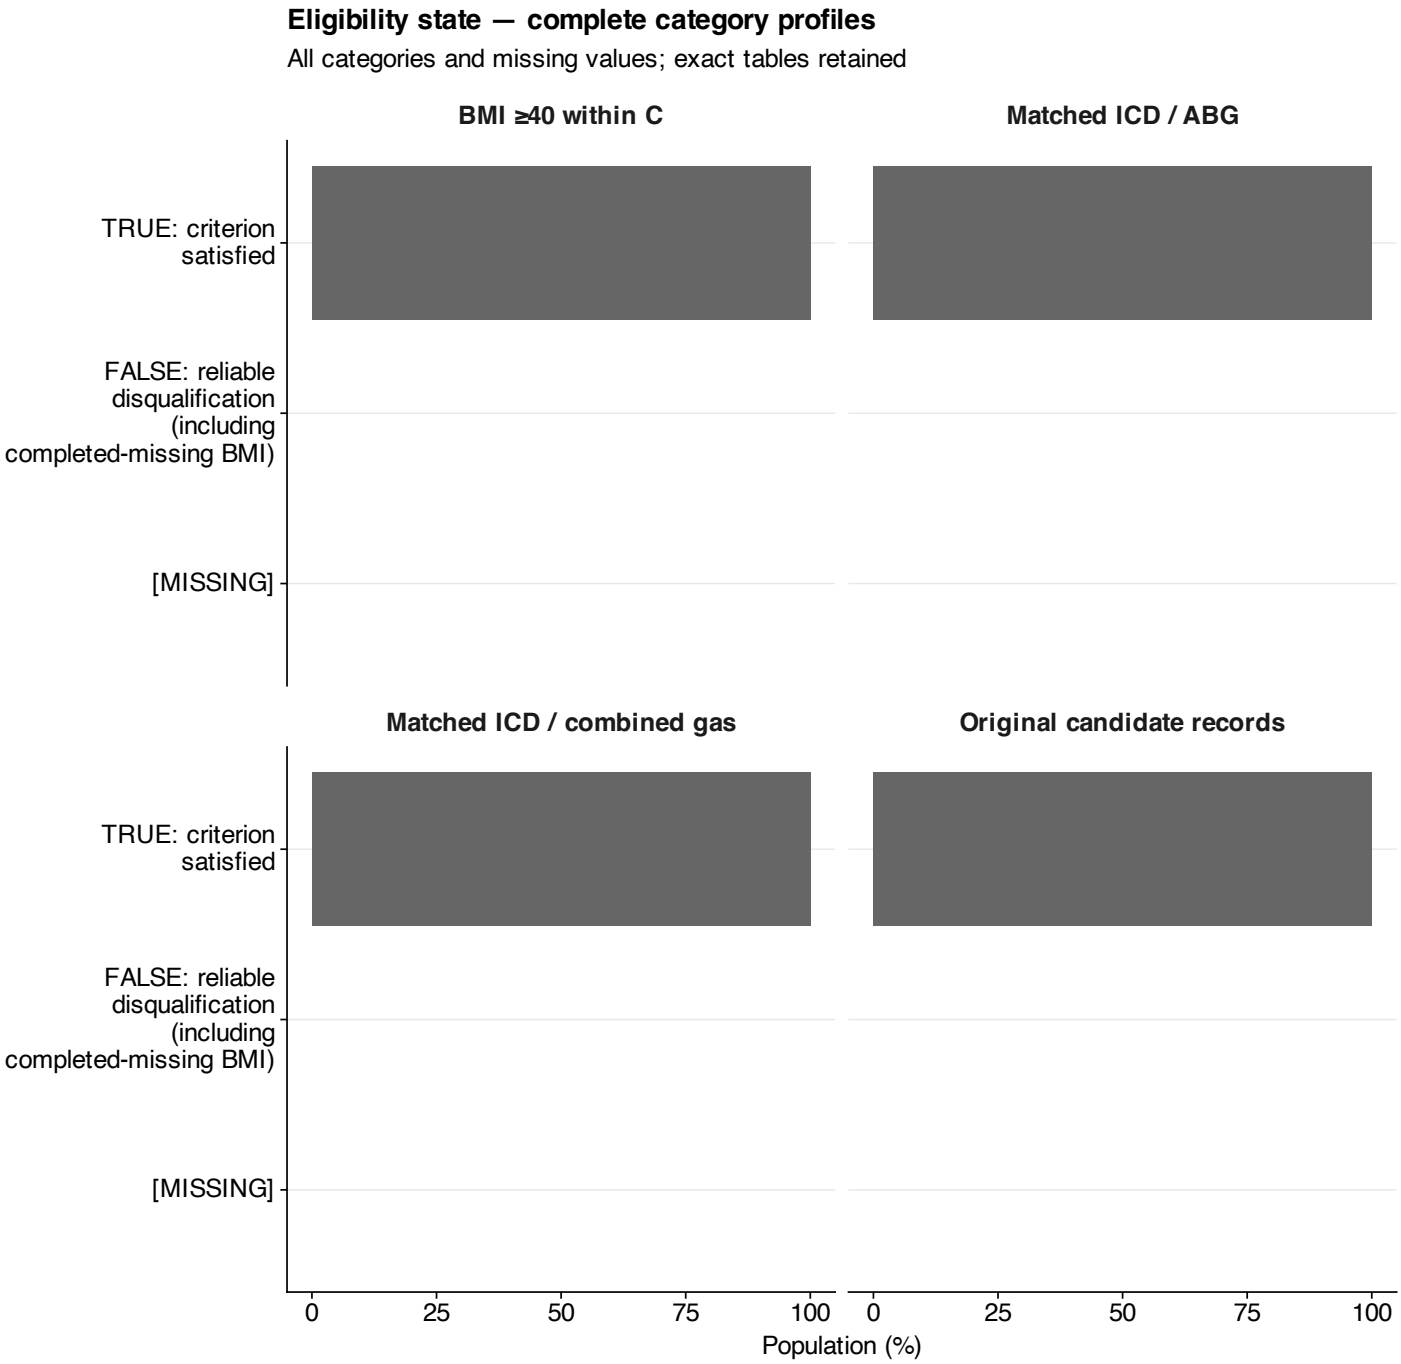

Figure 827: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete eligibility_state stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

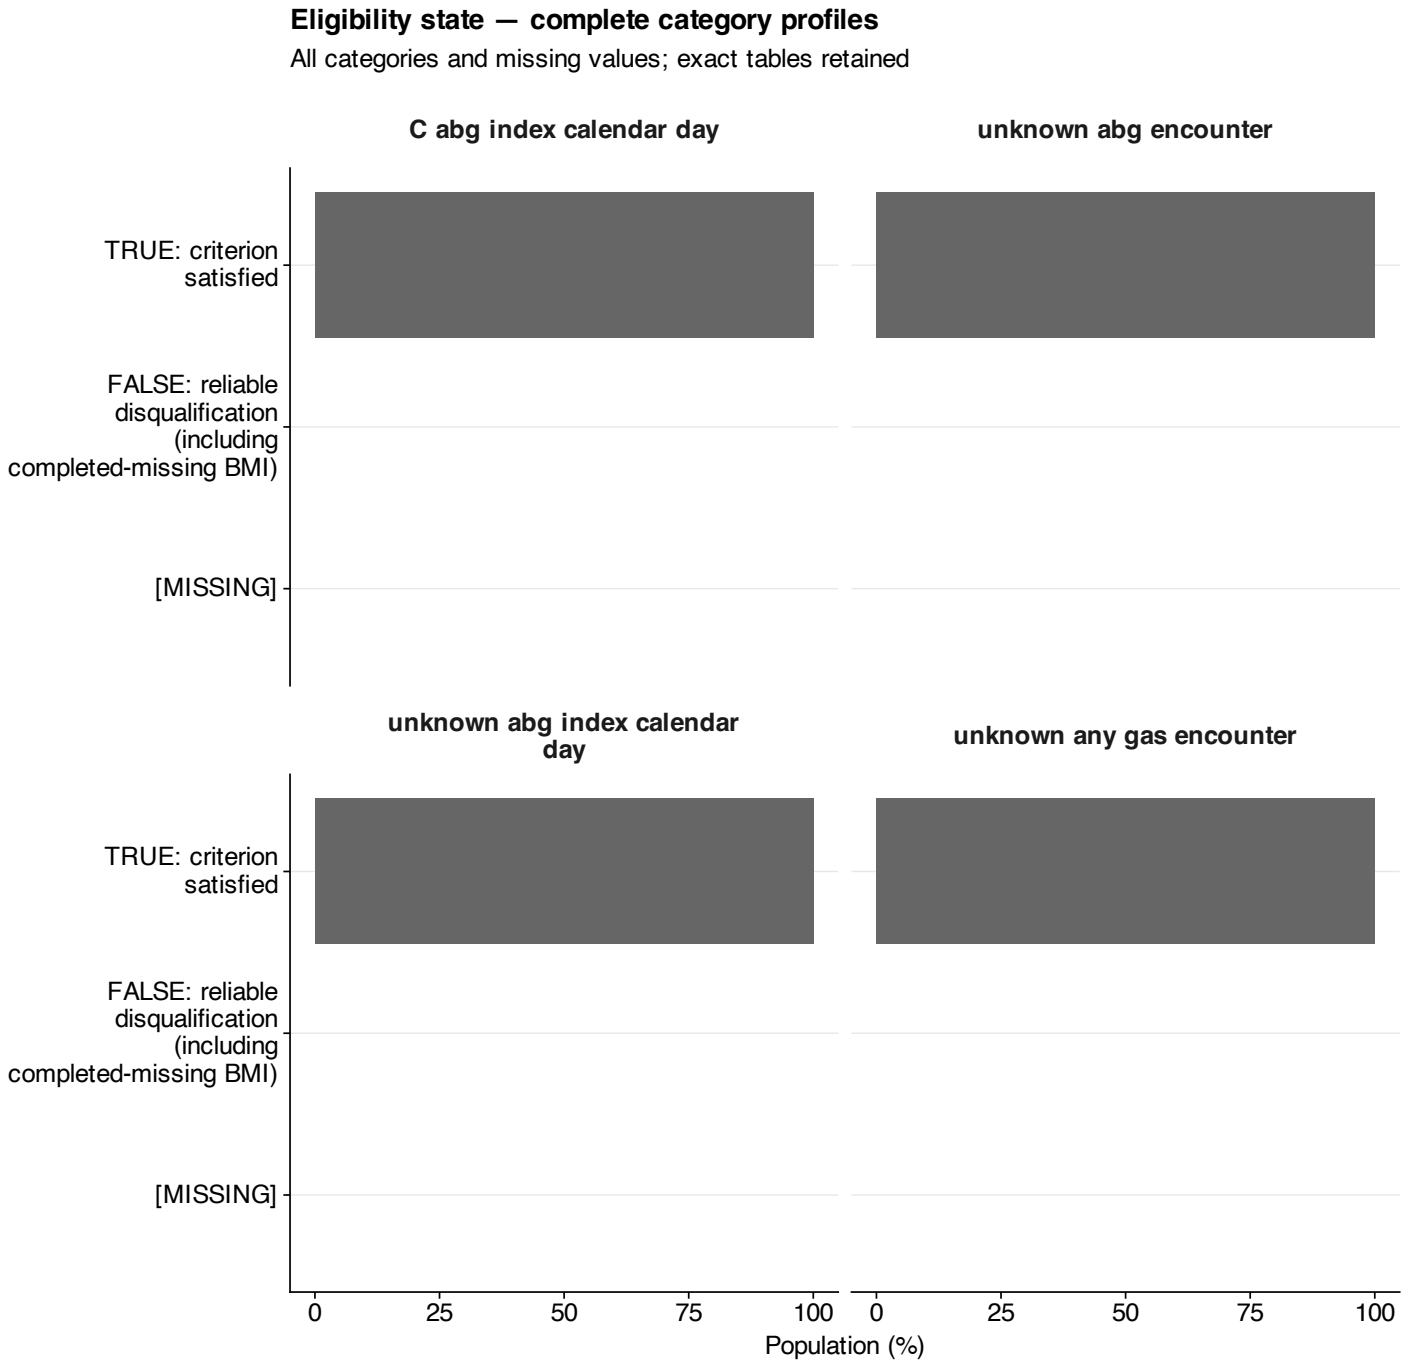

Figure 828: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete eligibility_state stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

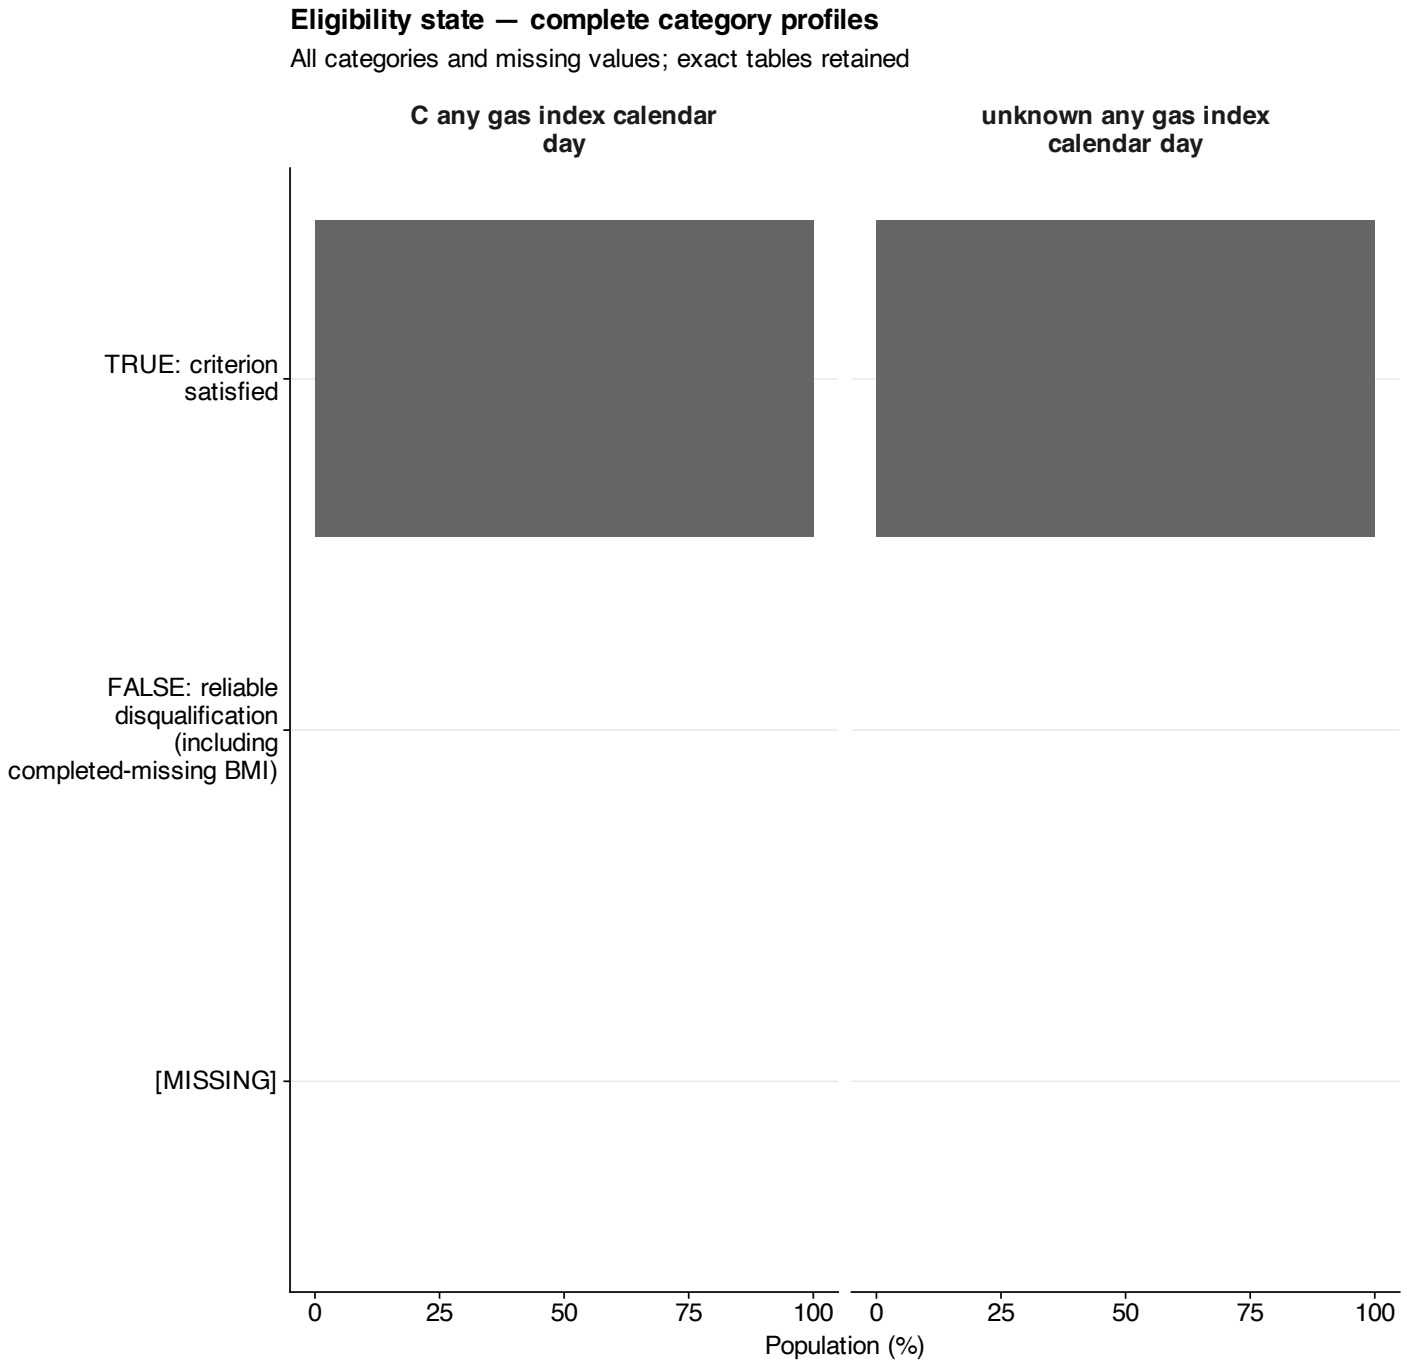

Figure 829: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete eligibility_state stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

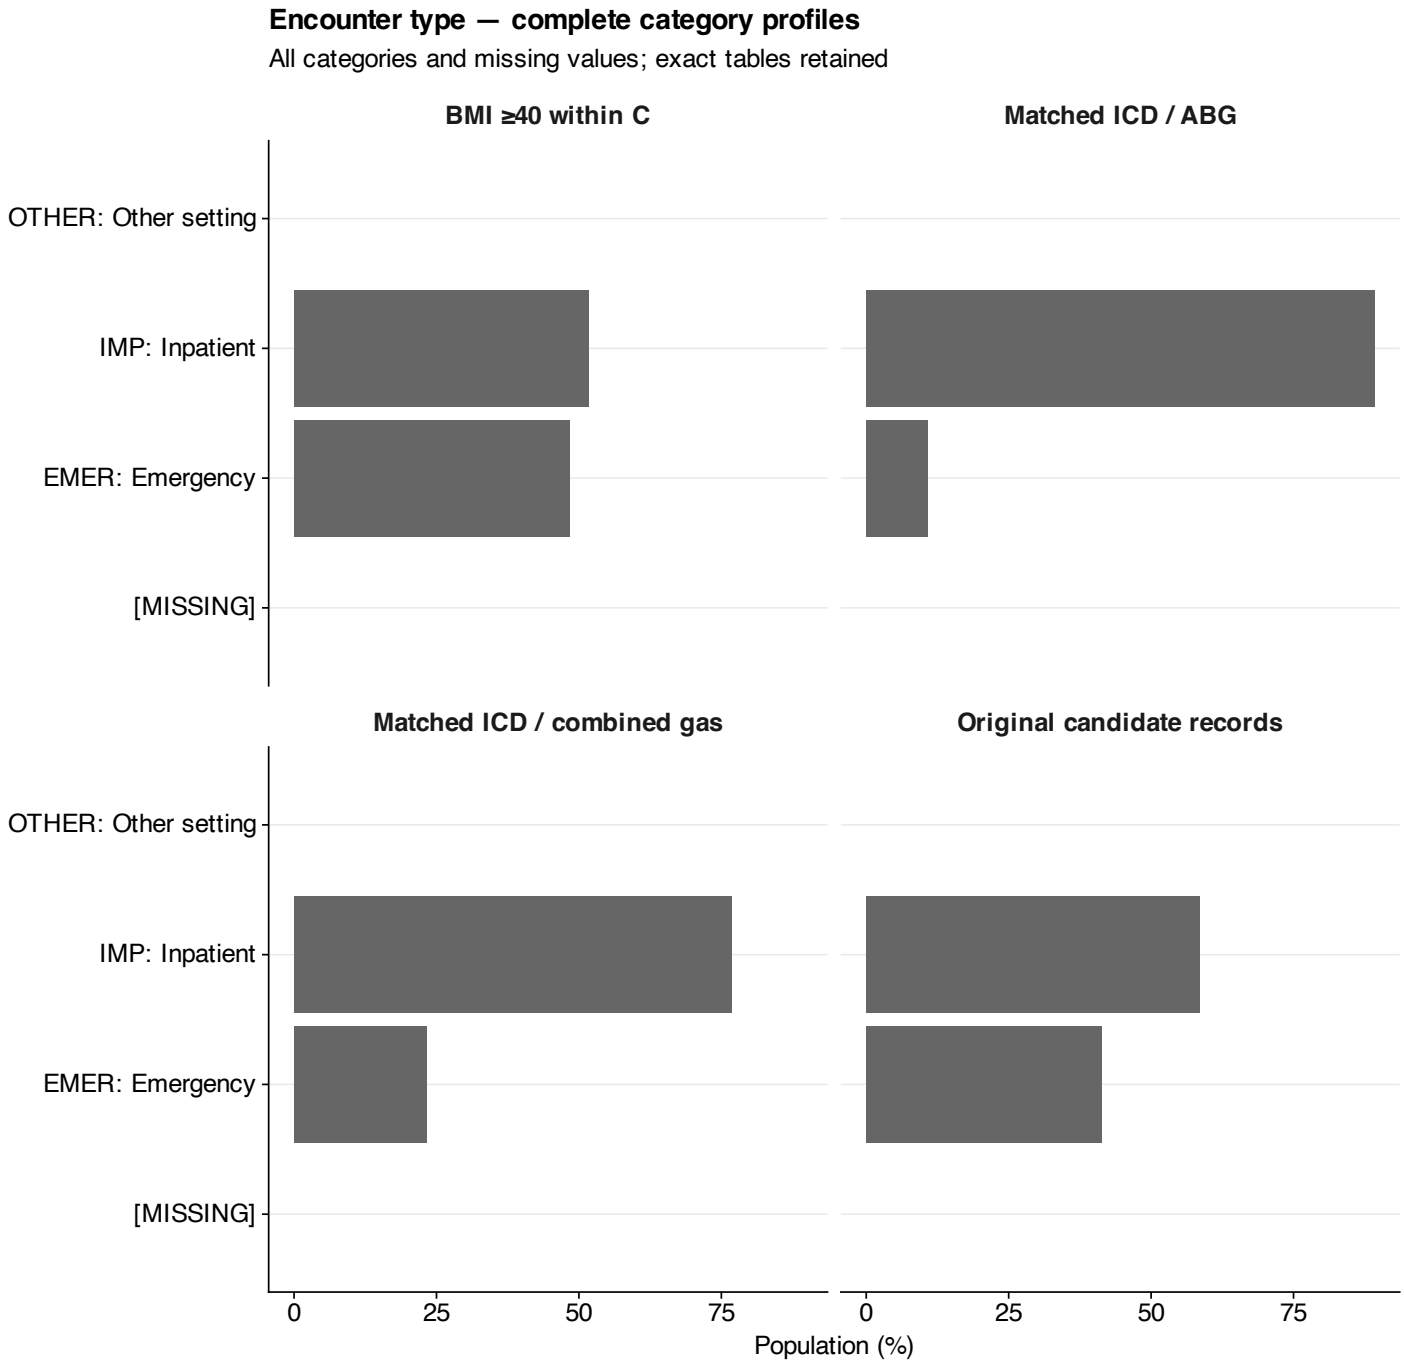

Figure 830: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete encounter_type stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

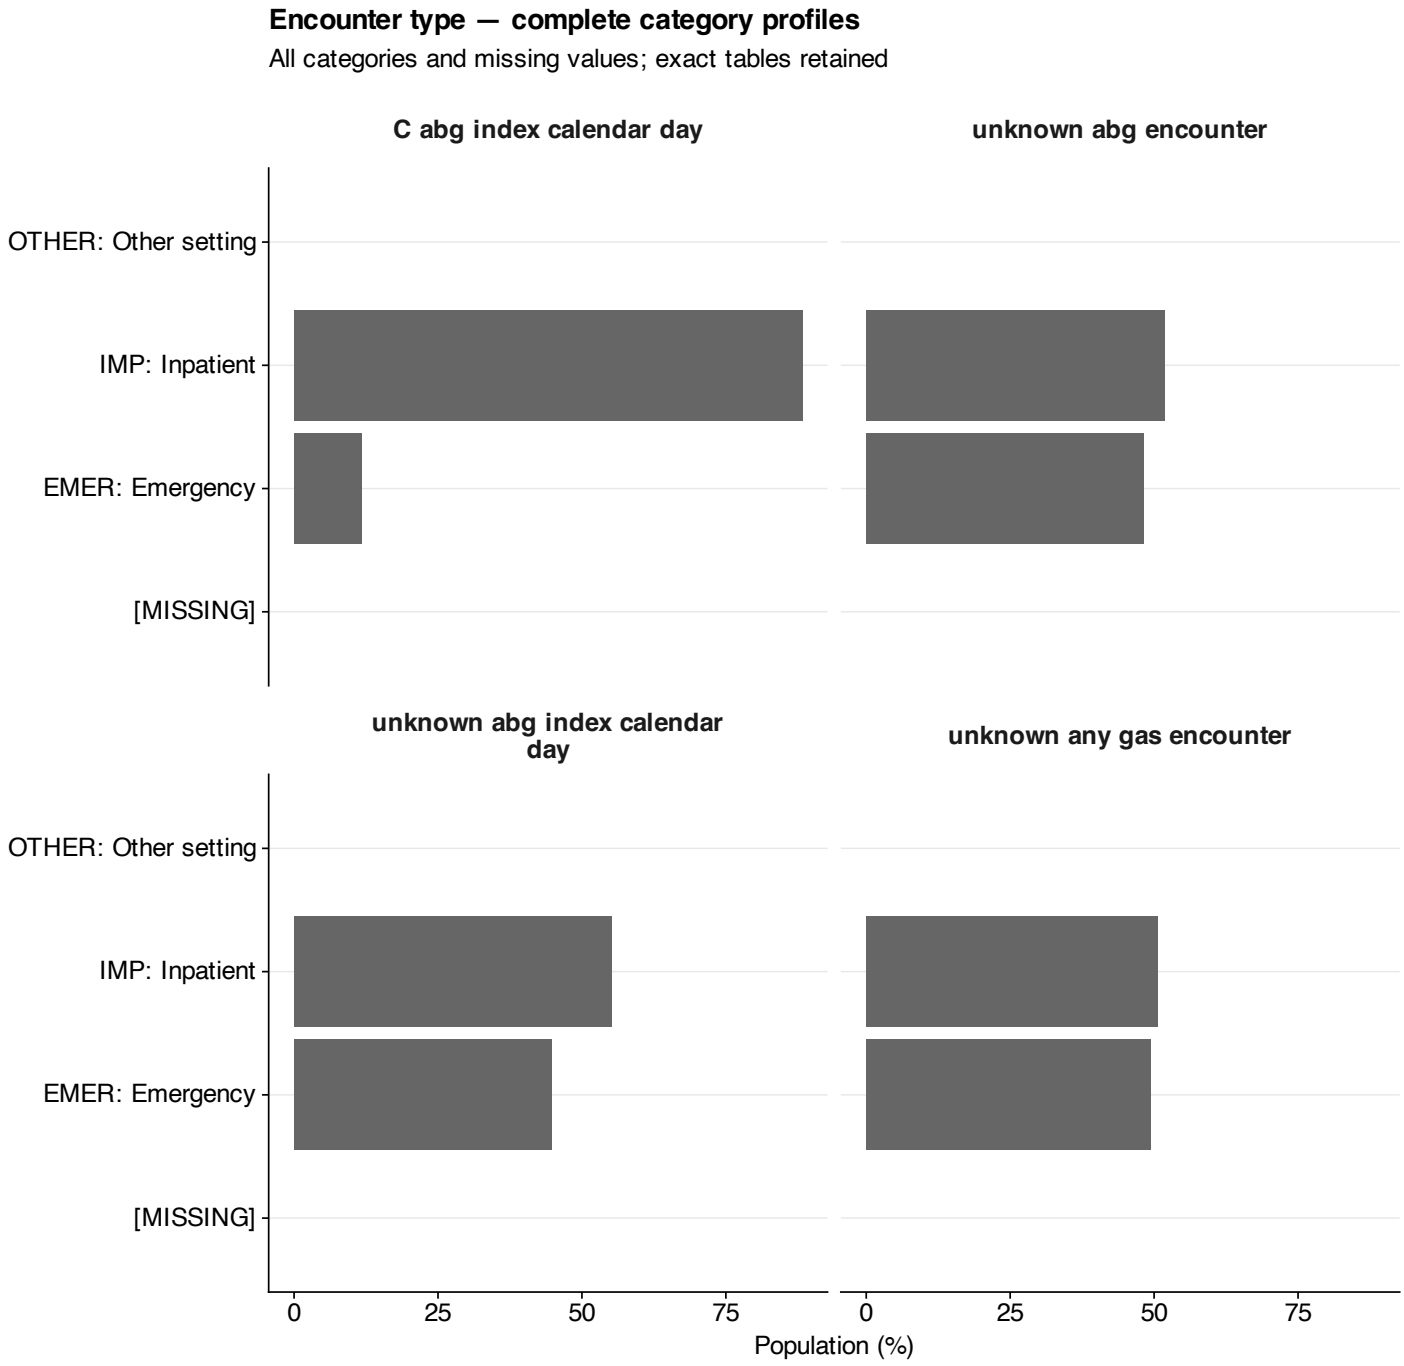

Figure 831: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete encounter_type stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

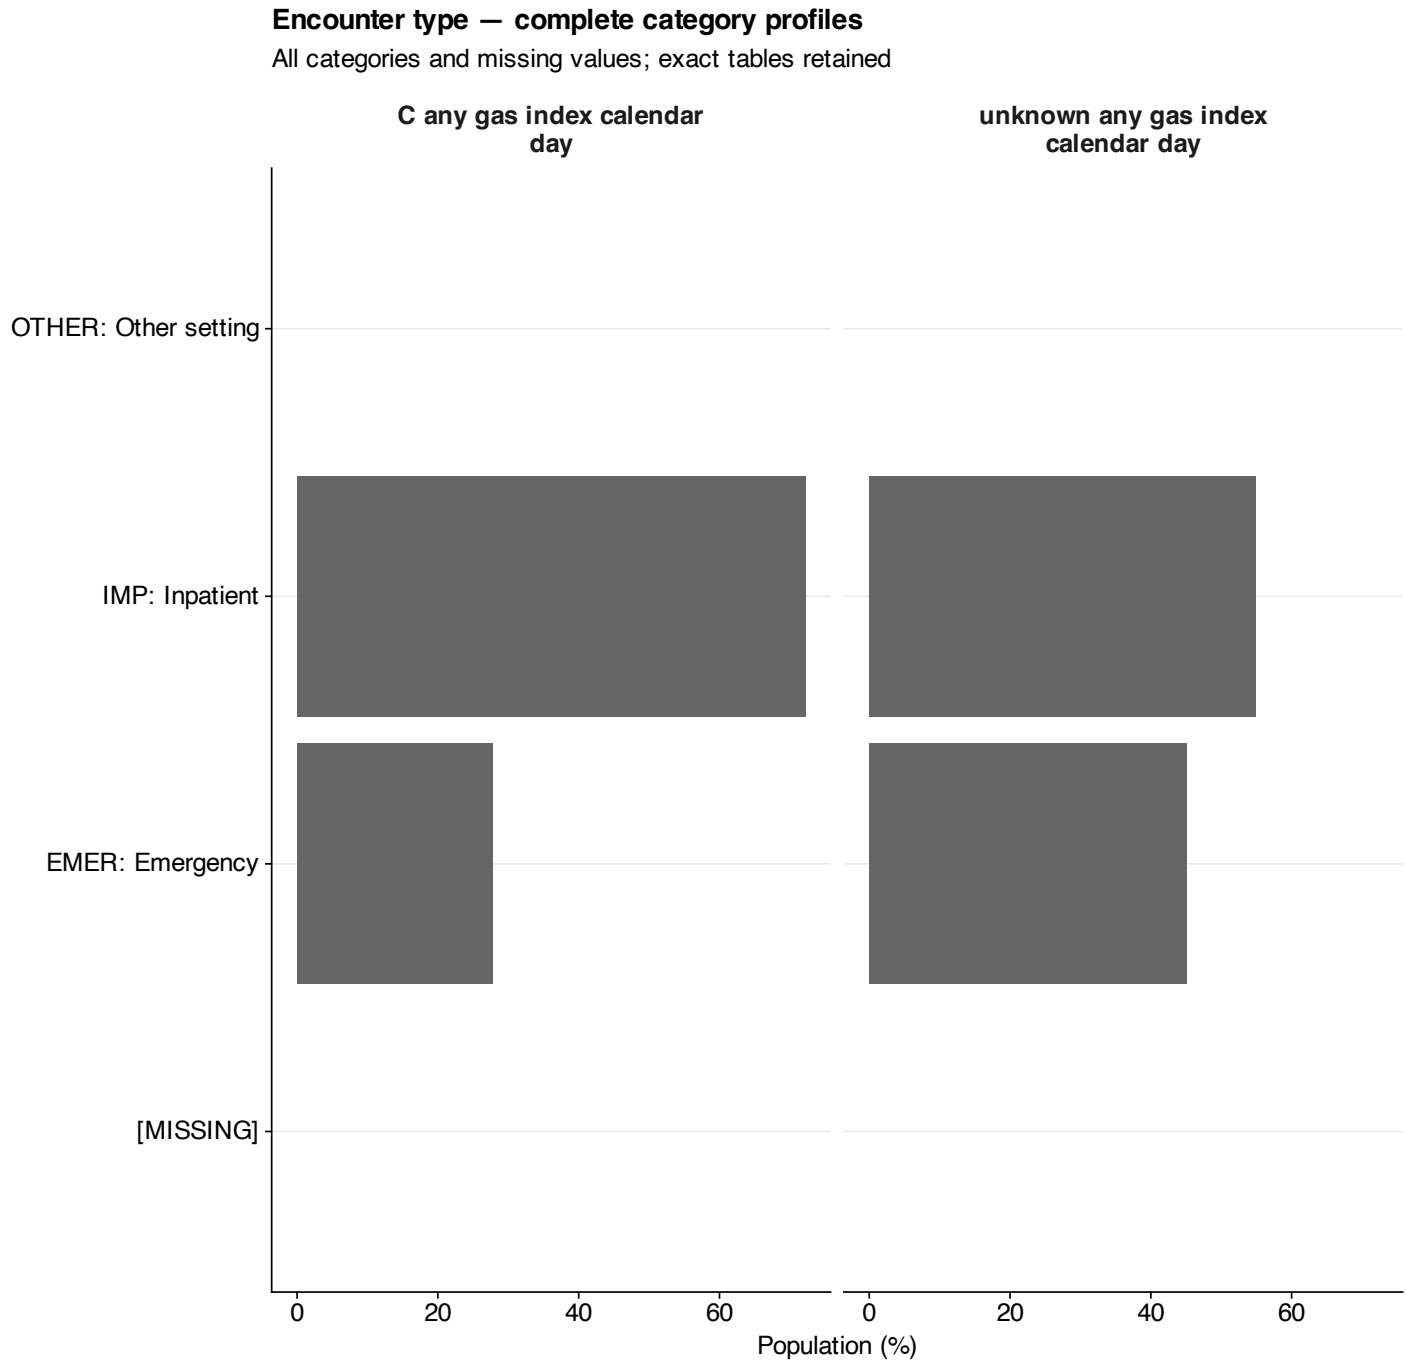

Figure 832: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete encounter_type stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

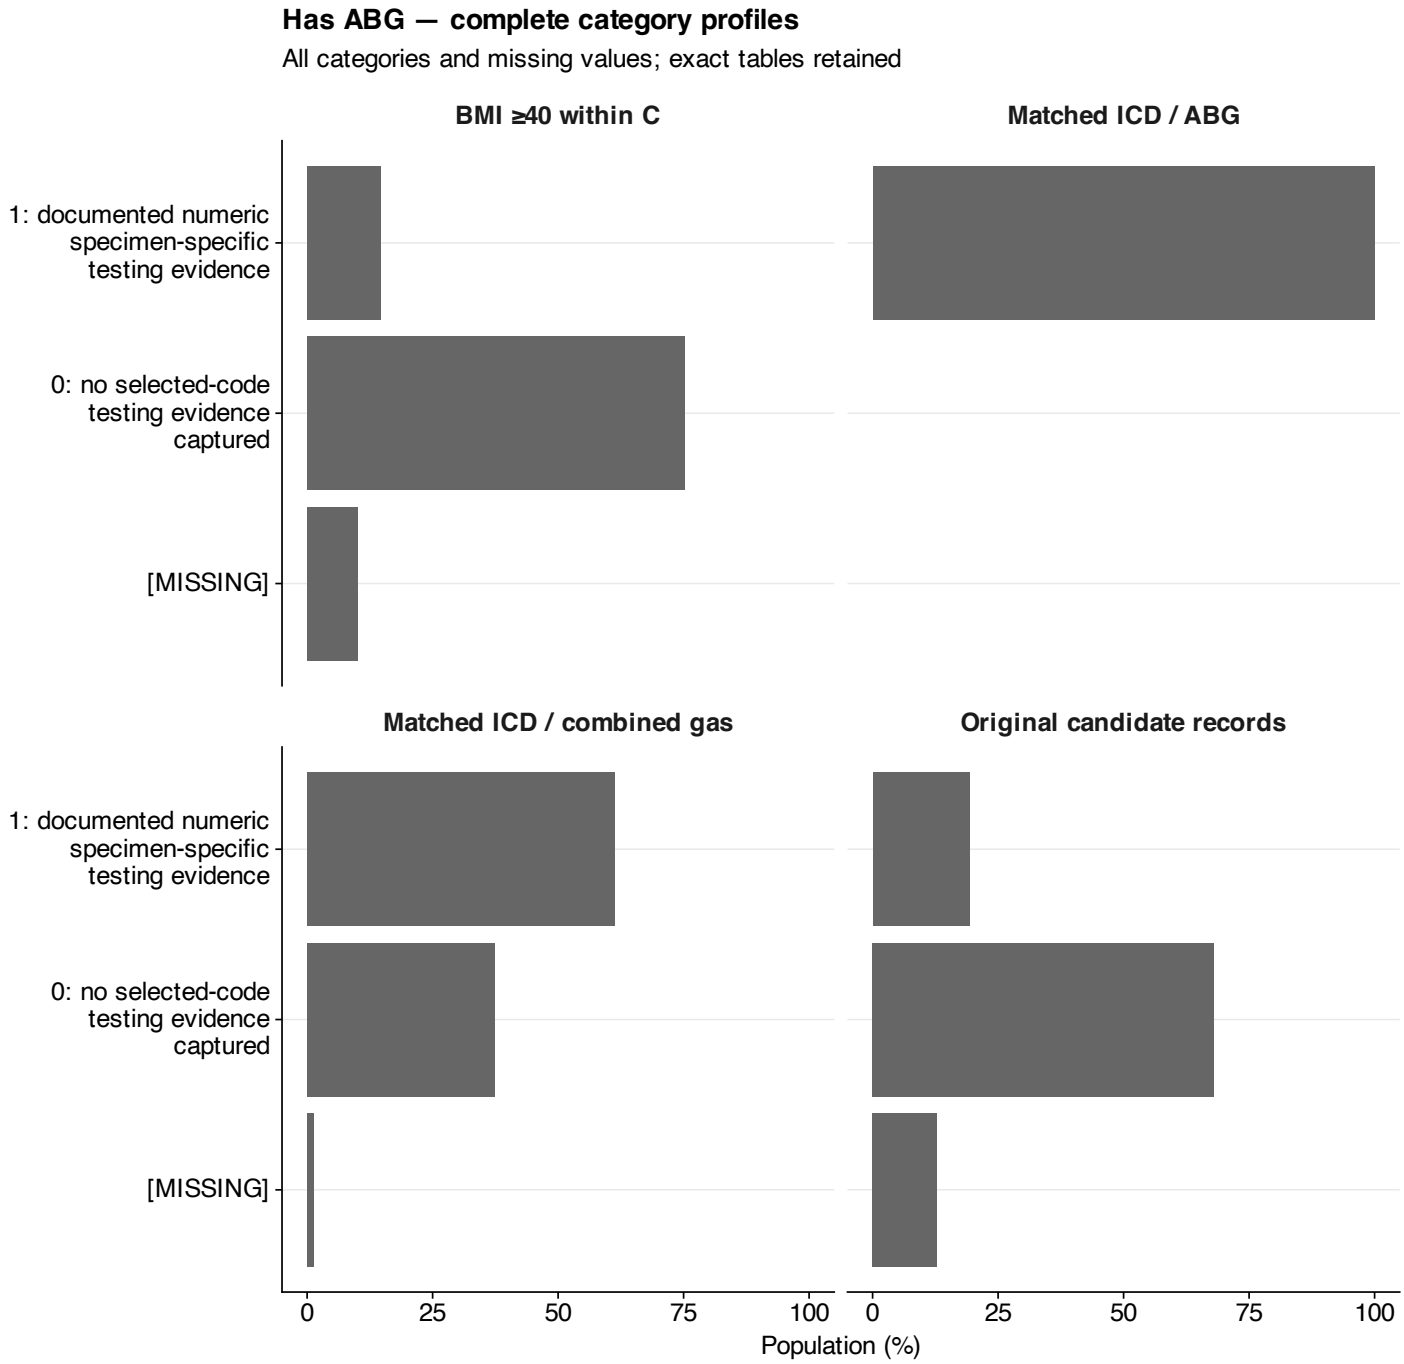

Figure 833: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete has_abg stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

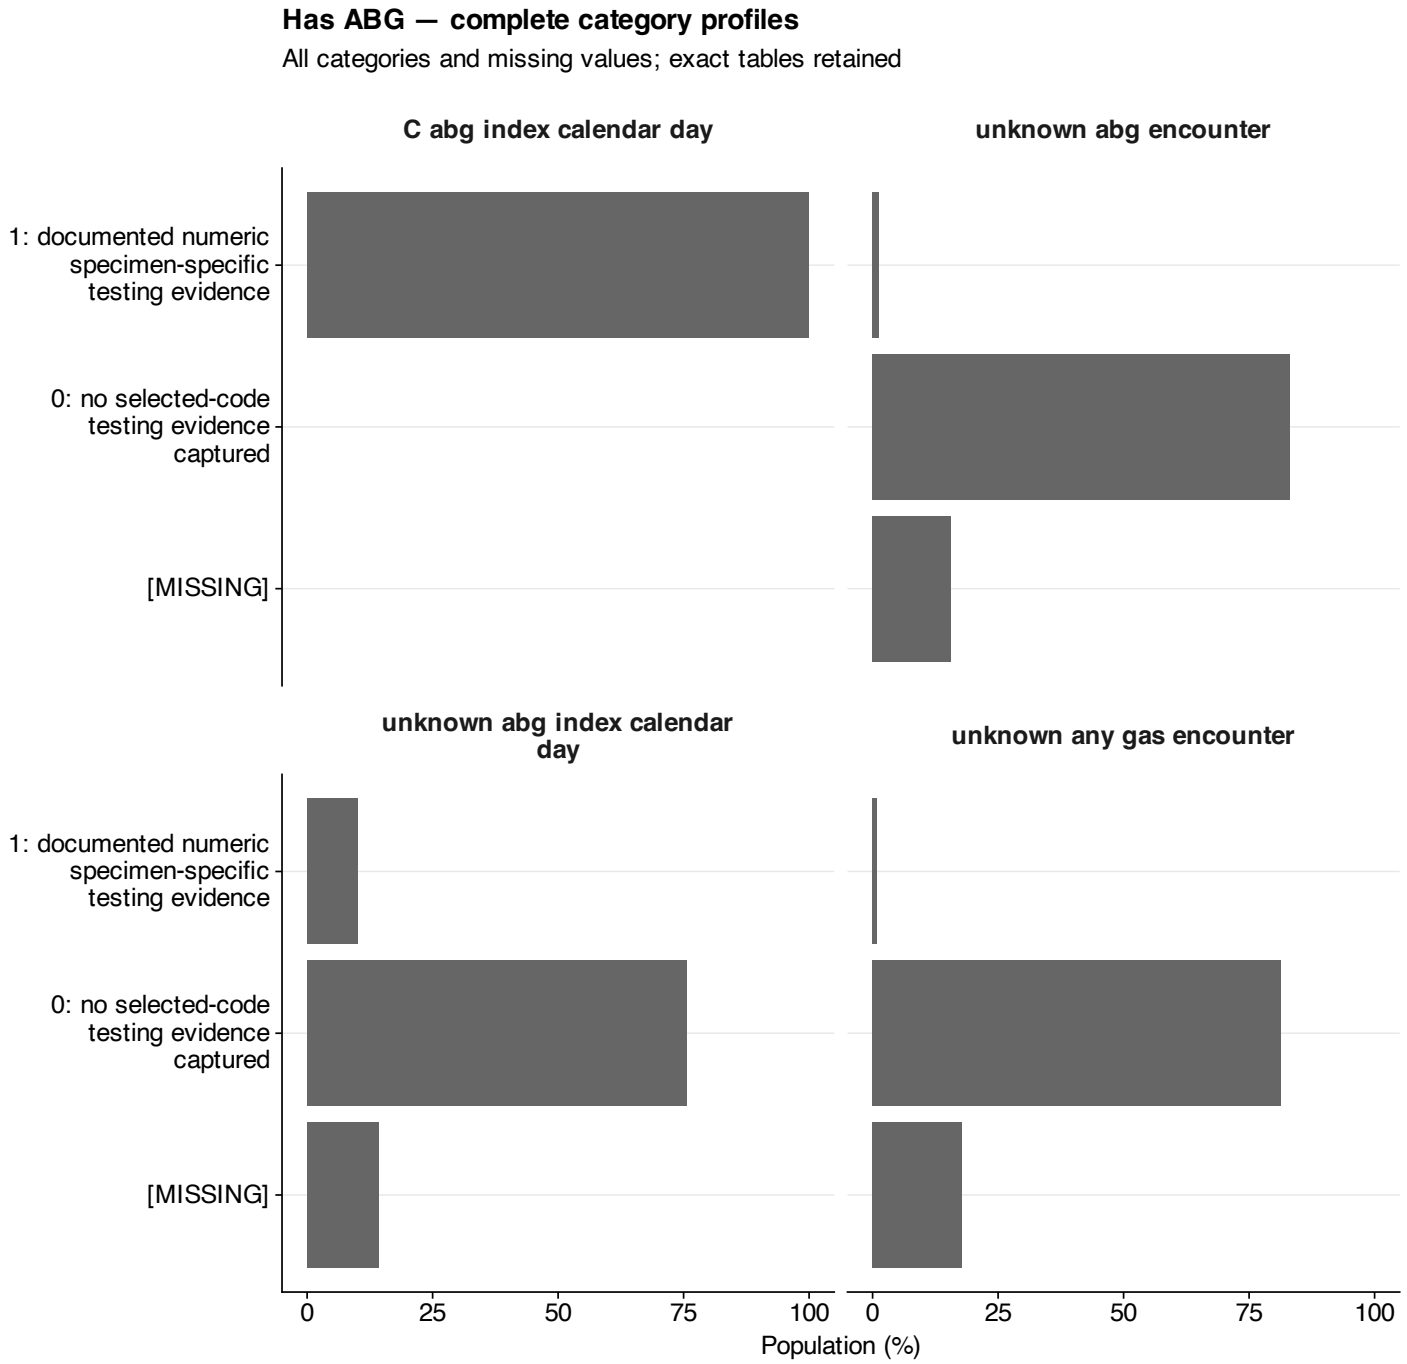

Figure 834: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete has_abg stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

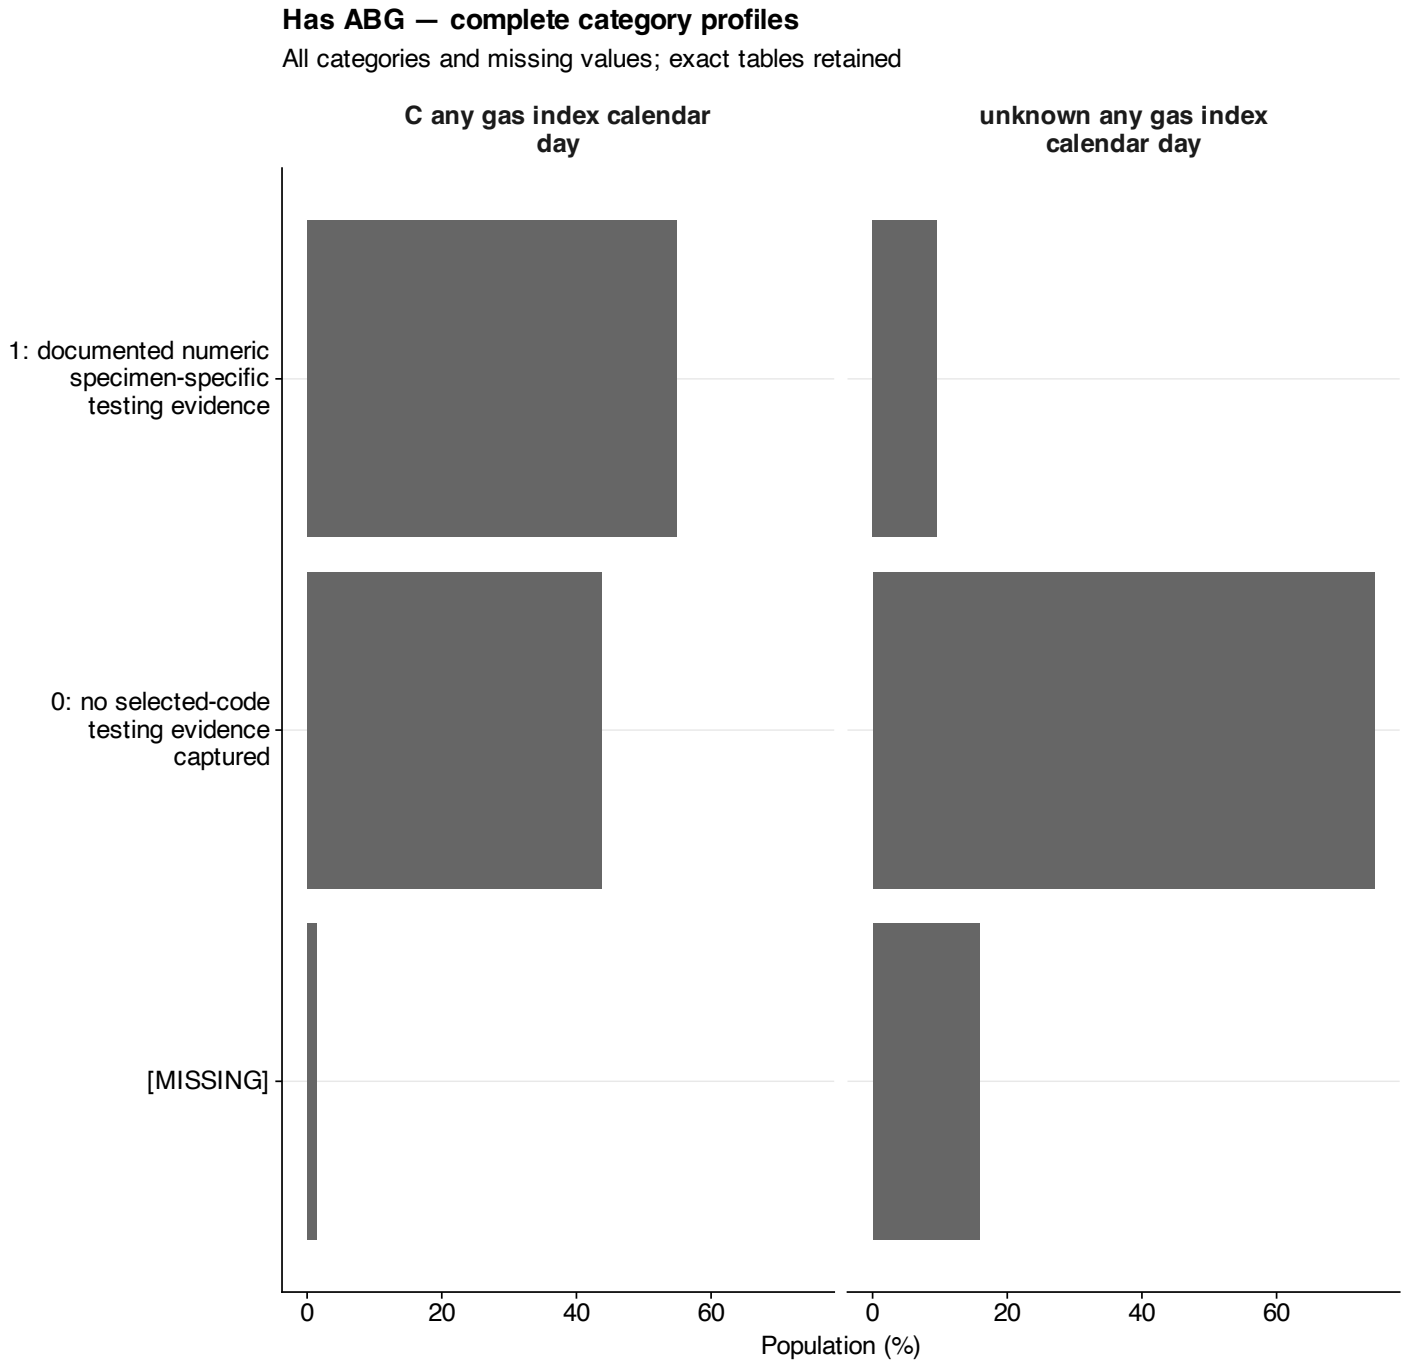

Figure 835: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete has_abg stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

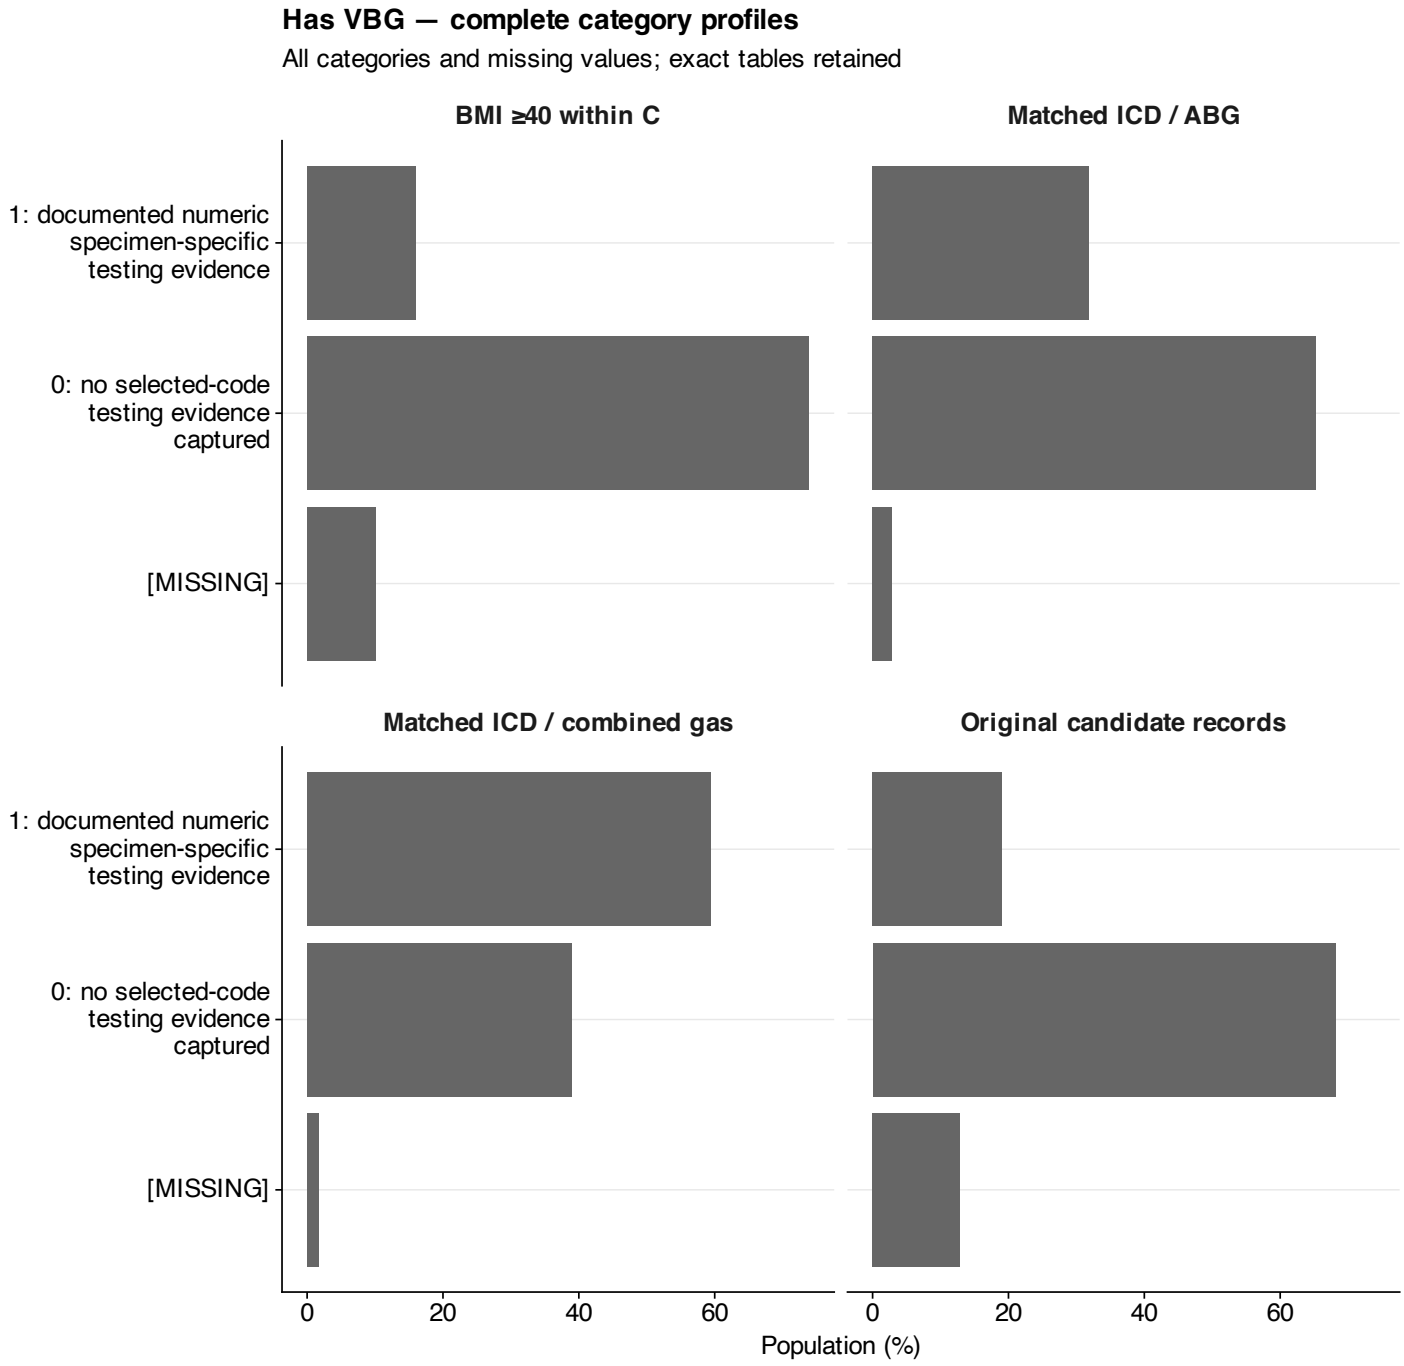

Figure 836: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete has_vbg stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

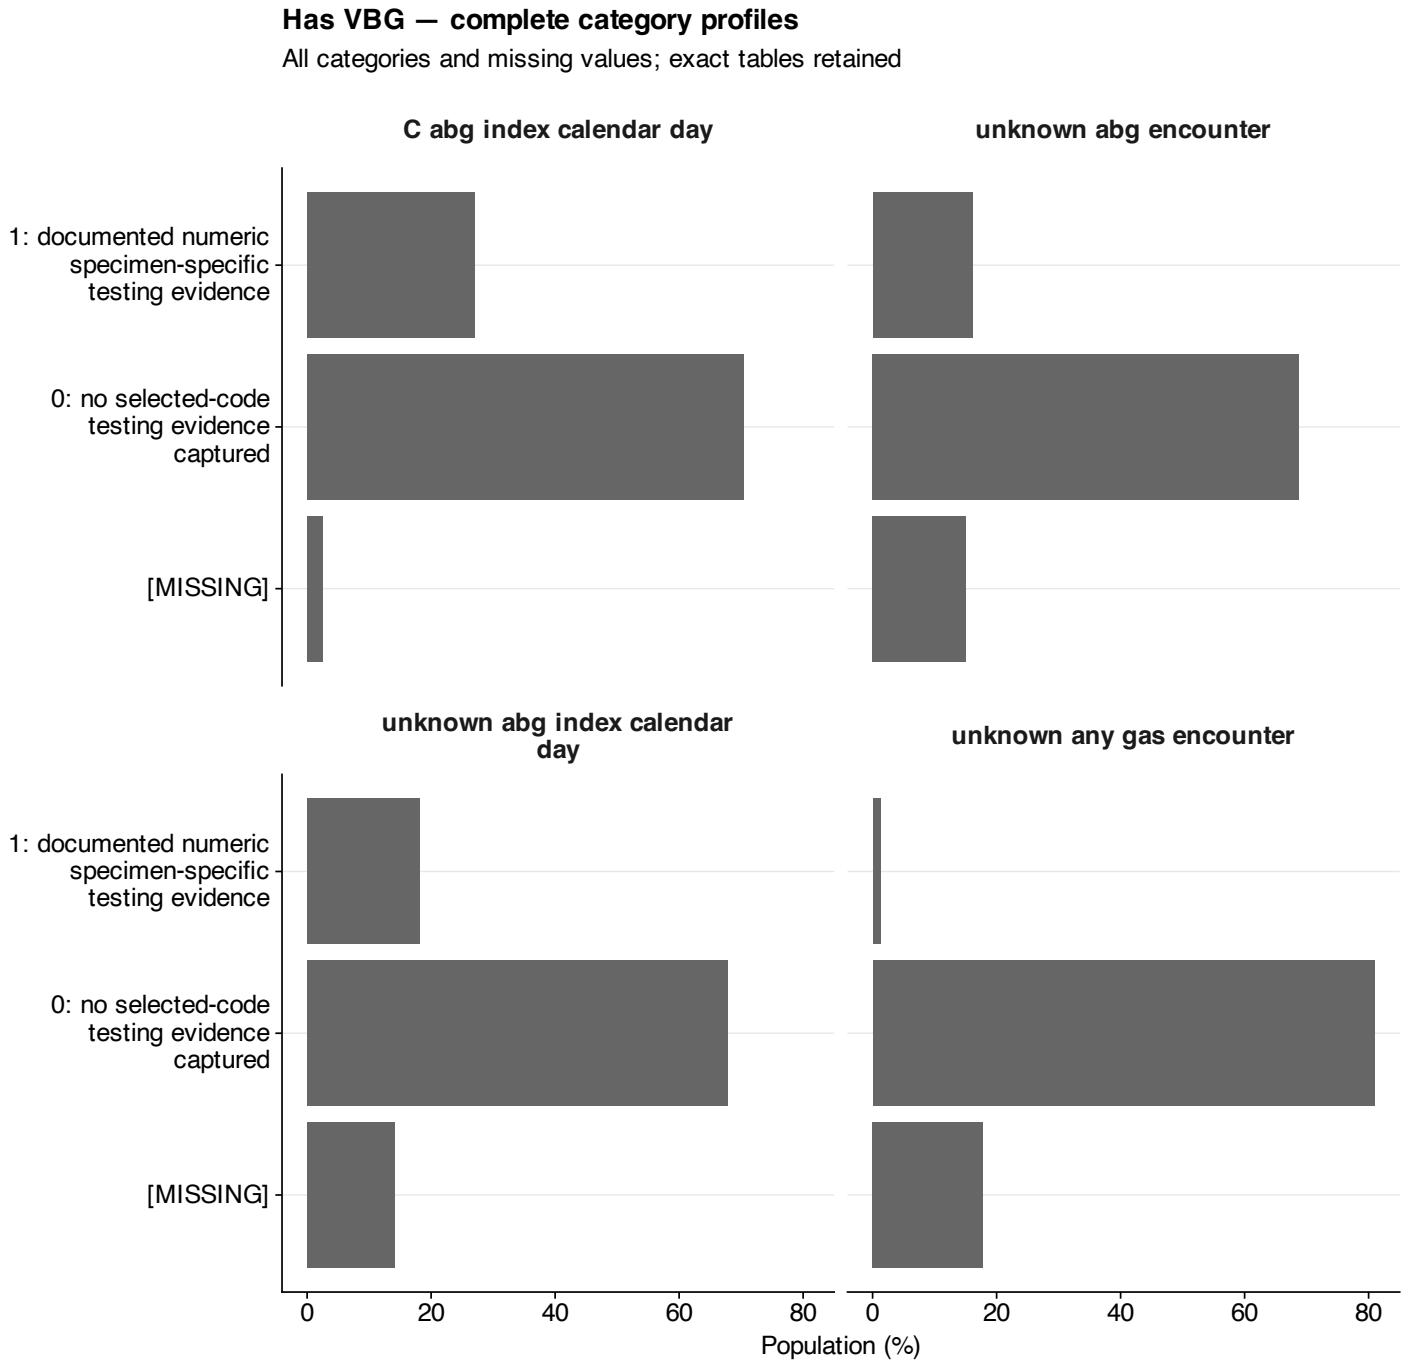

Figure 837: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete has_vbg stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

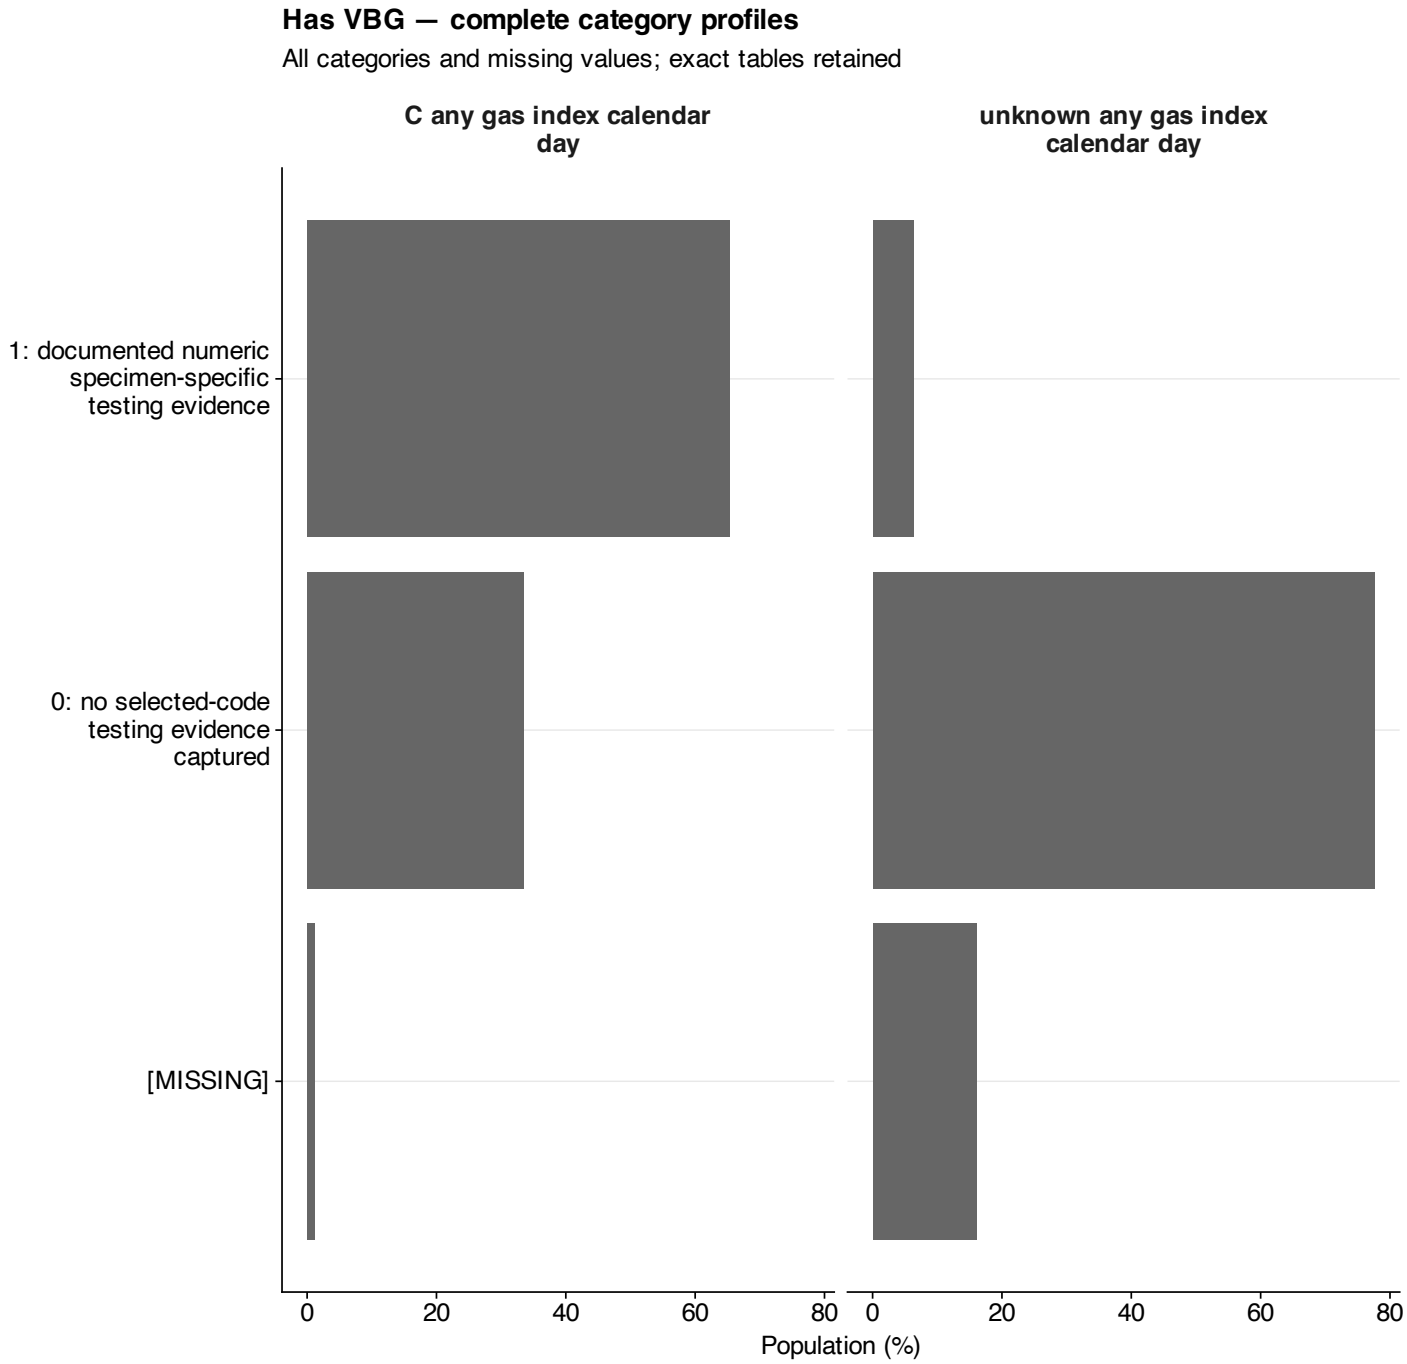

Figure 838: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete has_vbg stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

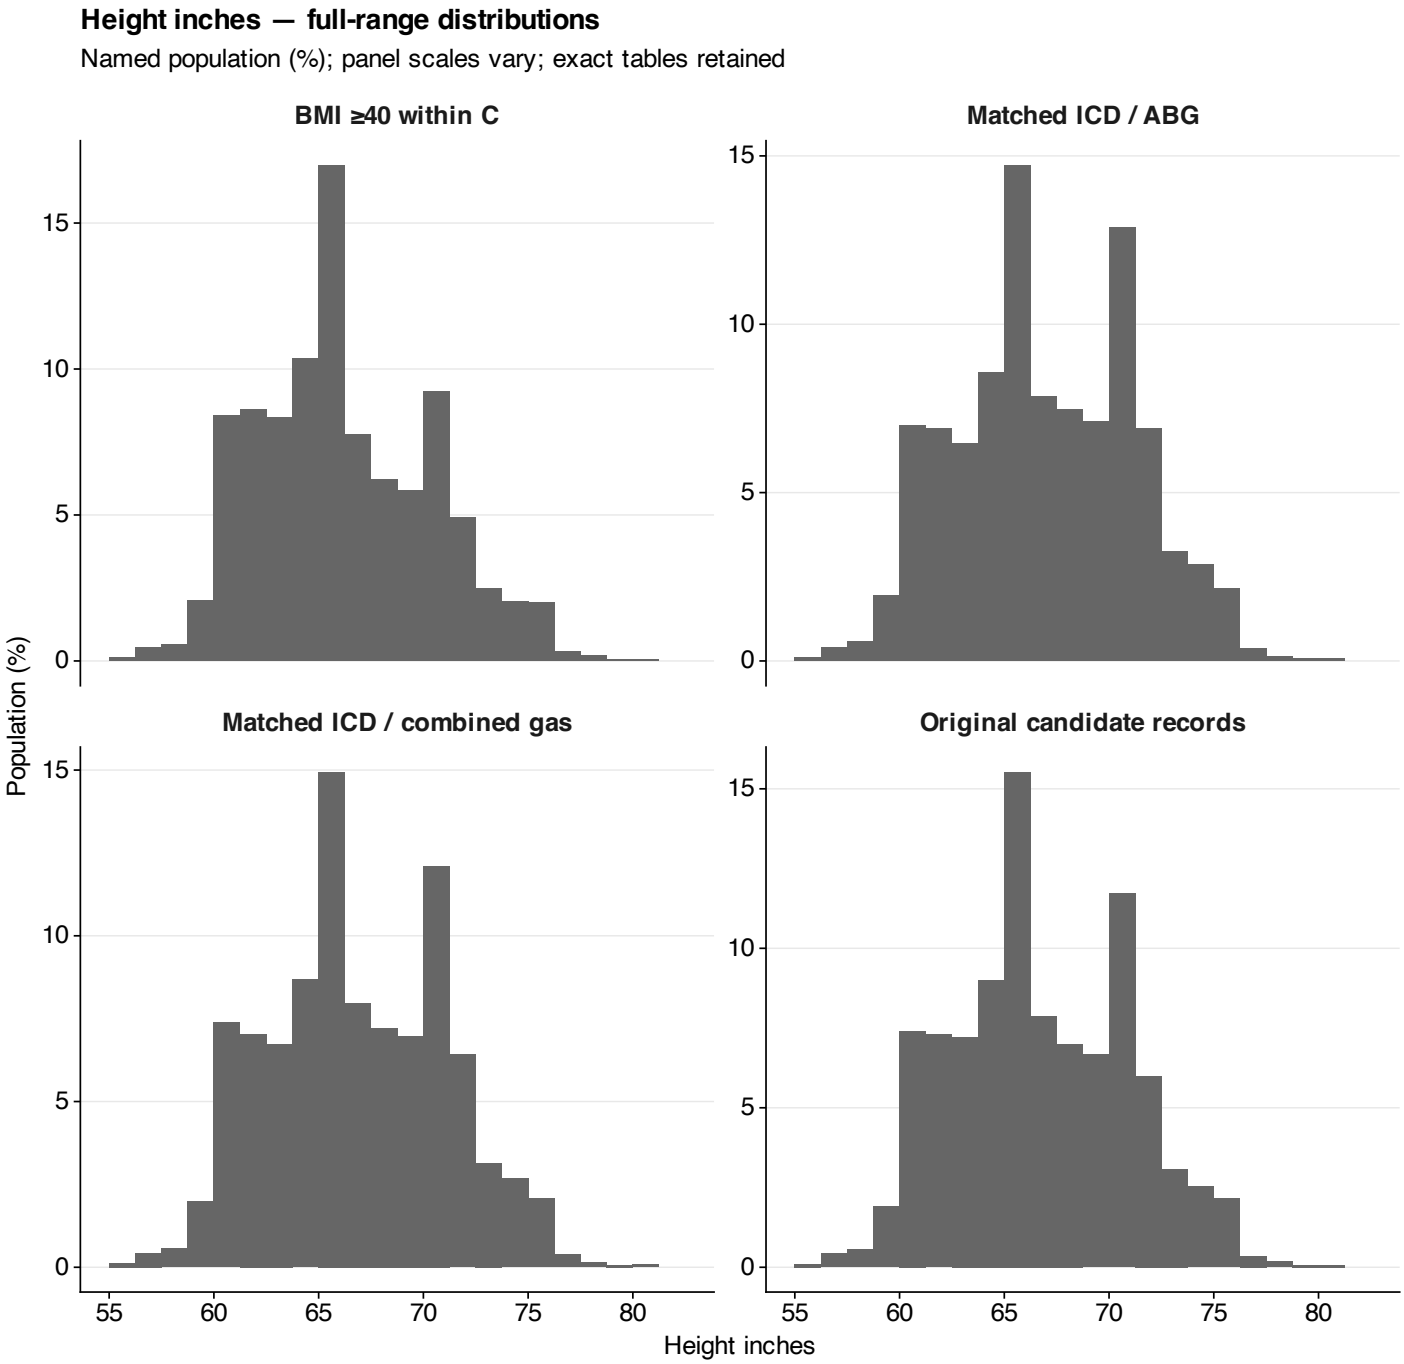

Figure 839: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete height_inches stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

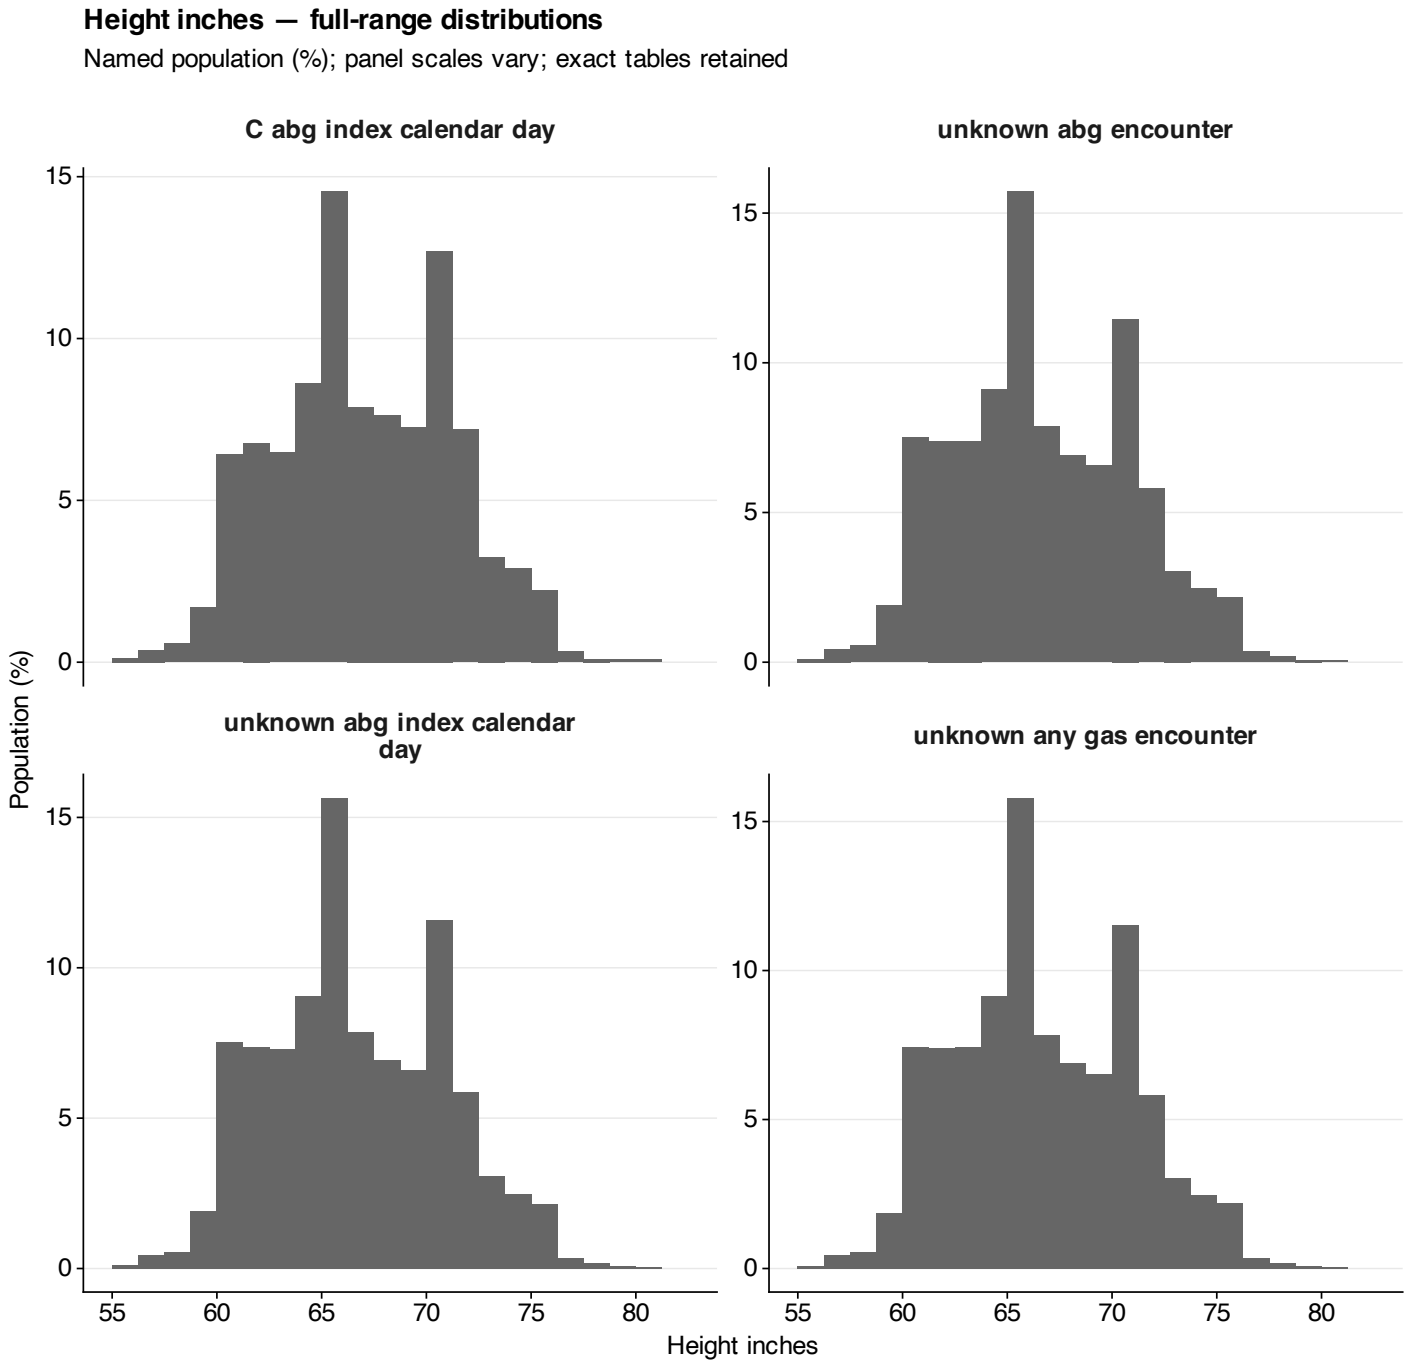

Figure 840: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete height_inches stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

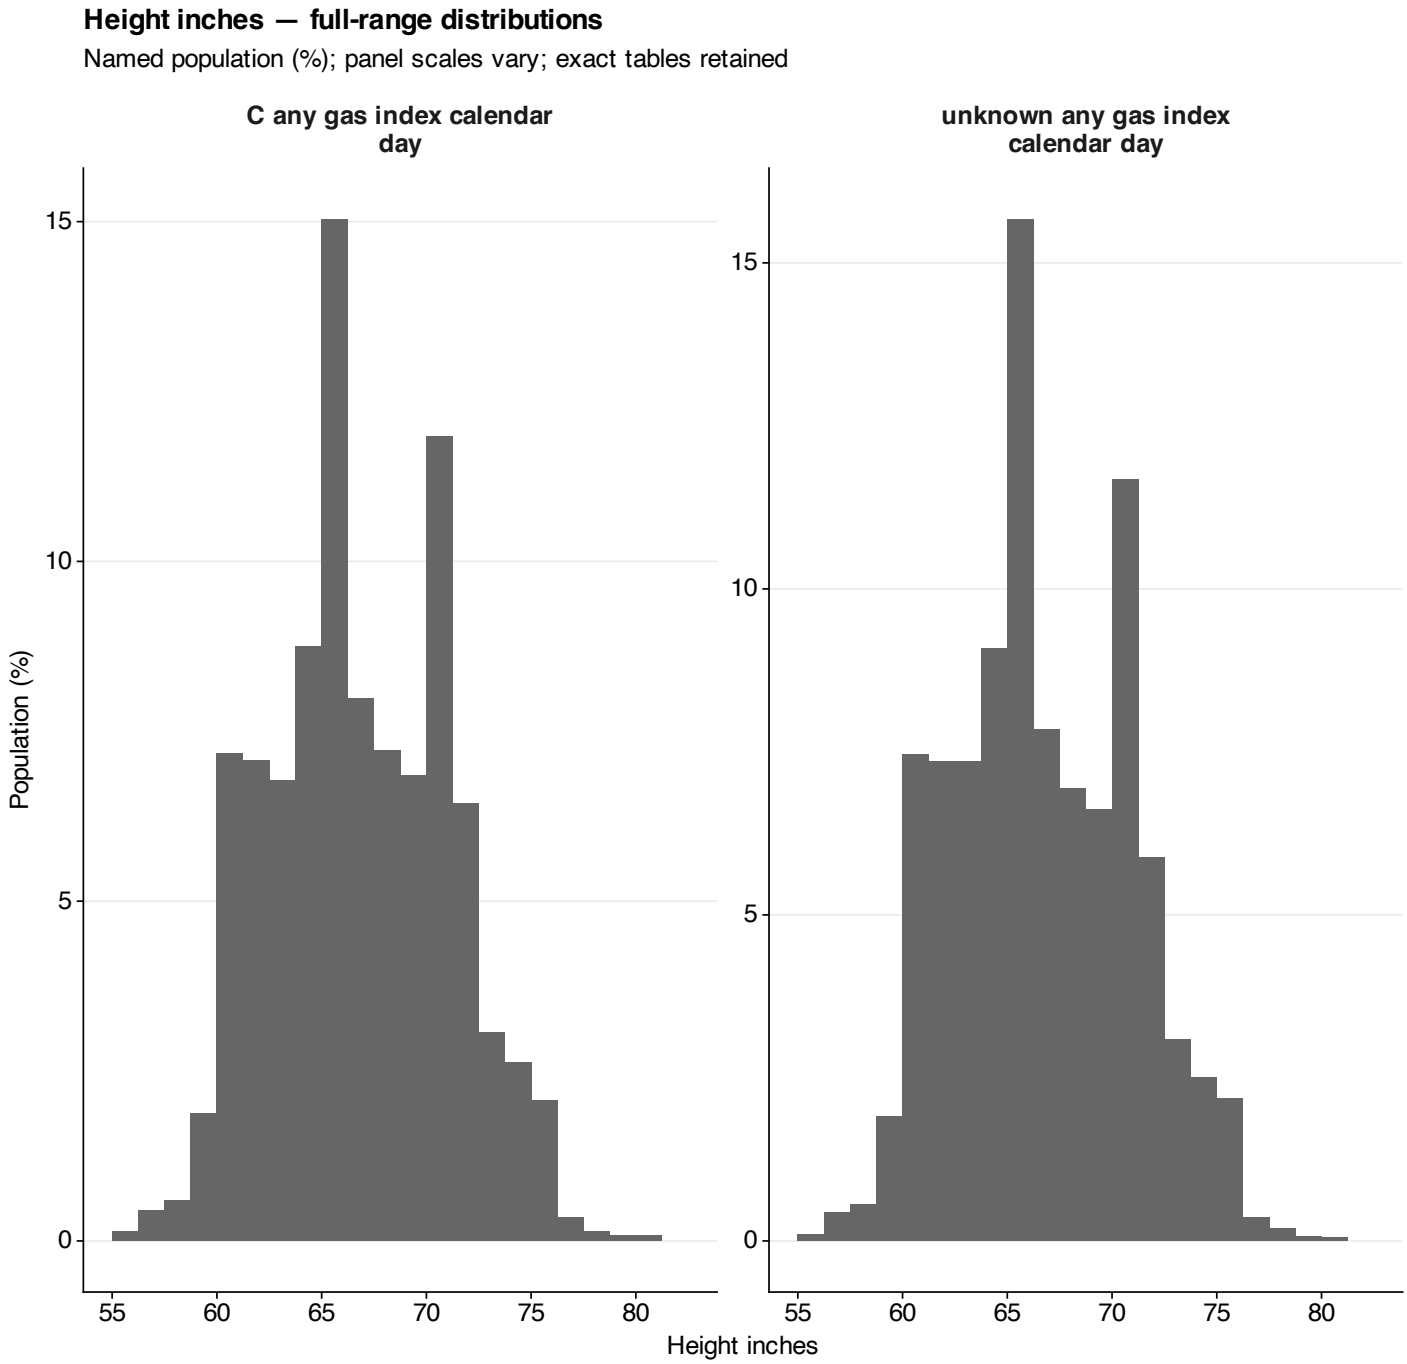

Figure 841: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete height_inches stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

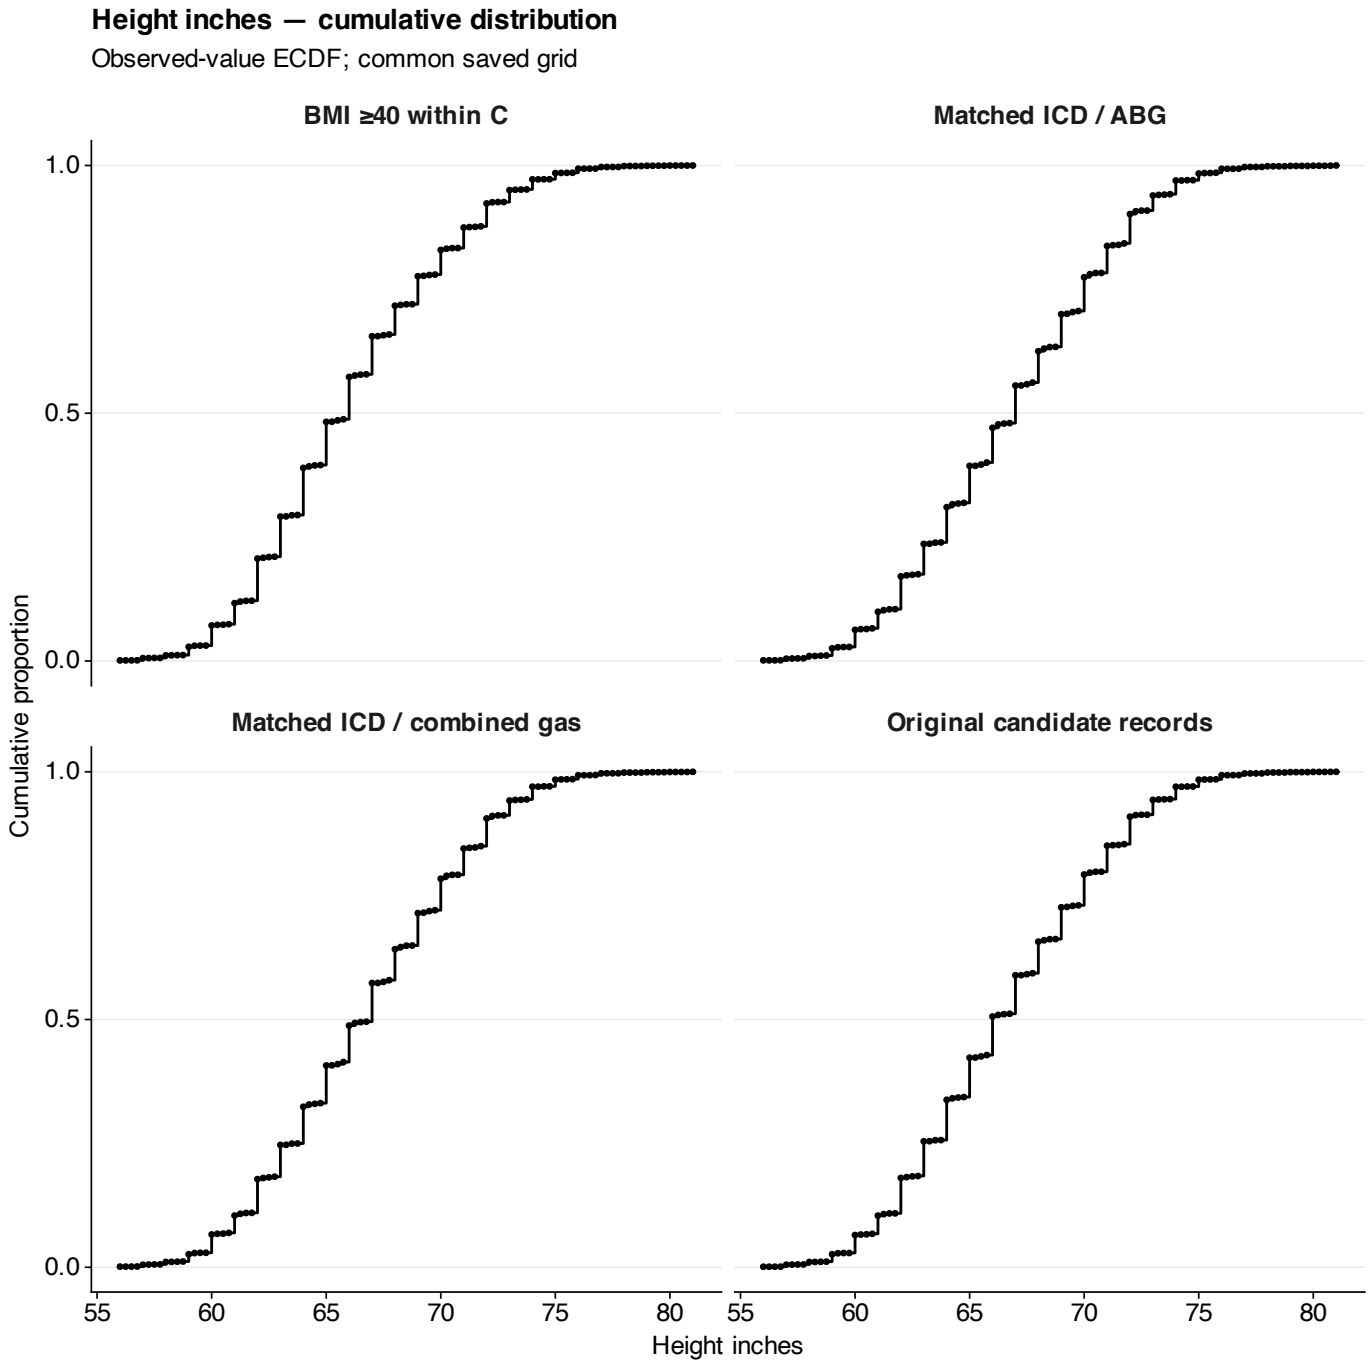

Figure 842: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. height_inches ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

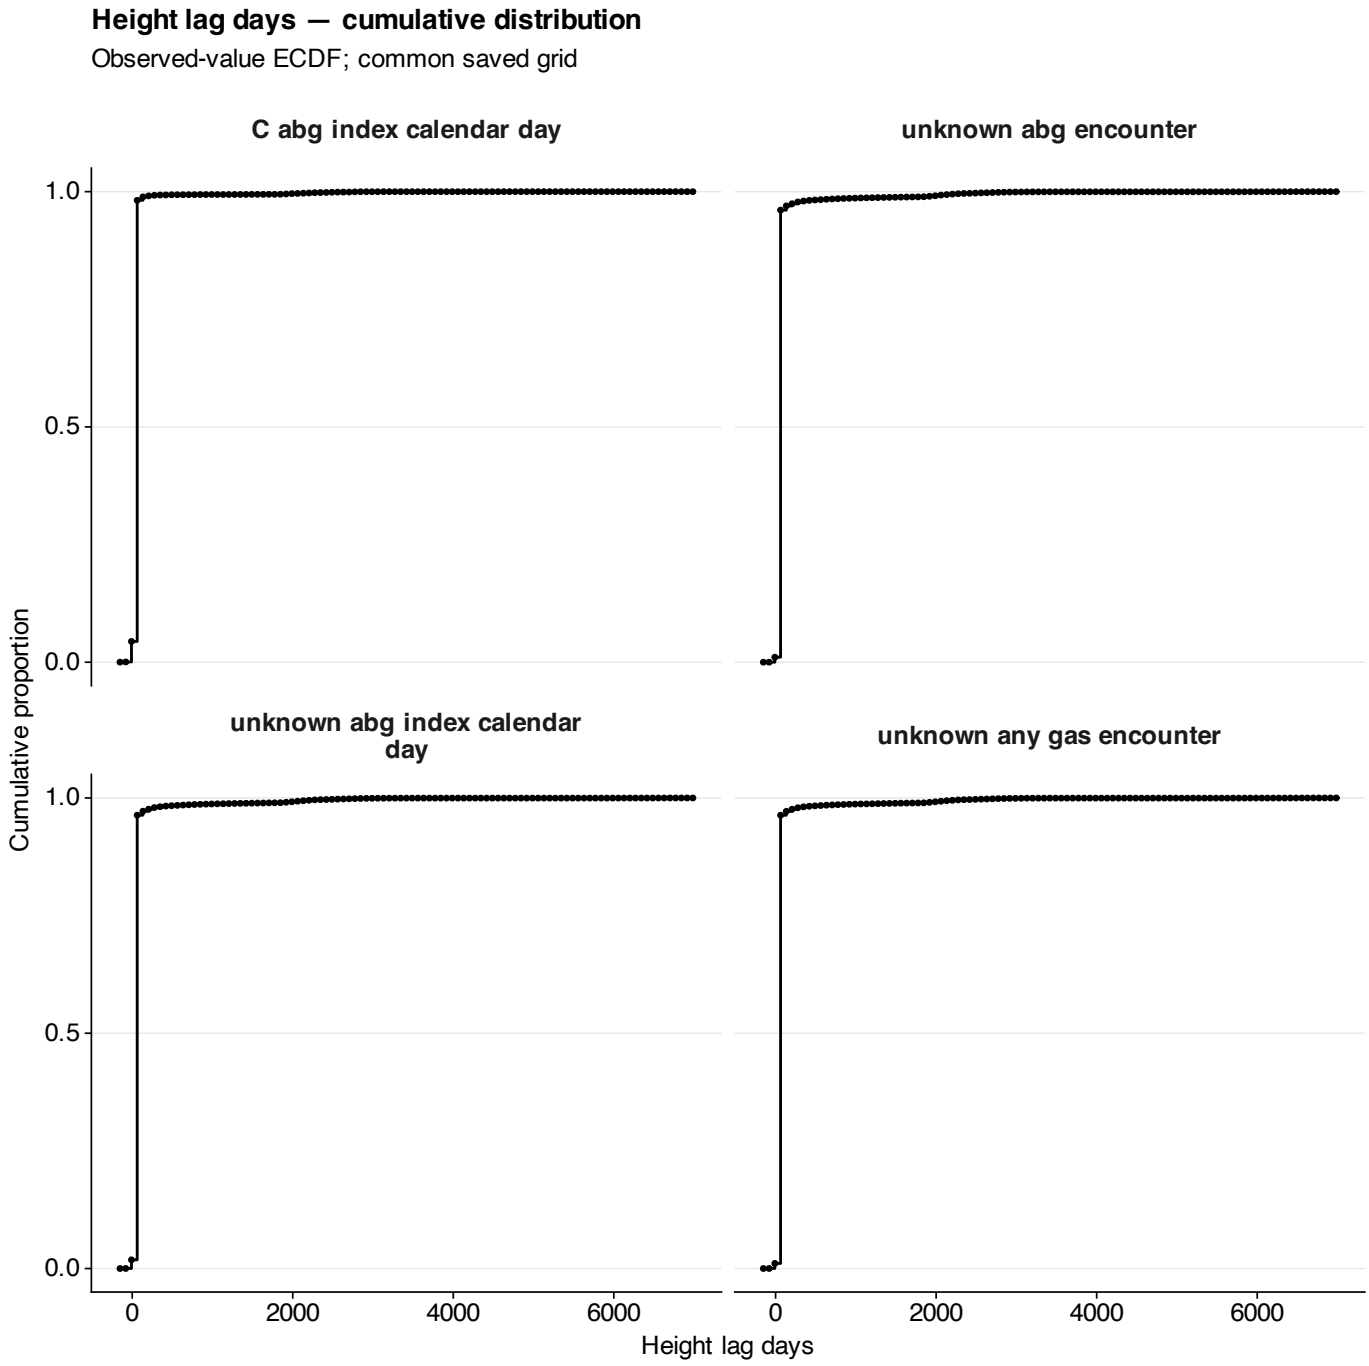

Figure 849: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. height_lag_days ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

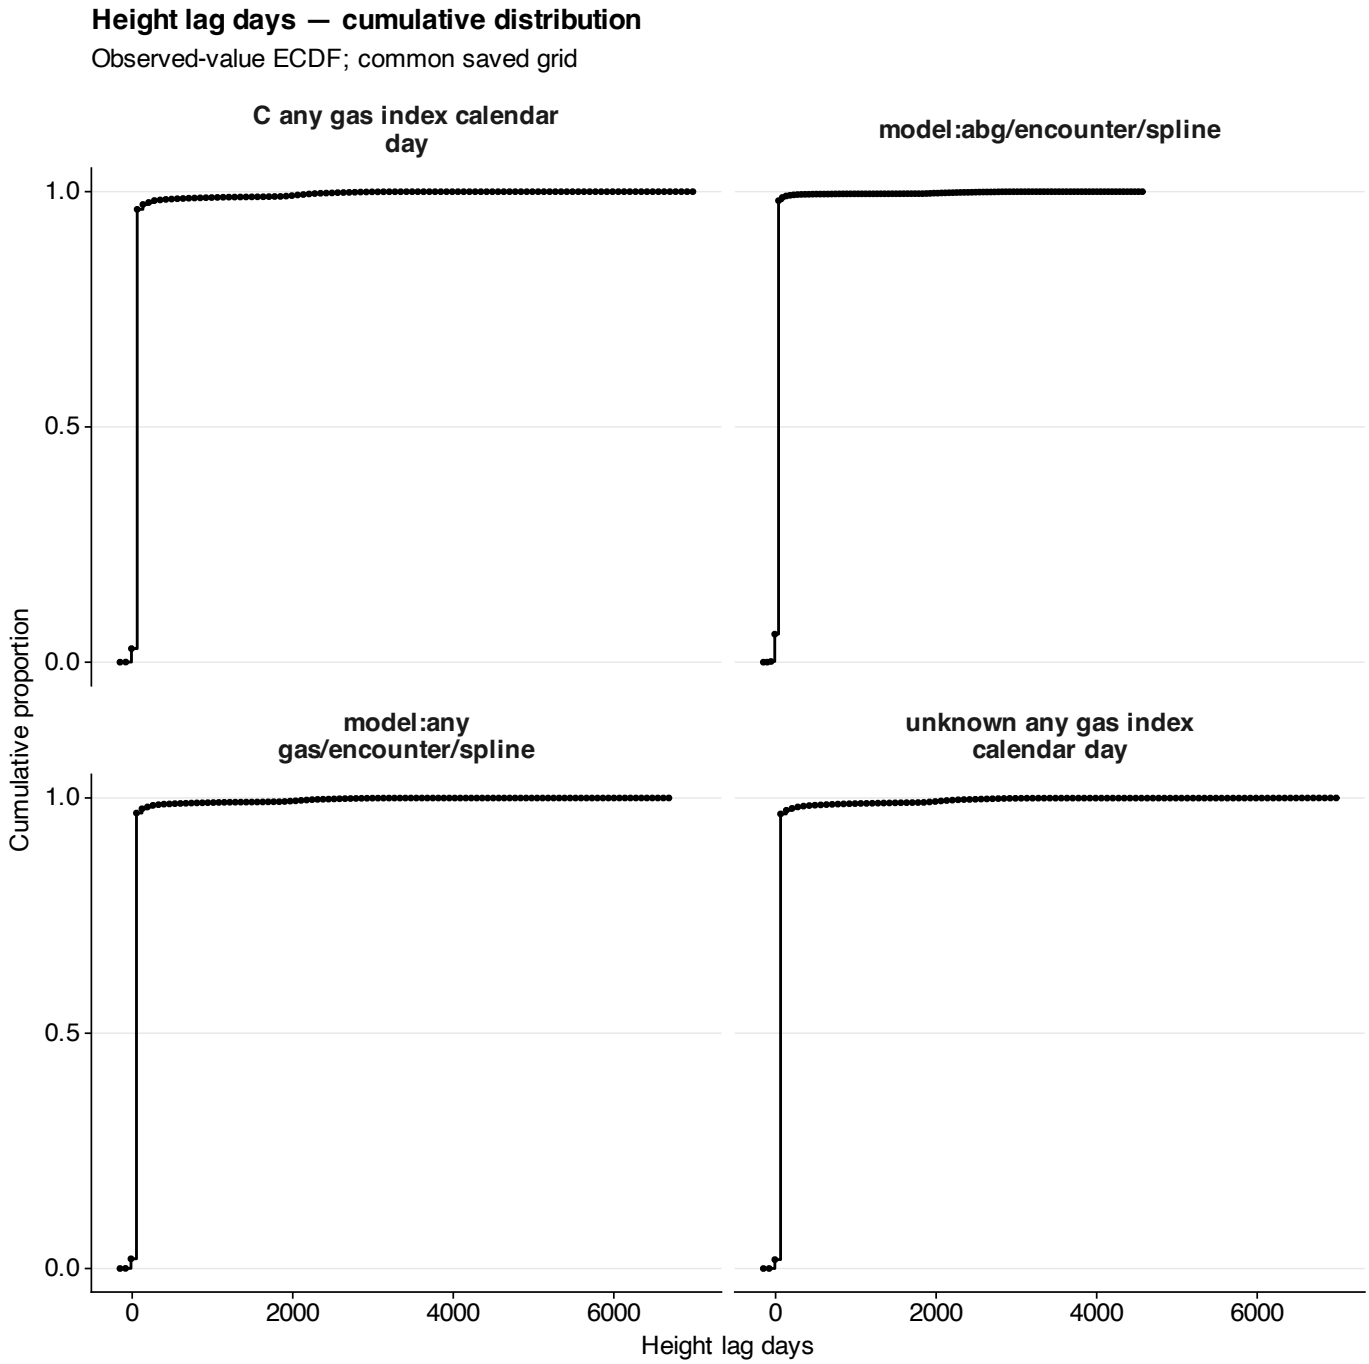

Figure 850: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. height_lag_days ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

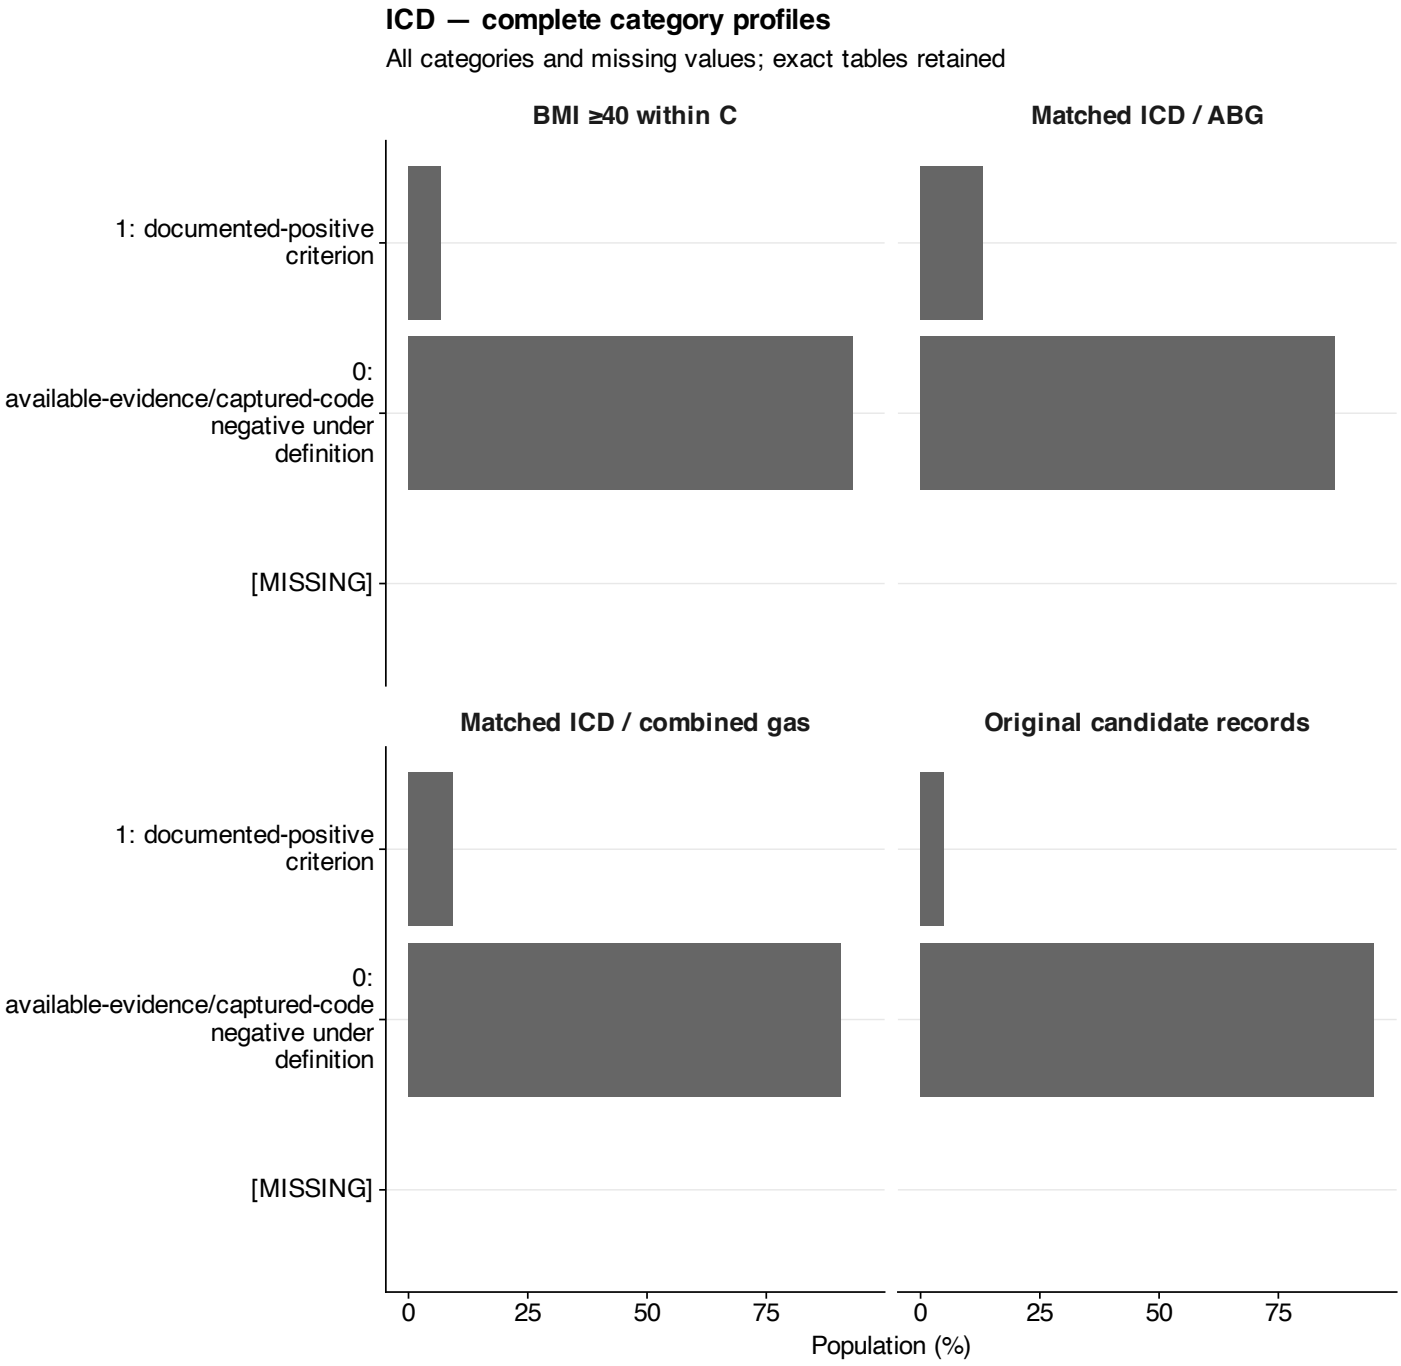

Figure 851: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete icd stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

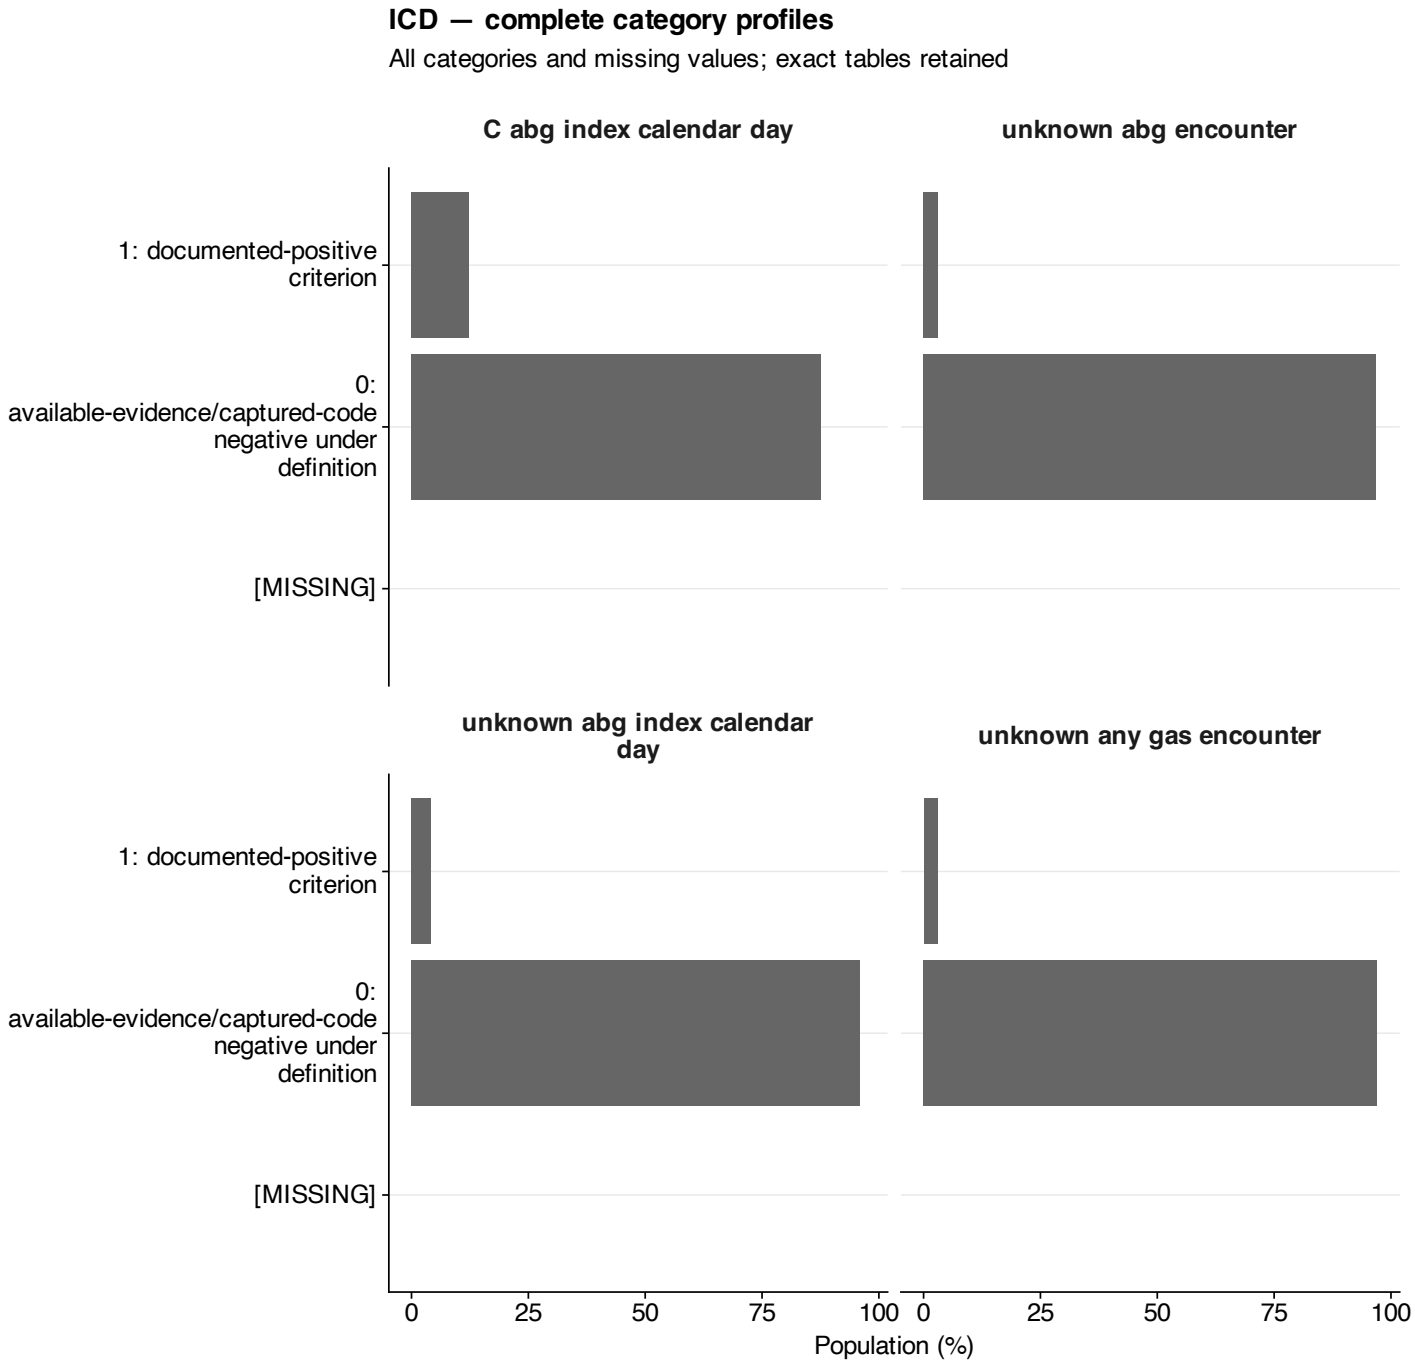

Figure 852: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete icd stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

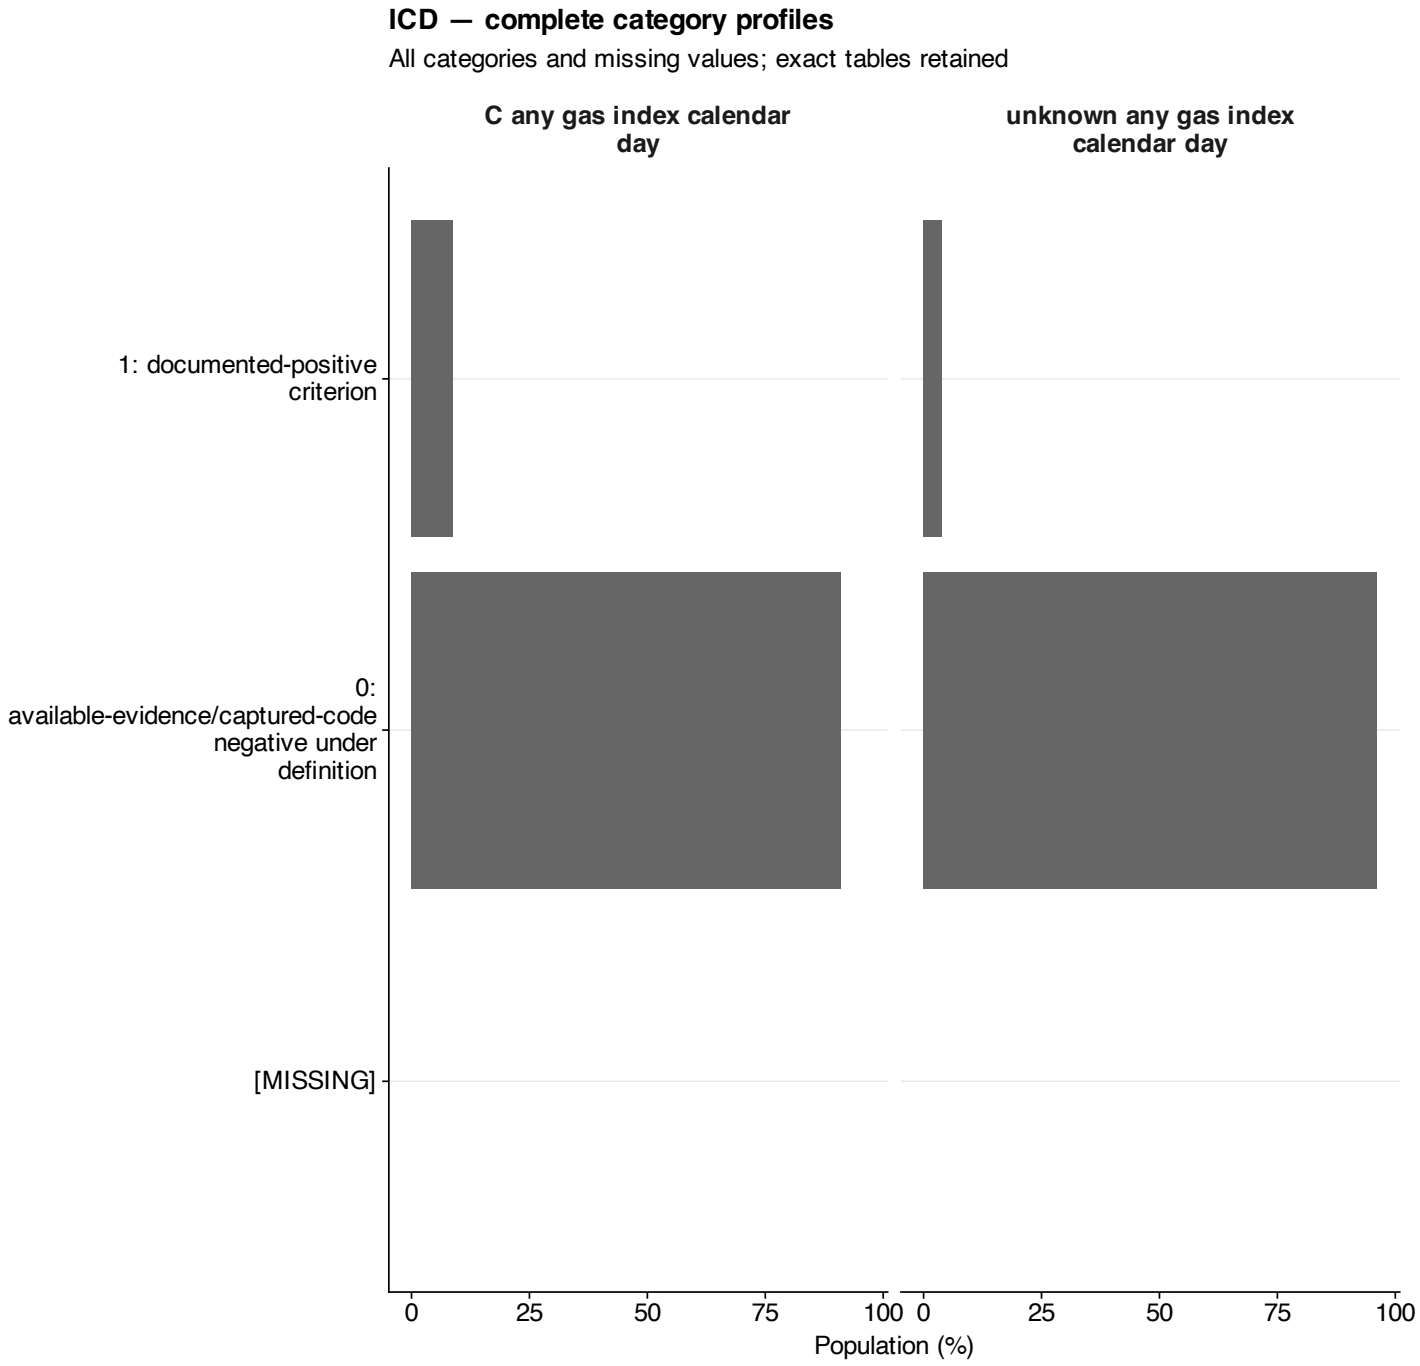

Figure 853: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete icd stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

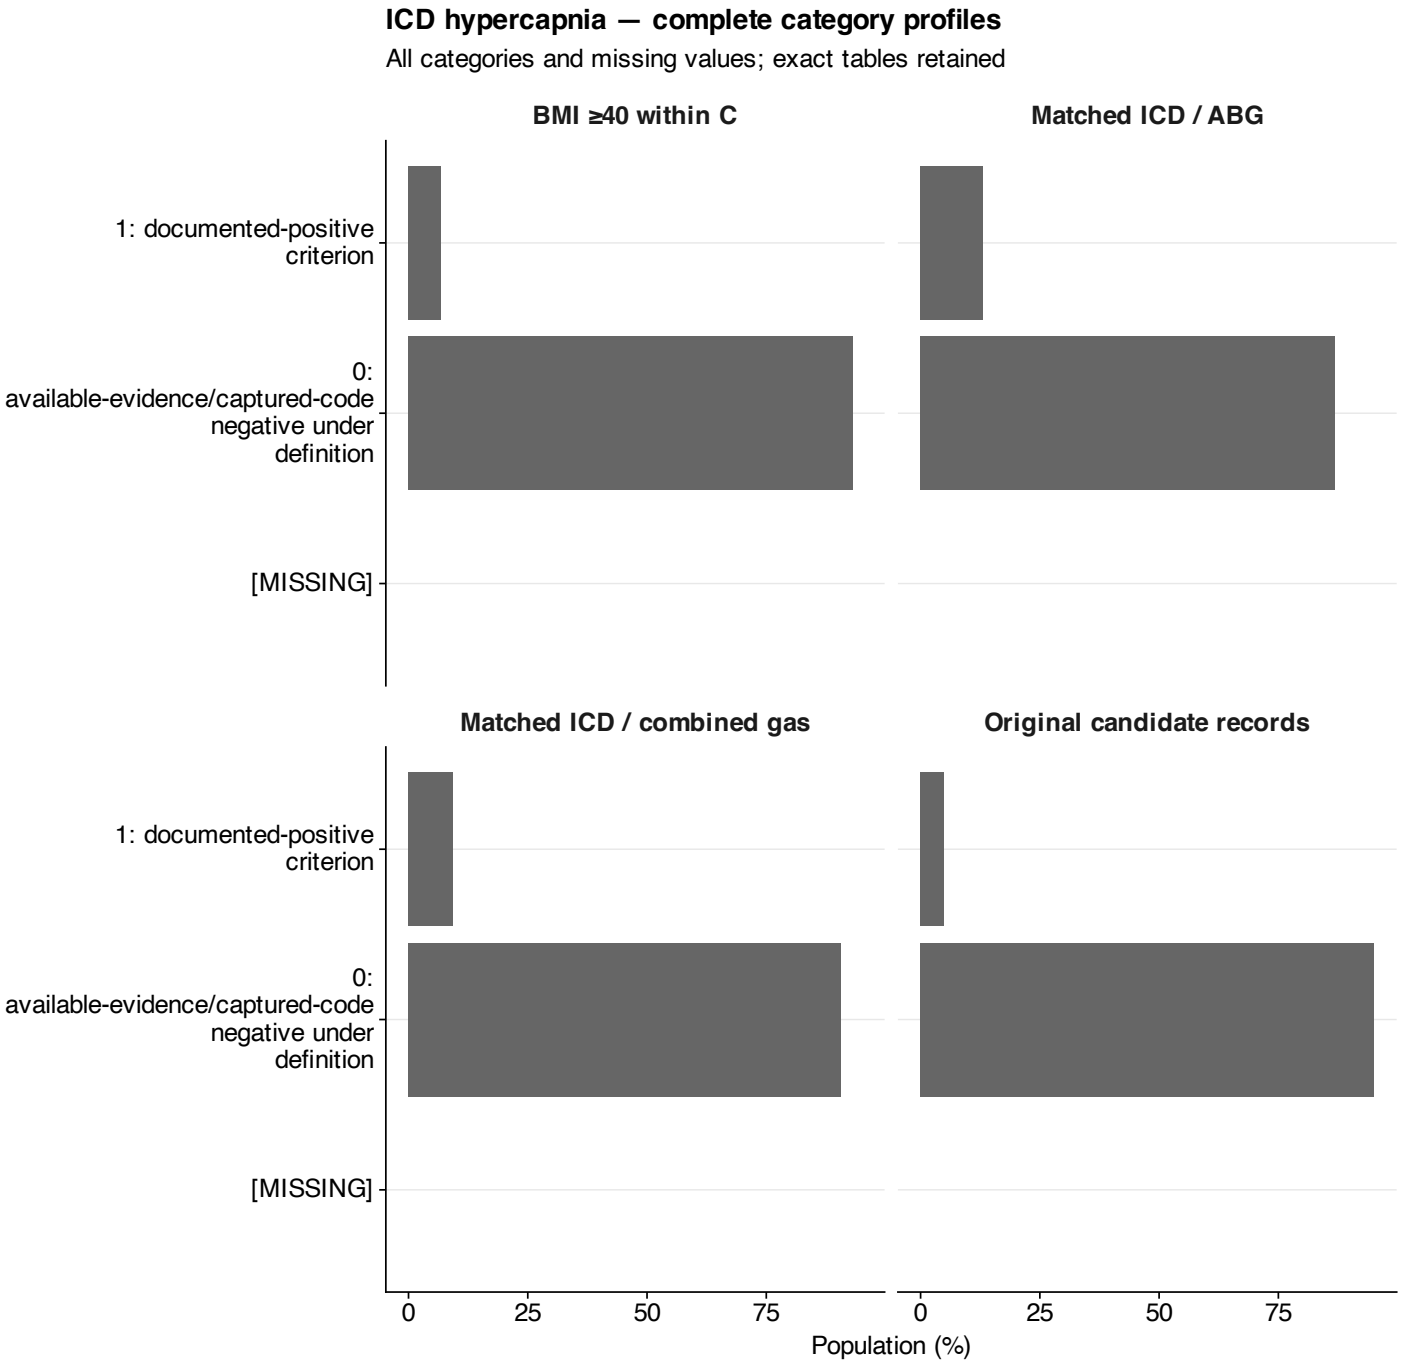

Figure 854: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete icd_hypercapnia stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

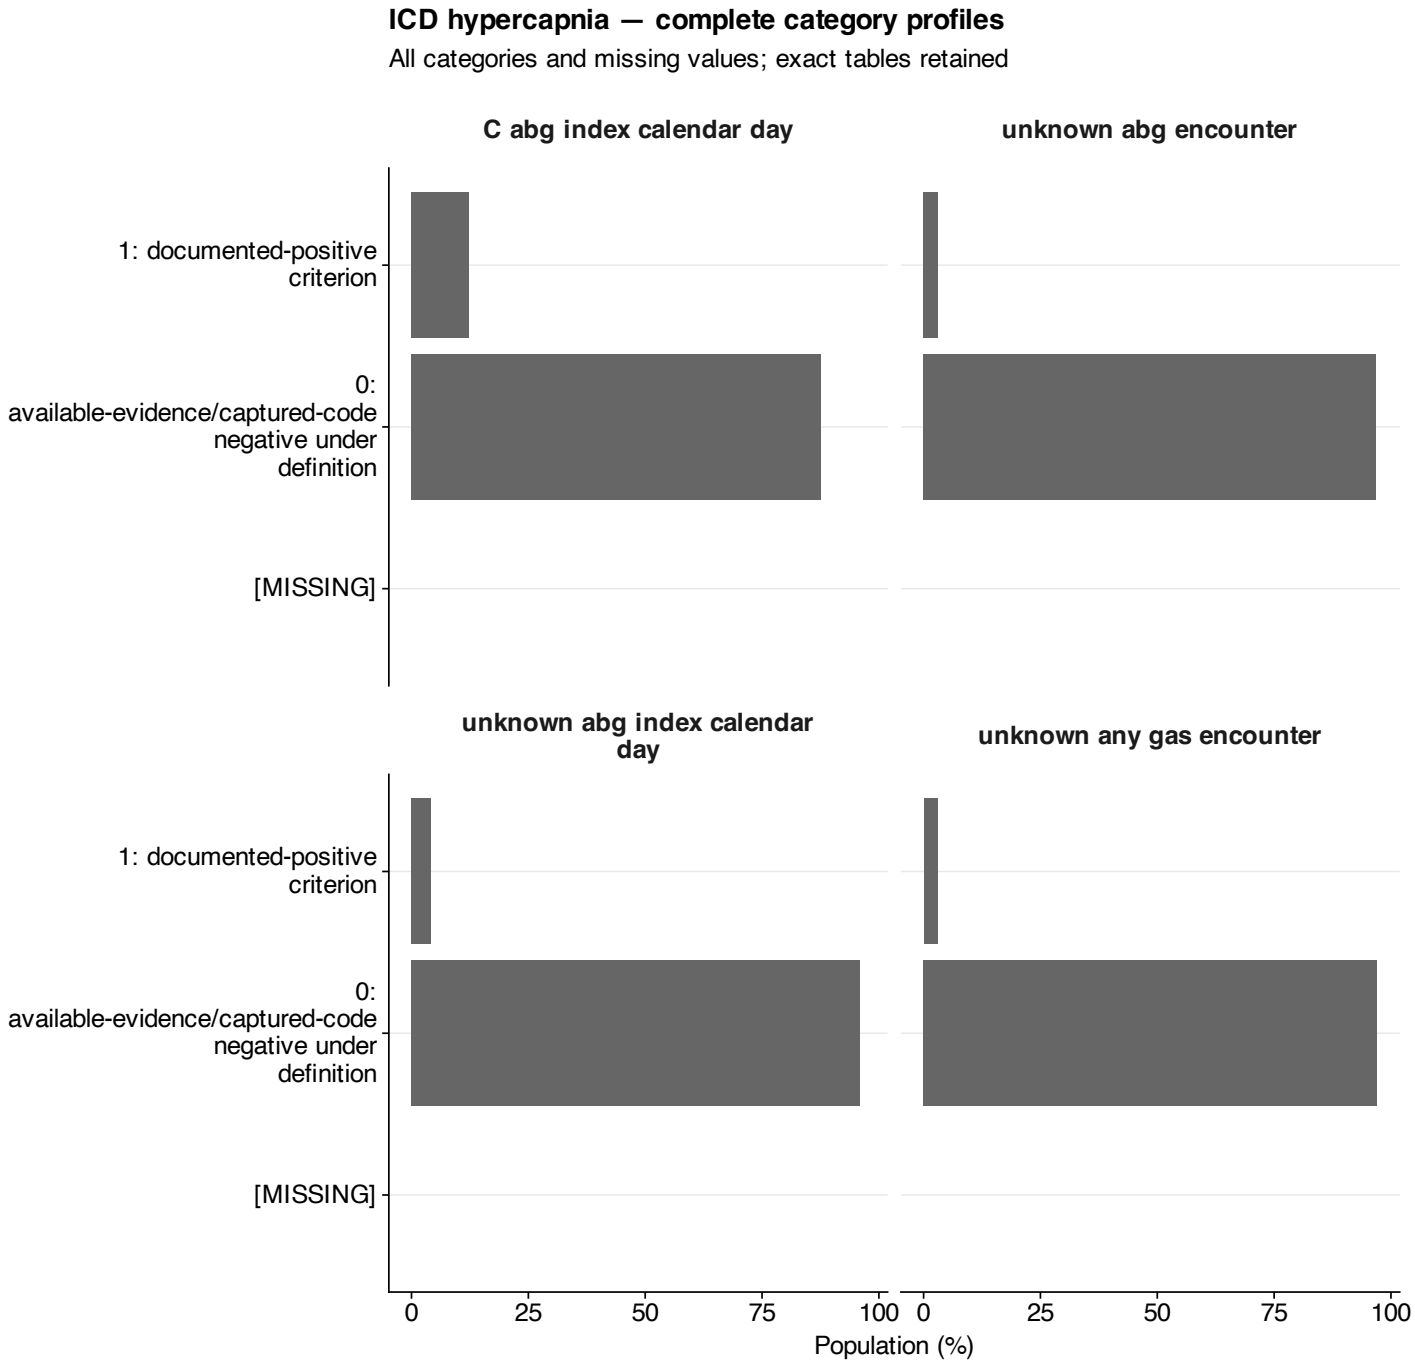

Figure 855: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete icd_hypercapnia stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

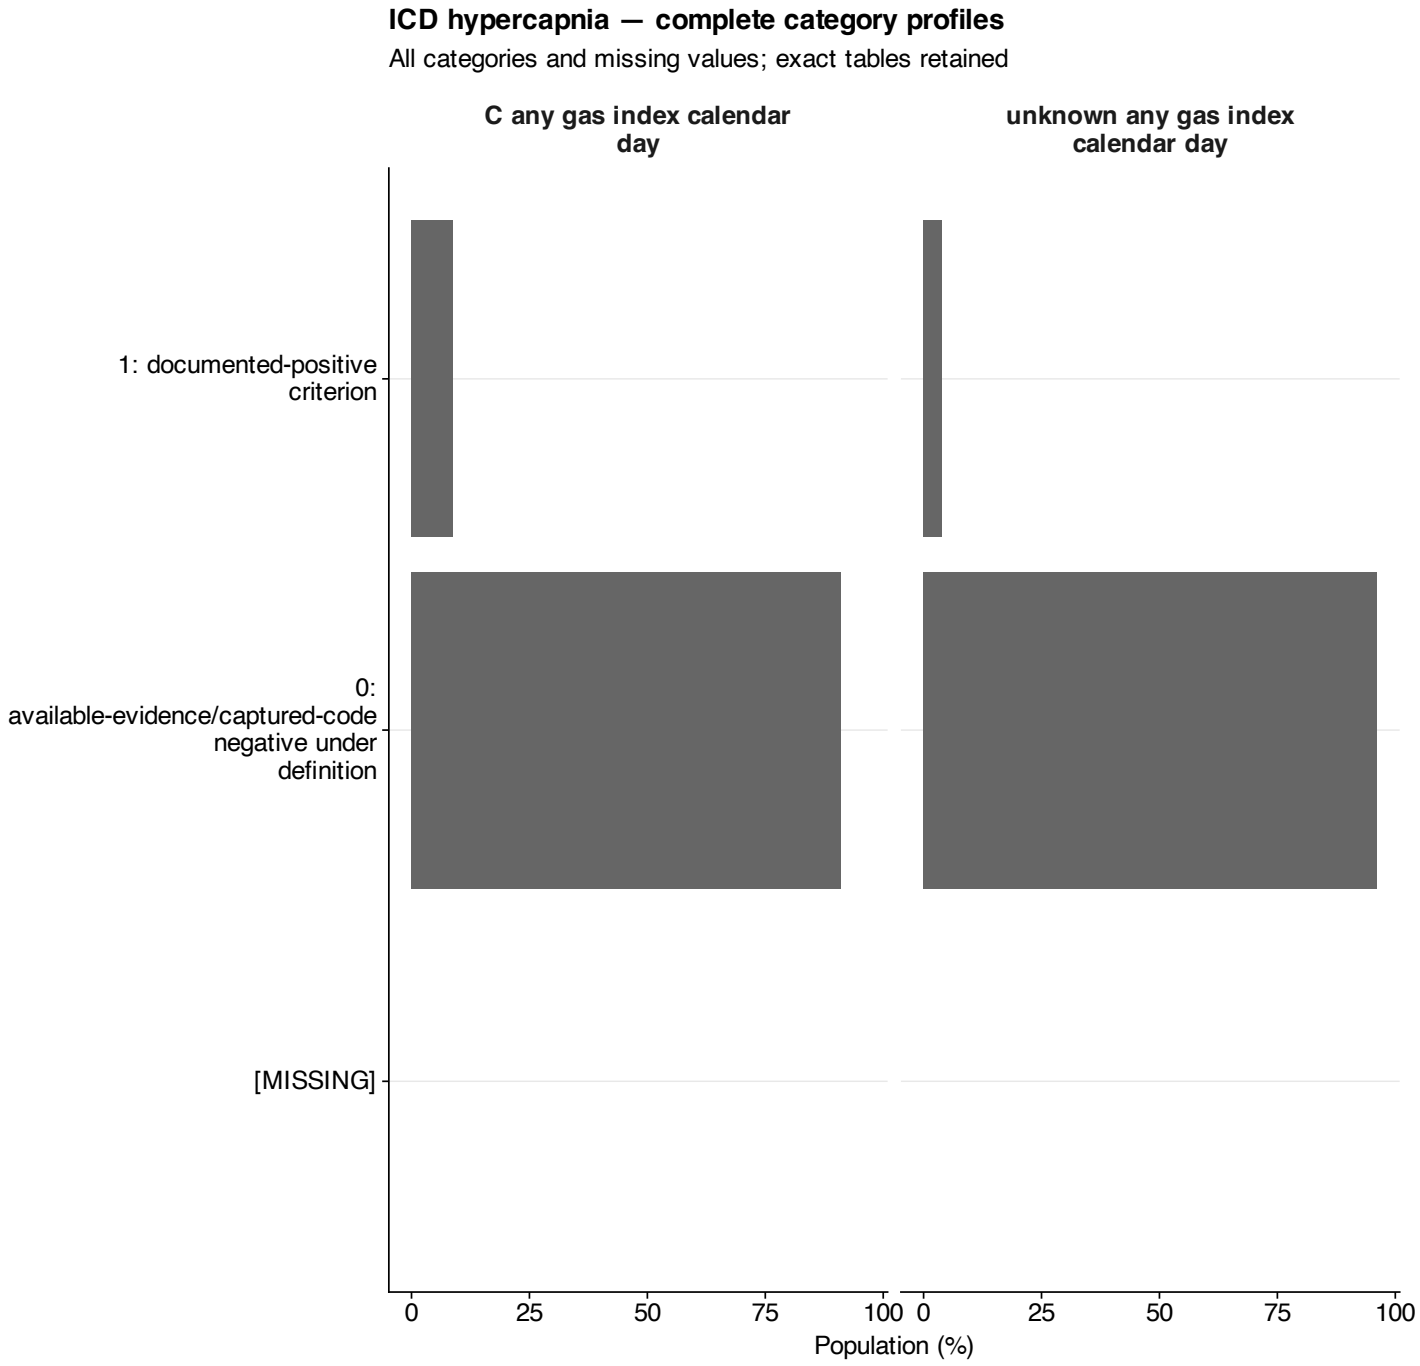

Figure 856: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete icd_hypercapnia stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

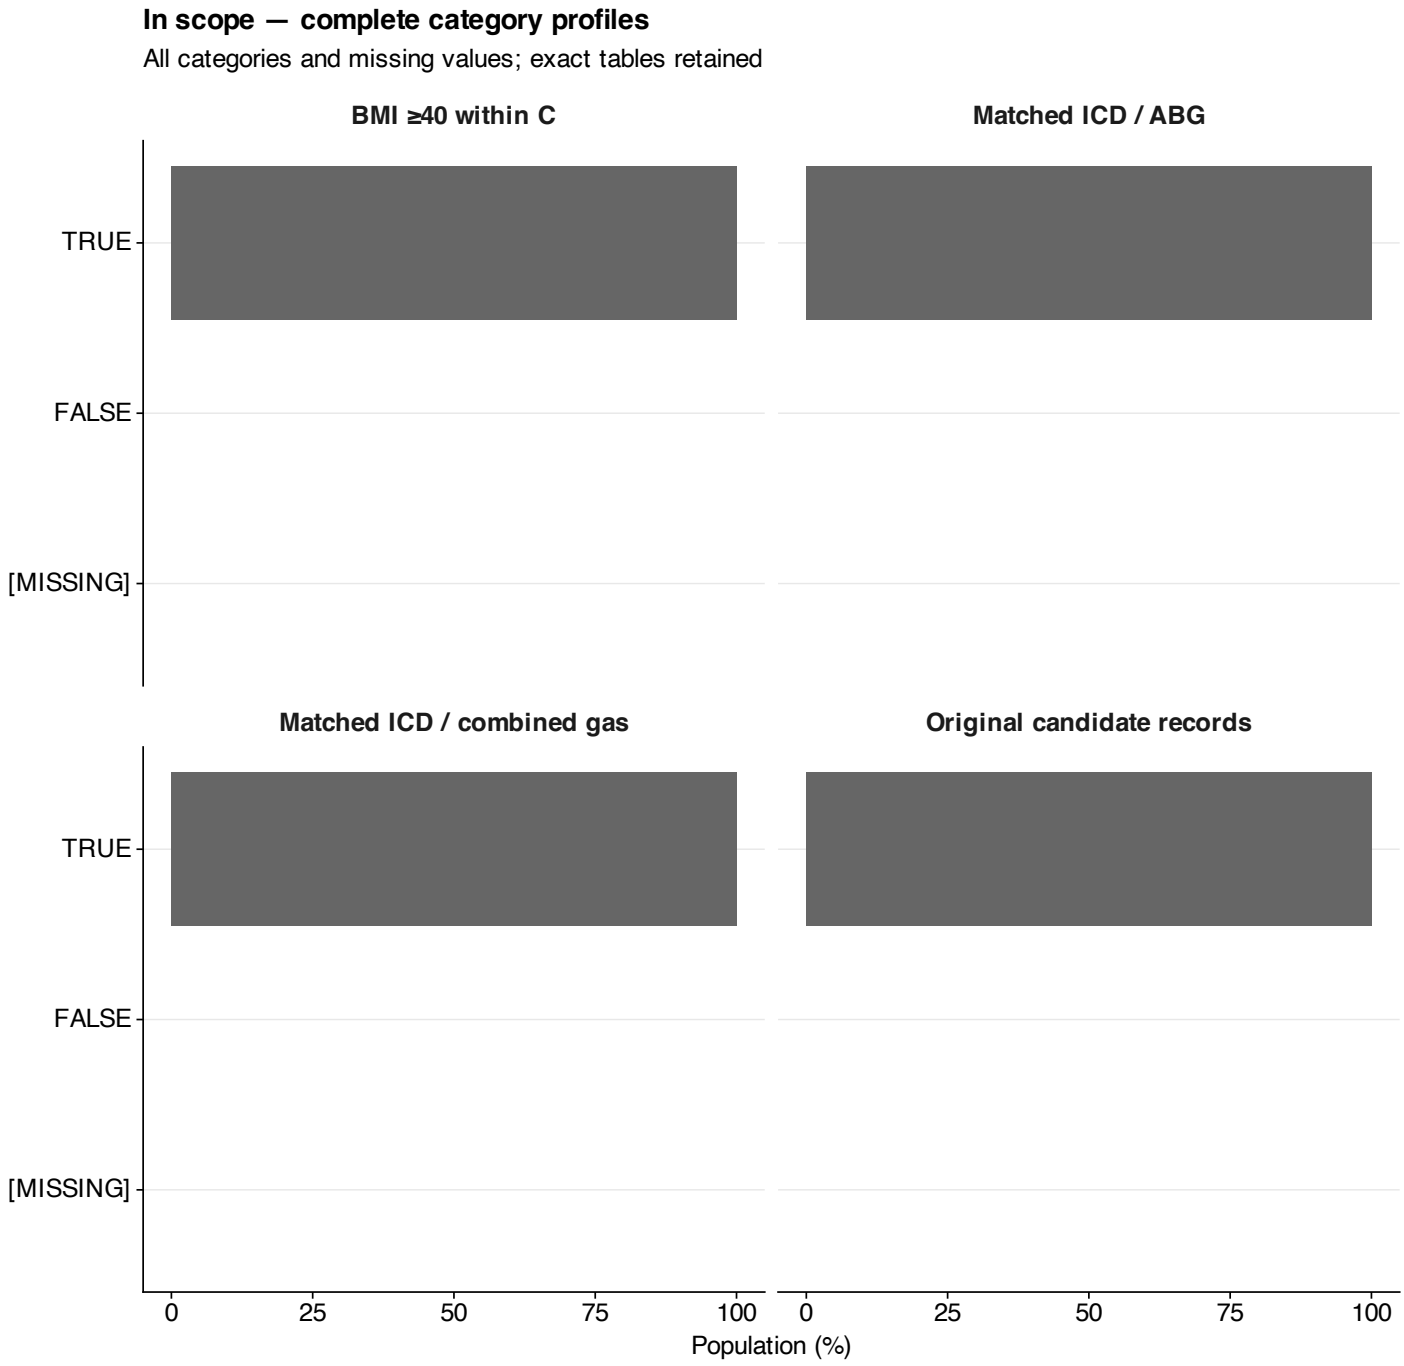

Figure 857: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete in_scope stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

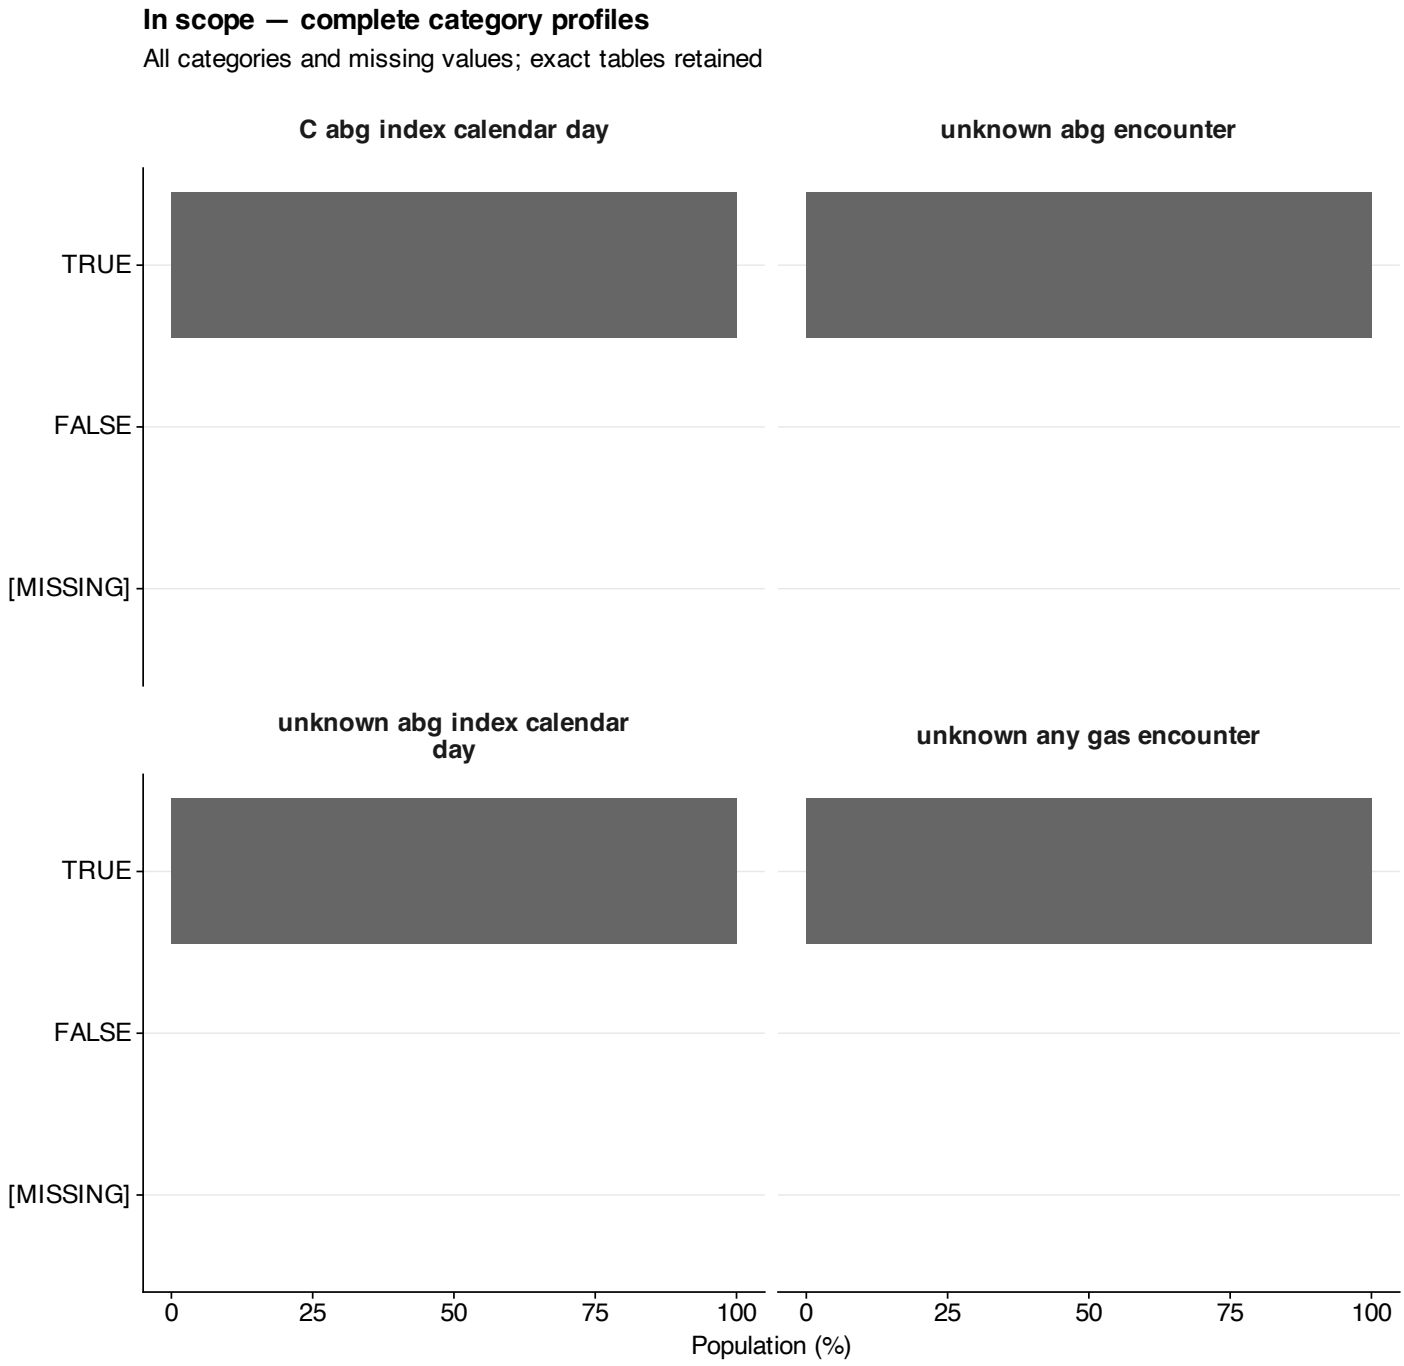

Figure 858: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete in_scope stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

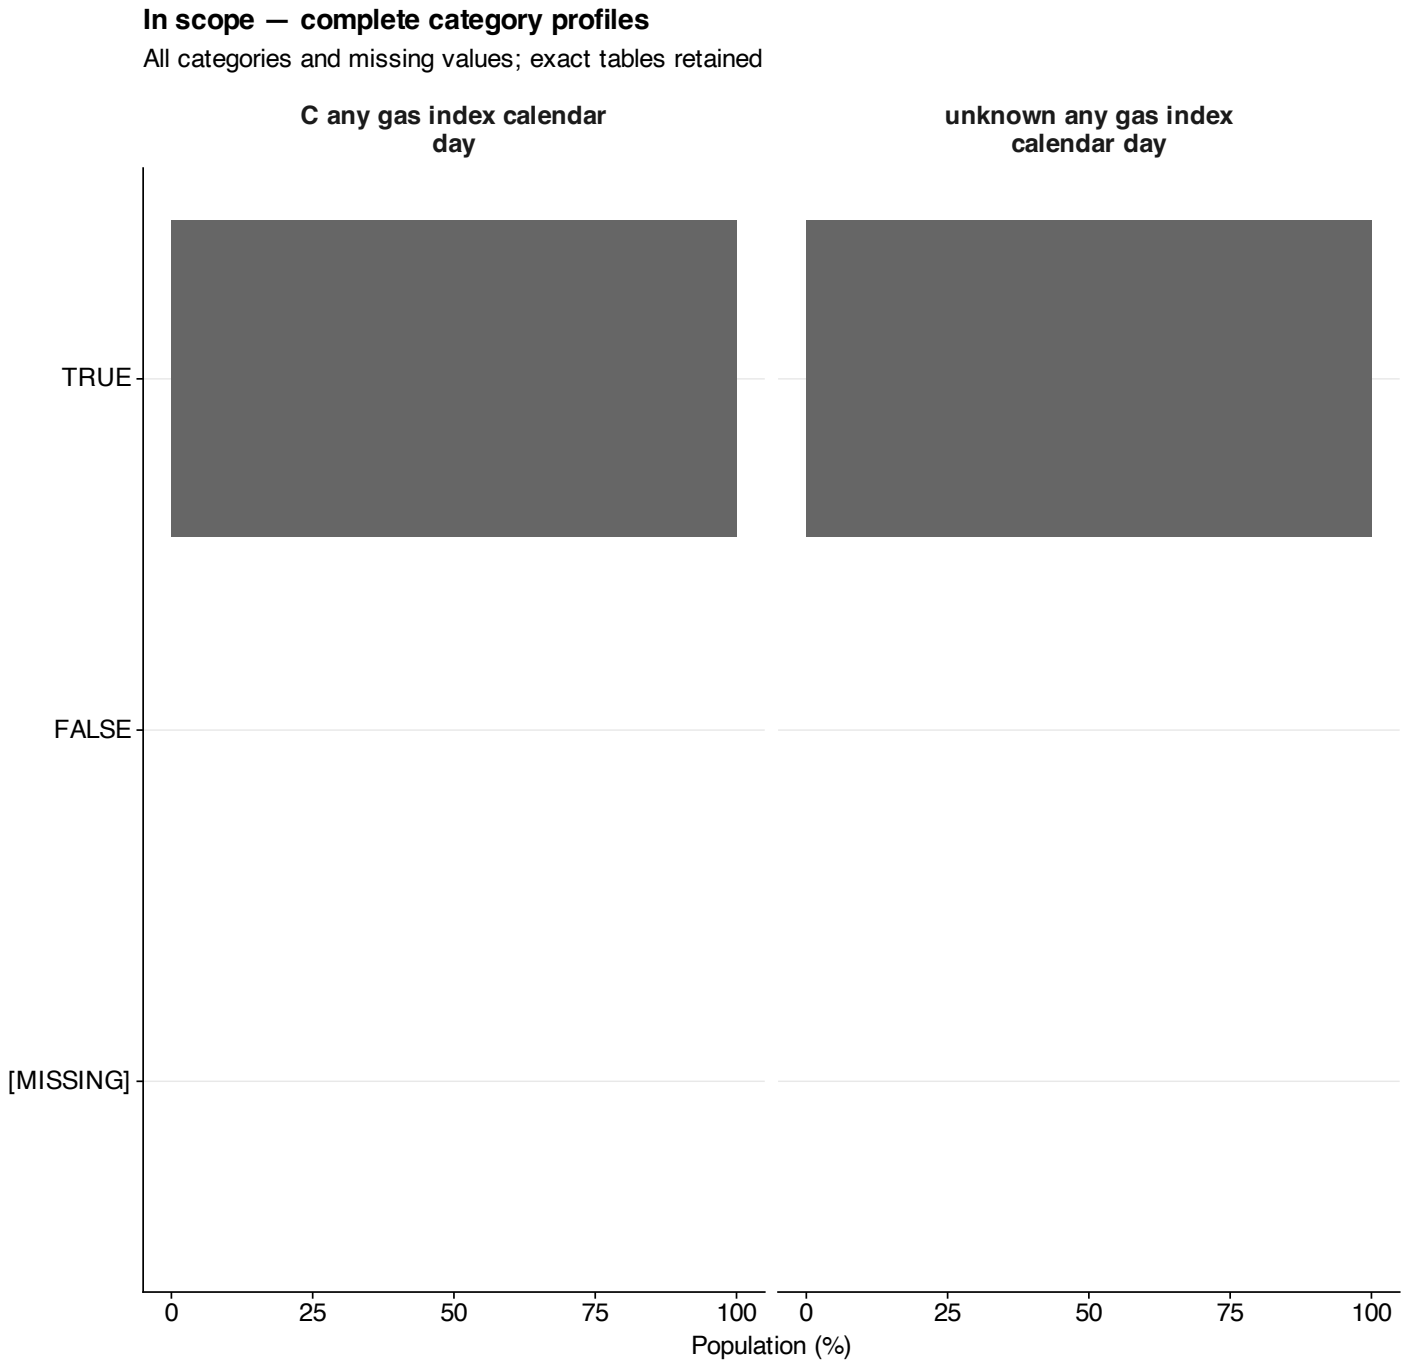

Figure 859: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete in_scope stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

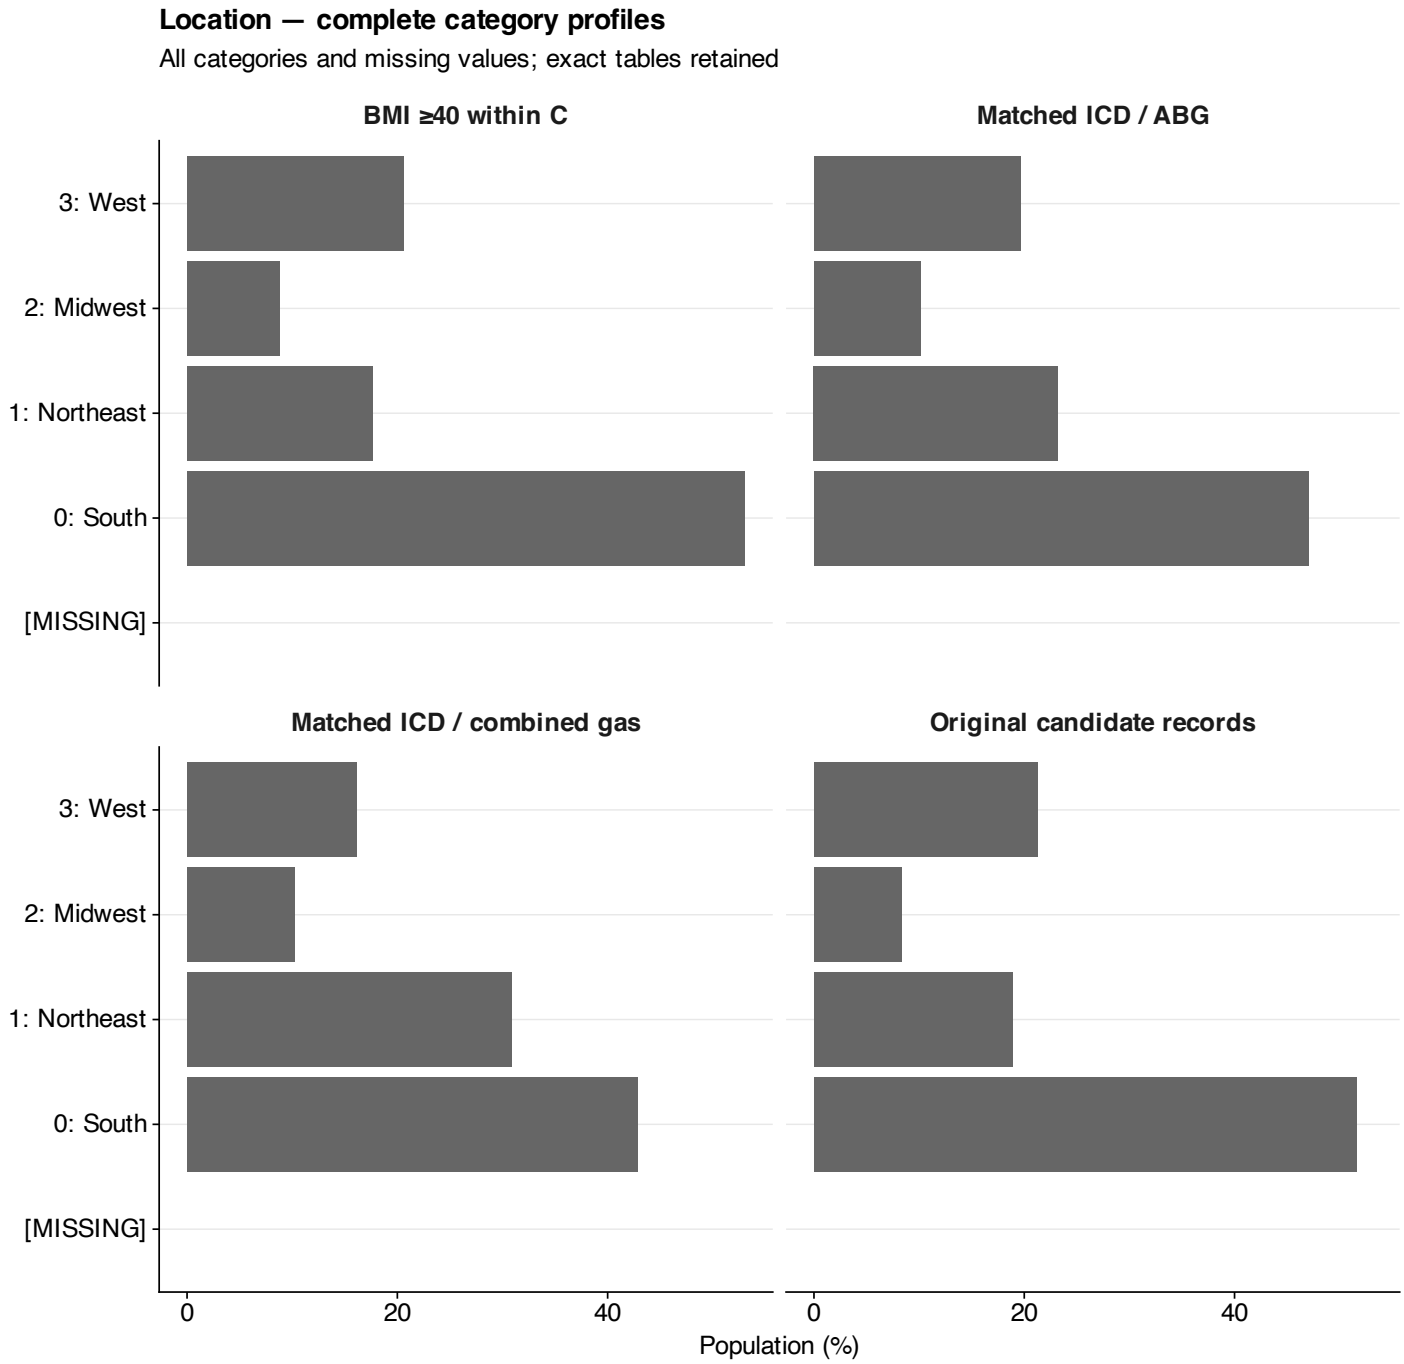

Figure 860: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete location stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

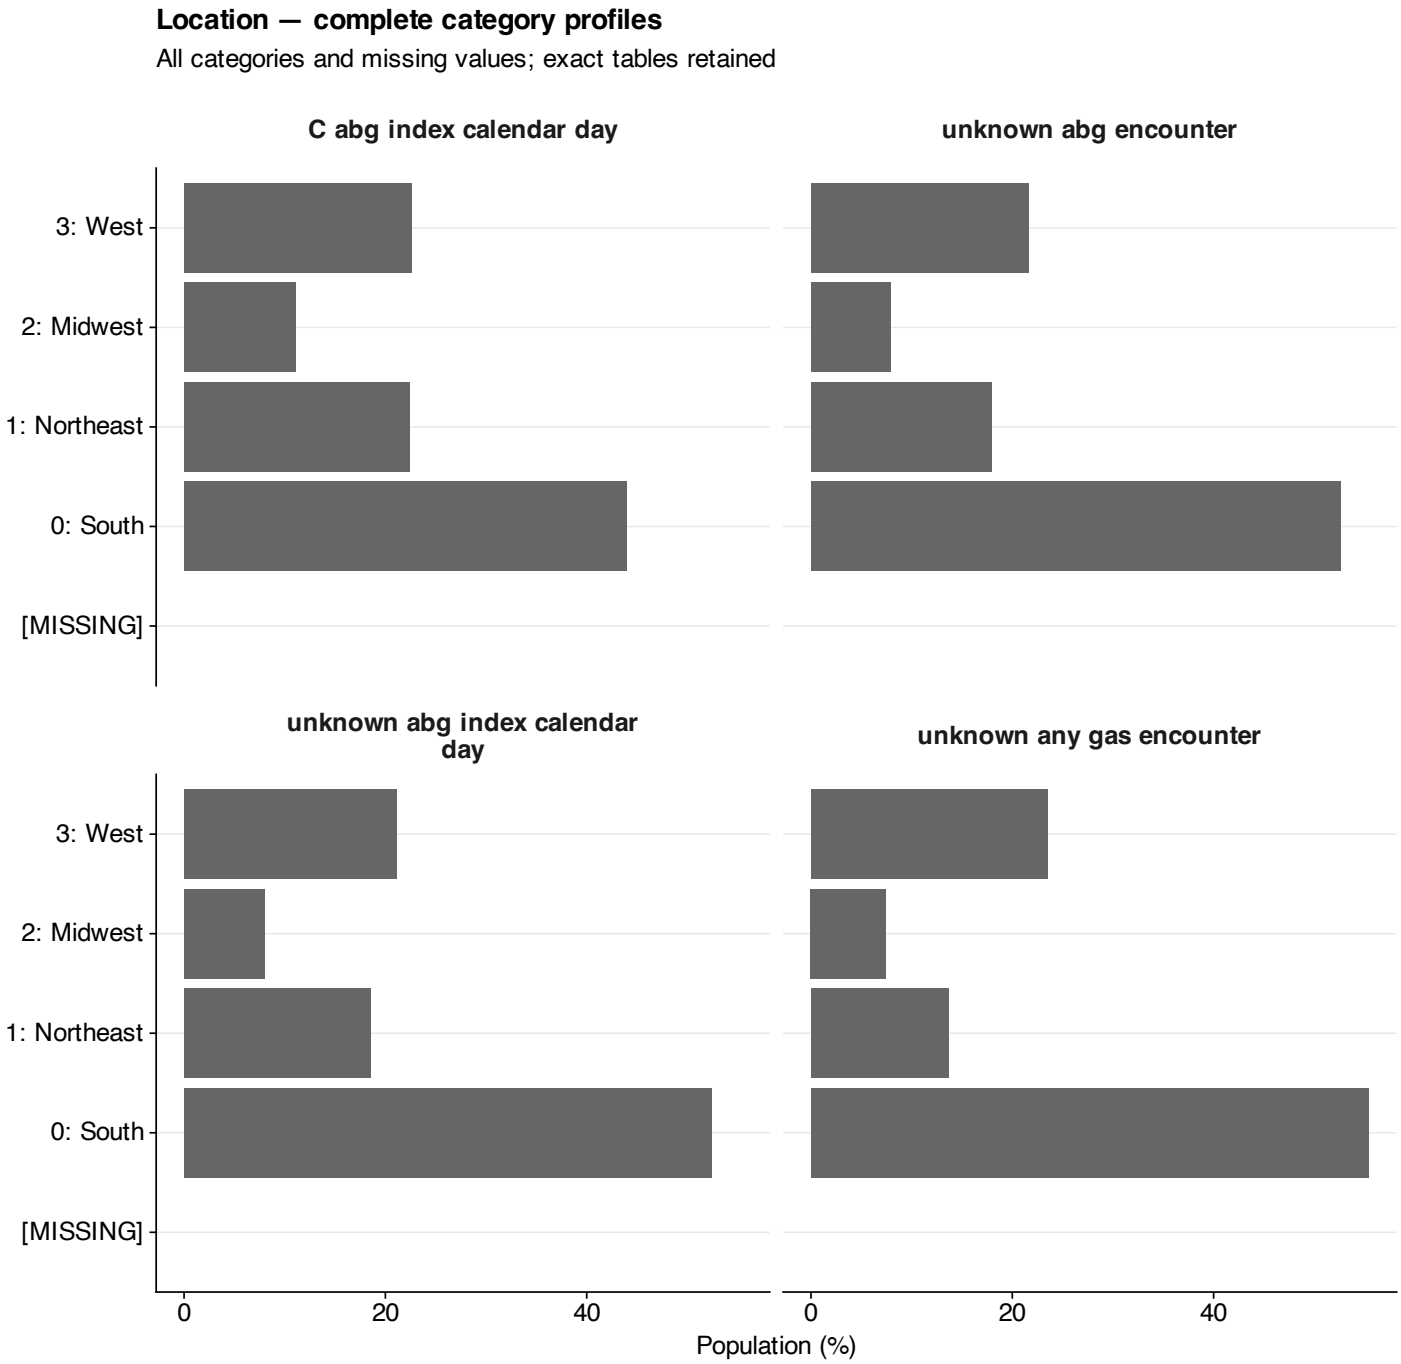

Figure 861: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete location stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

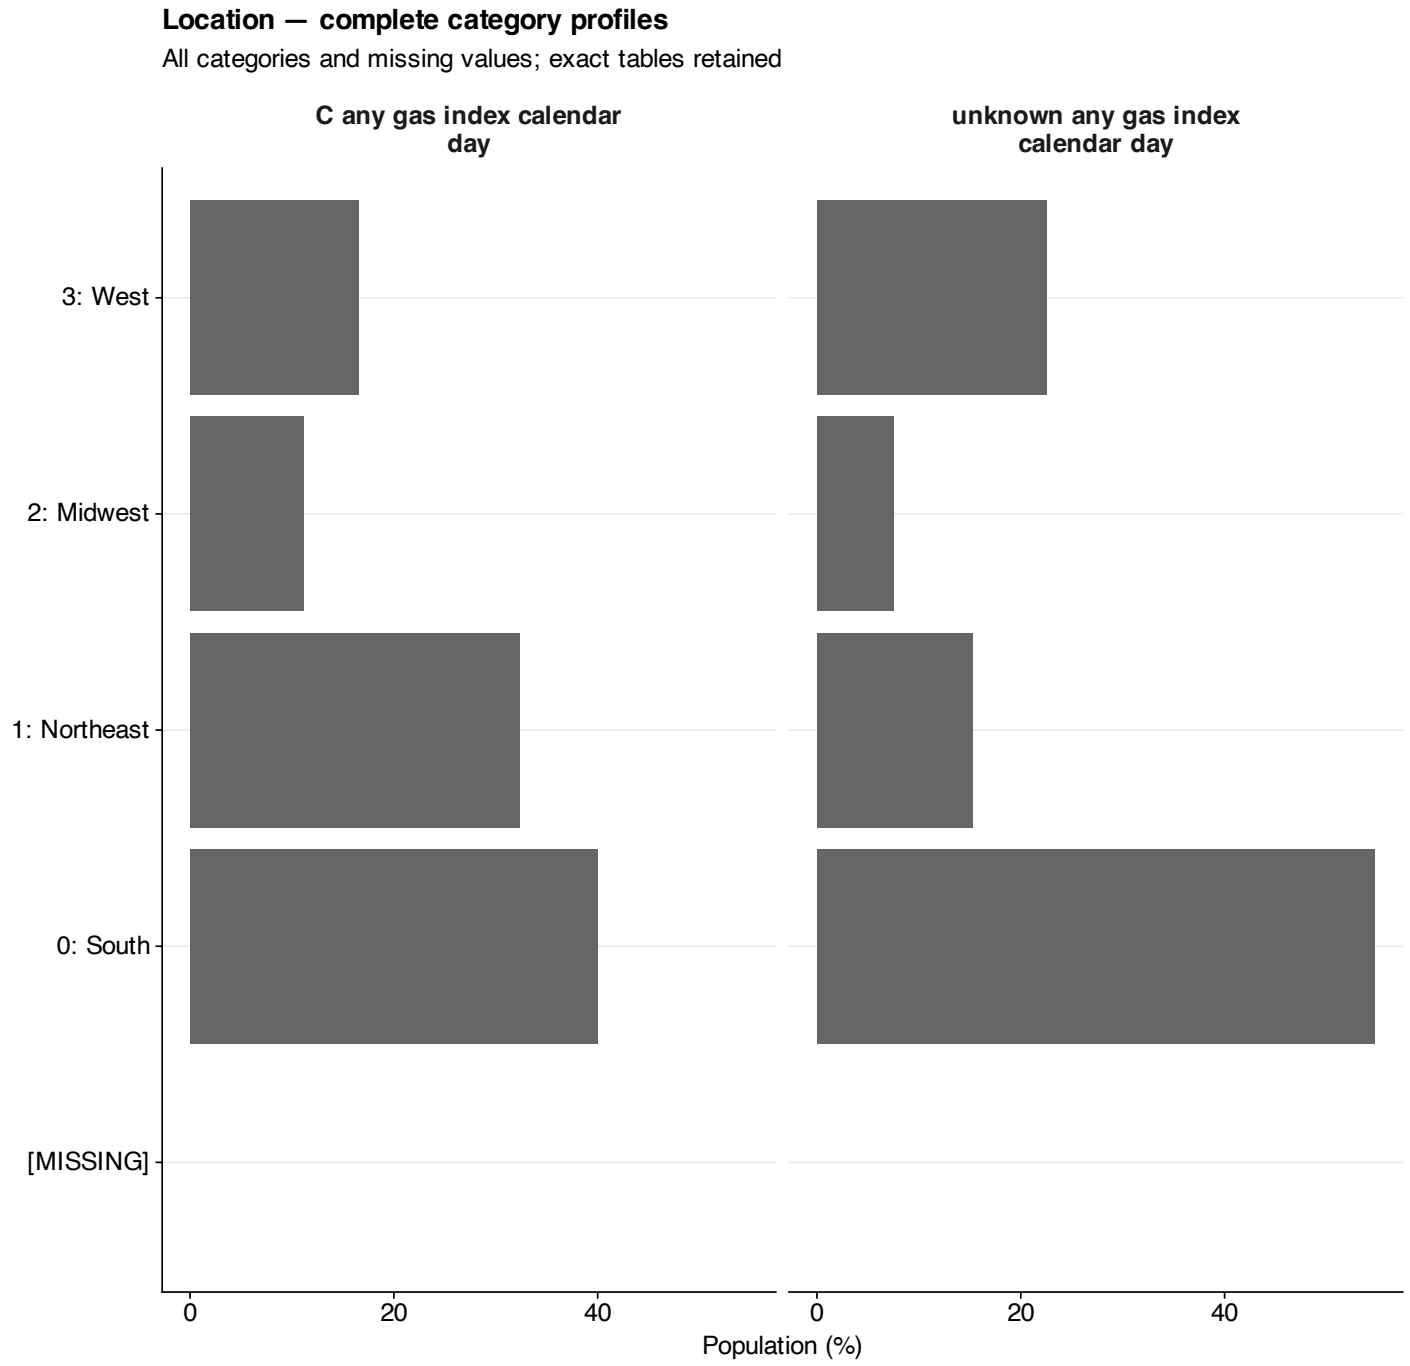

Figure 862: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete location stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

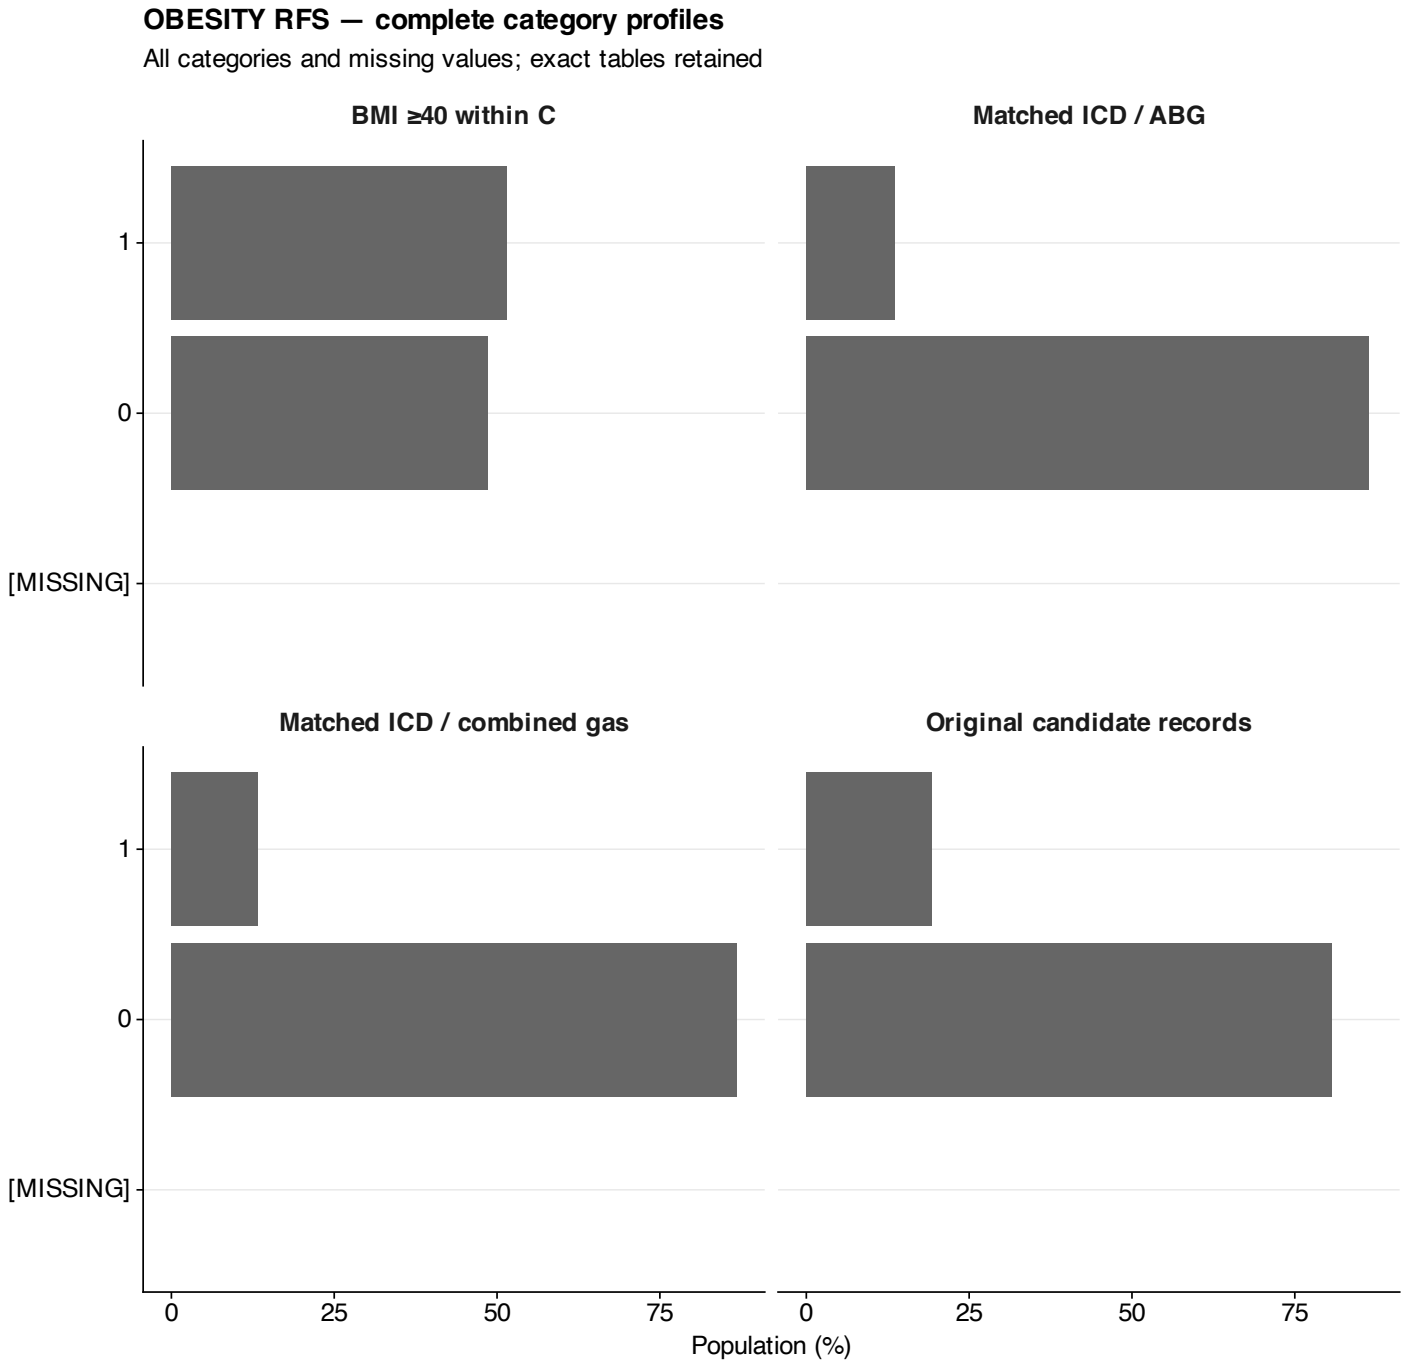

Figure 863: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete OBESITY_rfs stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

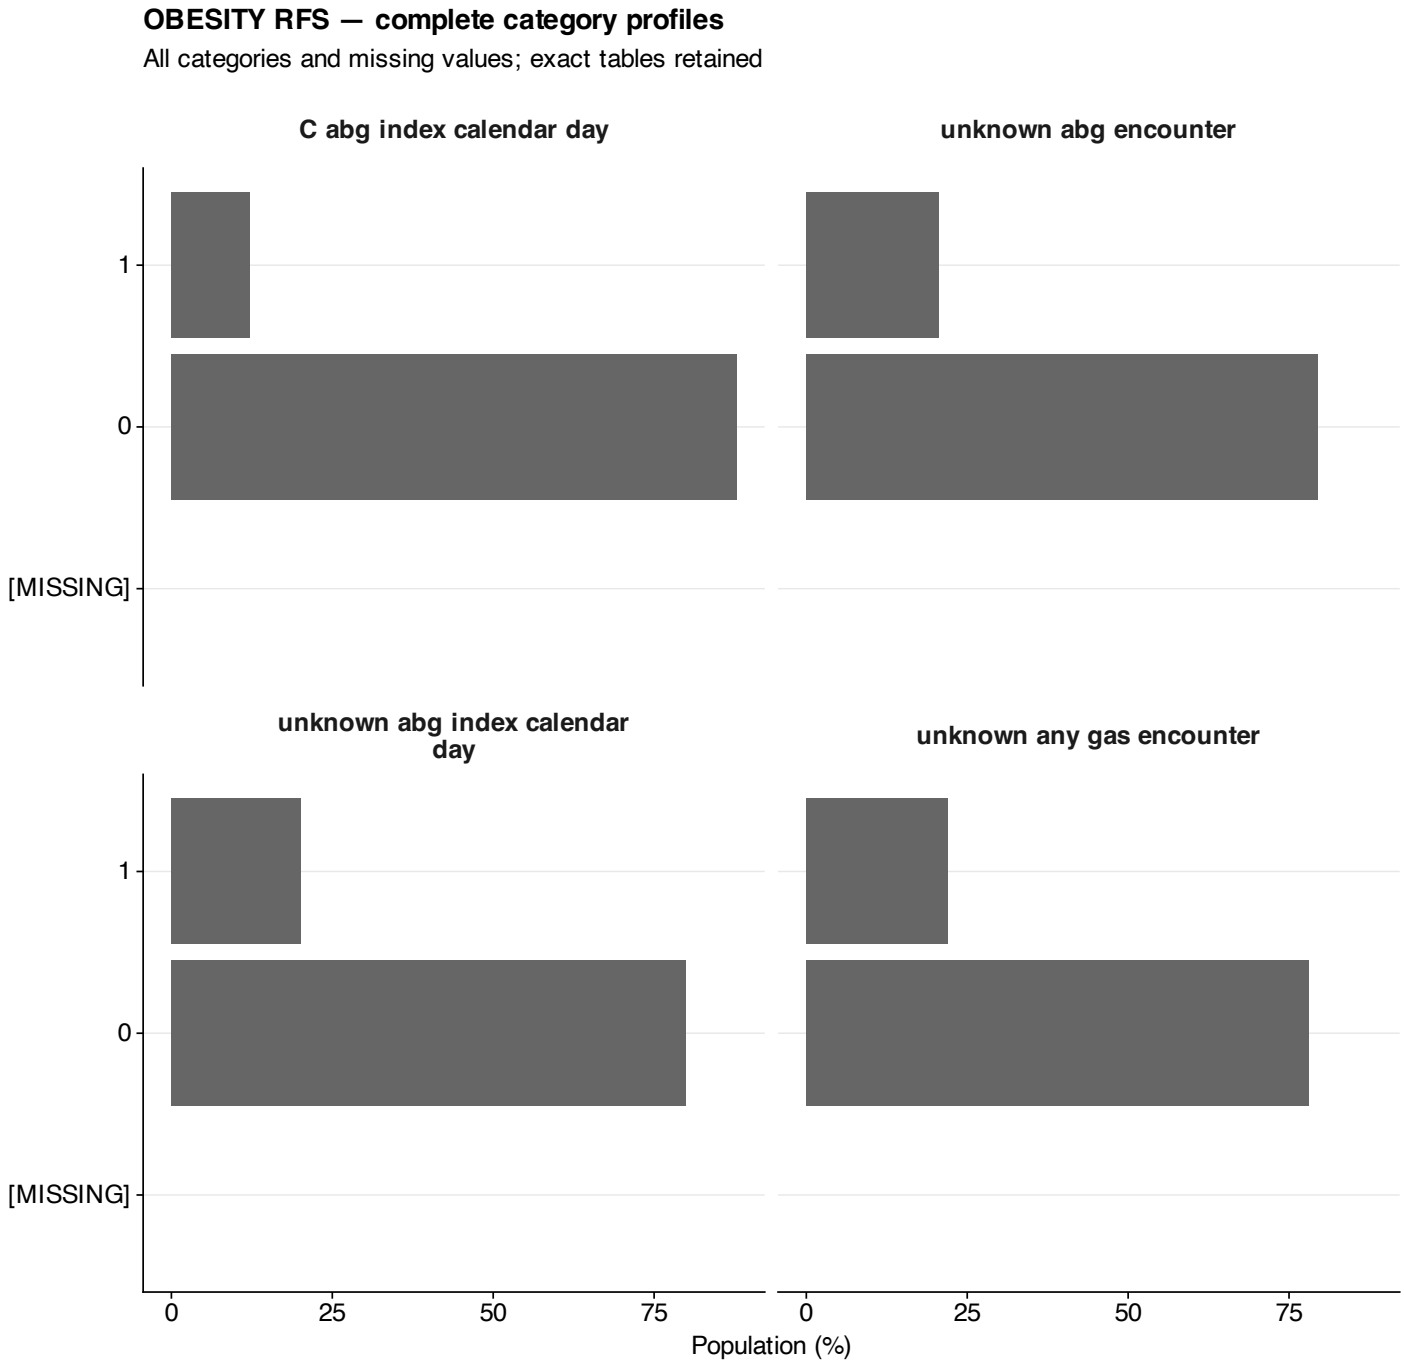

Figure 864: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete OBESITY_rfs stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

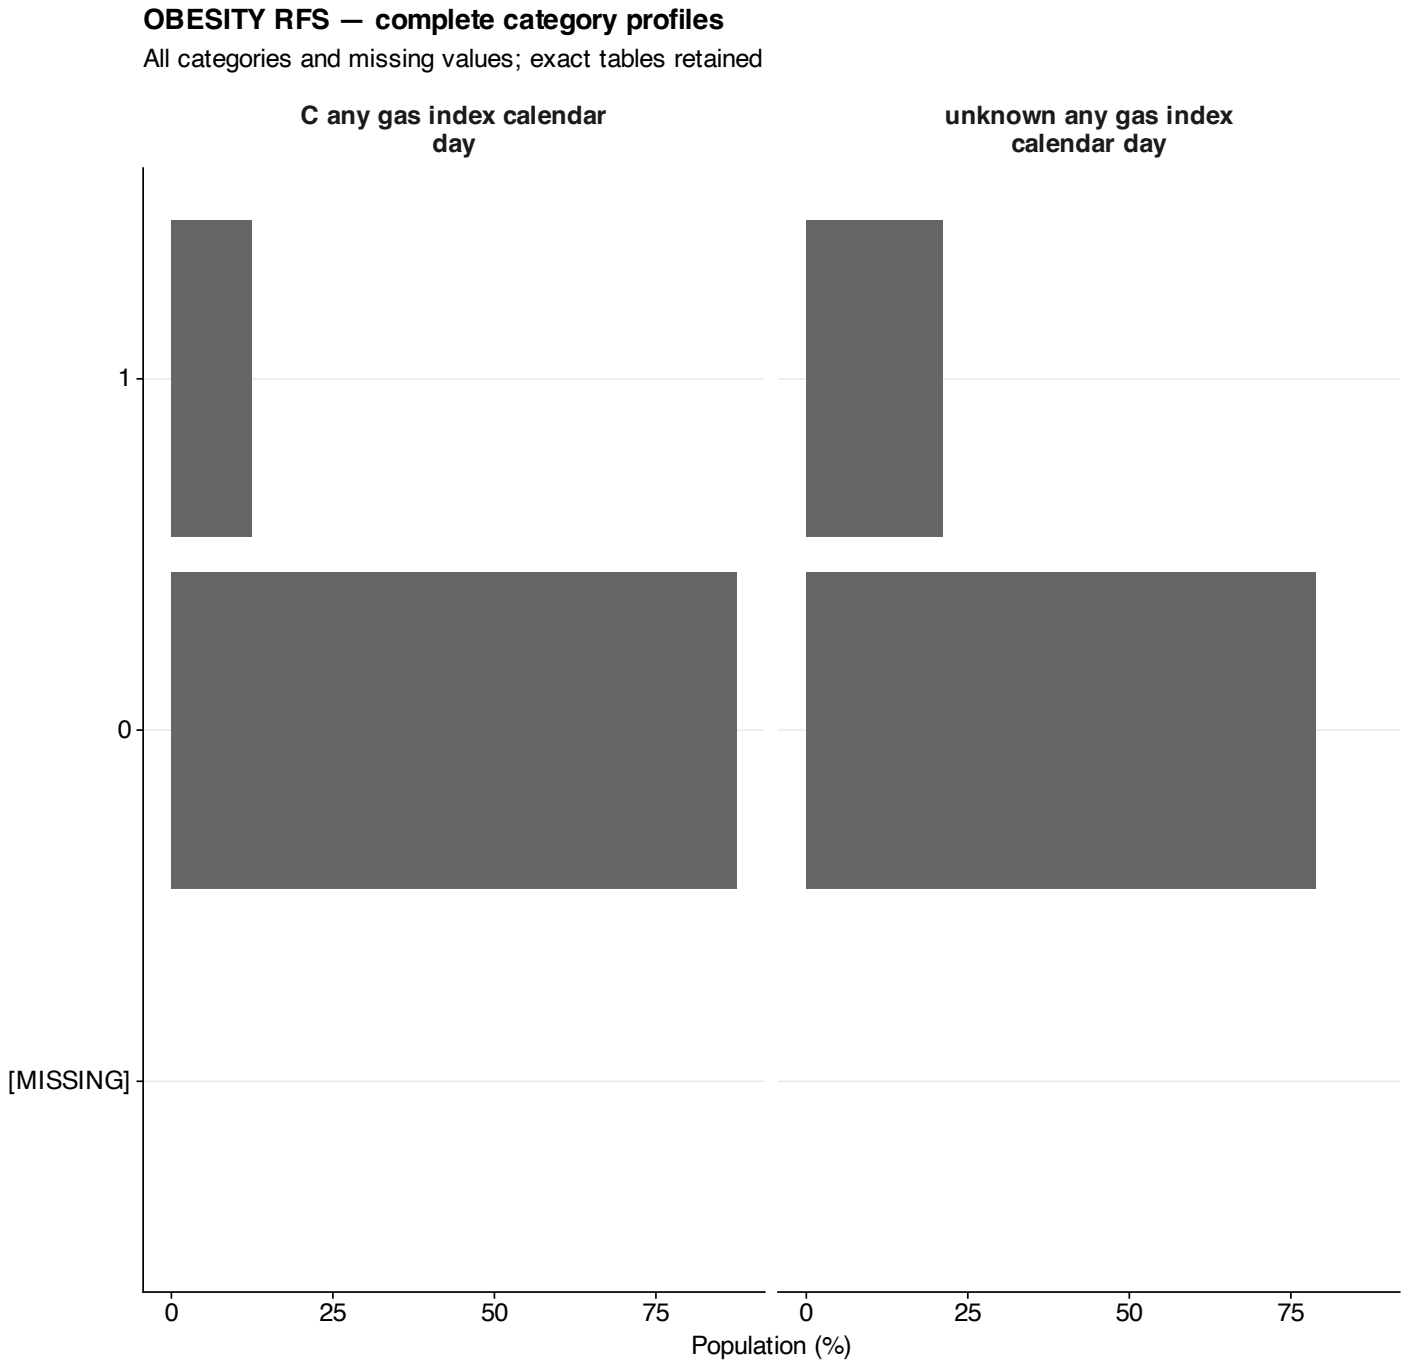

Figure 865: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete OBESITY_rfs stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

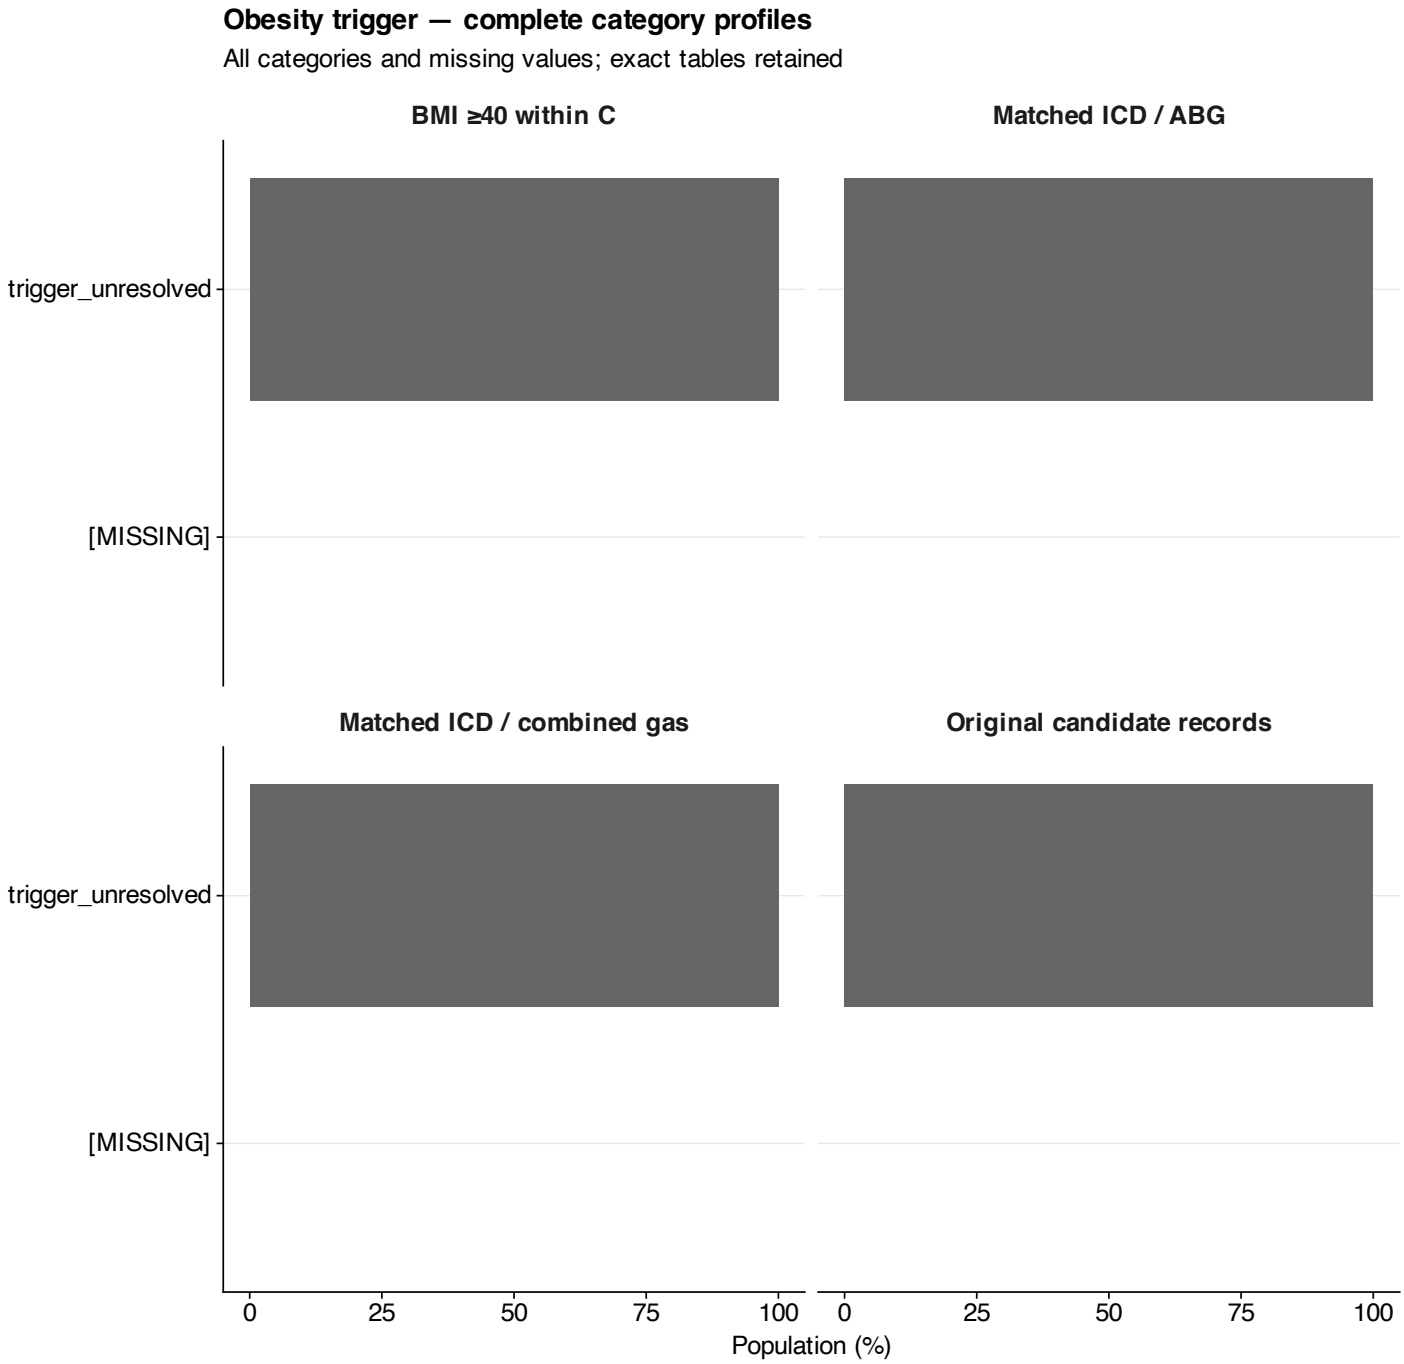

Figure 866: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete obesity_trigger stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

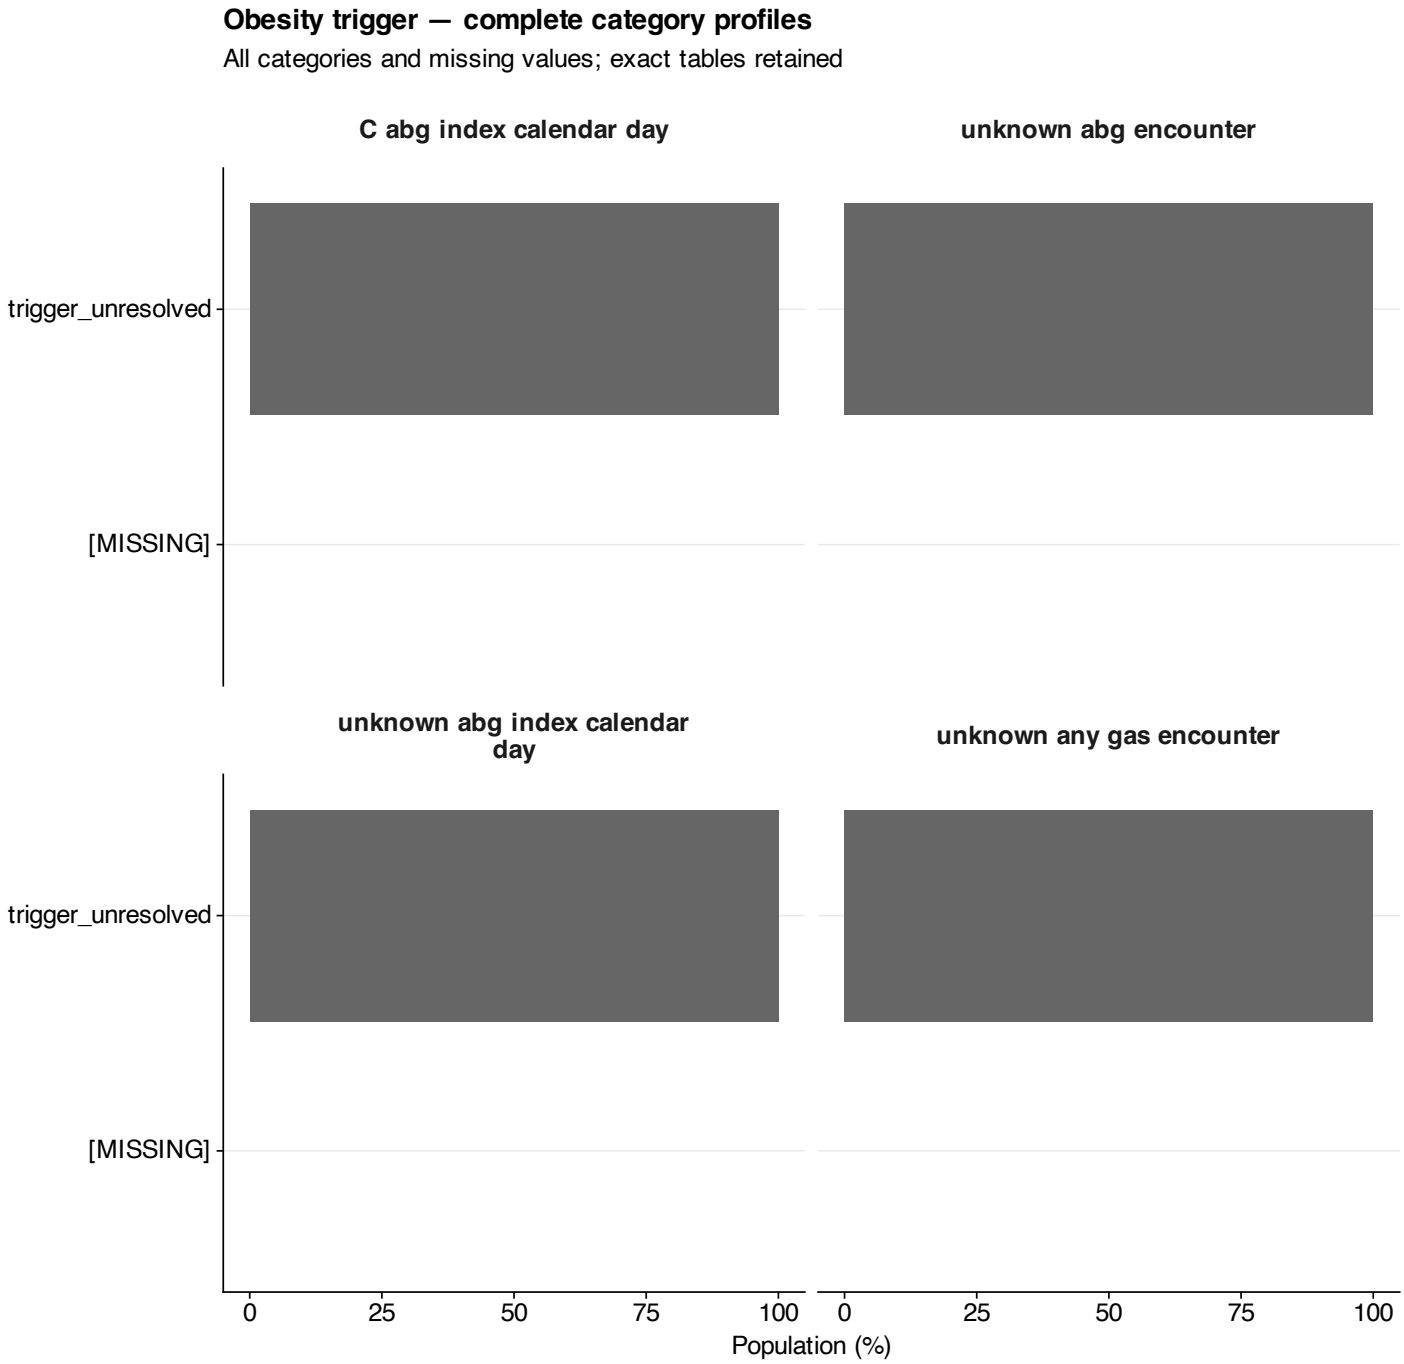

Figure 867: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete obesity_trigger stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

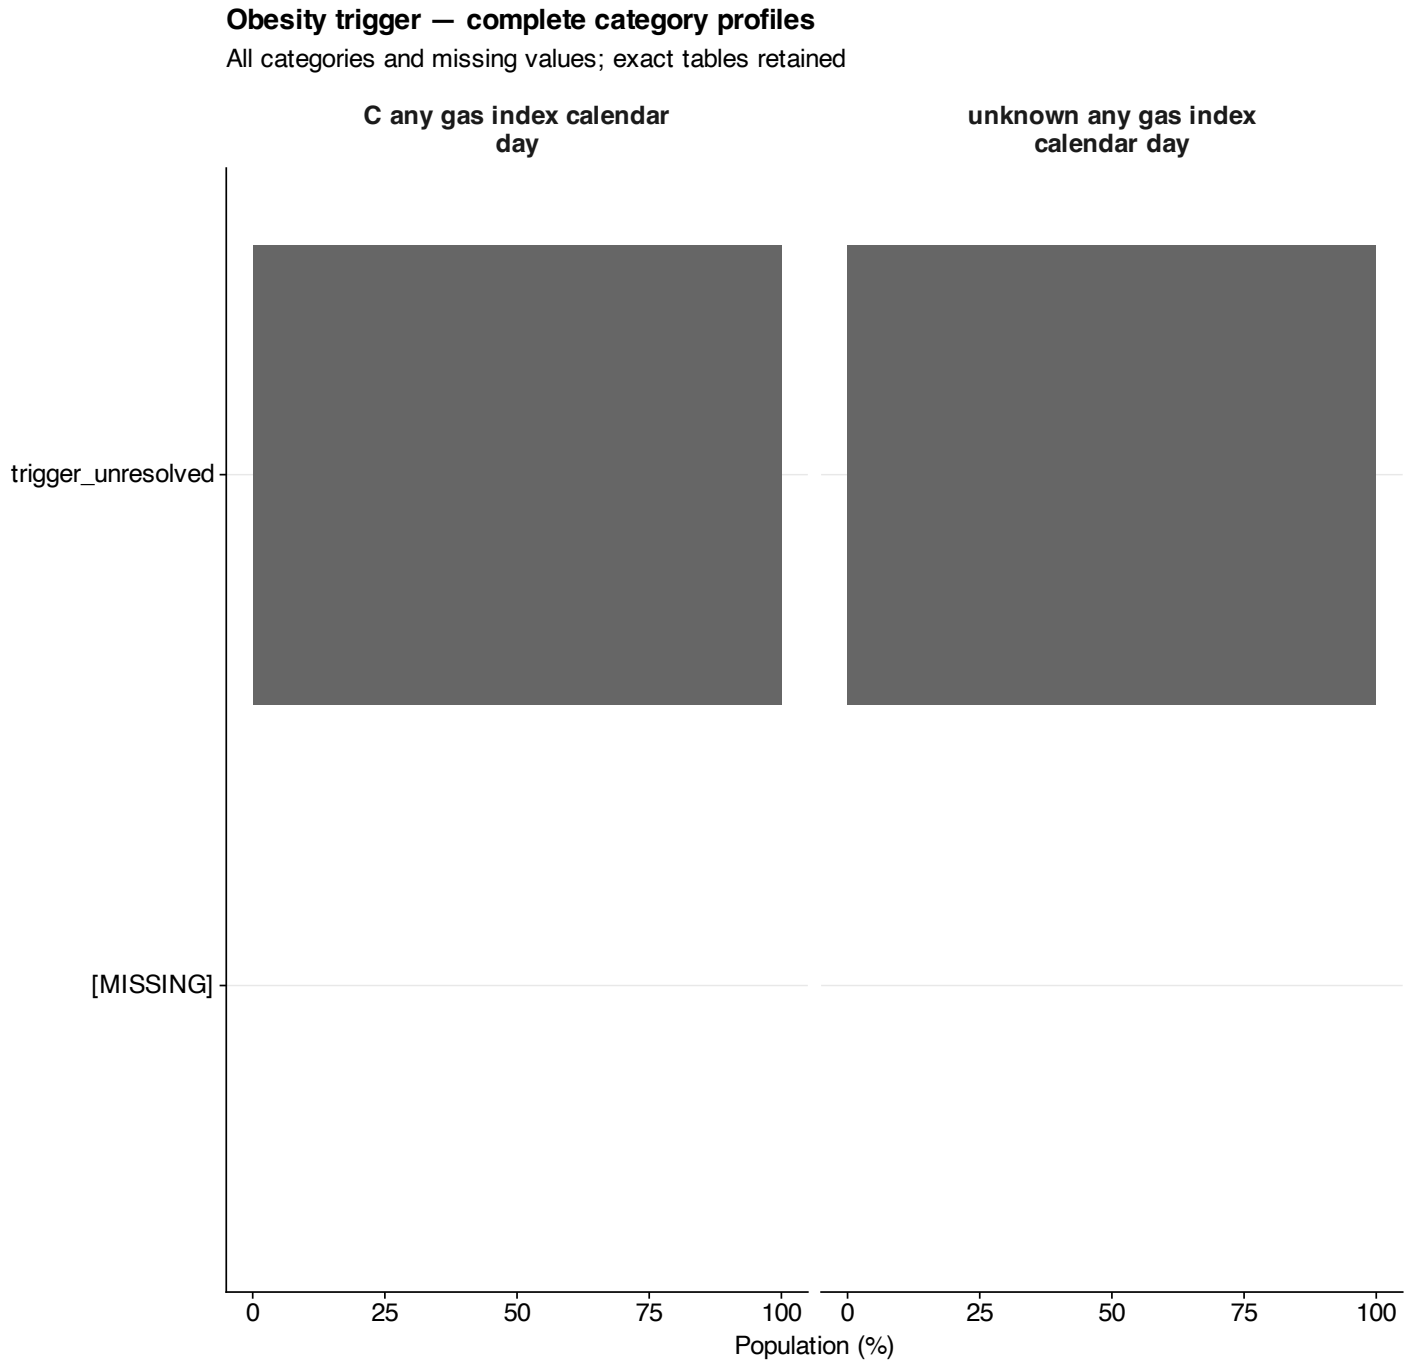

Figure 868: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete obesity_trigger stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

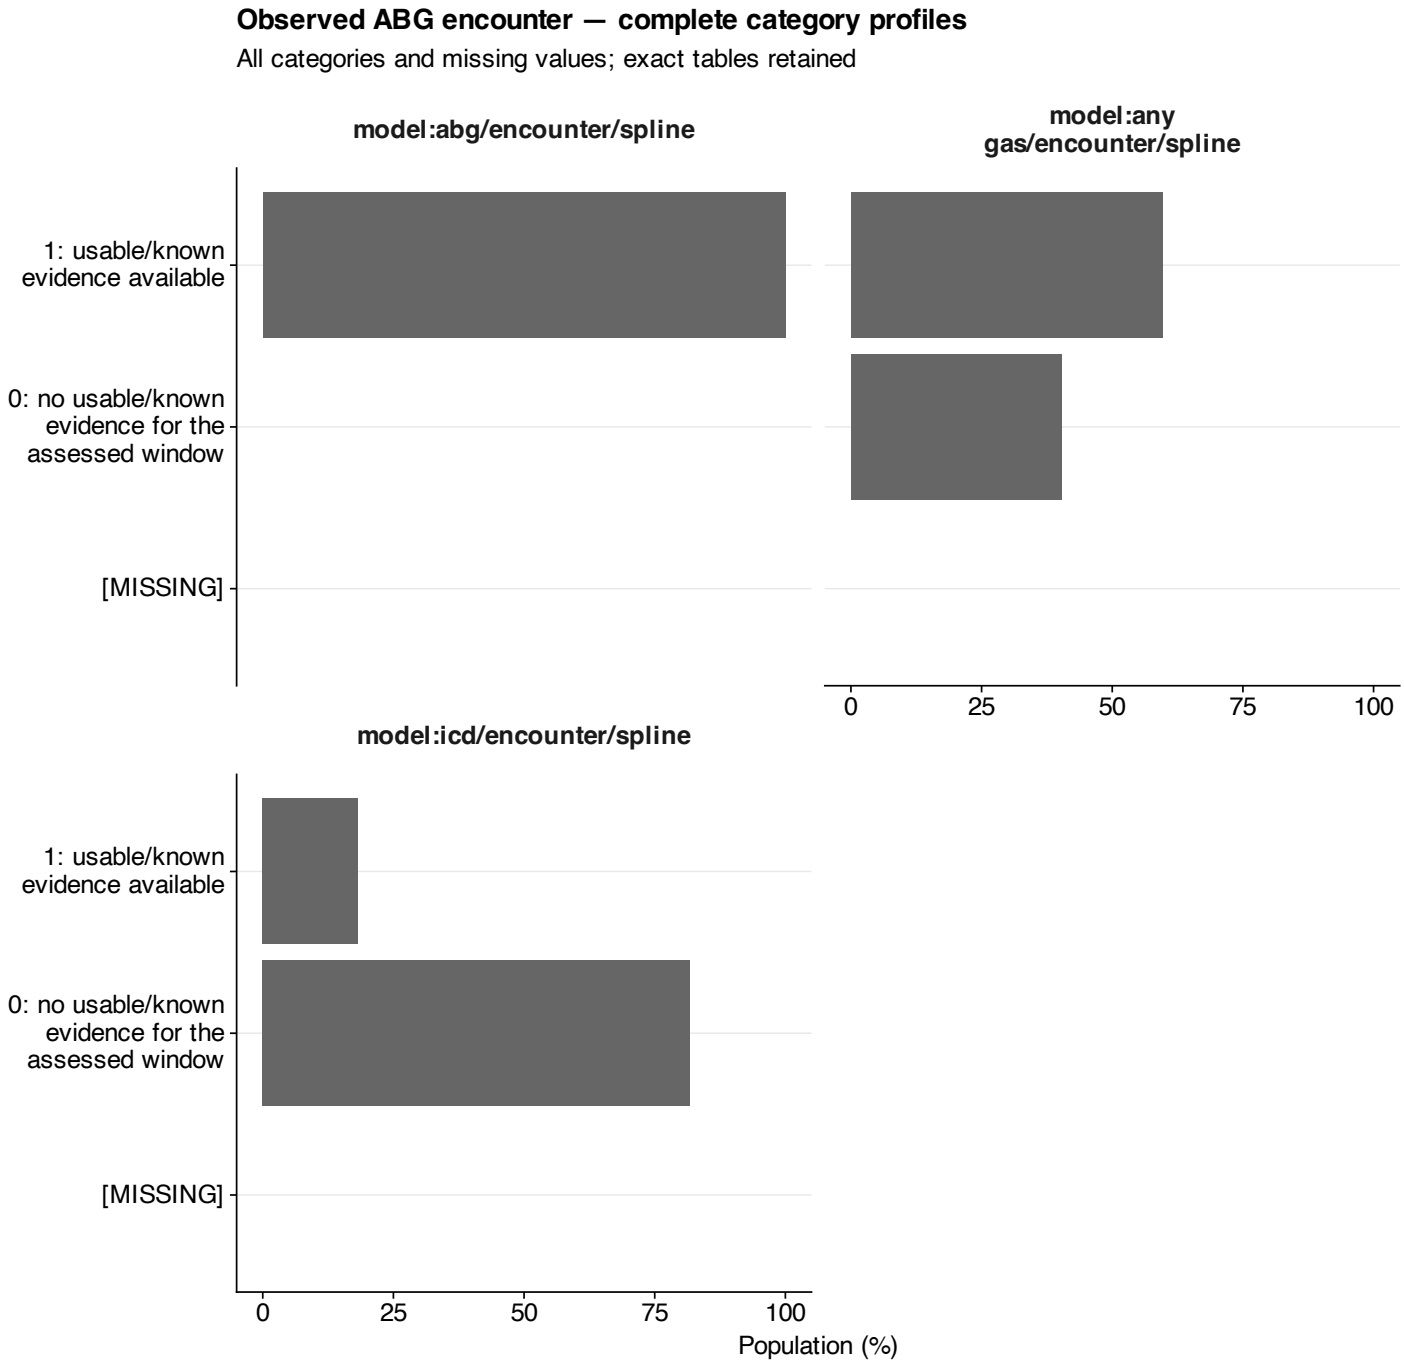

Figure 869: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete observed_abg_encounter stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

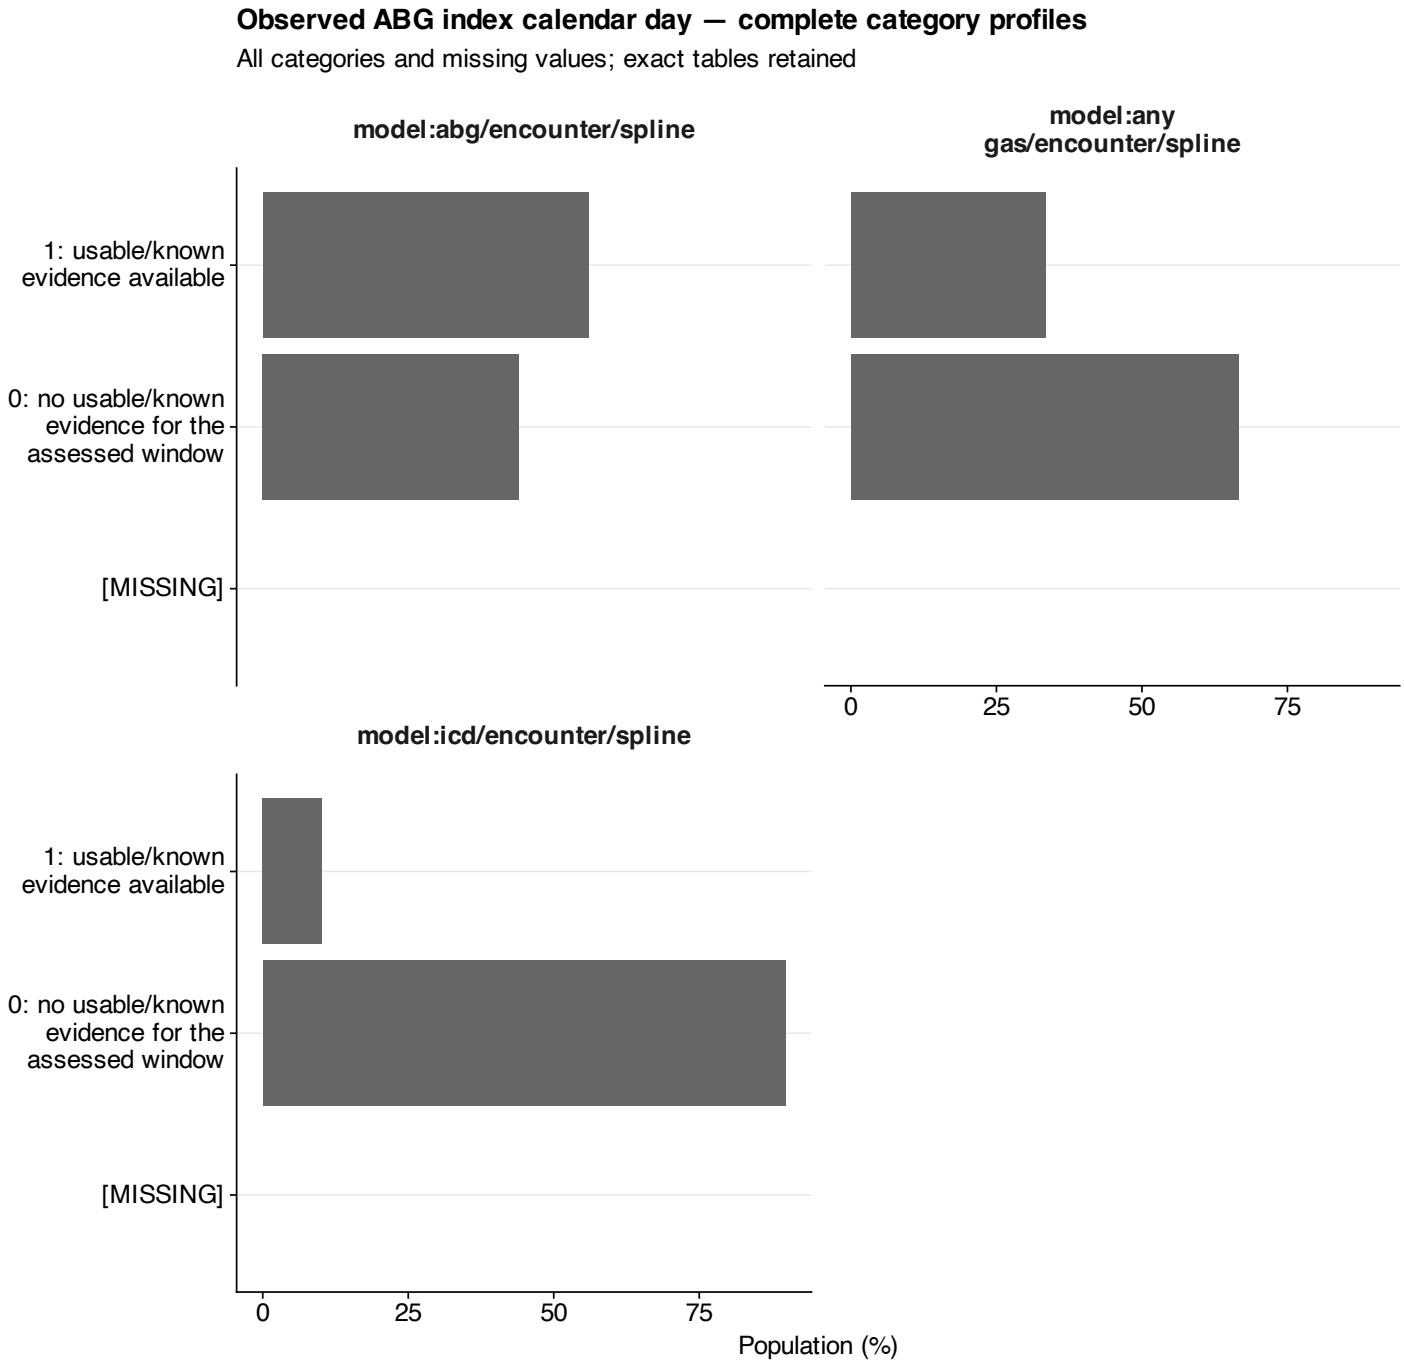

Figure 870: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete observed_abg_index_calendar_day stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

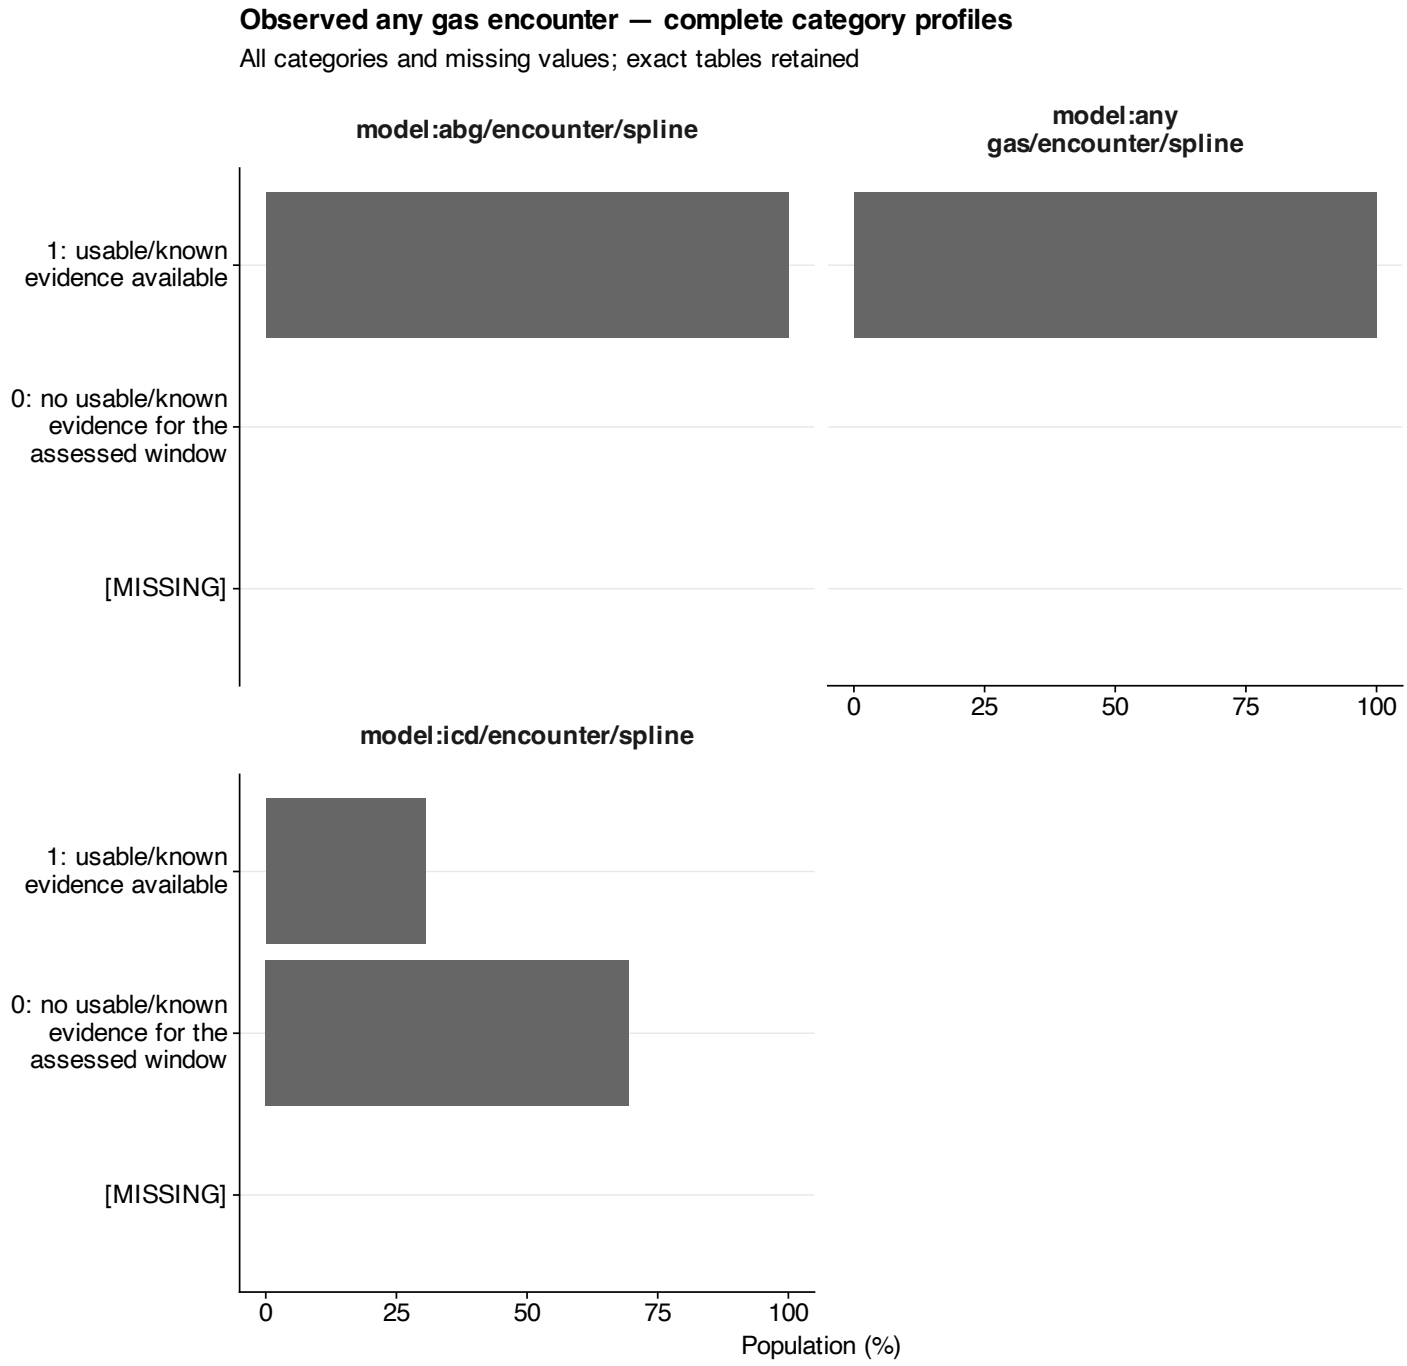

Figure 871: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete observed_any_gas_encounter stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

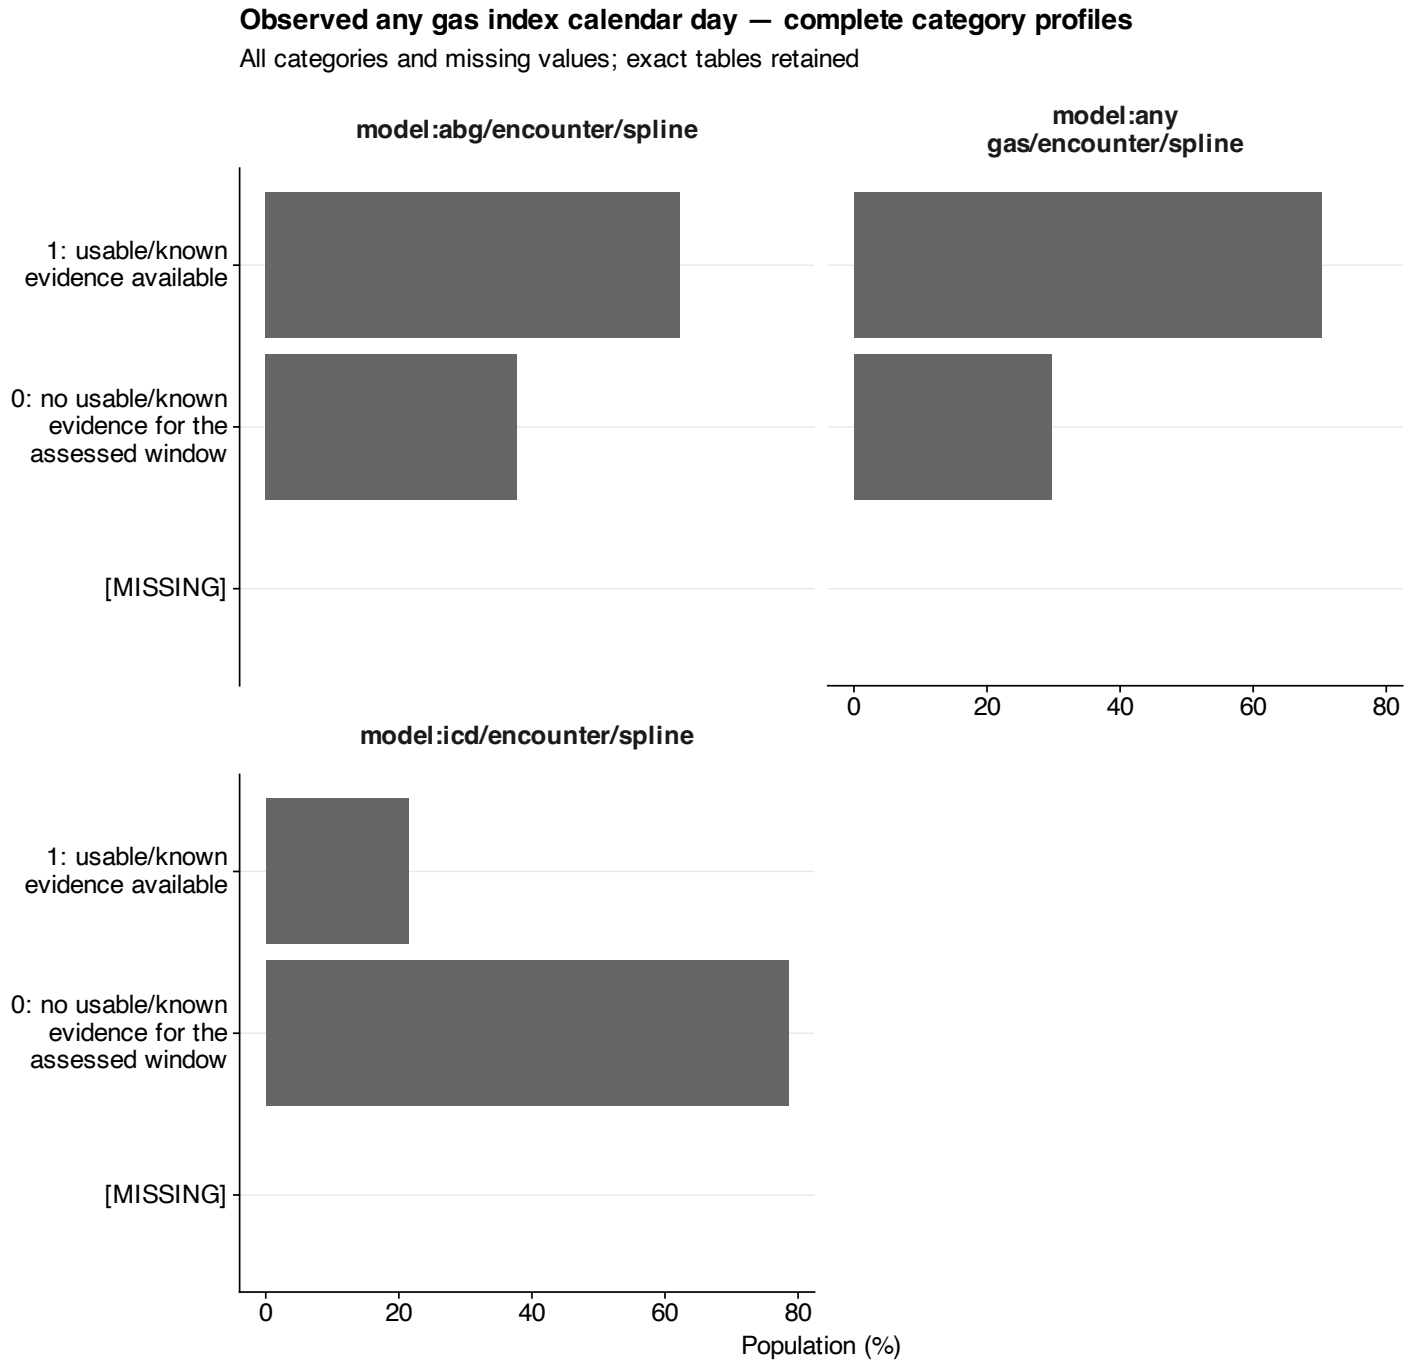

Figure 872: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete observed_any_gas_index_calendar_day stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

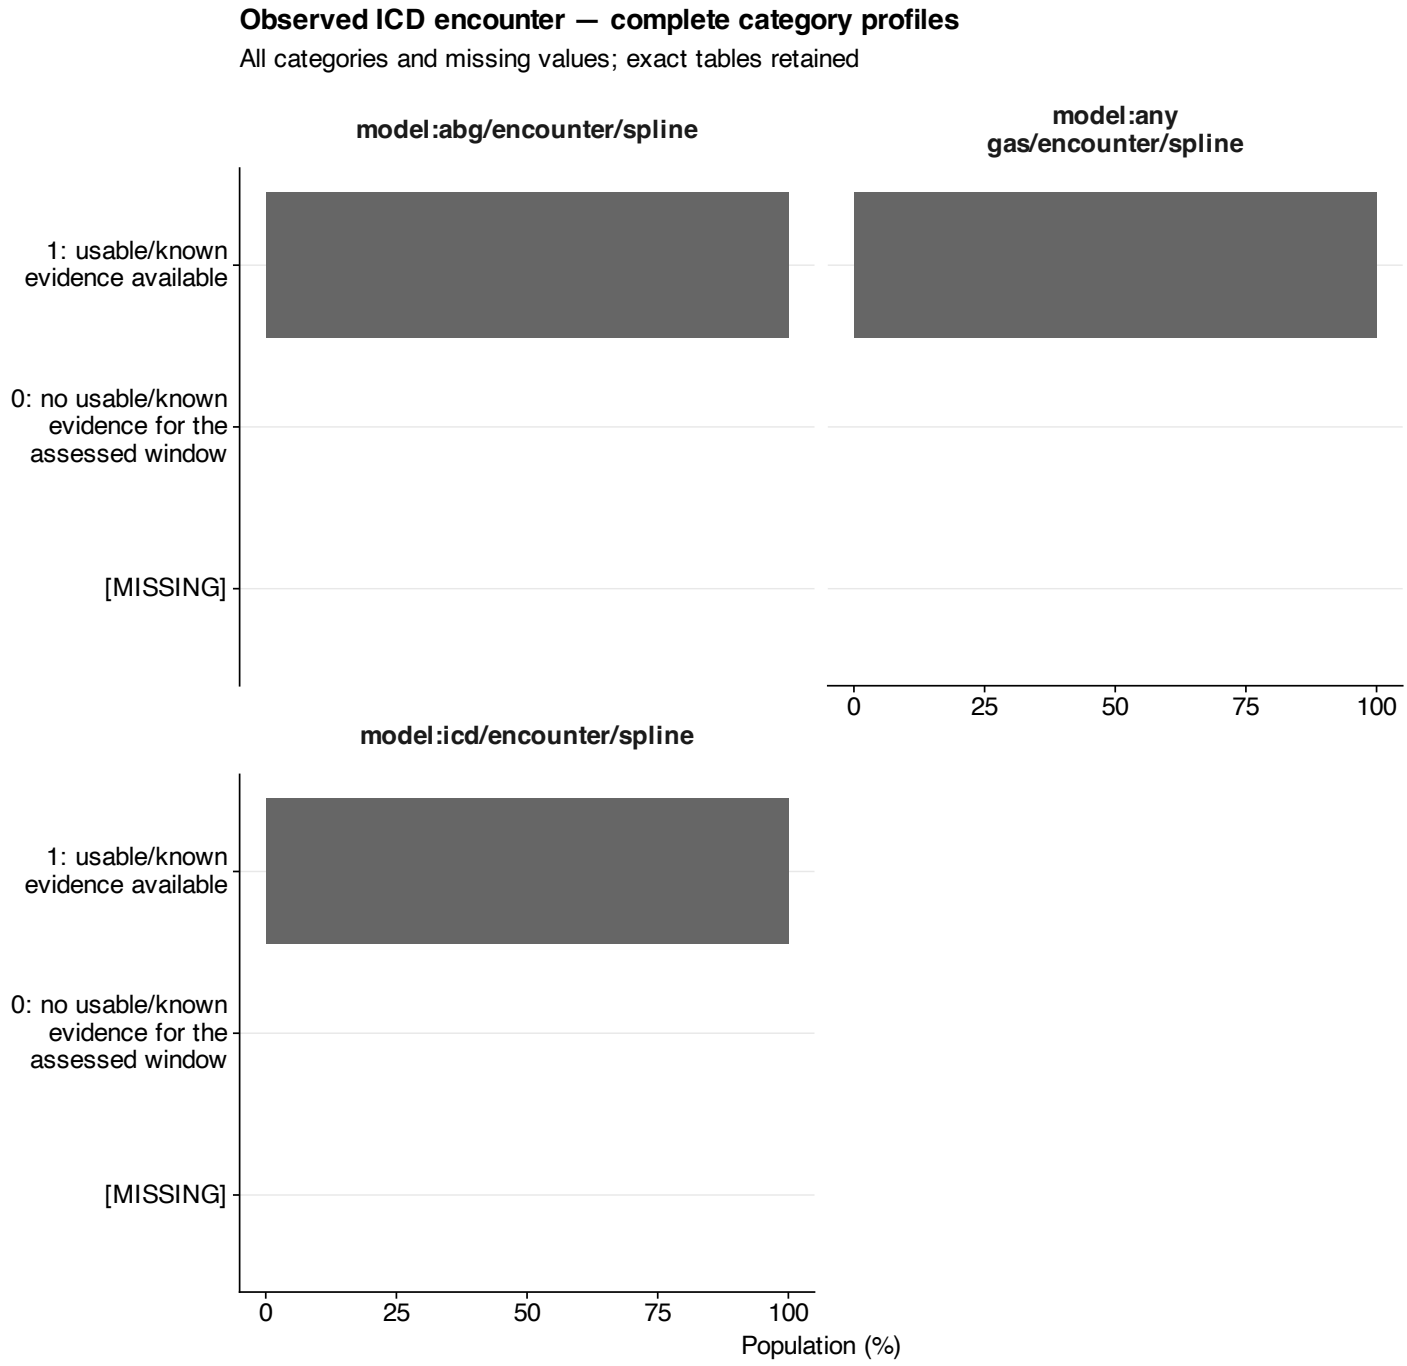

Figure 873: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete observed_icd_encounter stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

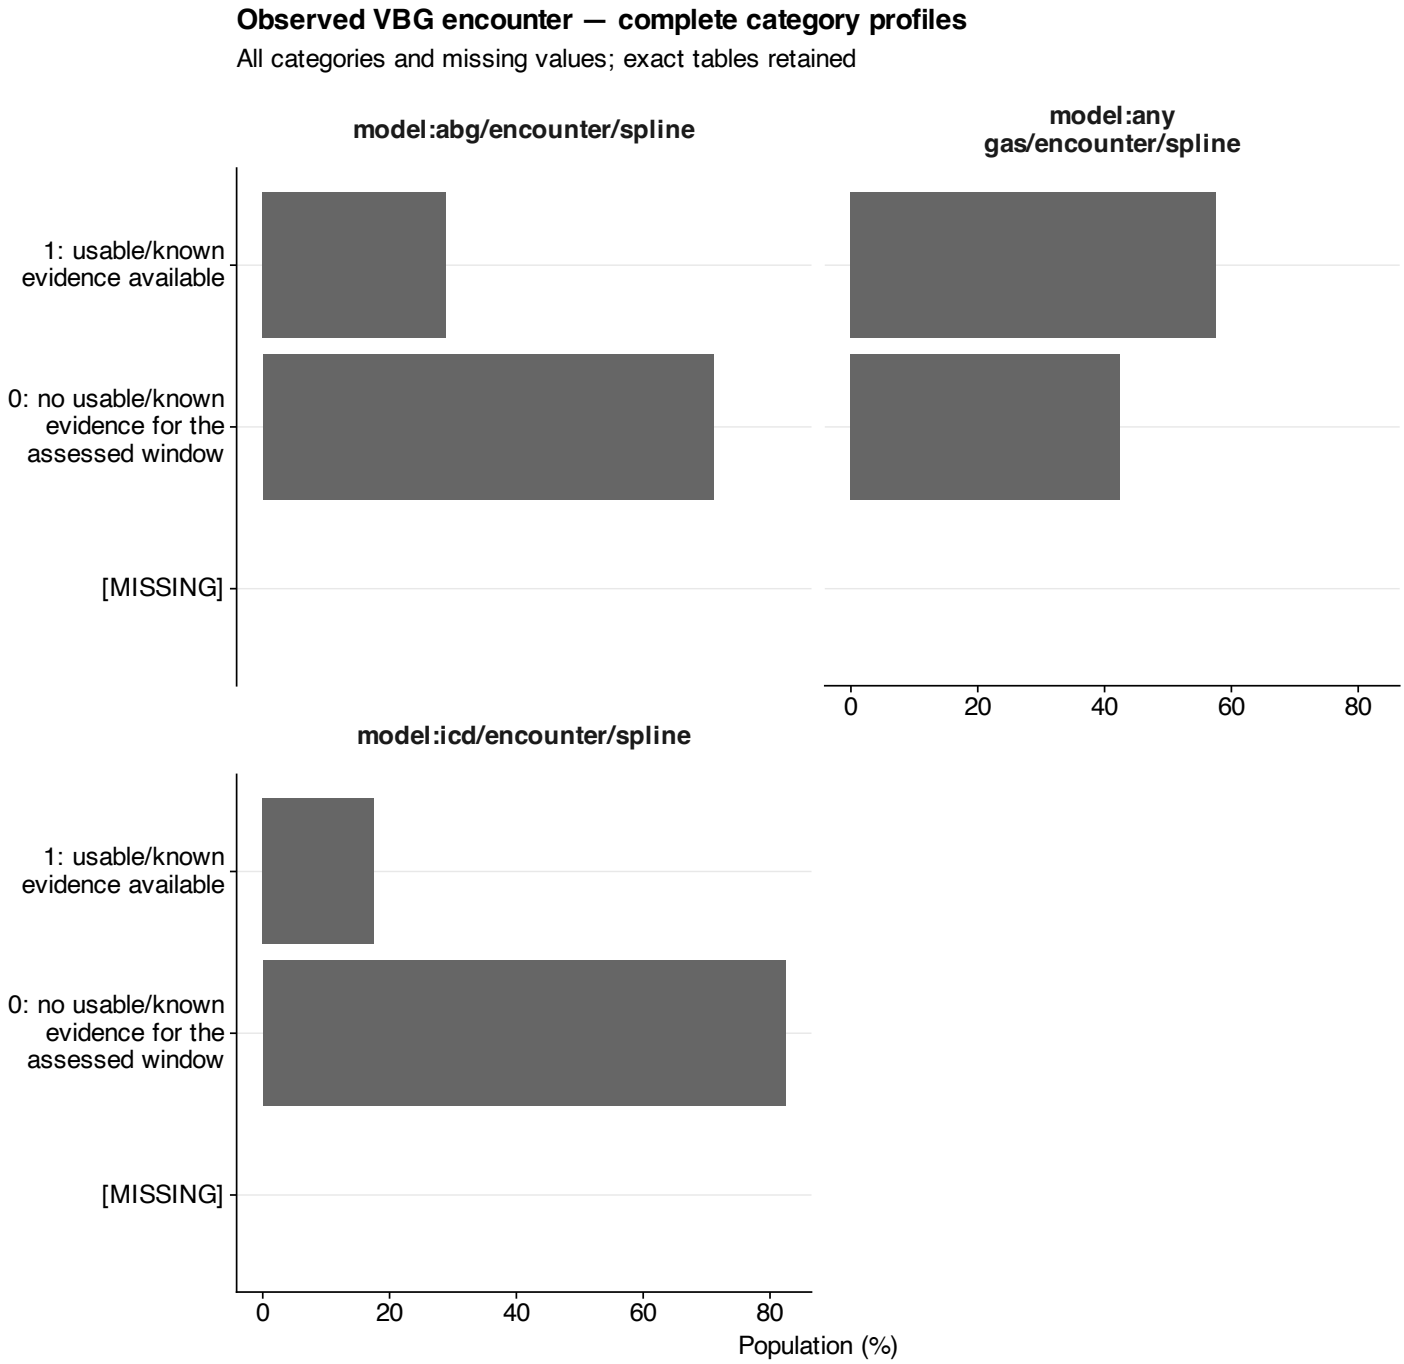

Figure 874: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete observed_vbg_encounter stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

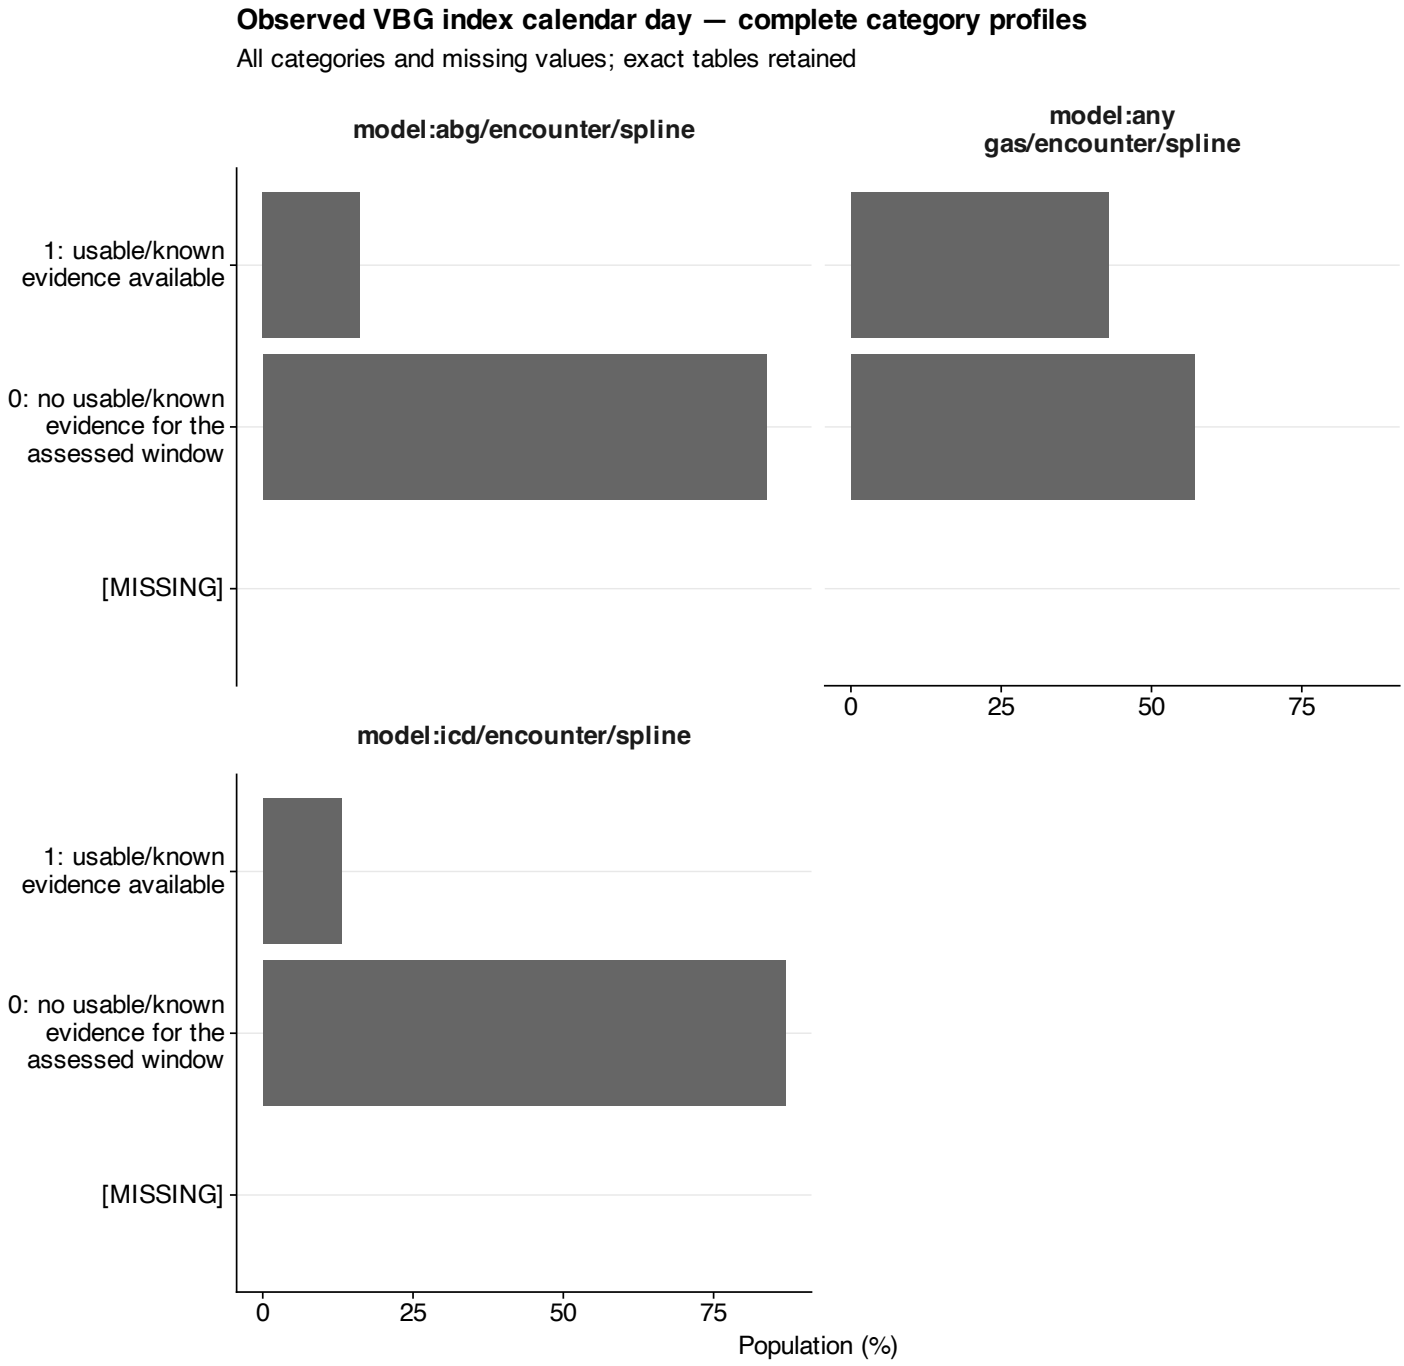

Figure 875: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete observed_vbg_index_calendar_day stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

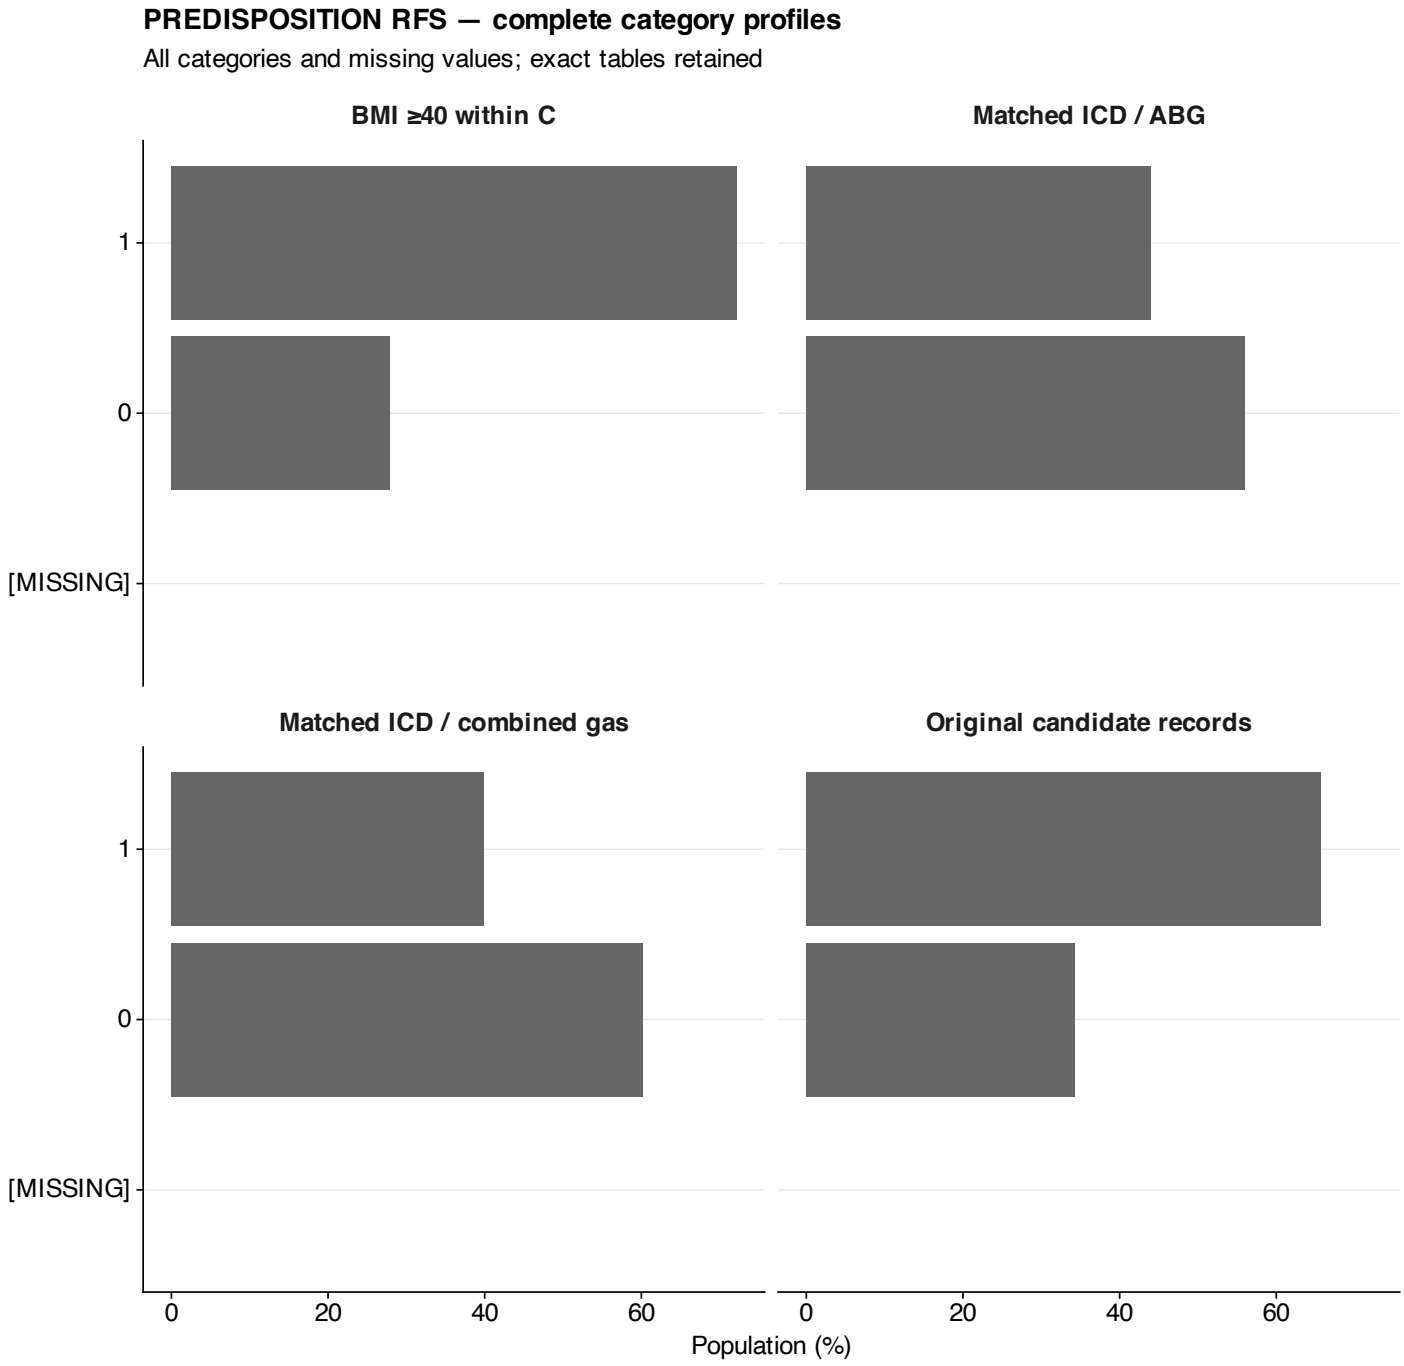

Figure 876: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete PREDISPOSITION_rfs stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

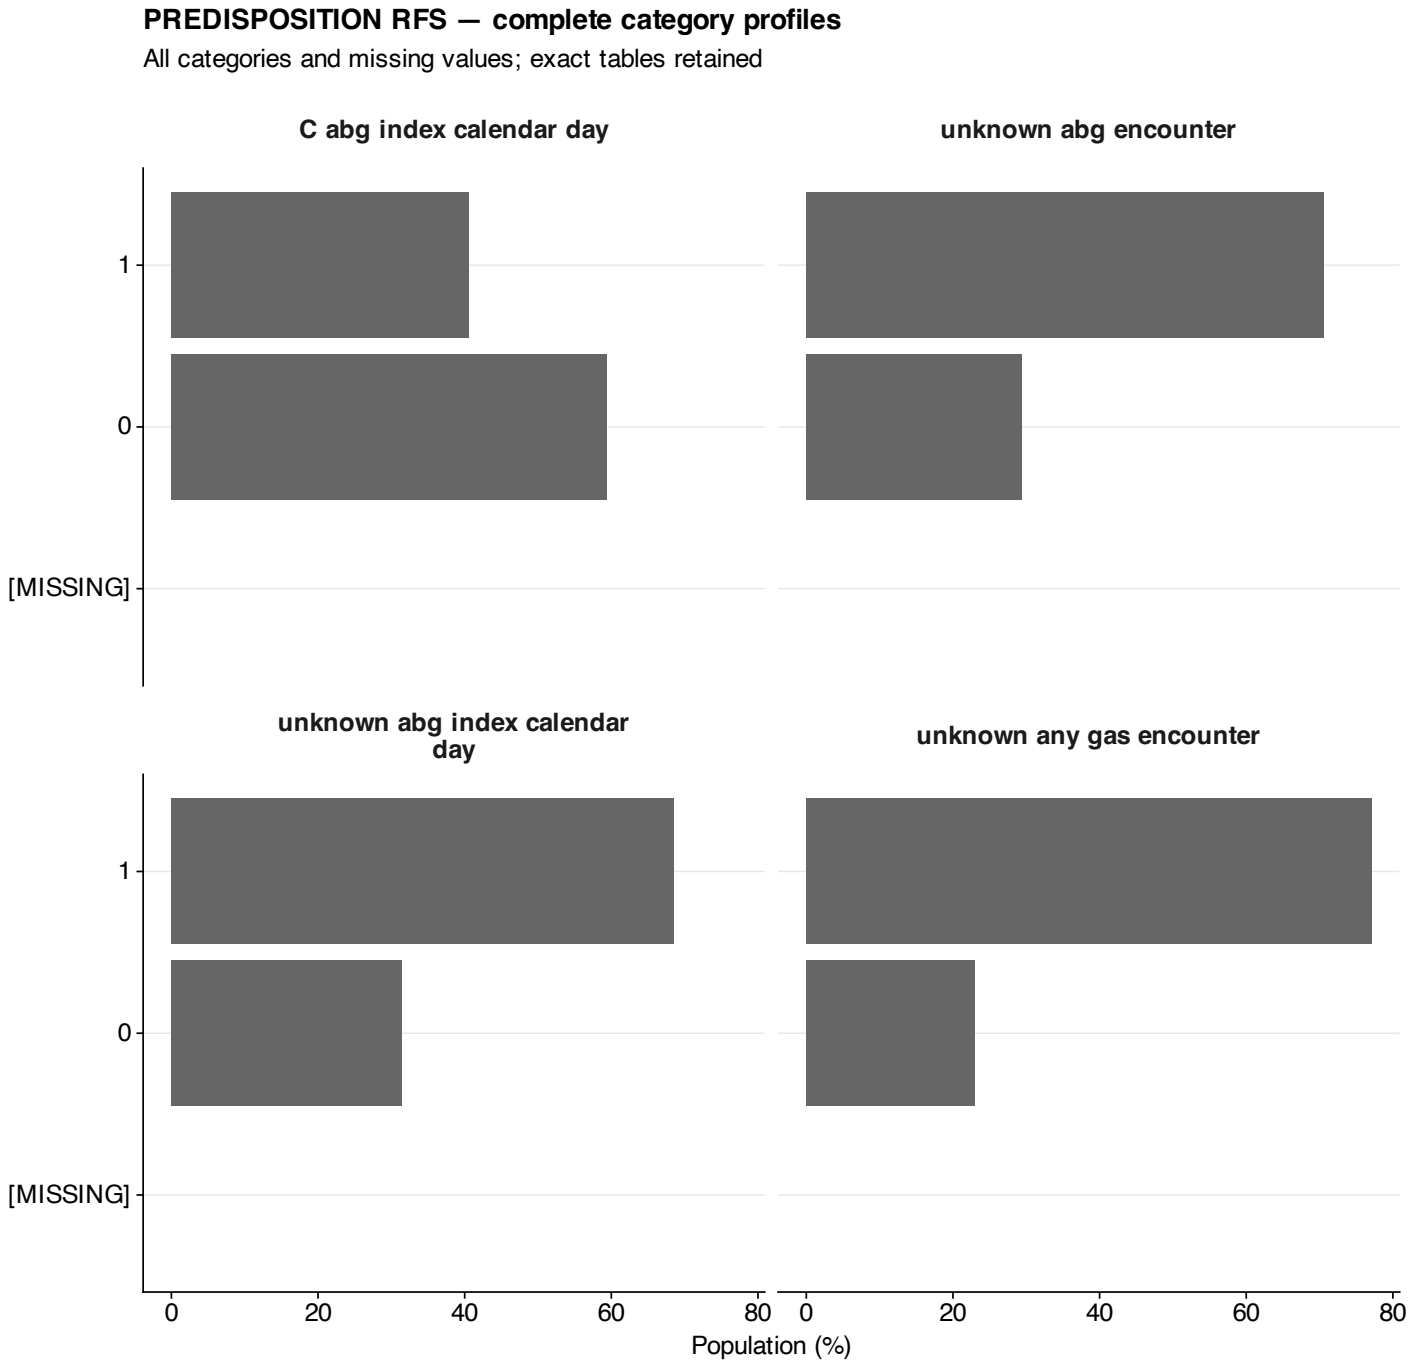

Figure 877: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete PREDISPOSITION_rfs stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

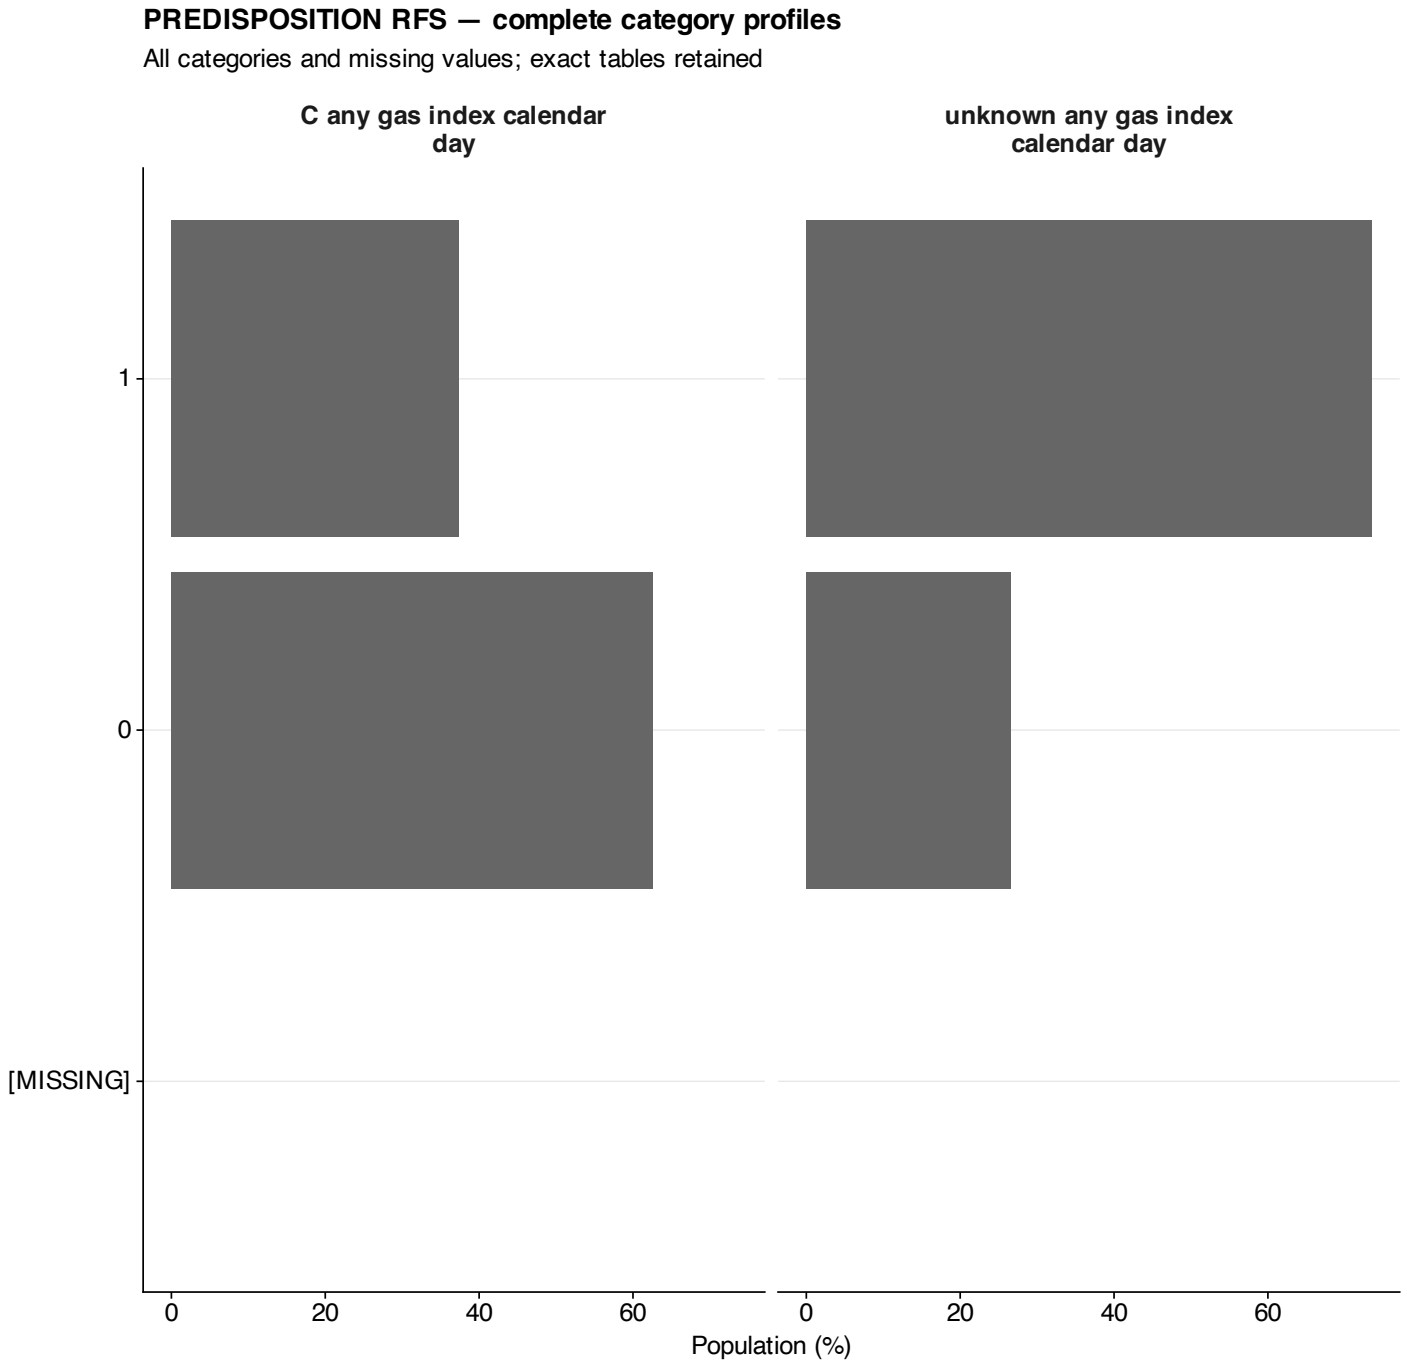

Figure 878: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete PREDISPOSITION_rfs stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

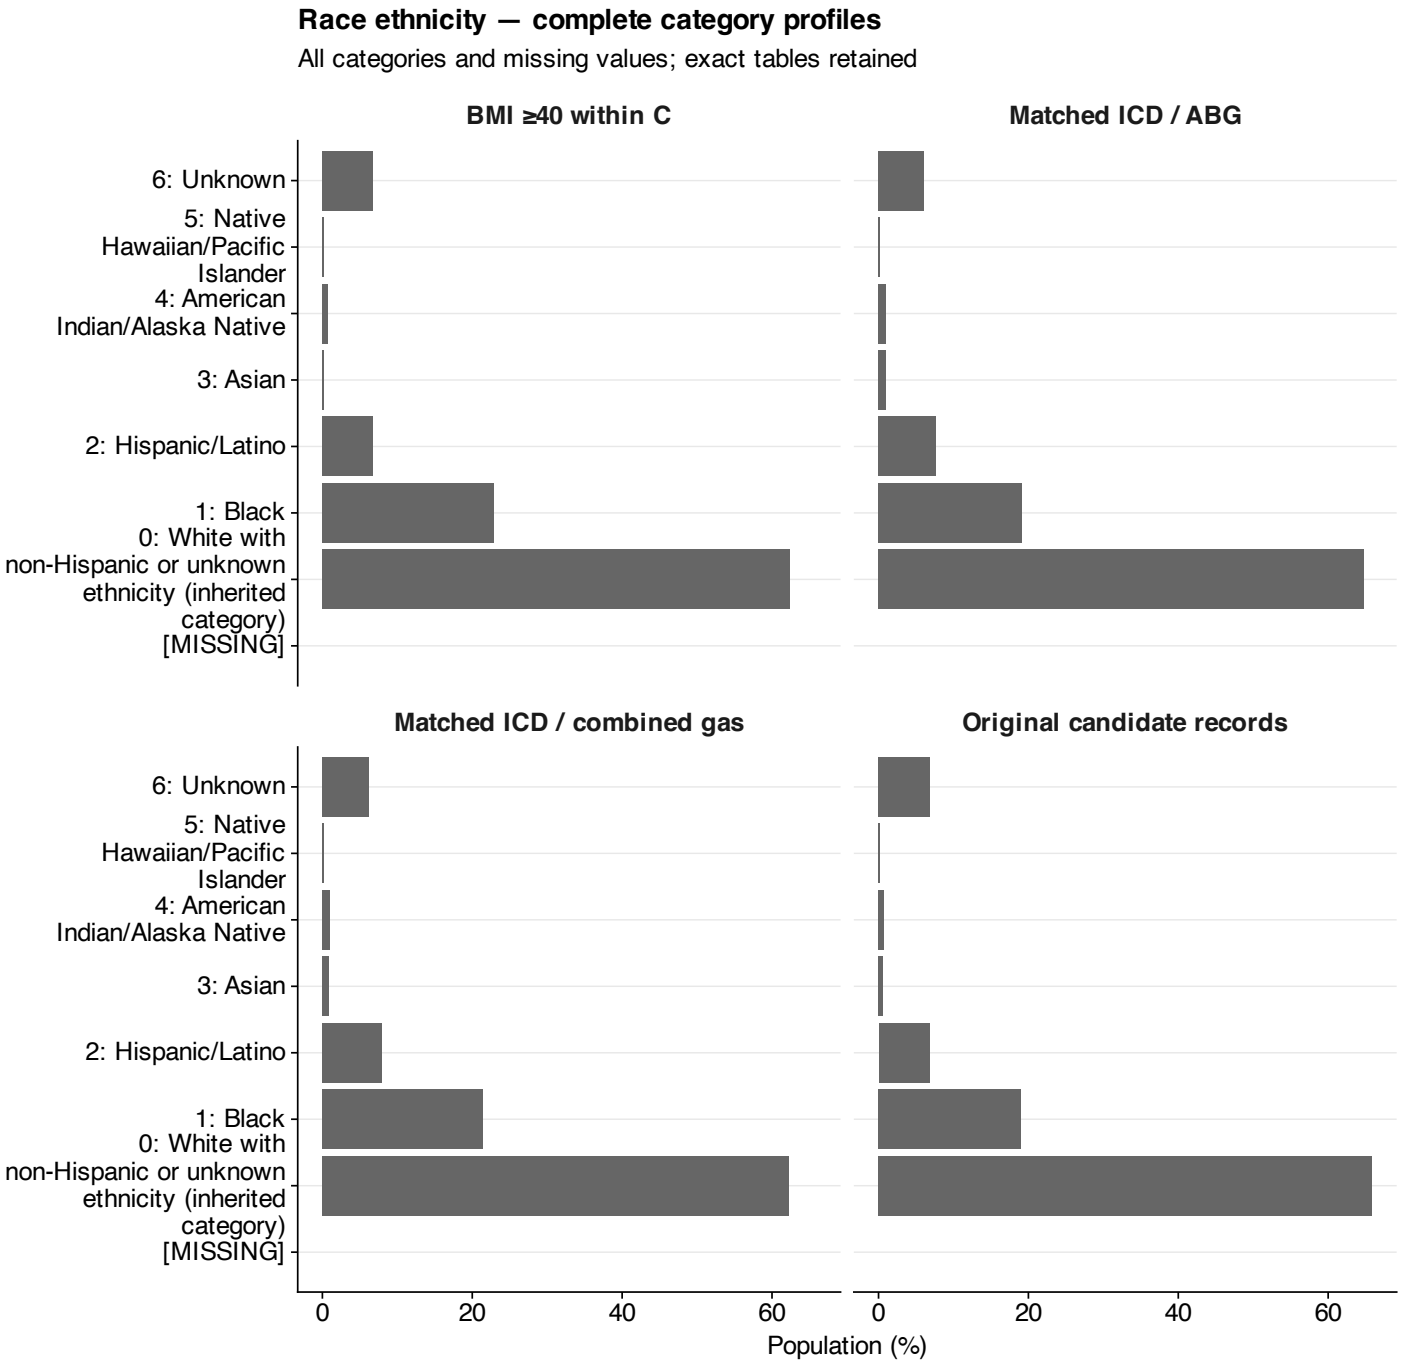

Figure 879: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete race_ethnicity stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

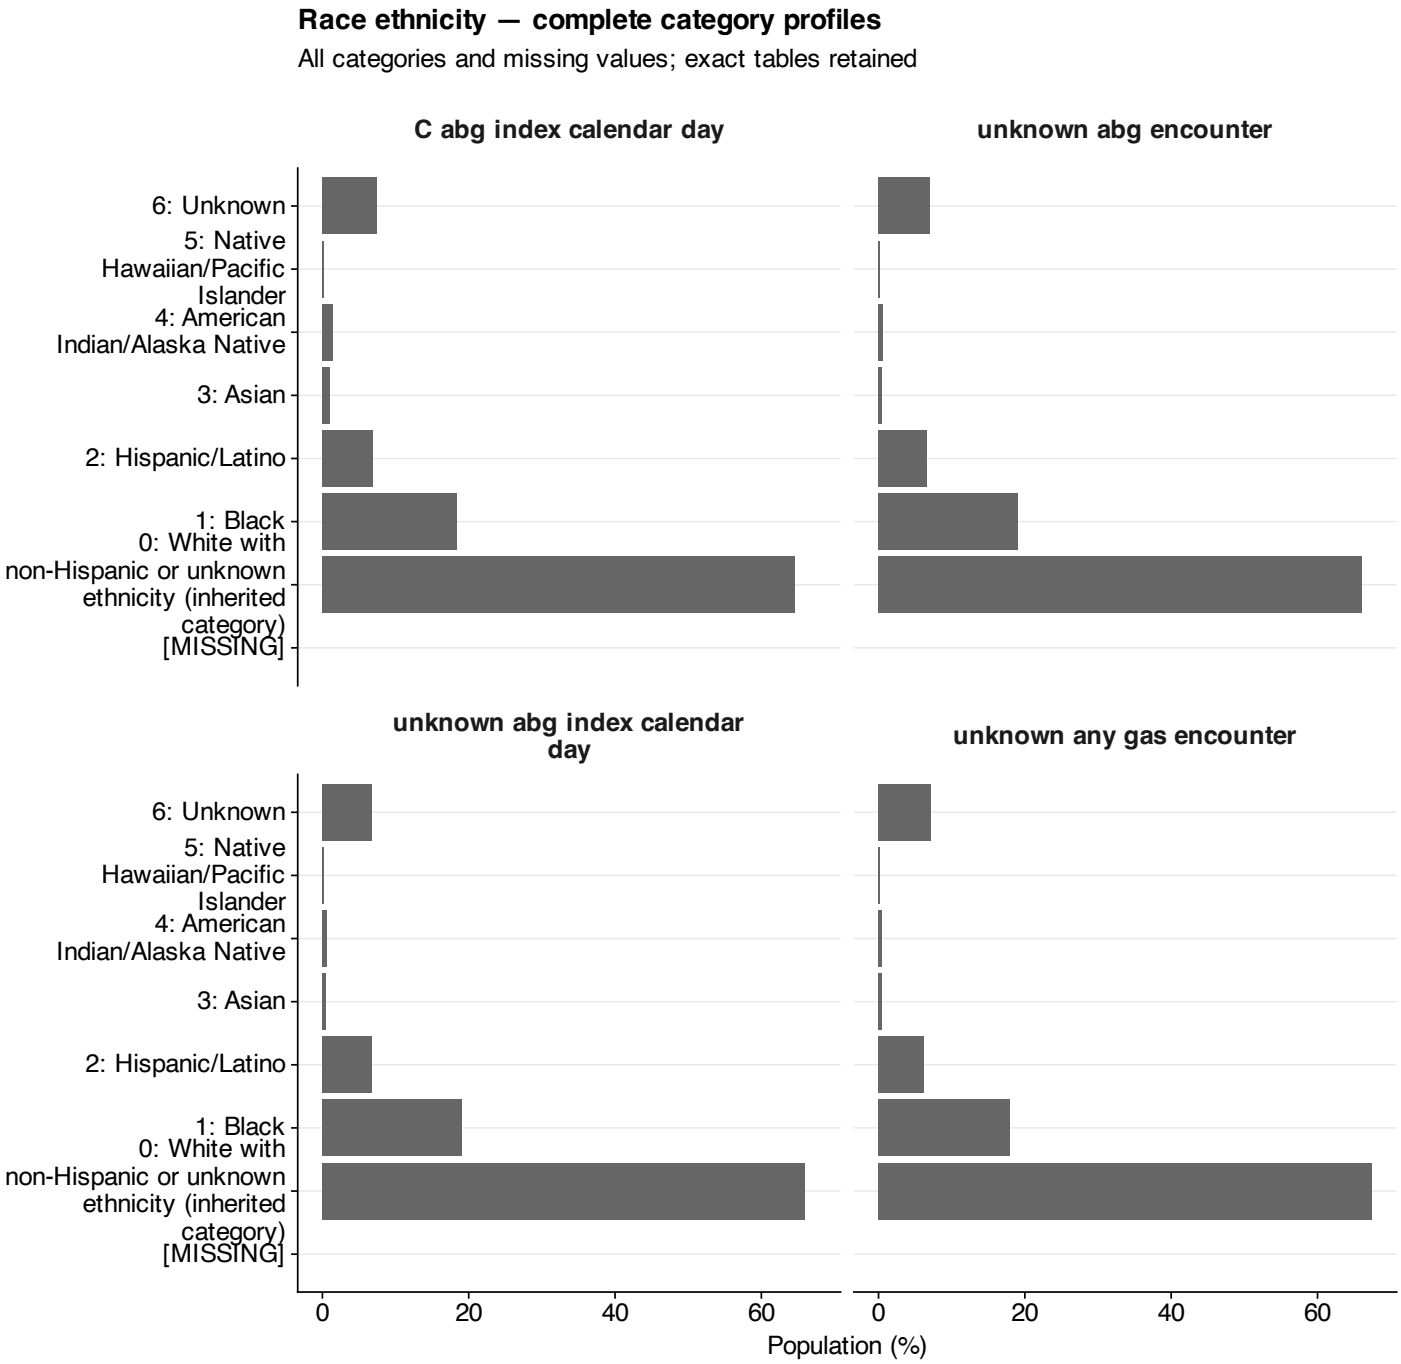

Figure 880: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete race_ethnicity stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

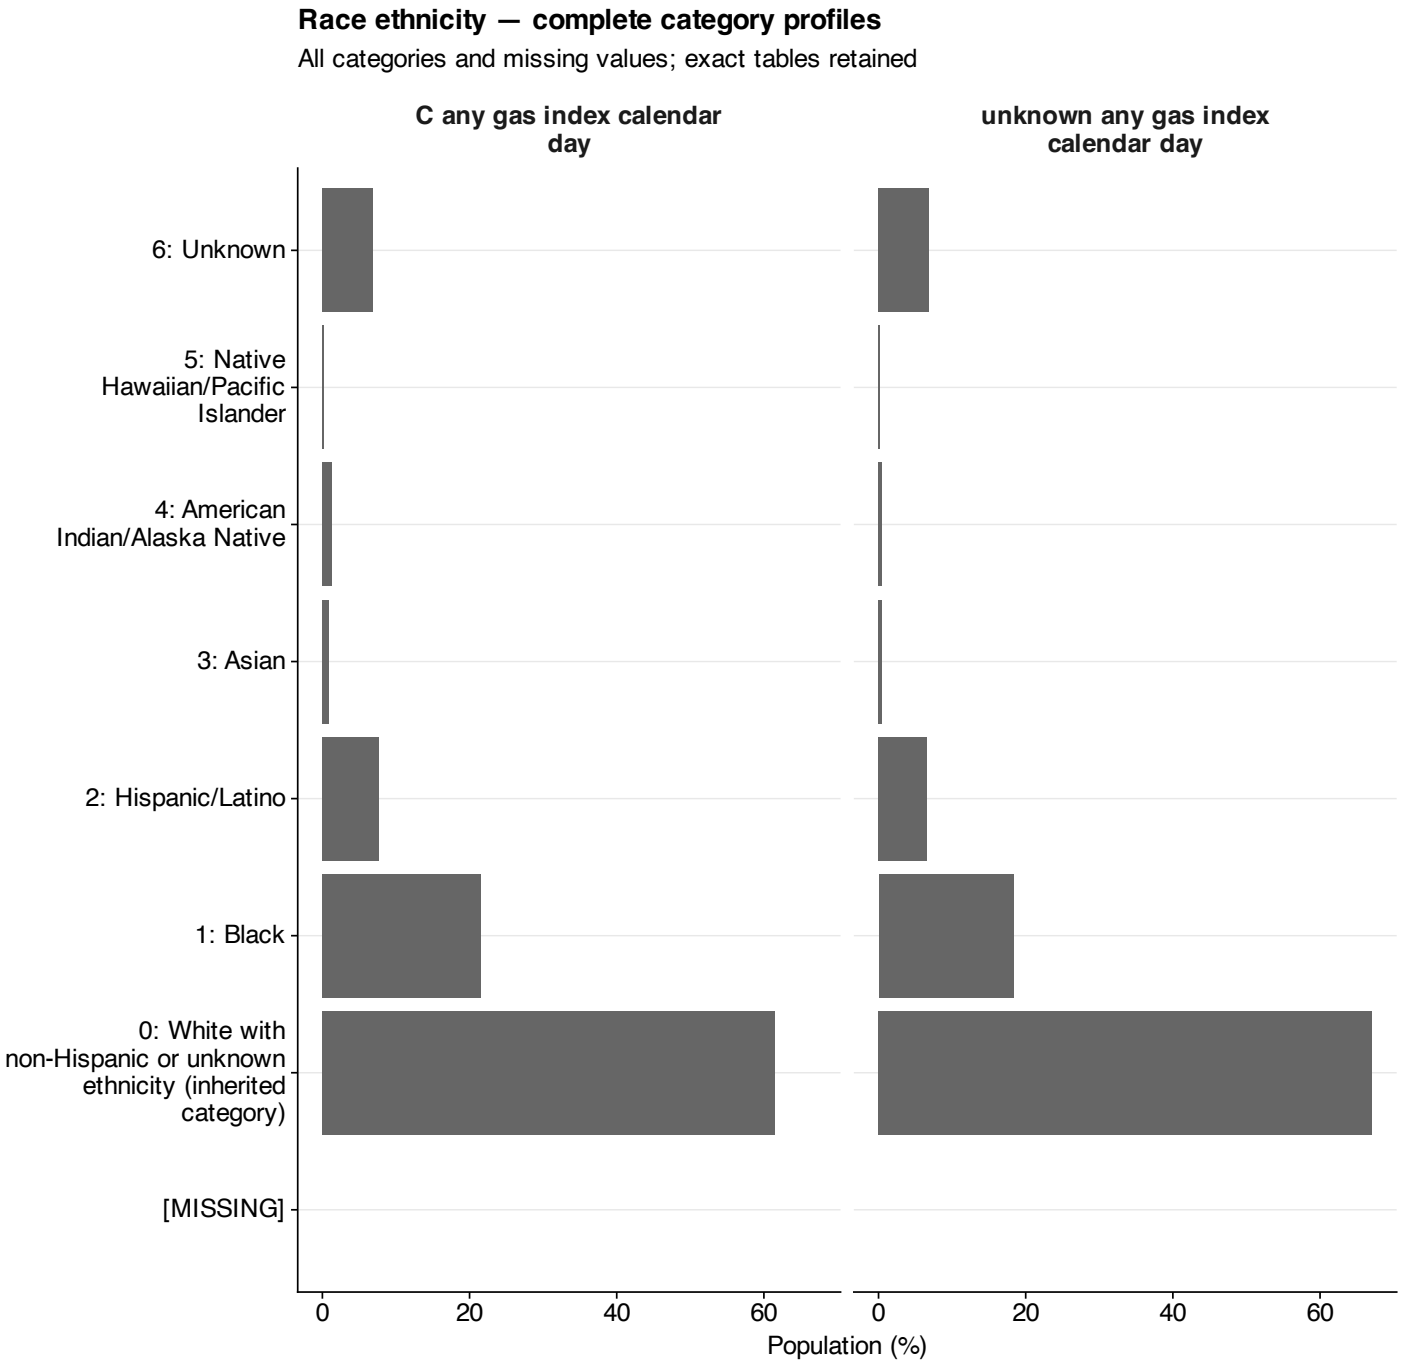

Figure 881: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete race_ethnicity stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

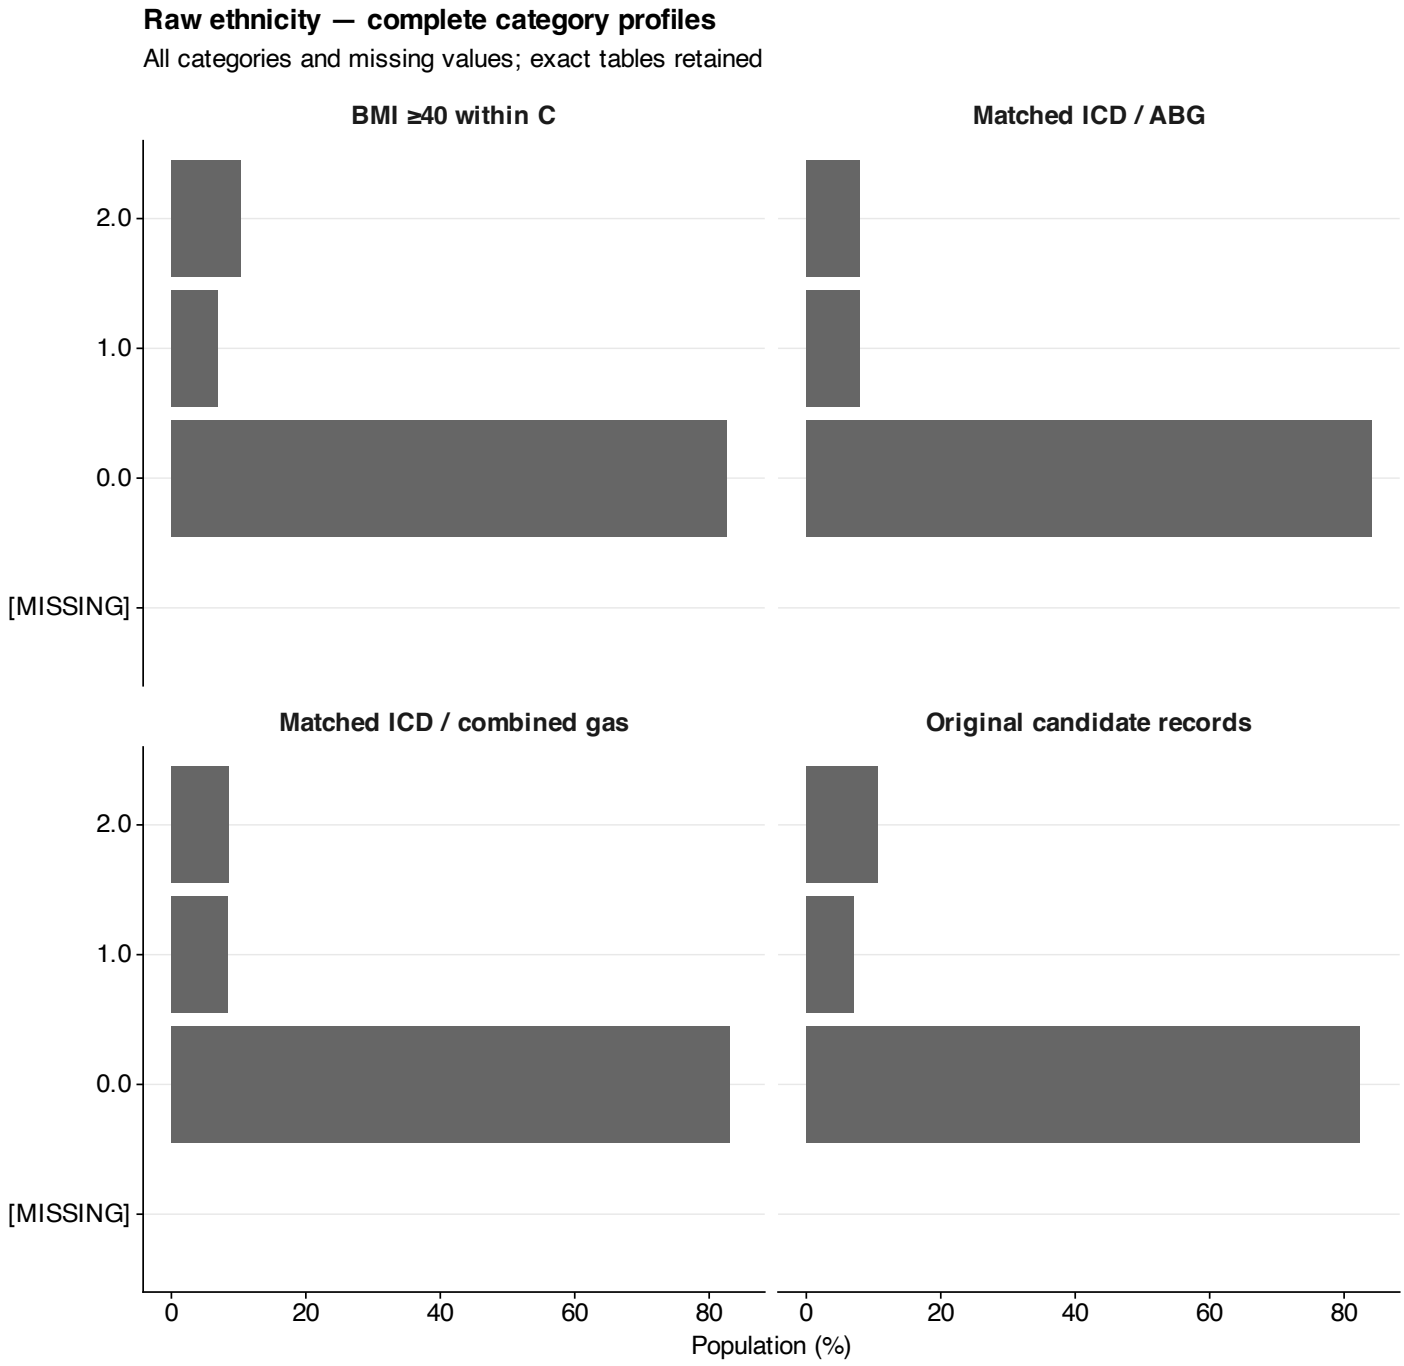

Figure 882: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete raw_ethnicity stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

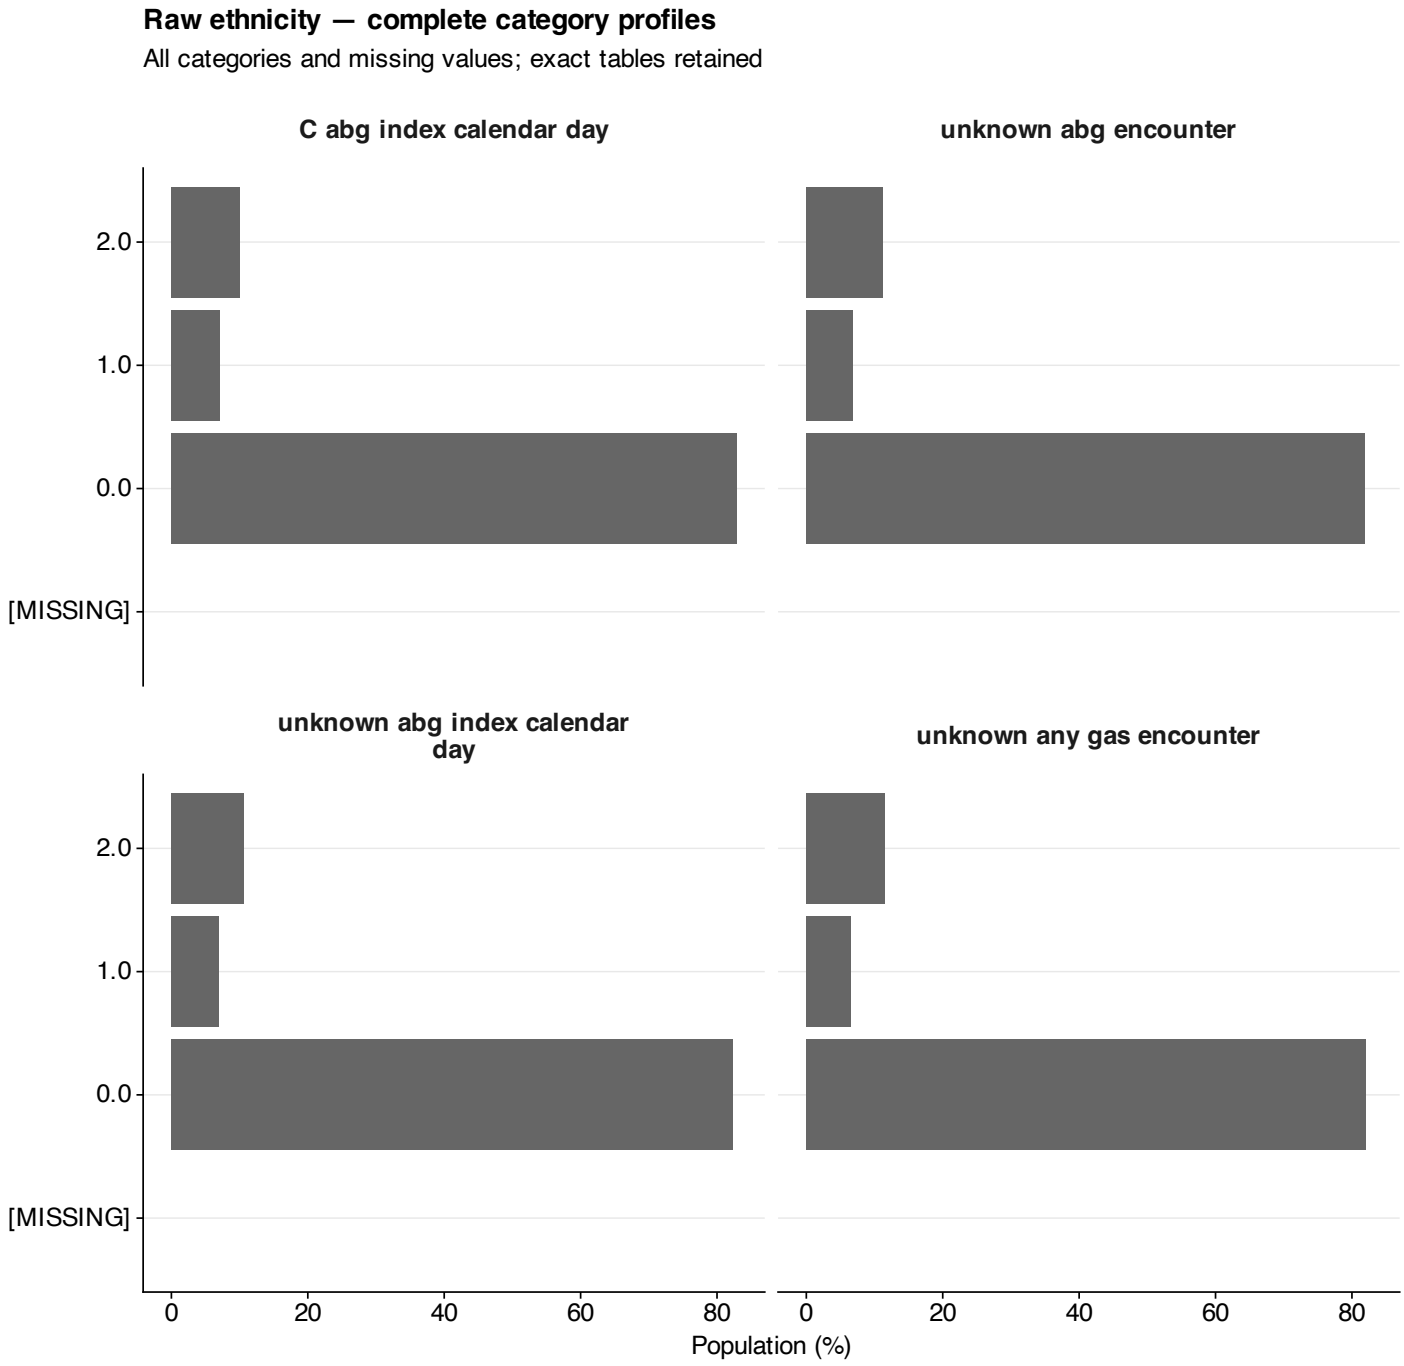

Figure 883: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete raw_ethnicity stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

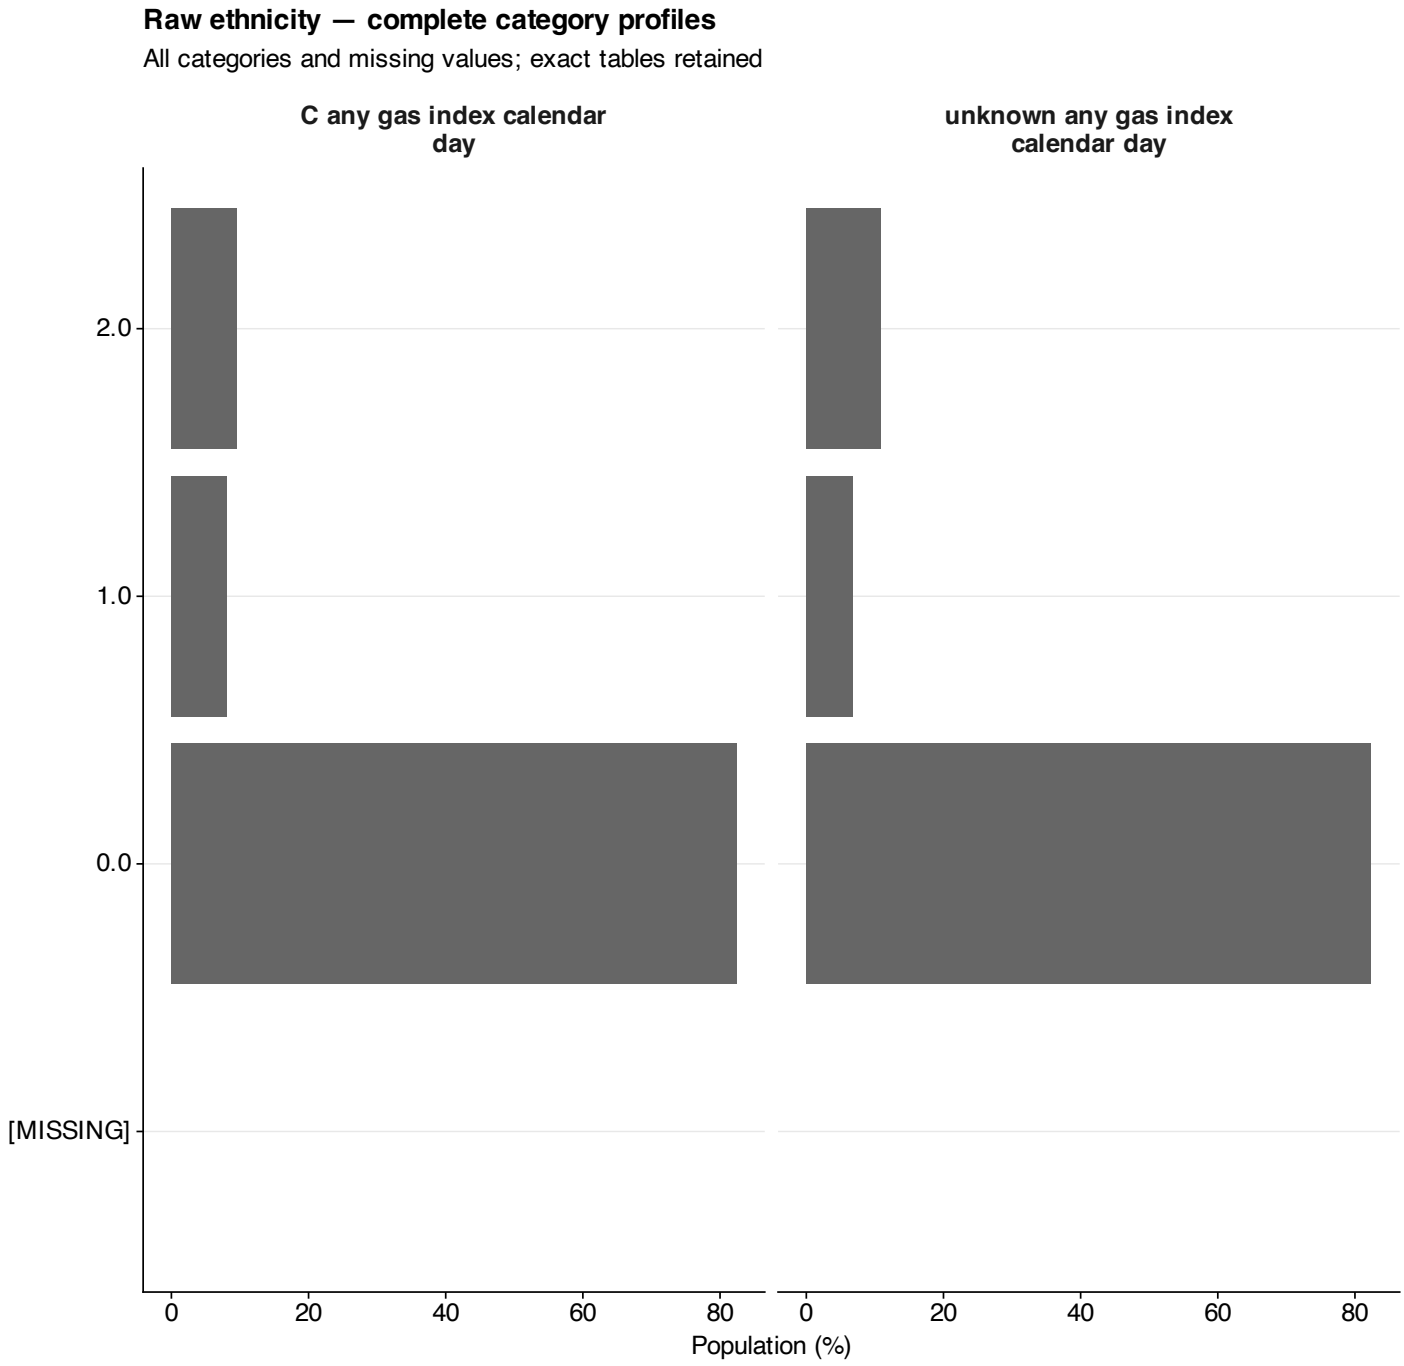

Figure 884: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete raw_ethnicity stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

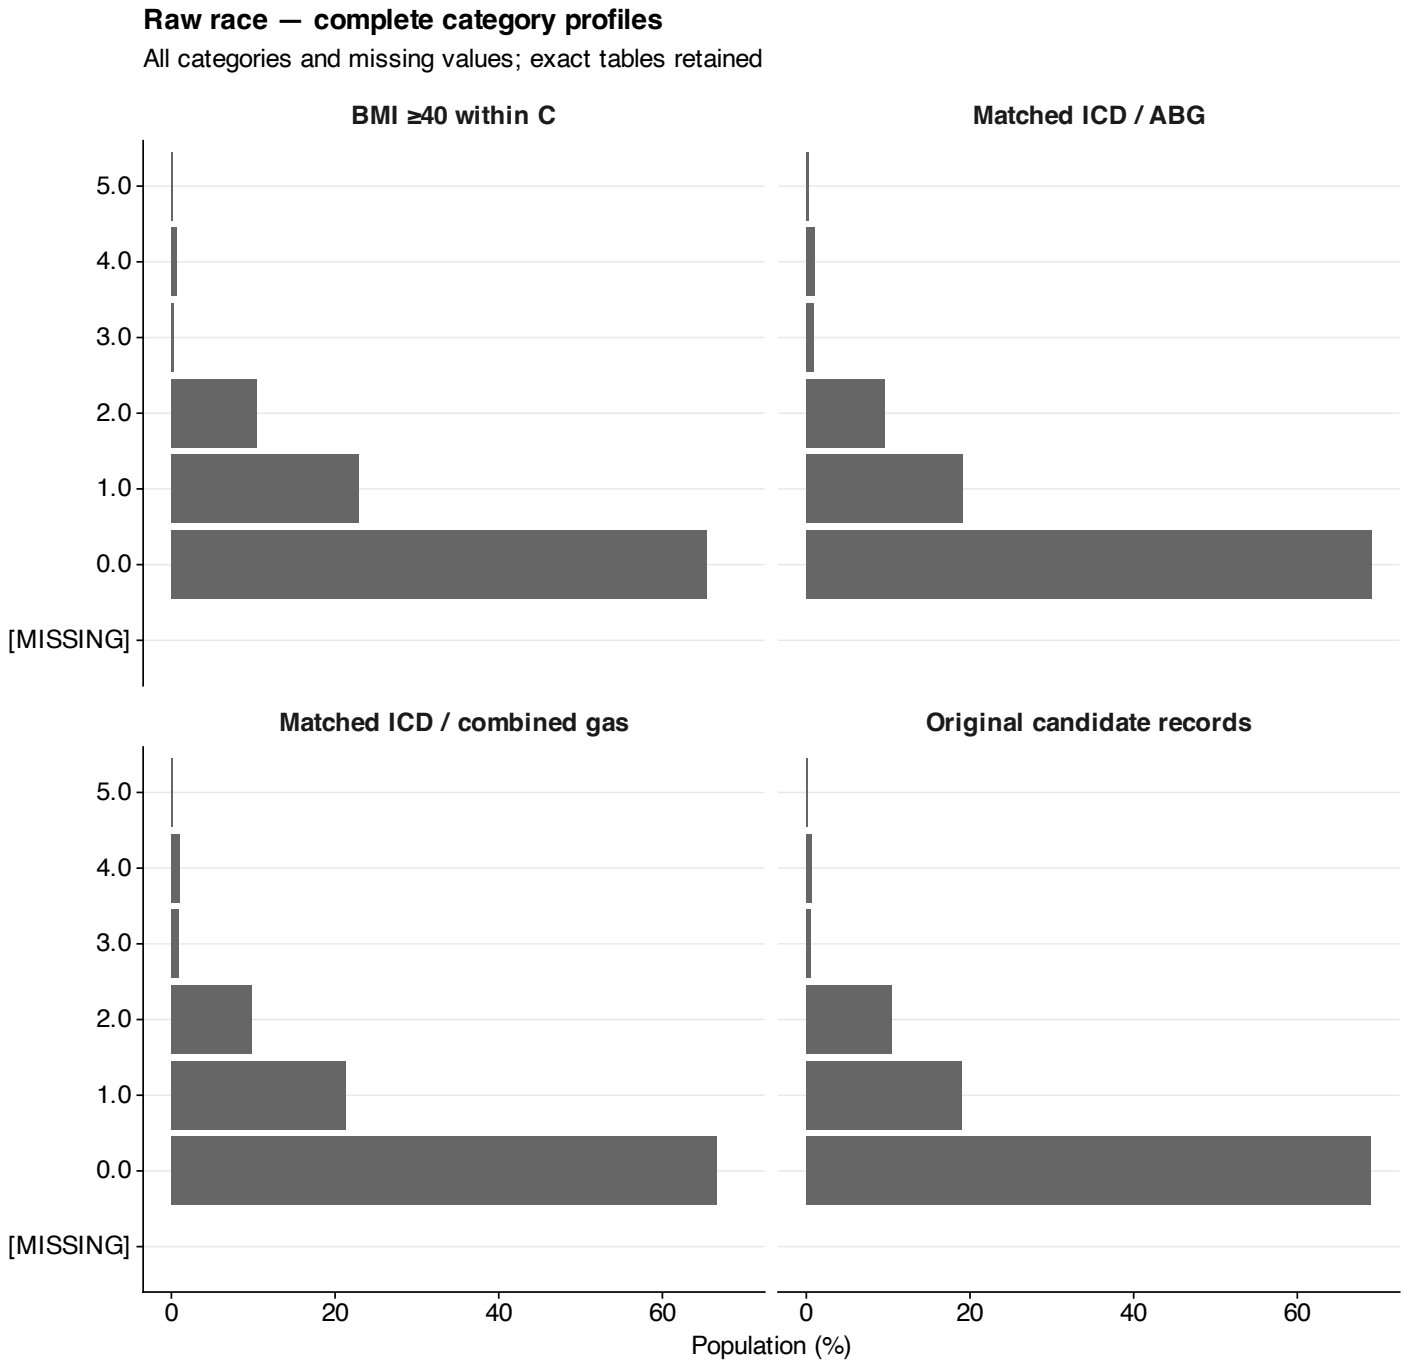

Figure 885: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete raw_race stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

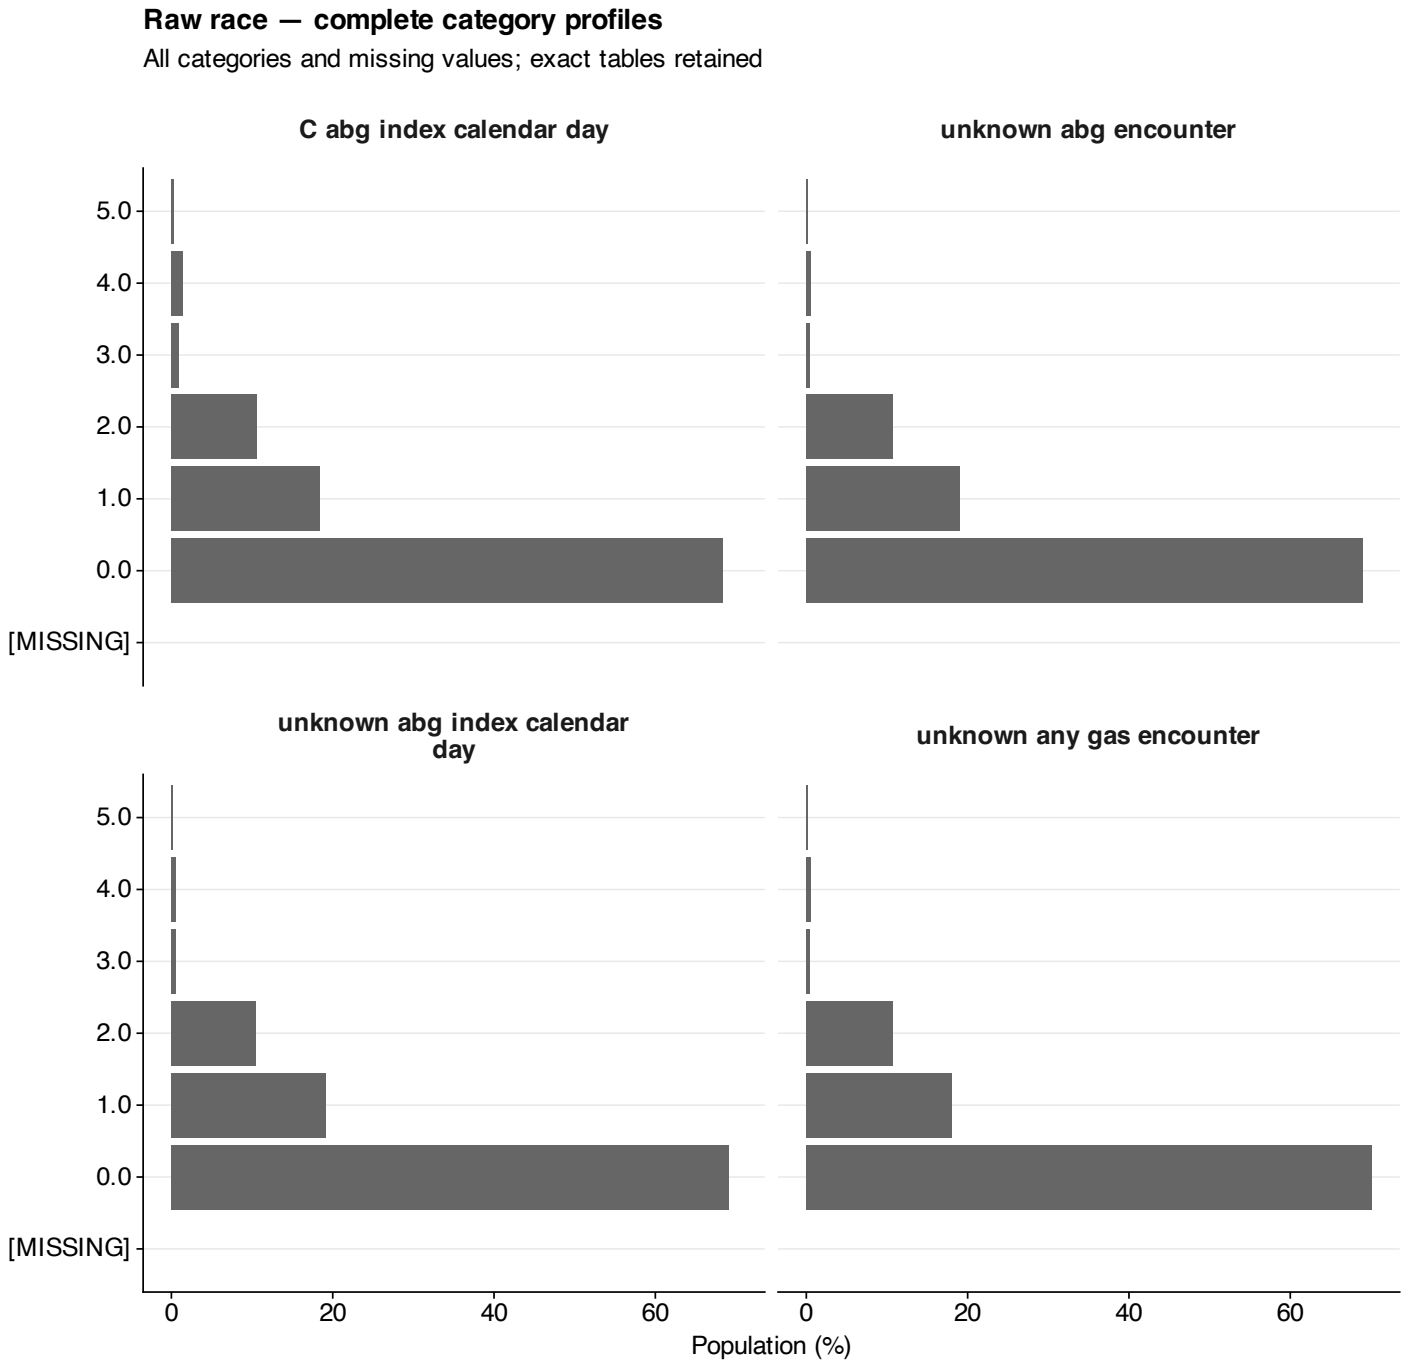

Figure 886: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete raw_race stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

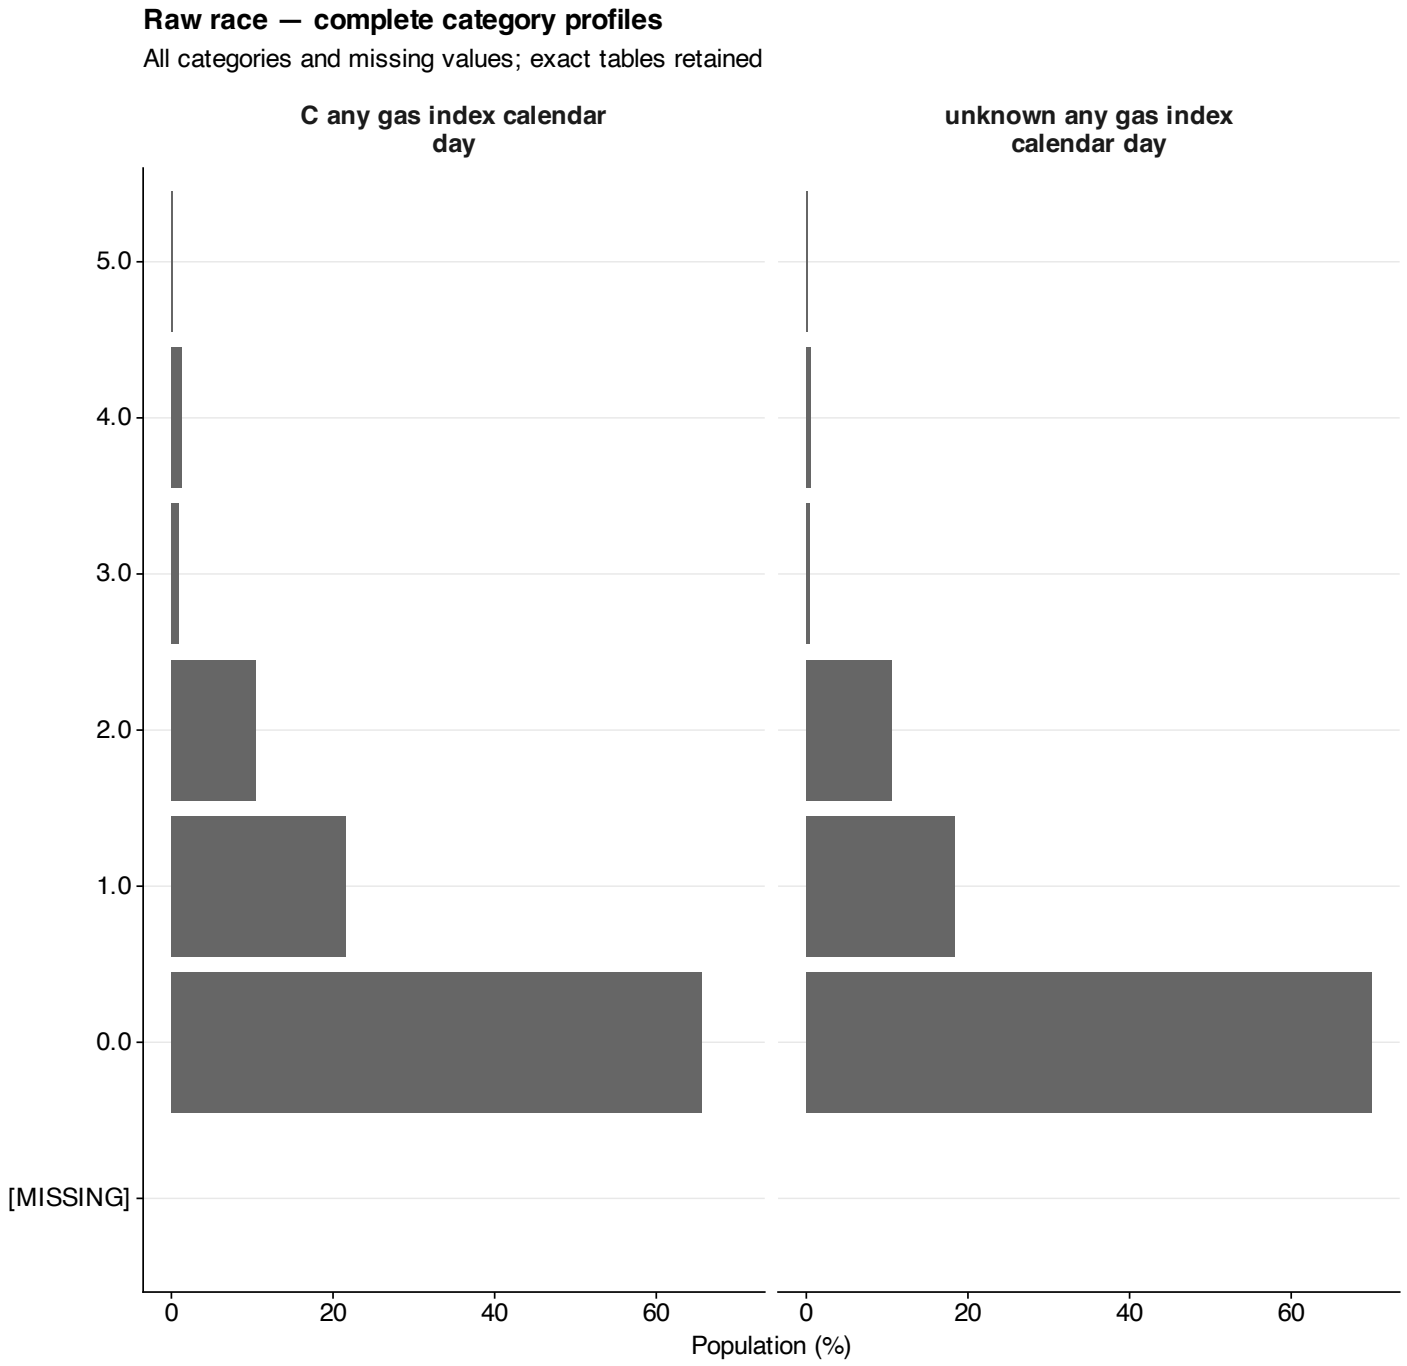

Figure 887: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete raw_race stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

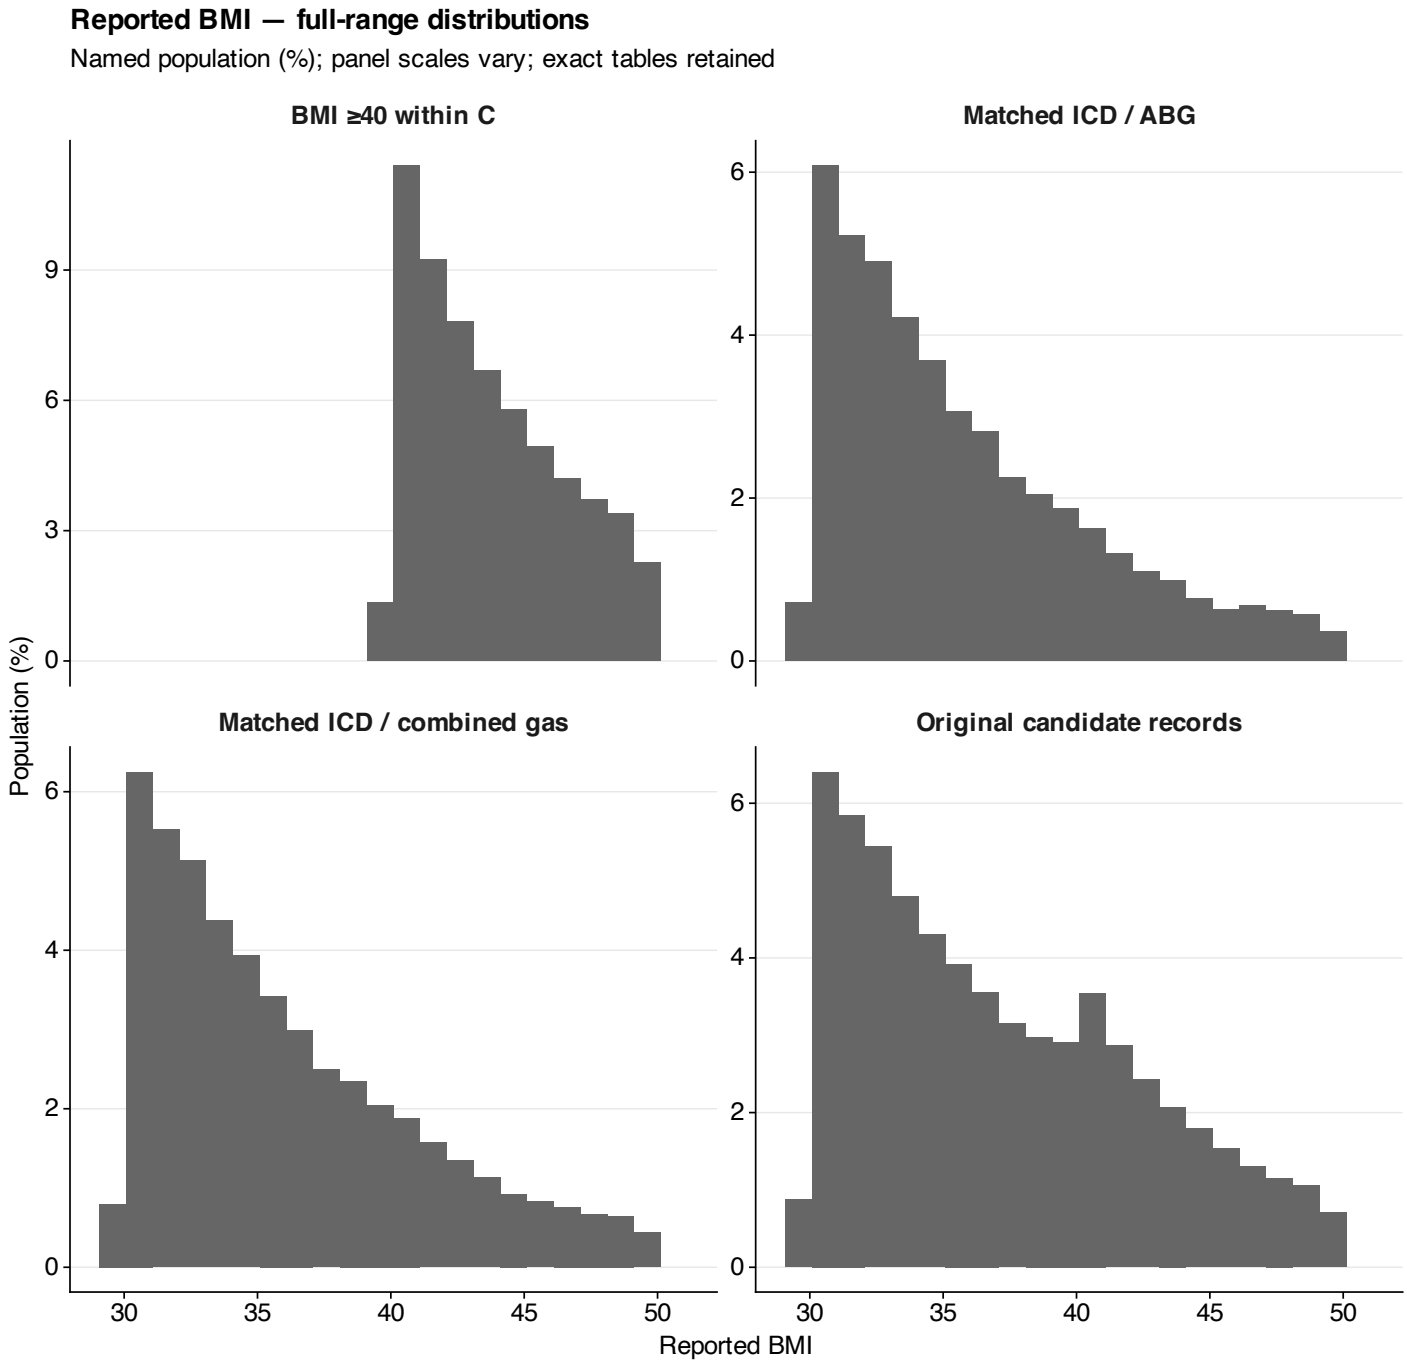

Figure 888: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete reported_bmi stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

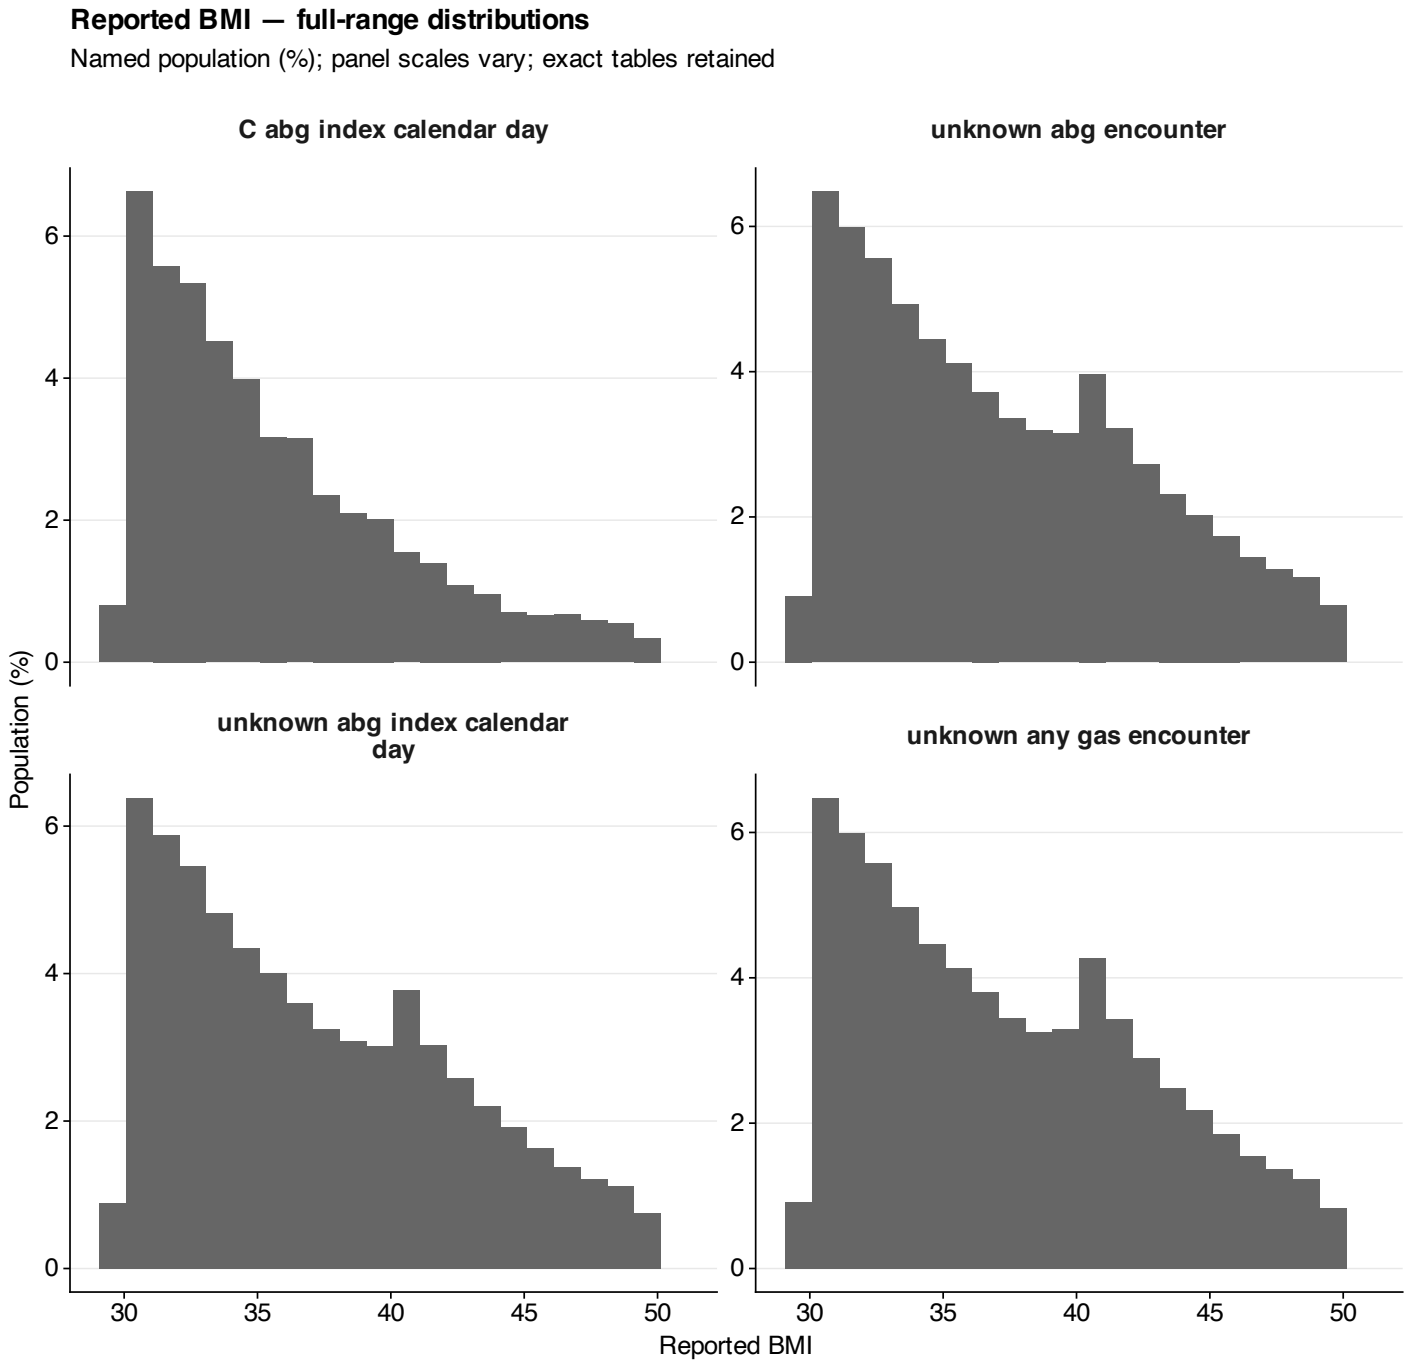

Figure 889: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete reported_bmi stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

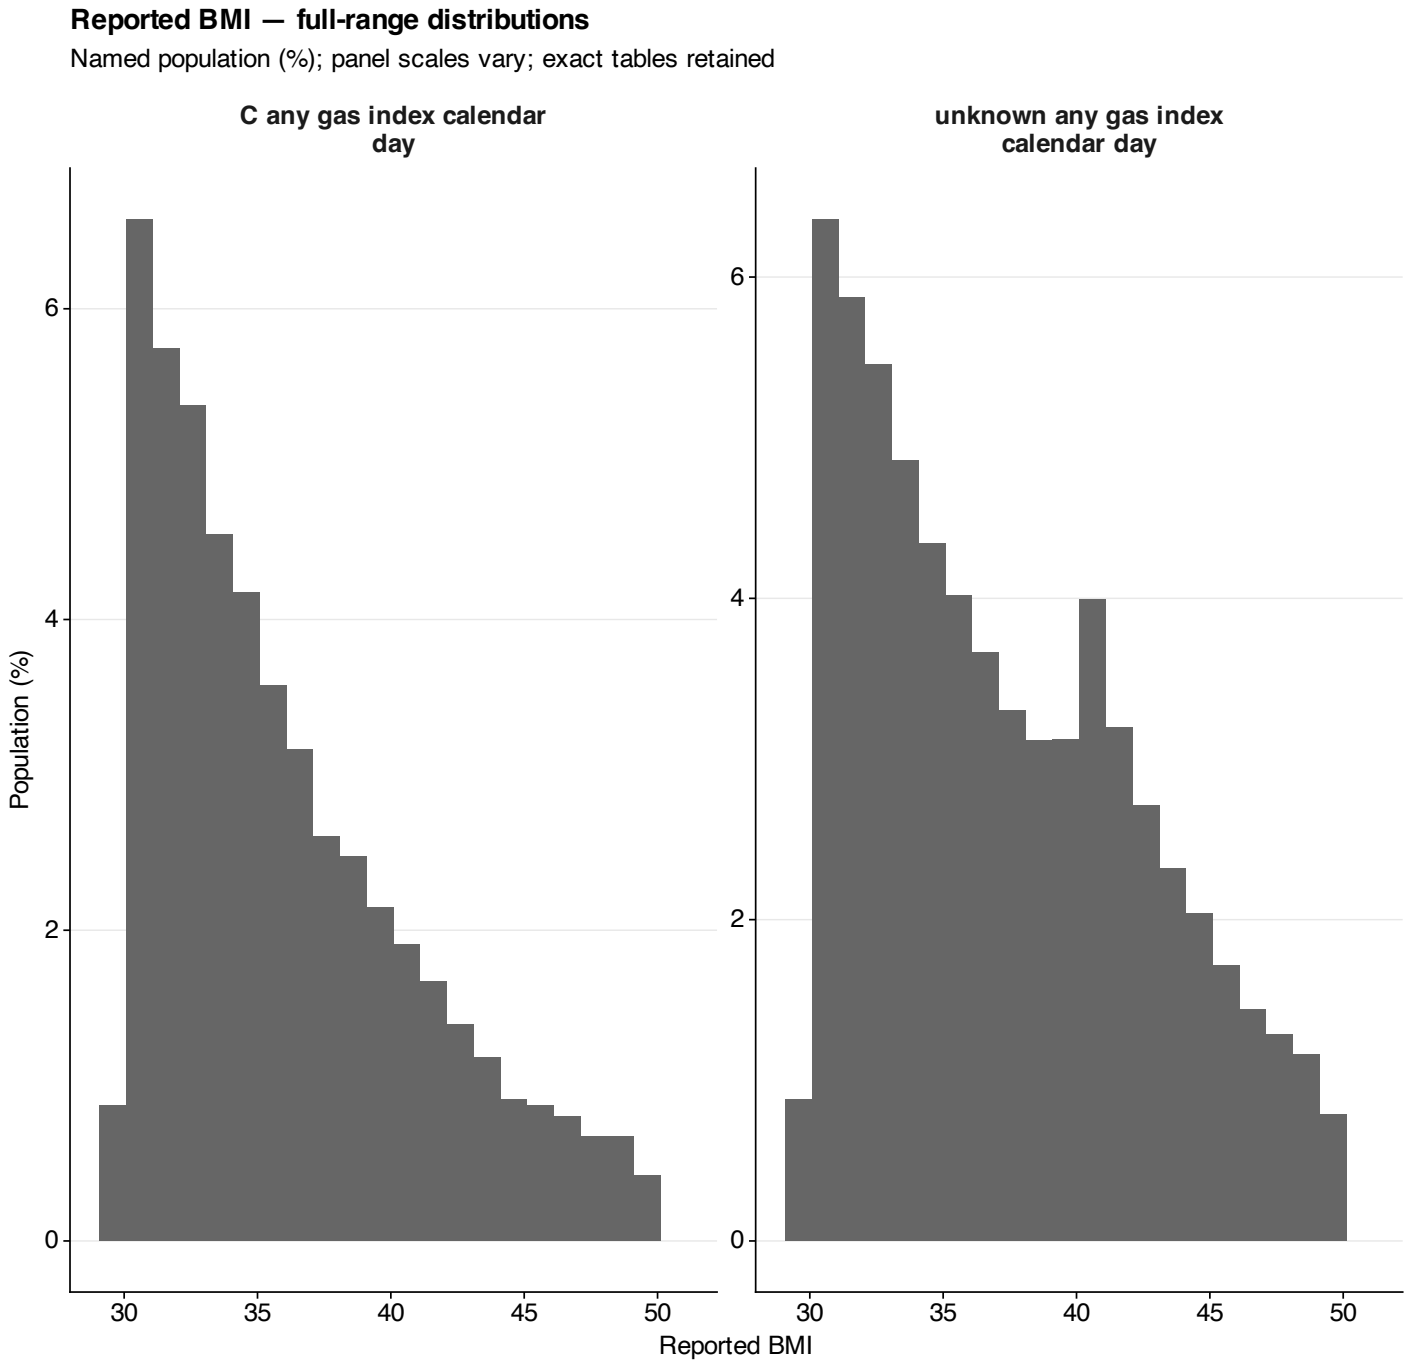

Figure 890: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete reported_bmi stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

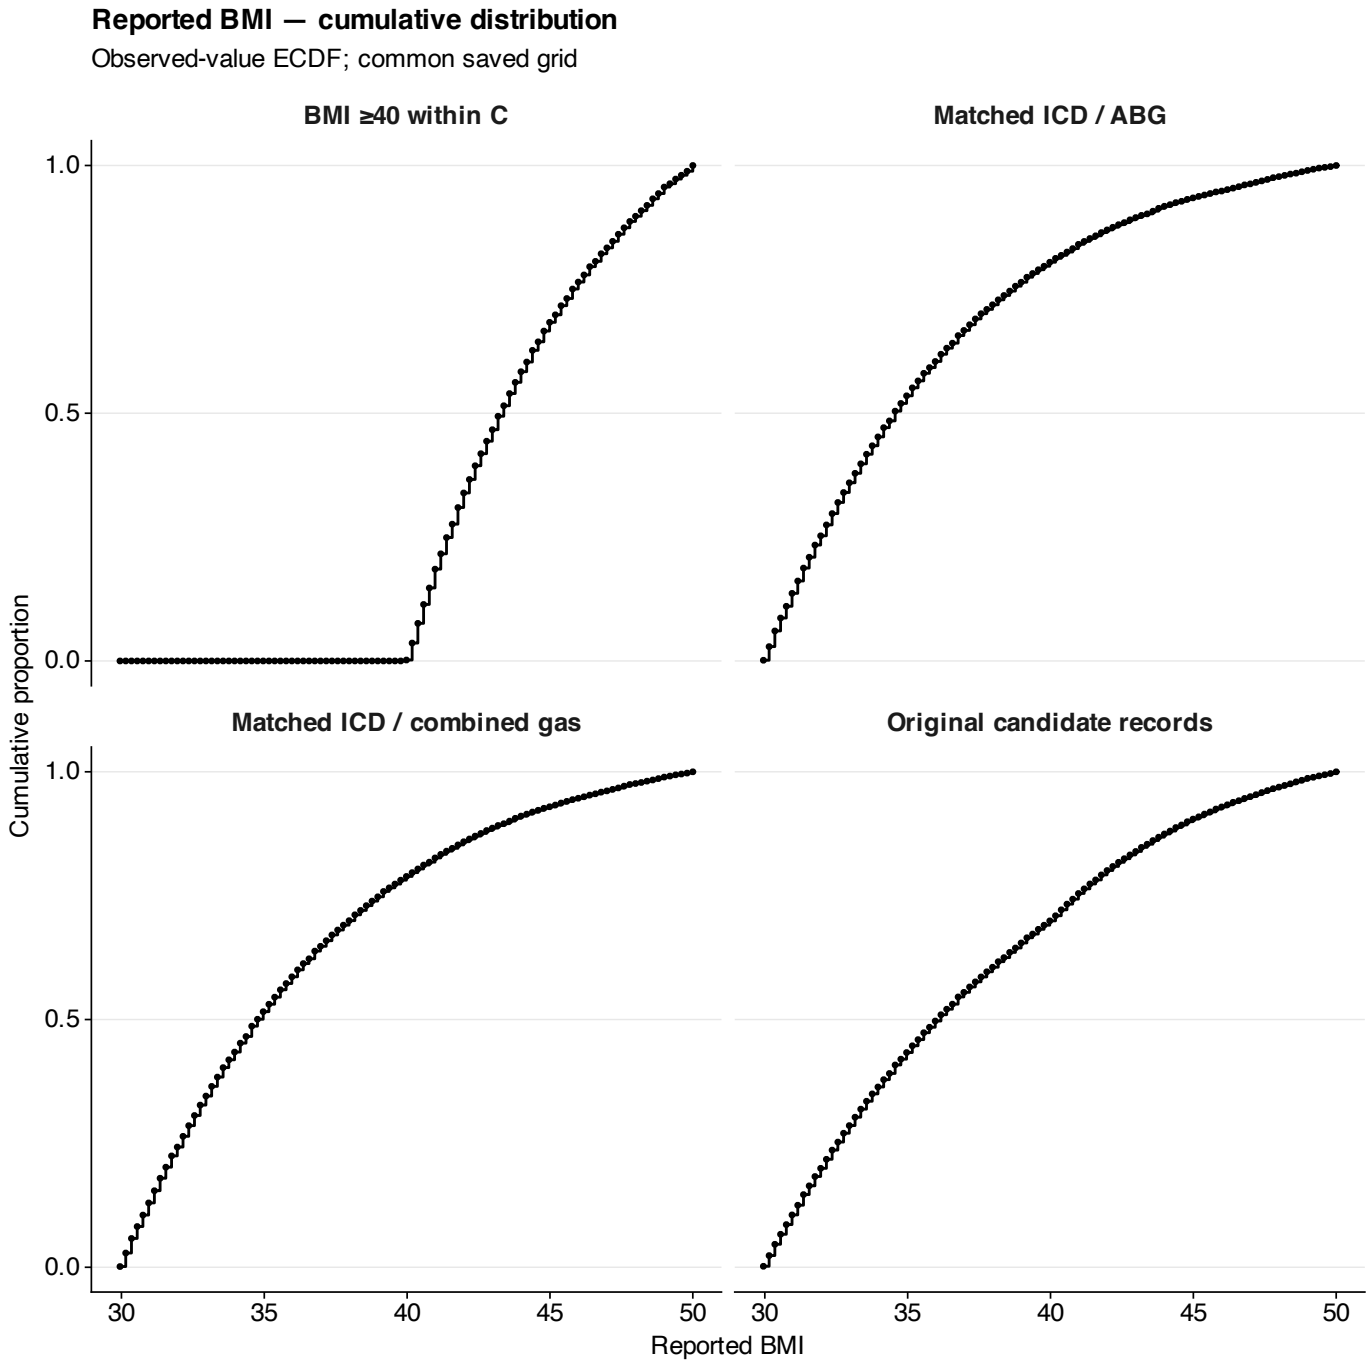

Figure 891: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. reported_bmi ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

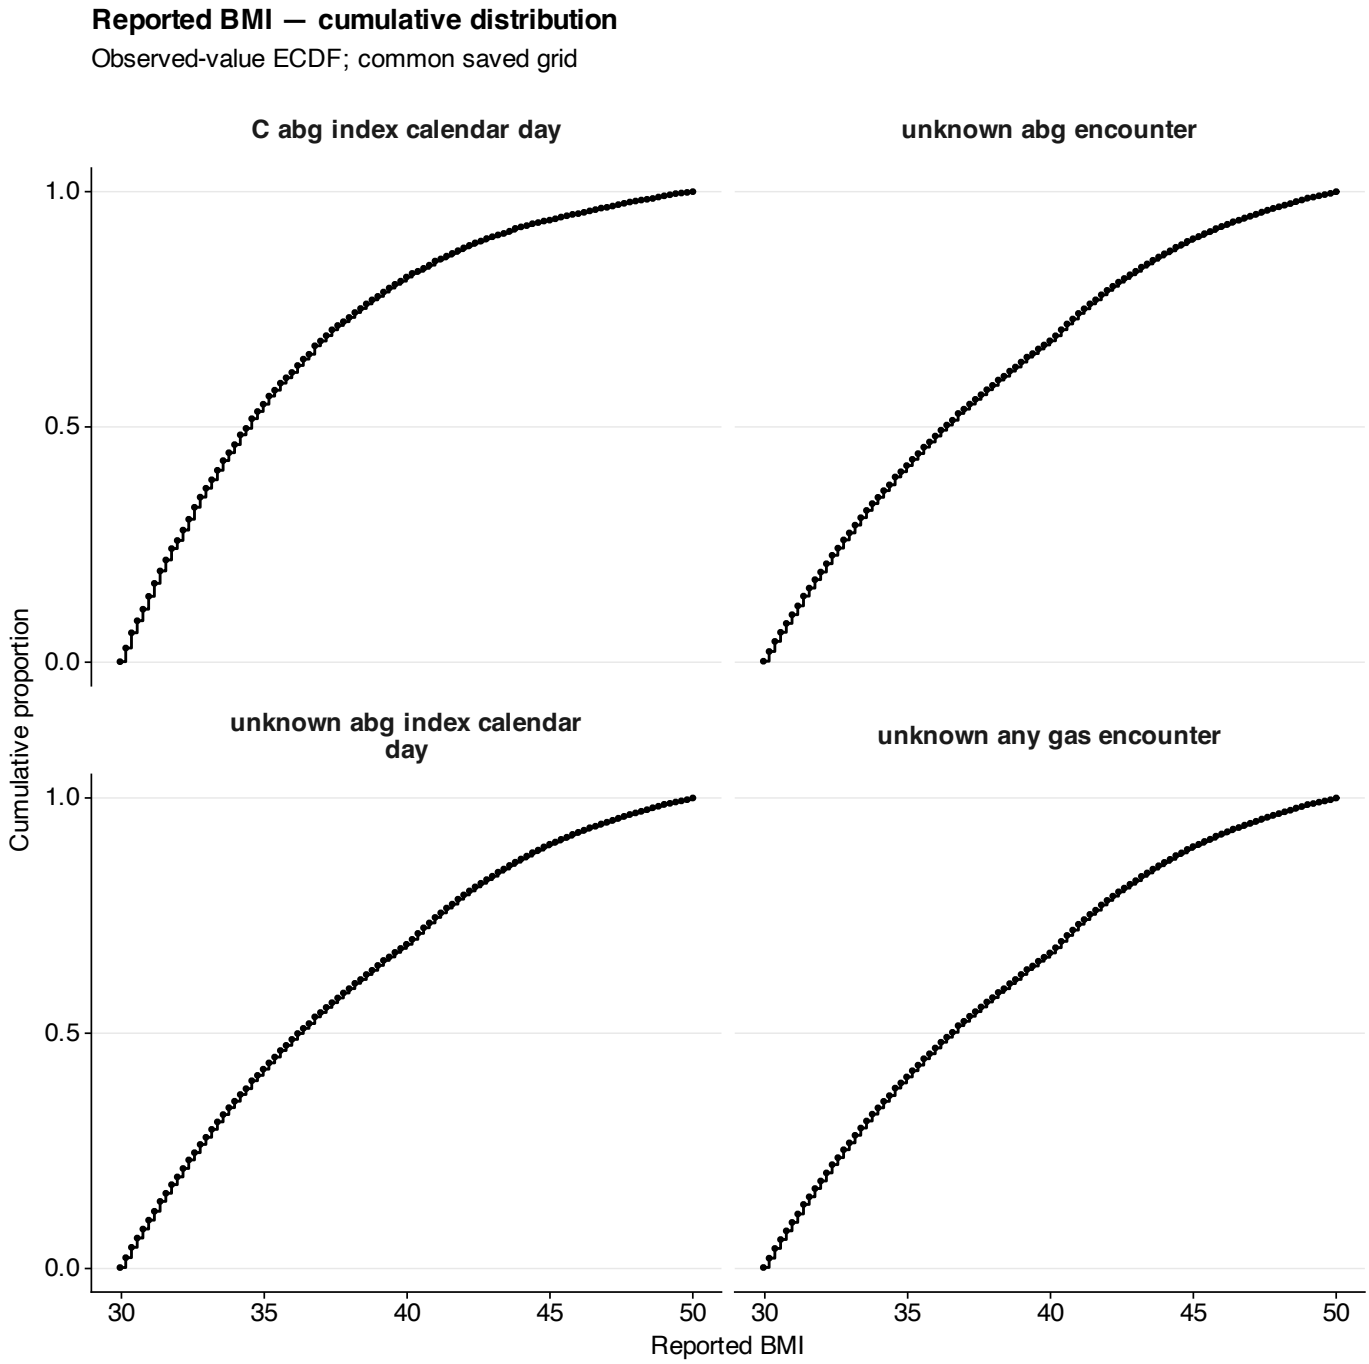

Figure 892: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. reported_bmi ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

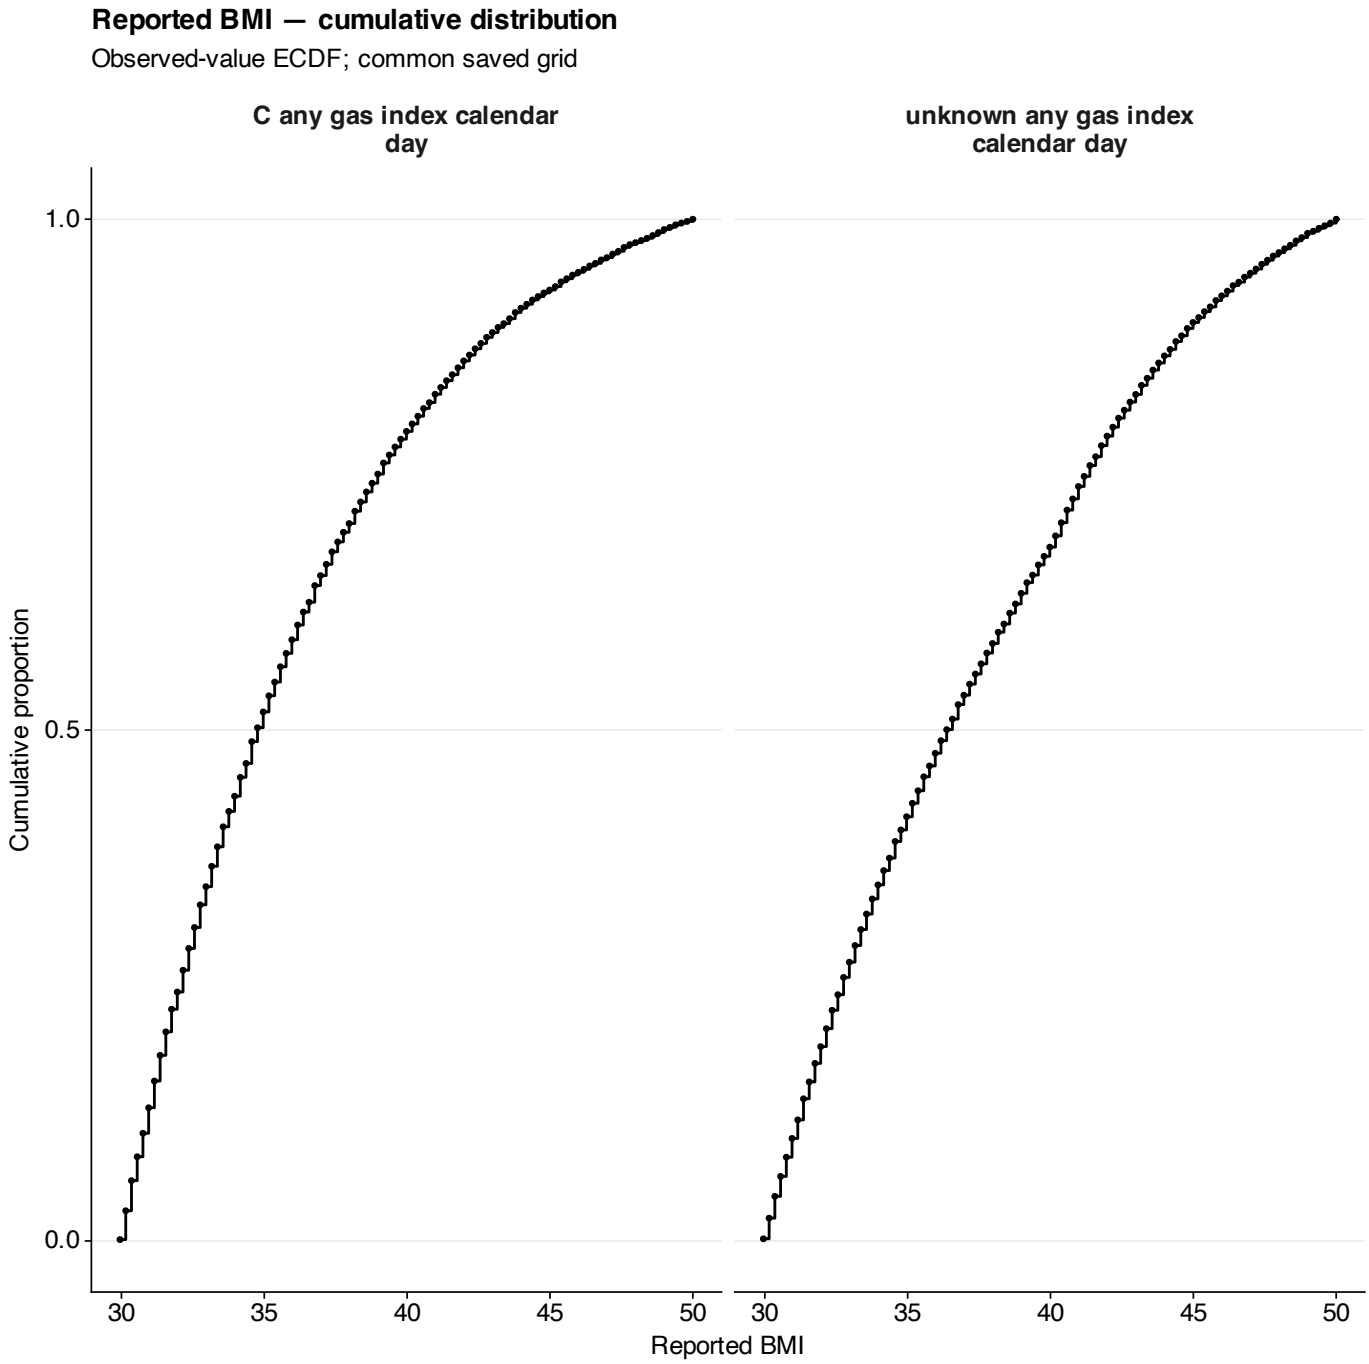

Figure 893: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. reported_bmi ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

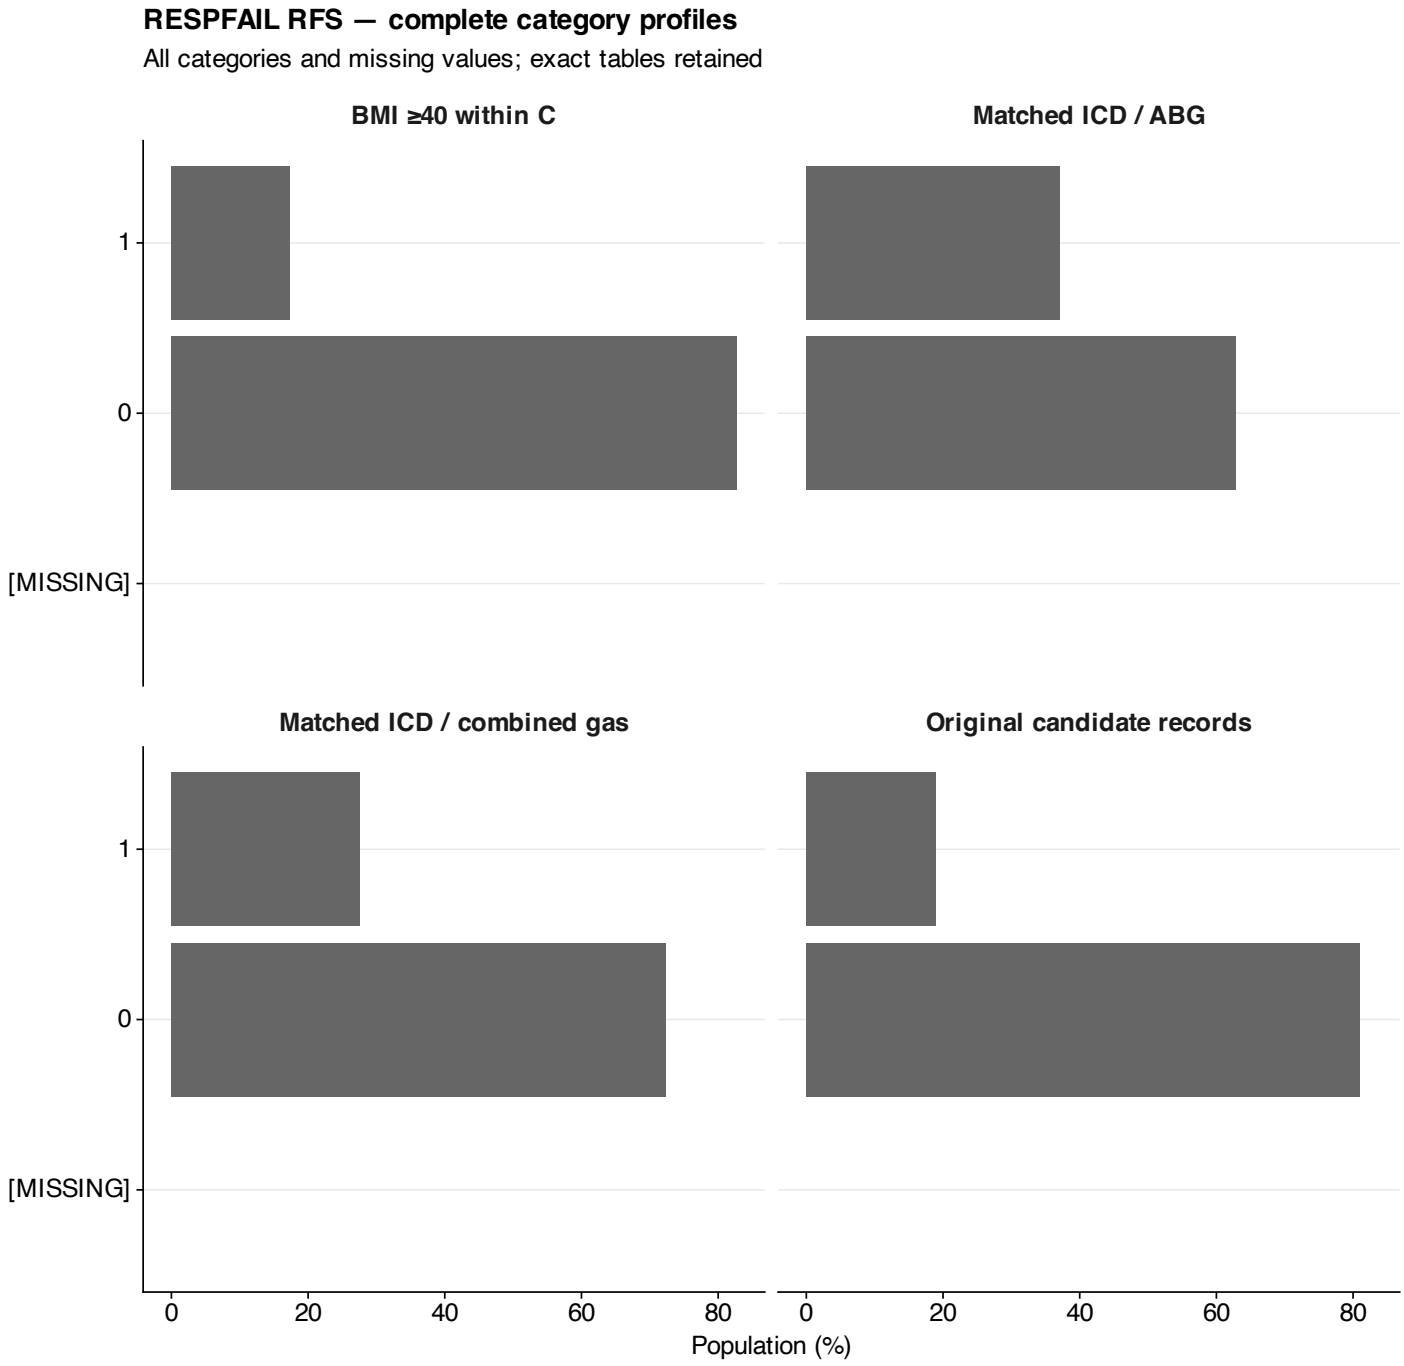

Figure 894: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete RESPFAIL_rfs stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

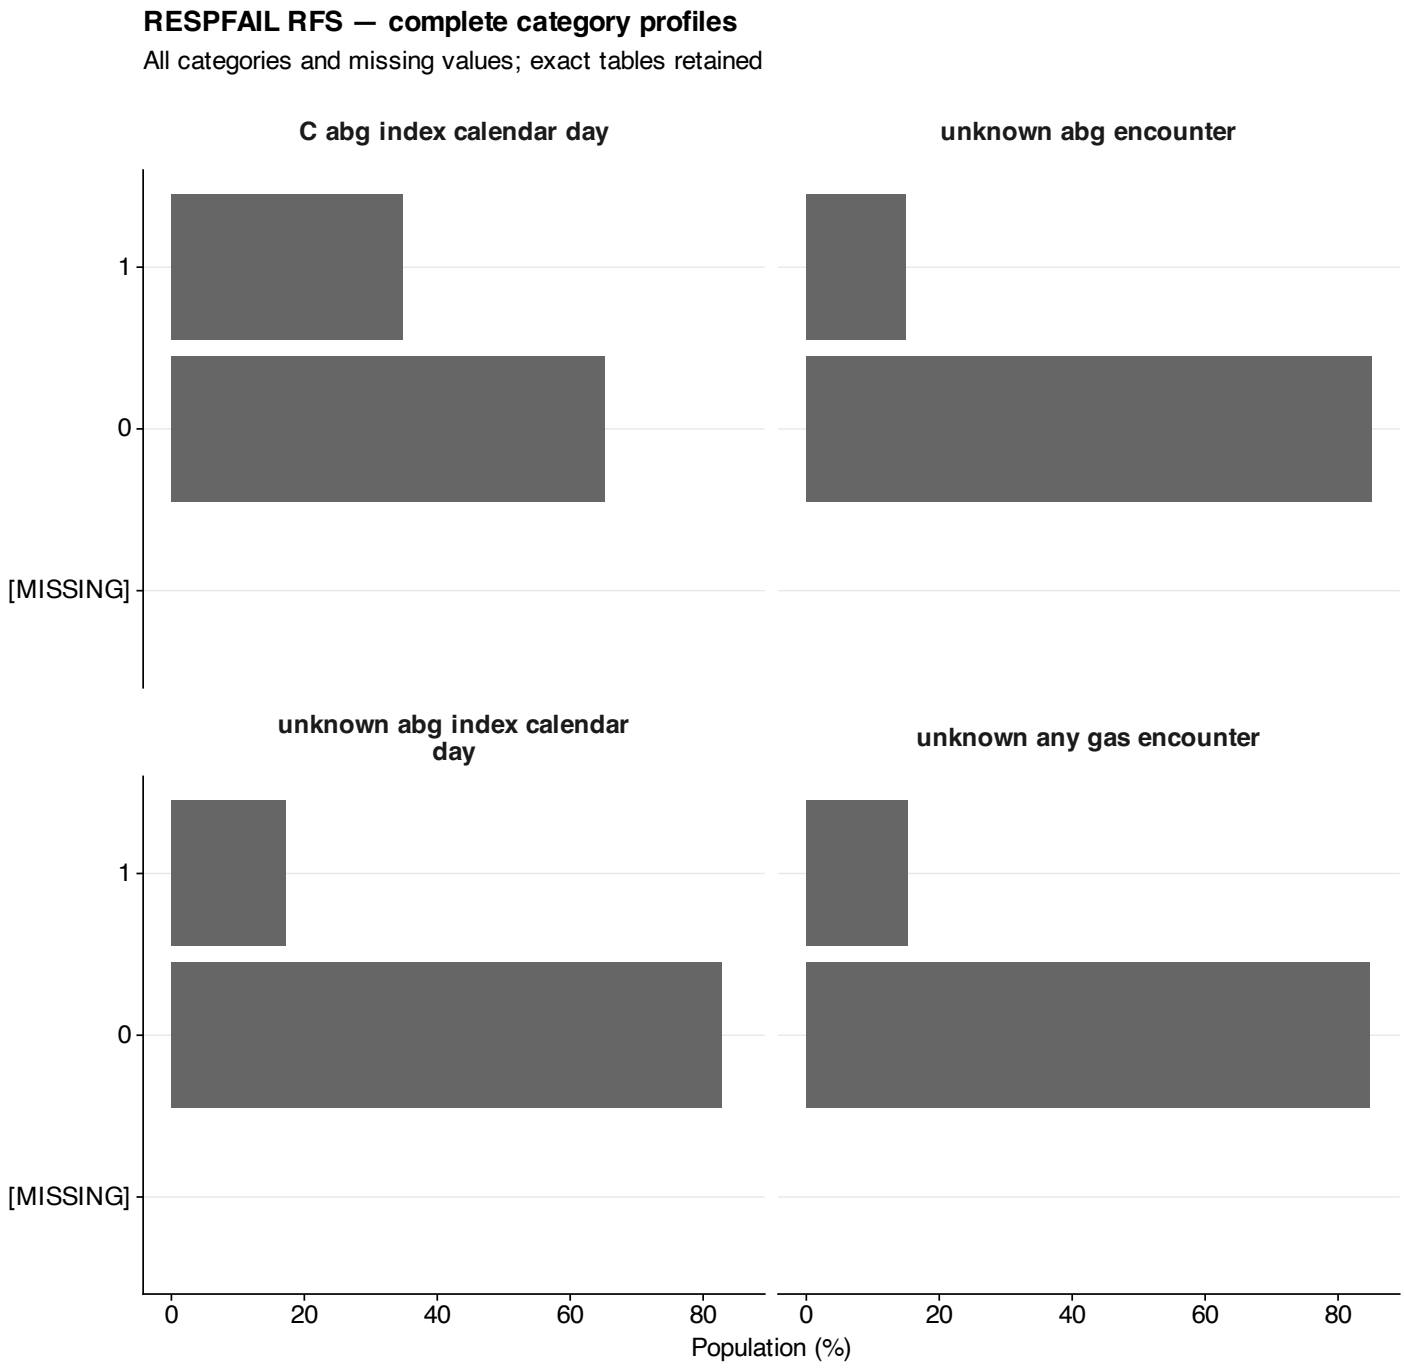

Figure 895: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete RESPFAIL_rfs stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

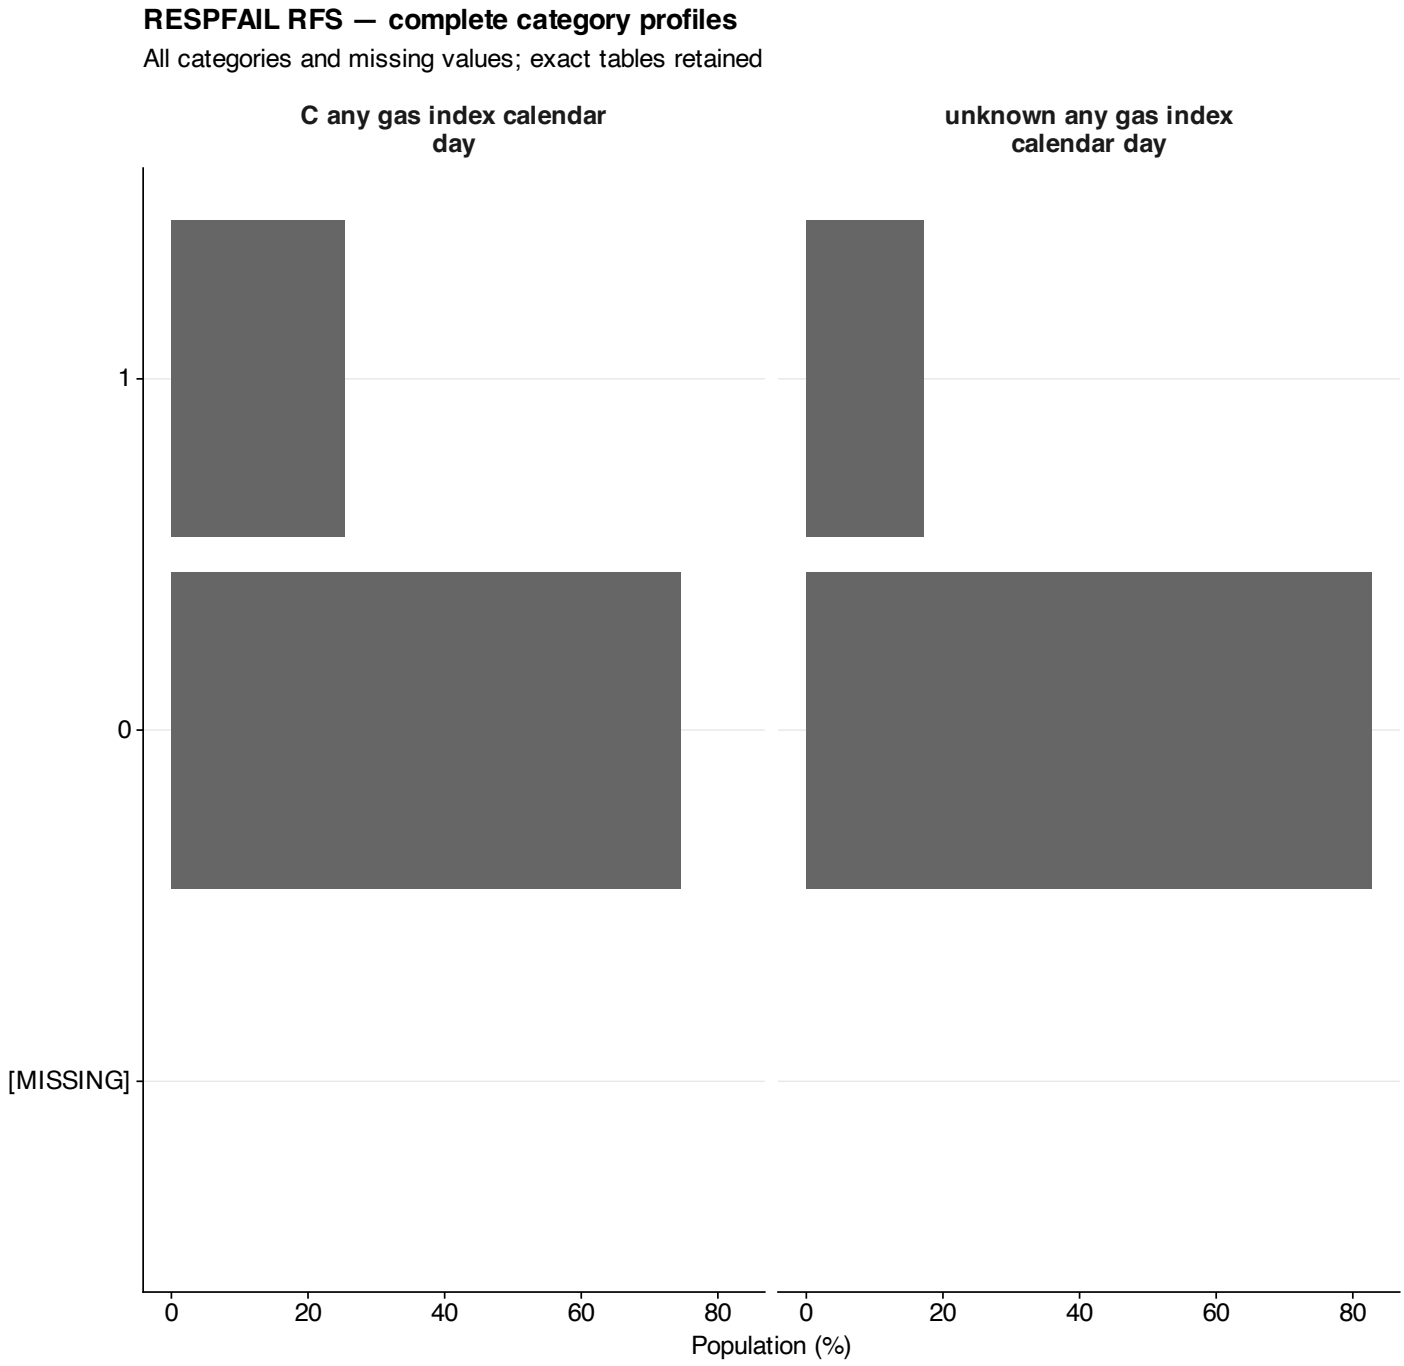

Figure 896: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete RESPFAIL_rfs stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

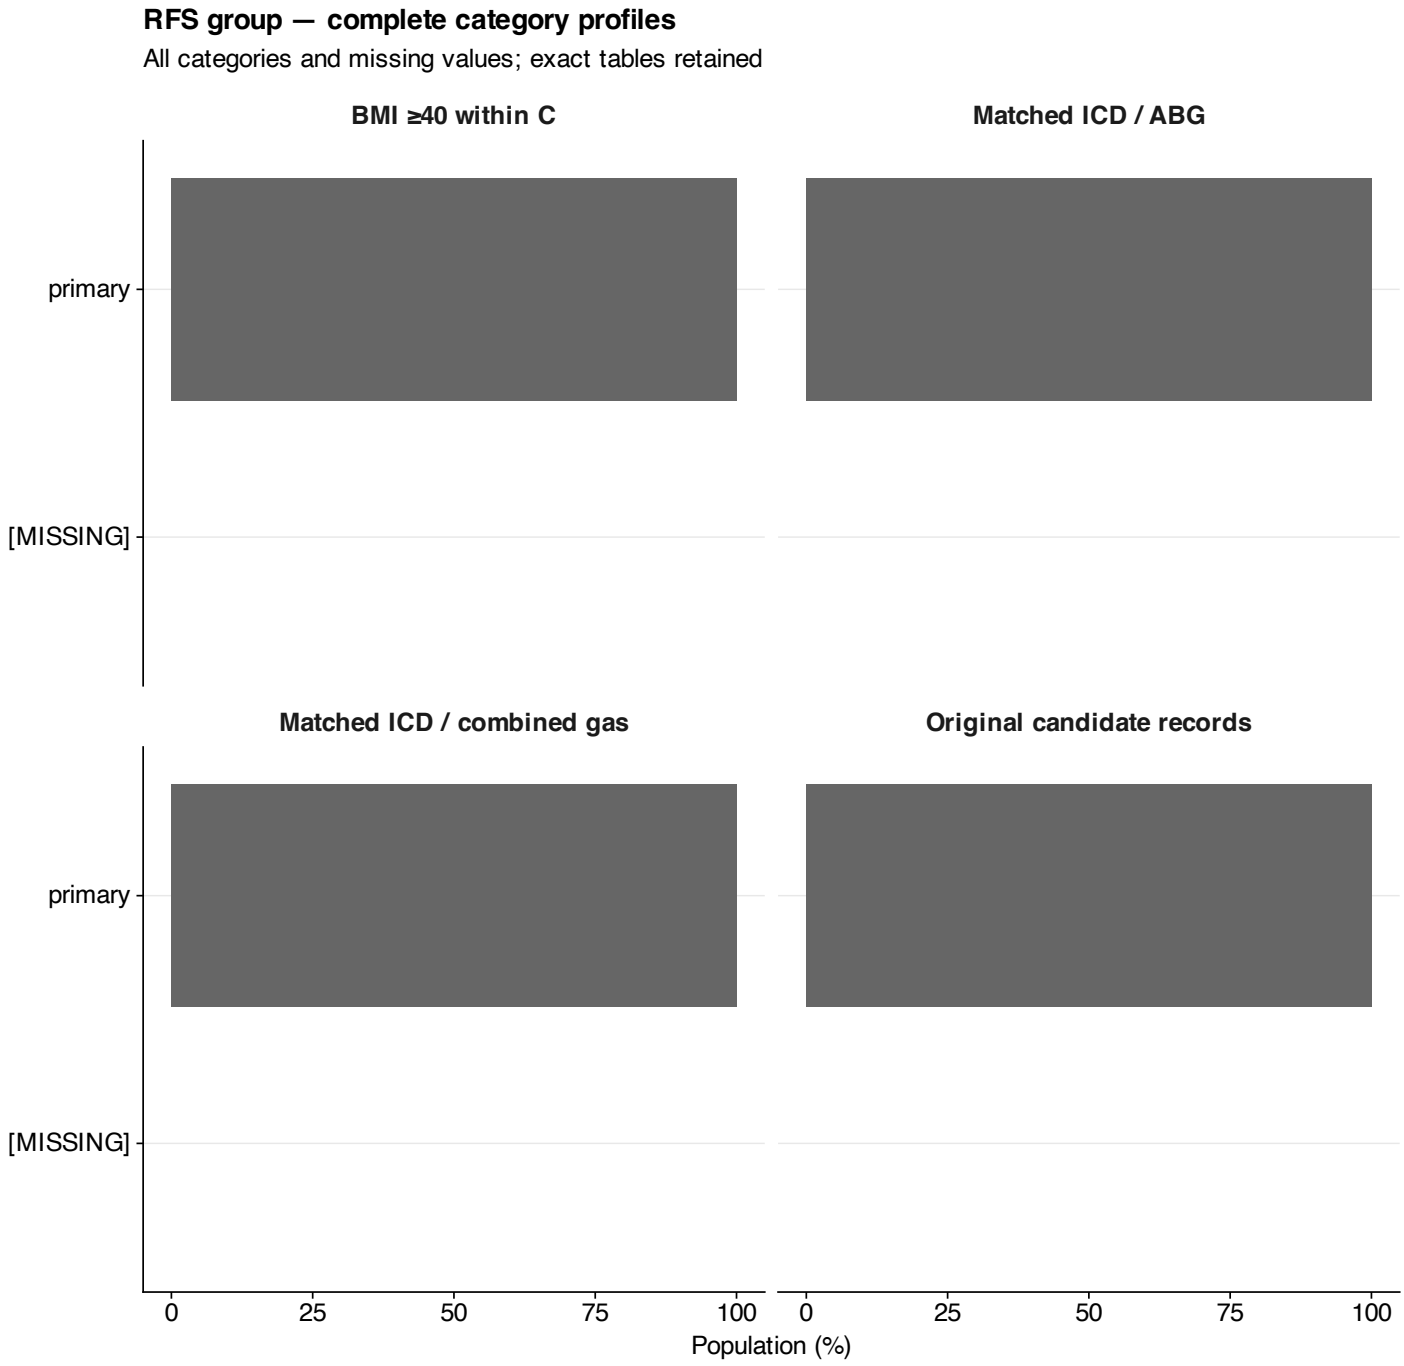

Figure 897: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete rfs_group stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

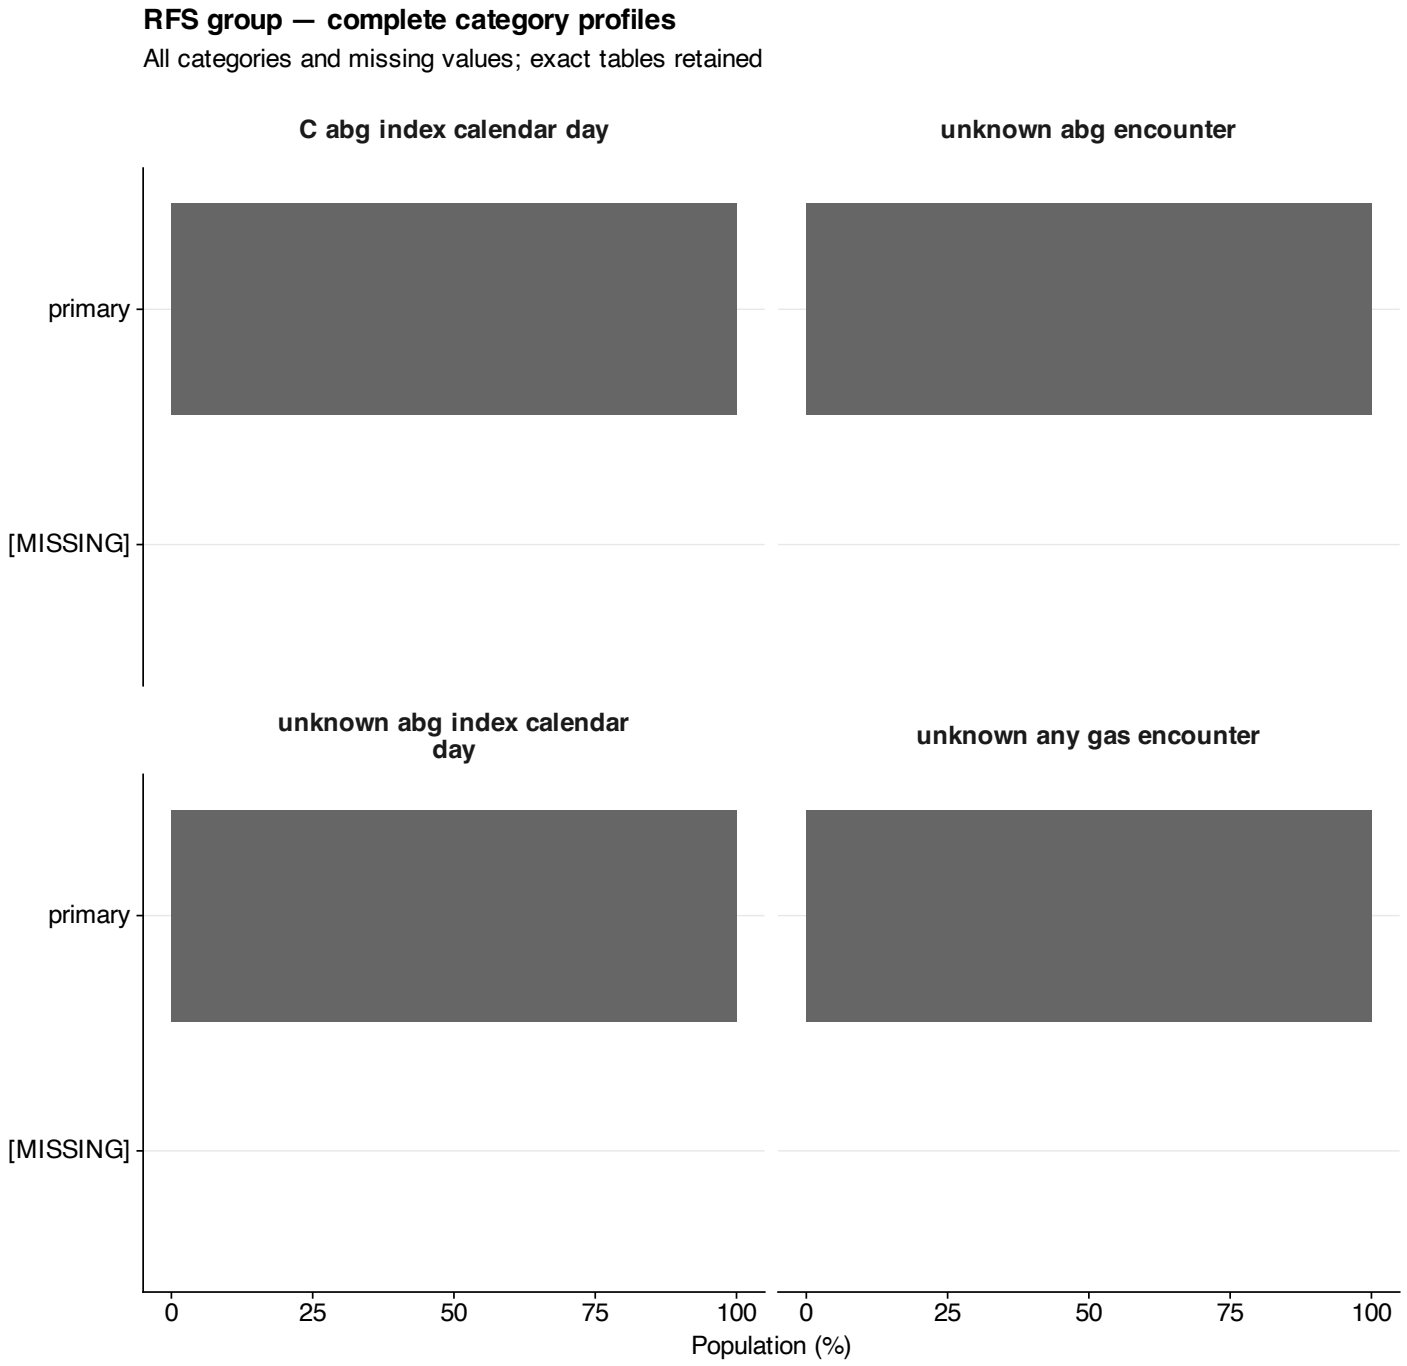

Figure 898: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete rfs_group stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

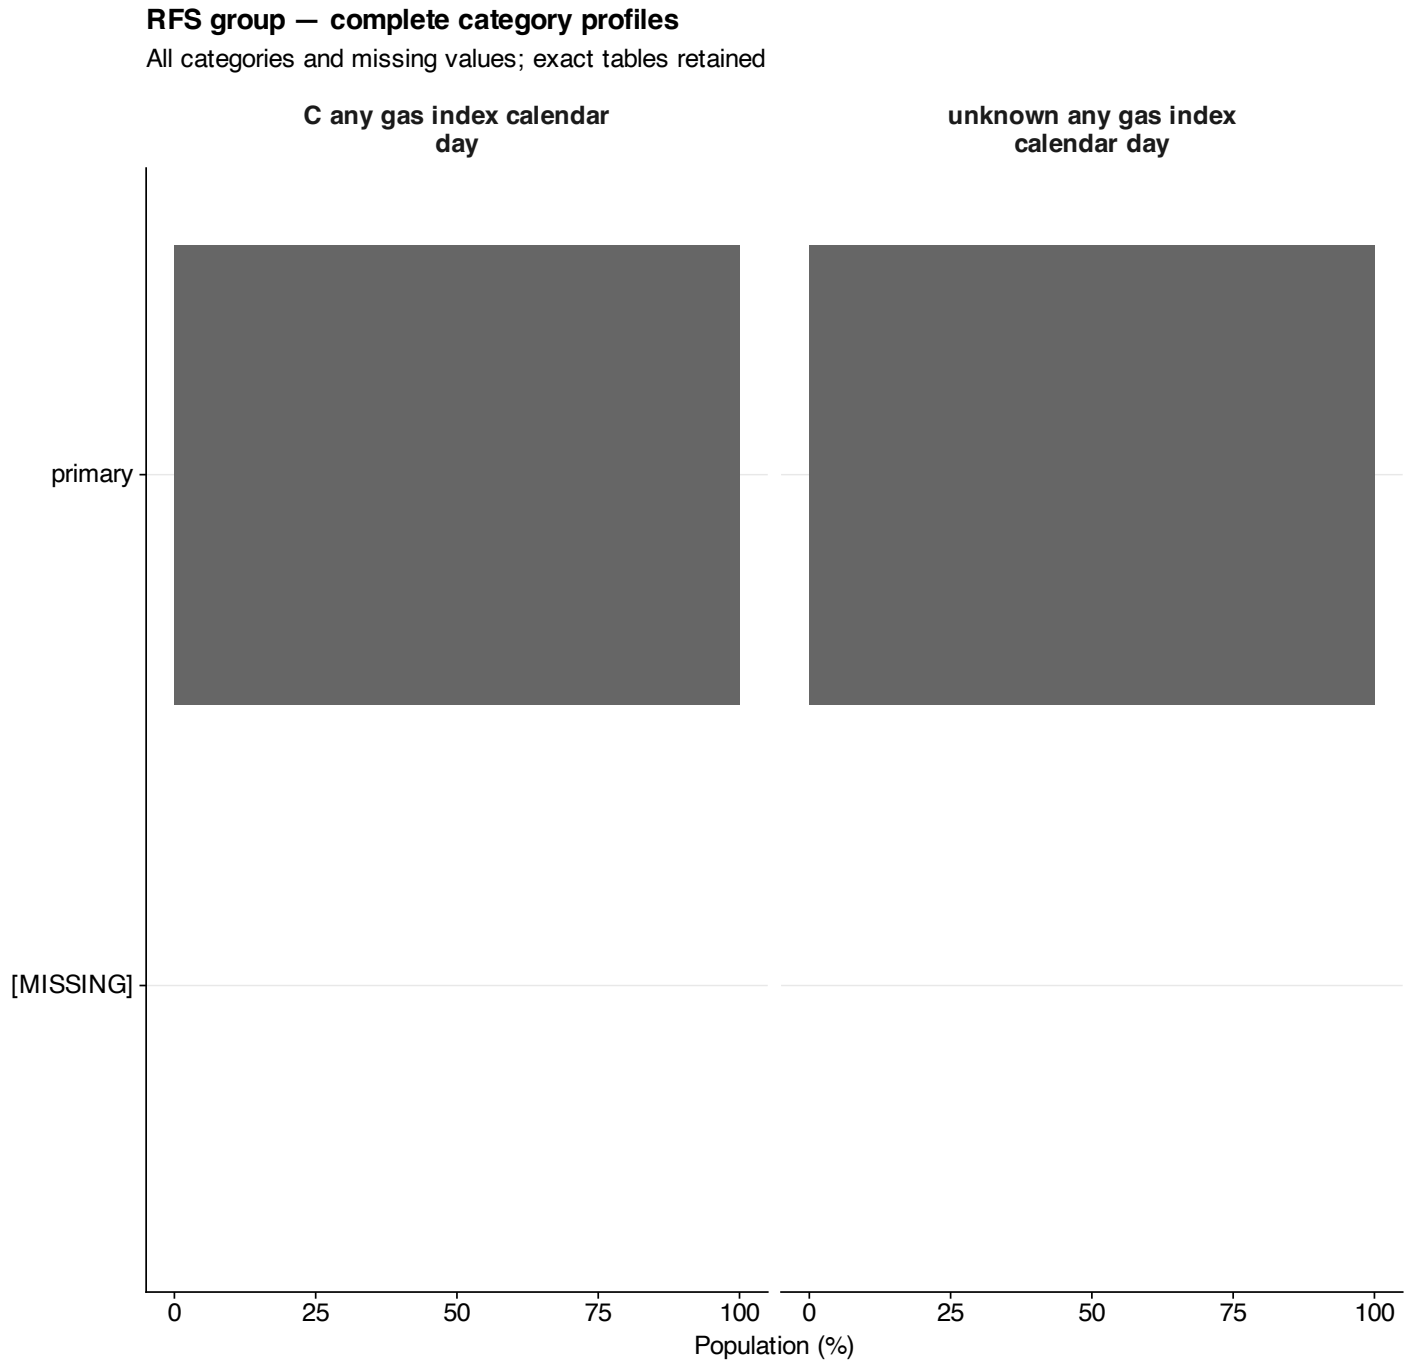

Figure 899: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete rfs_group stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

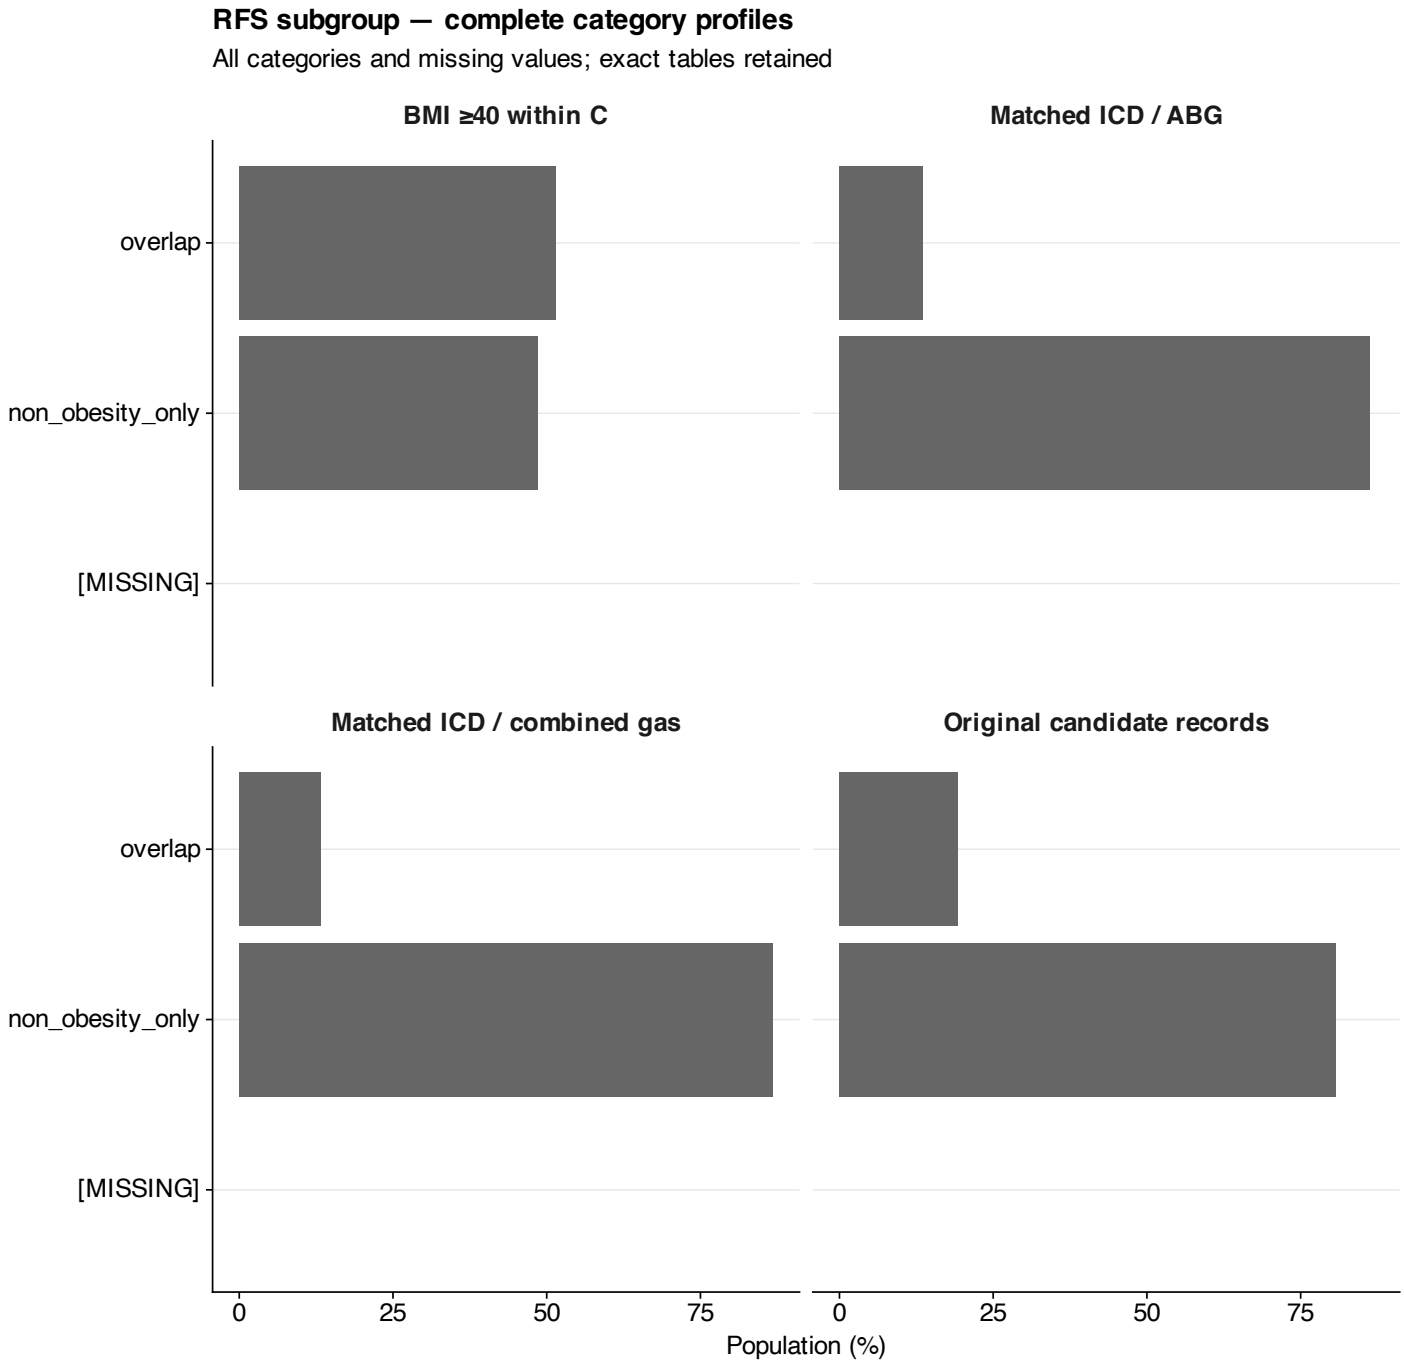

Figure 900: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete rfs_subgroup stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

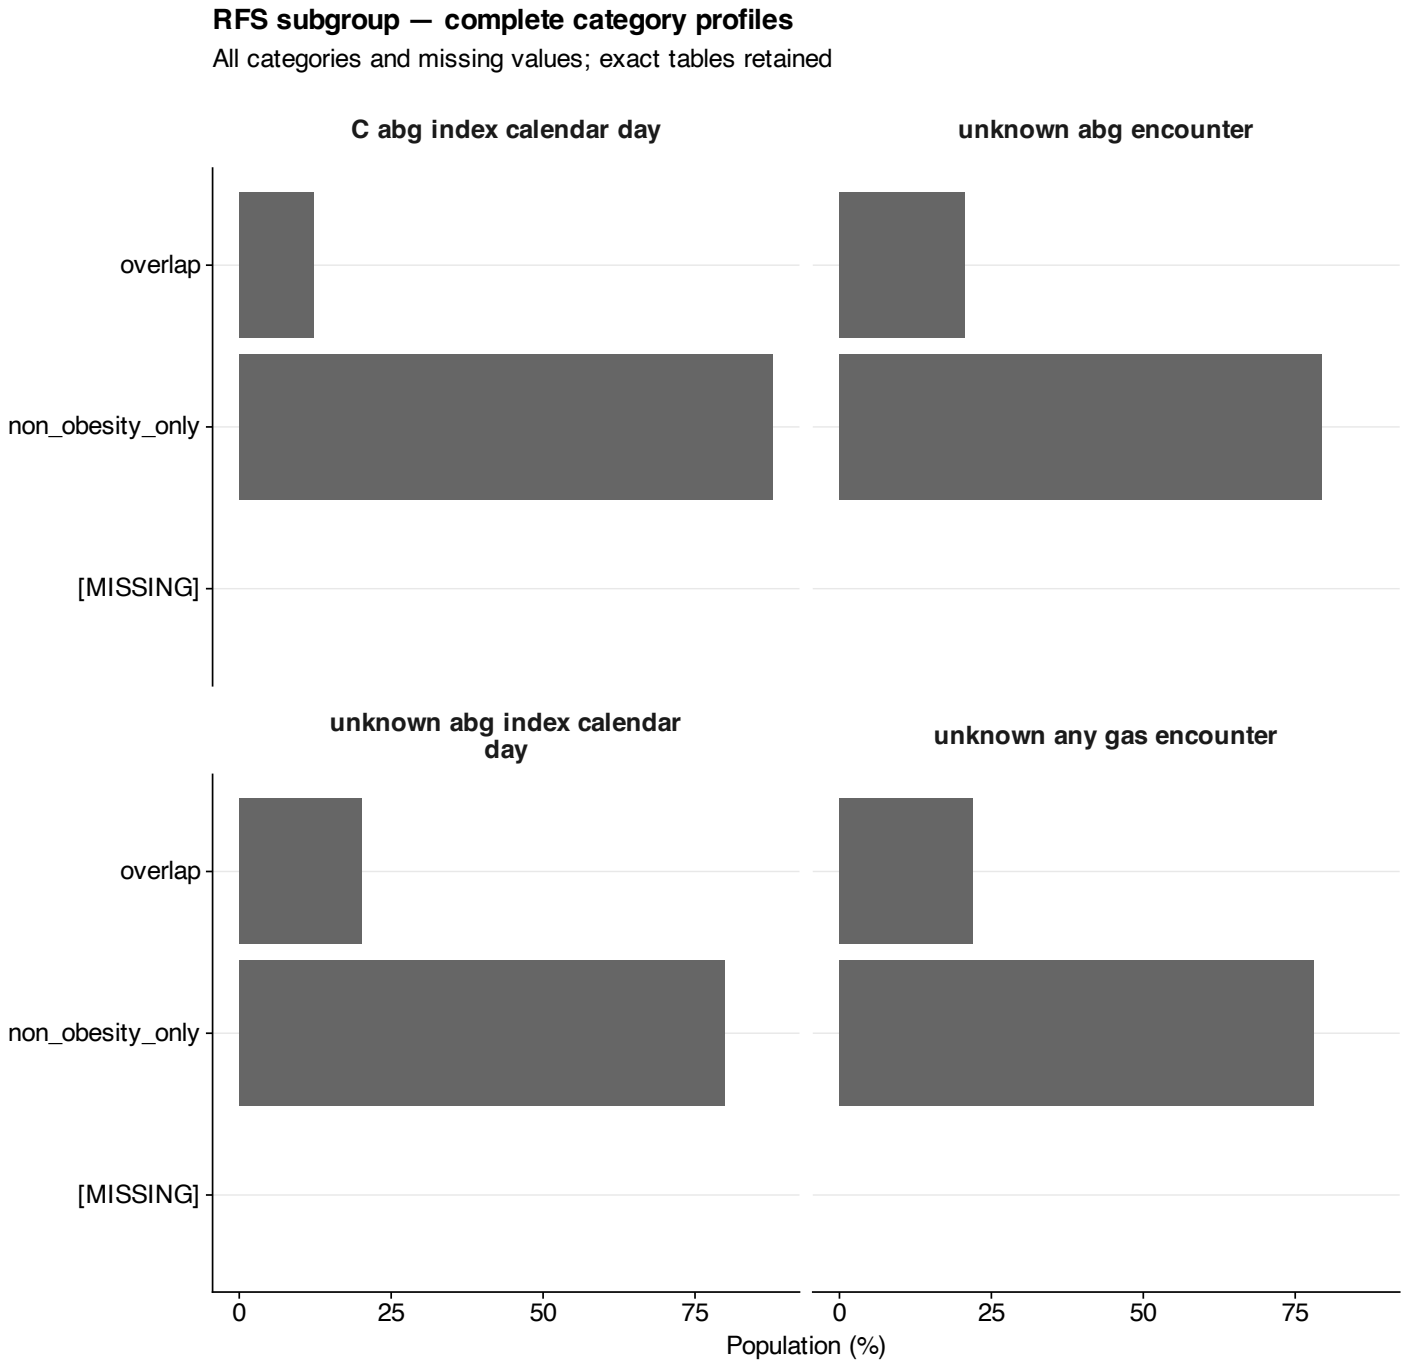

Figure 901: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete rfs_subgroup stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

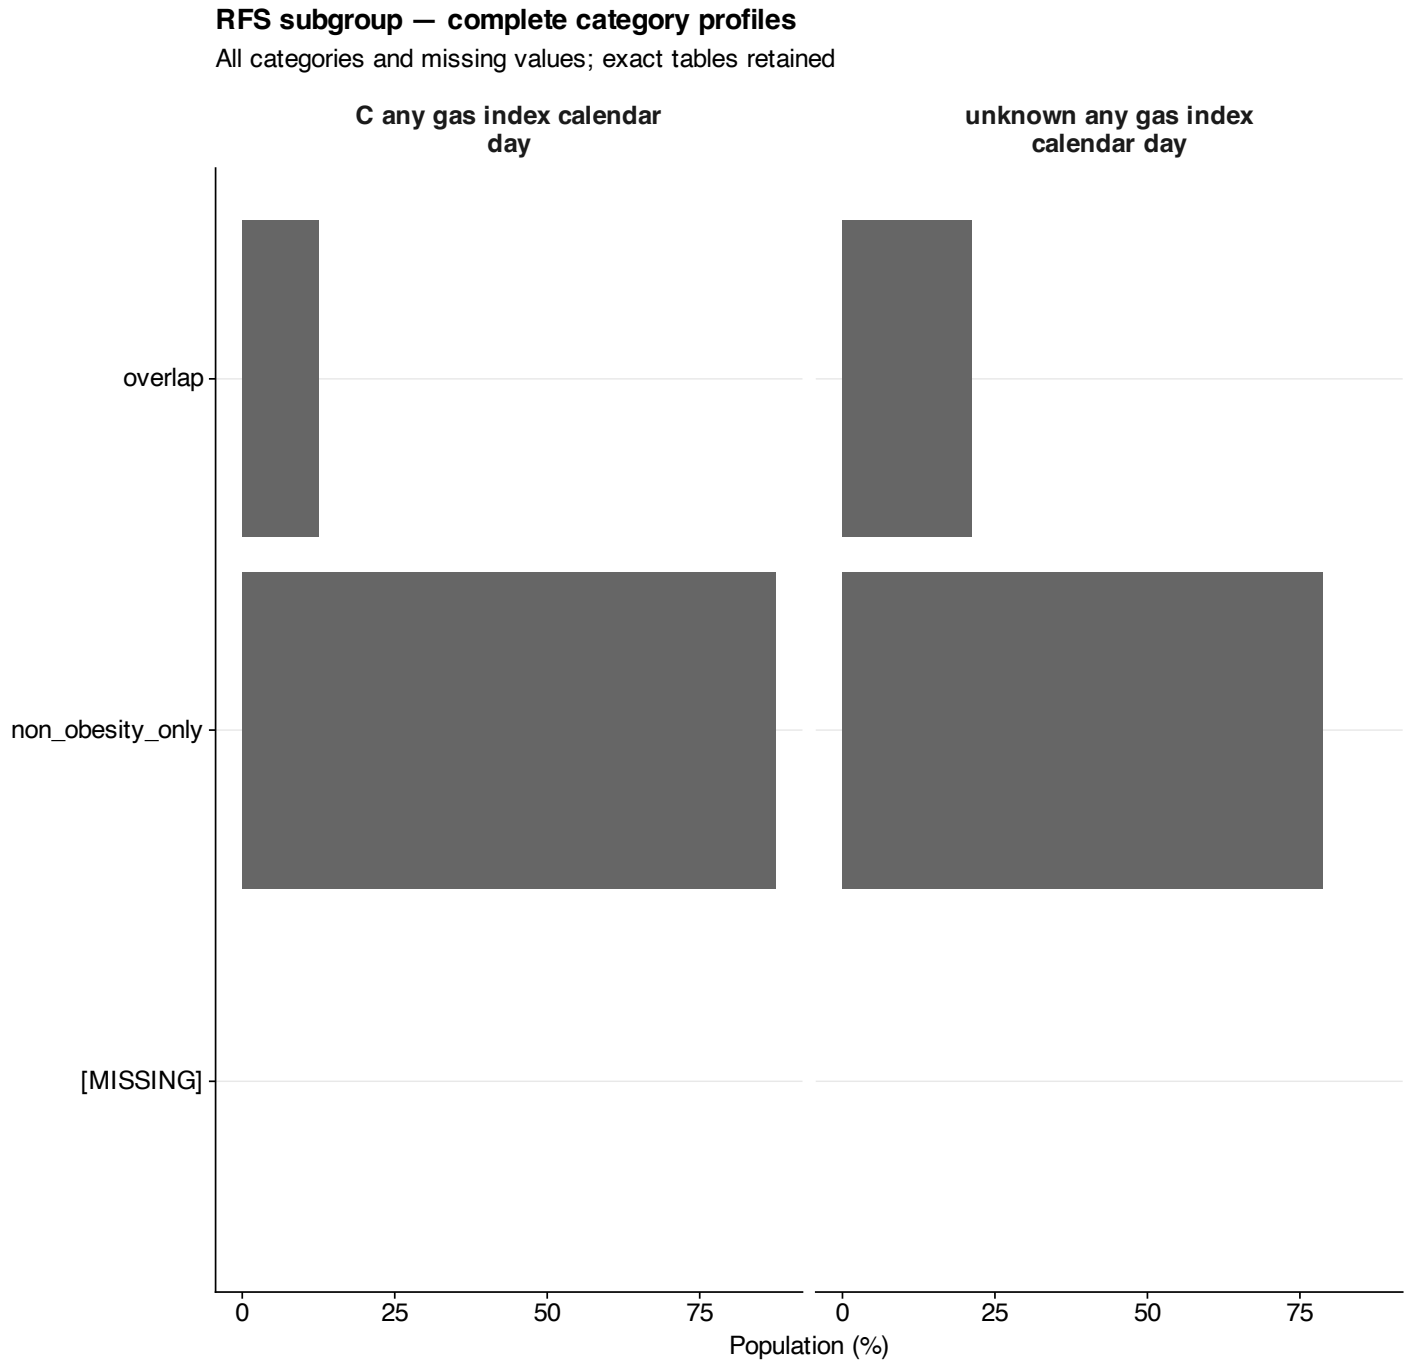

Figure 902: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete rfs_subgroup stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

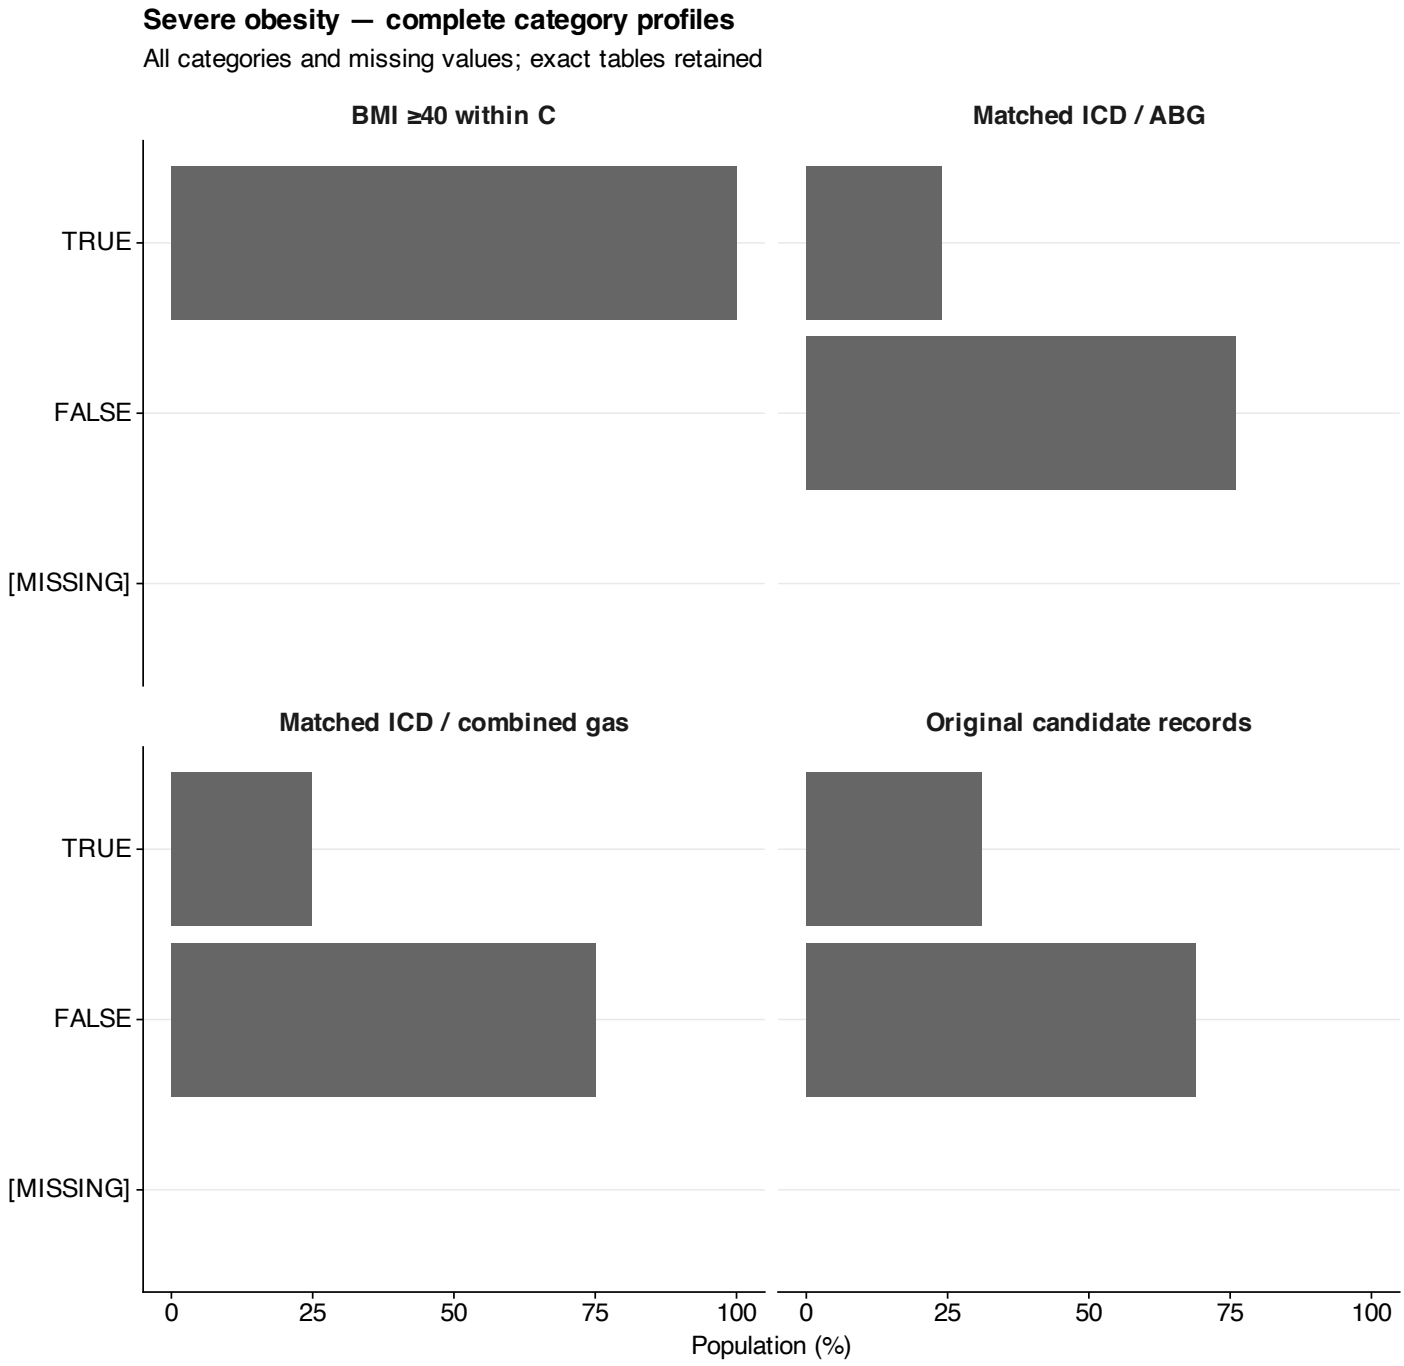

Figure 903: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete severe_obesity stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

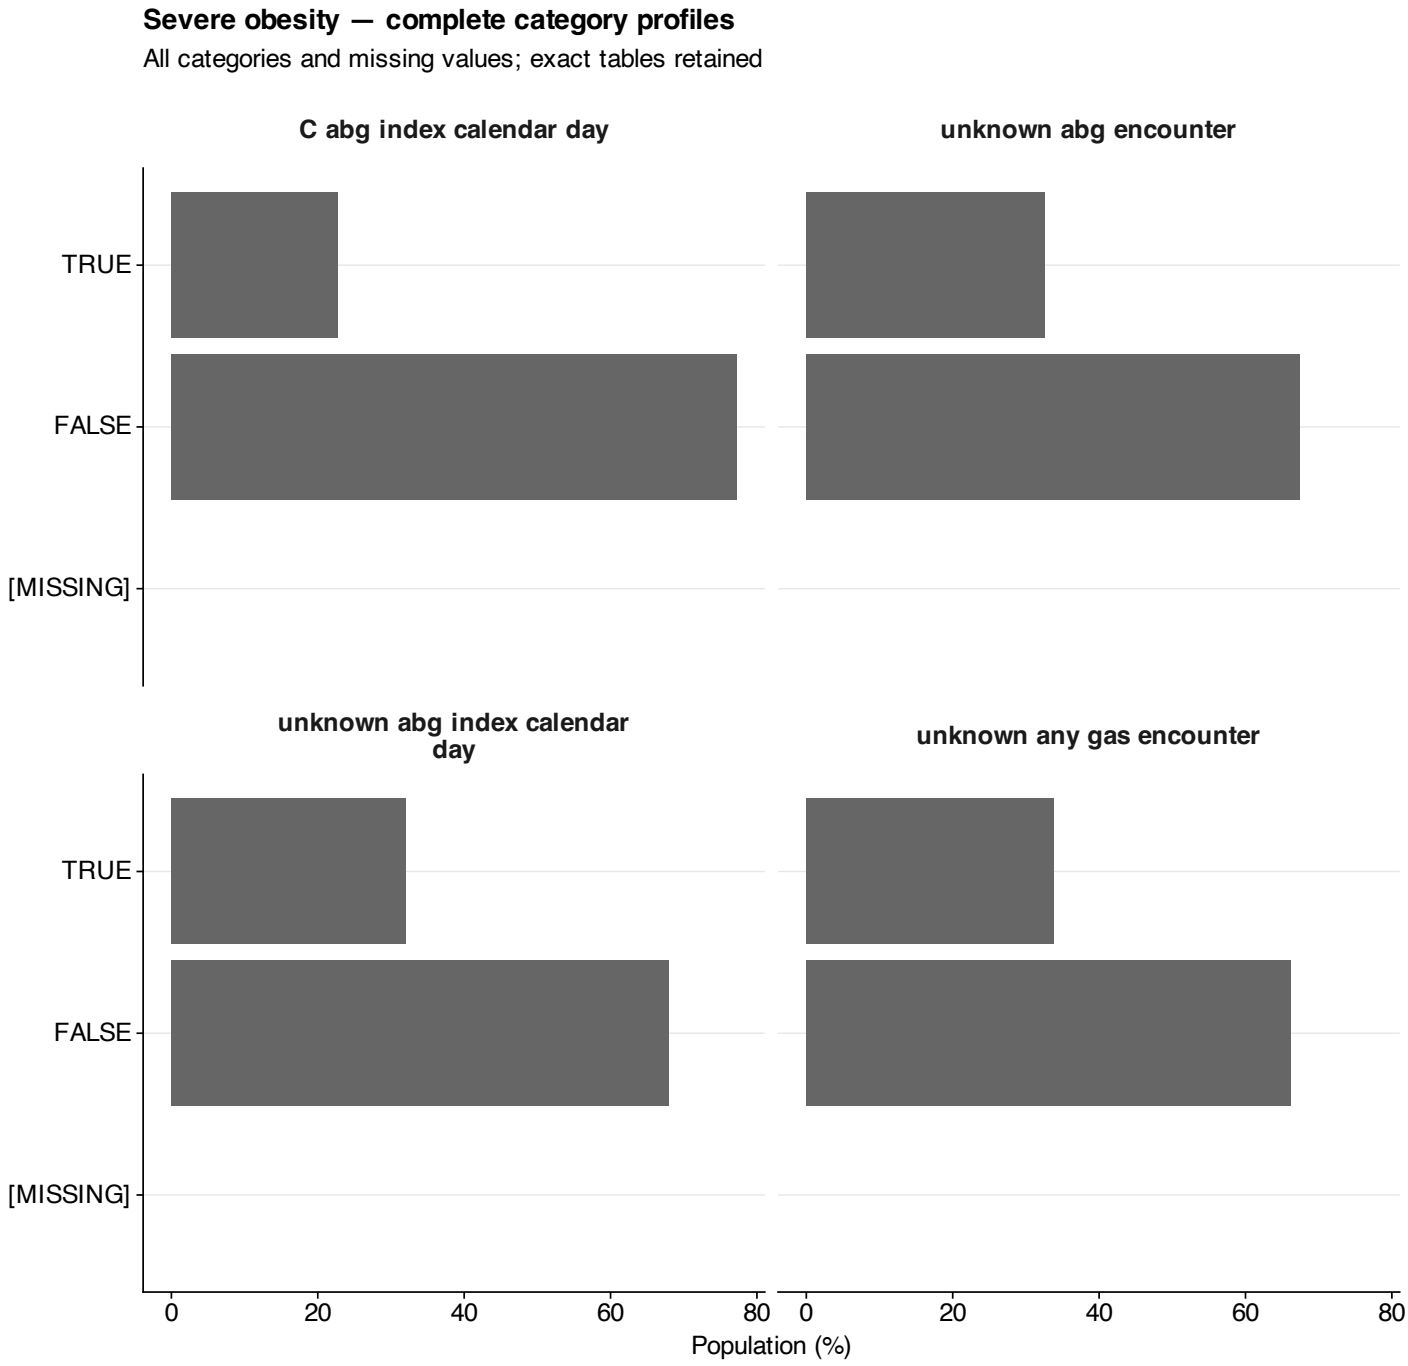

Figure 904: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete severe_obesity stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

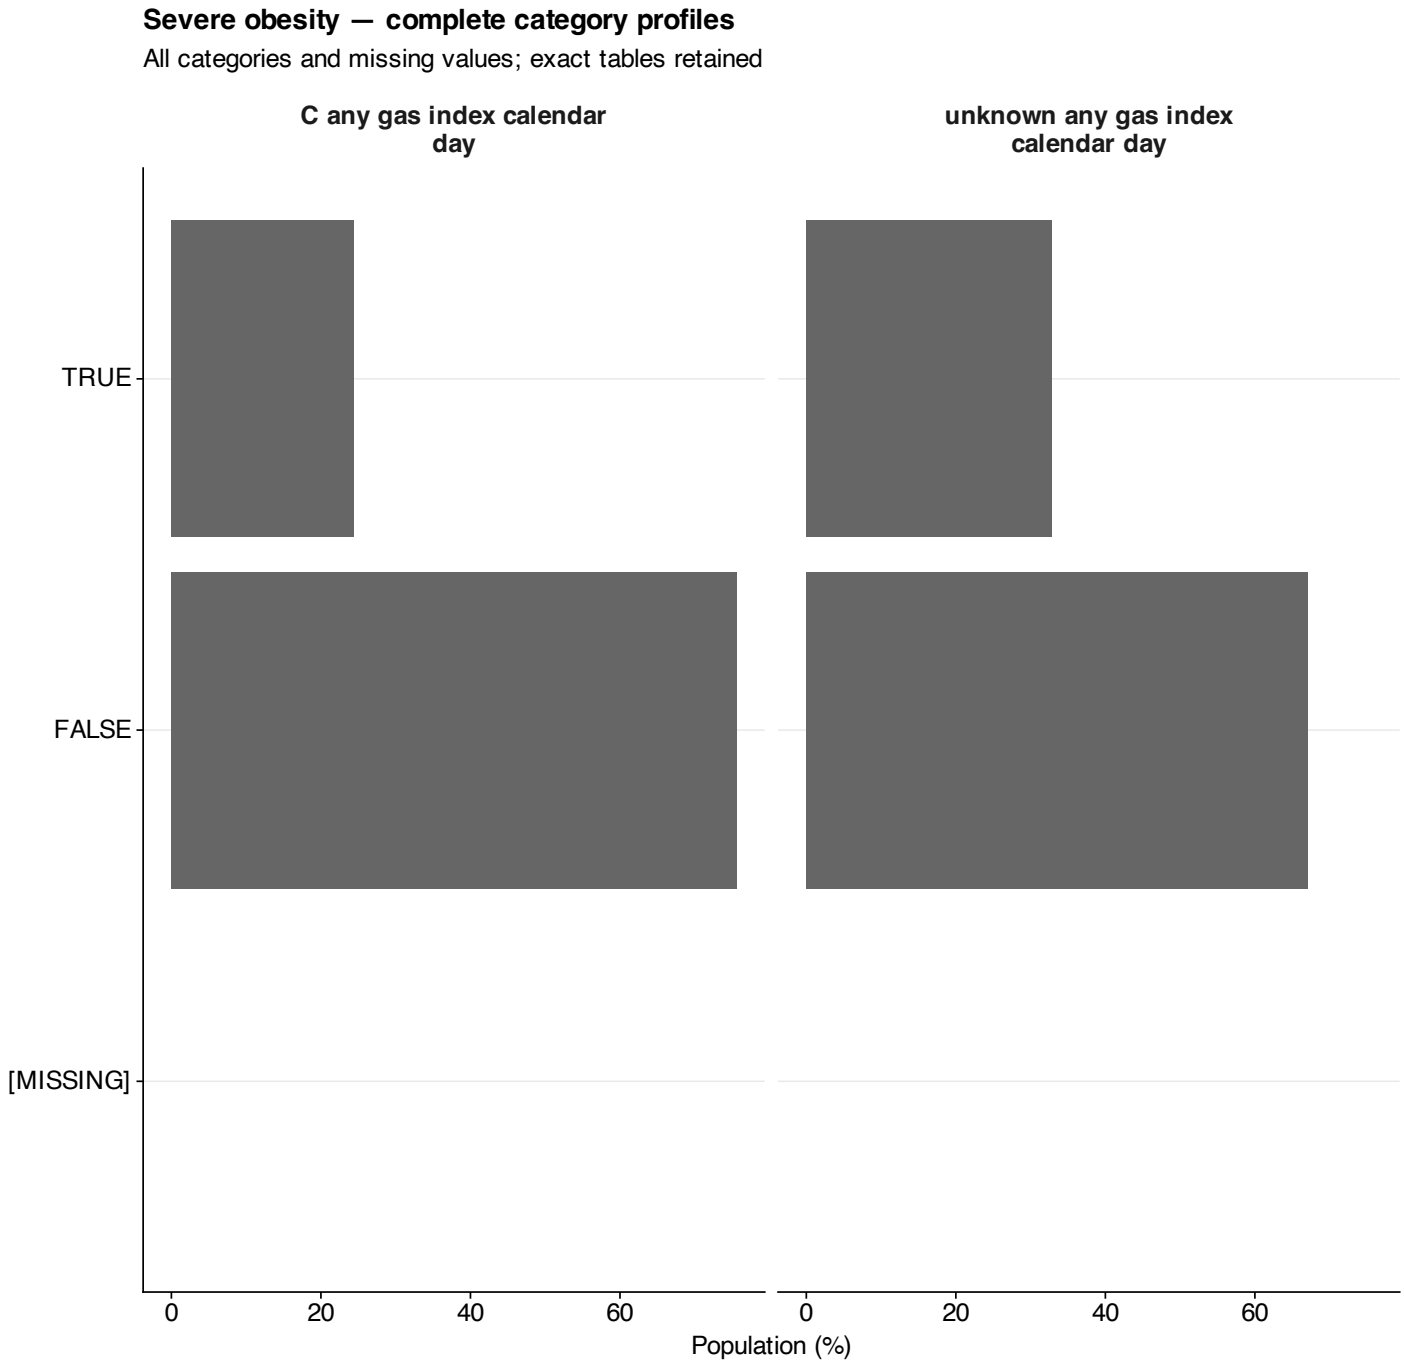

Figure 905: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete severe_obesity stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

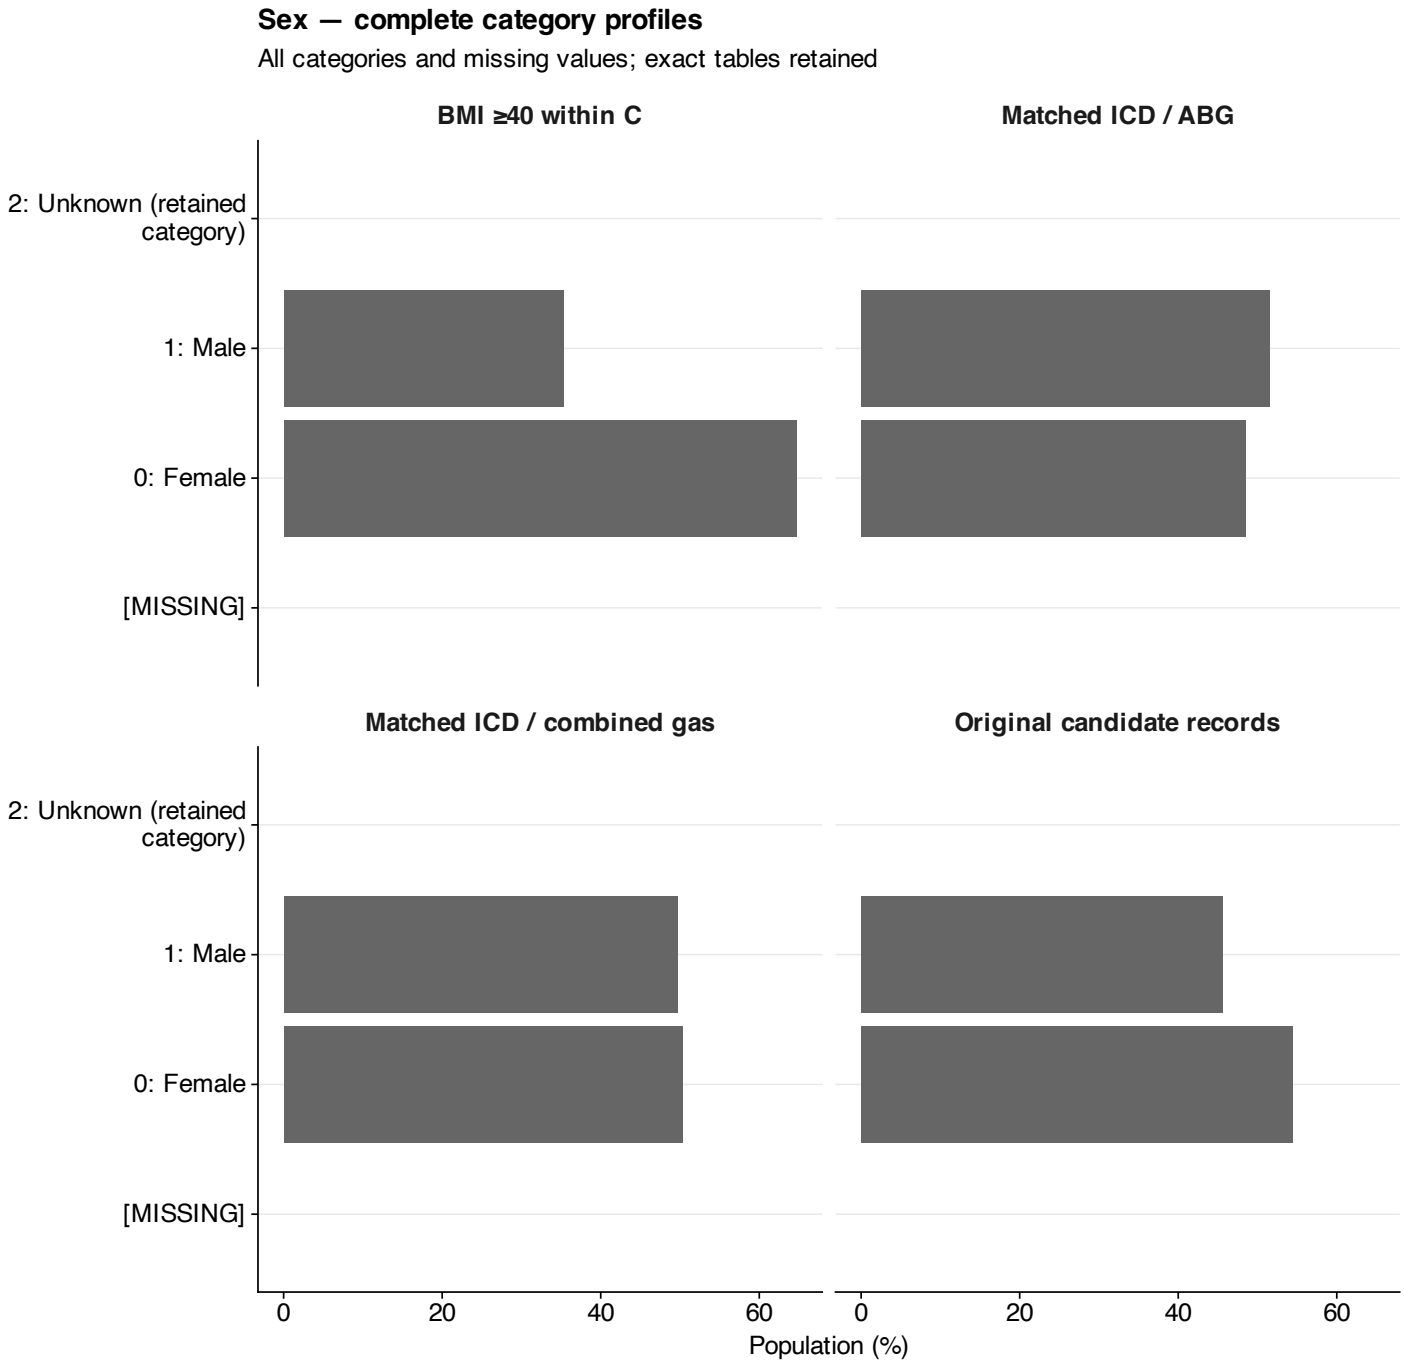

Figure 906: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete sex stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

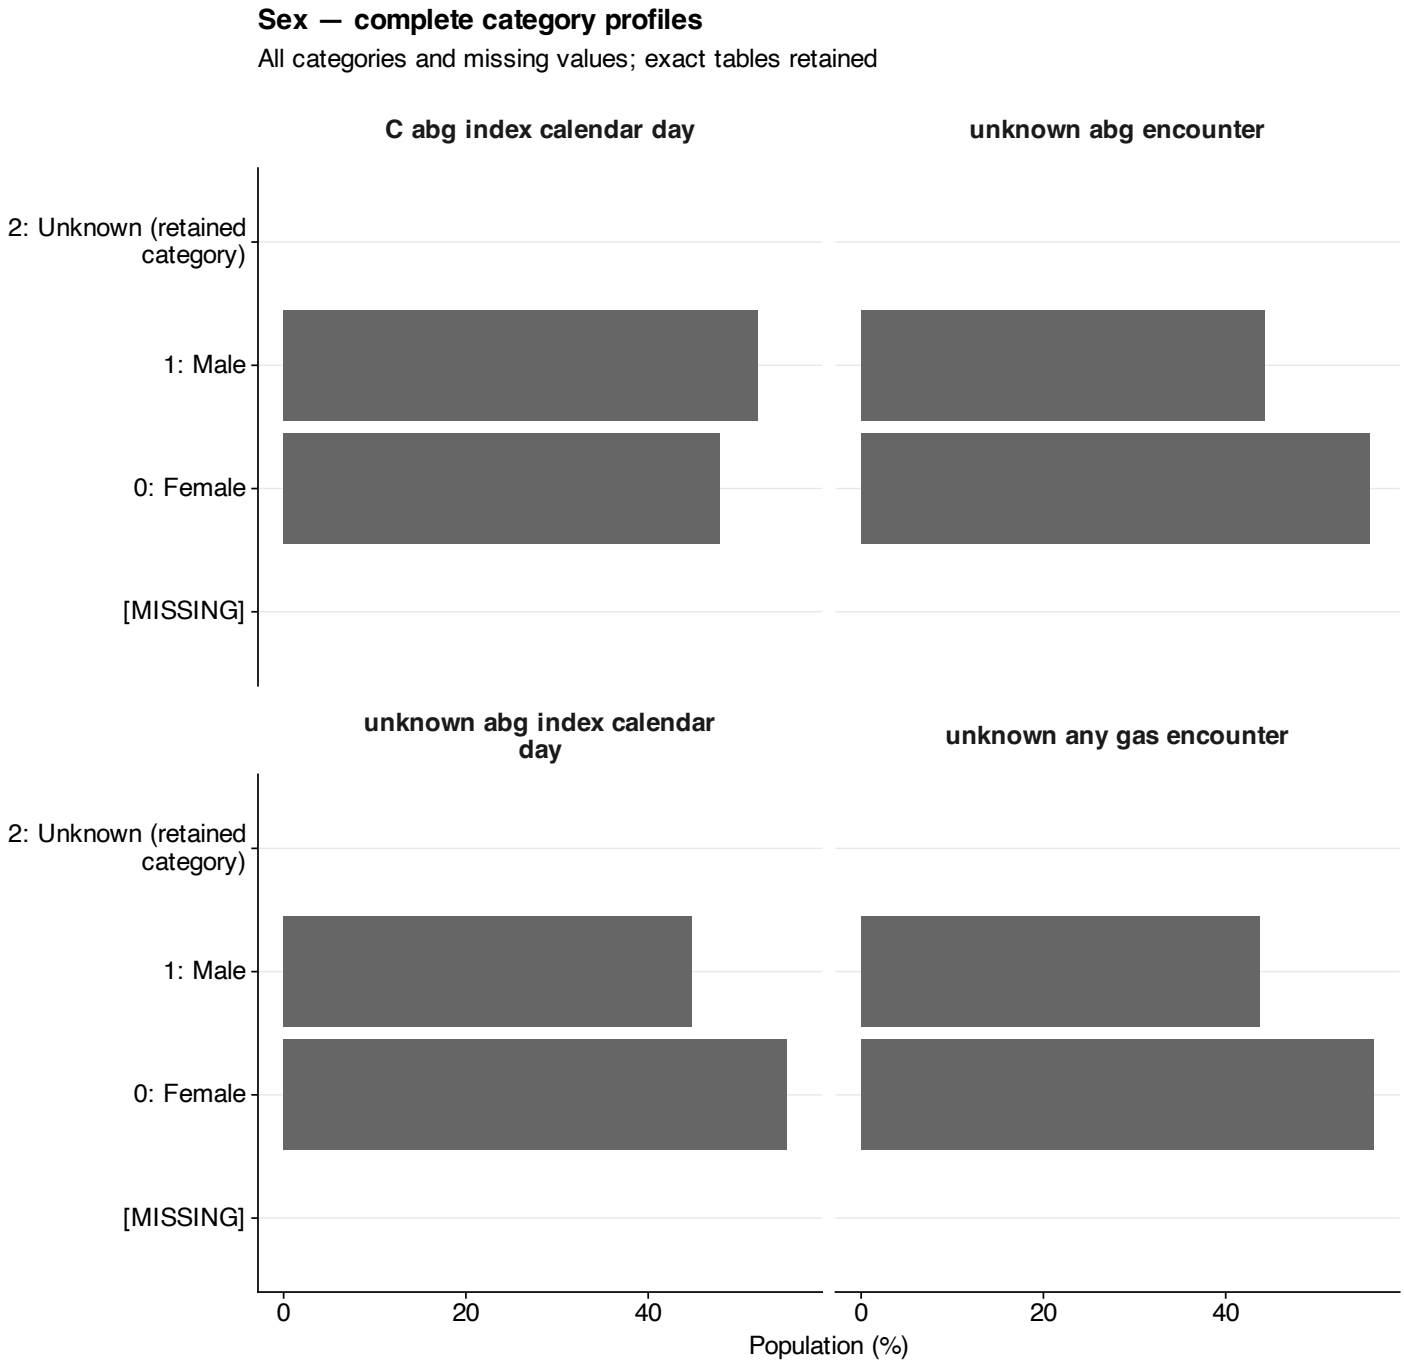

Figure 907: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete sex stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

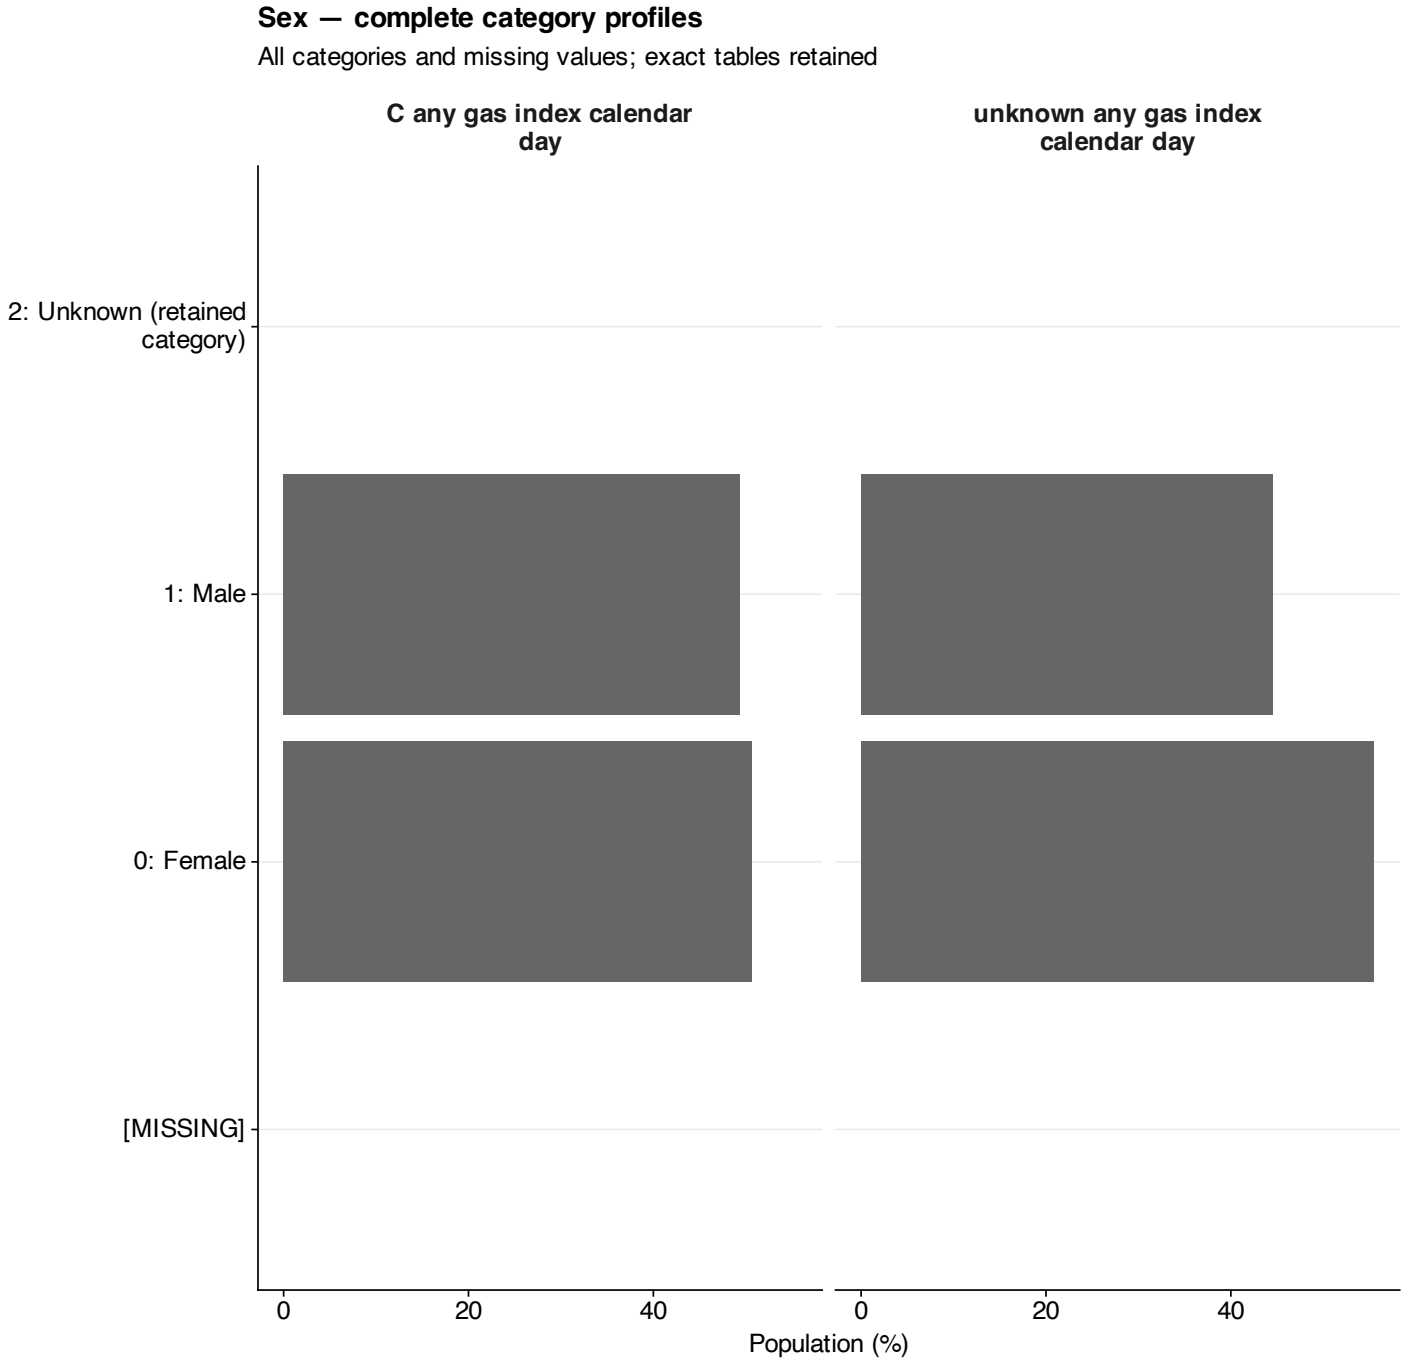

Figure 908: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete sex stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

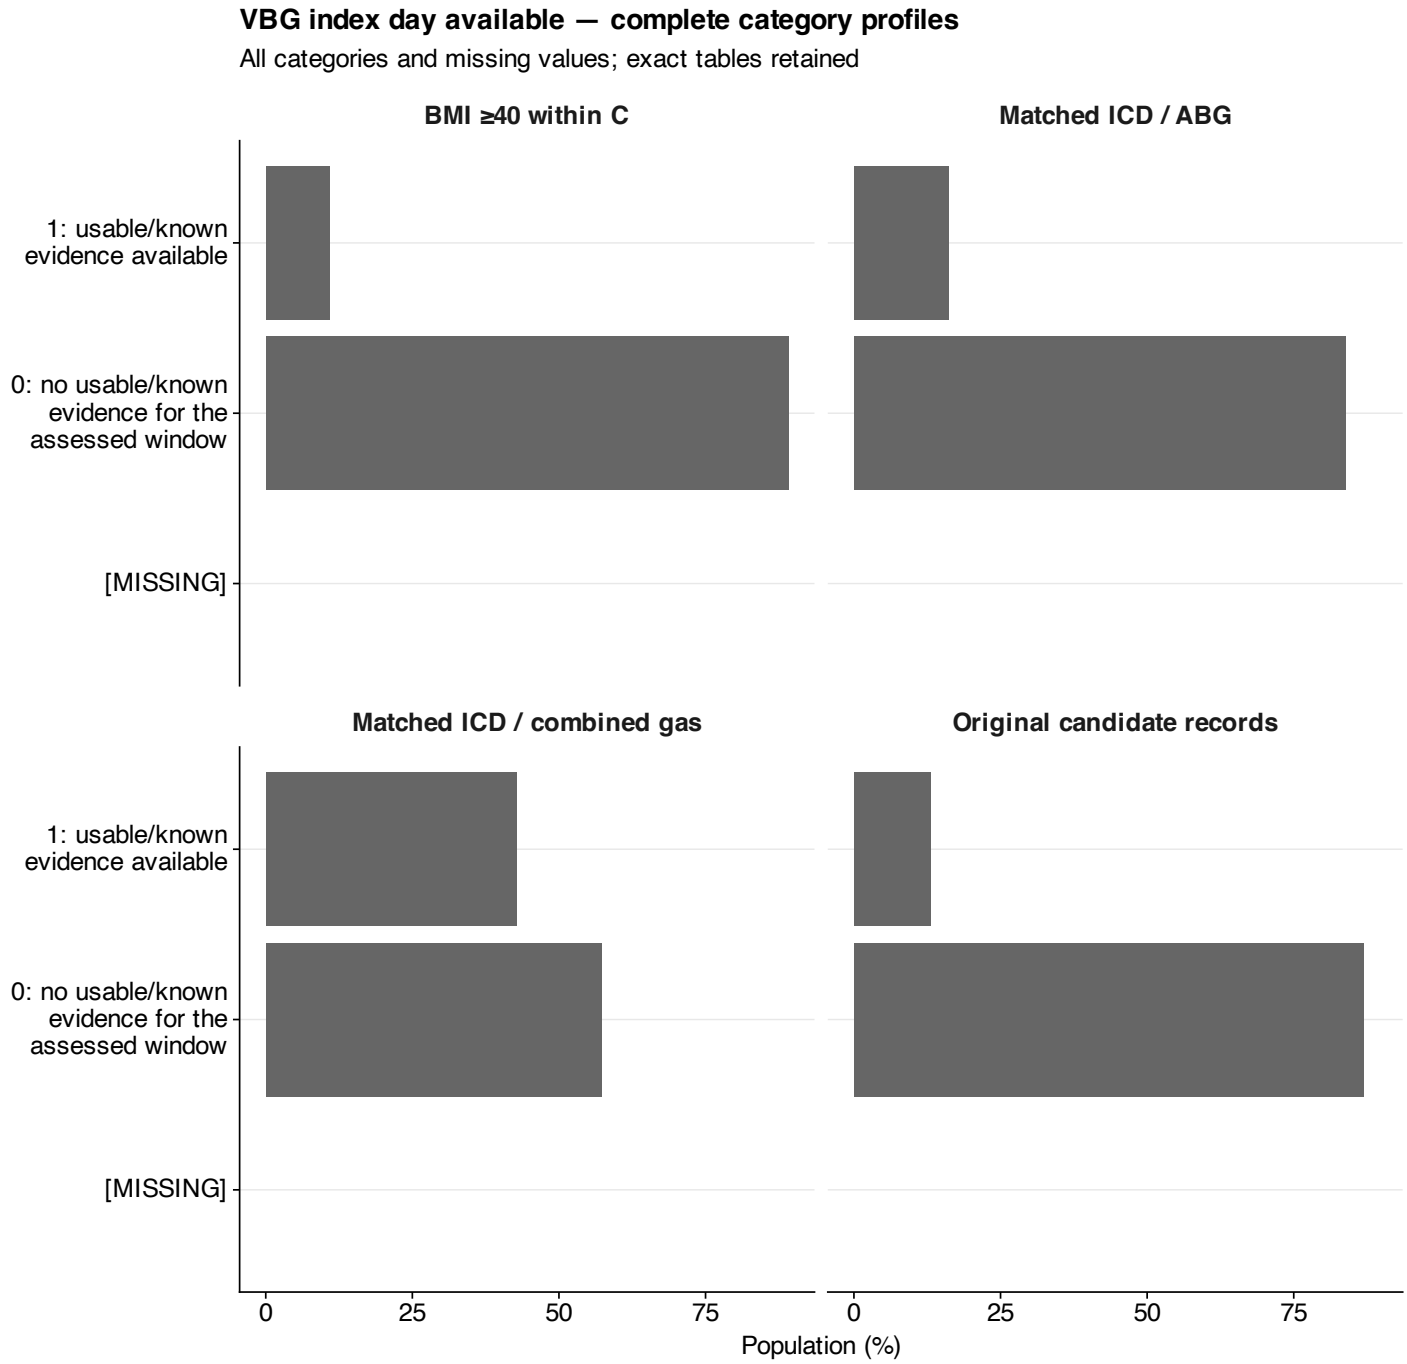

Figure 909: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete vbg_index_day_available stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

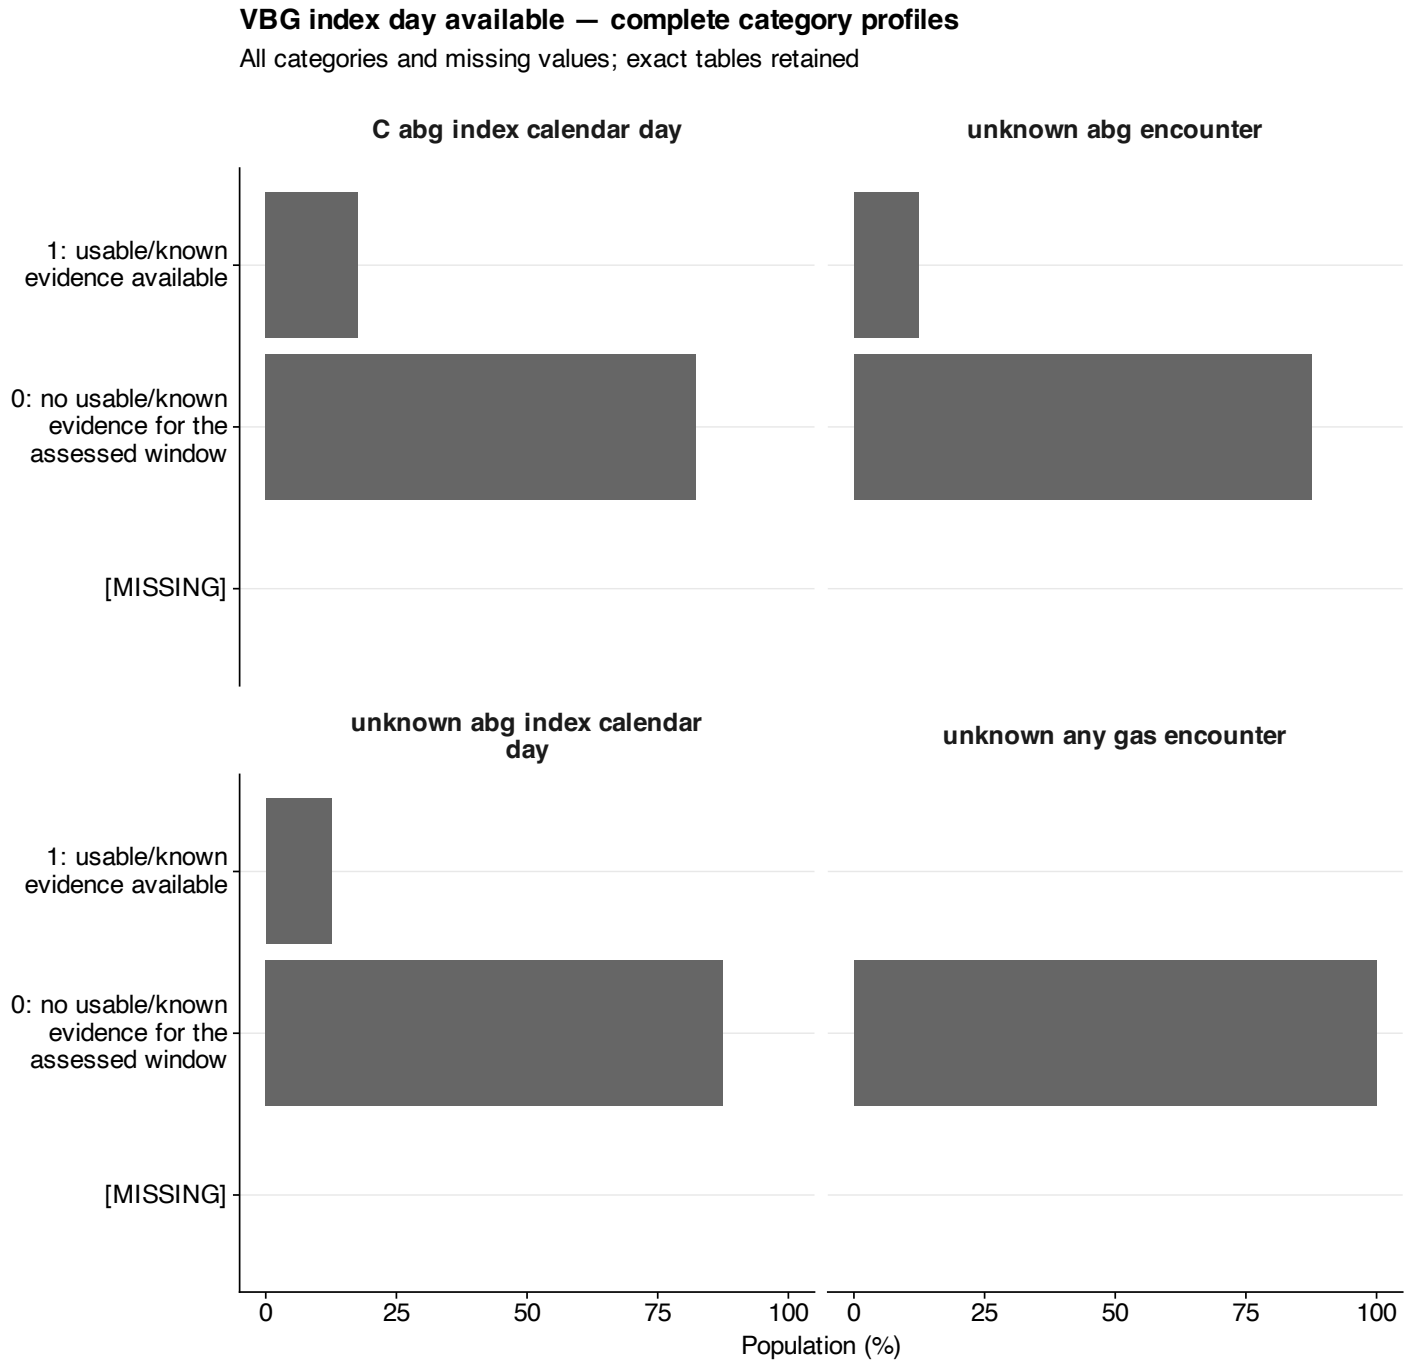

Figure 910: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete vbg_index_day_available stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

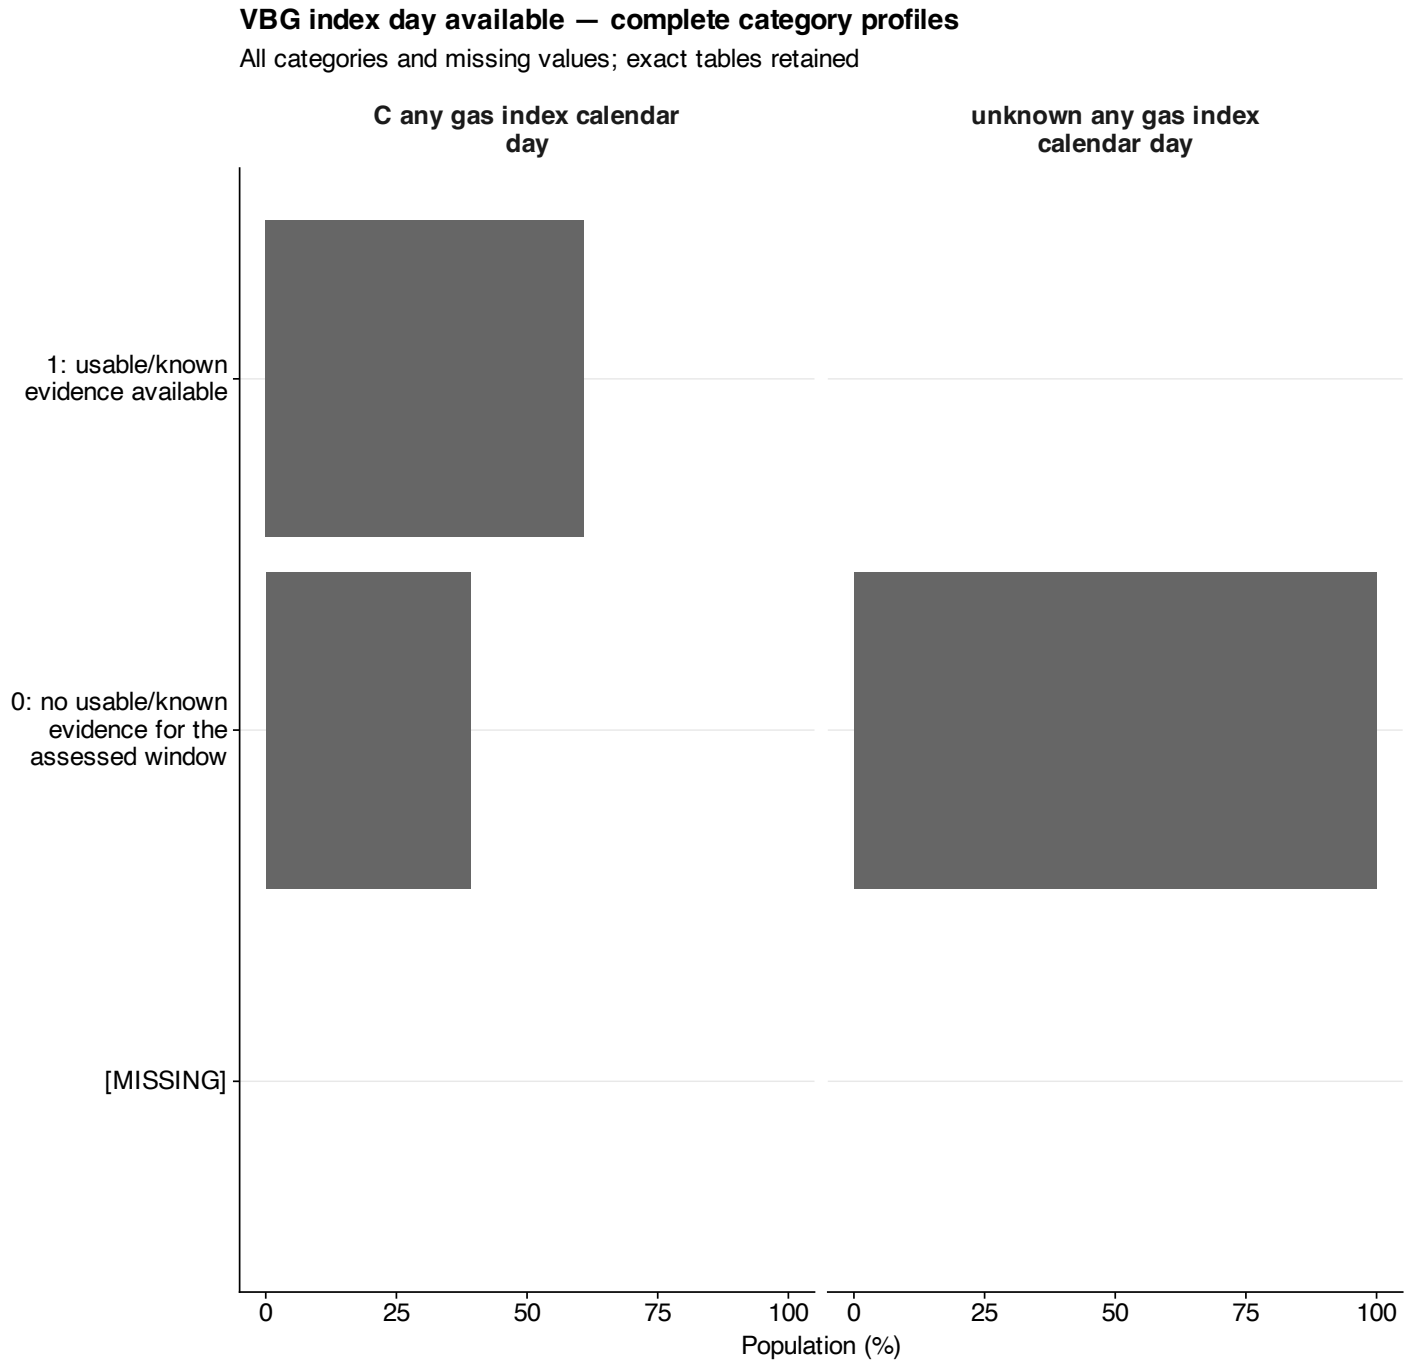

Figure 911: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete vbg_index_day_available stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

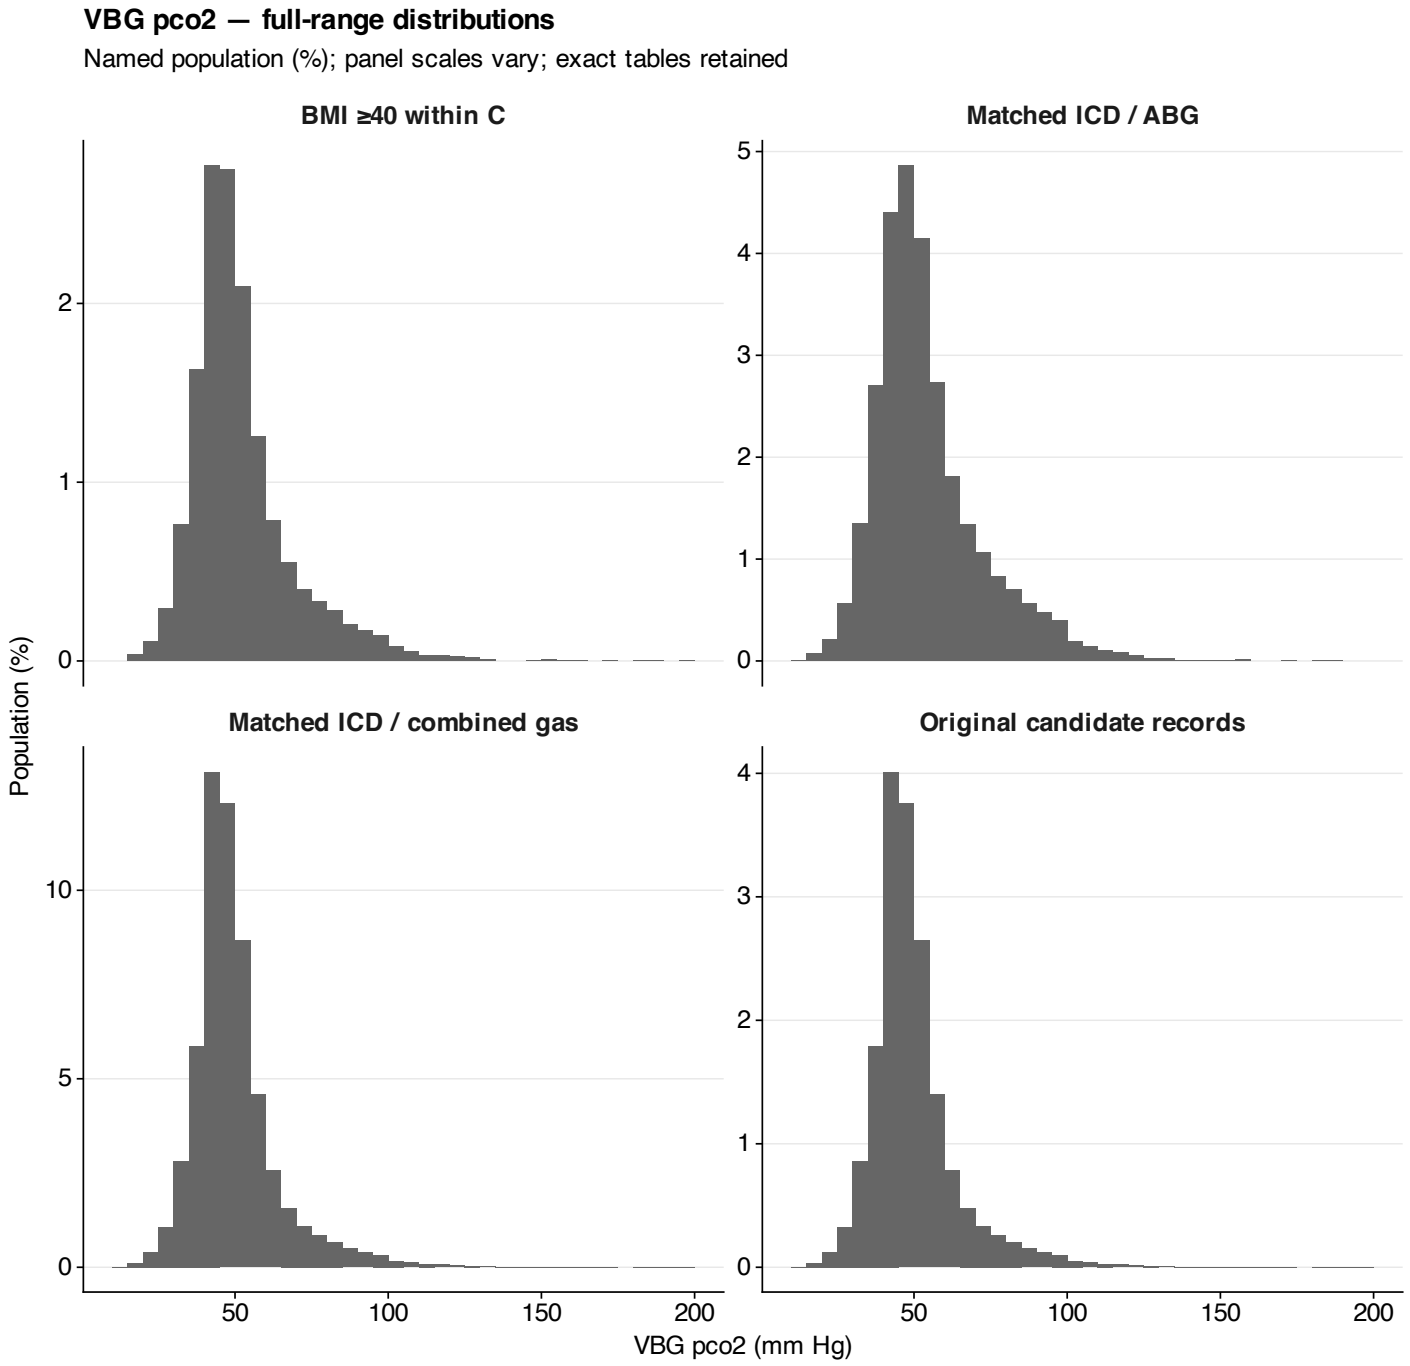

Figure 912: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete vbg_pco2 stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

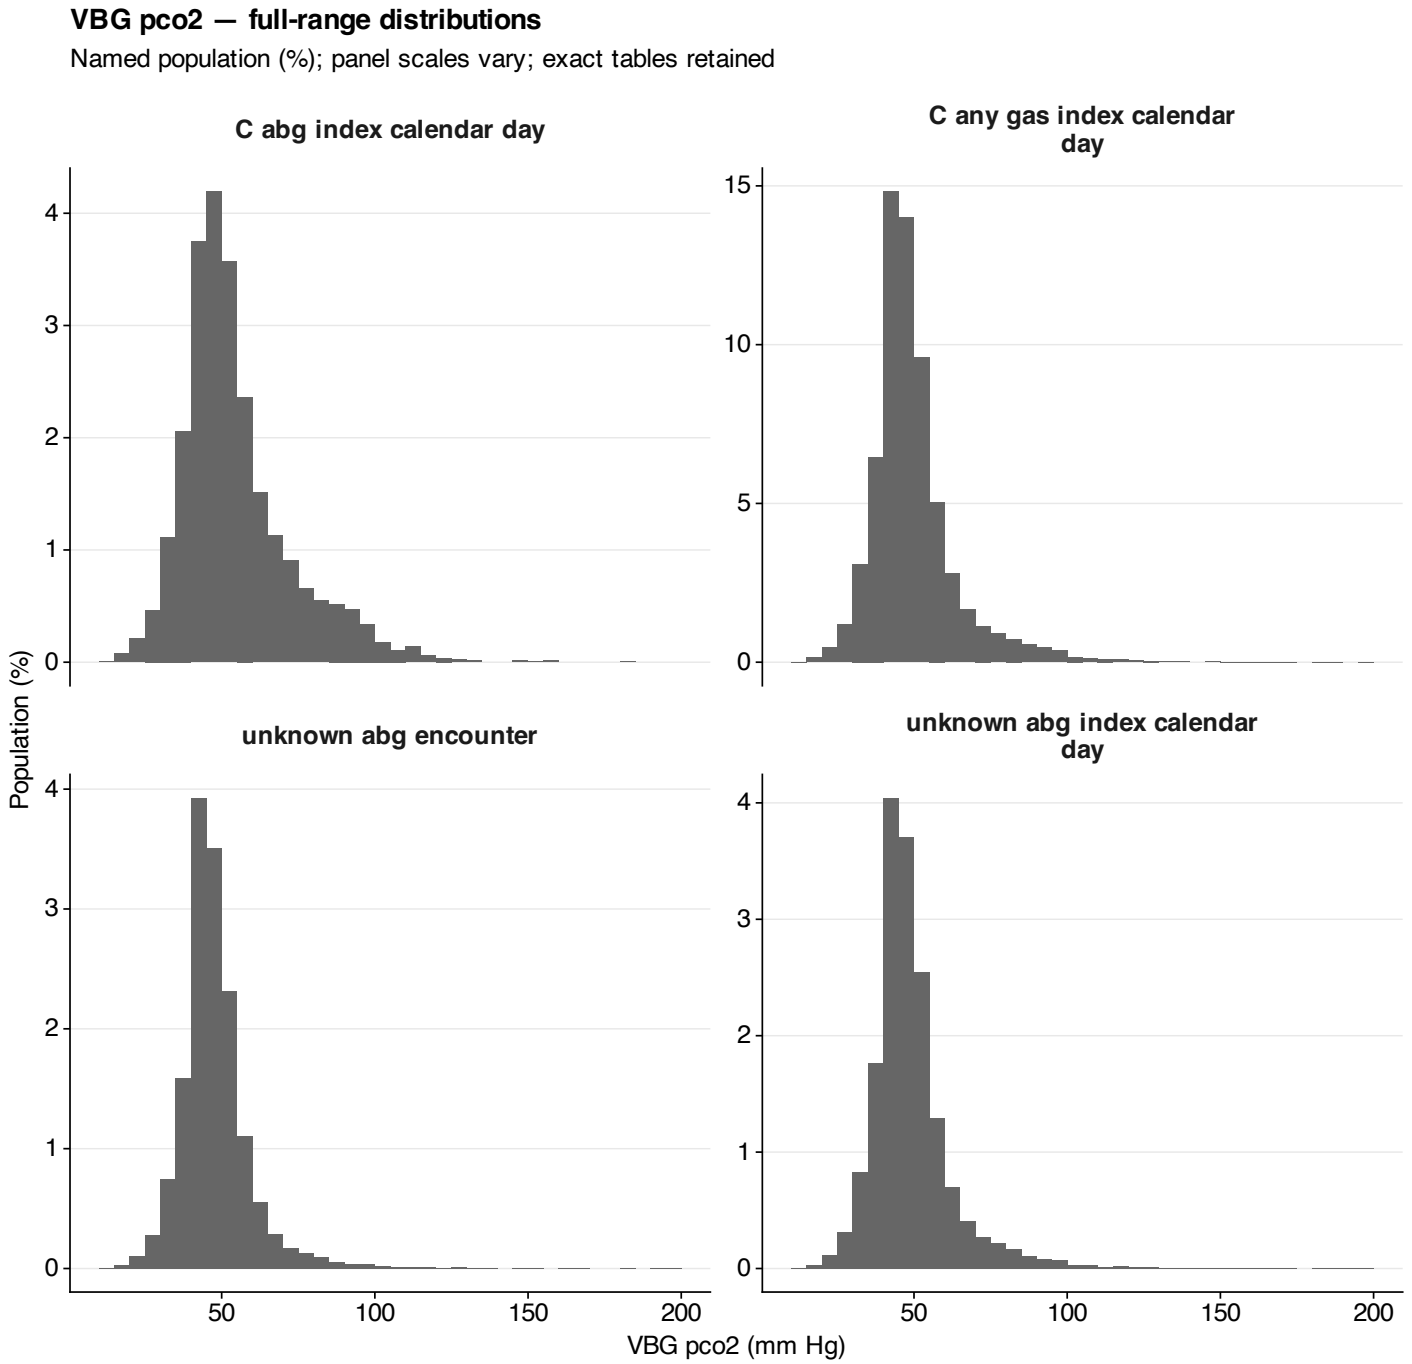

Figure 913: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete vbg_pco2 stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

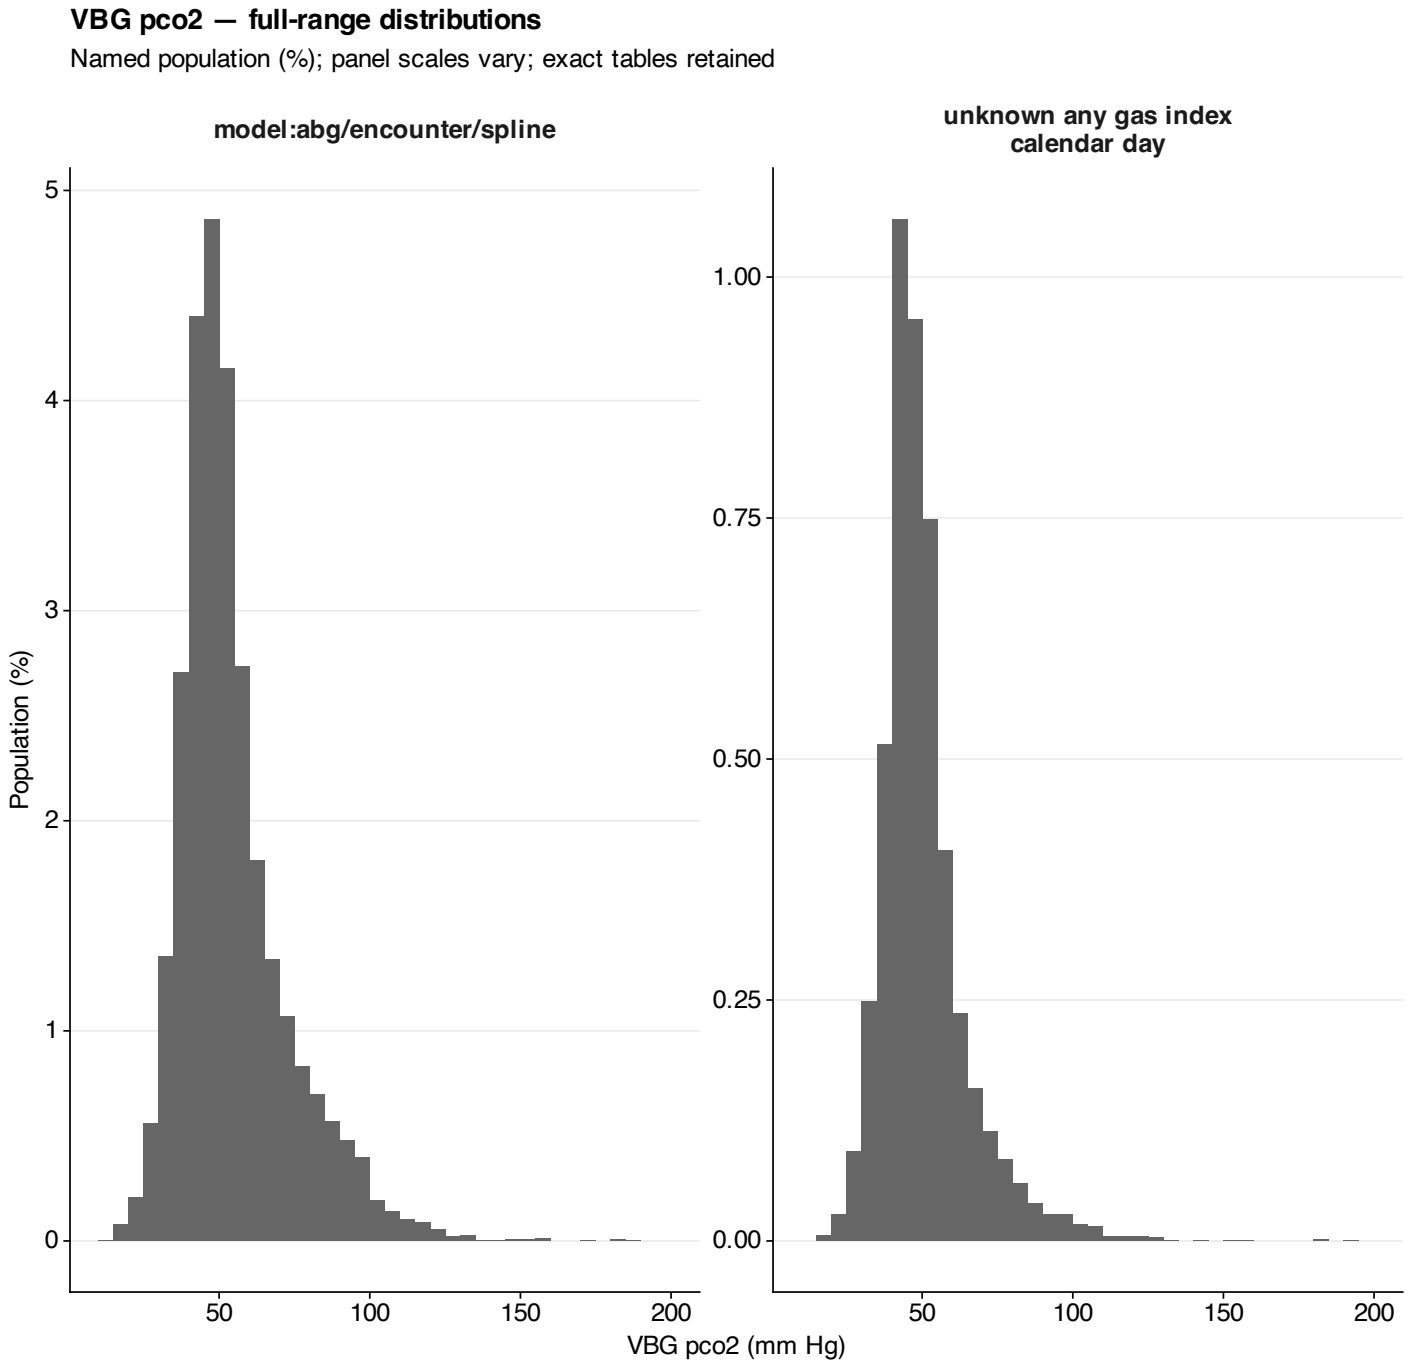

Figure 914: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete vbg_pco2 stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

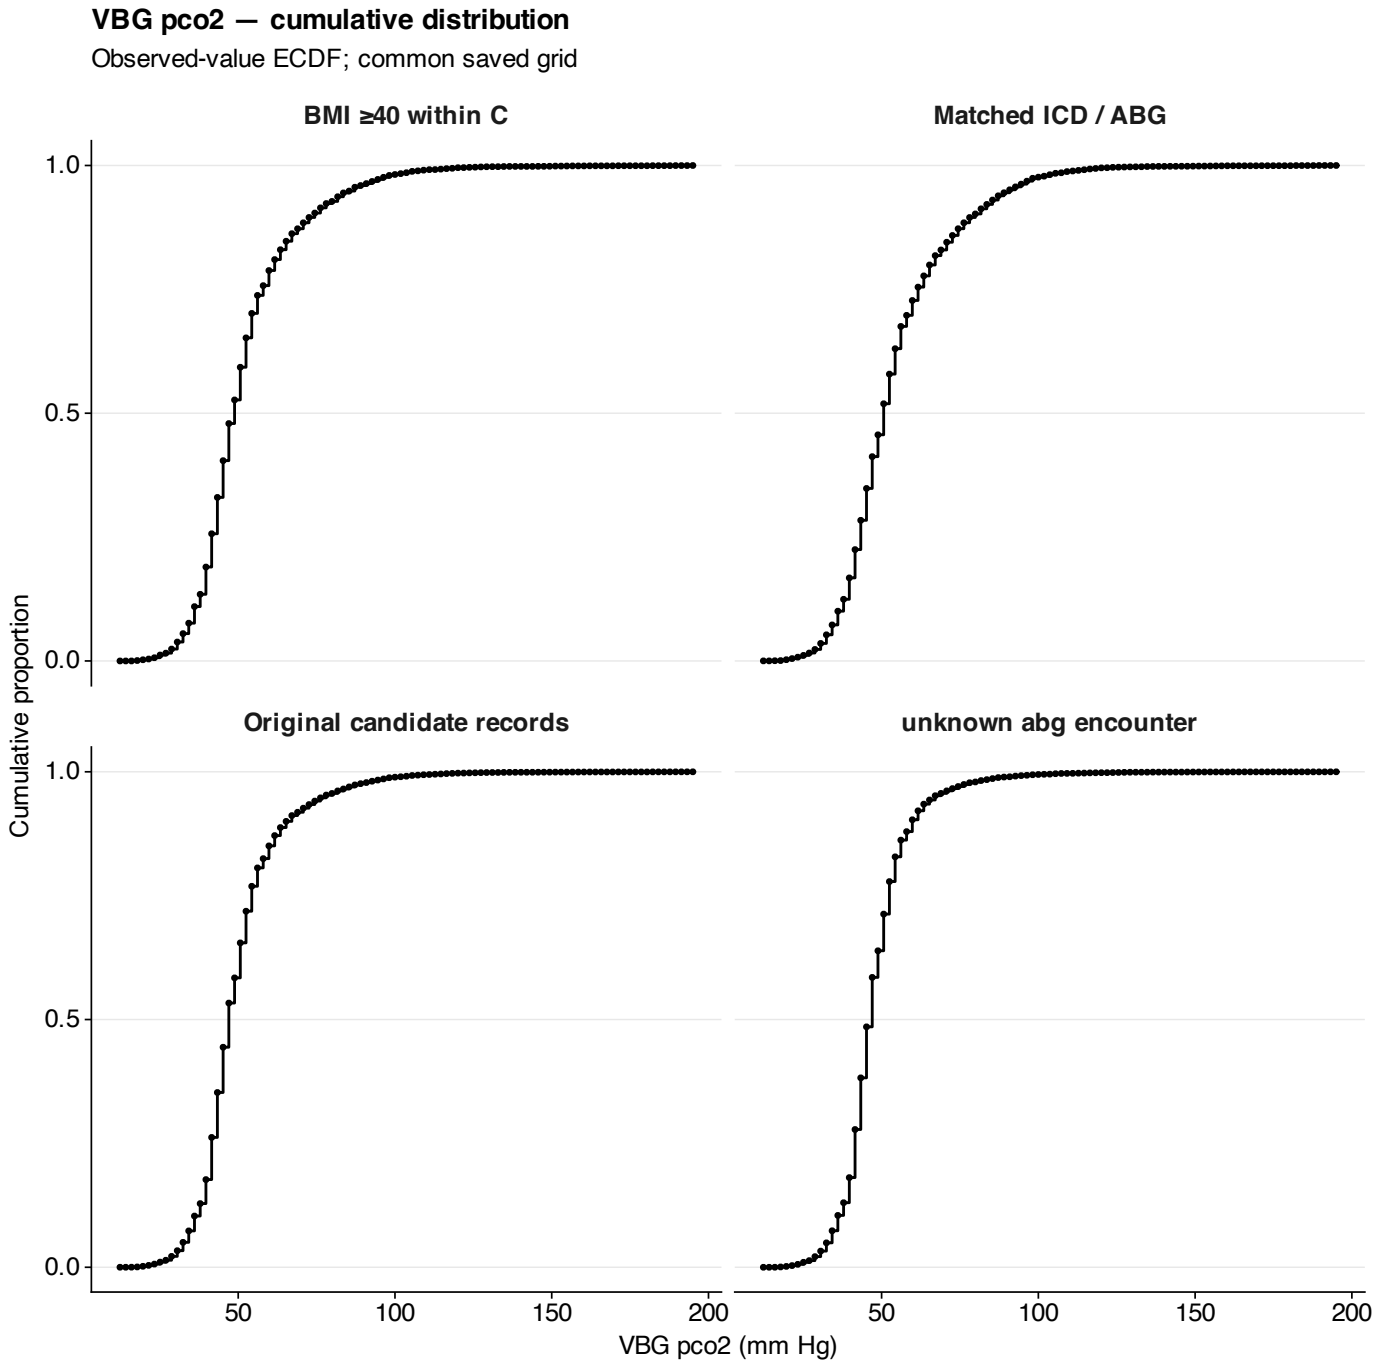

Figure 915: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. vbg_pco2 ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

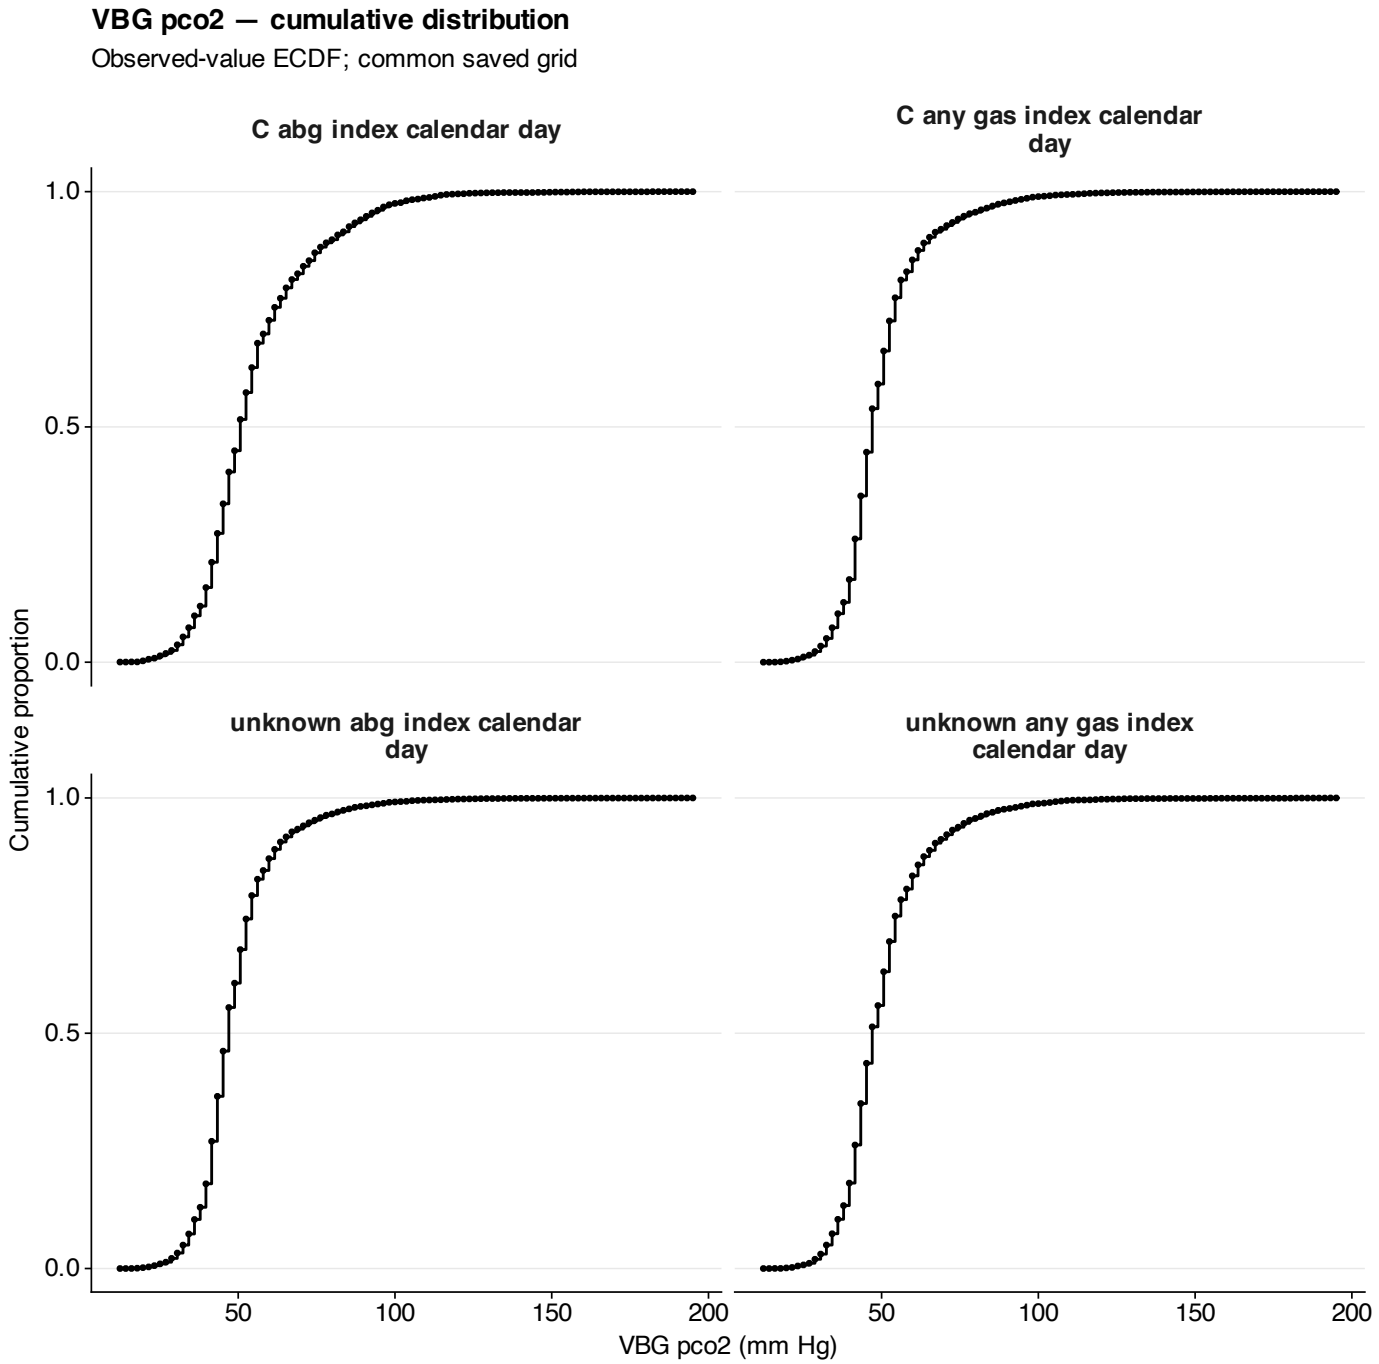

Figure 916: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. vbg_pco2 ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

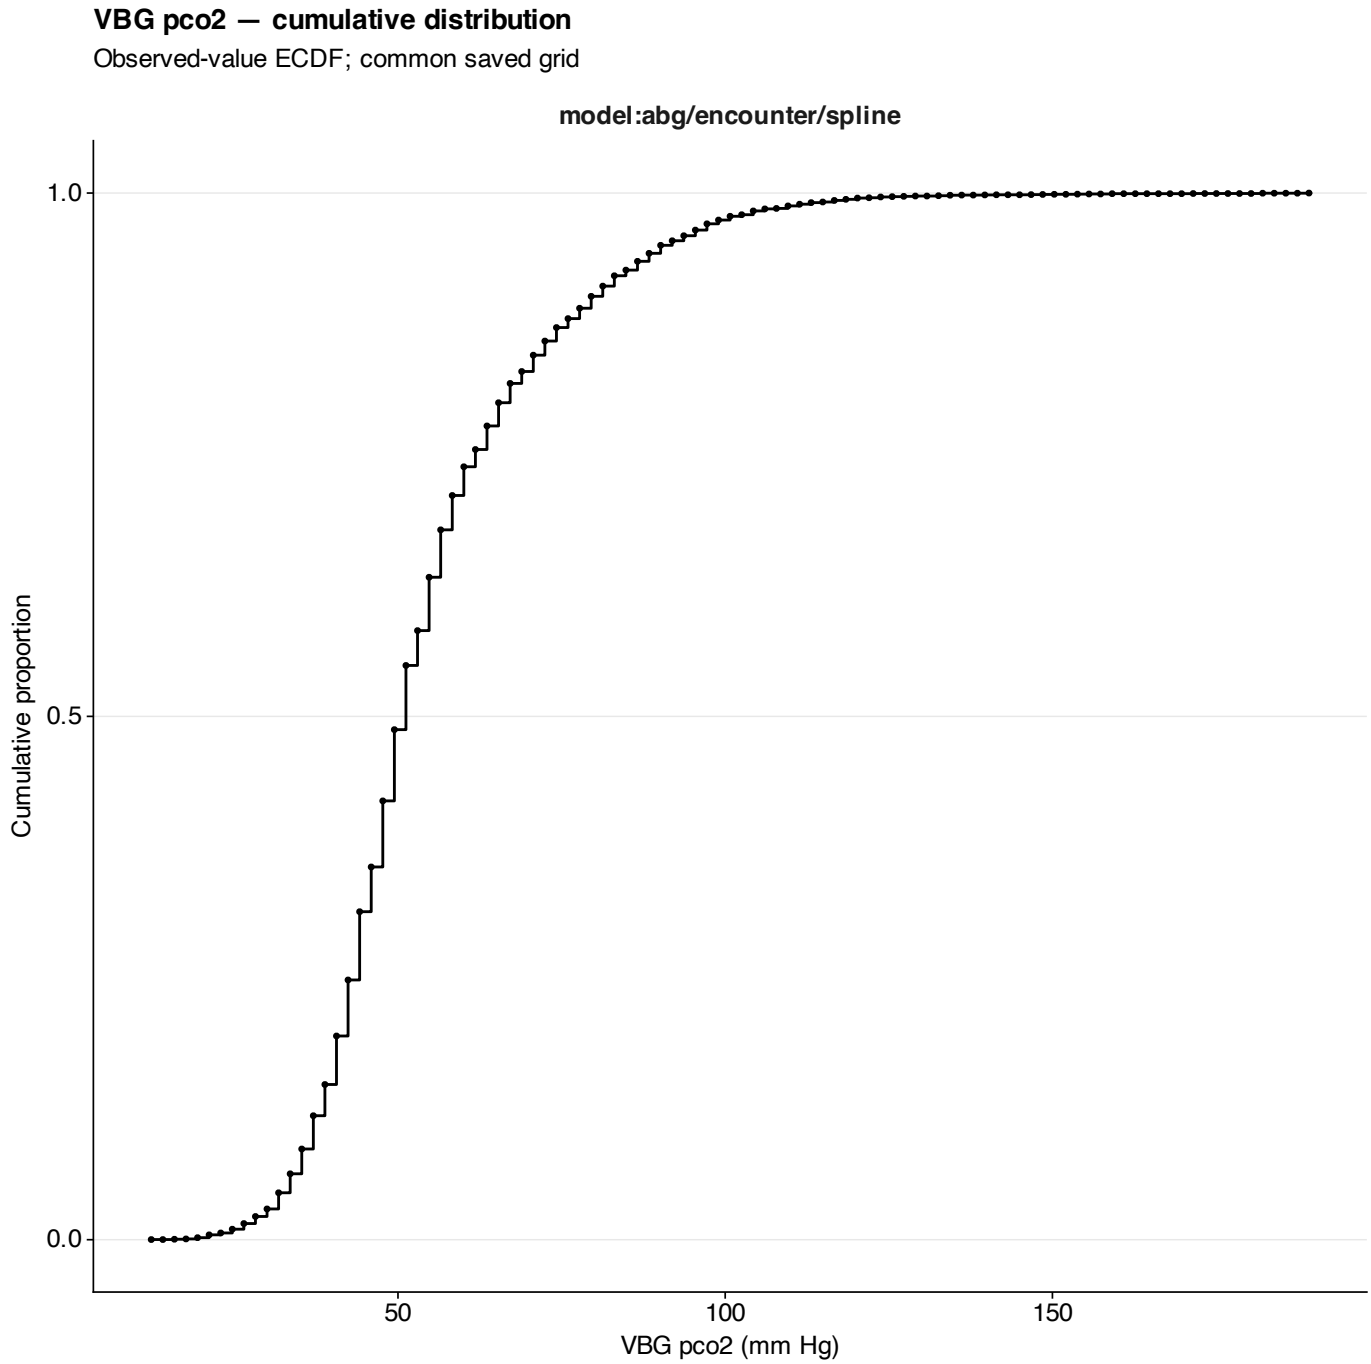

Figure 917: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. vbg_pco2 ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

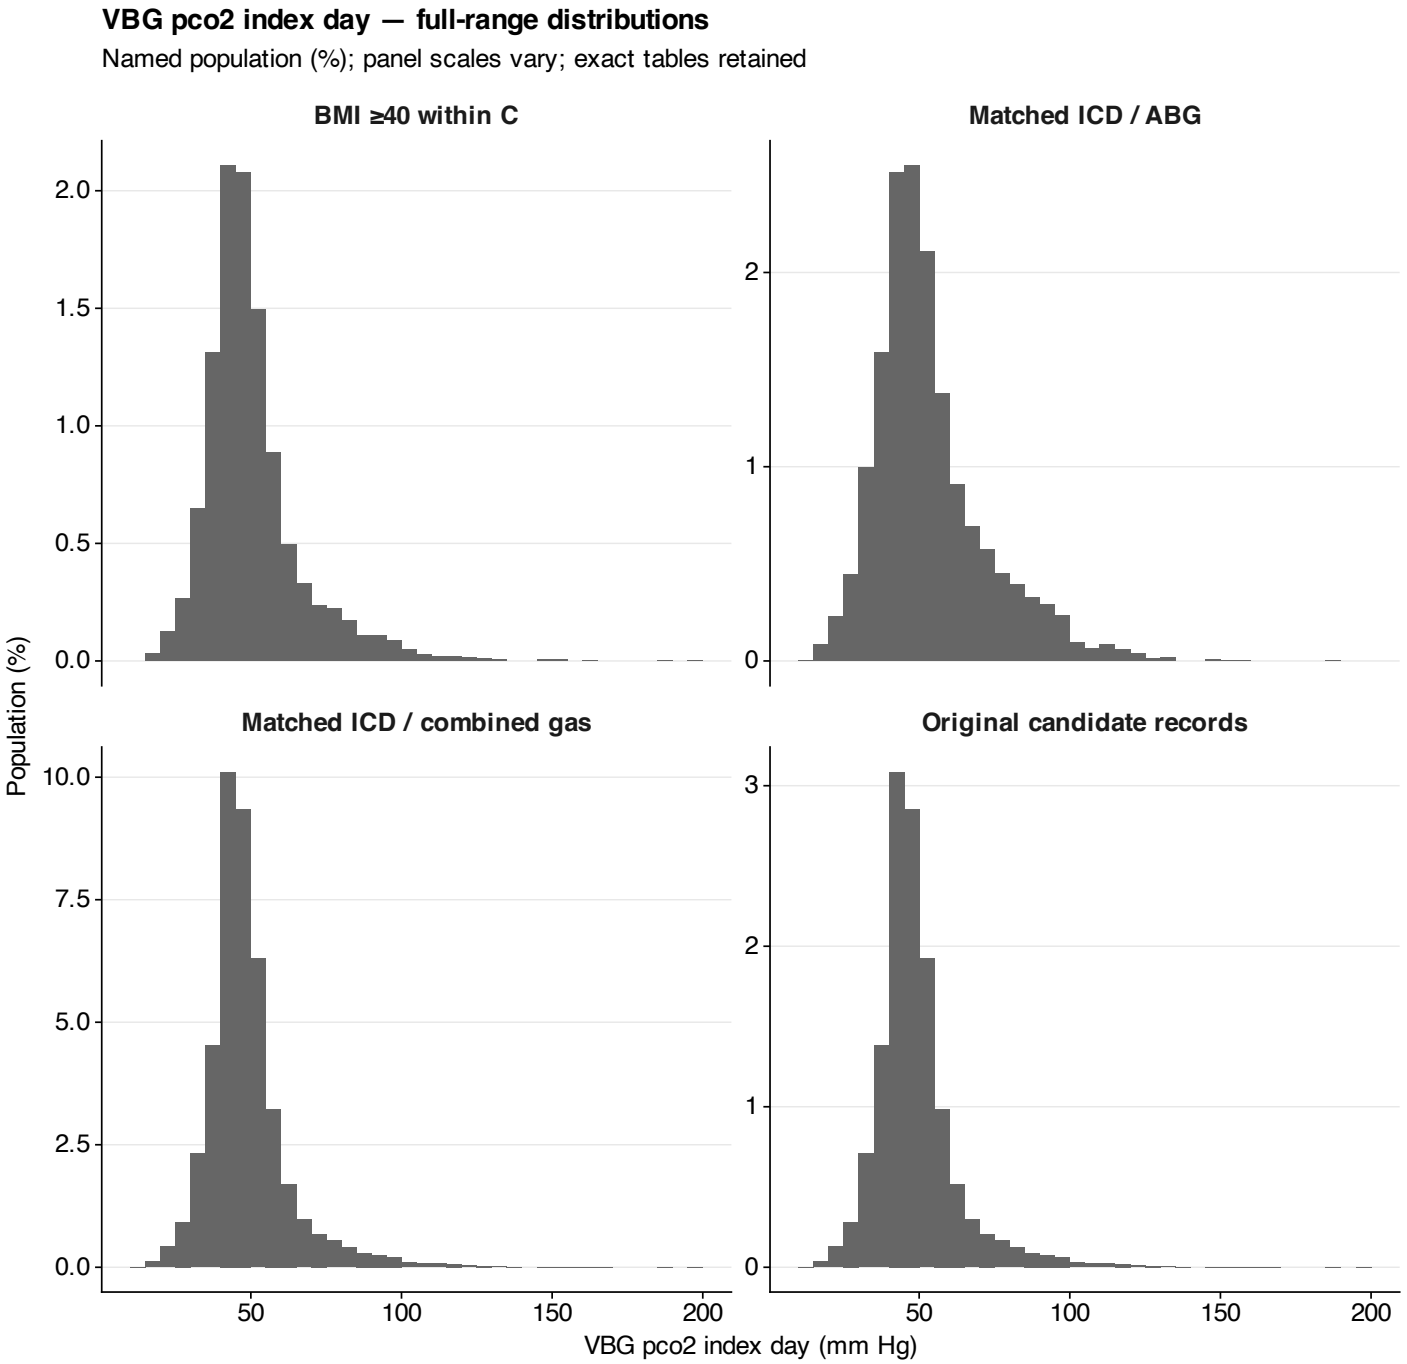

Figure 918: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete vbg_pco2_index_day stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

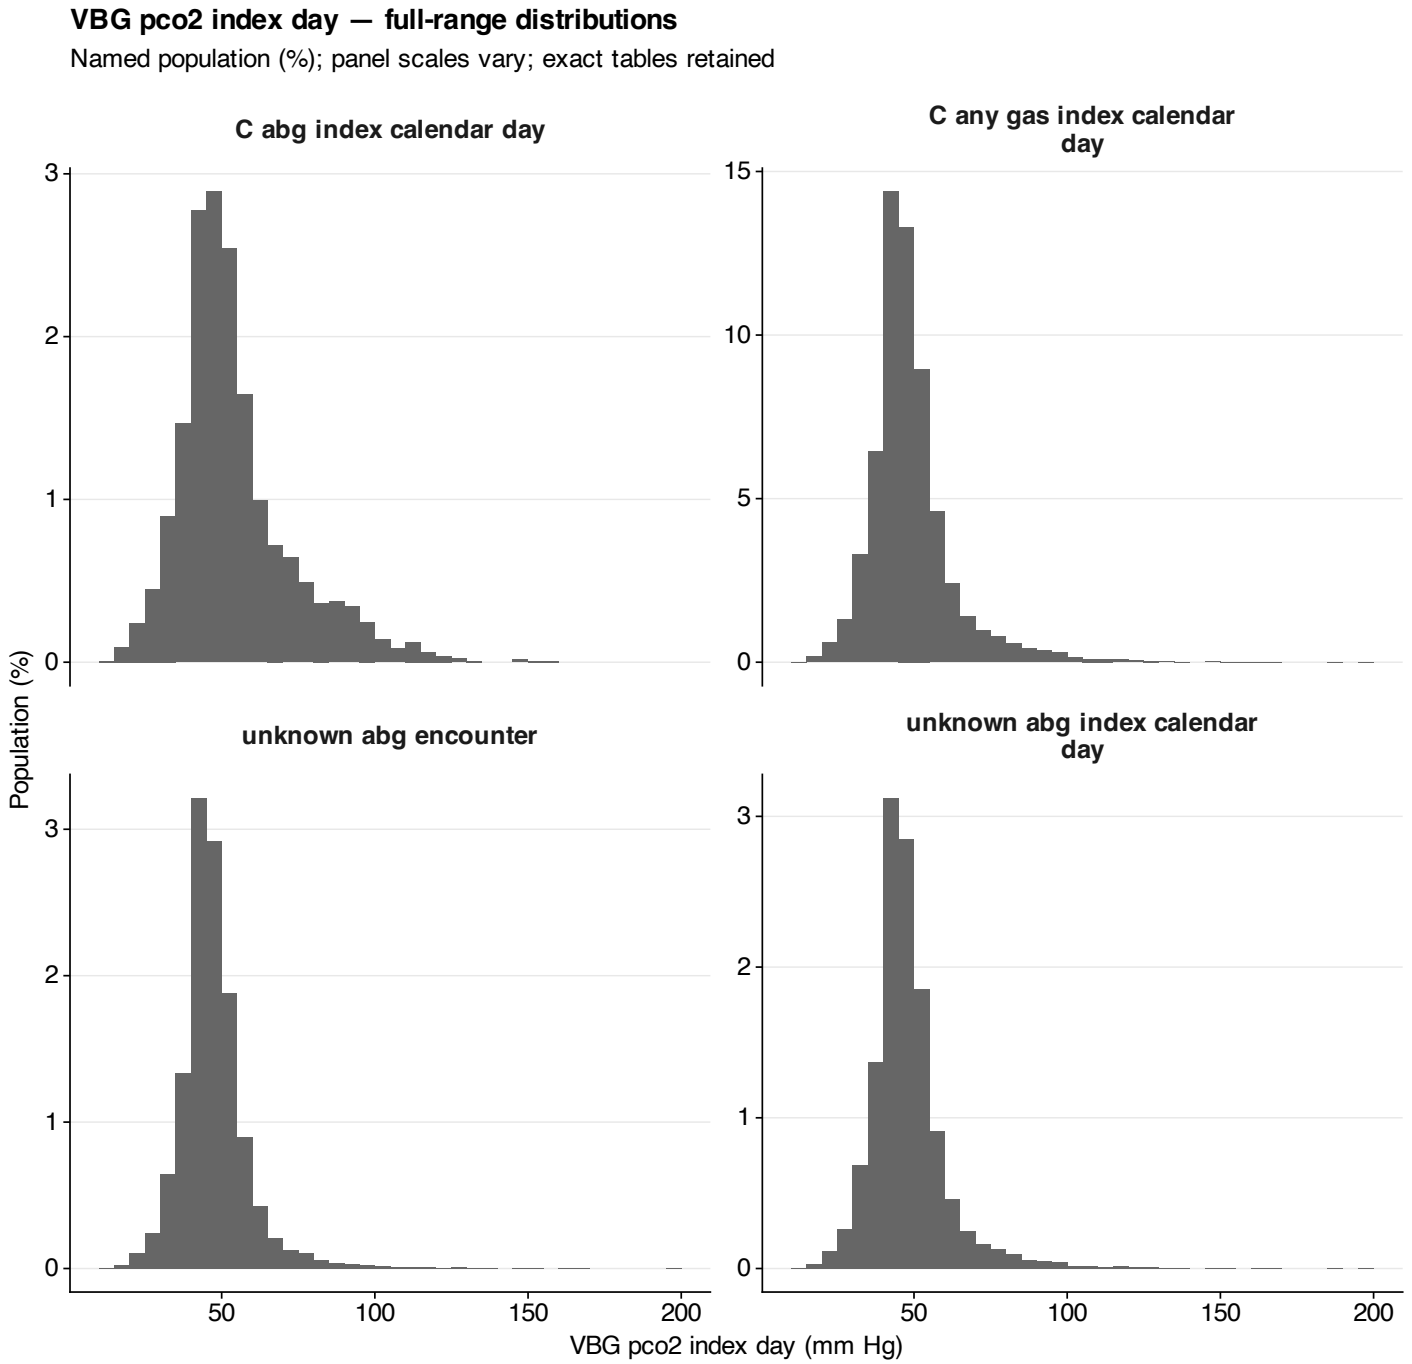

Figure 919: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete vbg_pco2_index_day stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

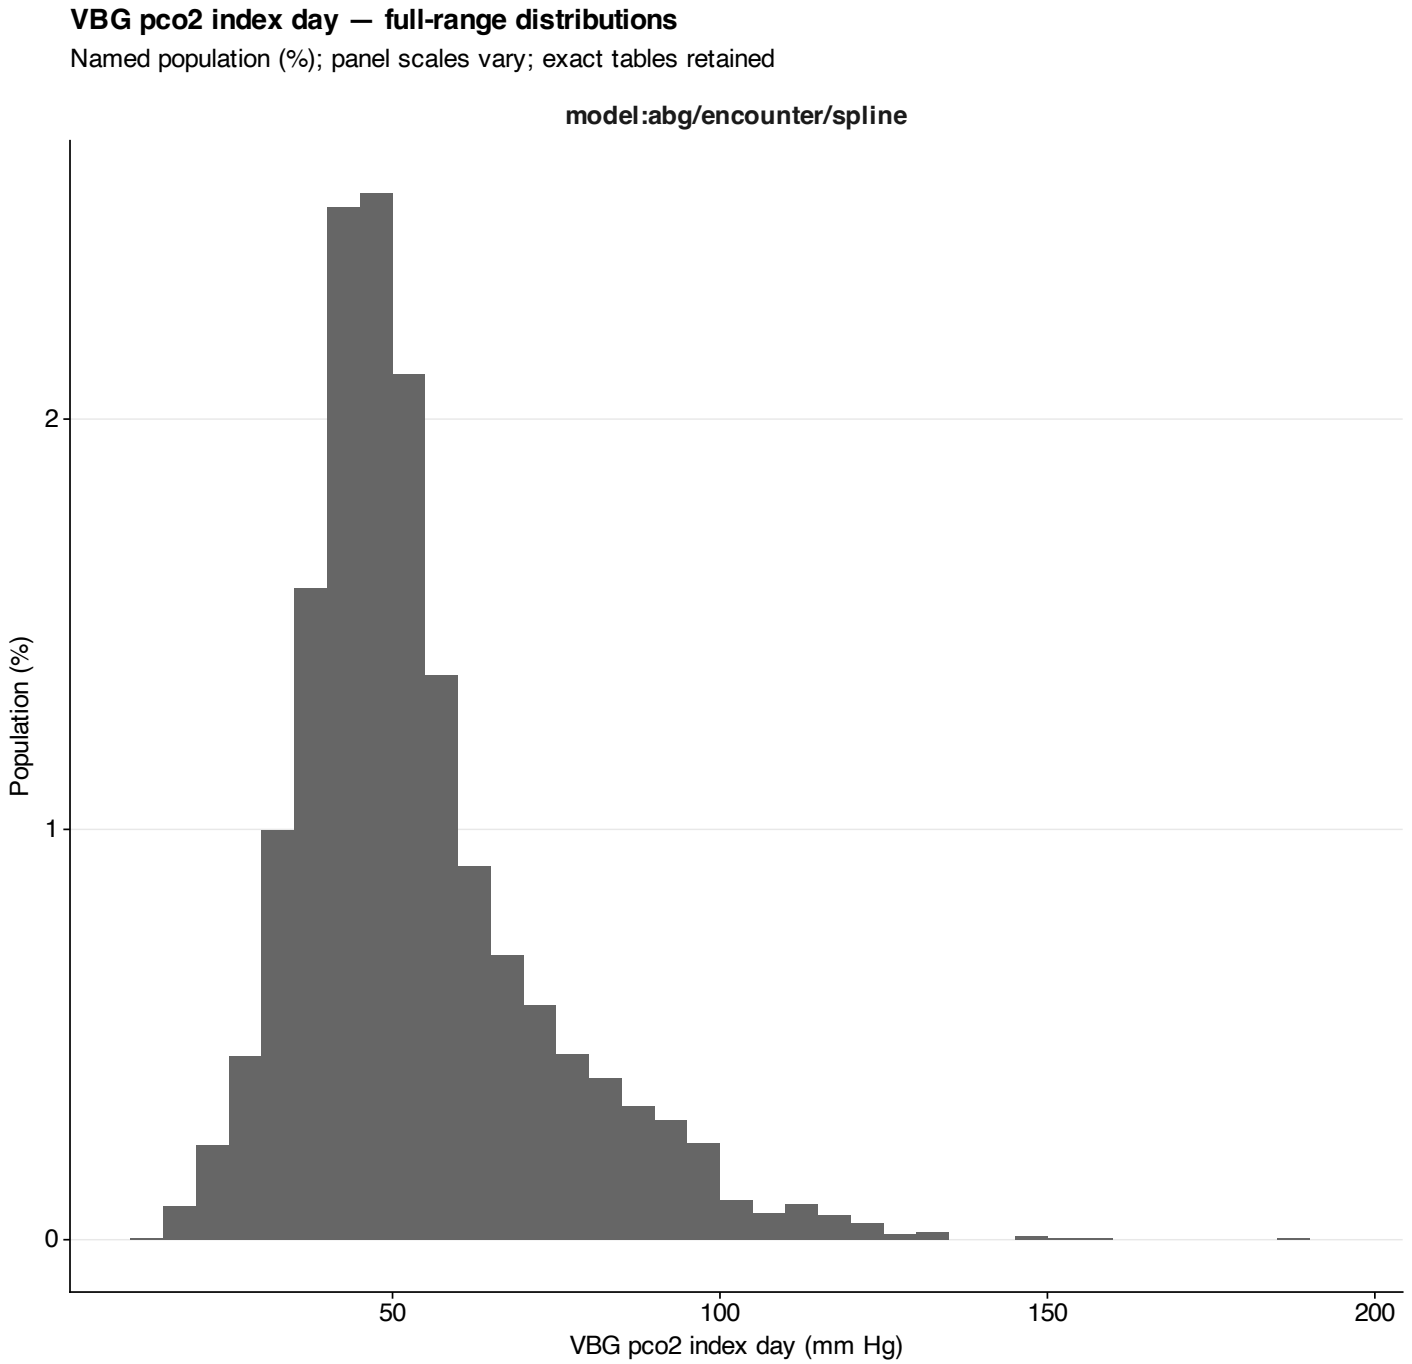

Figure 920: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete vbg_pco2_index_day stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

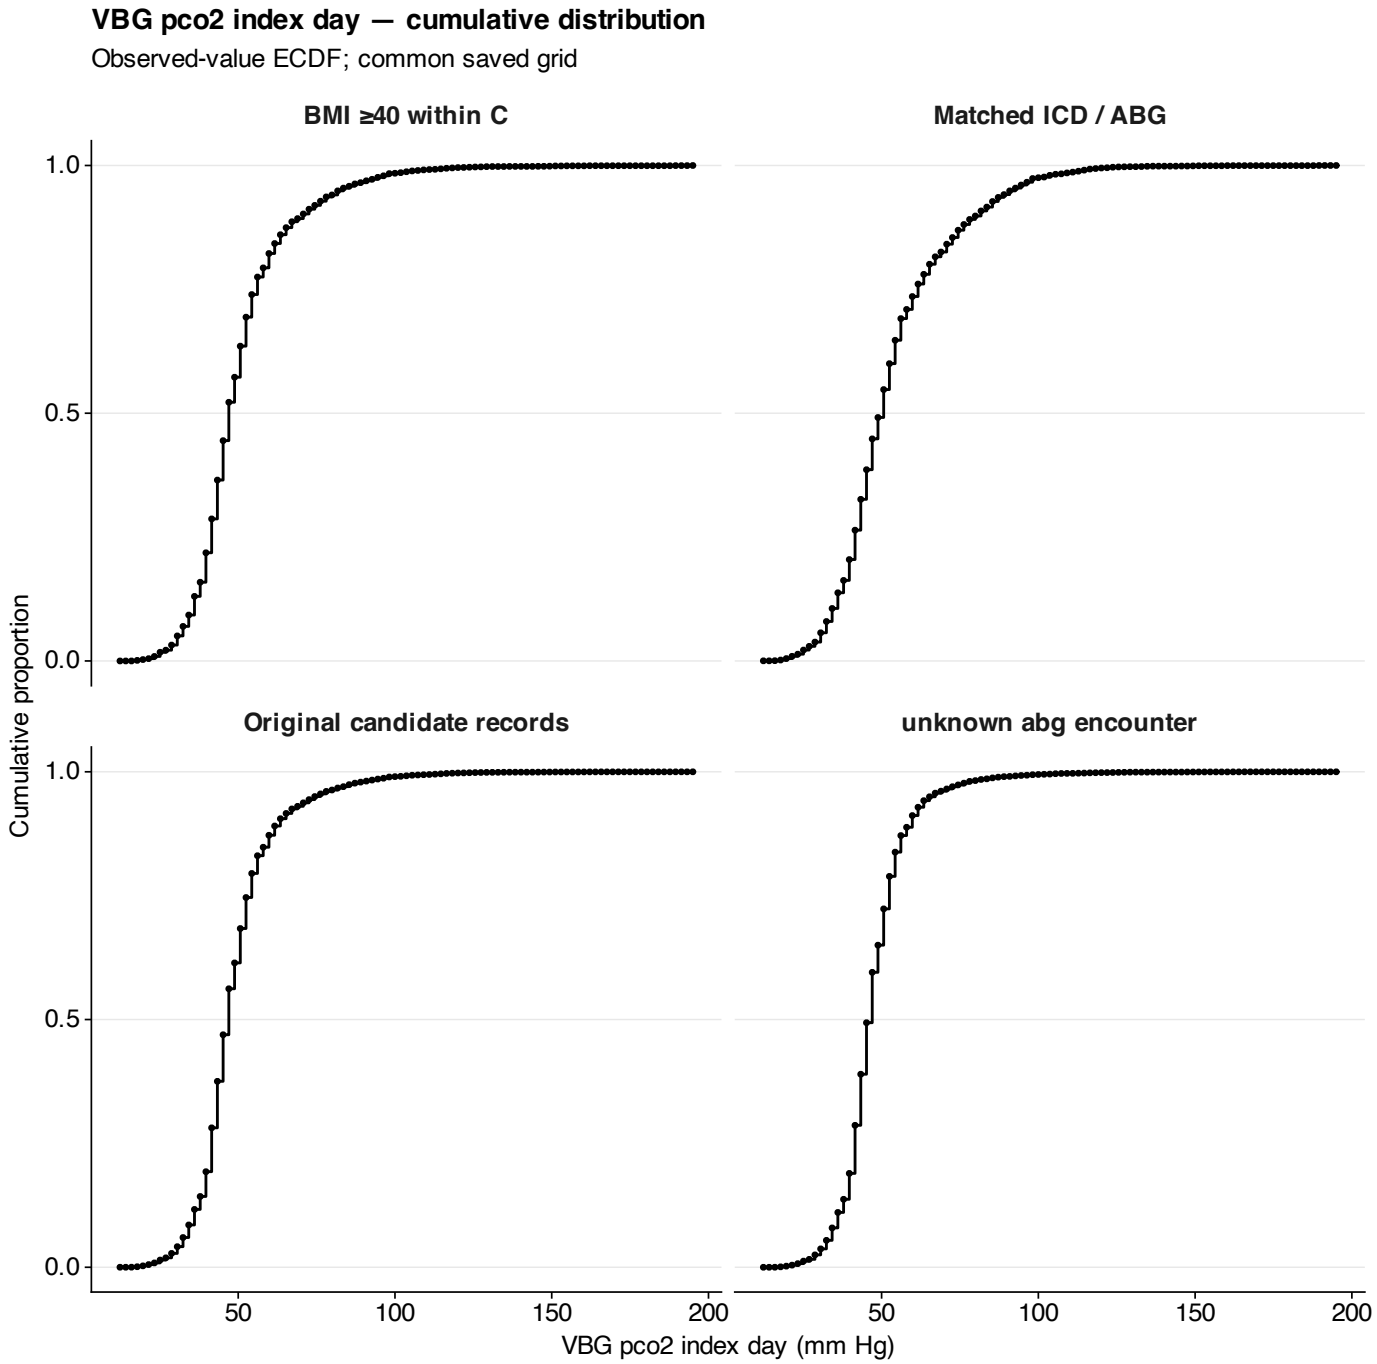

Figure 921: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. vbg_pco2_index_day ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

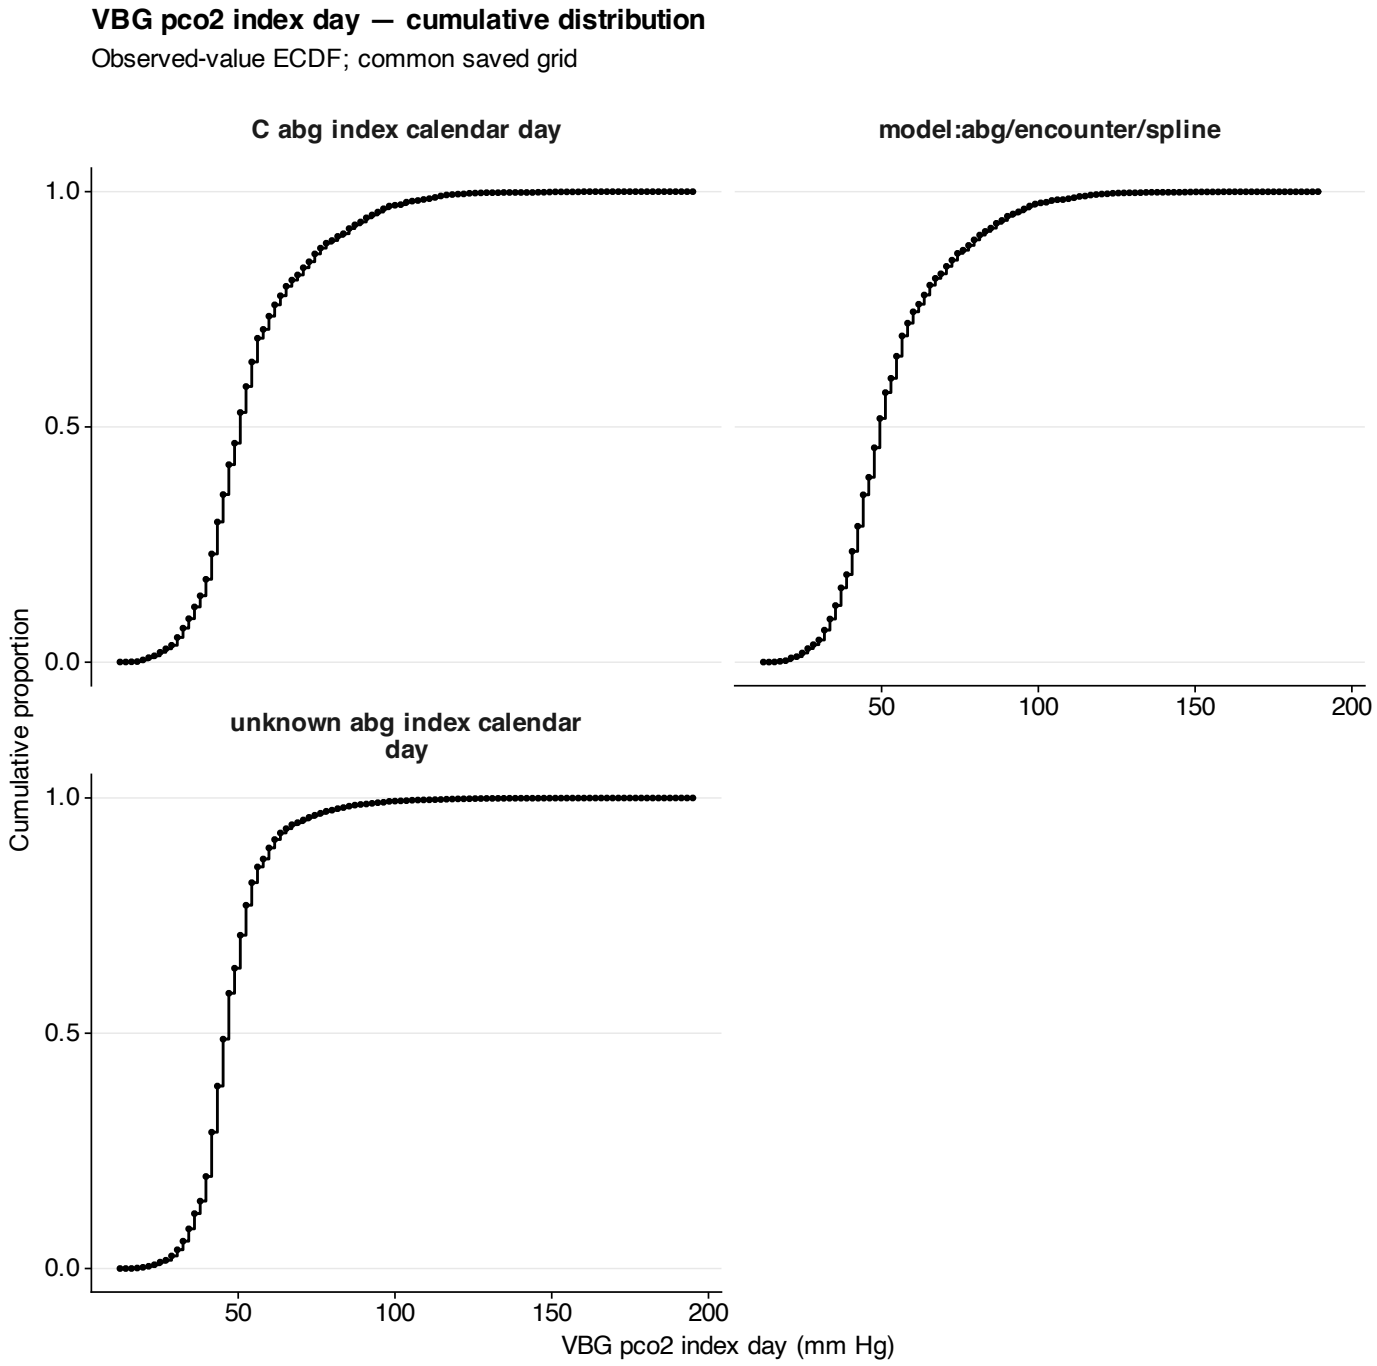

Figure 922: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. vbg_pco2_index_day ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

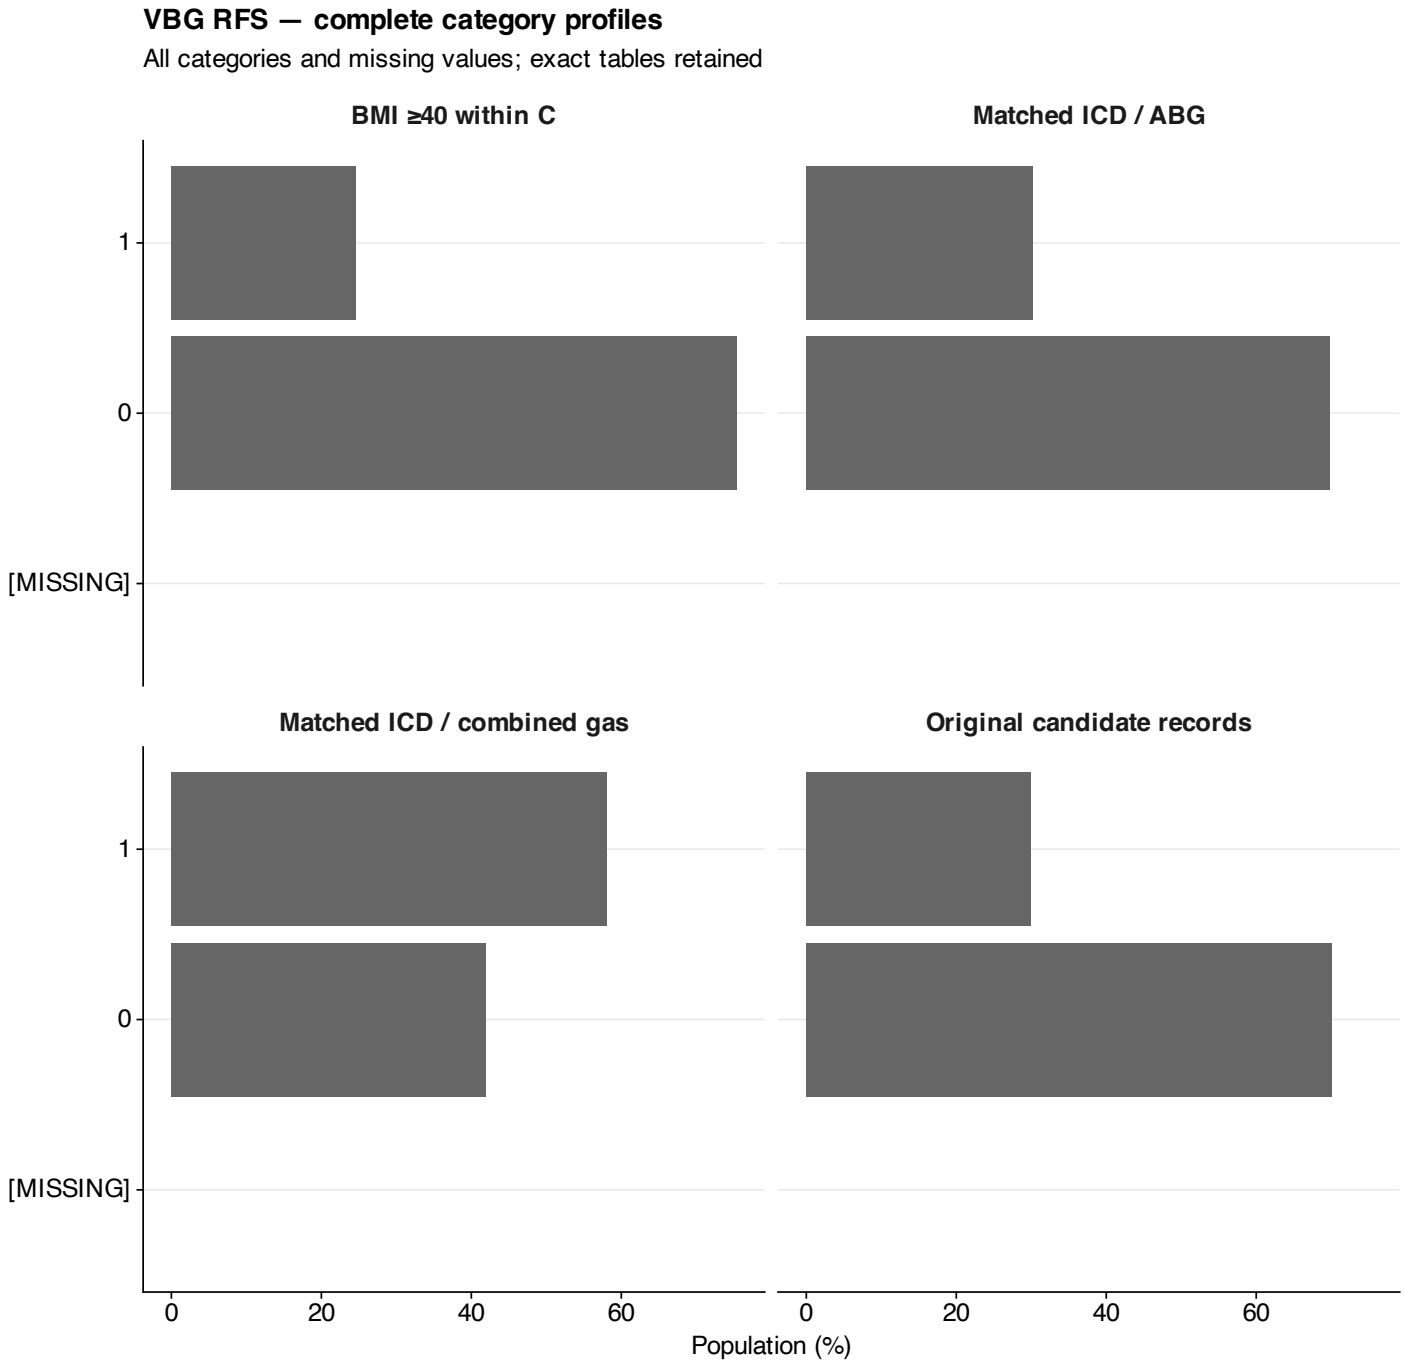

Figure 923: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete VBG_rfs stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

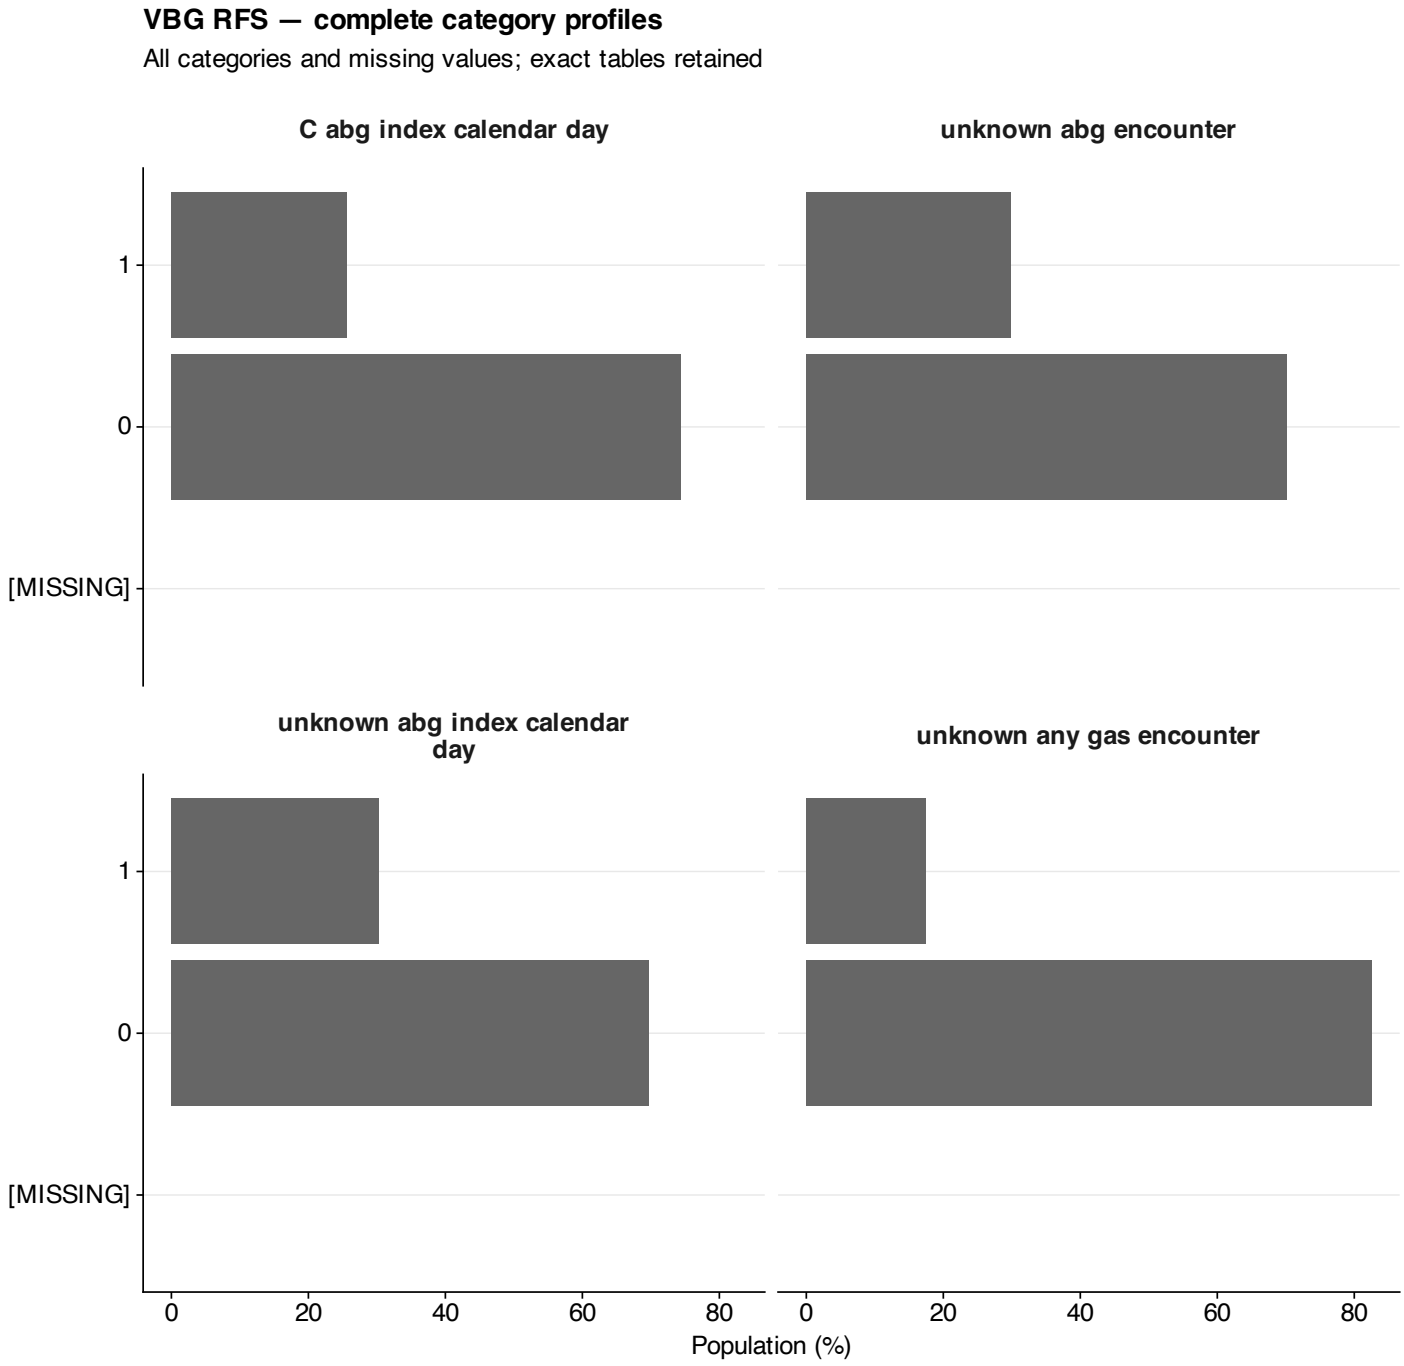

Figure 924: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete VBG_rfs stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

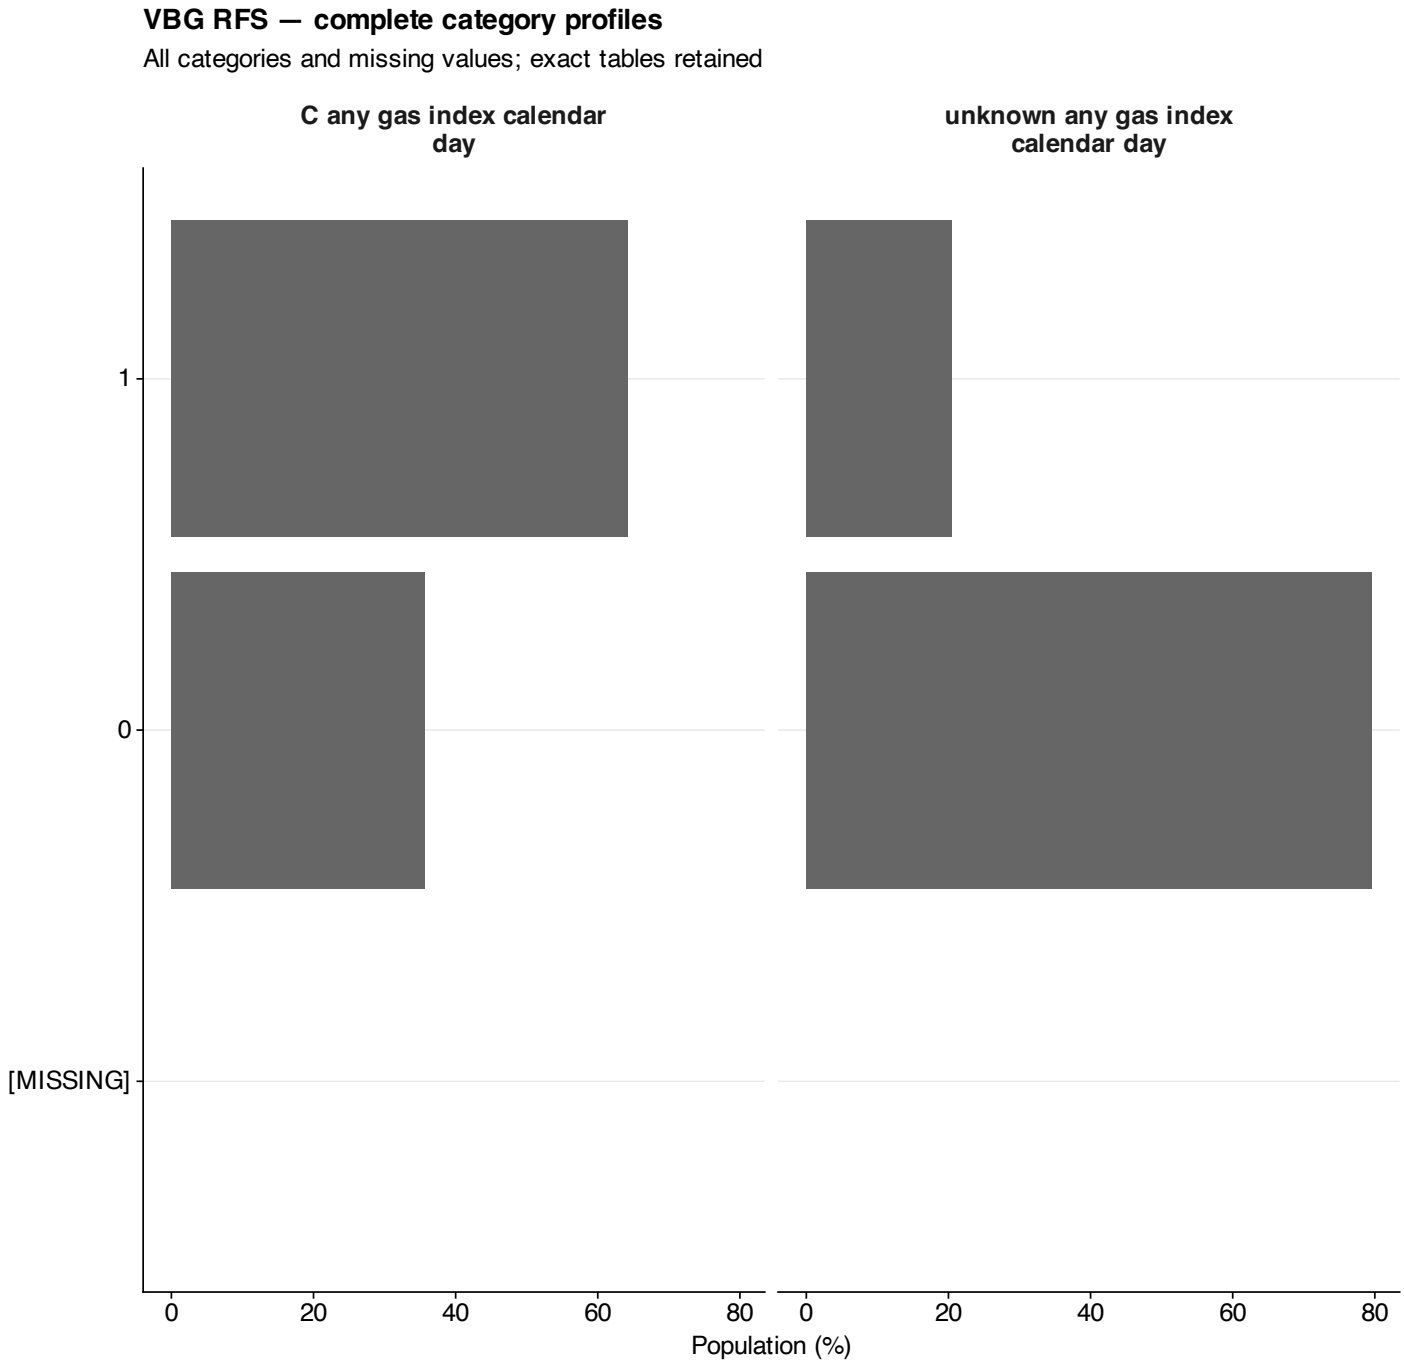

Figure 925: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete VBG_rfs stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

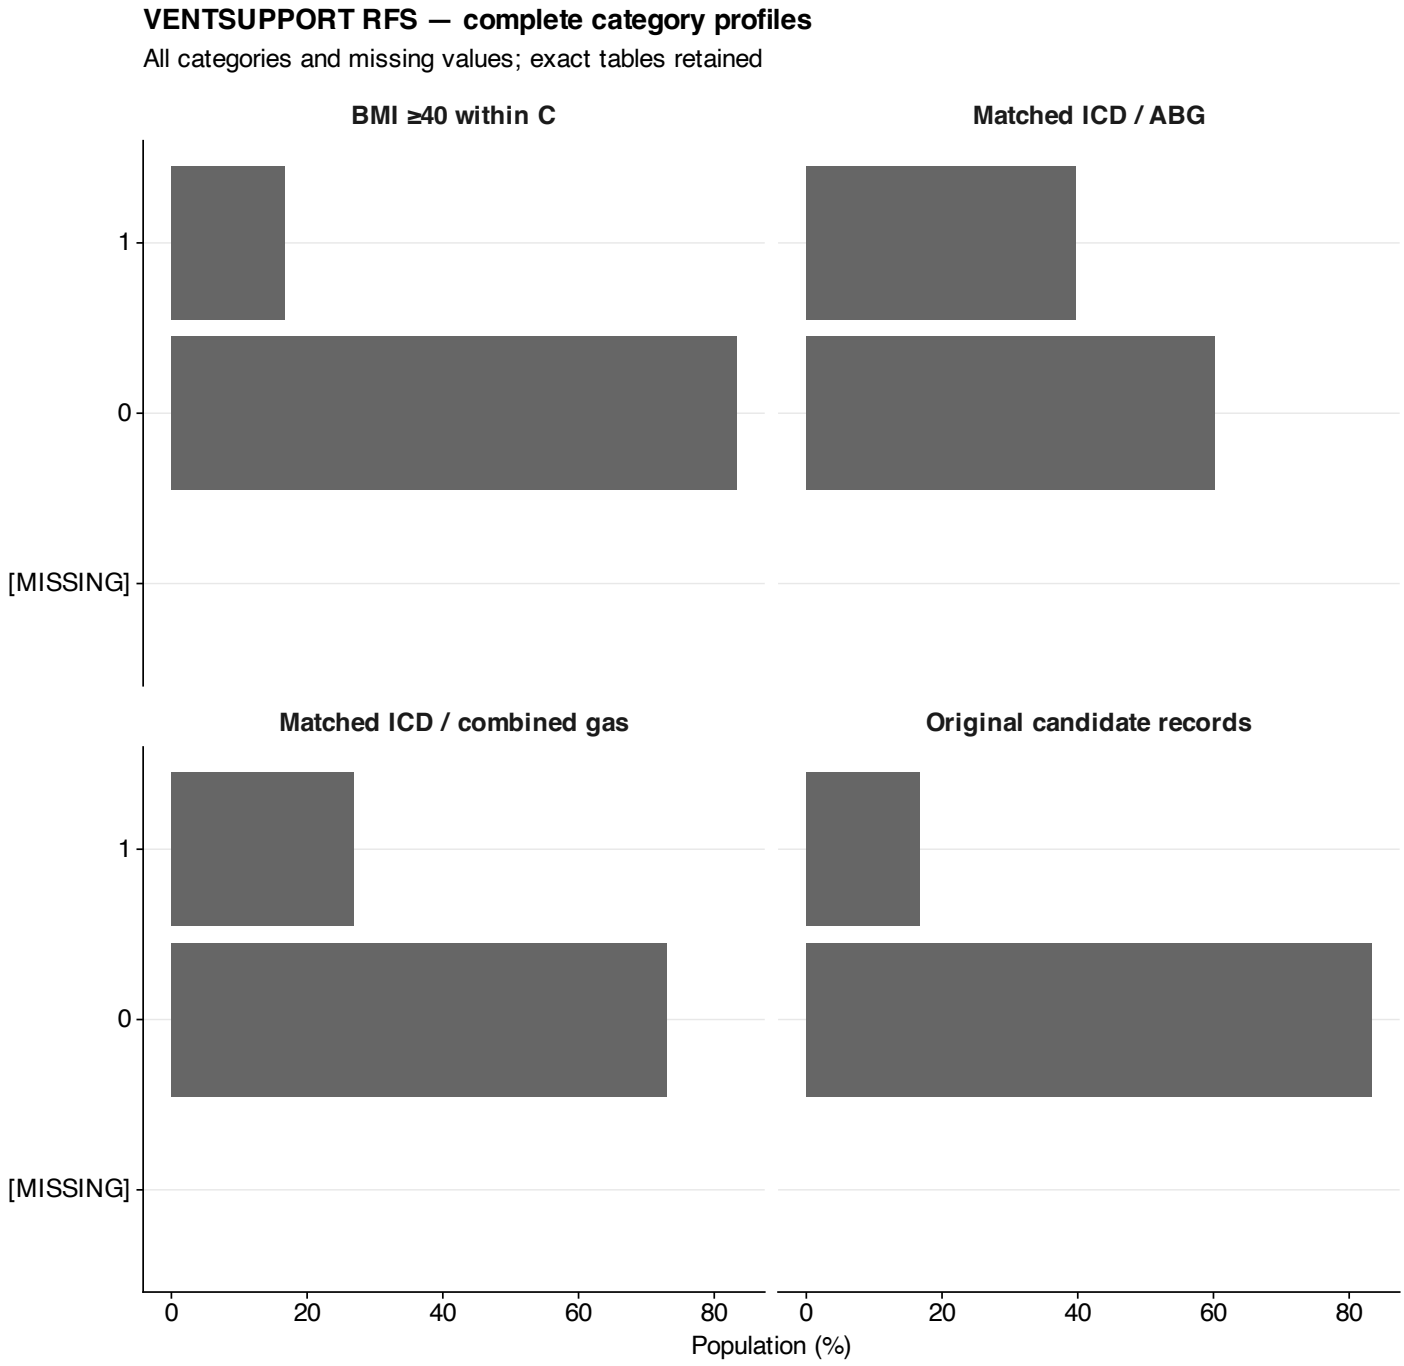

Figure 926: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete VENTSUPPORT_rfs stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

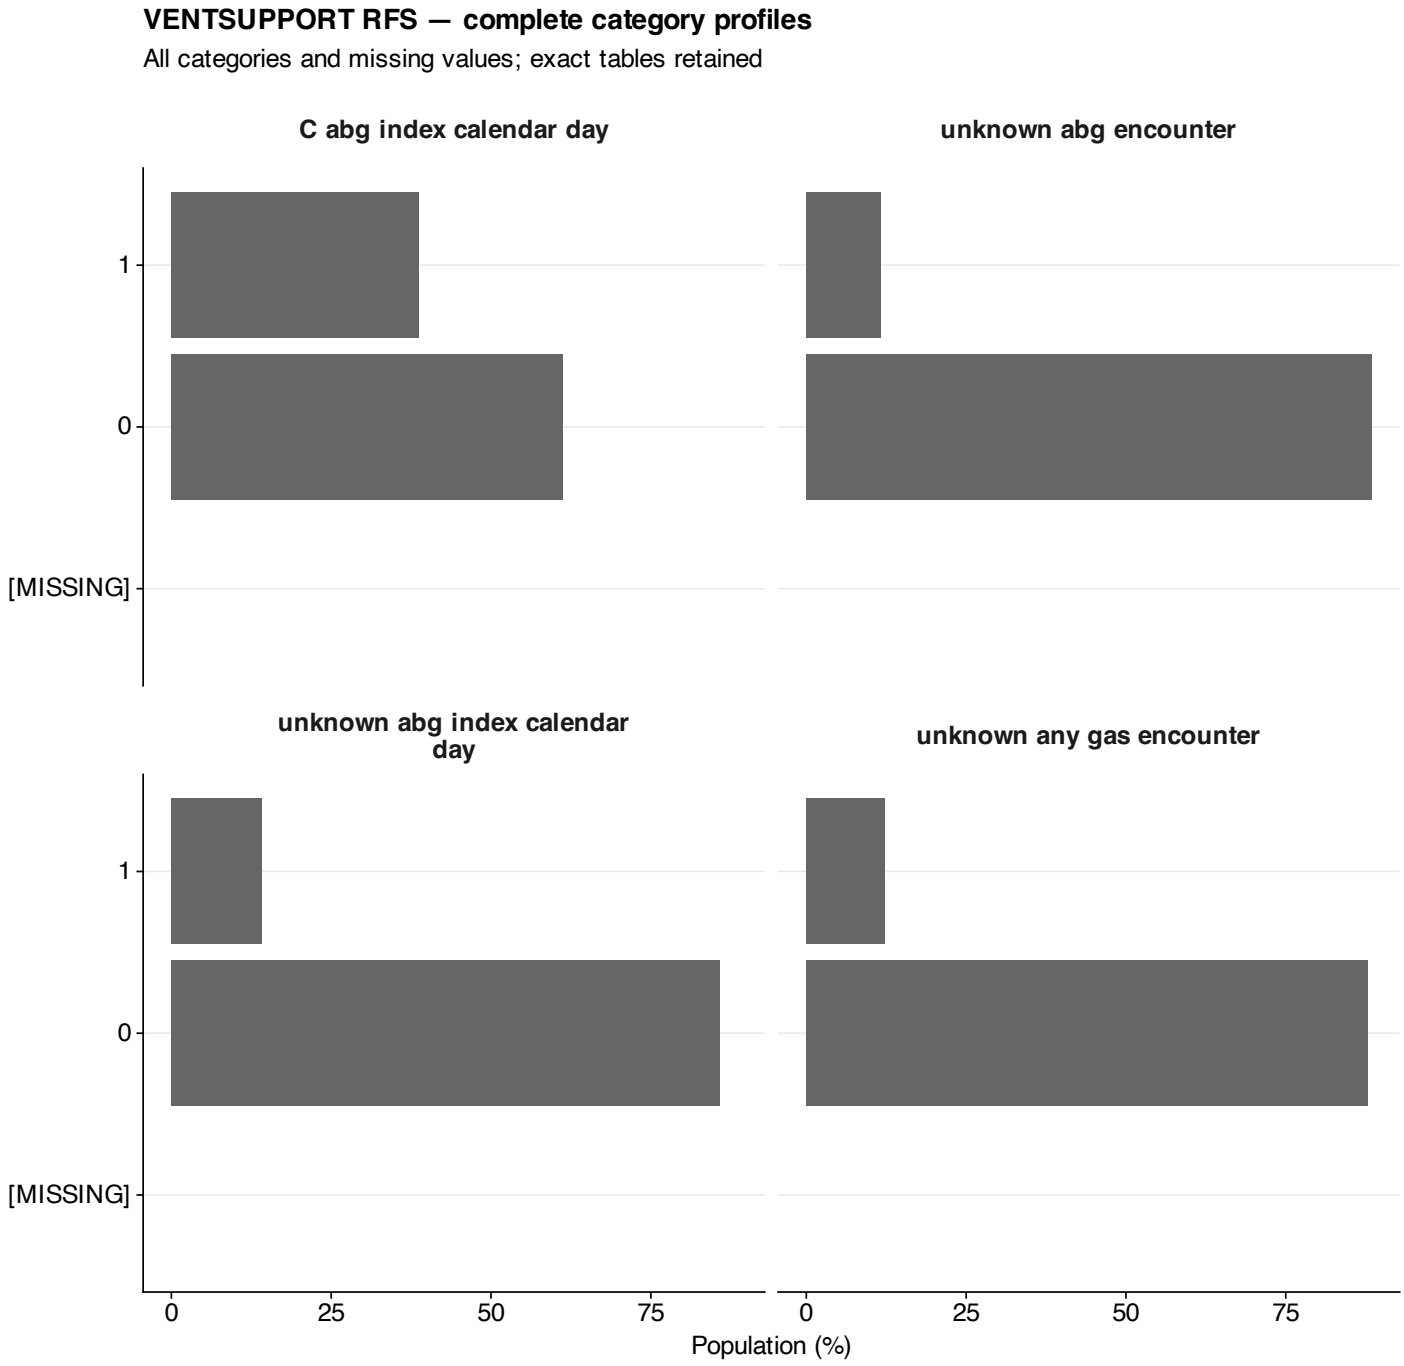

Figure 927: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete VENTSUPPORT_rfs stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

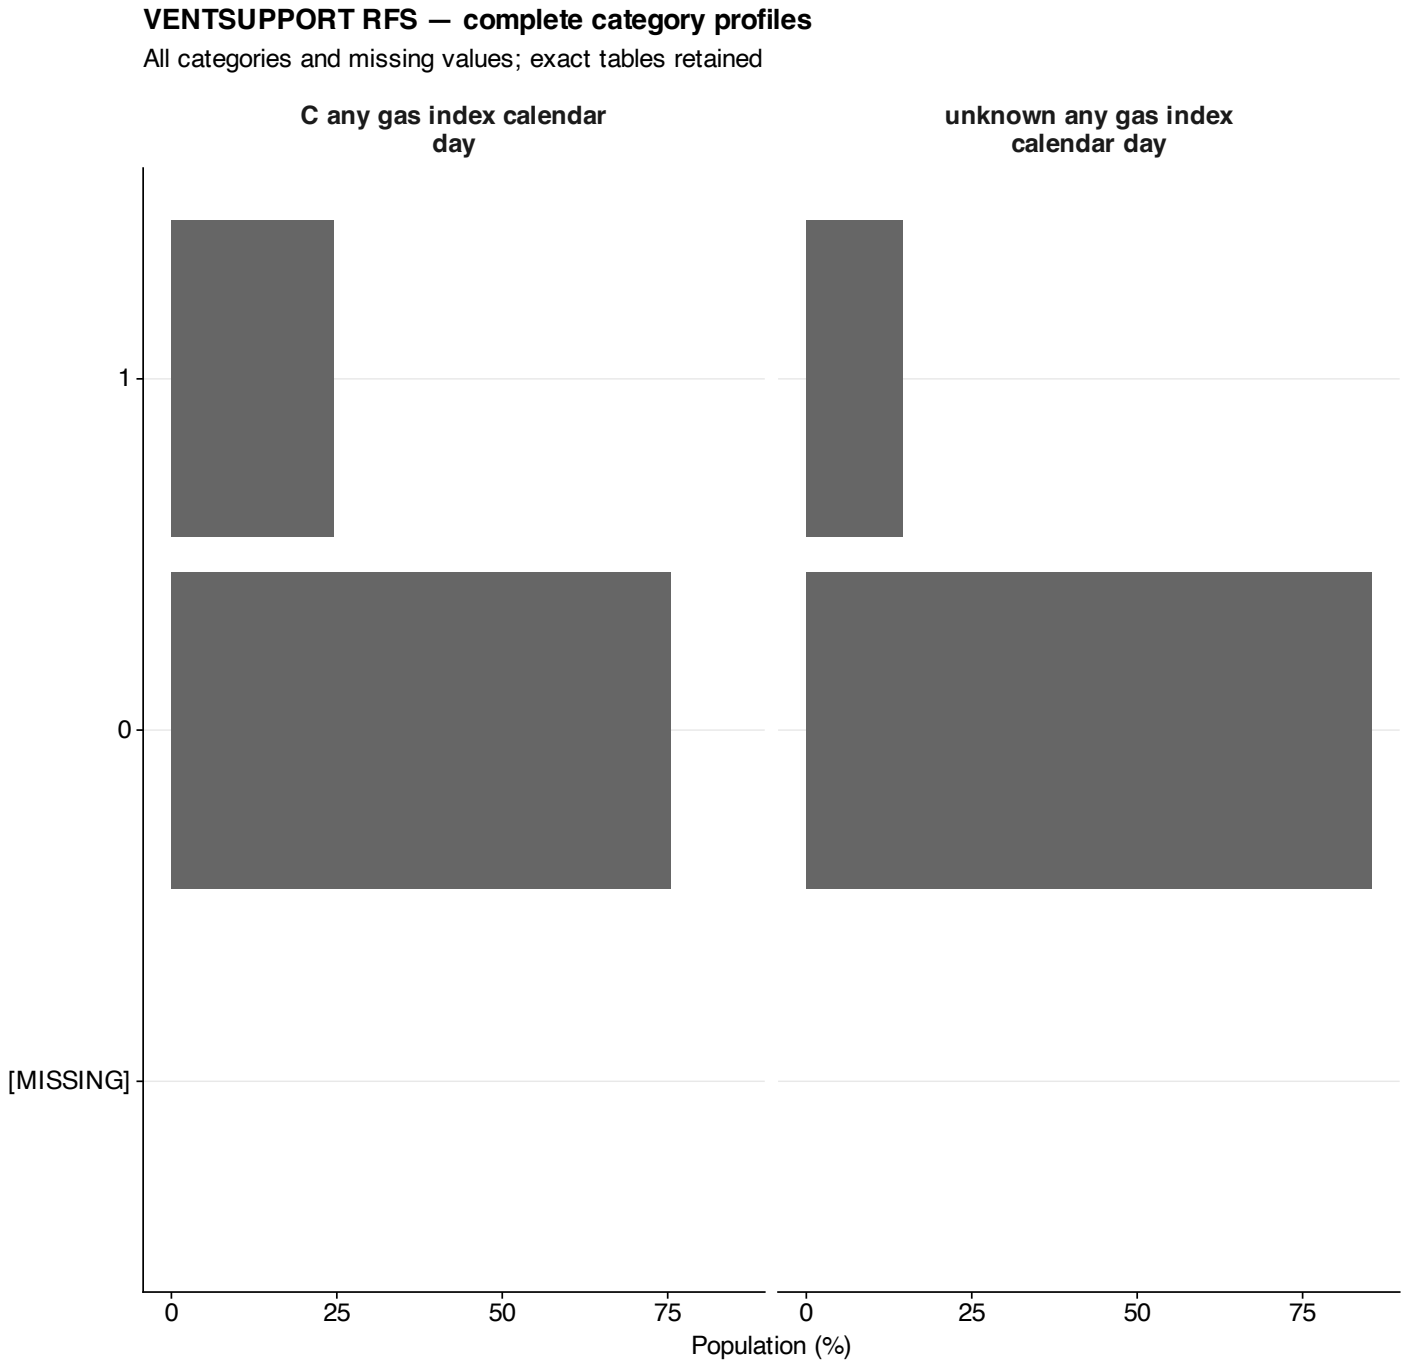

Figure 928: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete VENTSUPPORT_rfs stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

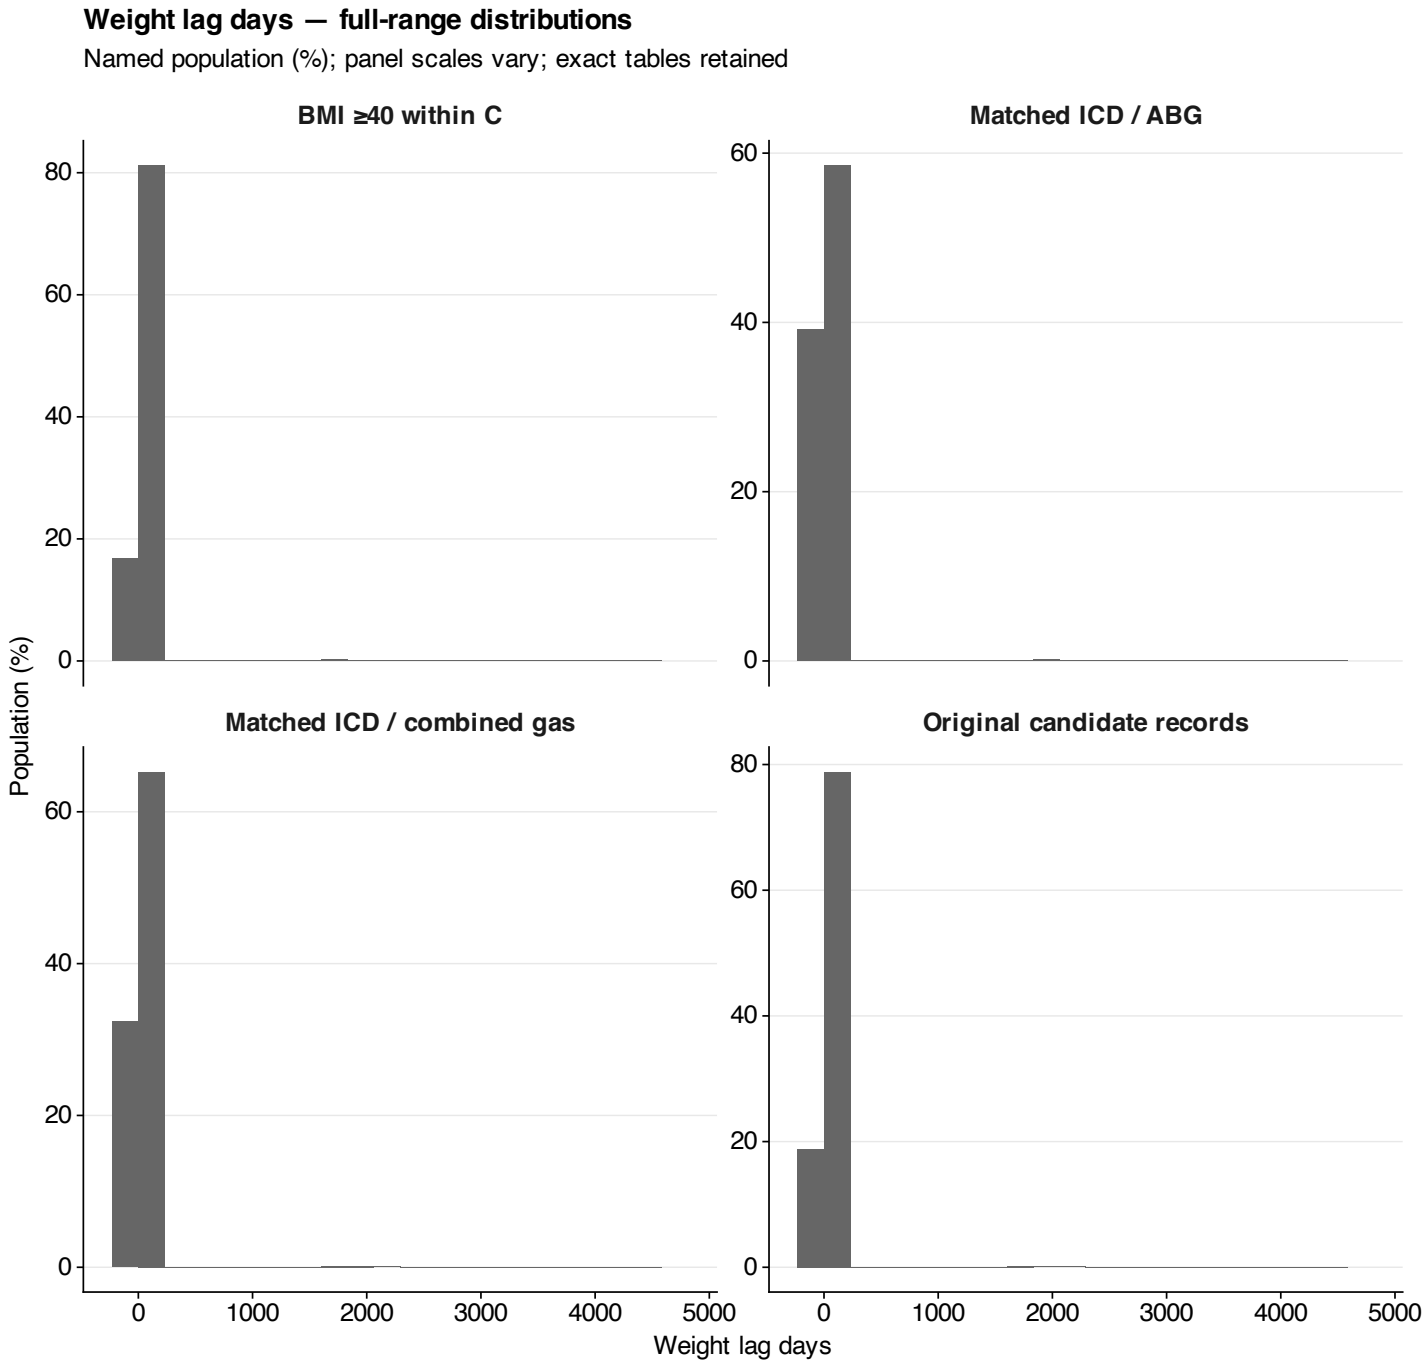

Figure 929: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete weight_lag_days stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

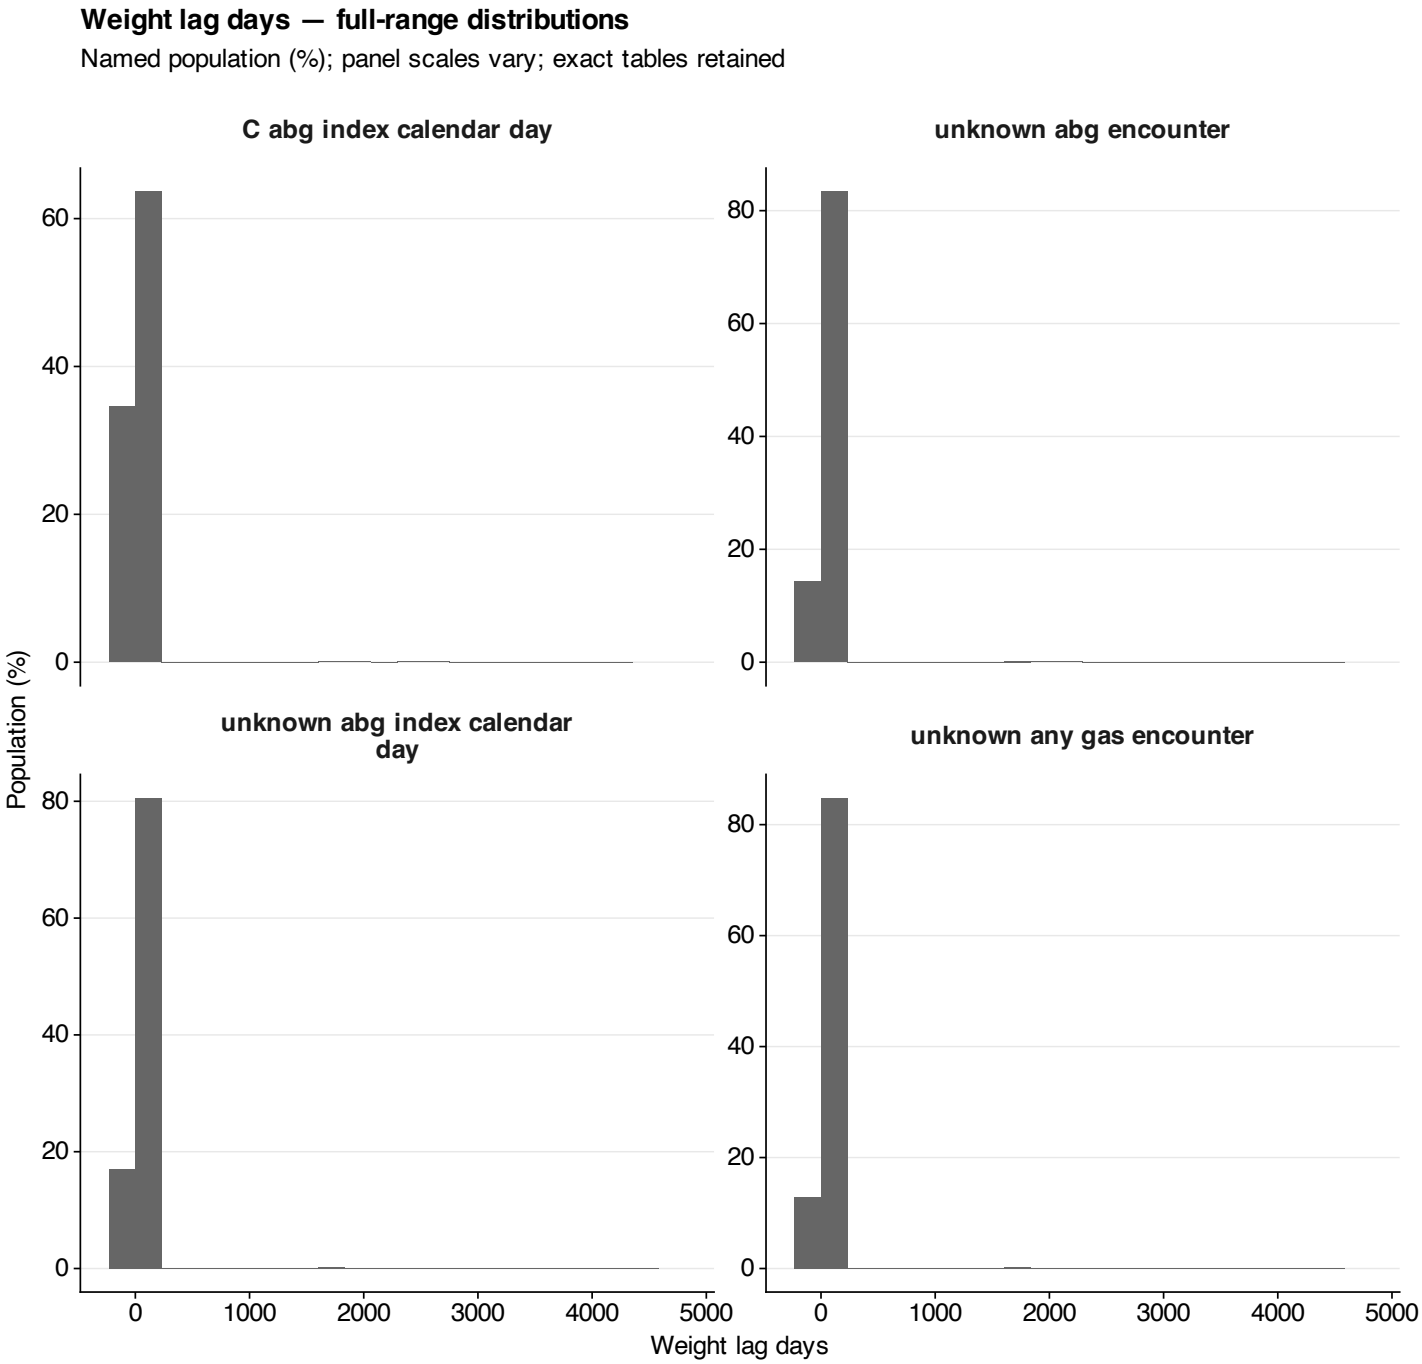

Figure 930: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete weight_lag_days stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

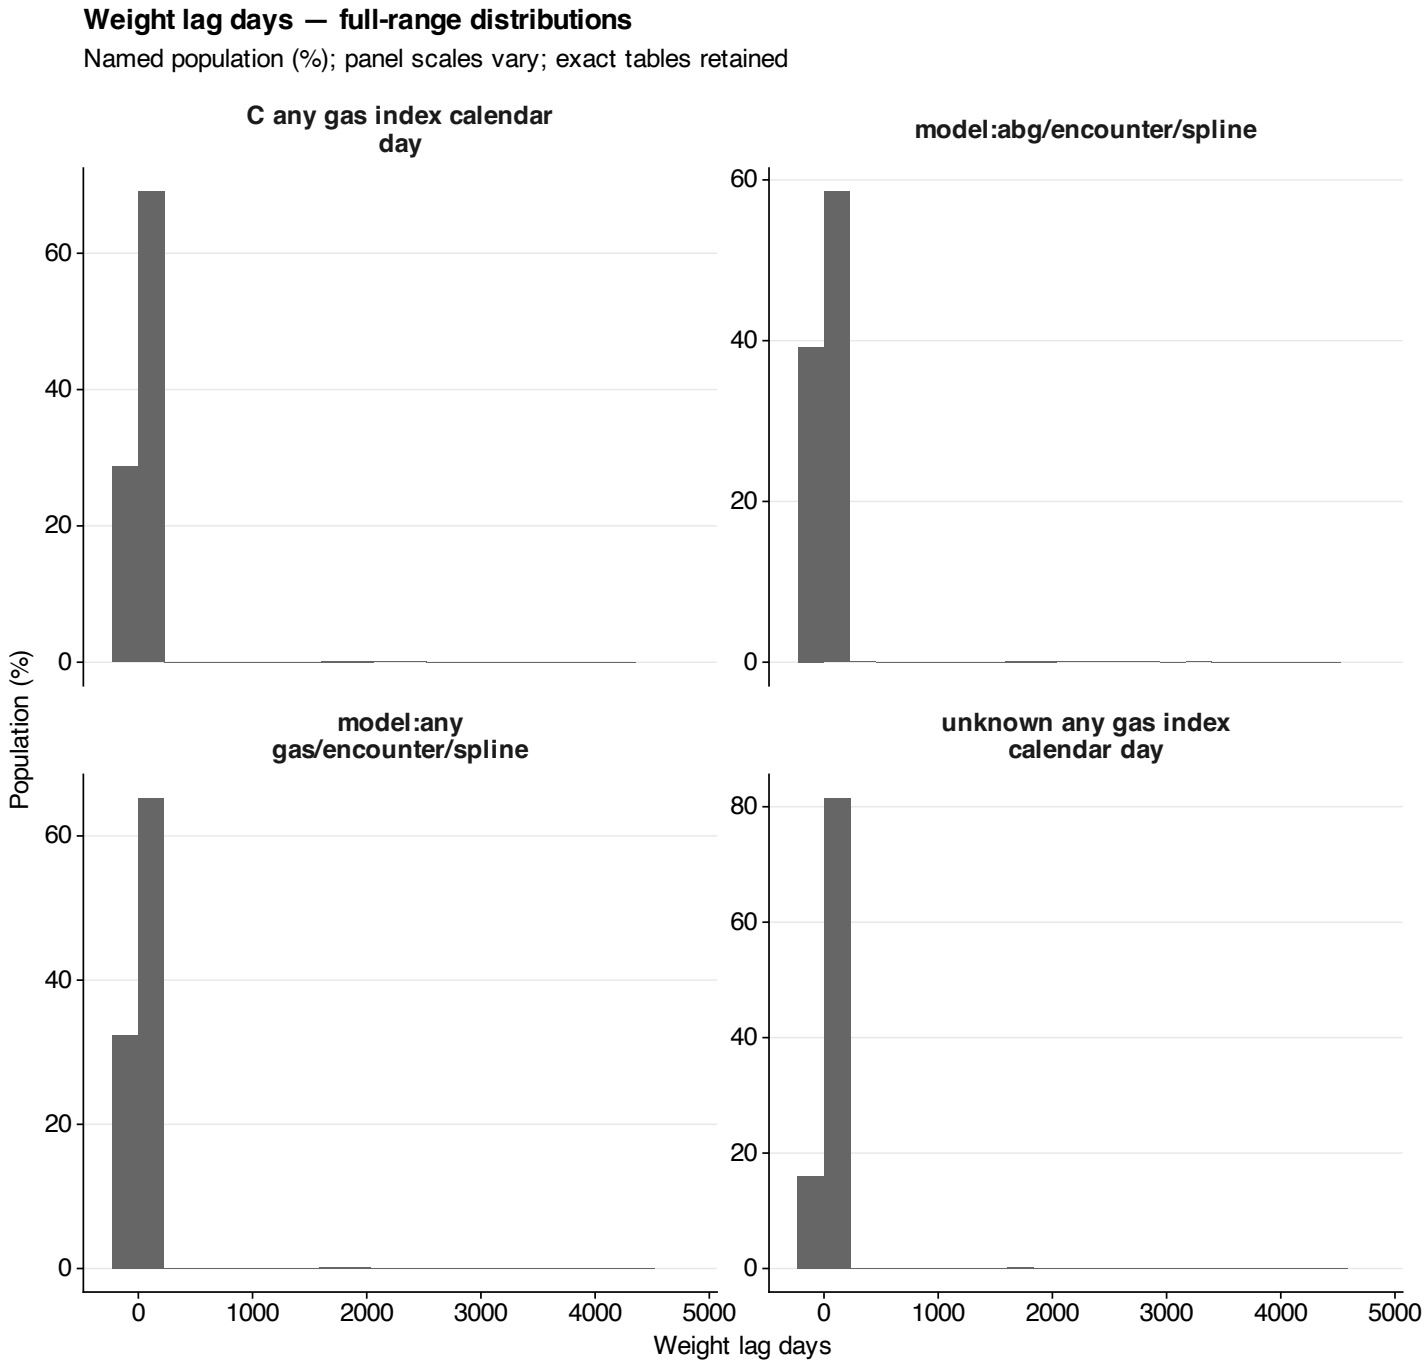

Figure 931: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete weight_lag_days stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

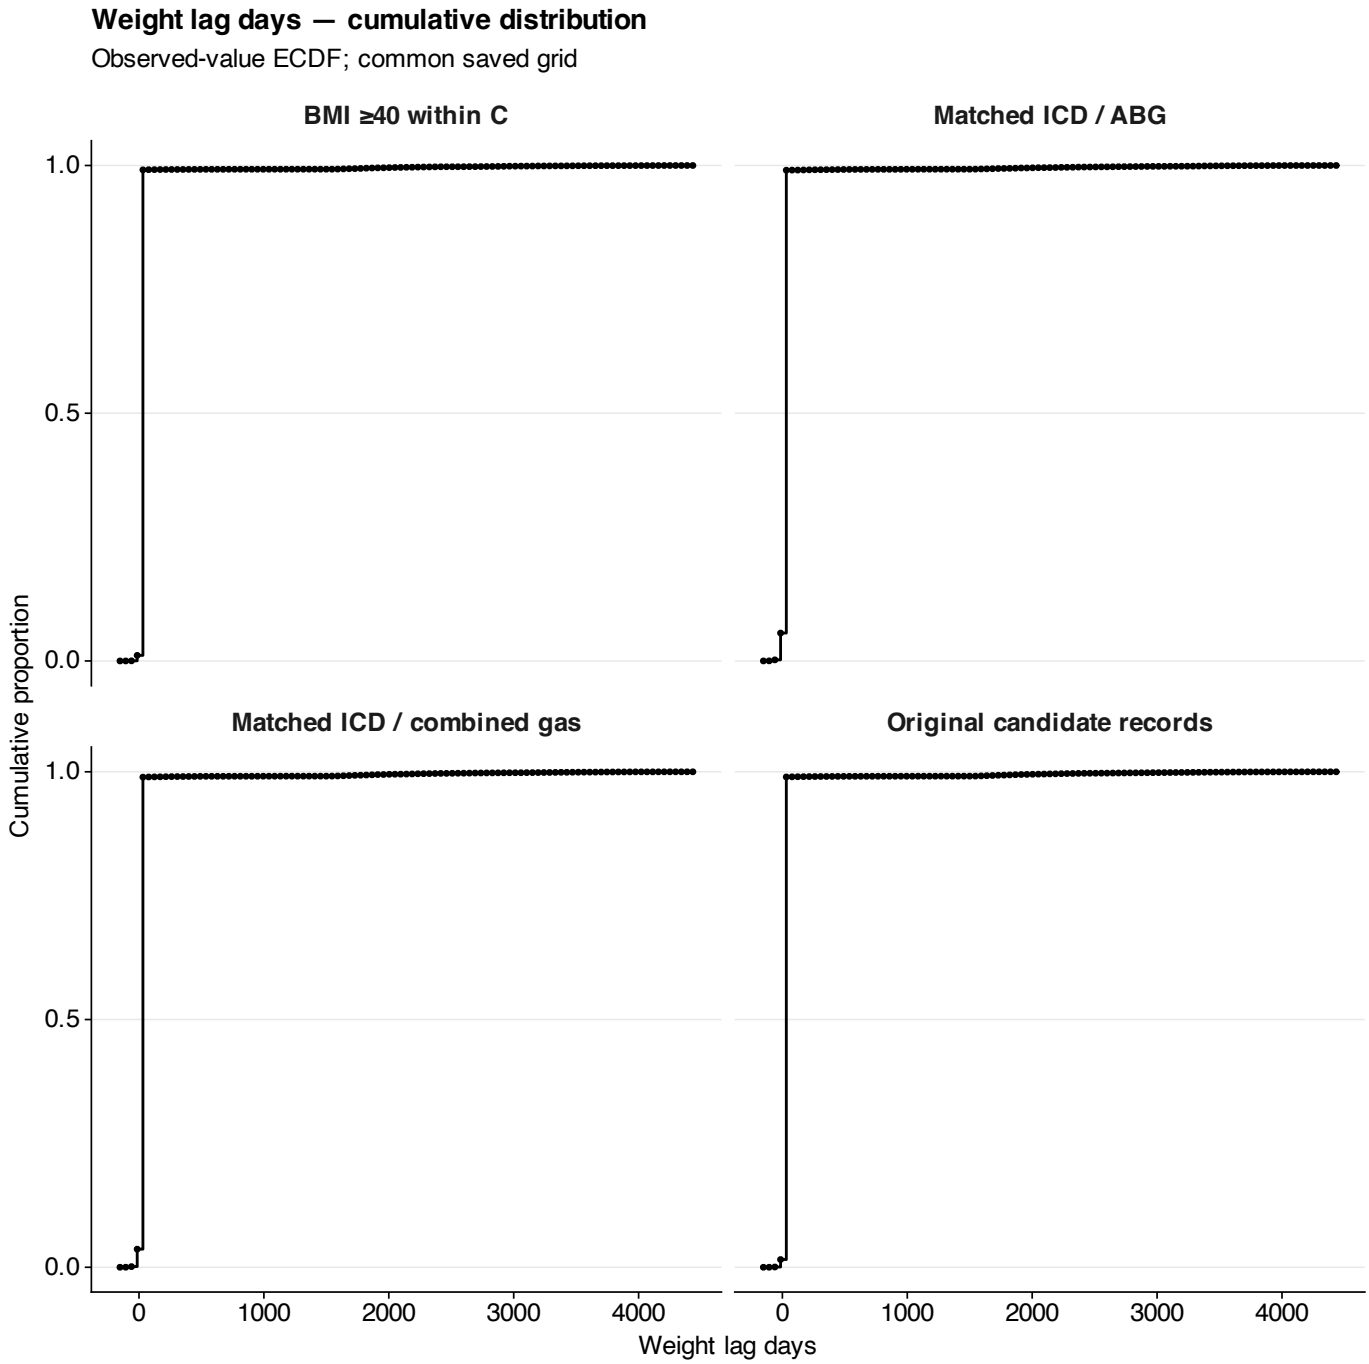

Figure 932: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. weight_lag_days ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

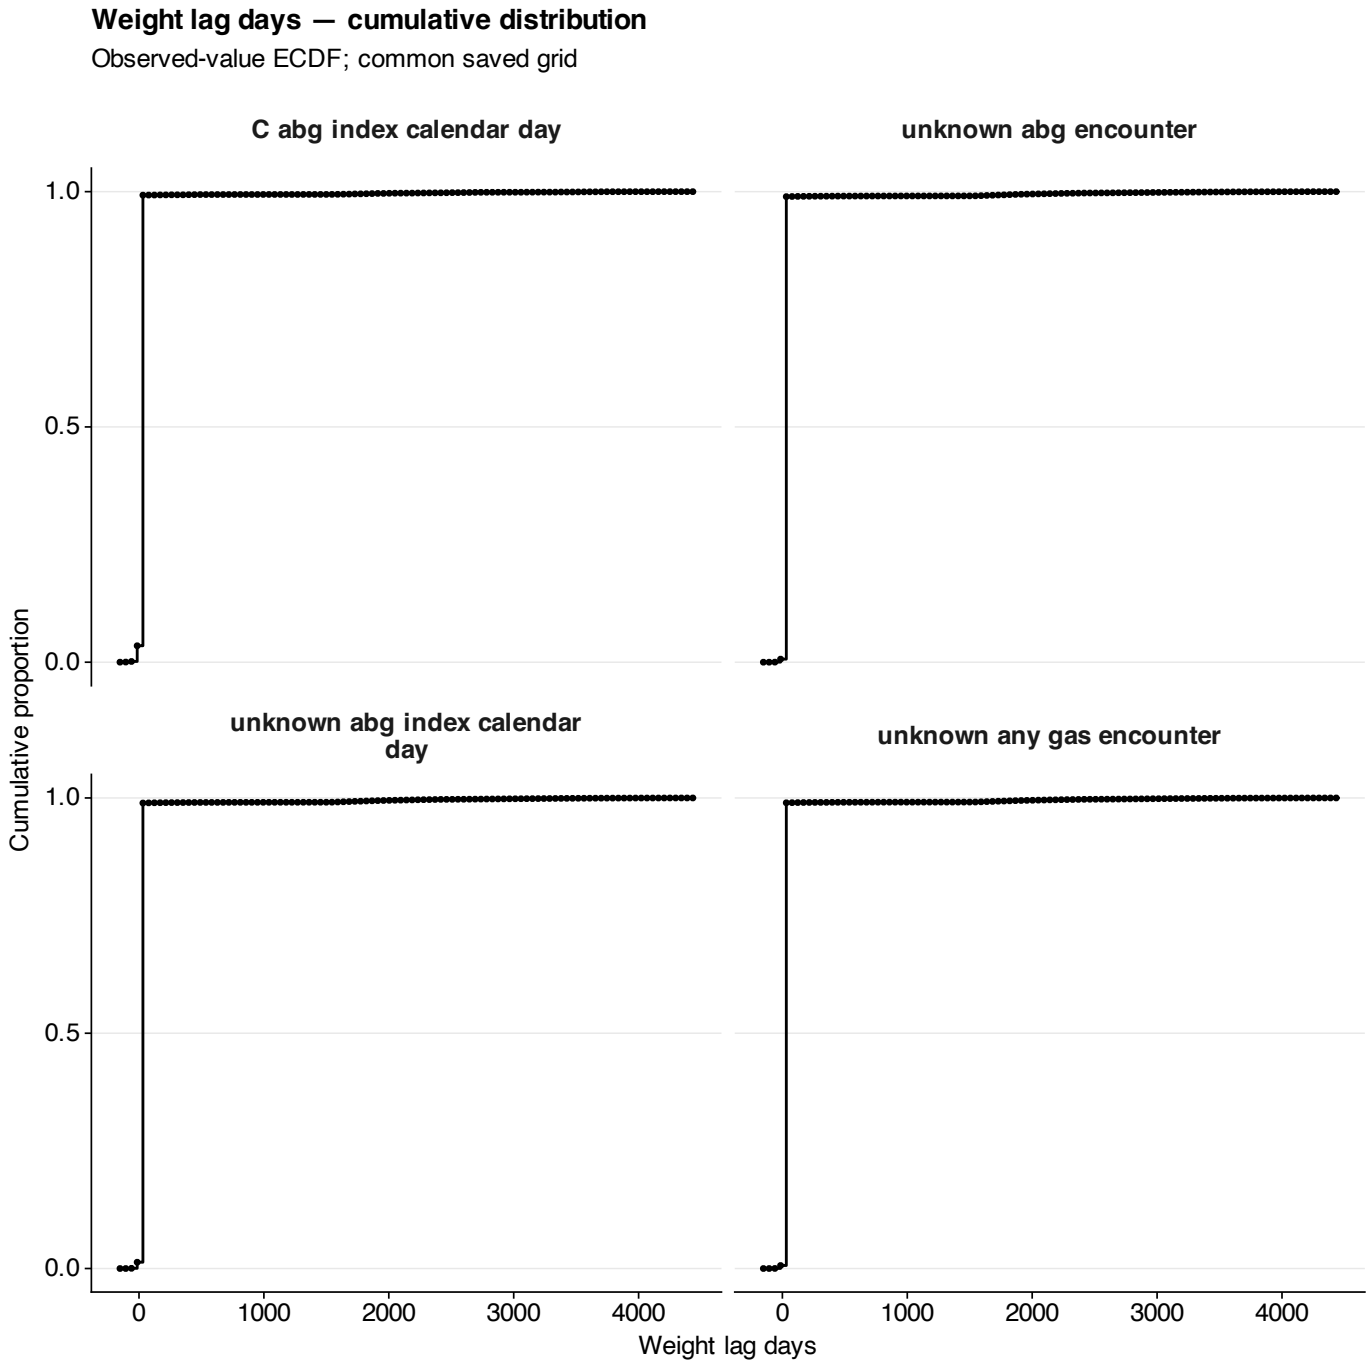

Figure 933: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. weight_lag_days ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

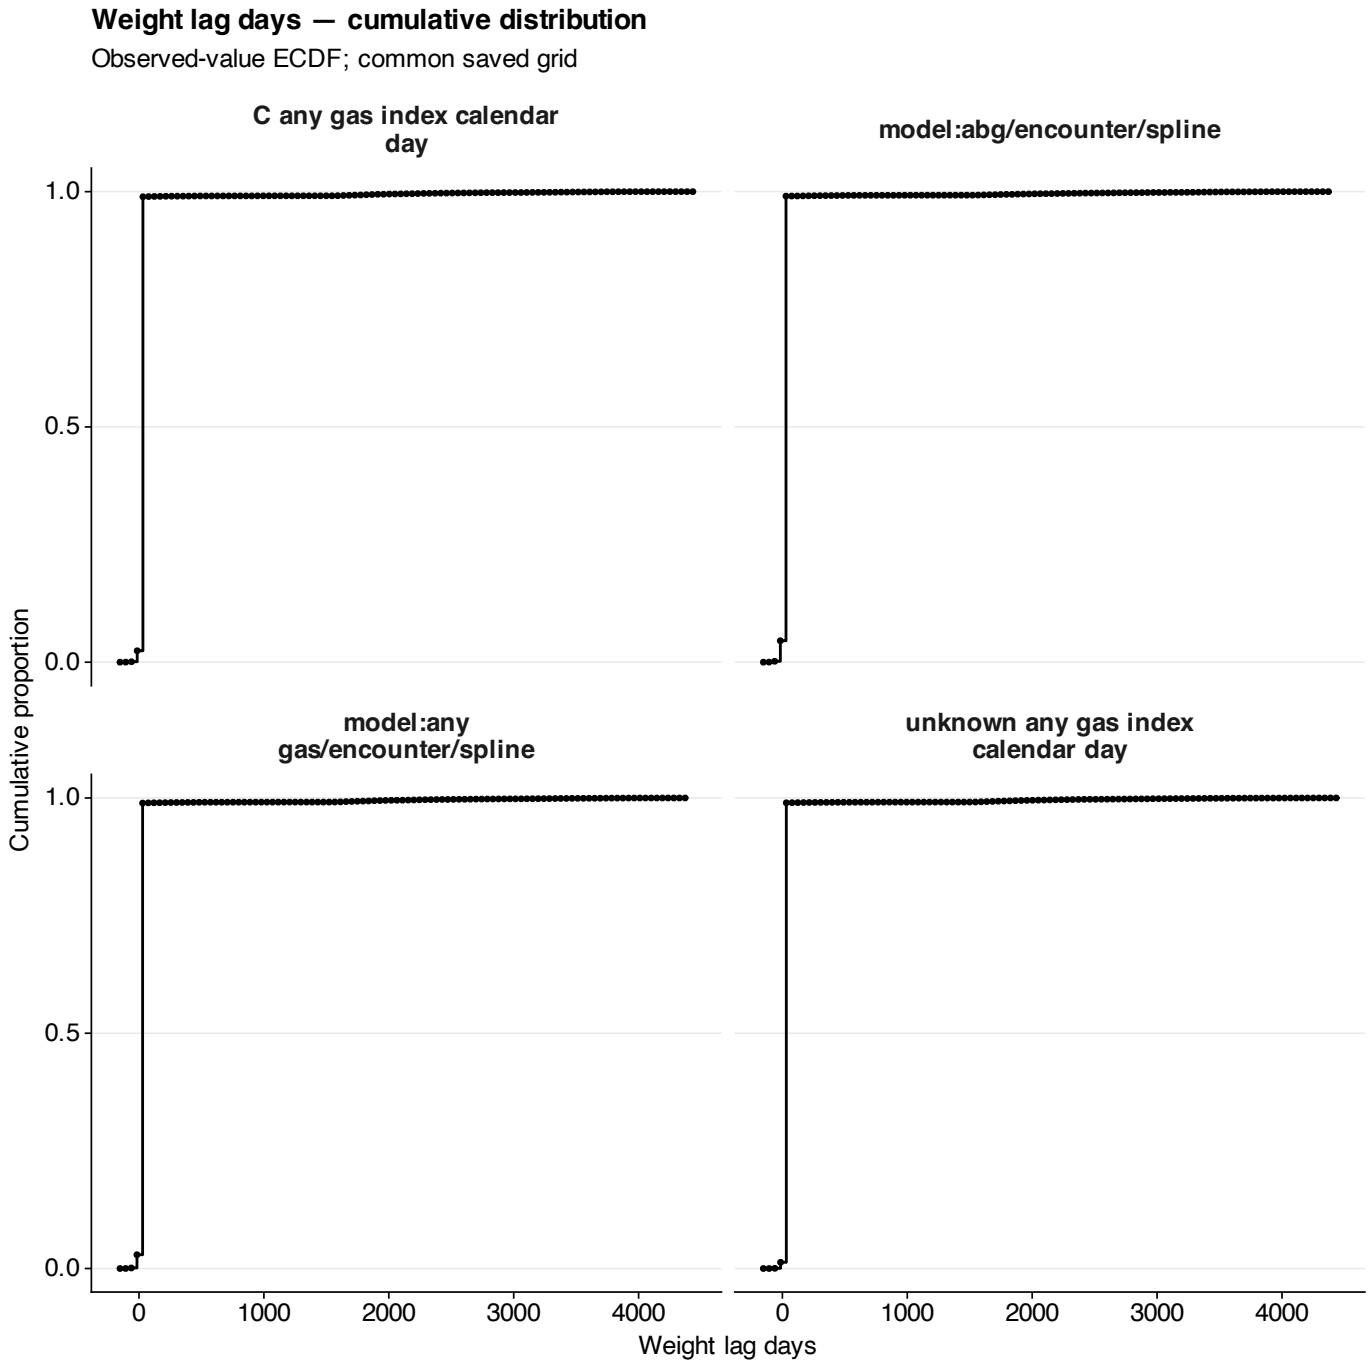

Figure 934: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. weight_lag_days ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

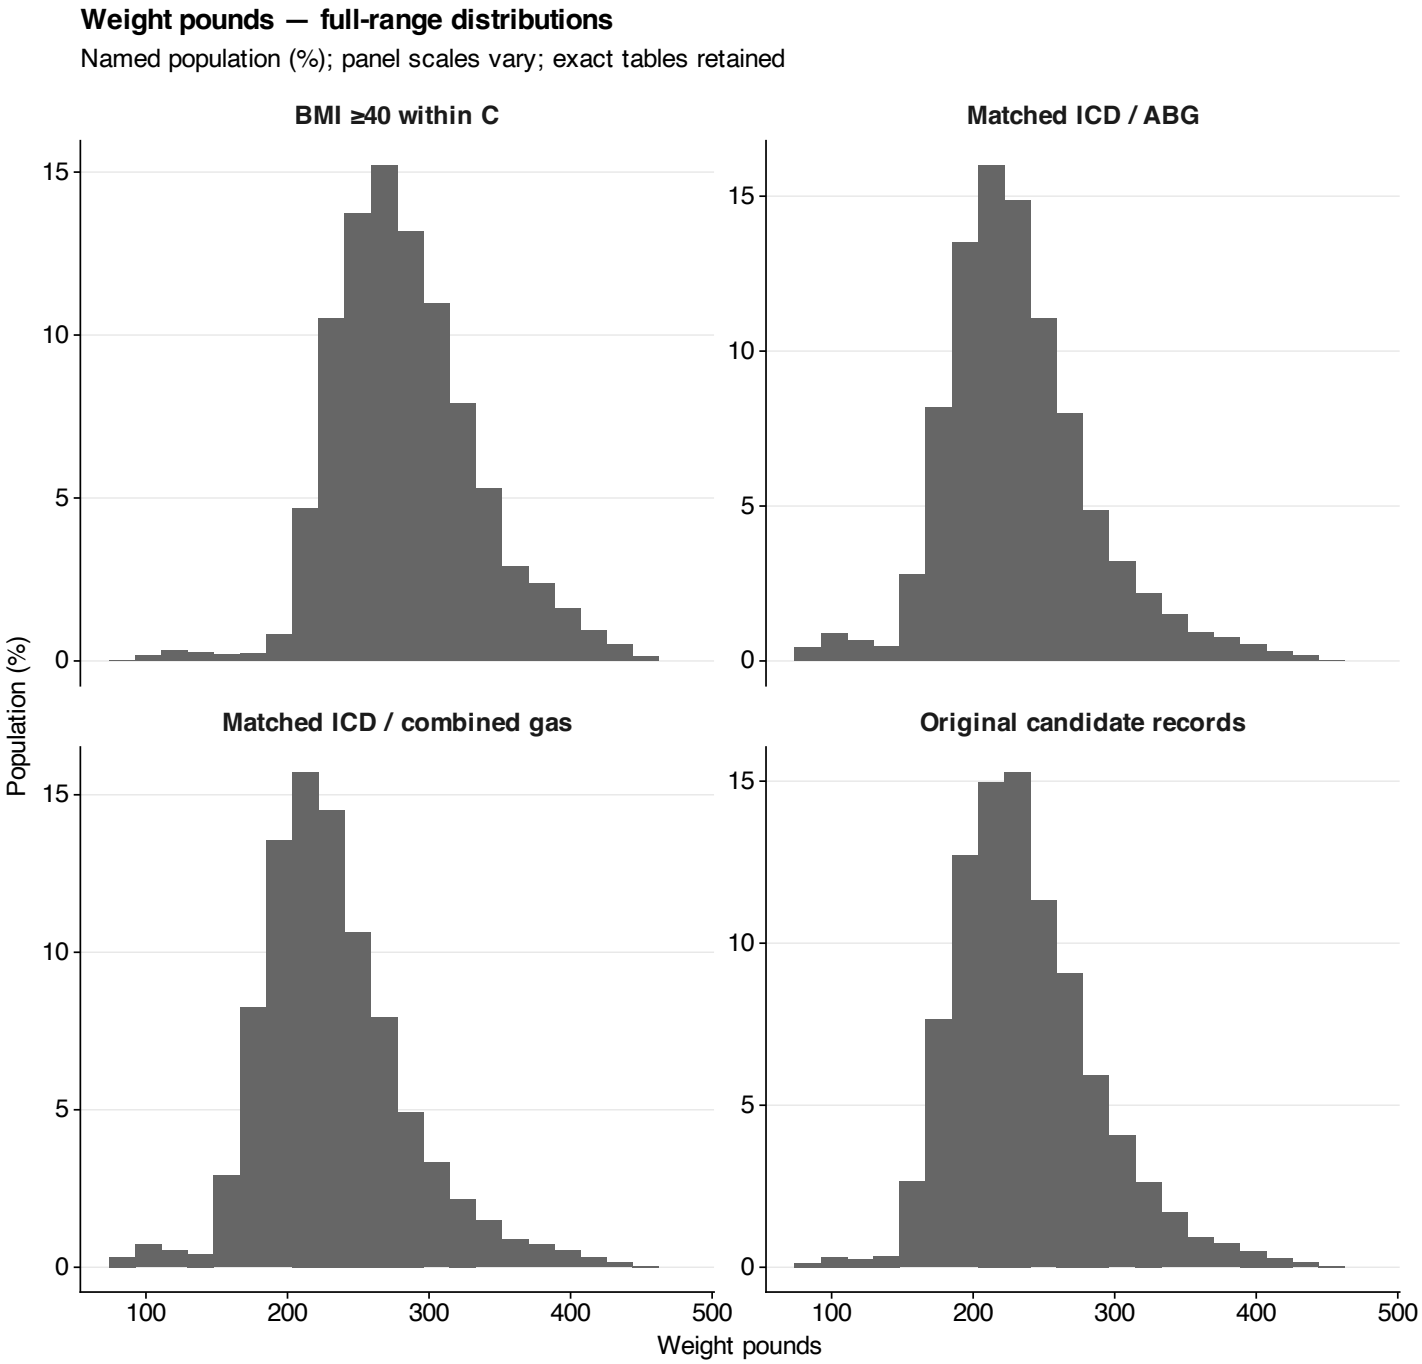

Figure 935: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete weight_pounds stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

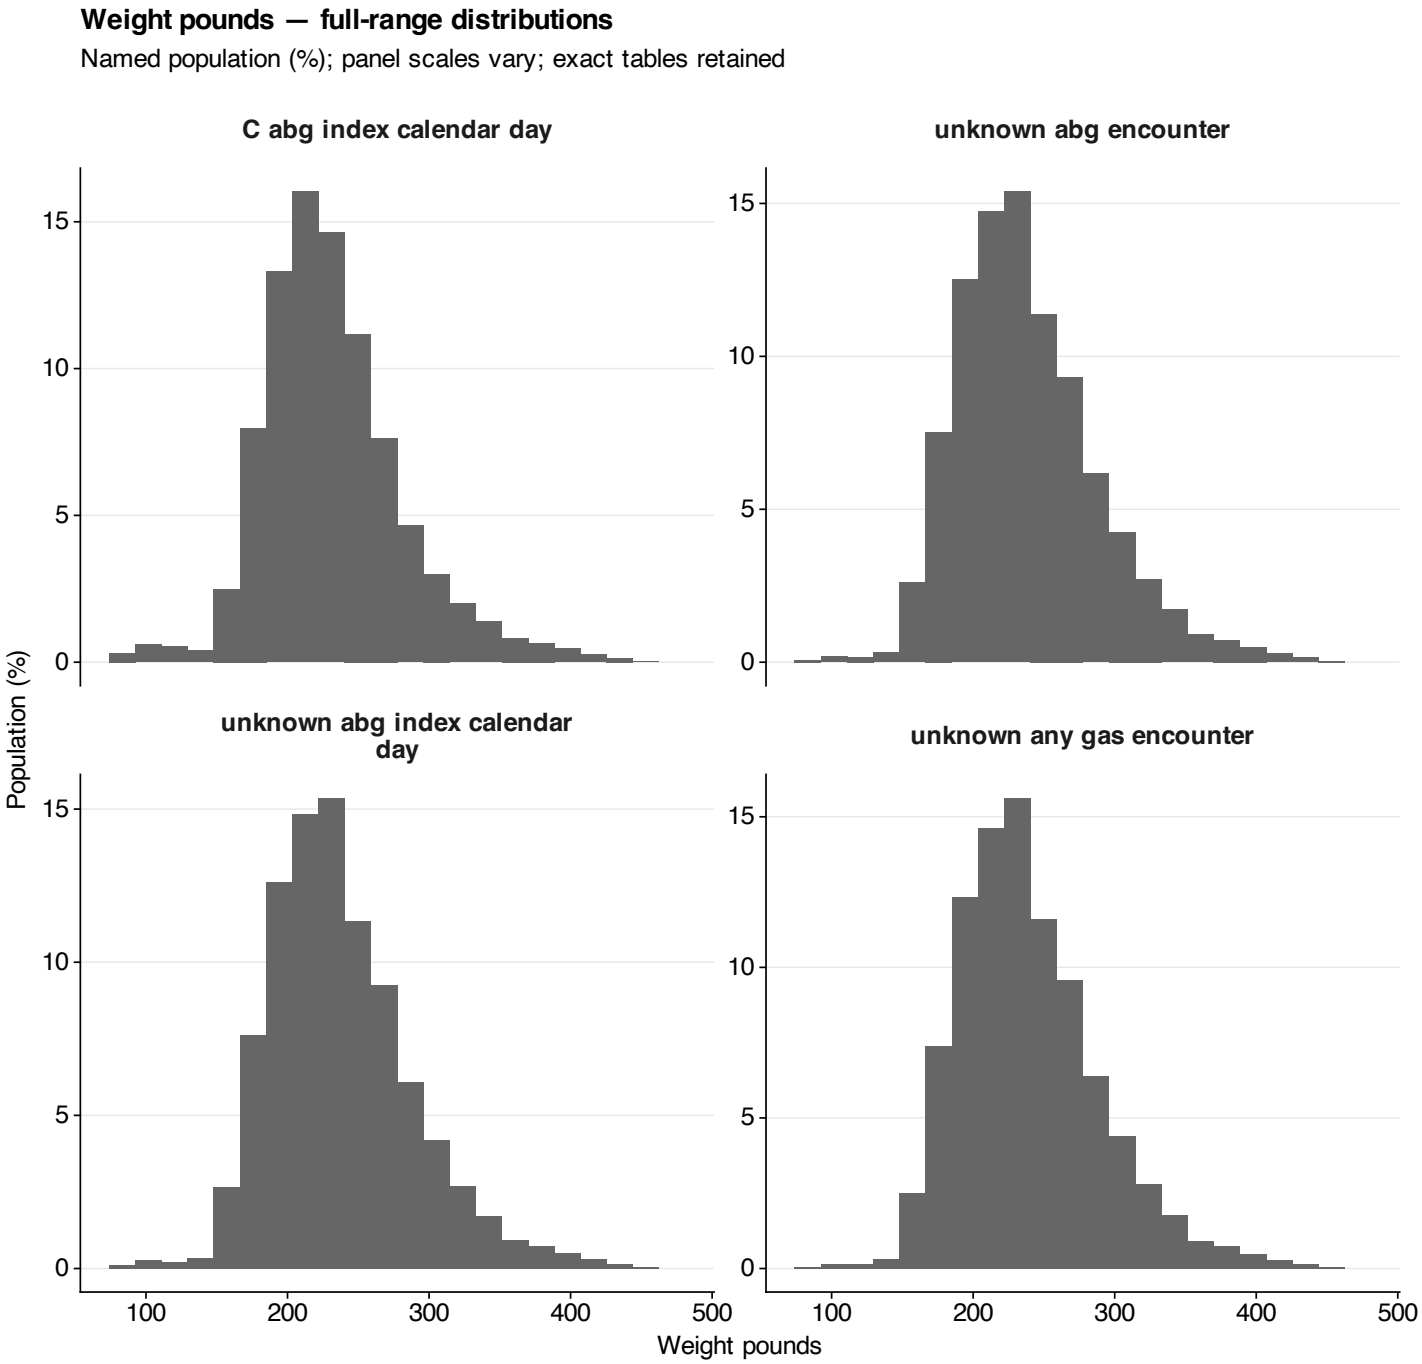

Figure 936: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete weight_pounds stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

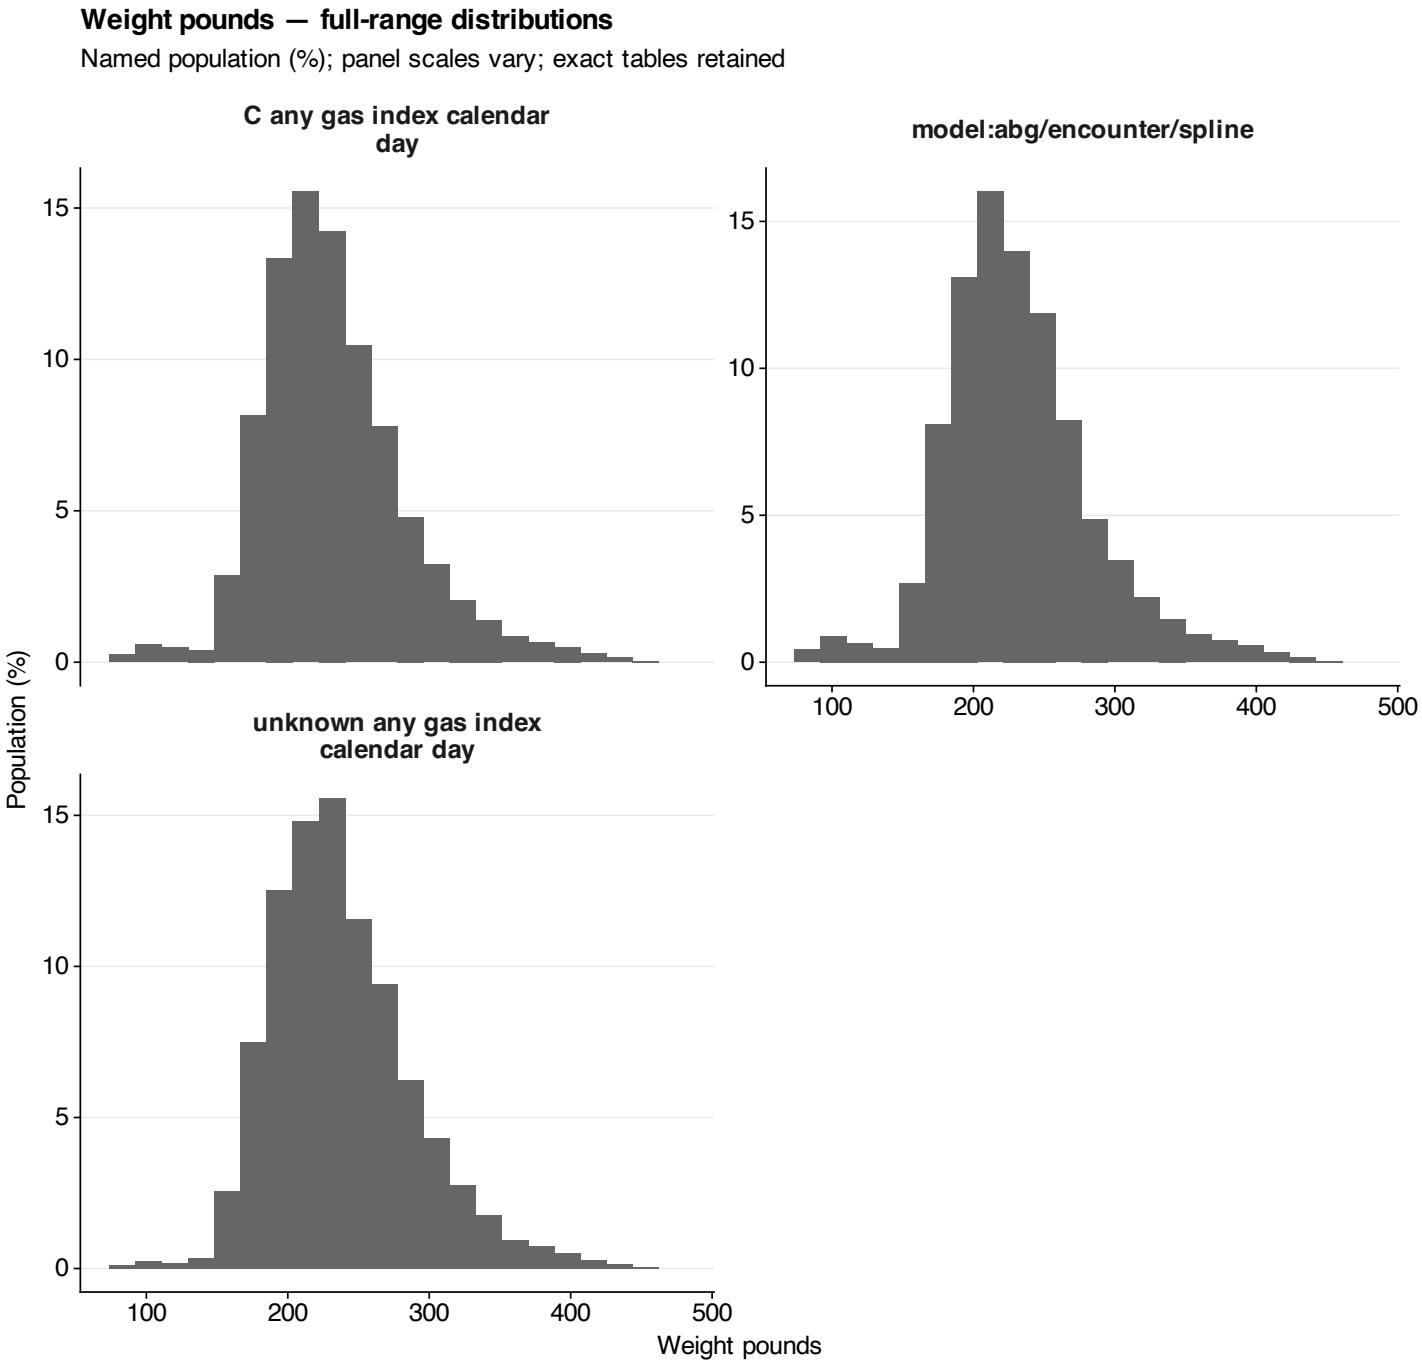

Figure 937: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete weight_pounds stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

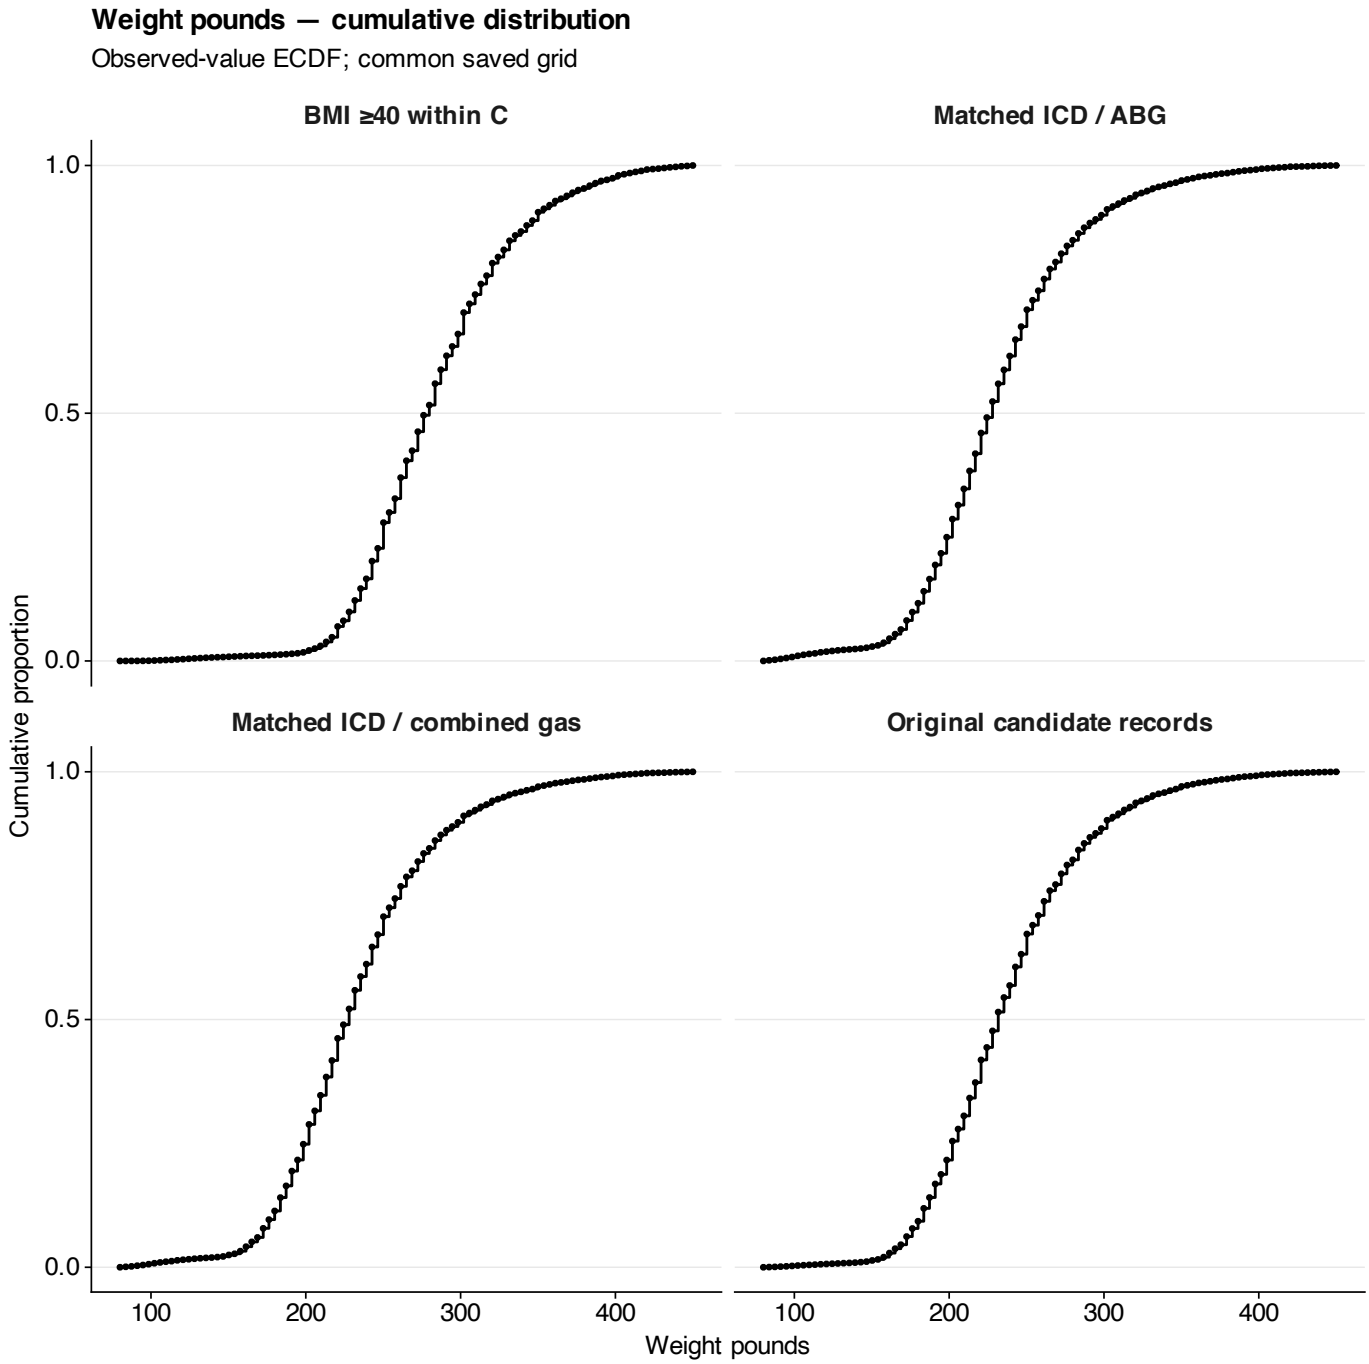

Figure 938: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. weight_pounds ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

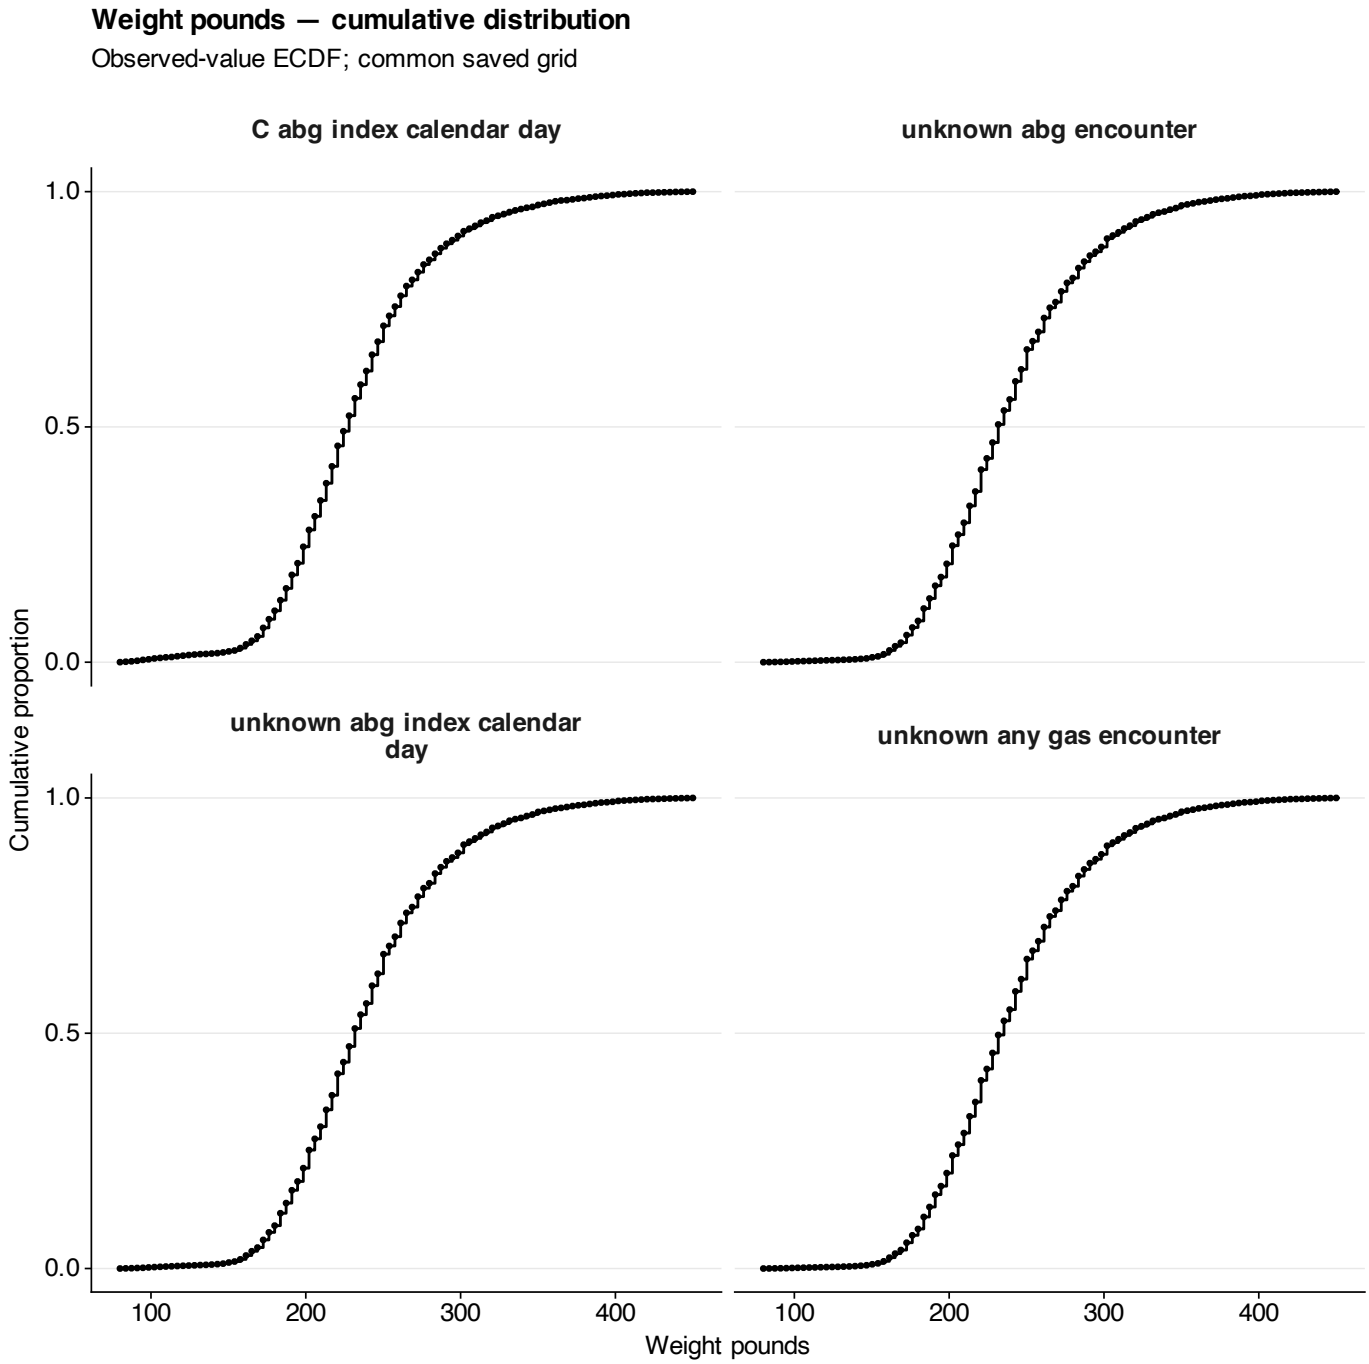

Figure 939: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. weight_pounds ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

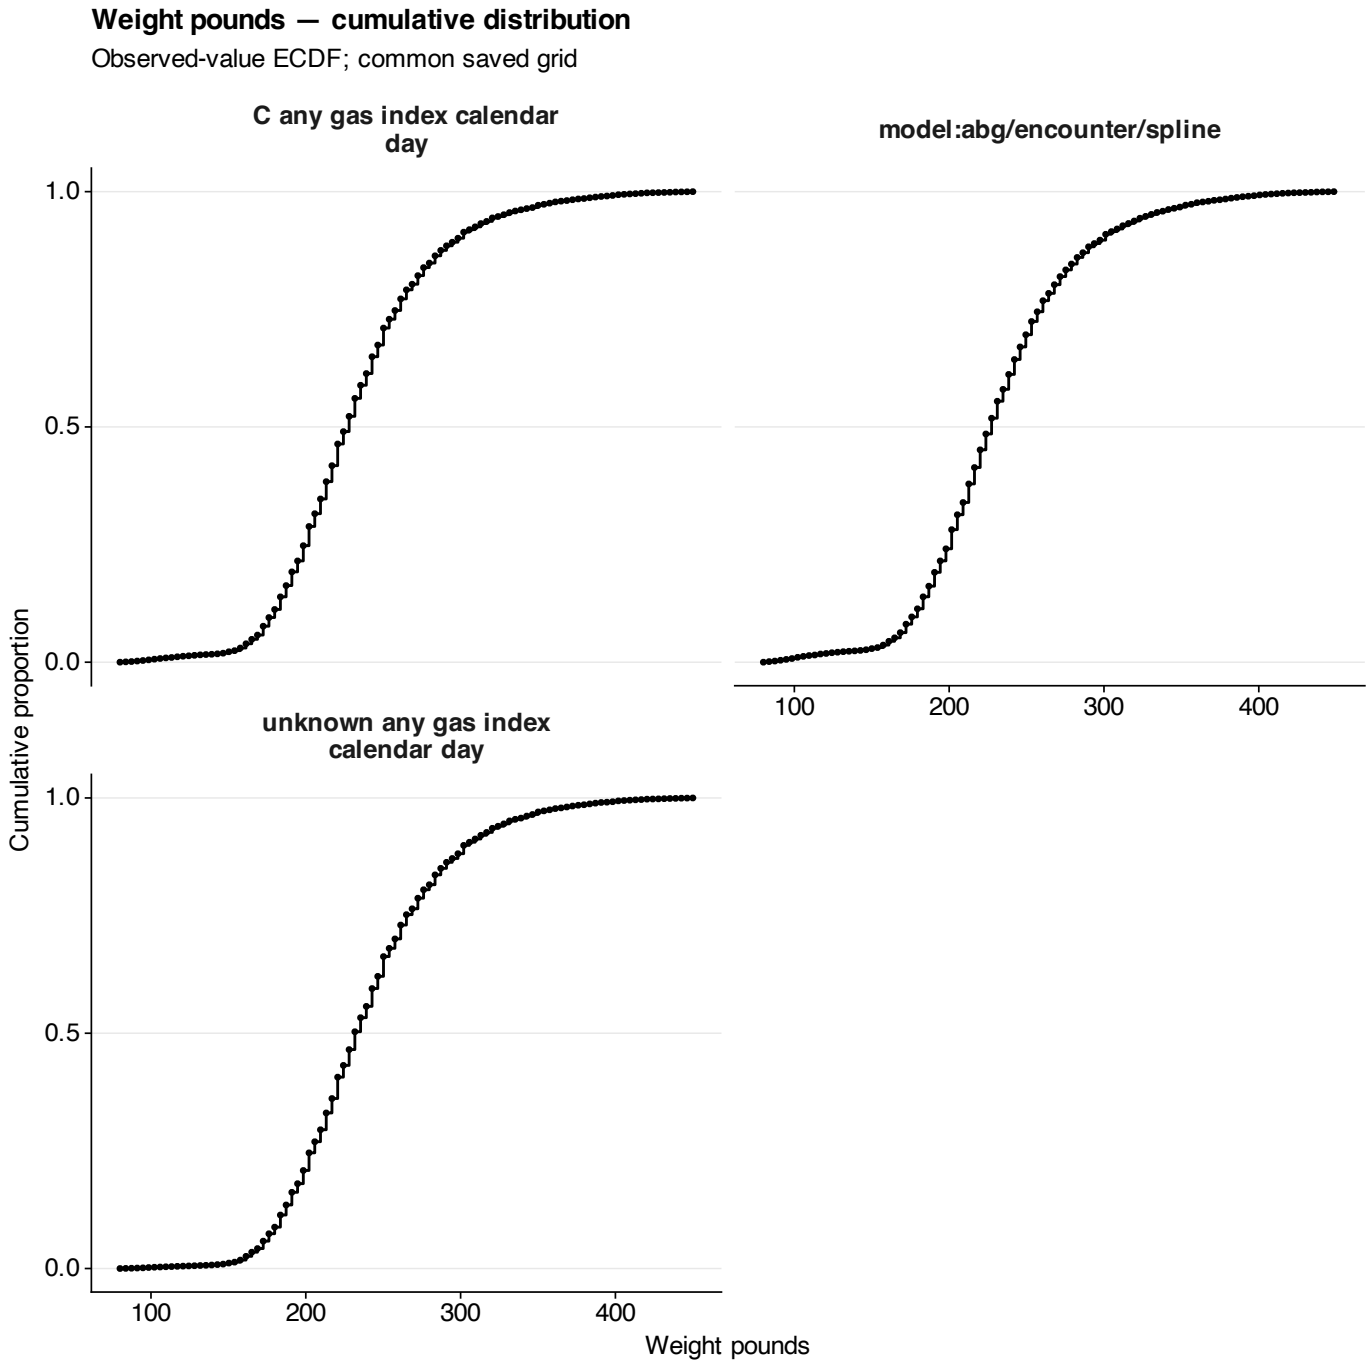

Figure 940: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. weight_pounds ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

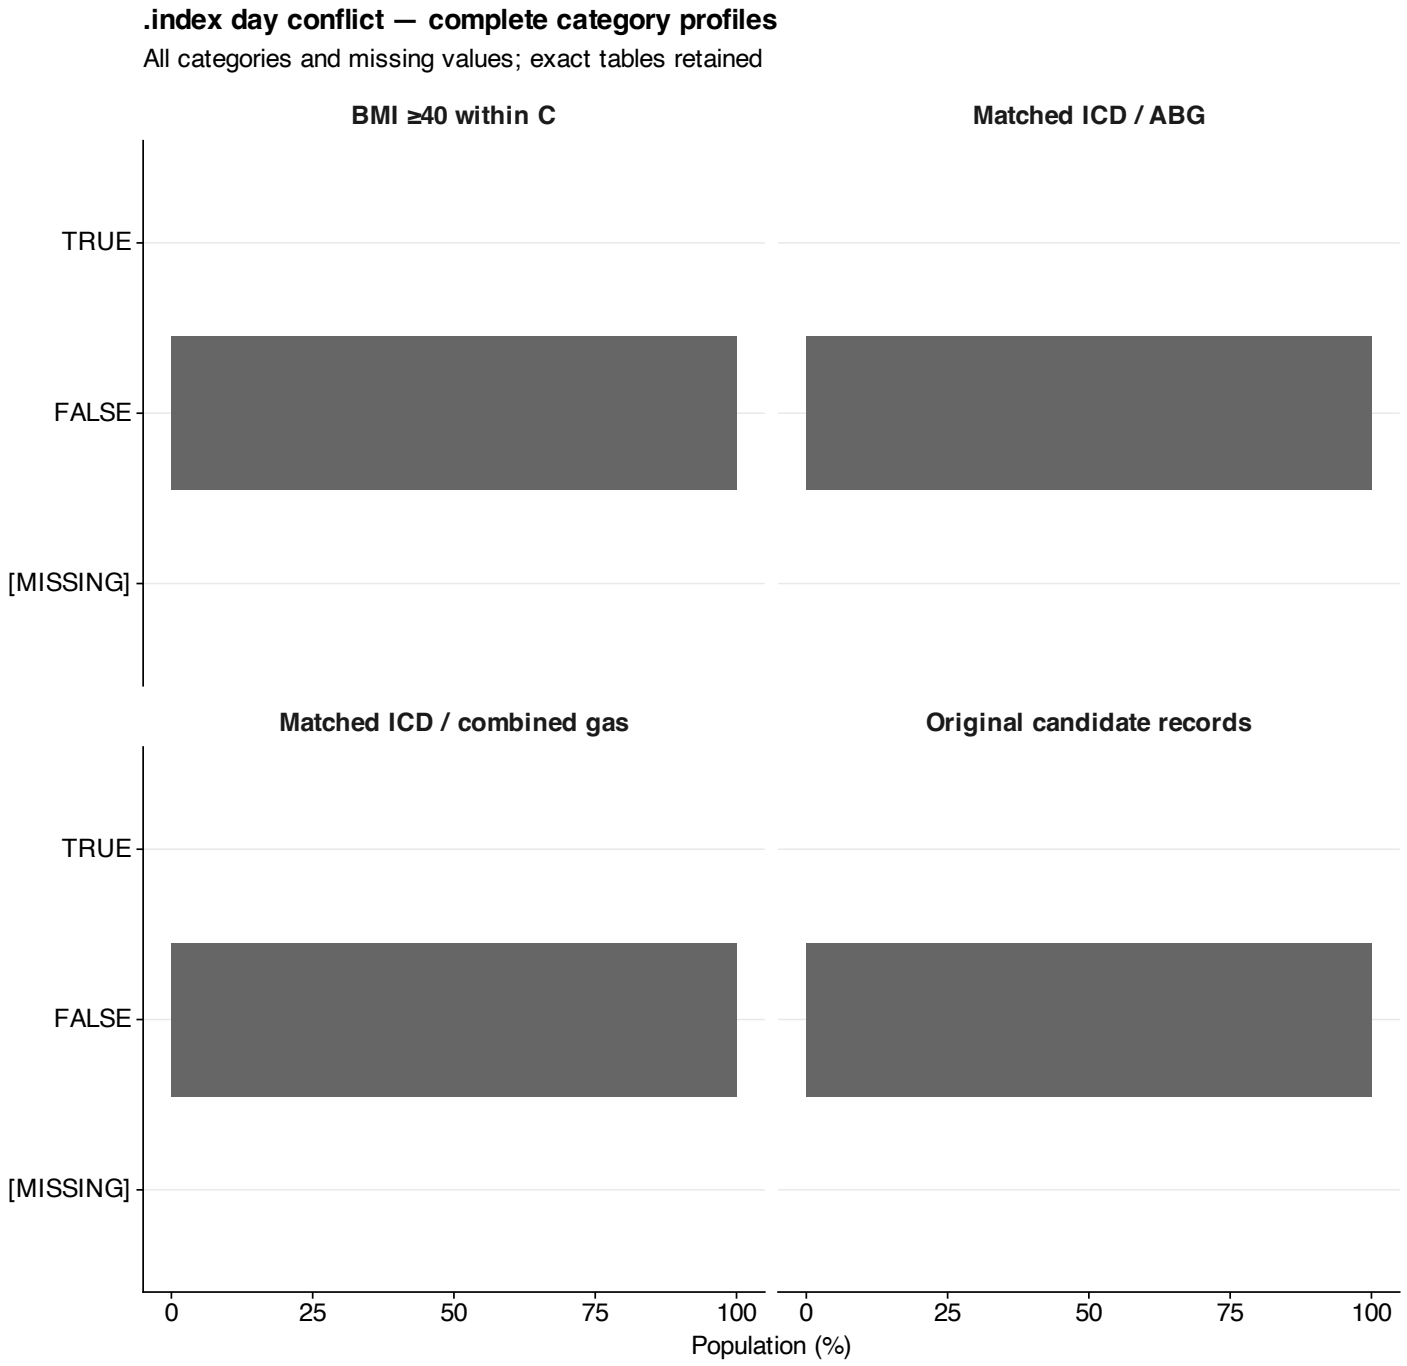

Figure 941: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete .index_day_conflict stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

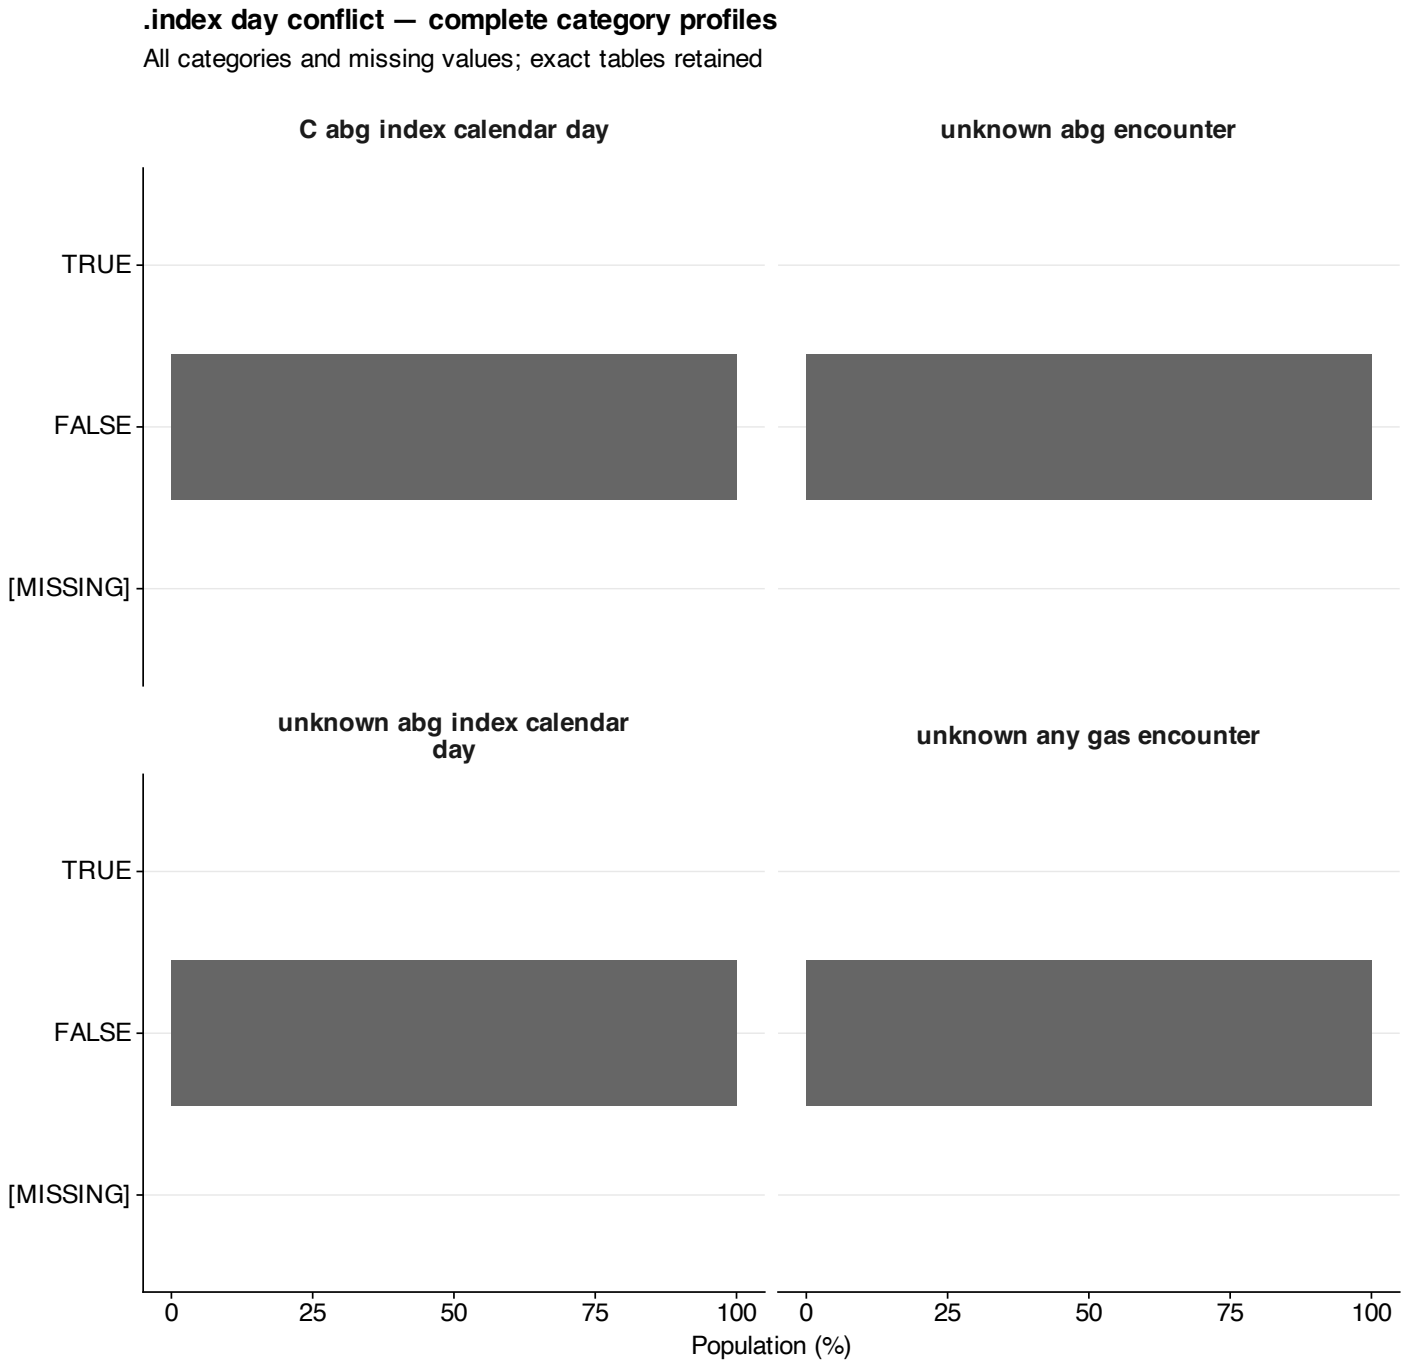

Figure 942: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete .index_day_conflict stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

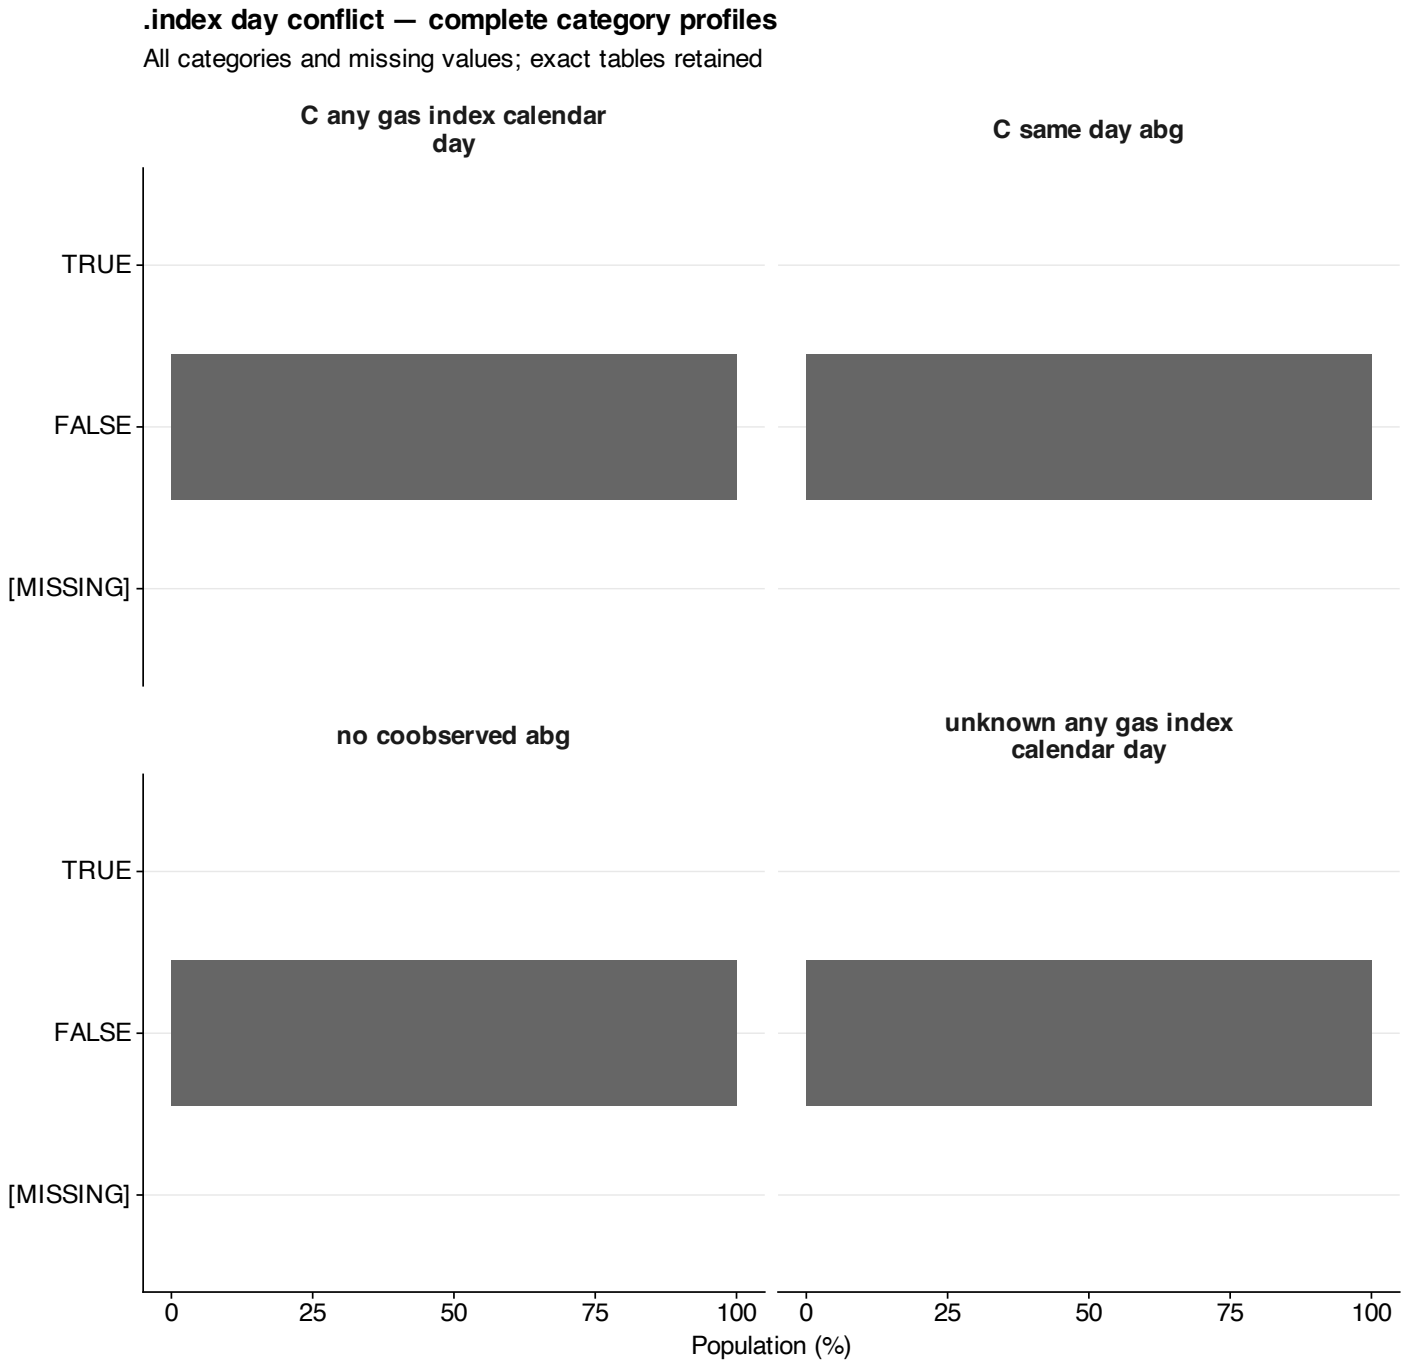

Figure 943: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete .index_day_conflict stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

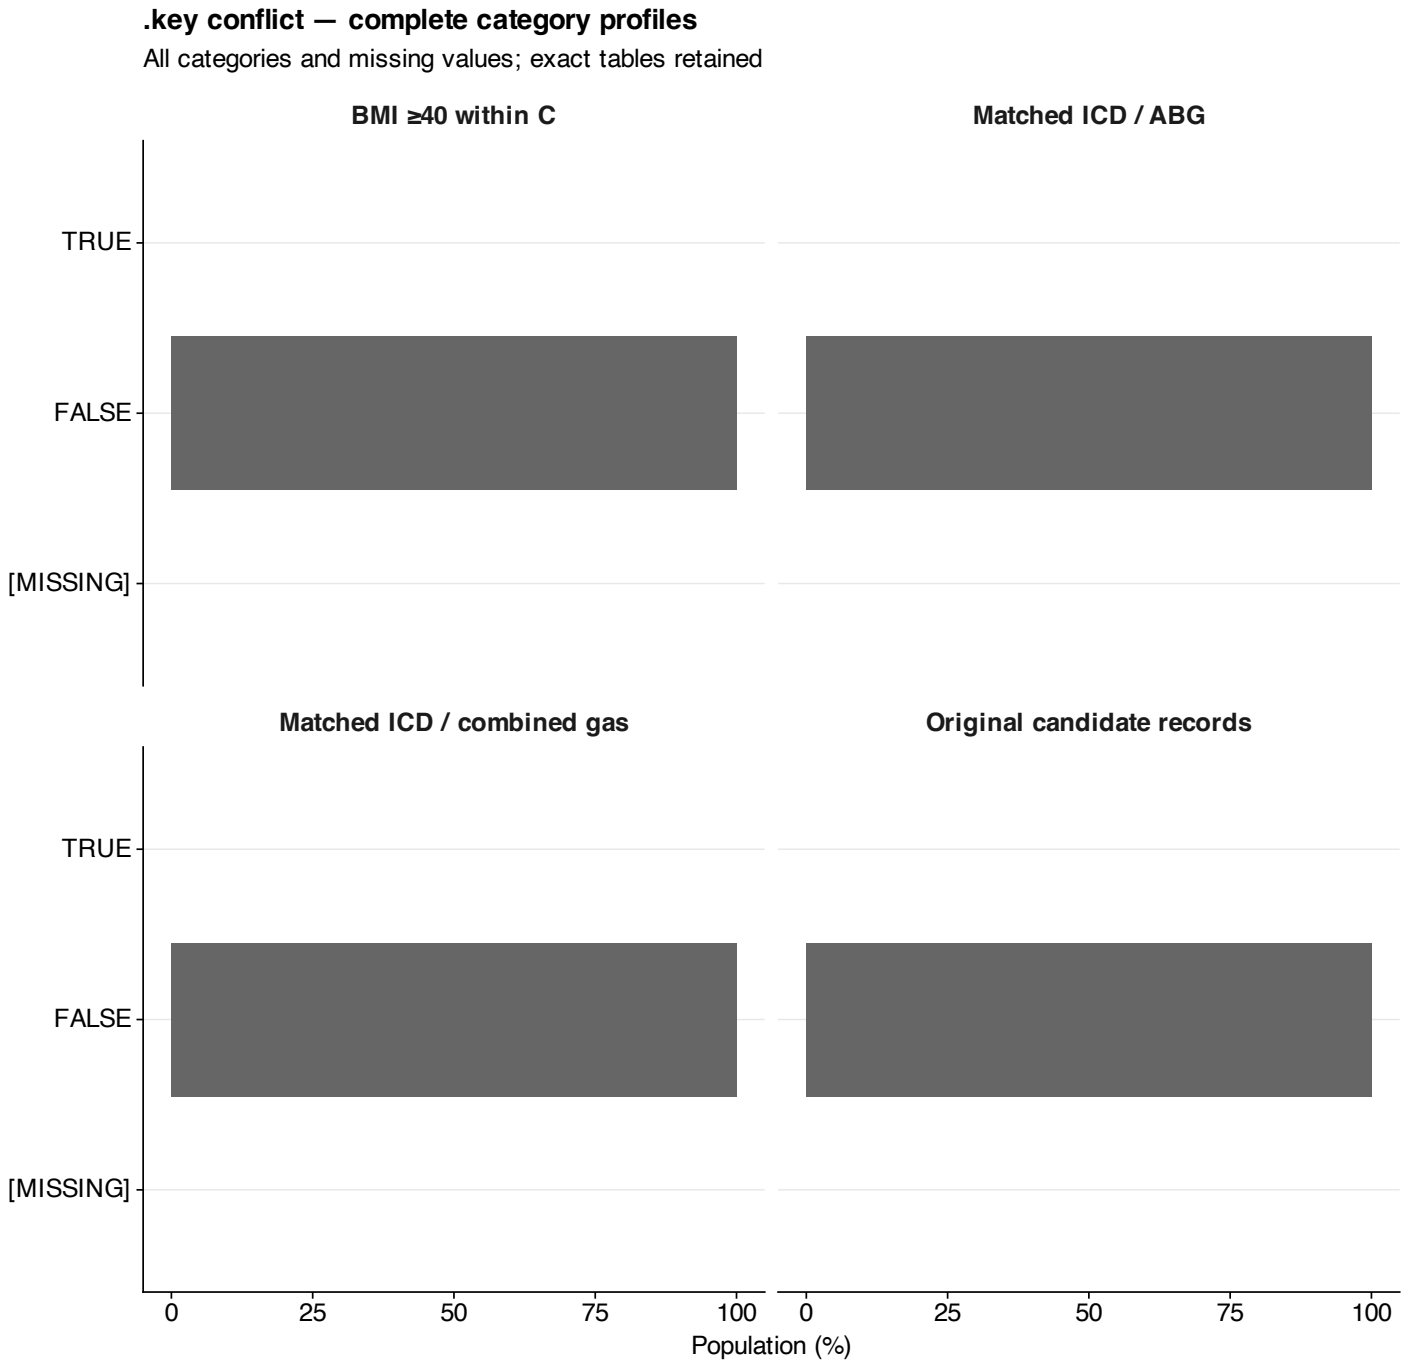

Figure 944: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete .key_conflict stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

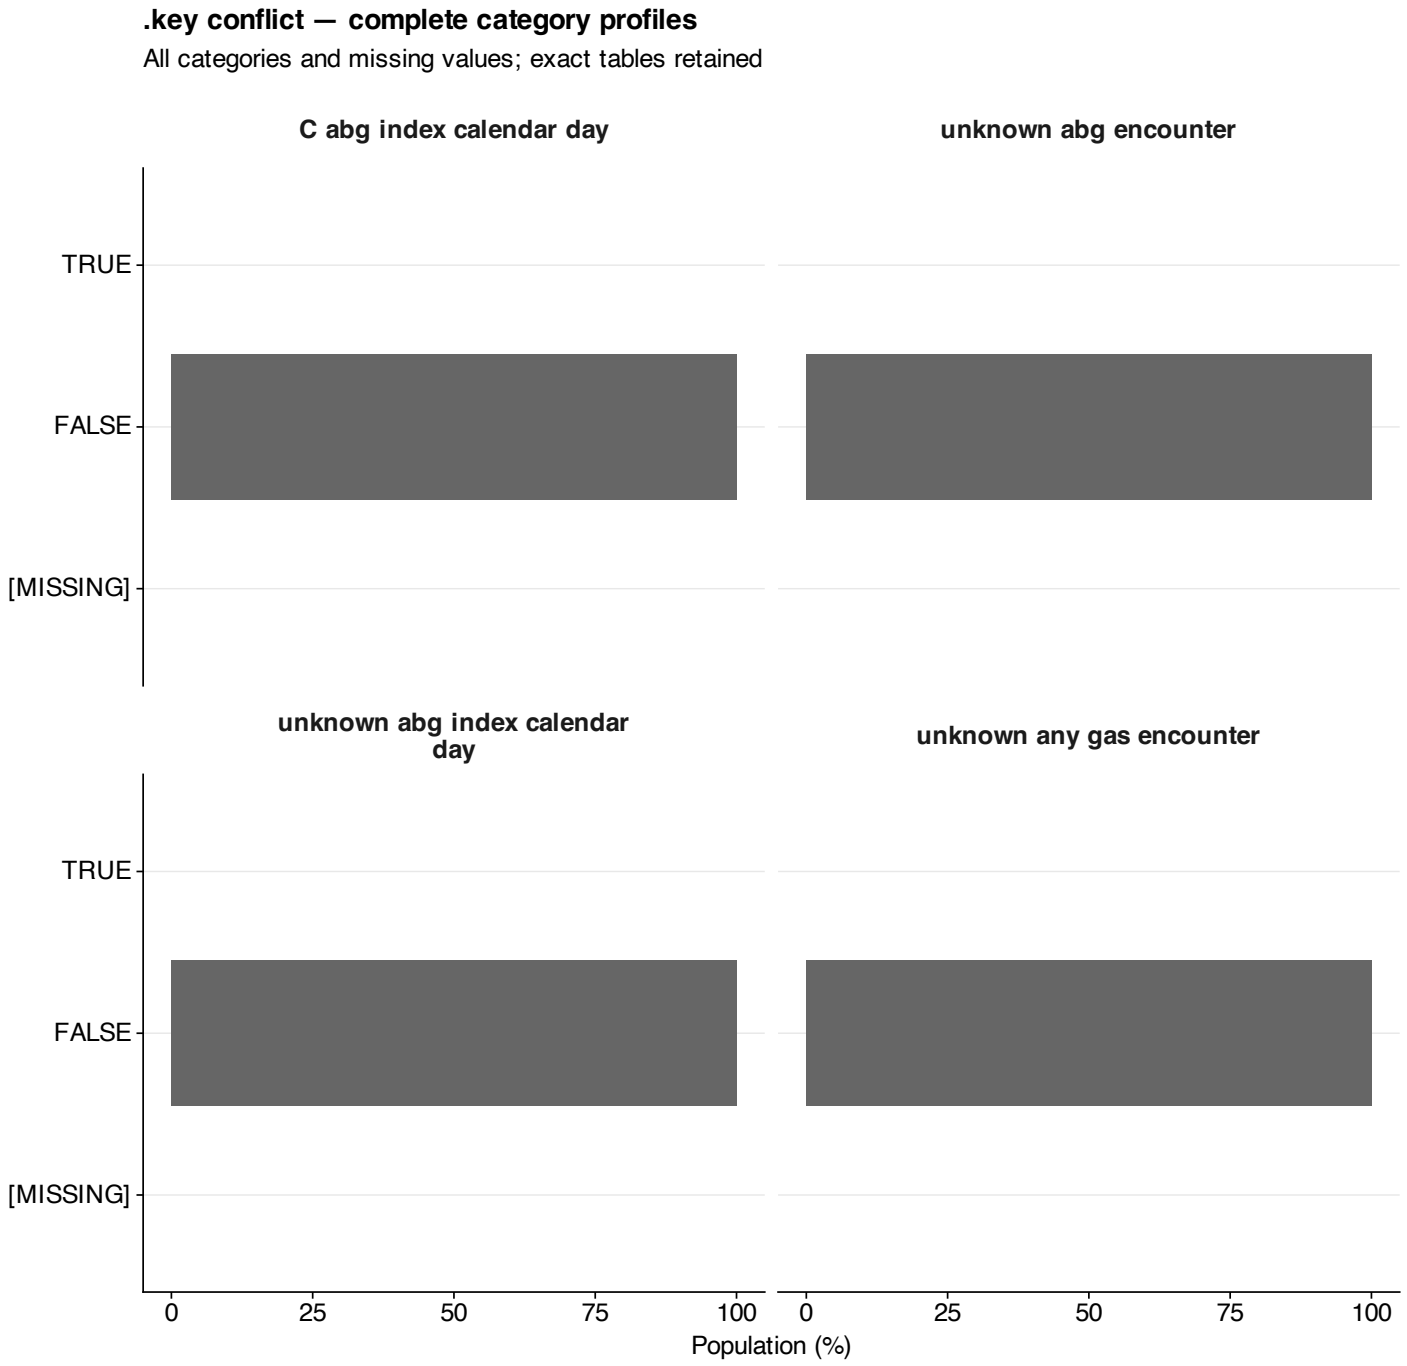

Figure 945: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete .key_conflict stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

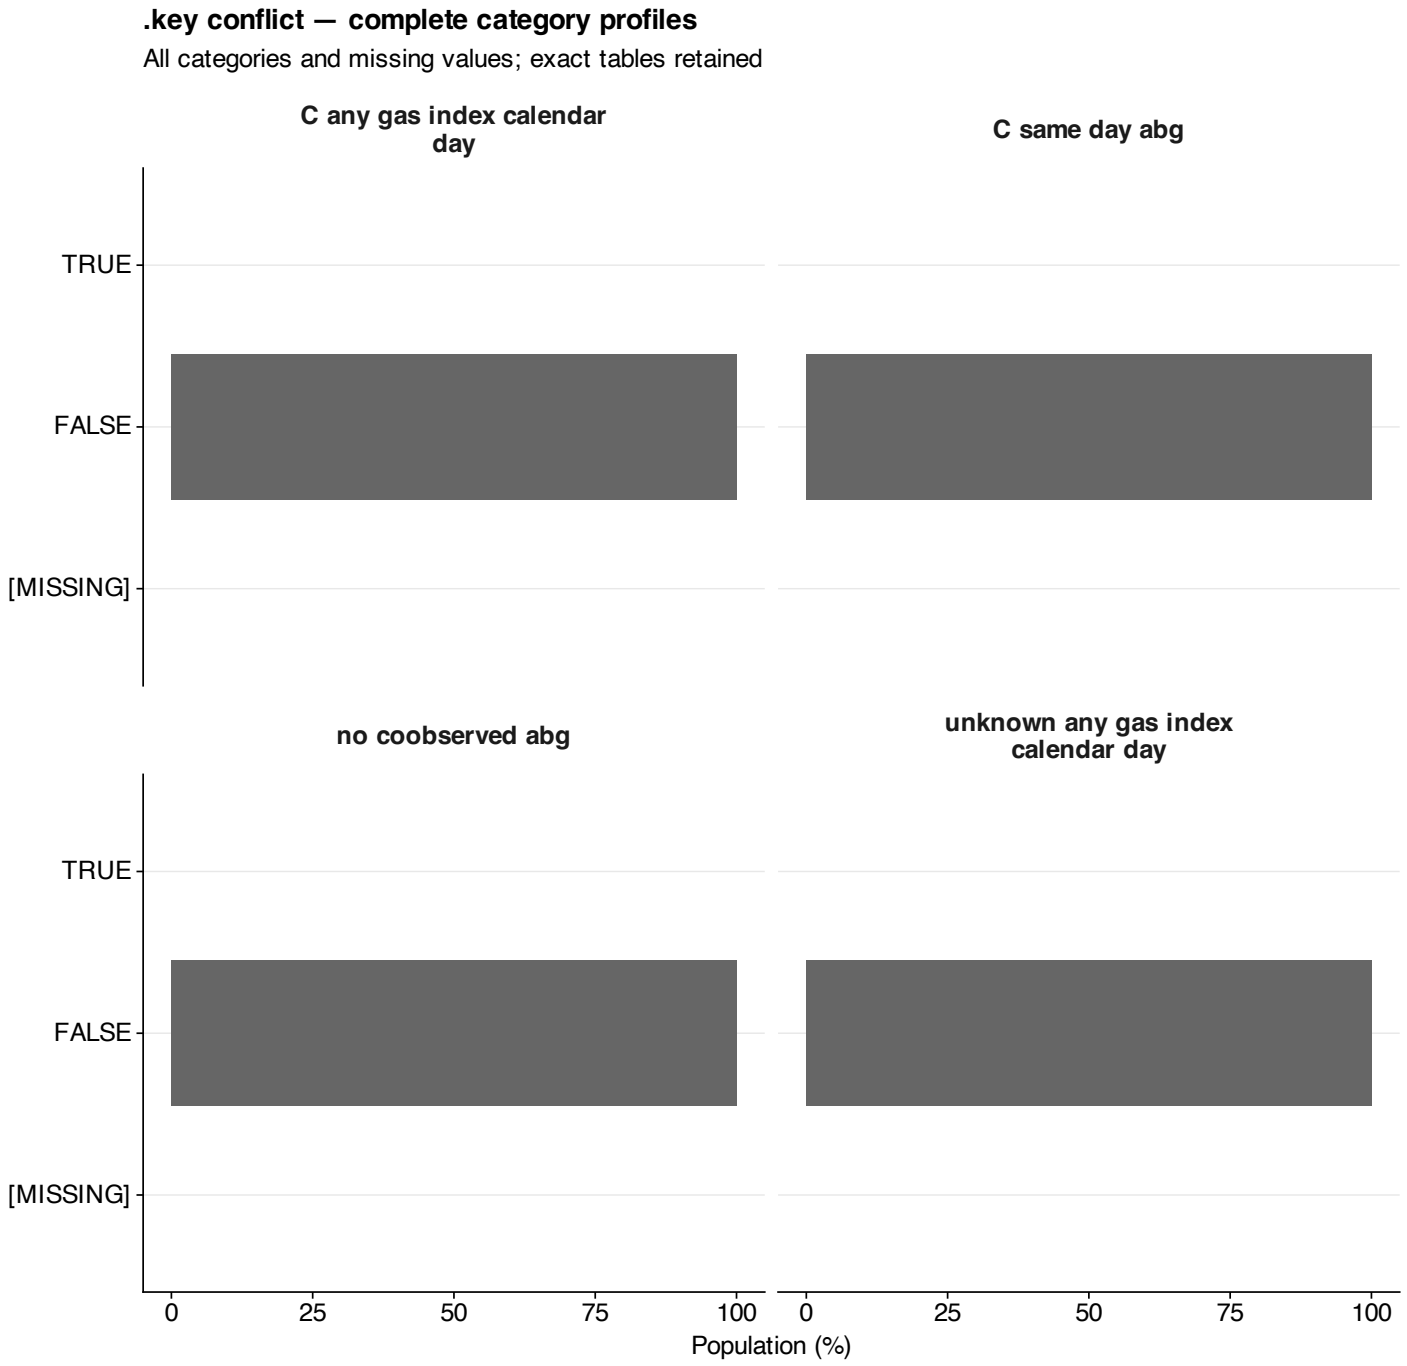

Figure 946: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete .key_conflict stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

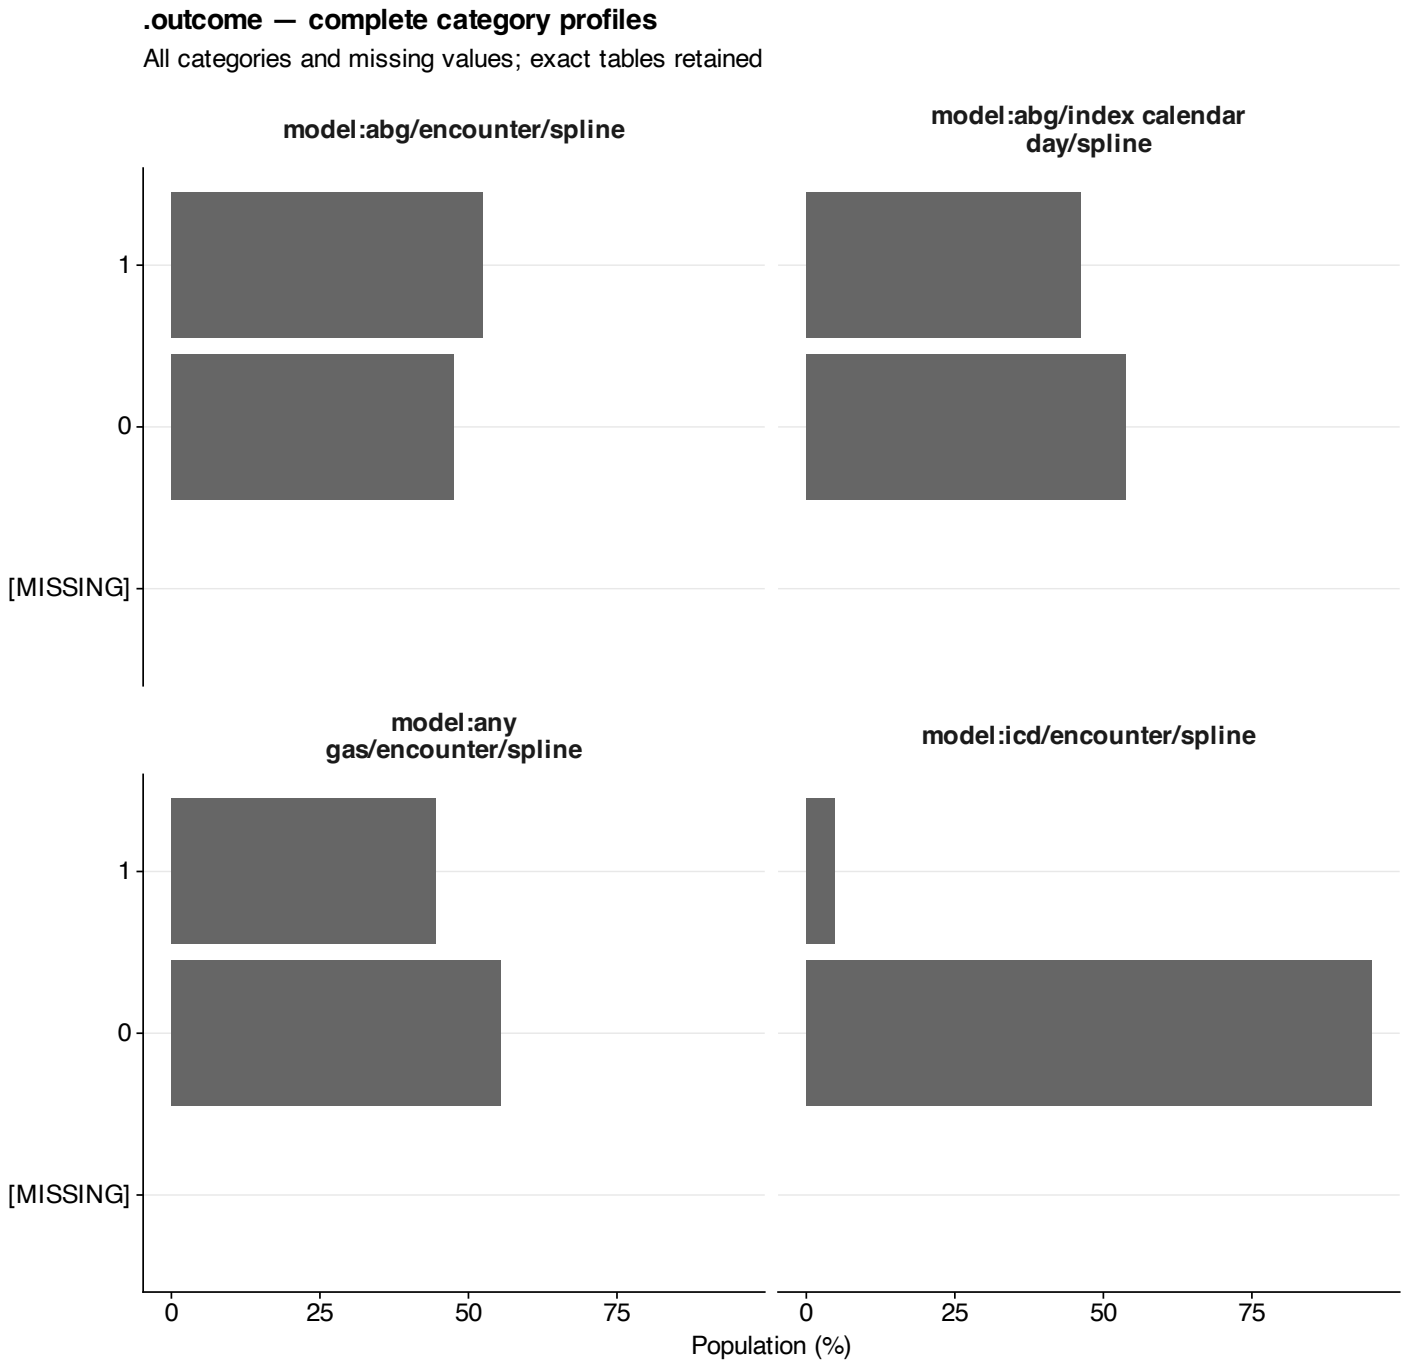

Figure 947: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete .outcome stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

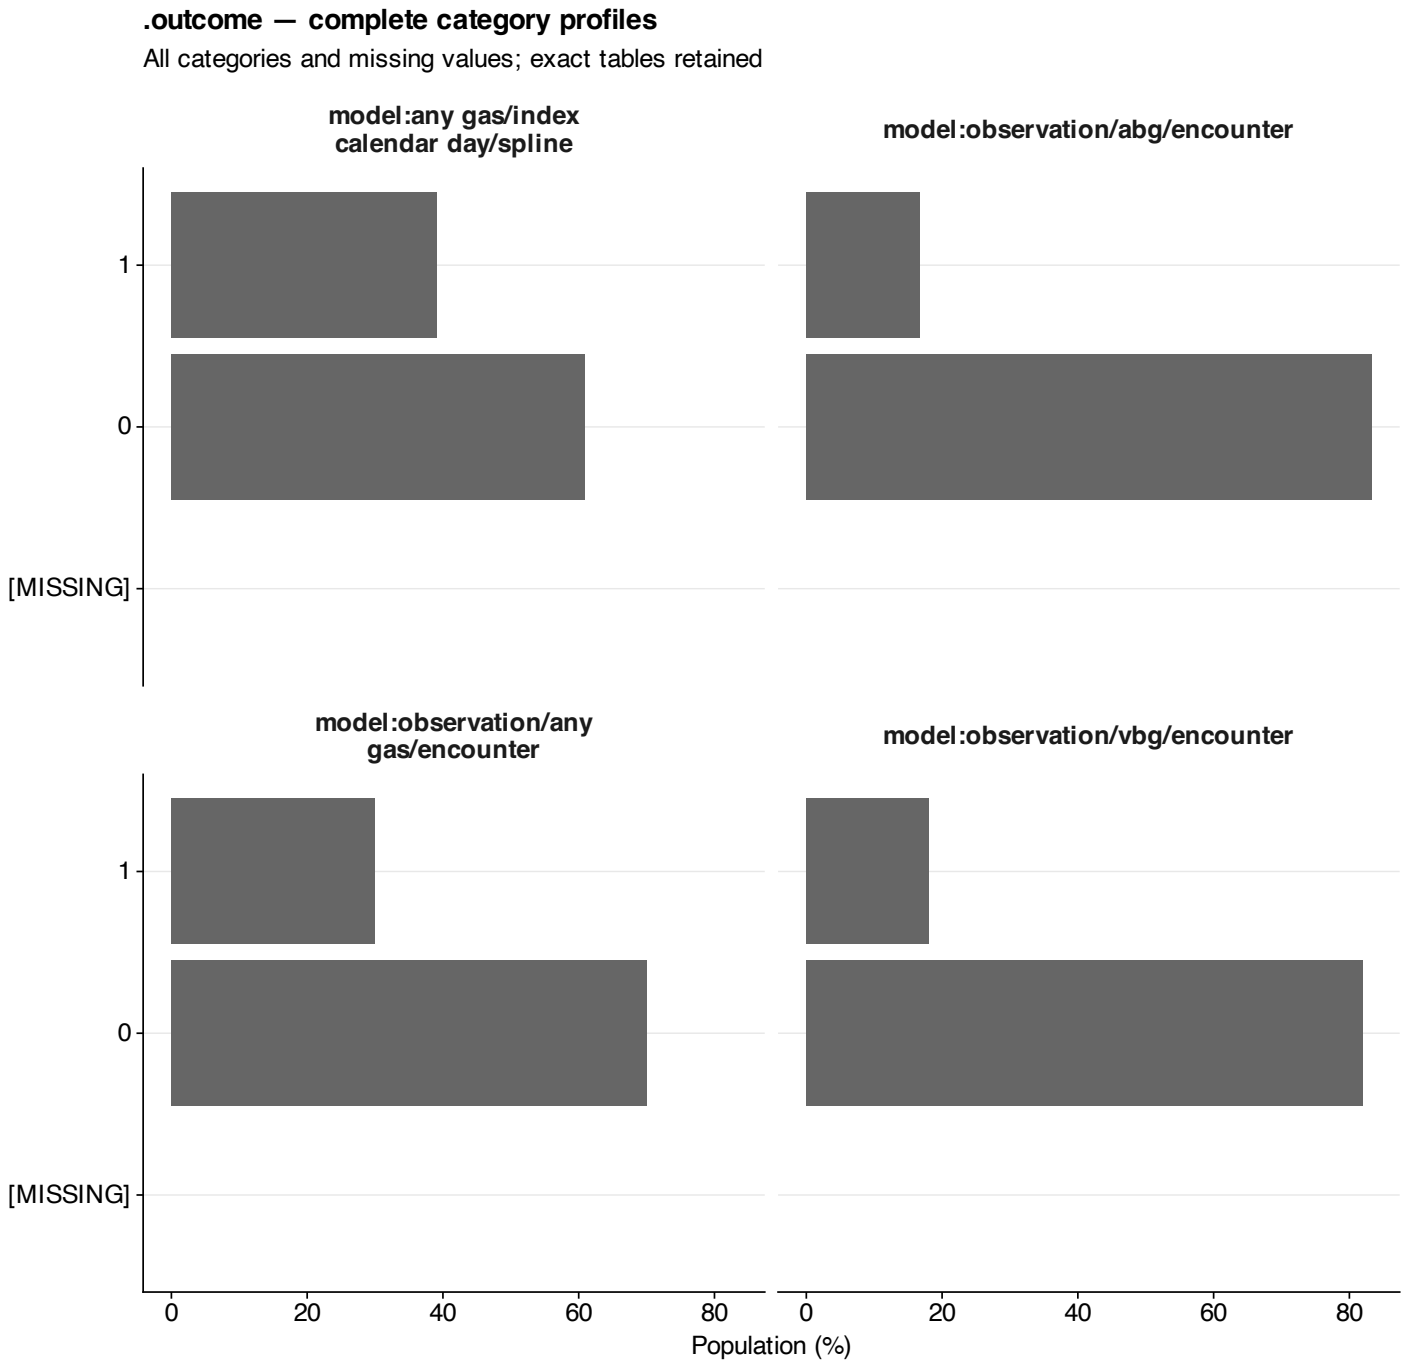

Figure 948: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete .outcome stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

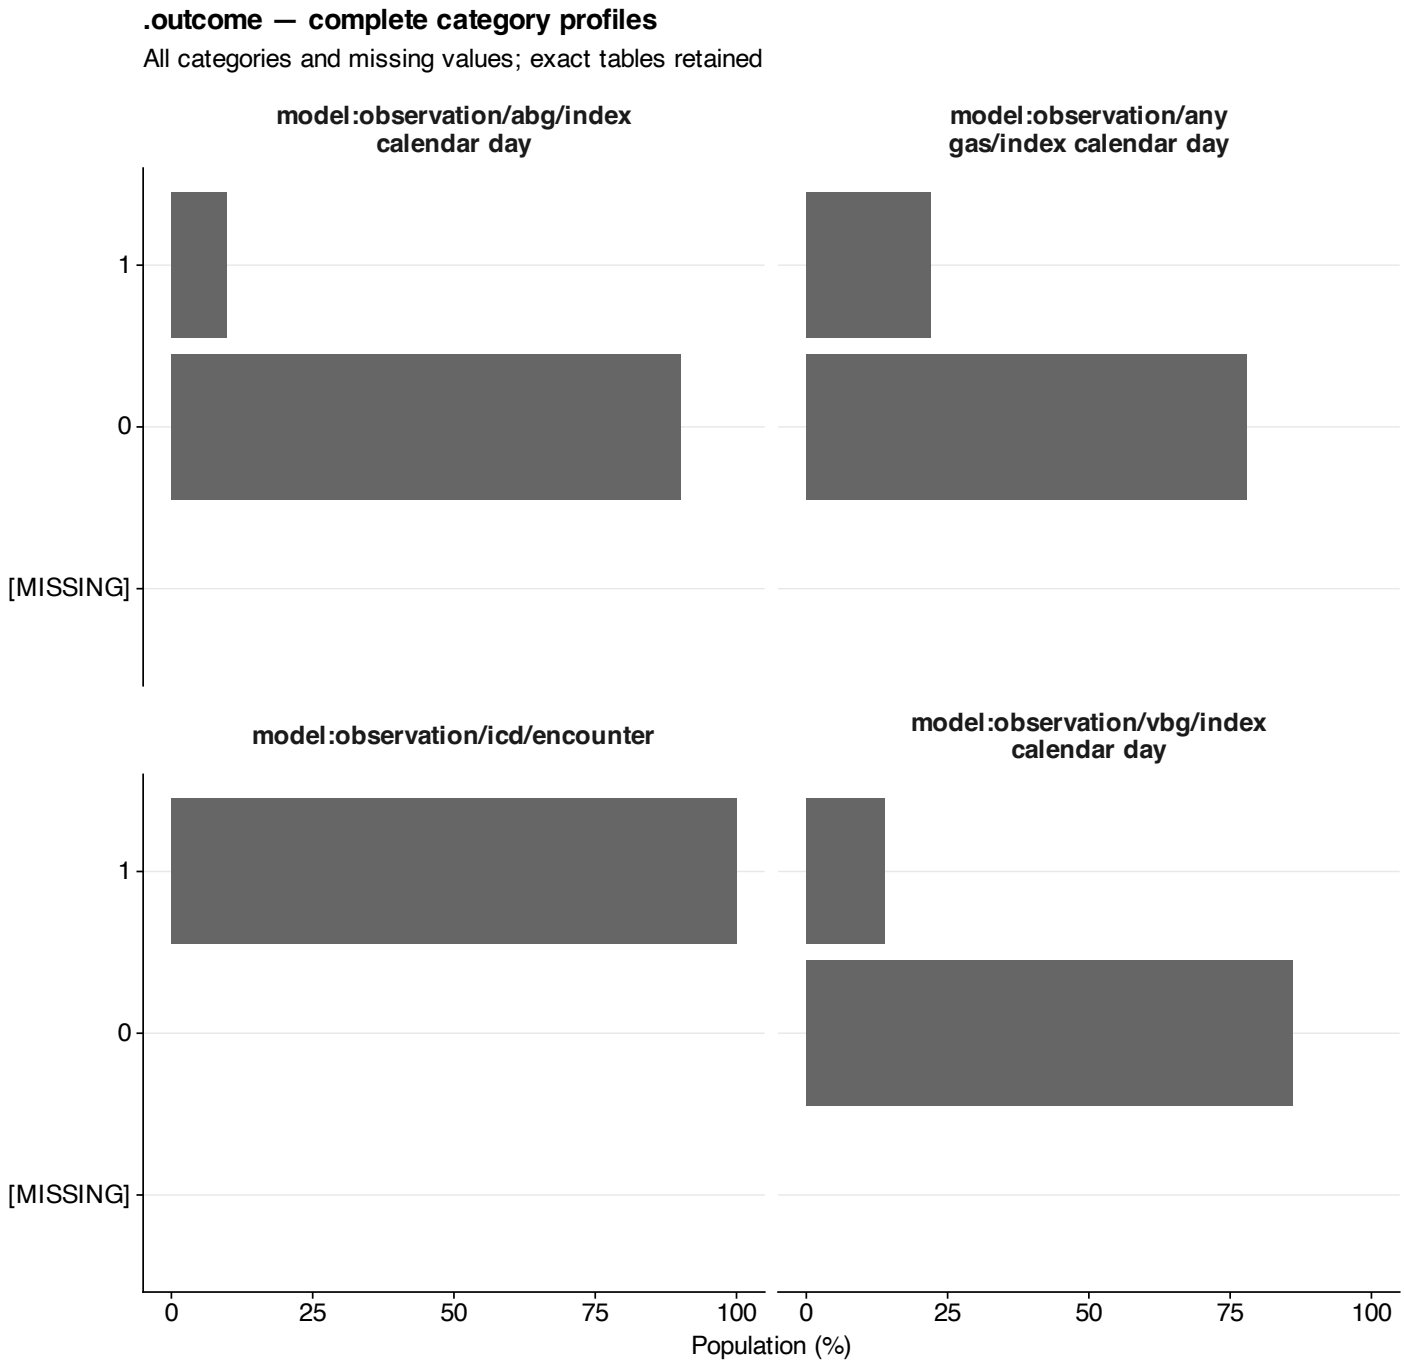

Figure 949: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete .outcome stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

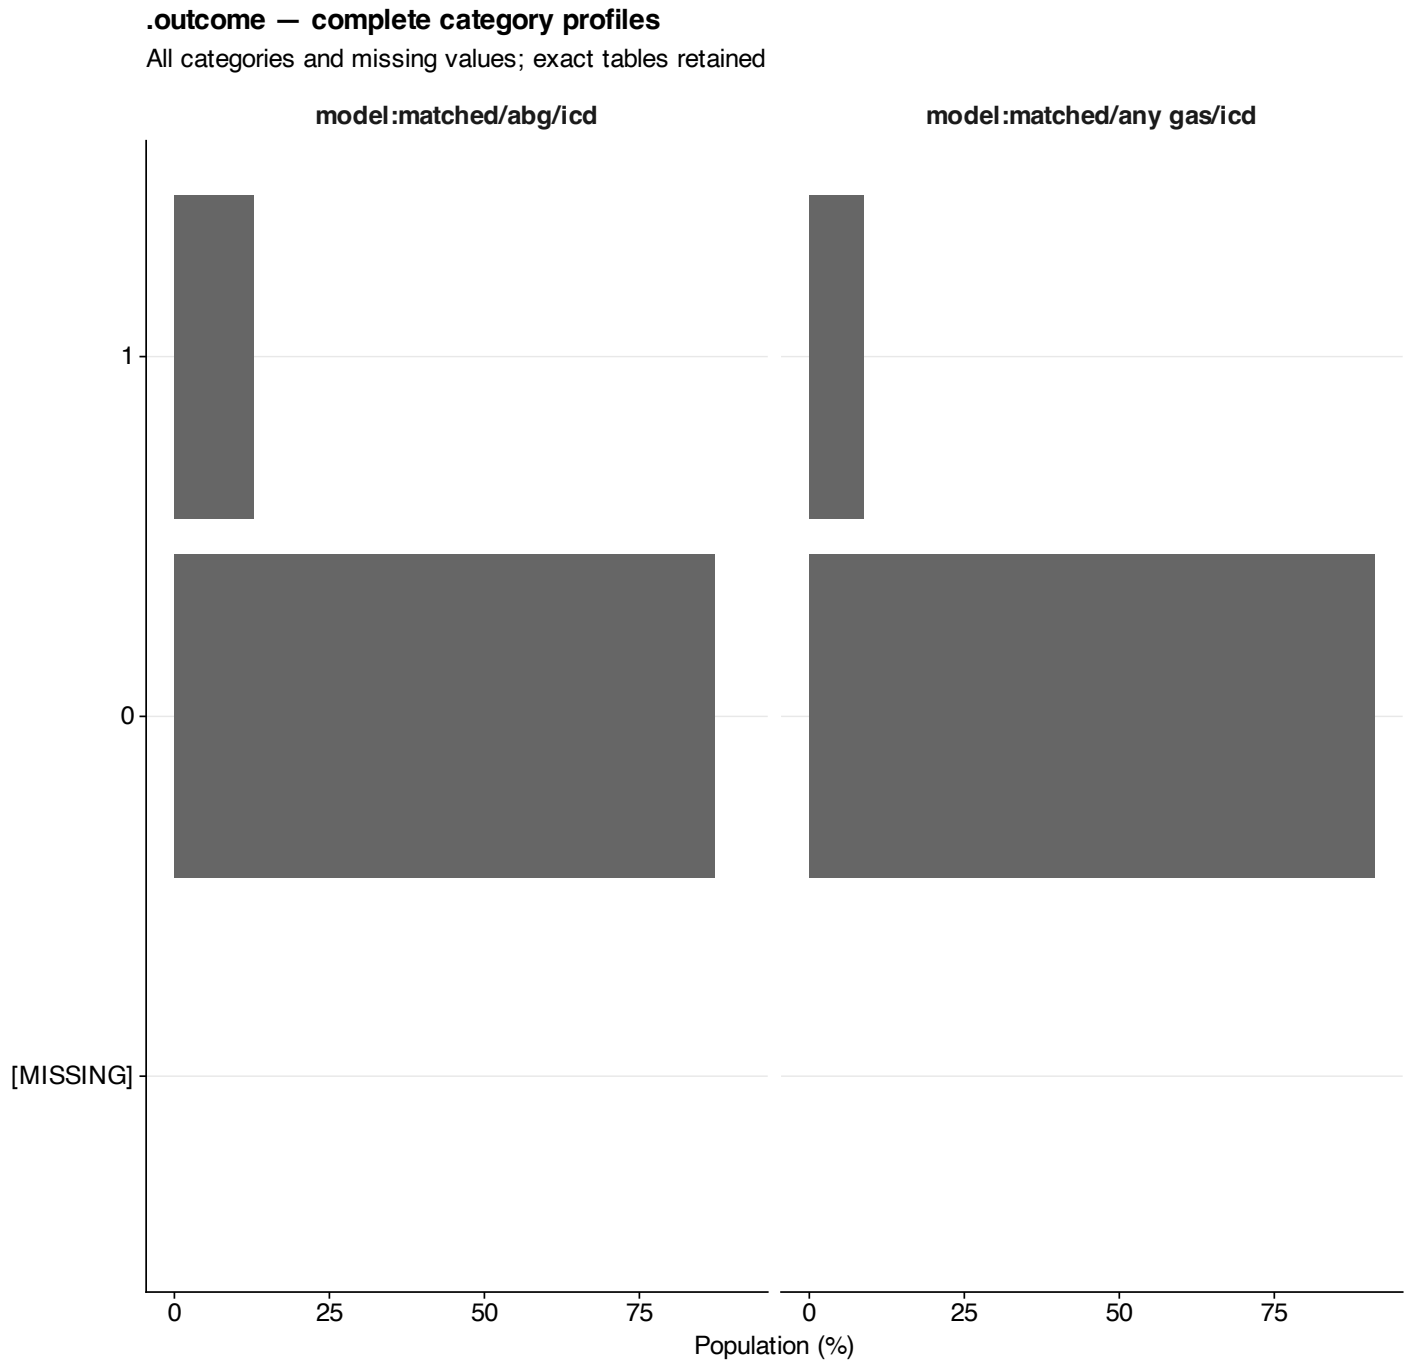

Figure 950: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete .outcome stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

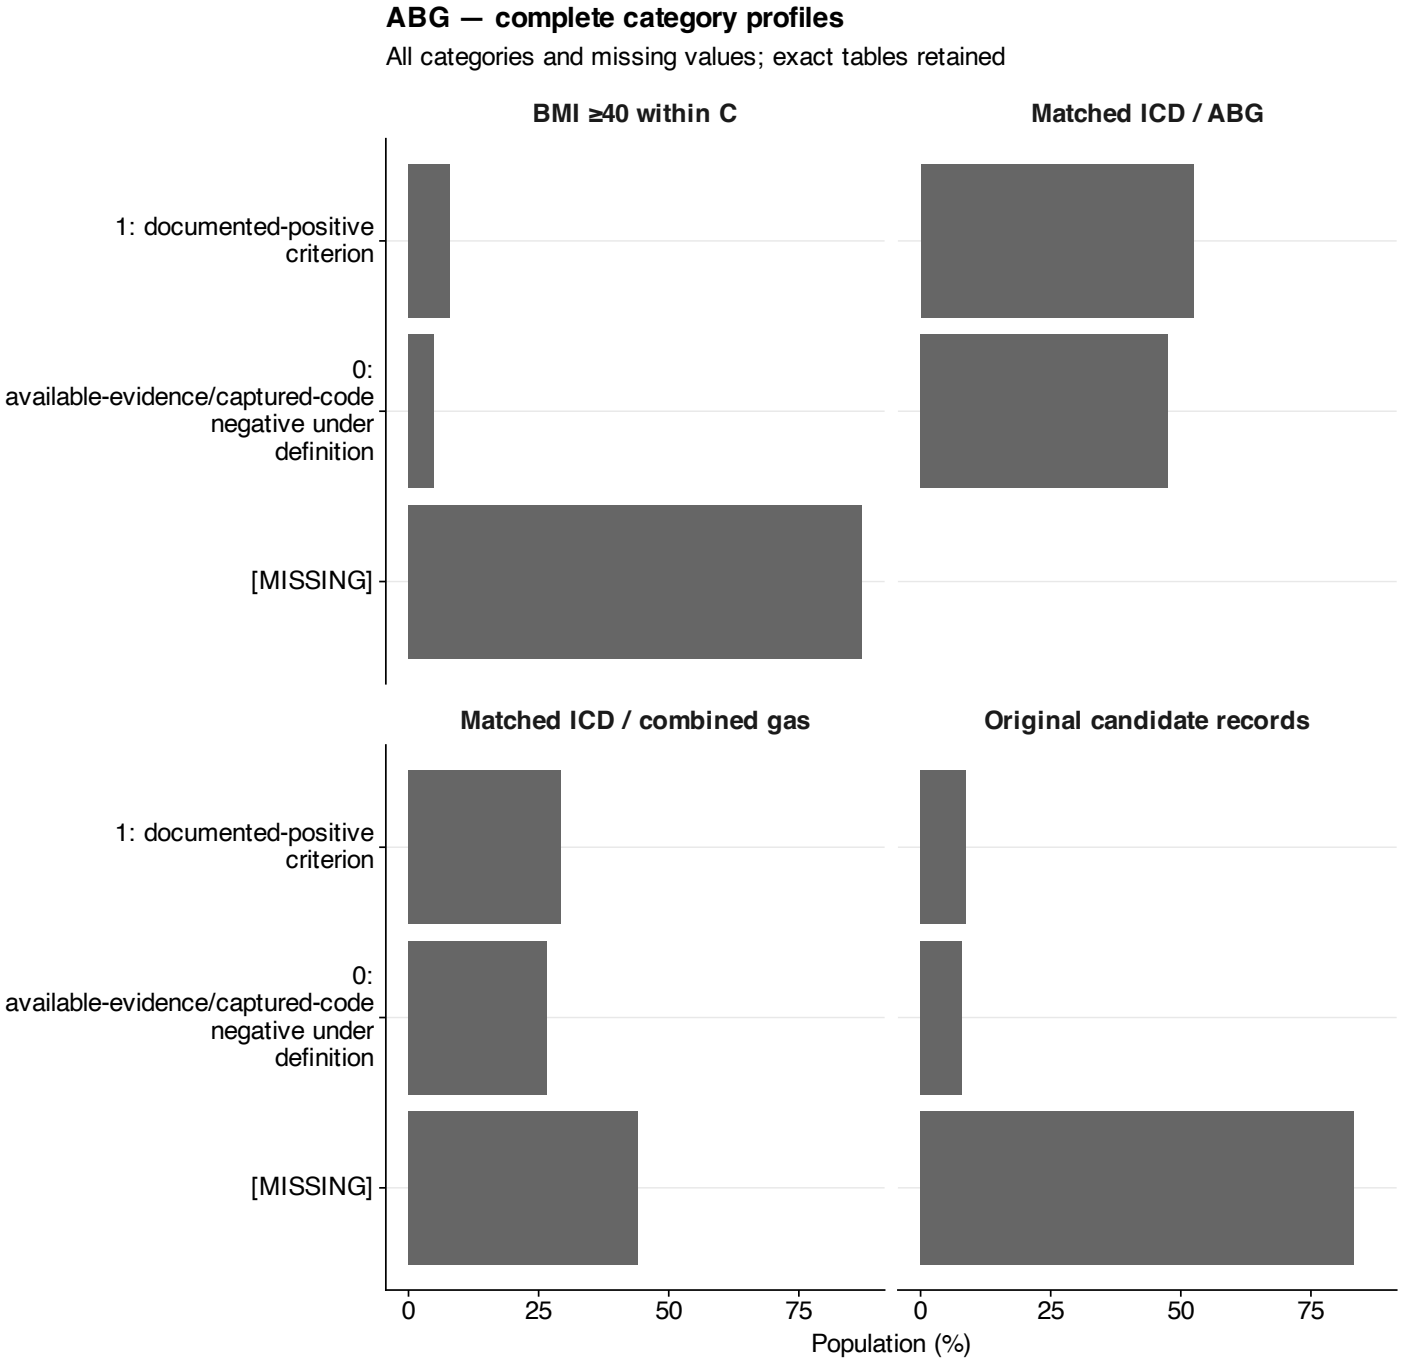

Figure 951: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete abg stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

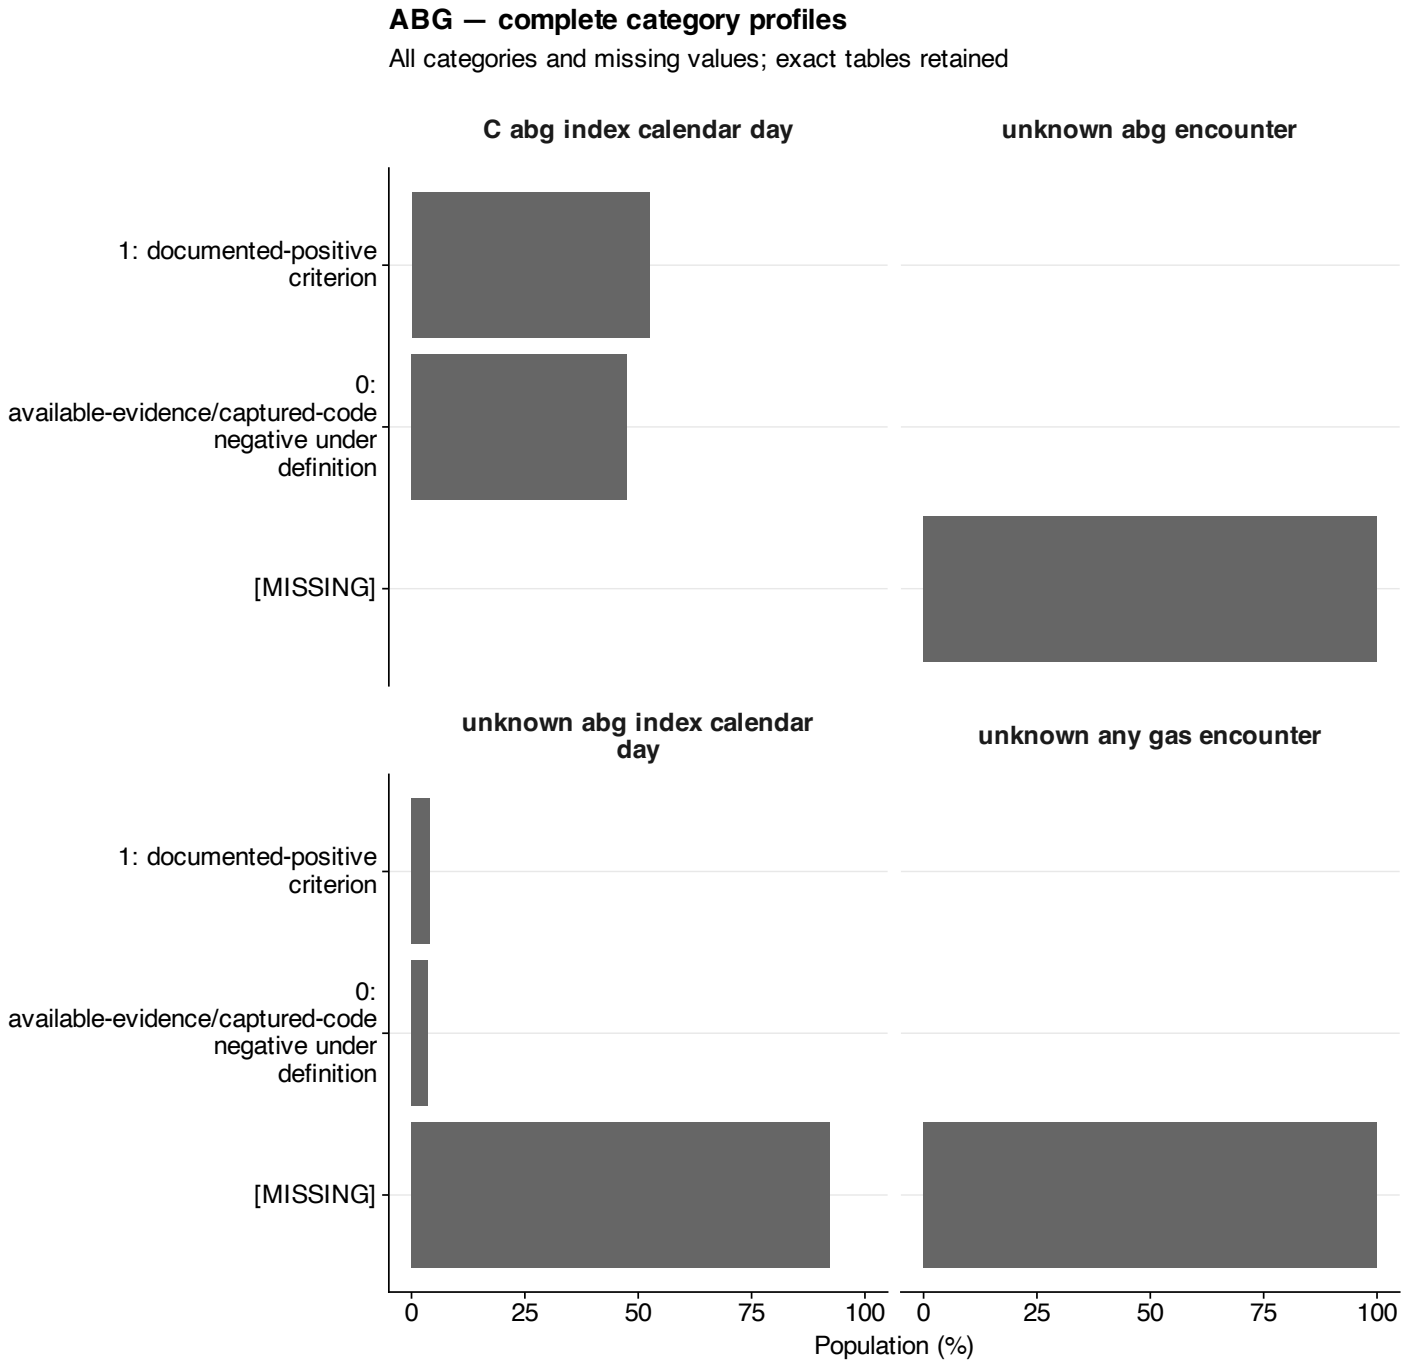

Figure 952: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete abg stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

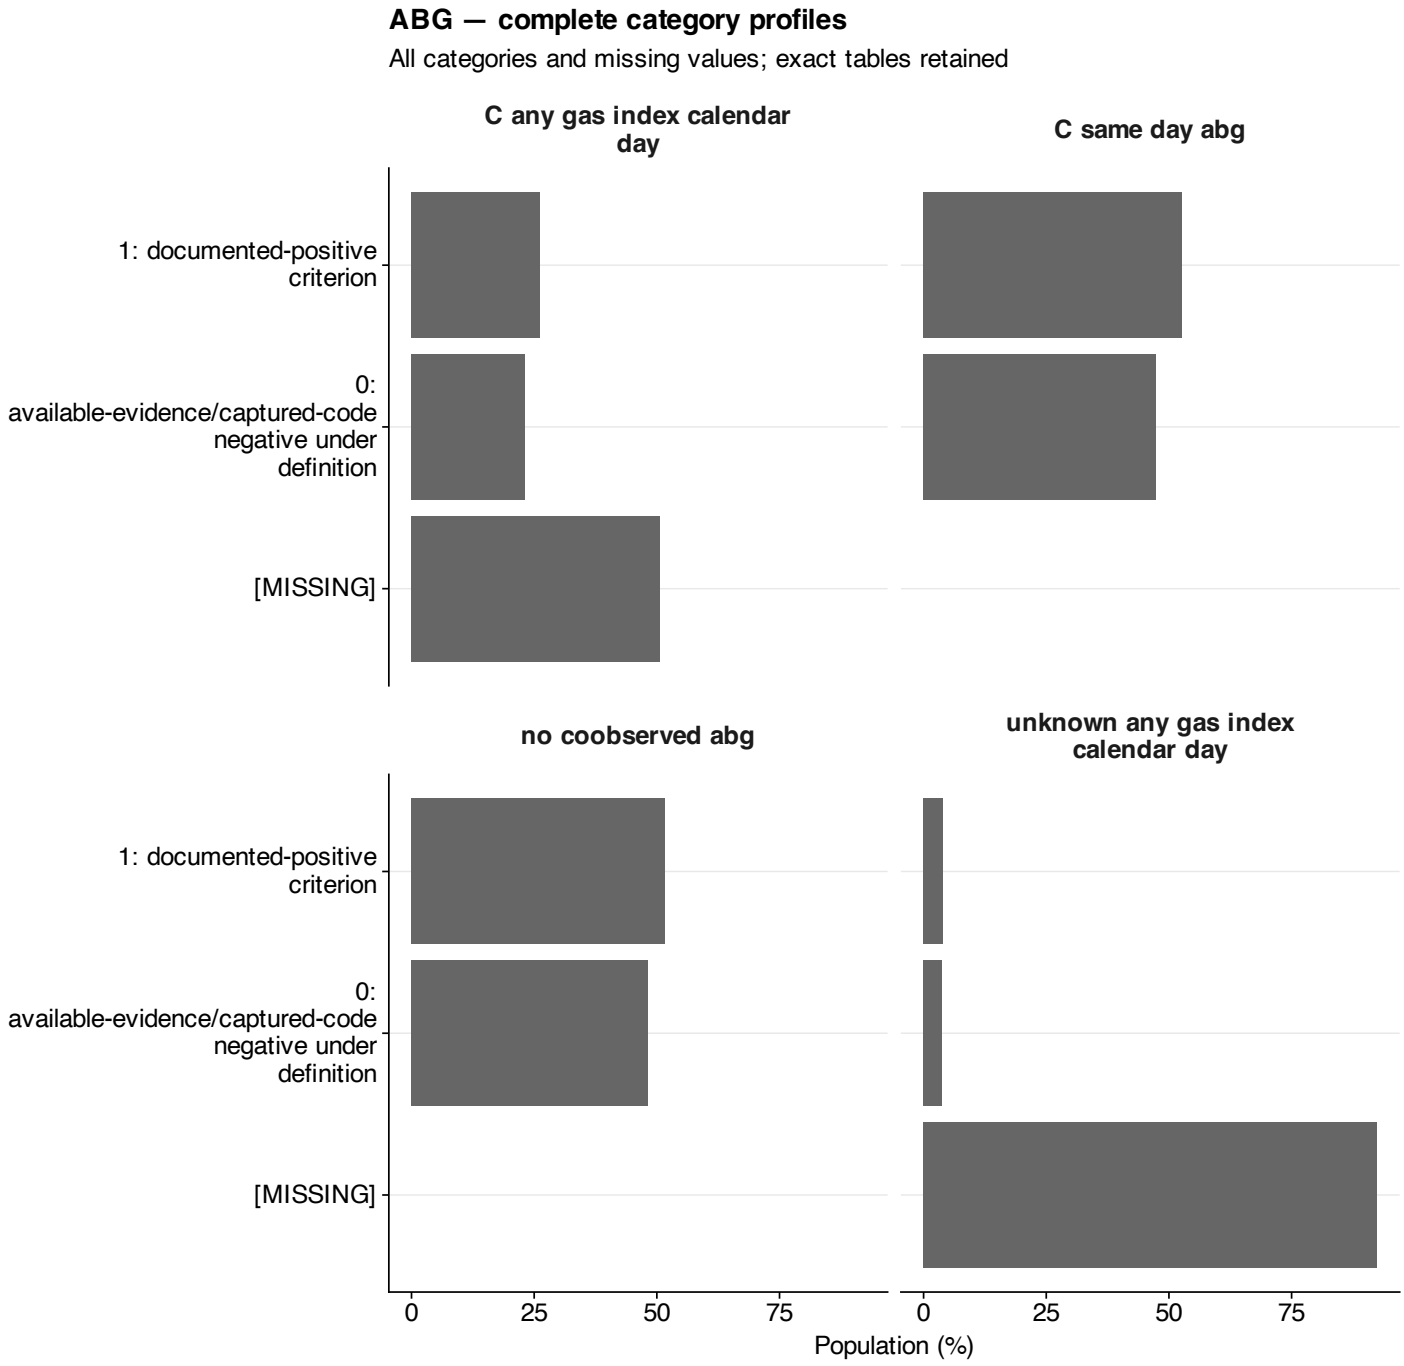

Figure 953: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete abg stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

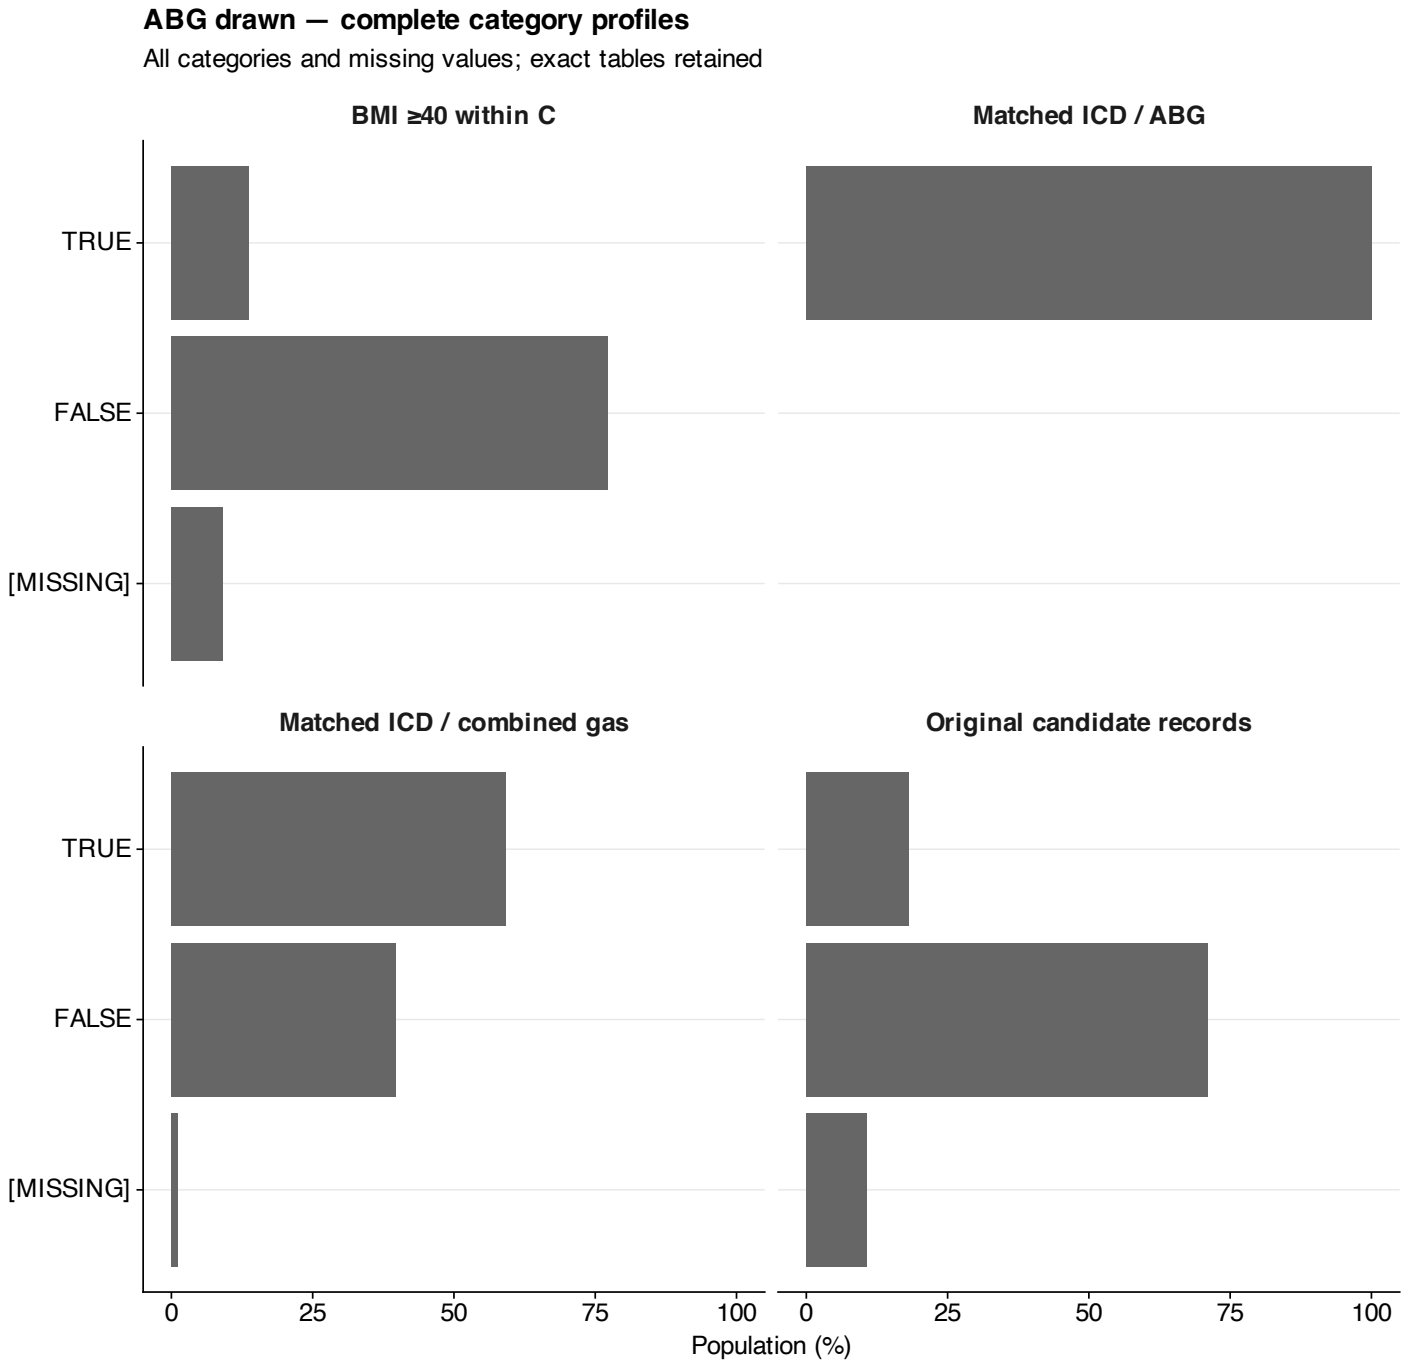

Figure 954: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete abg_drawn stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

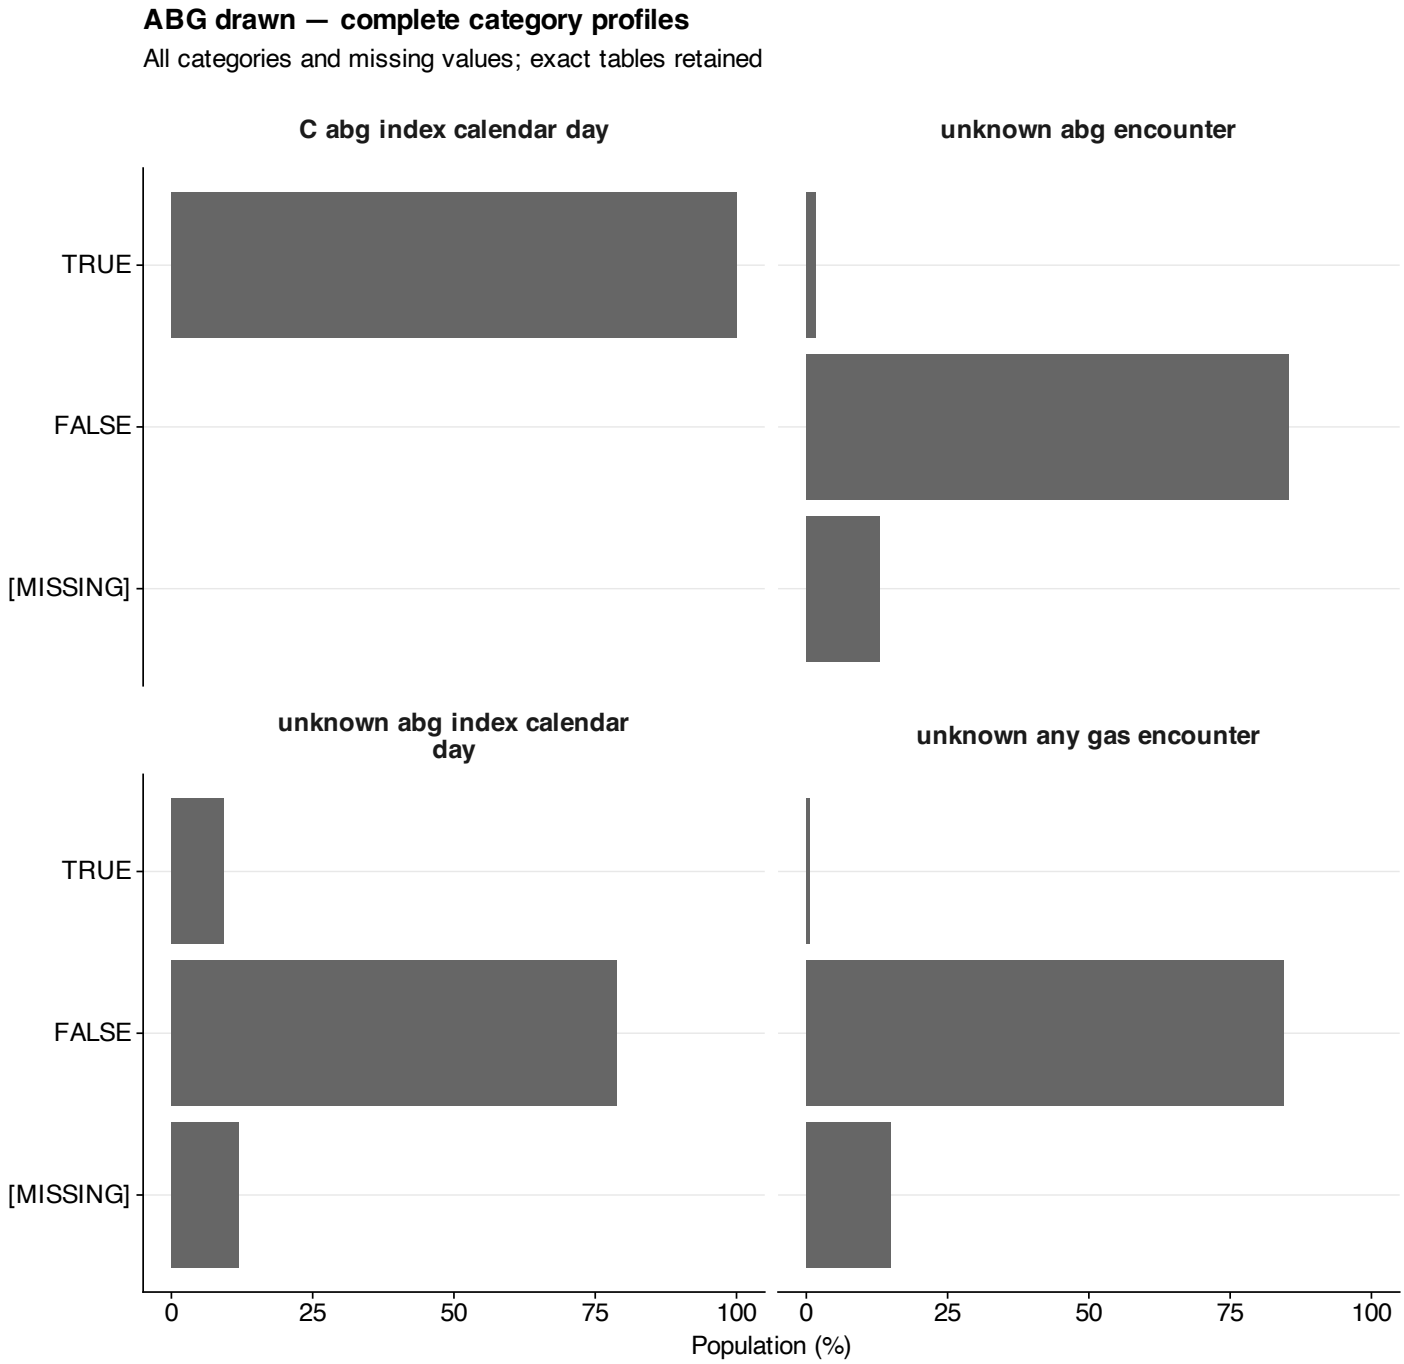

Figure 955: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete abg_drawn stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

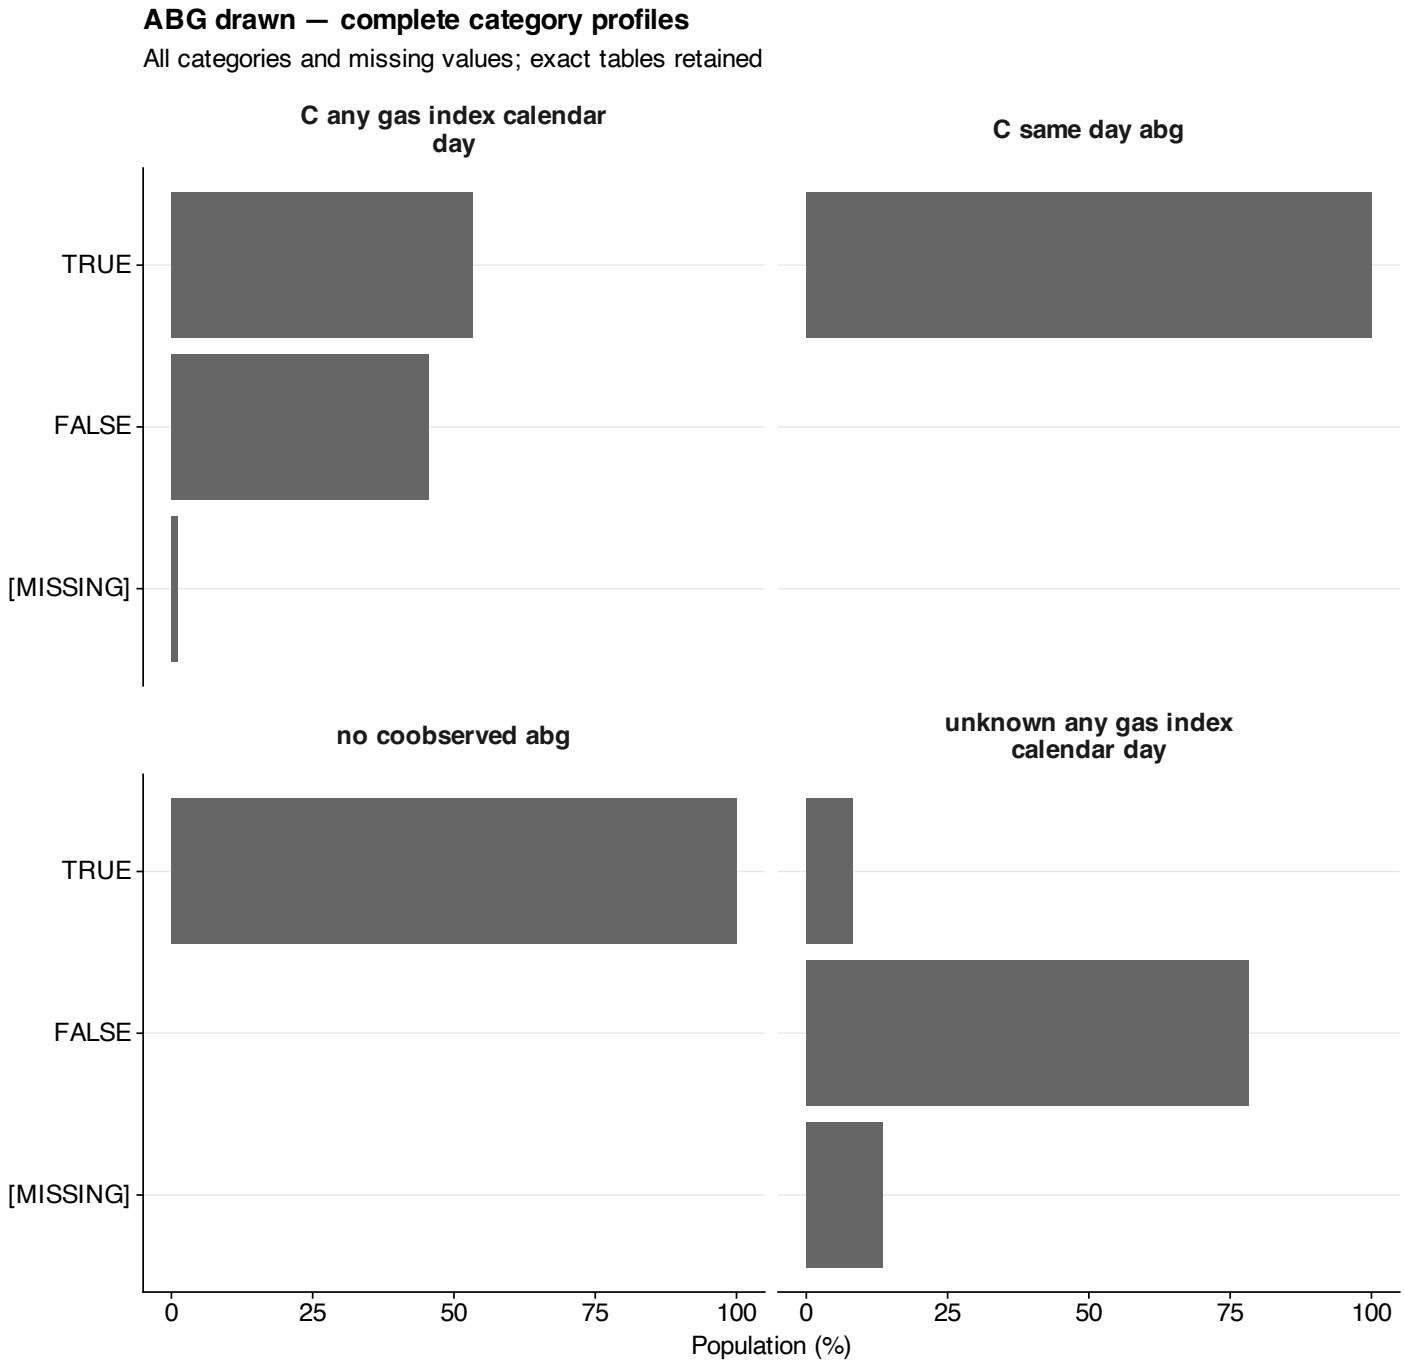

Figure 956: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete abg_drawn stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

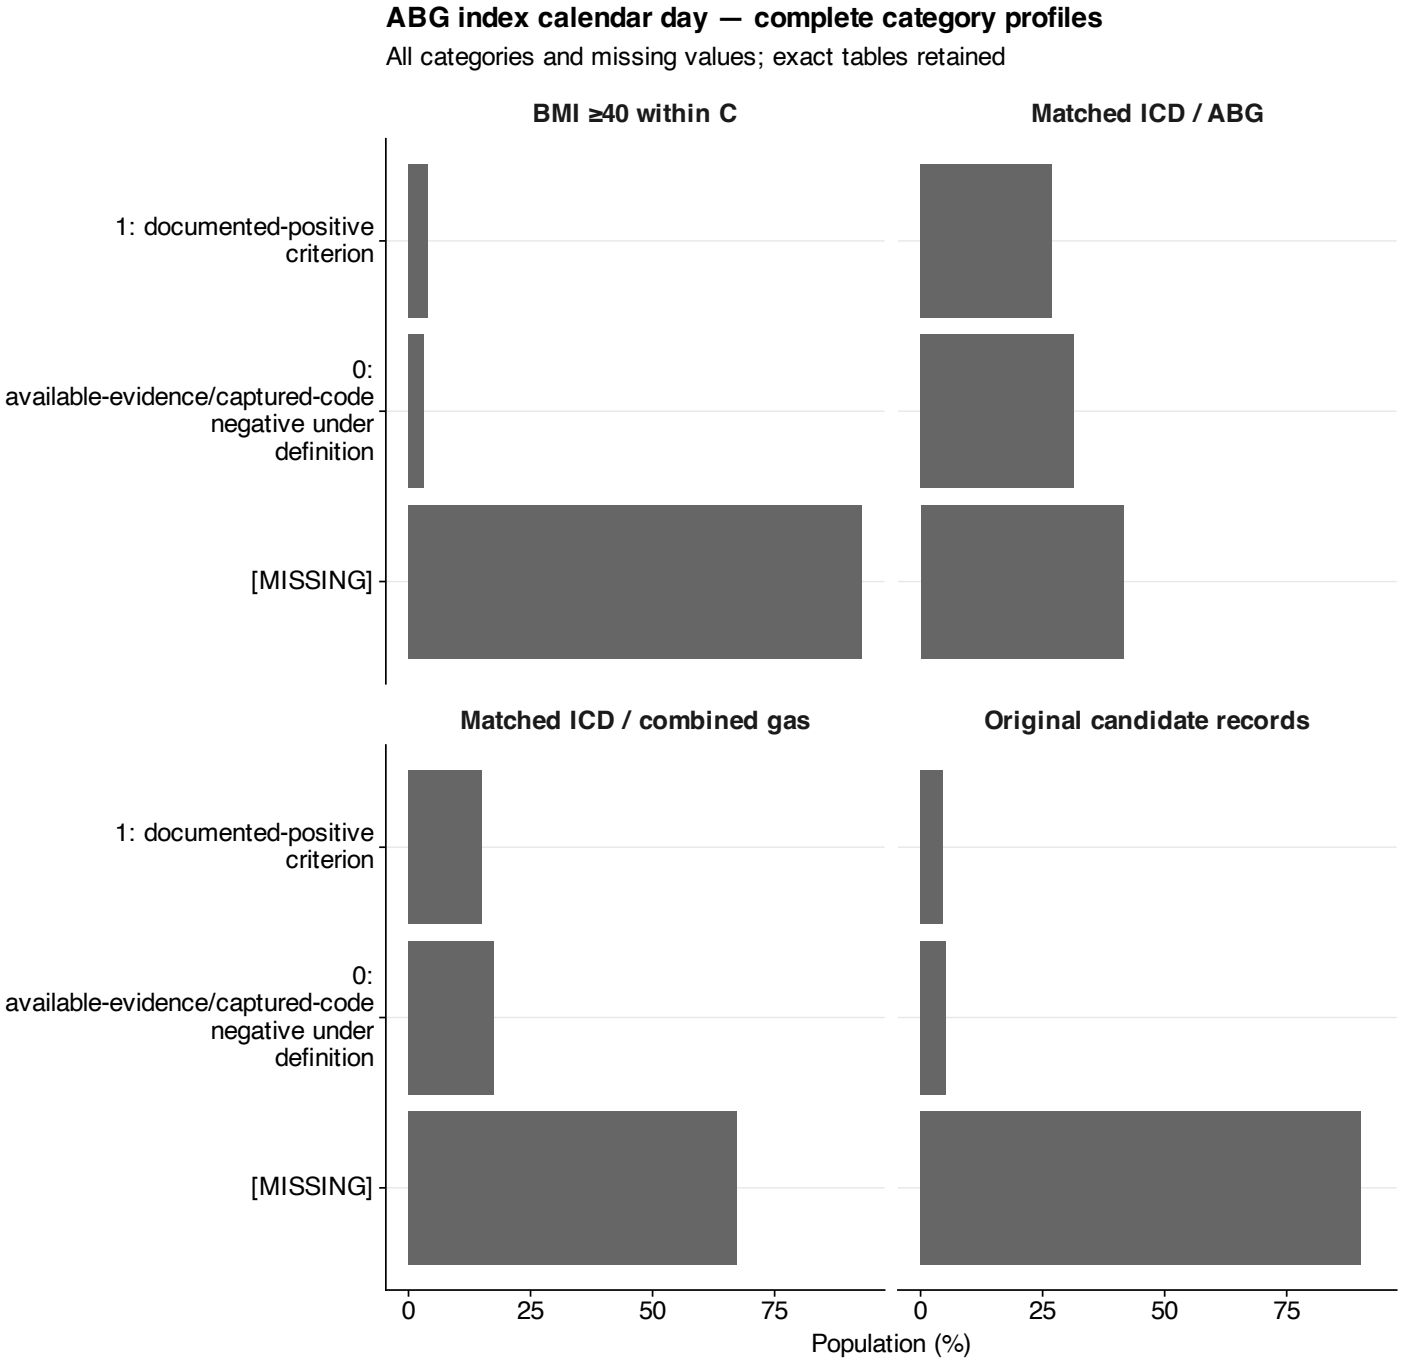

Figure 957: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete abg_index_calendar_day stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

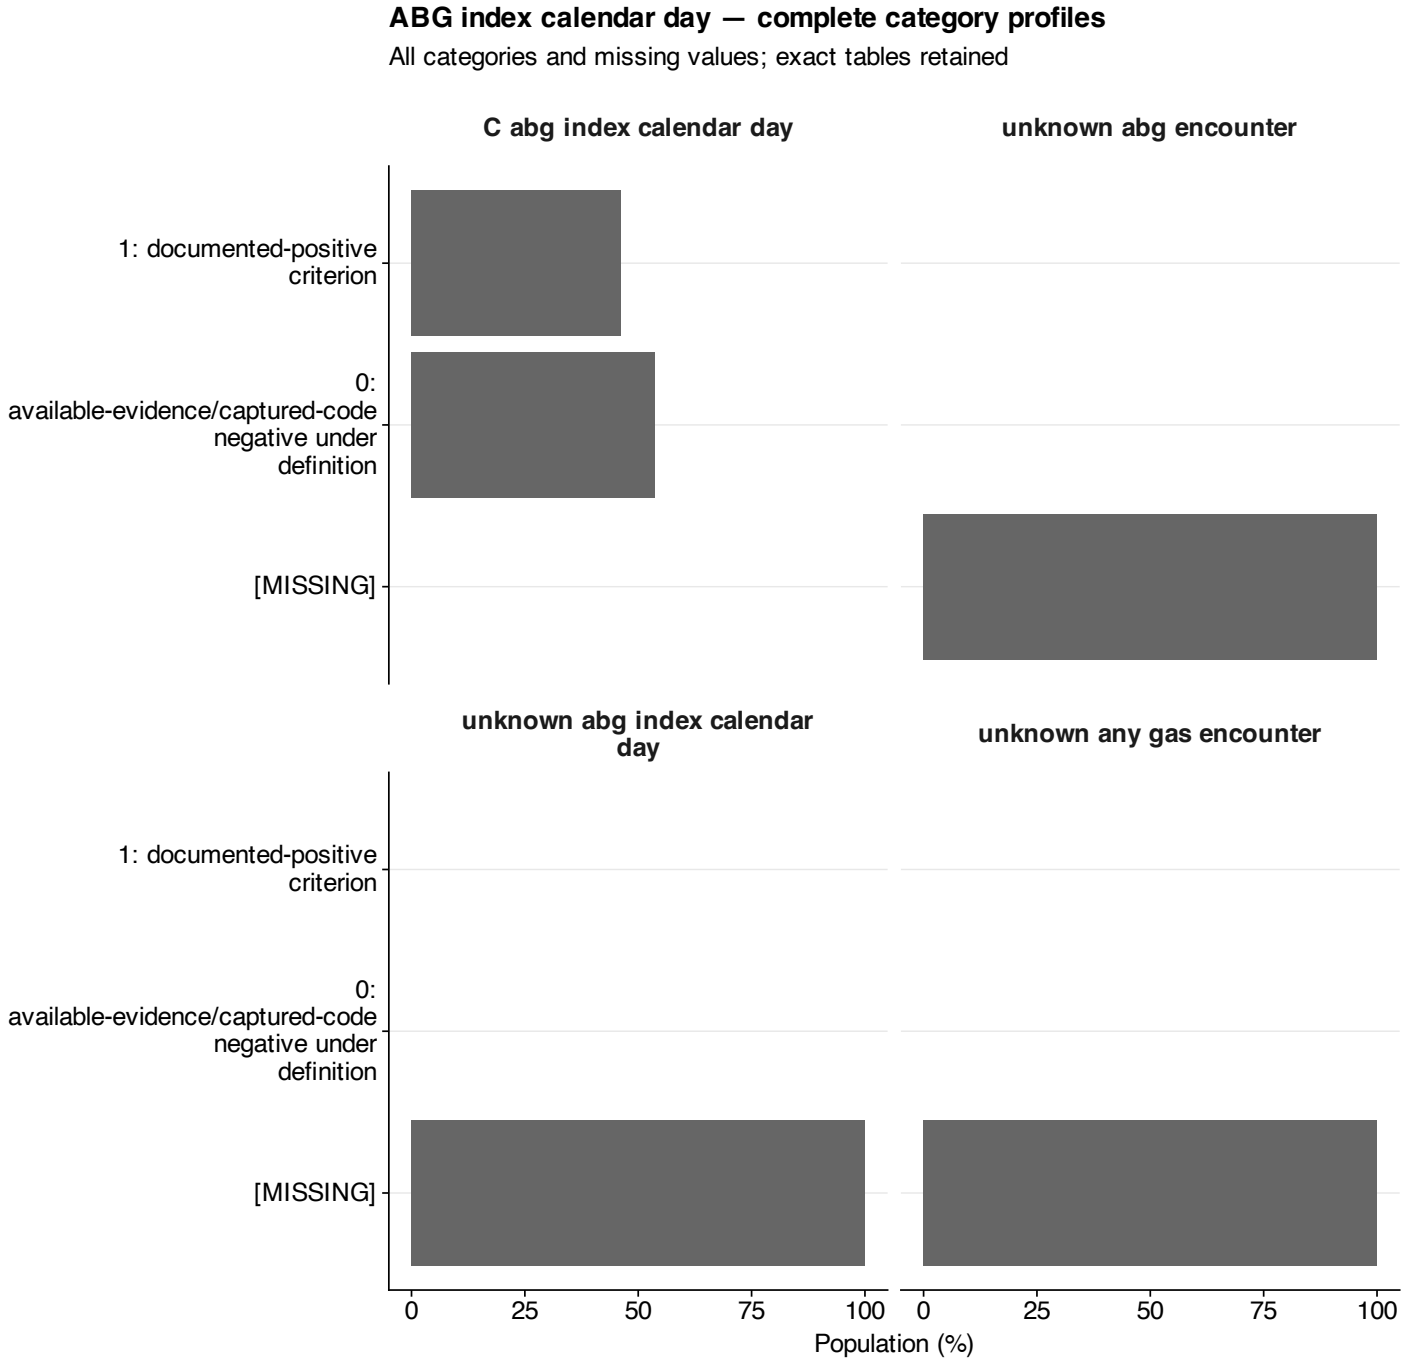

Figure 958: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete abg_index_calendar_day stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

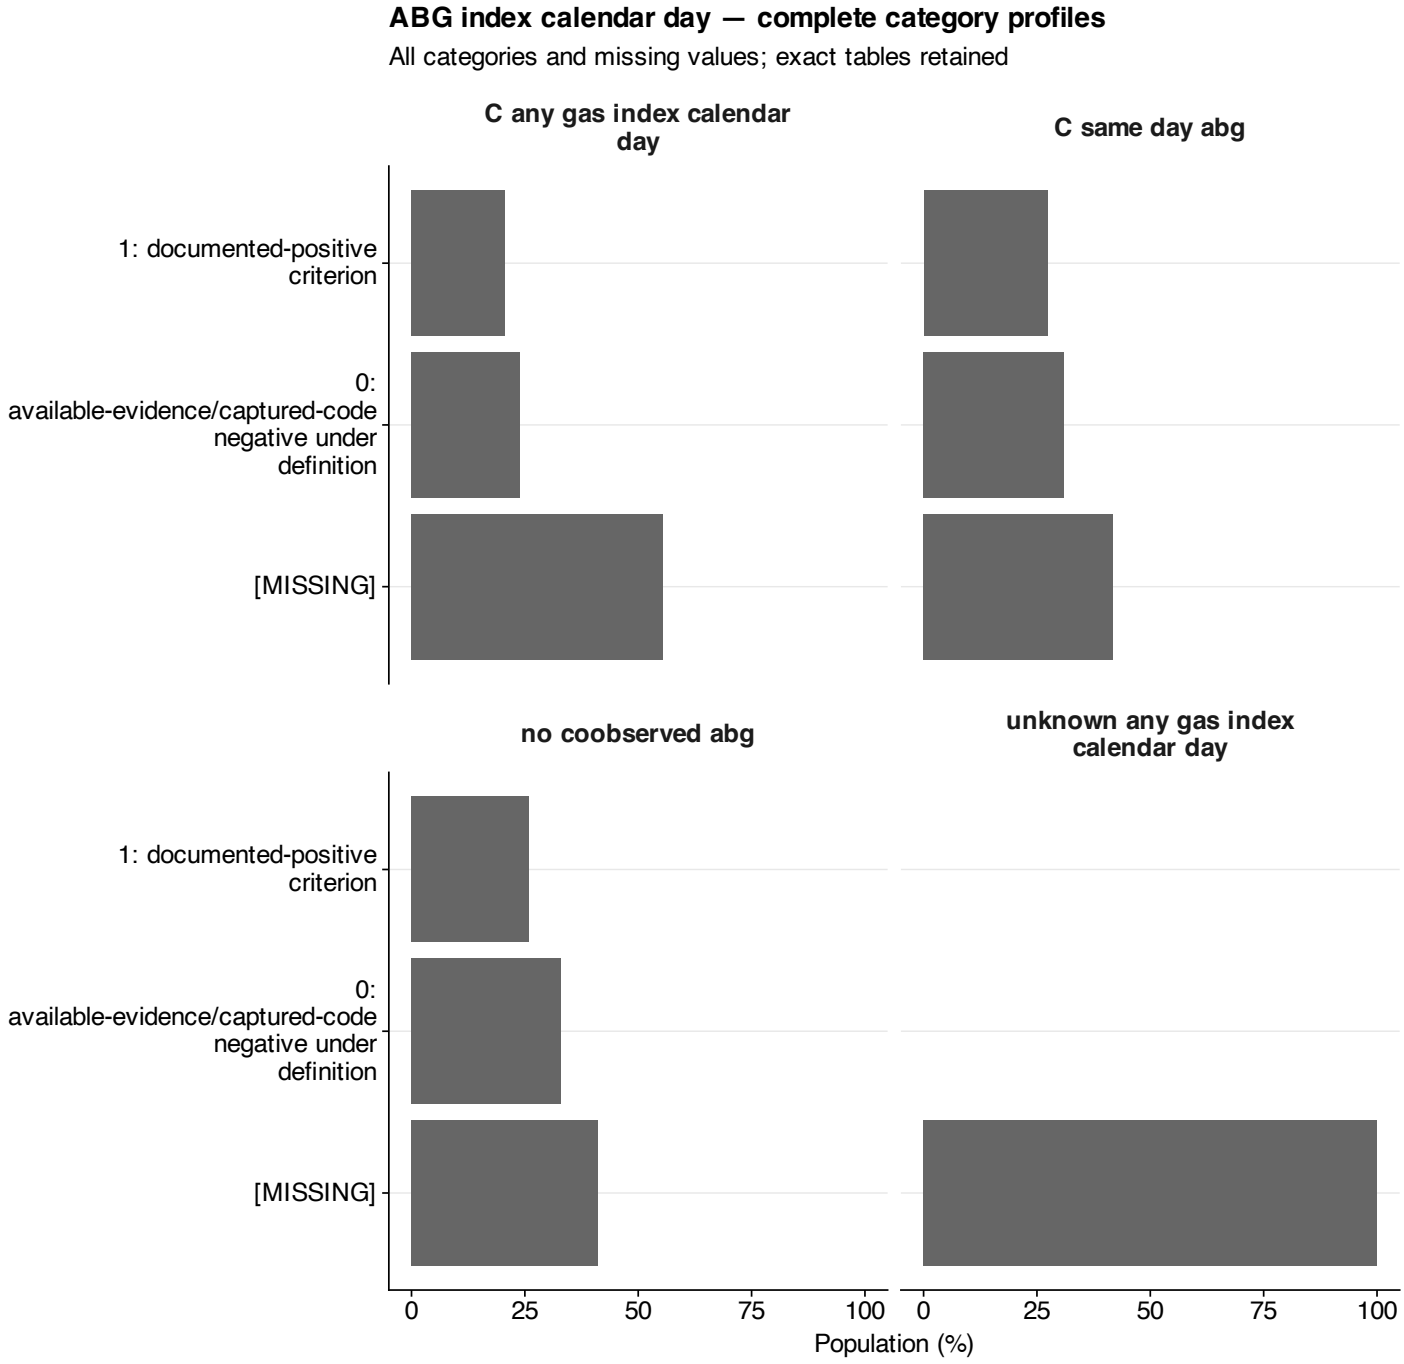

Figure 959: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete abg_index_calendar_day stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

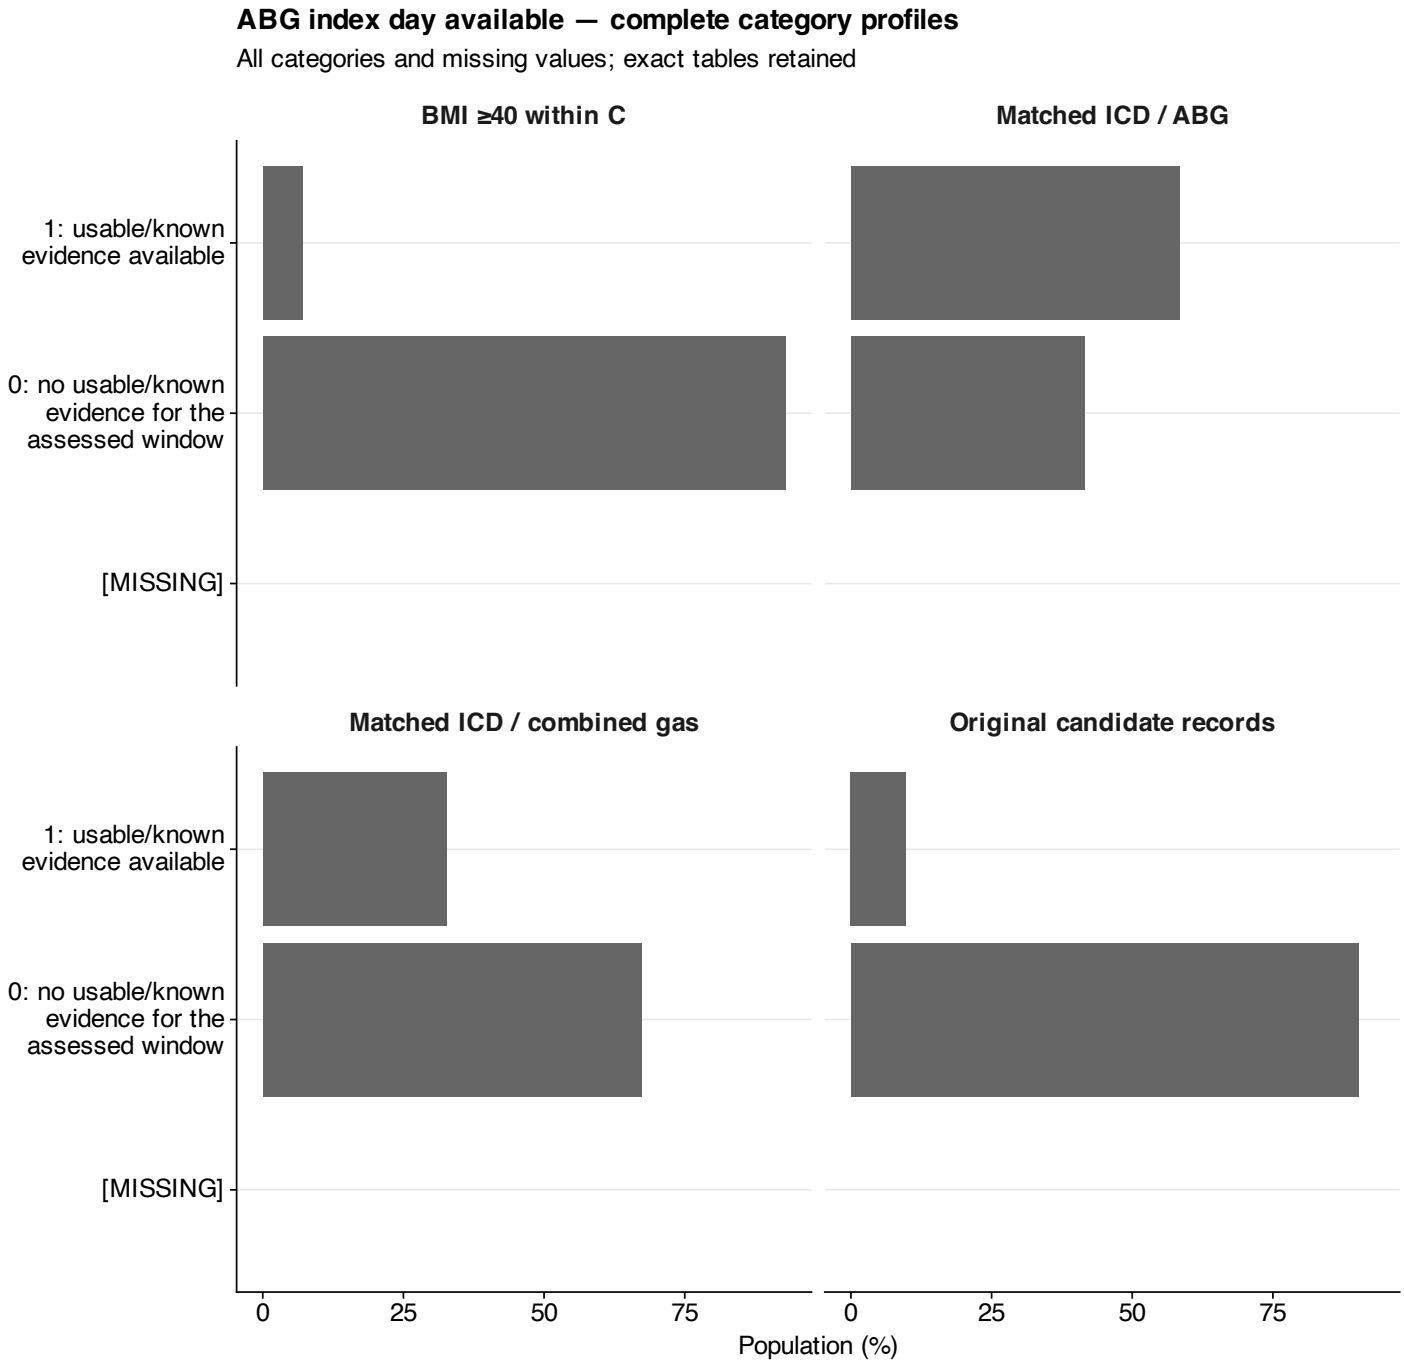

Figure 960: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete abg_index_day_available stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

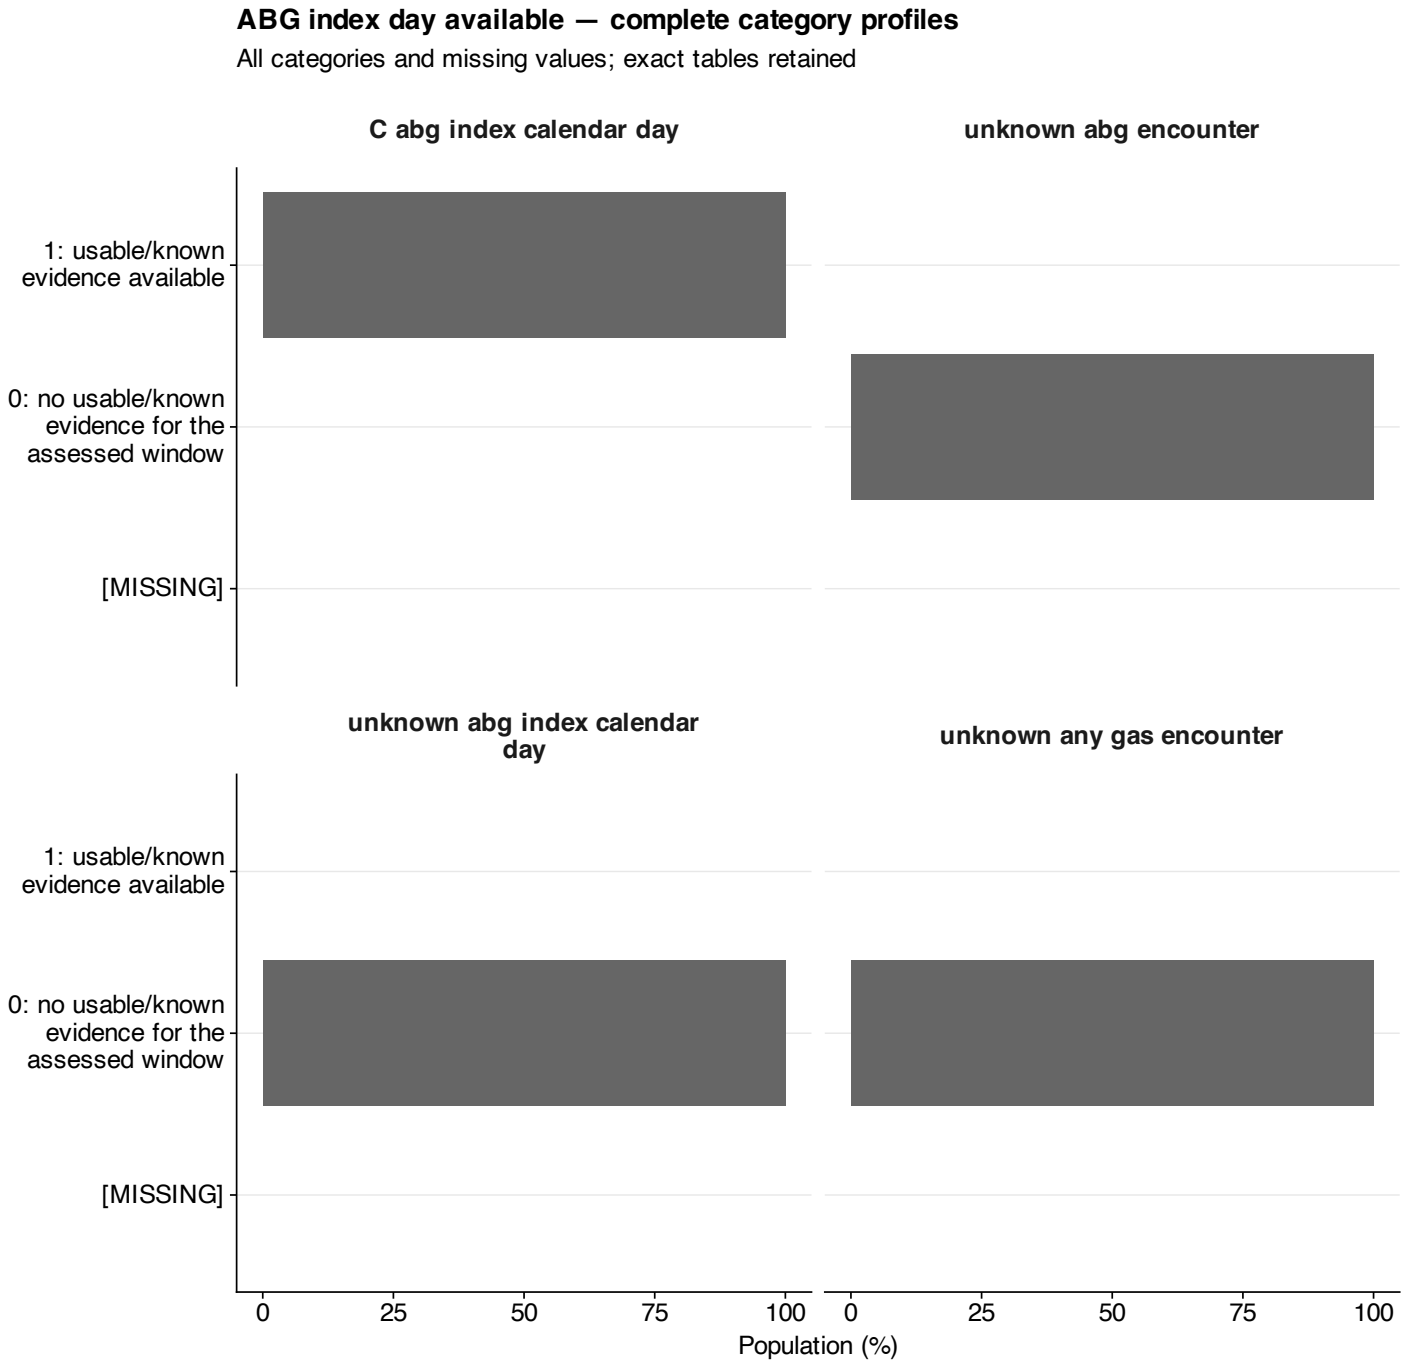

Figure 961: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete abg_index_day_available stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

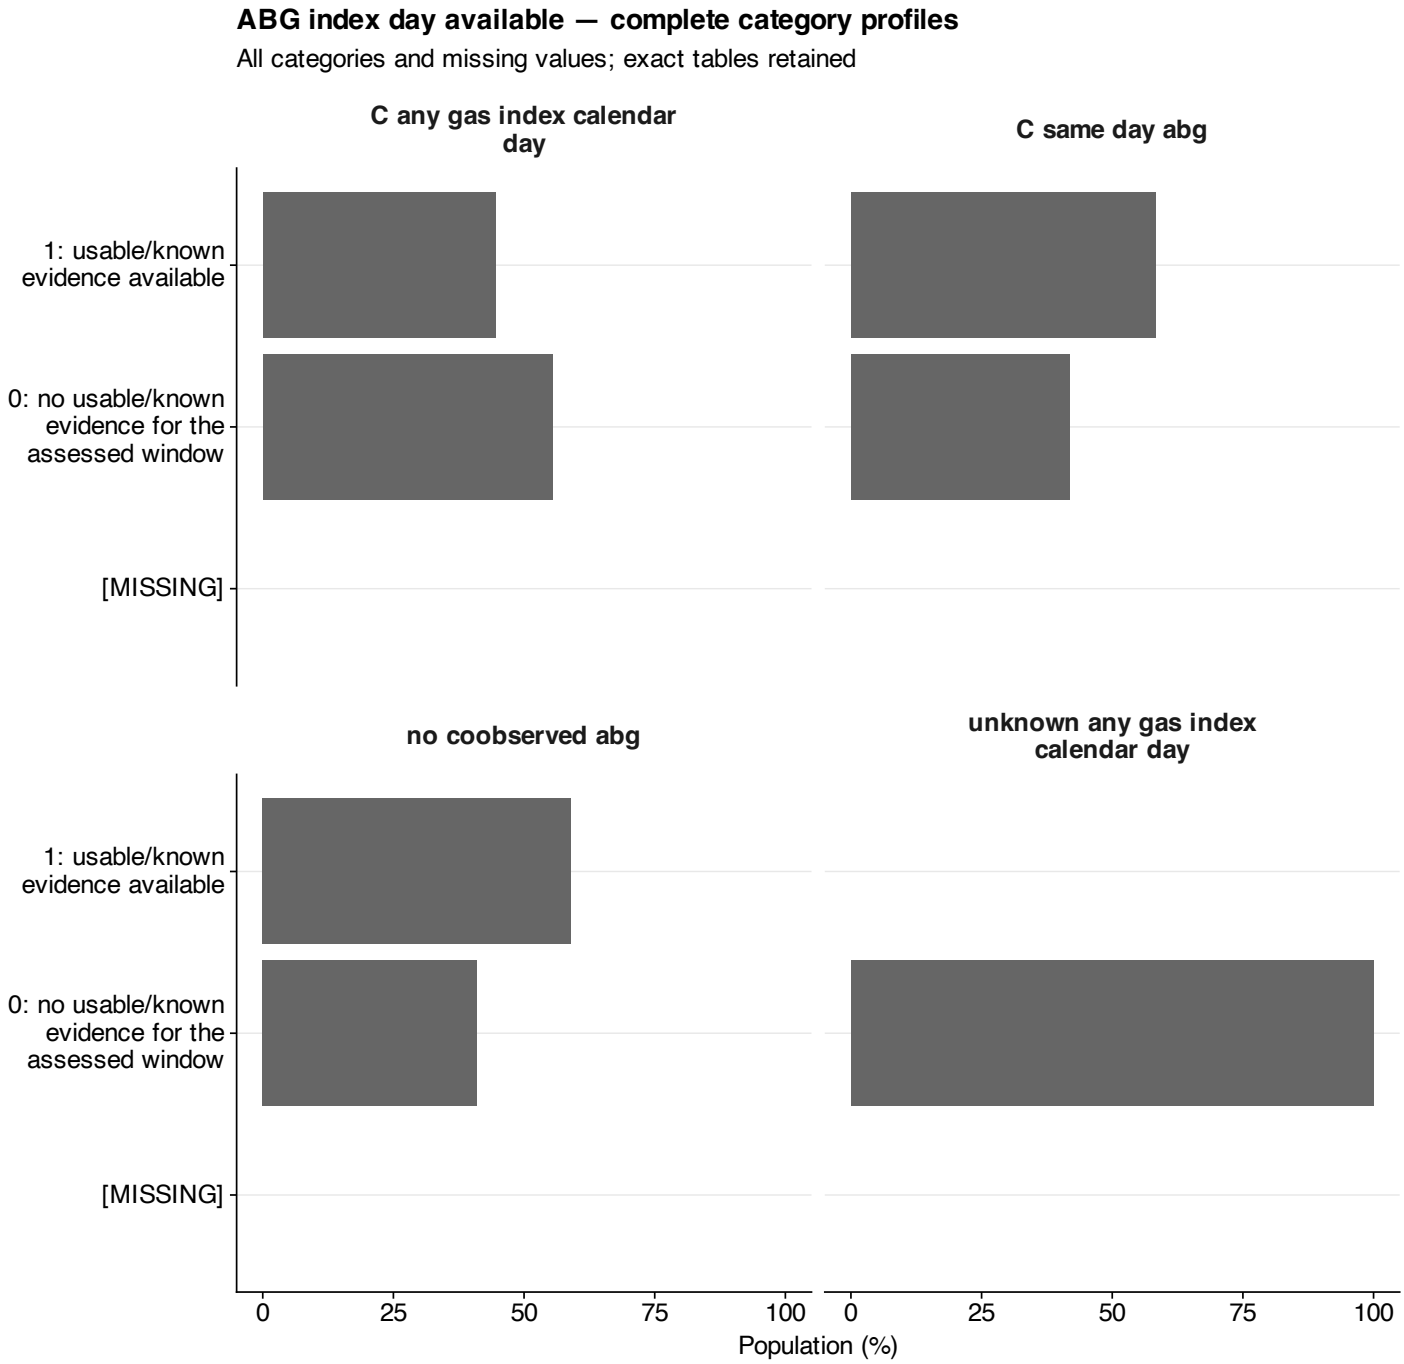

Figure 962: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete abg_index_day_available stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

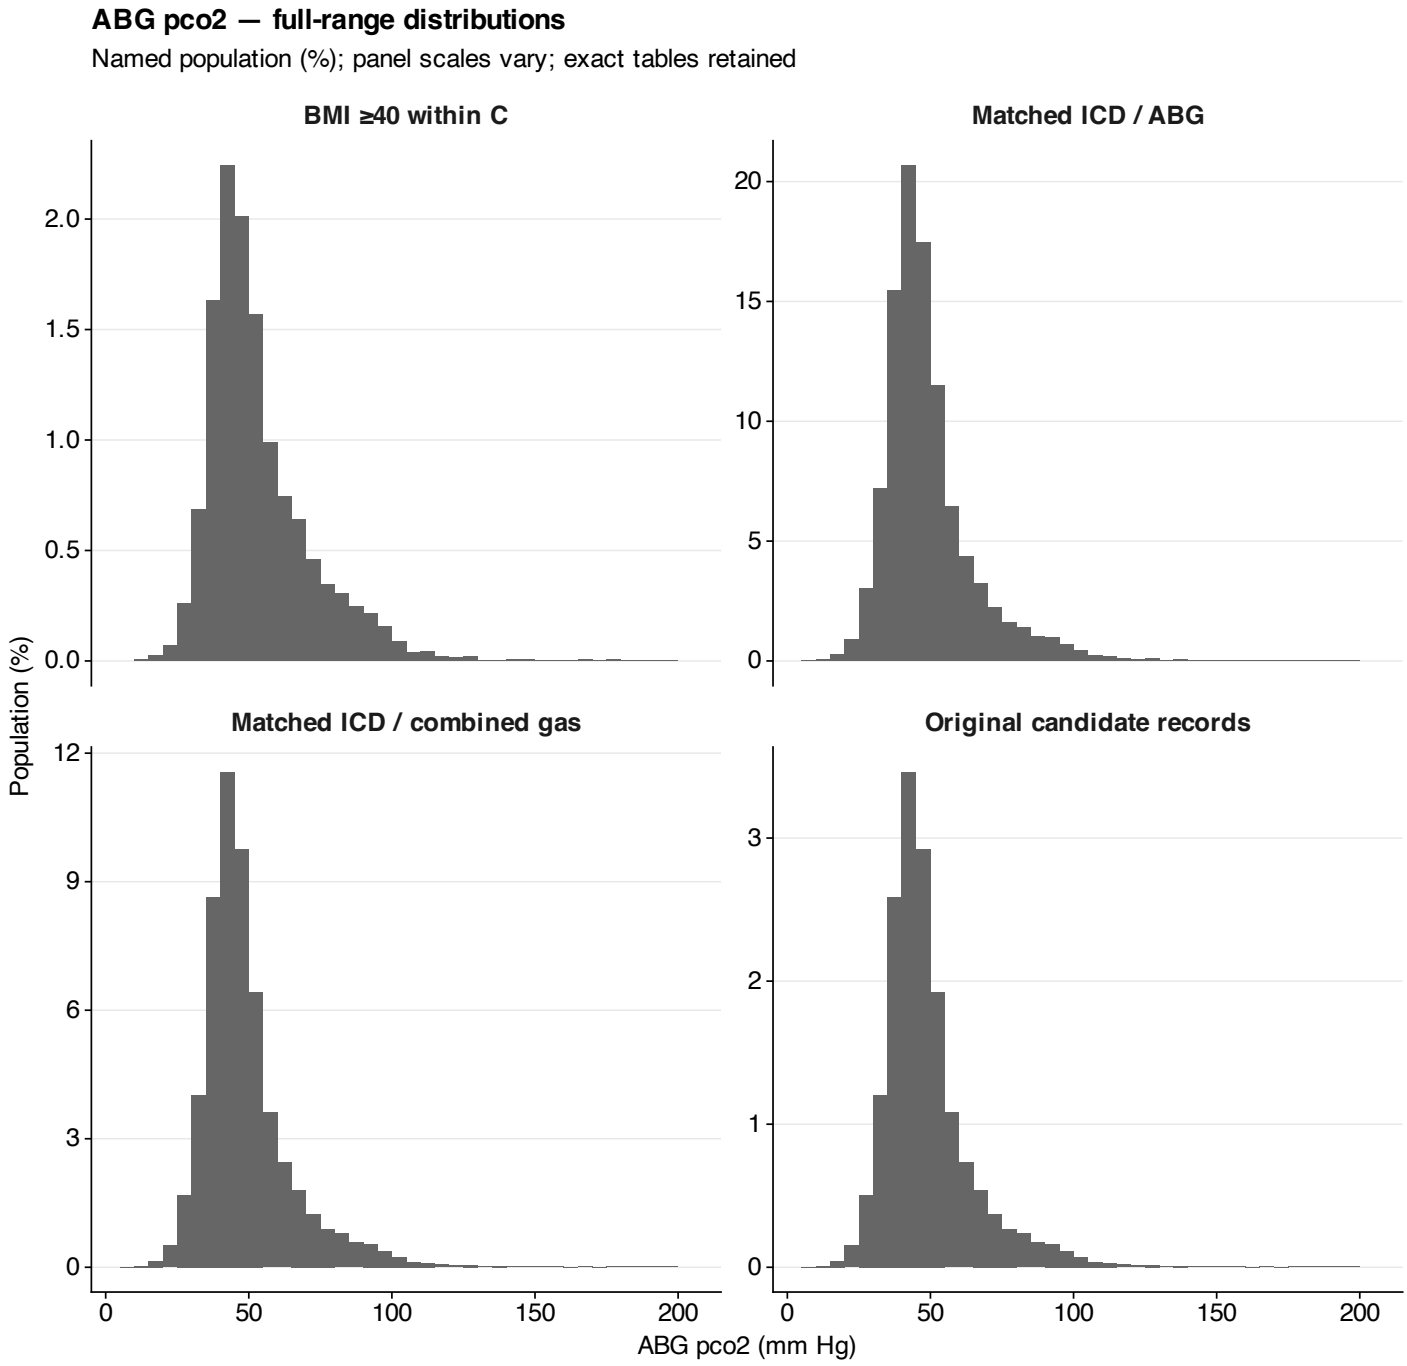

Figure 963: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete abg_pco2 stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

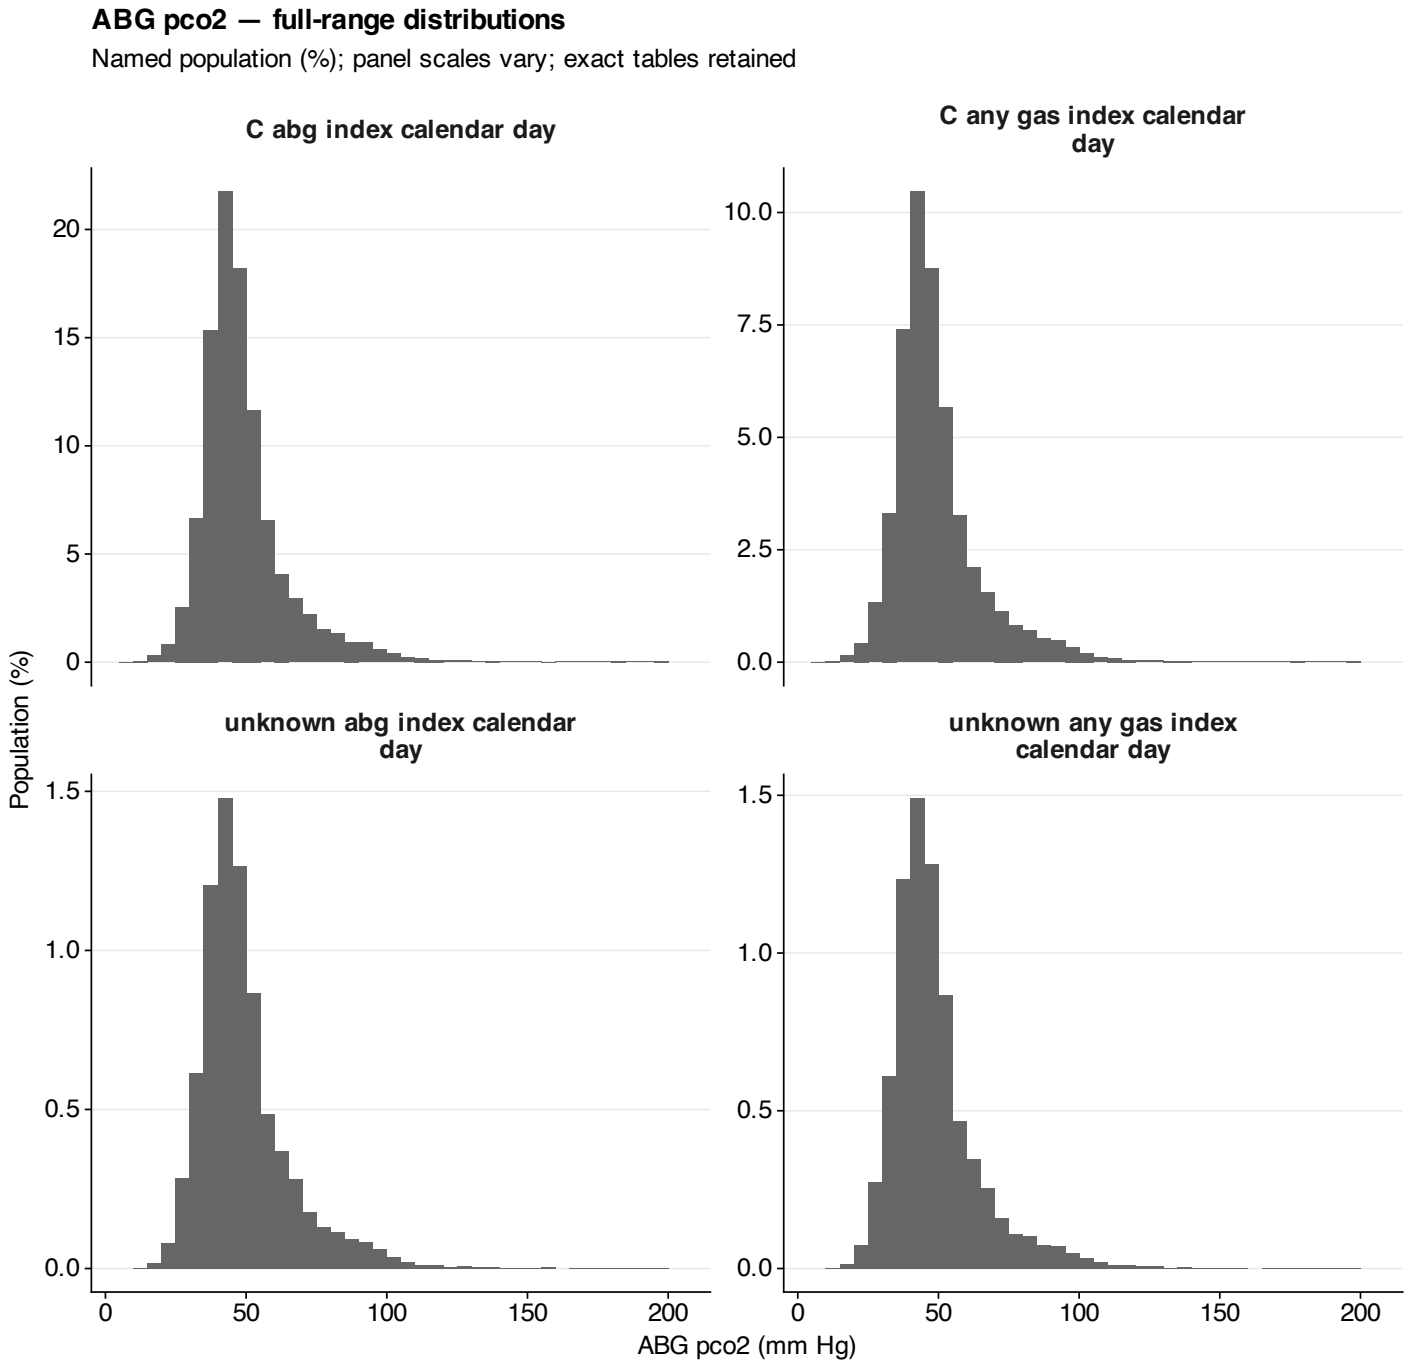

Figure 964: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete abg_pco2 stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

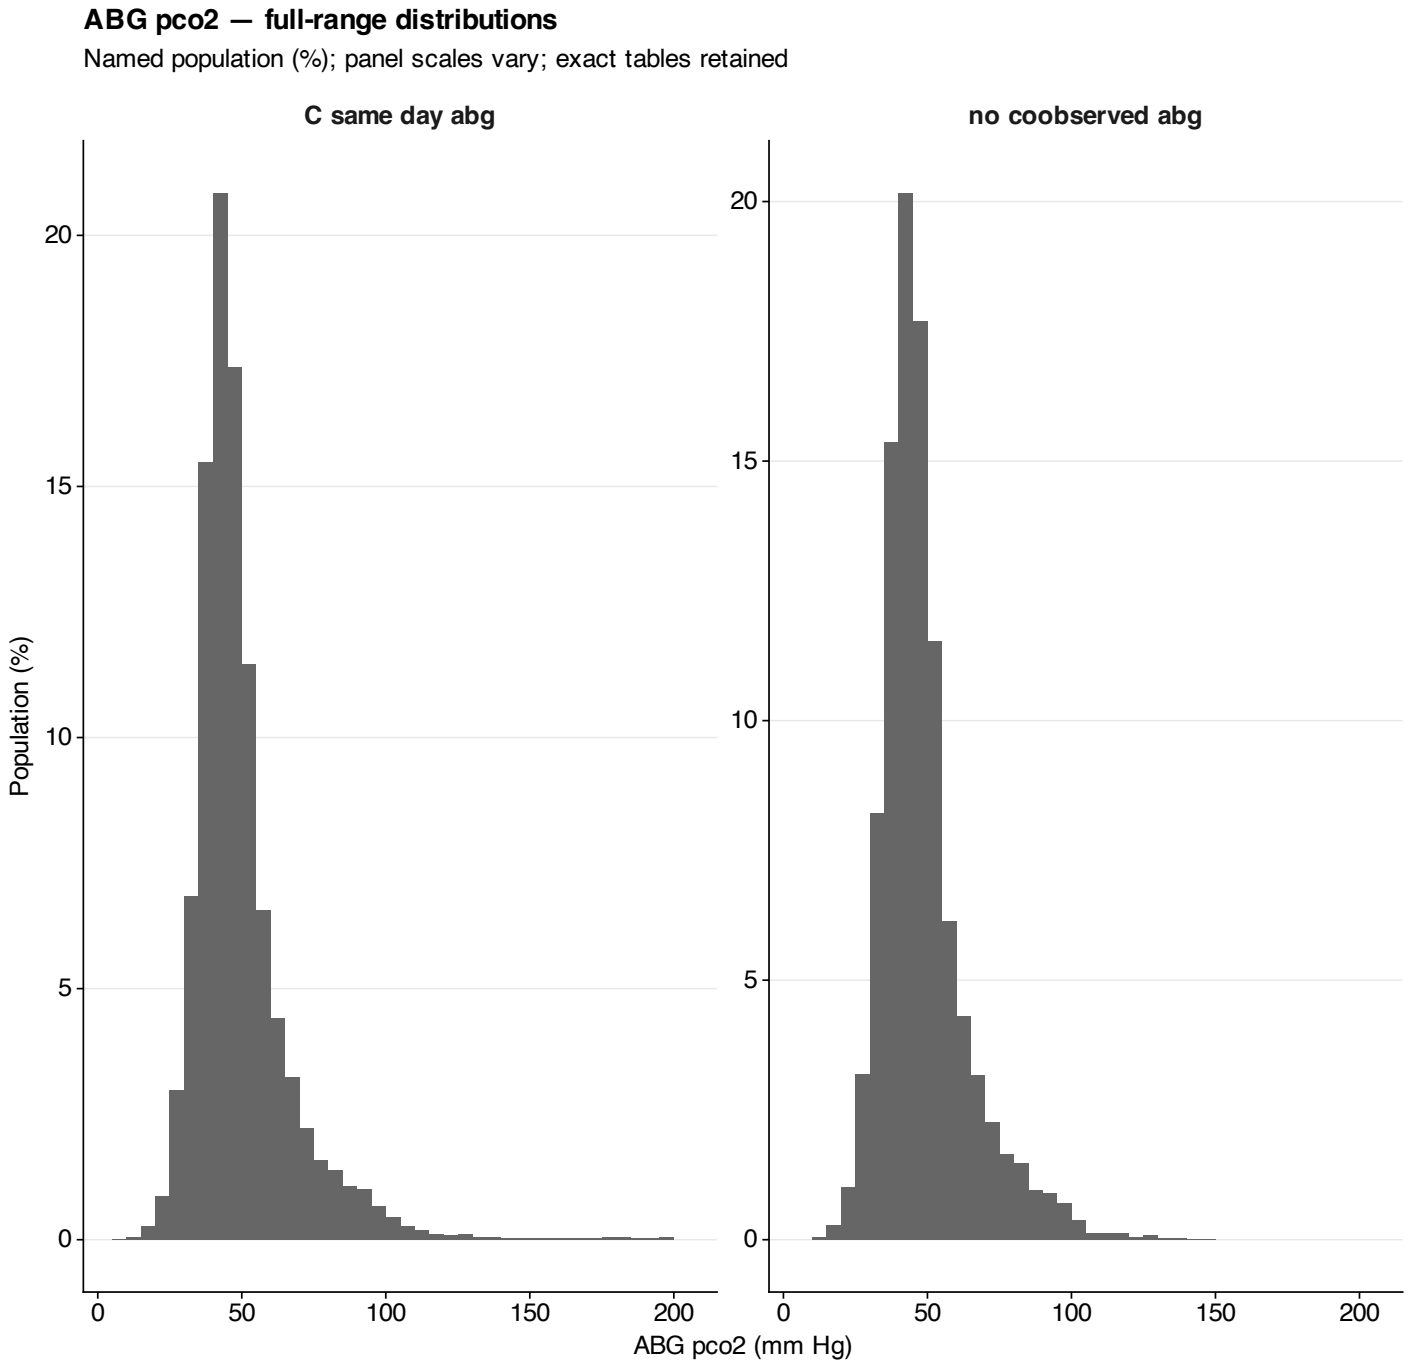

Figure 965: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete abg_pco2 stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

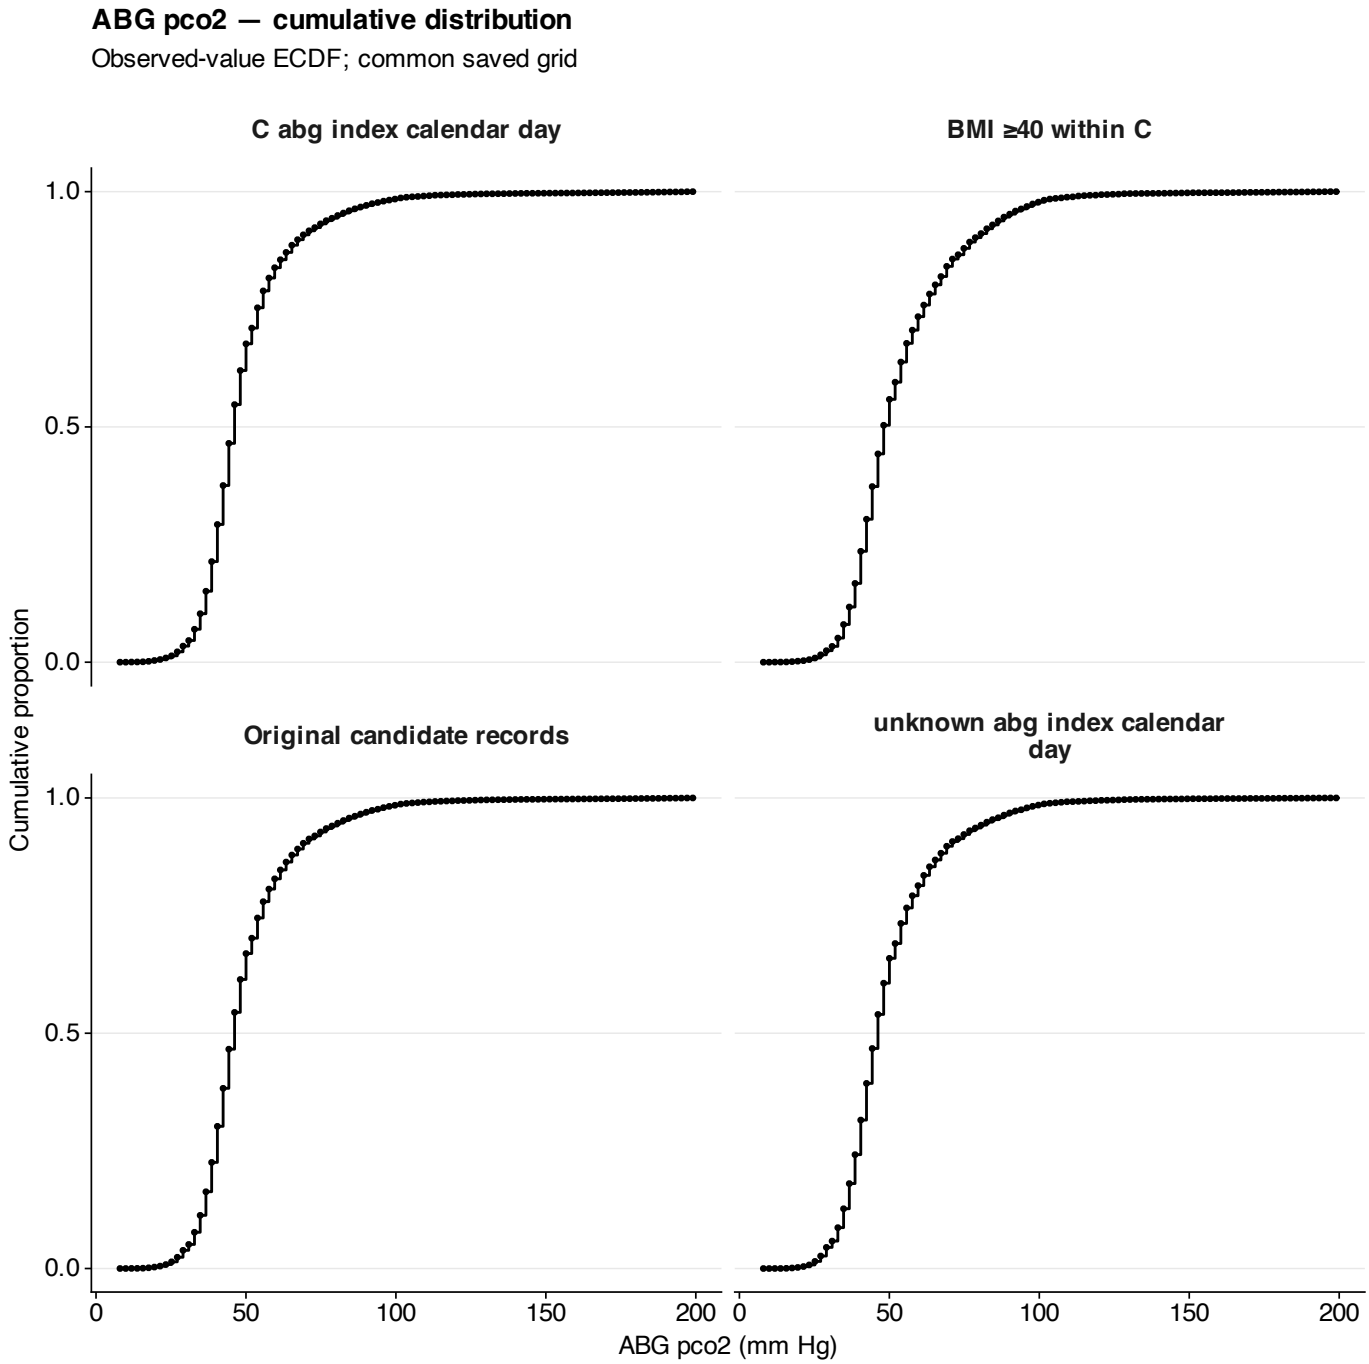

Figure 966: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. abg_pco2 ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

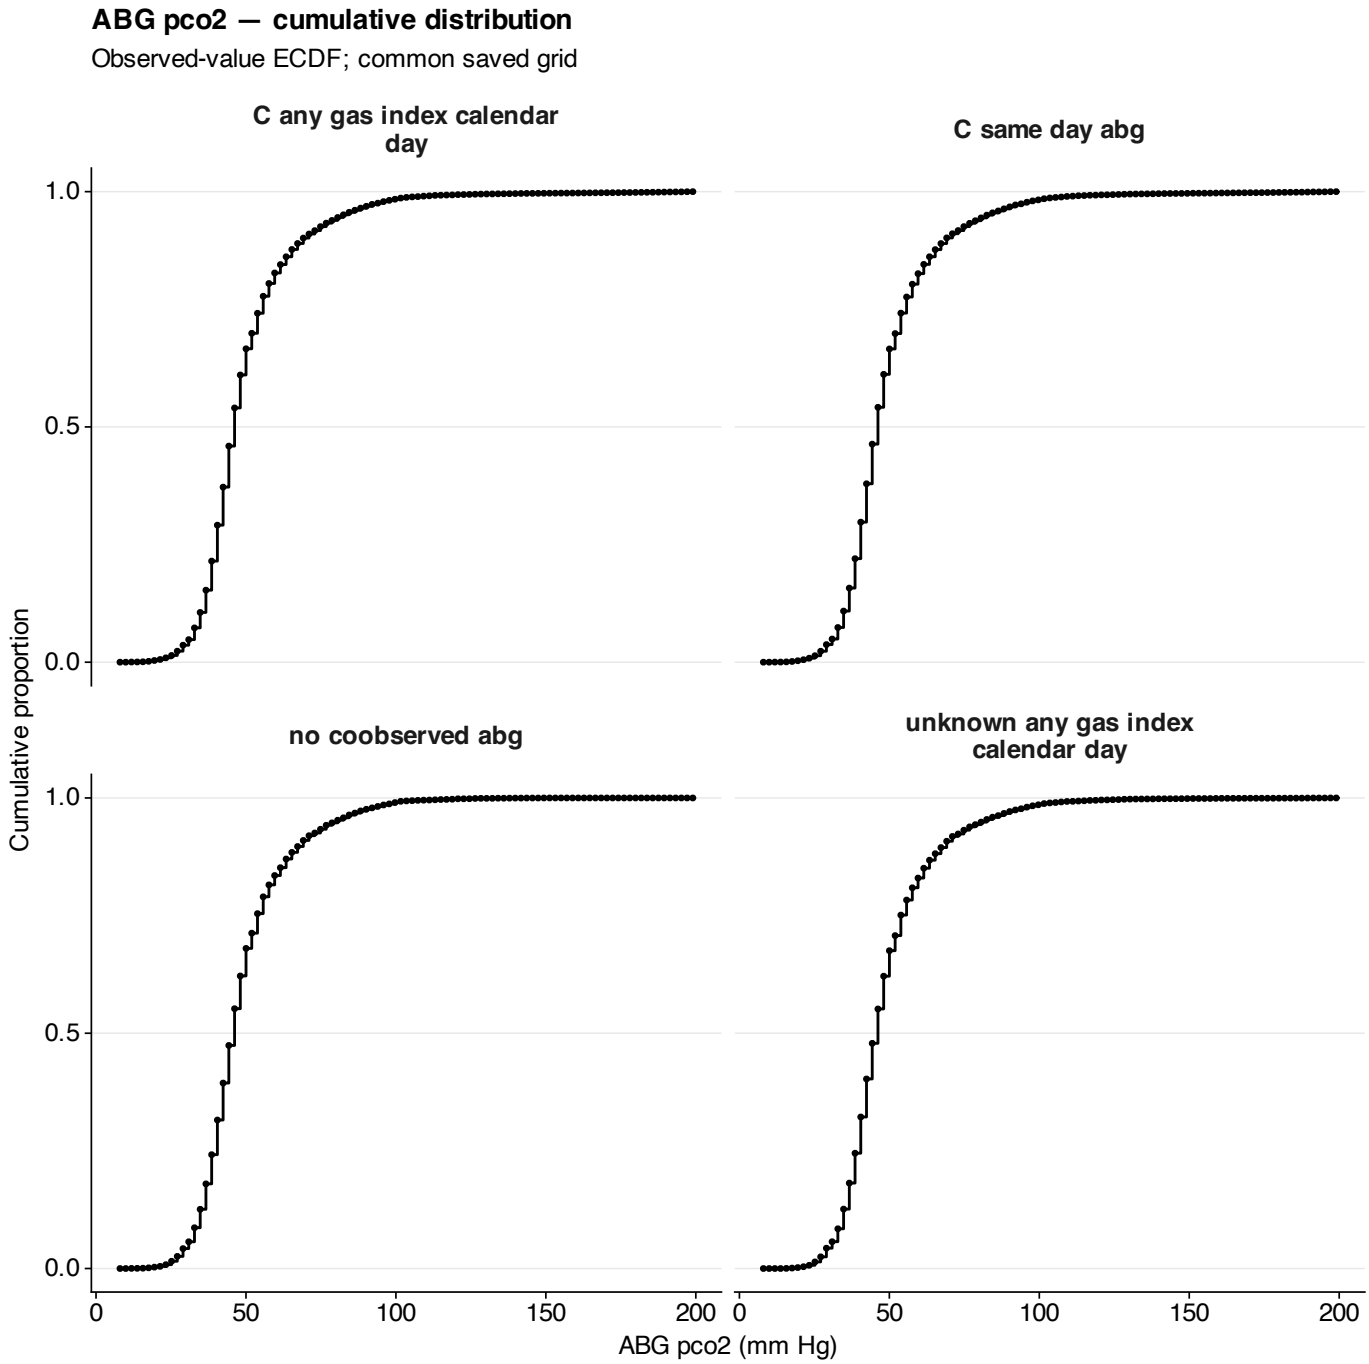

Figure 967: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. abg_pco2 ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

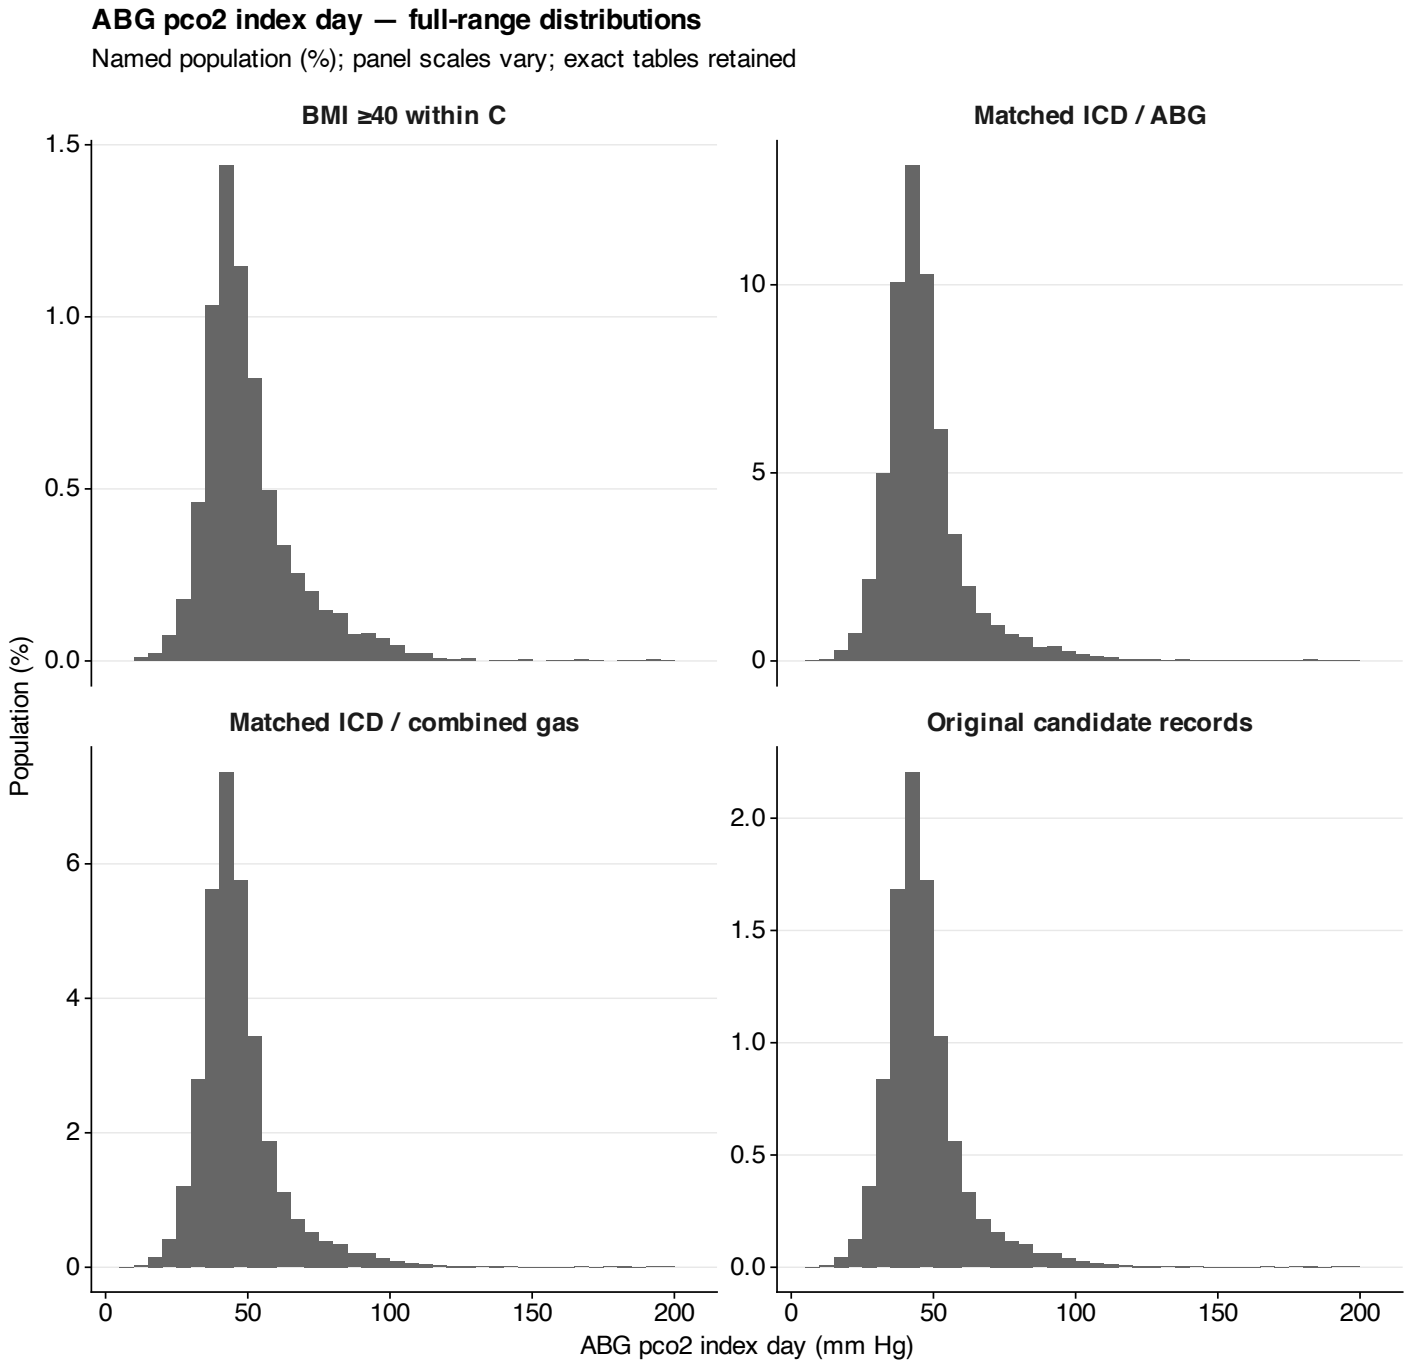

Figure 968: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete abg_pco2_index_day stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

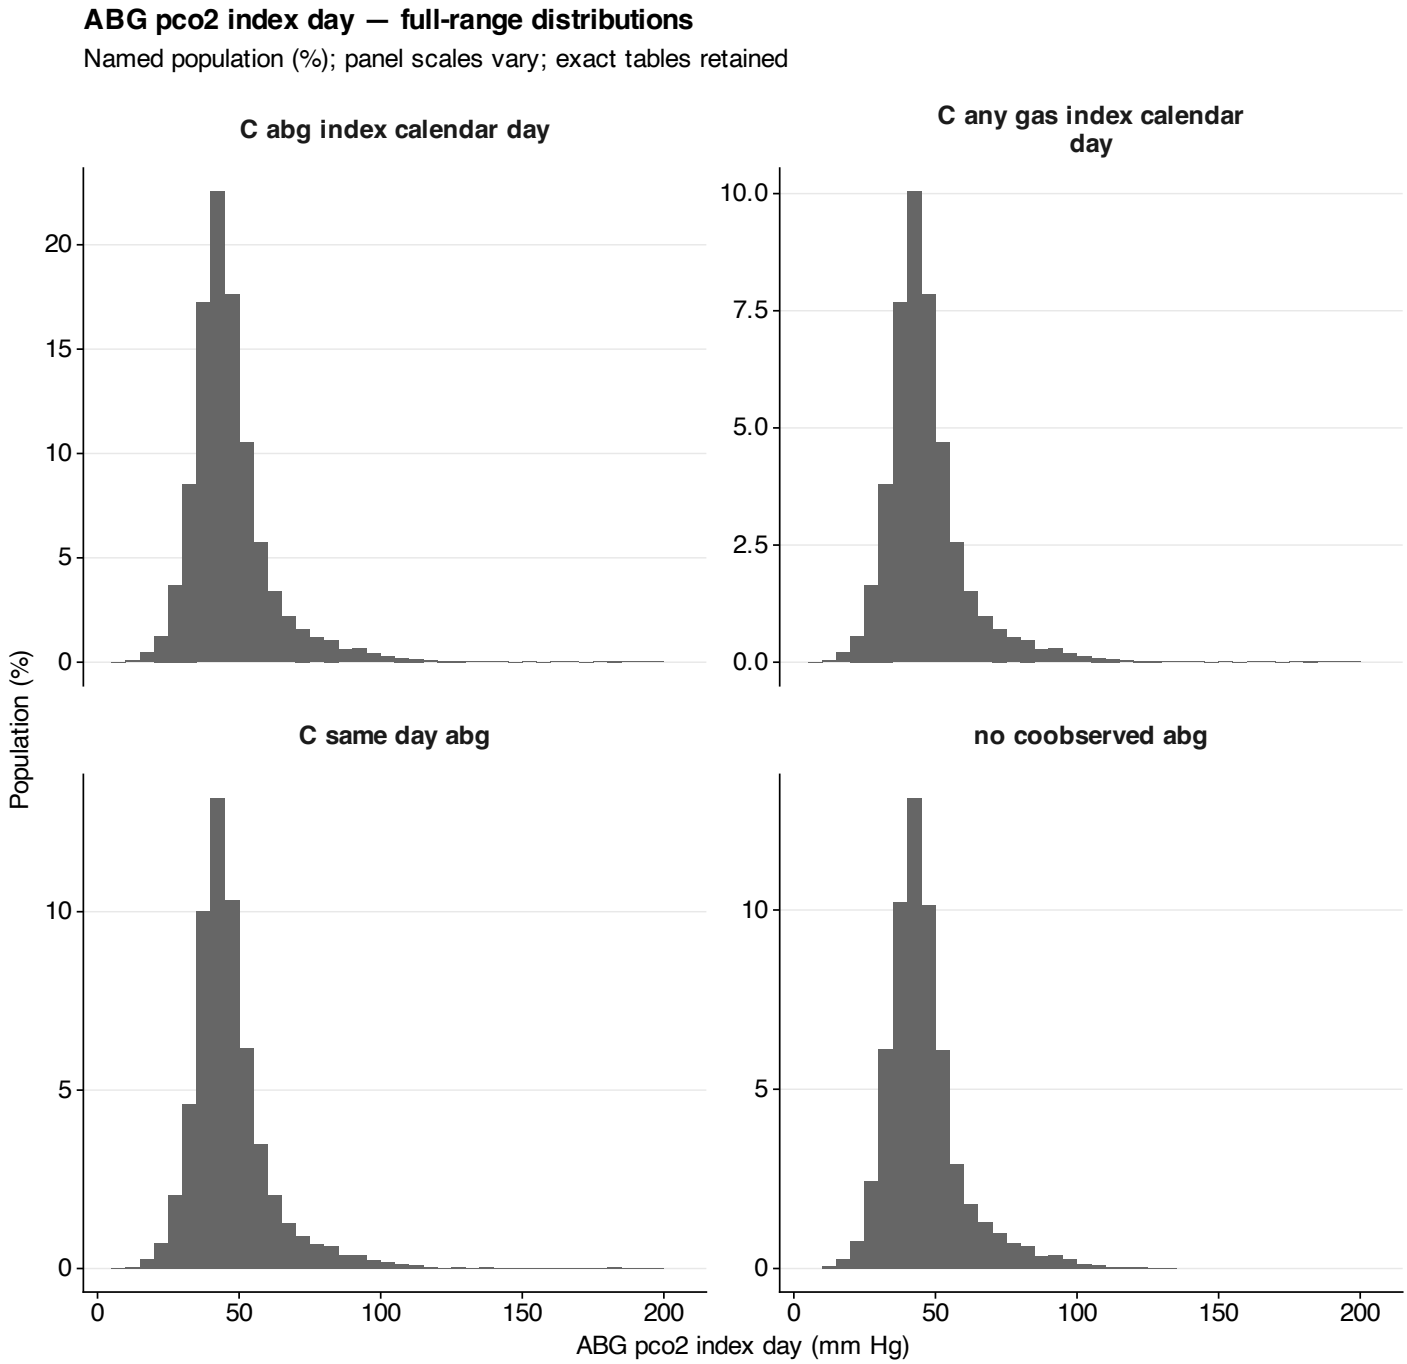

Figure 969: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete abg_pco2_index_day stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

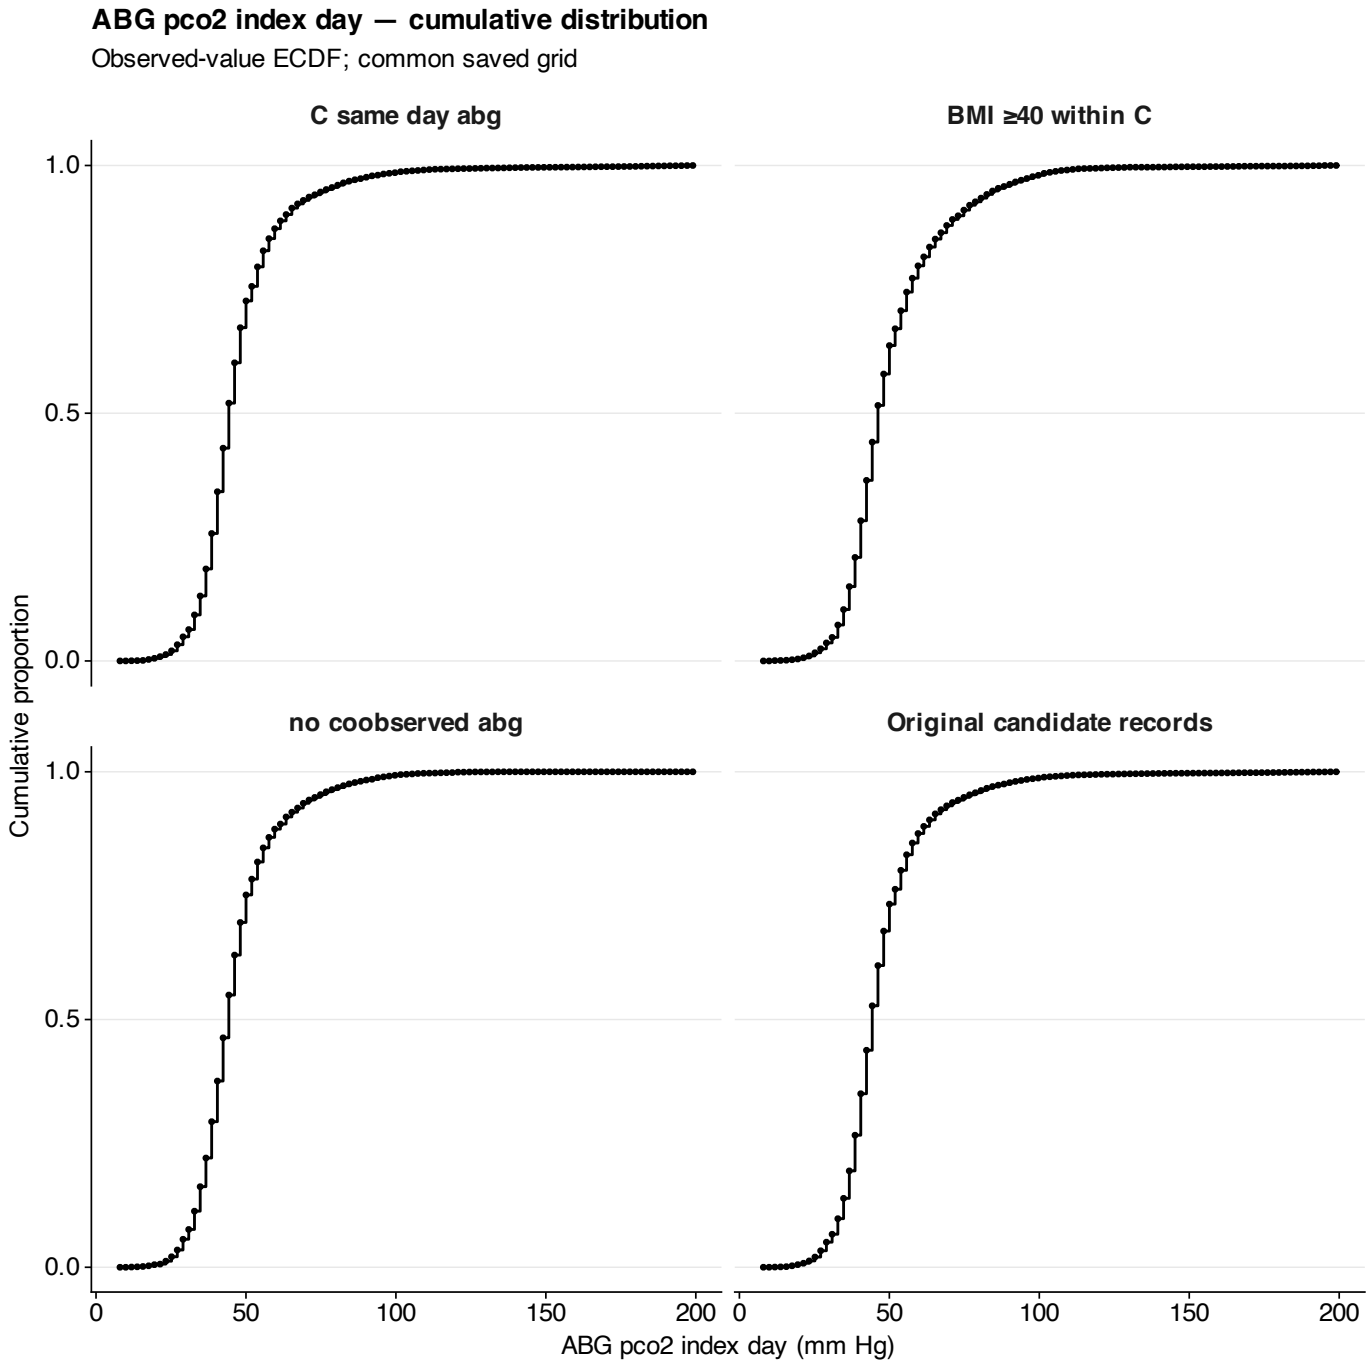

Figure 970: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. abg_pco2_index_day ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

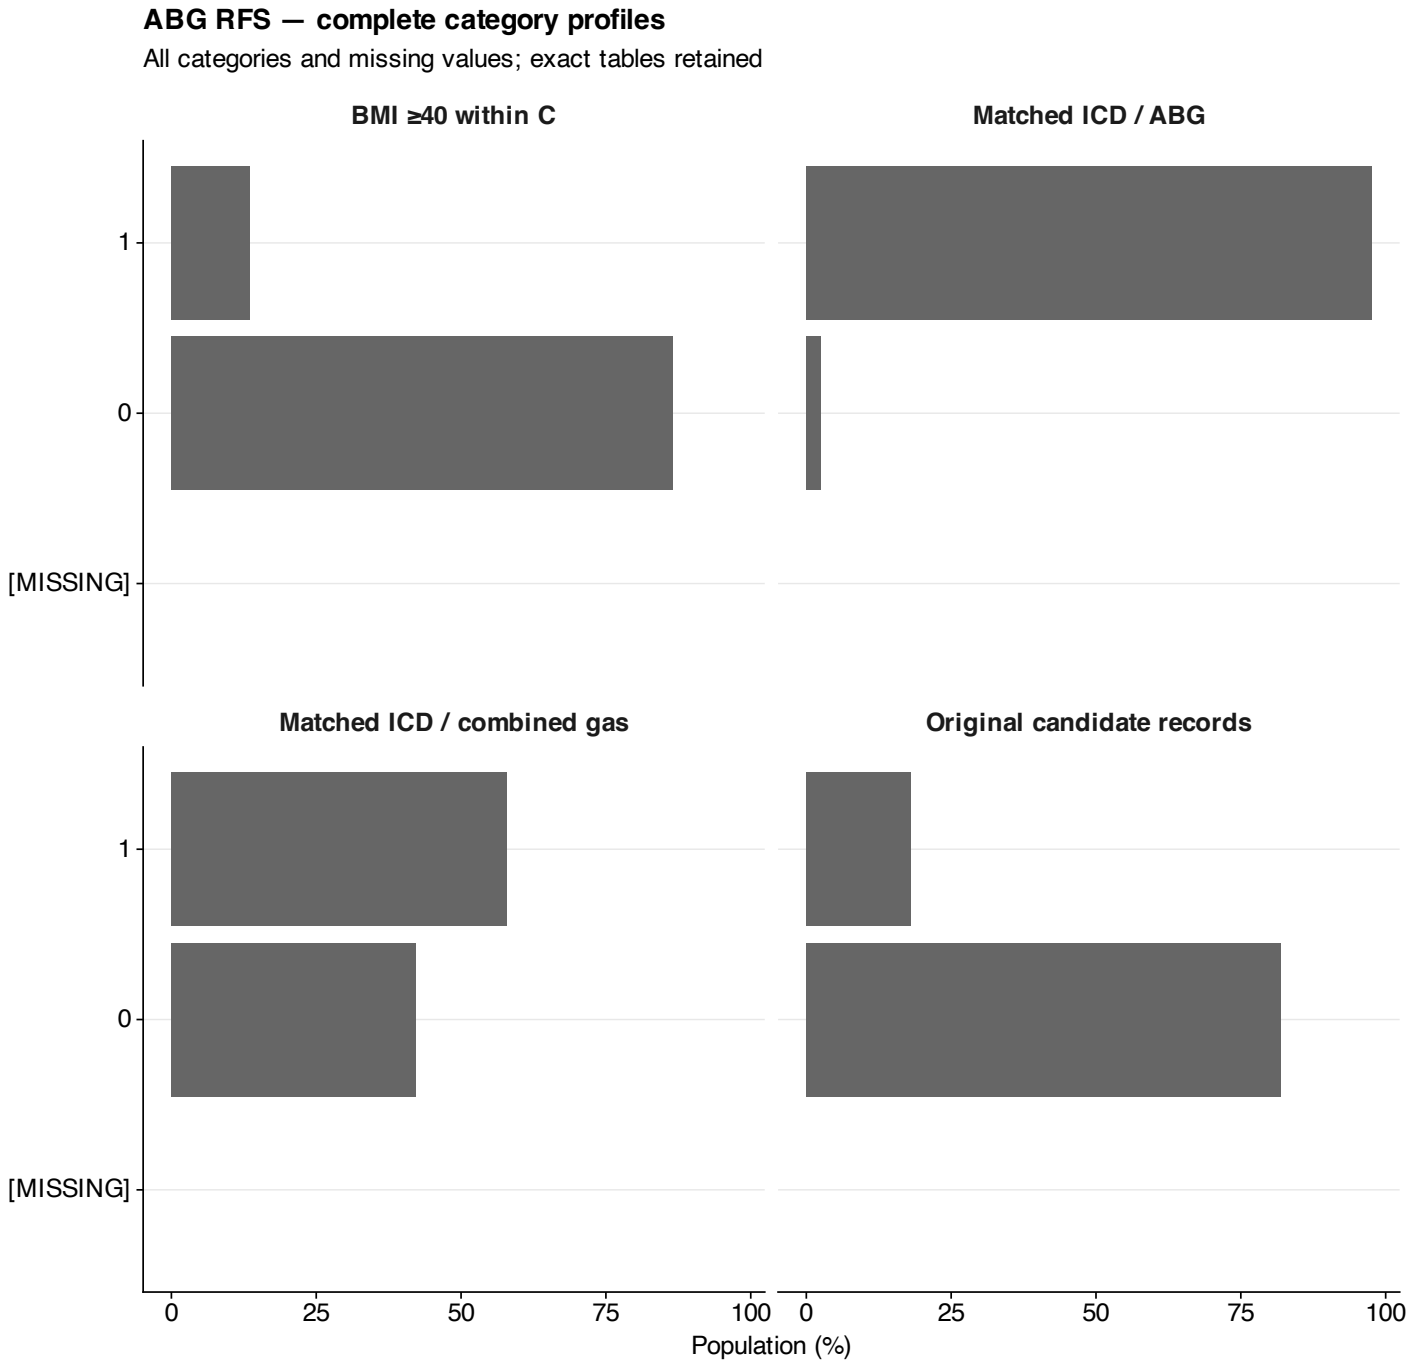

Figure 971: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete ABG_rfs stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

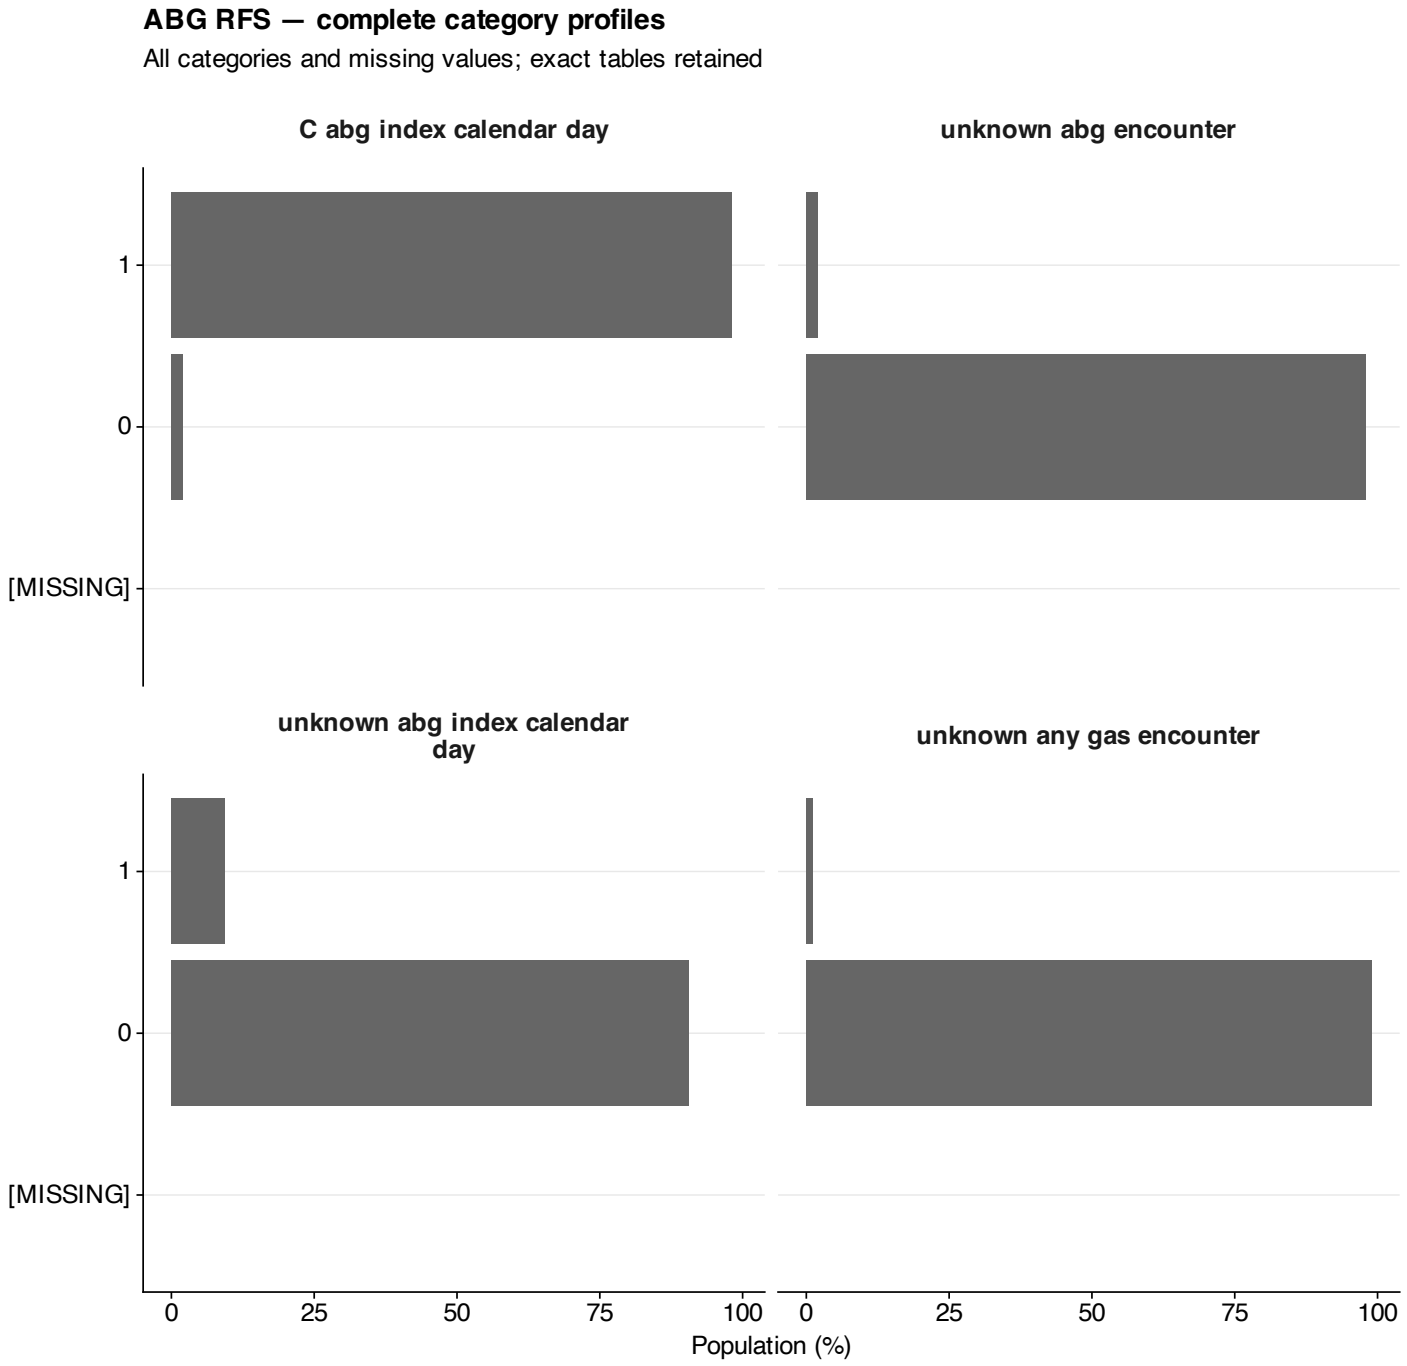

Figure 972: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete ABG_rfs stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

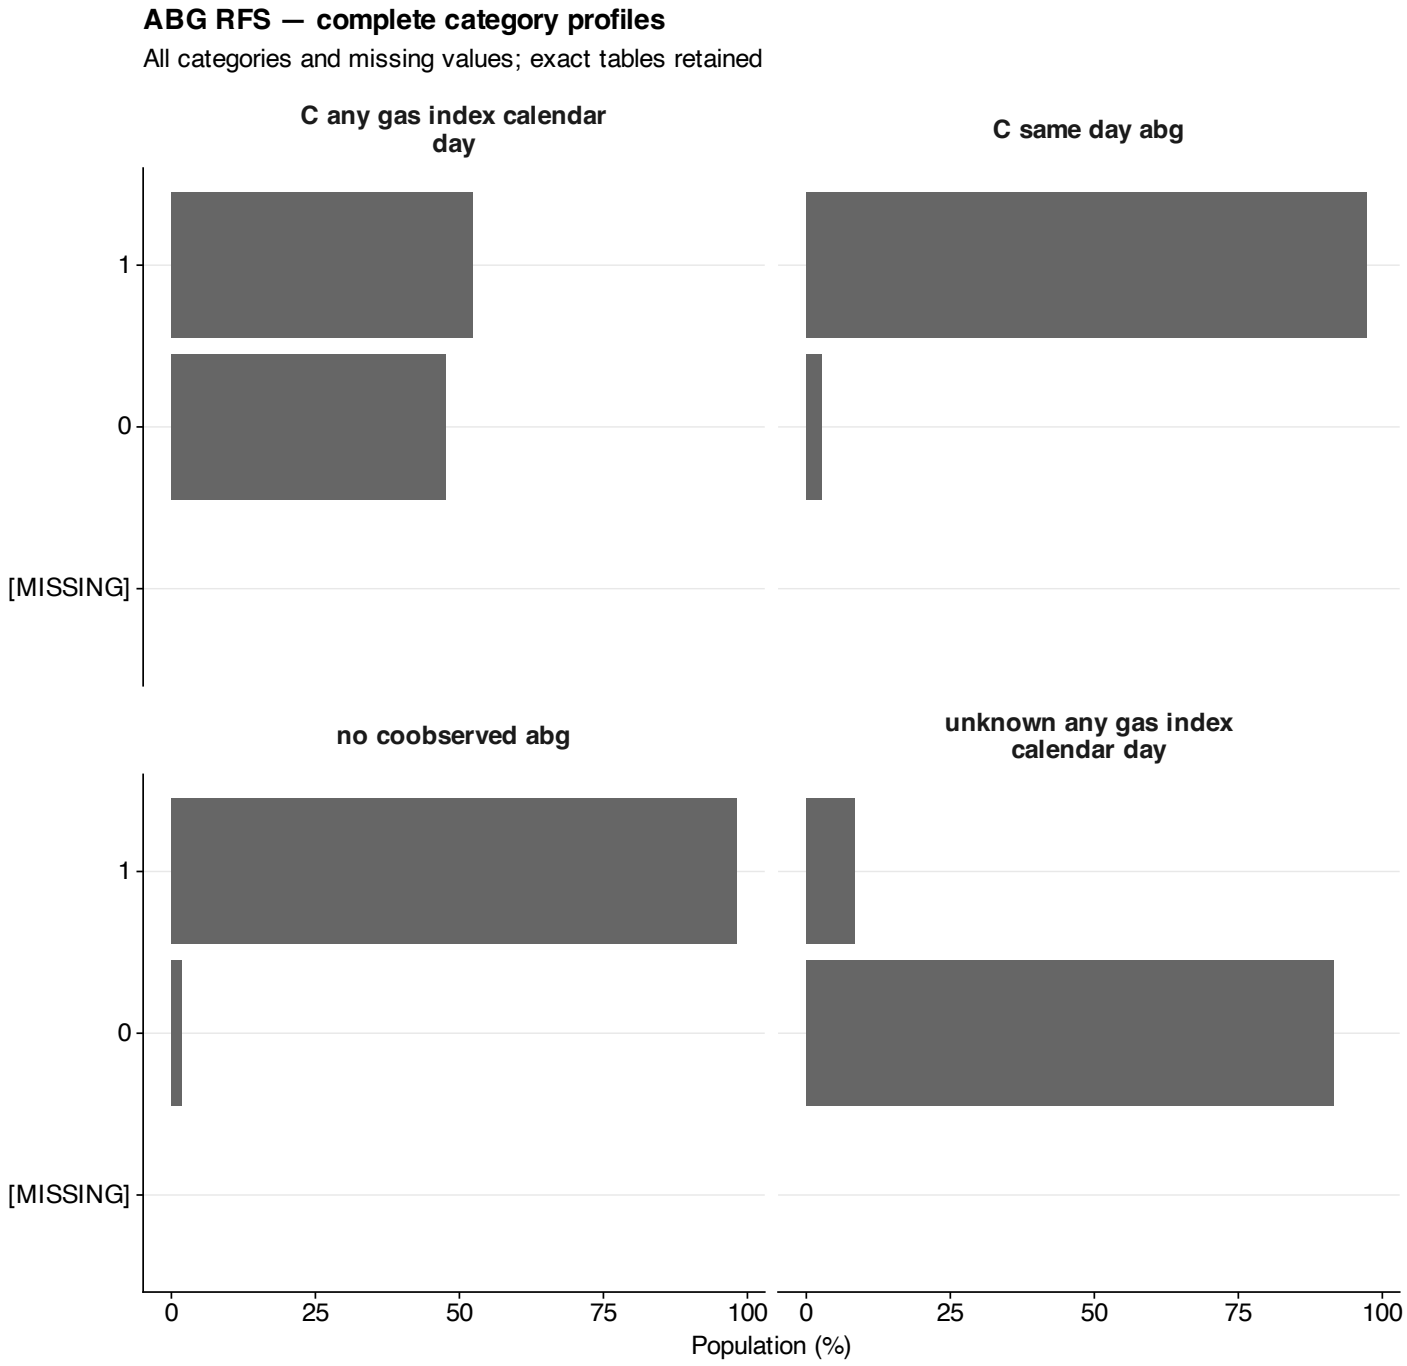

Figure 973: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete ABG_rfs stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

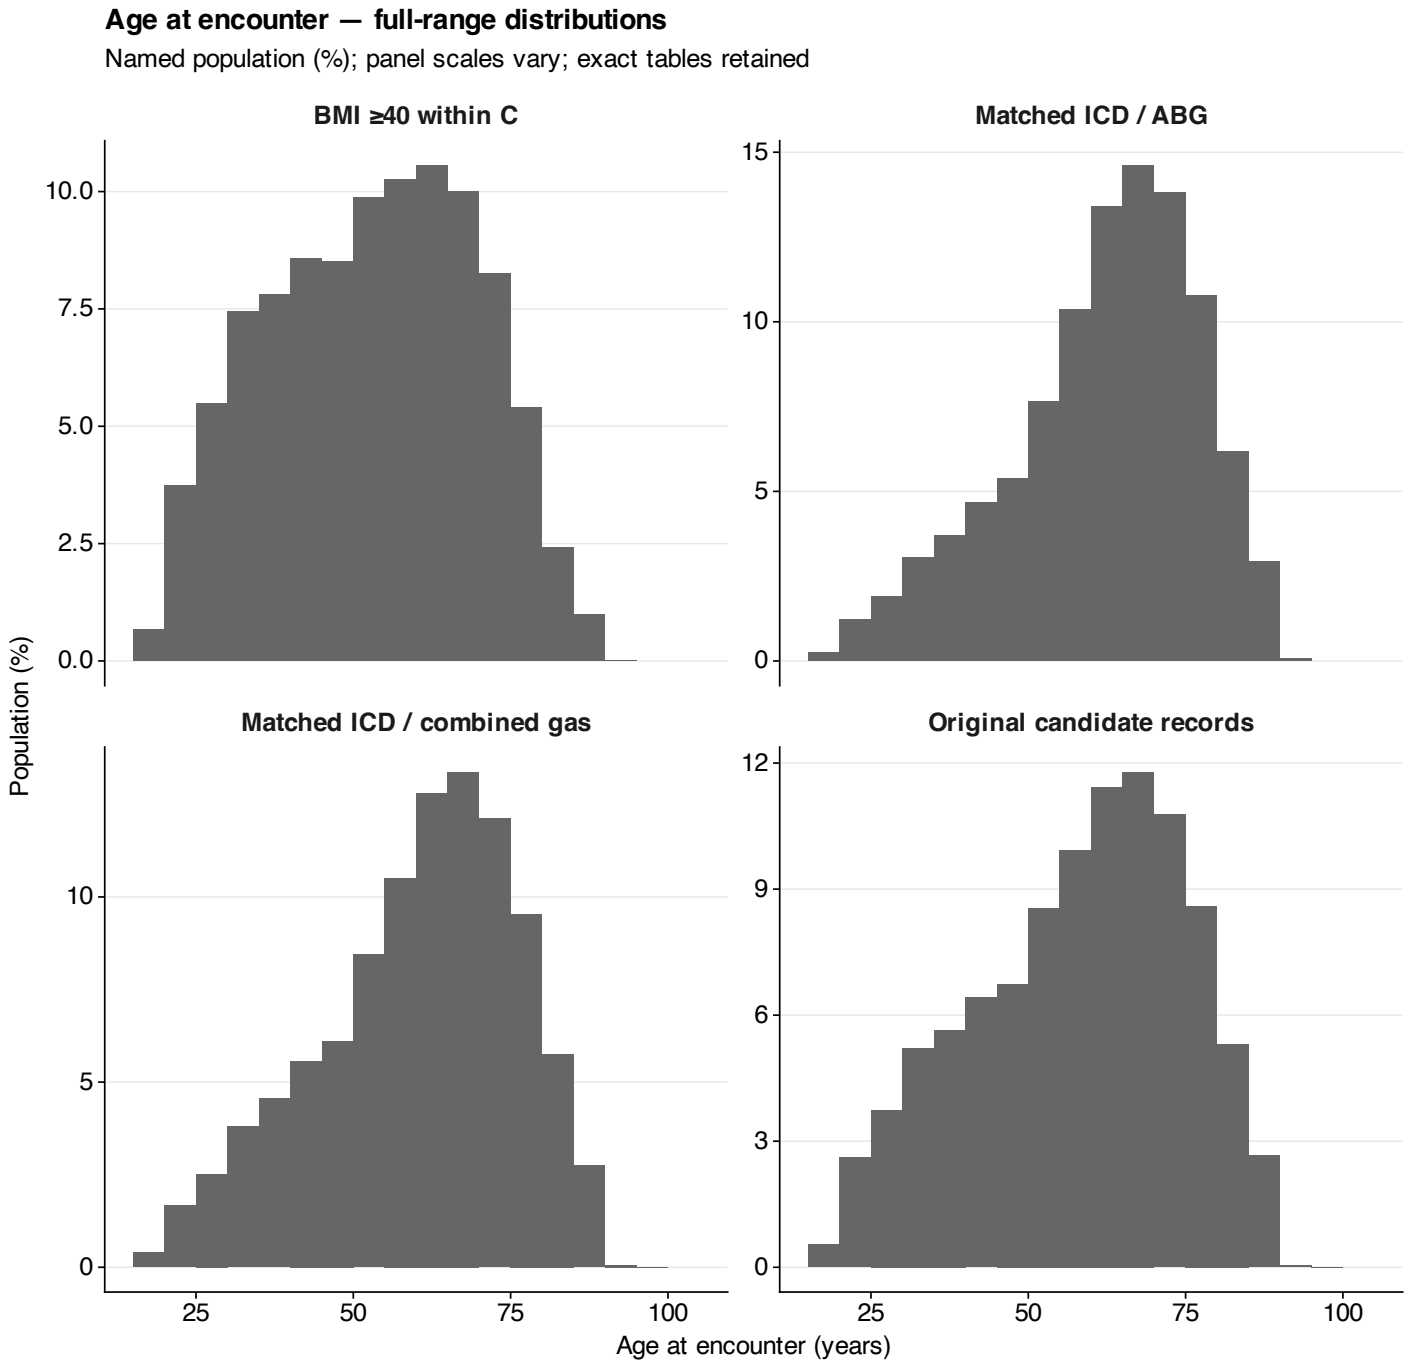

Figure 974: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete age_at_encounter stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

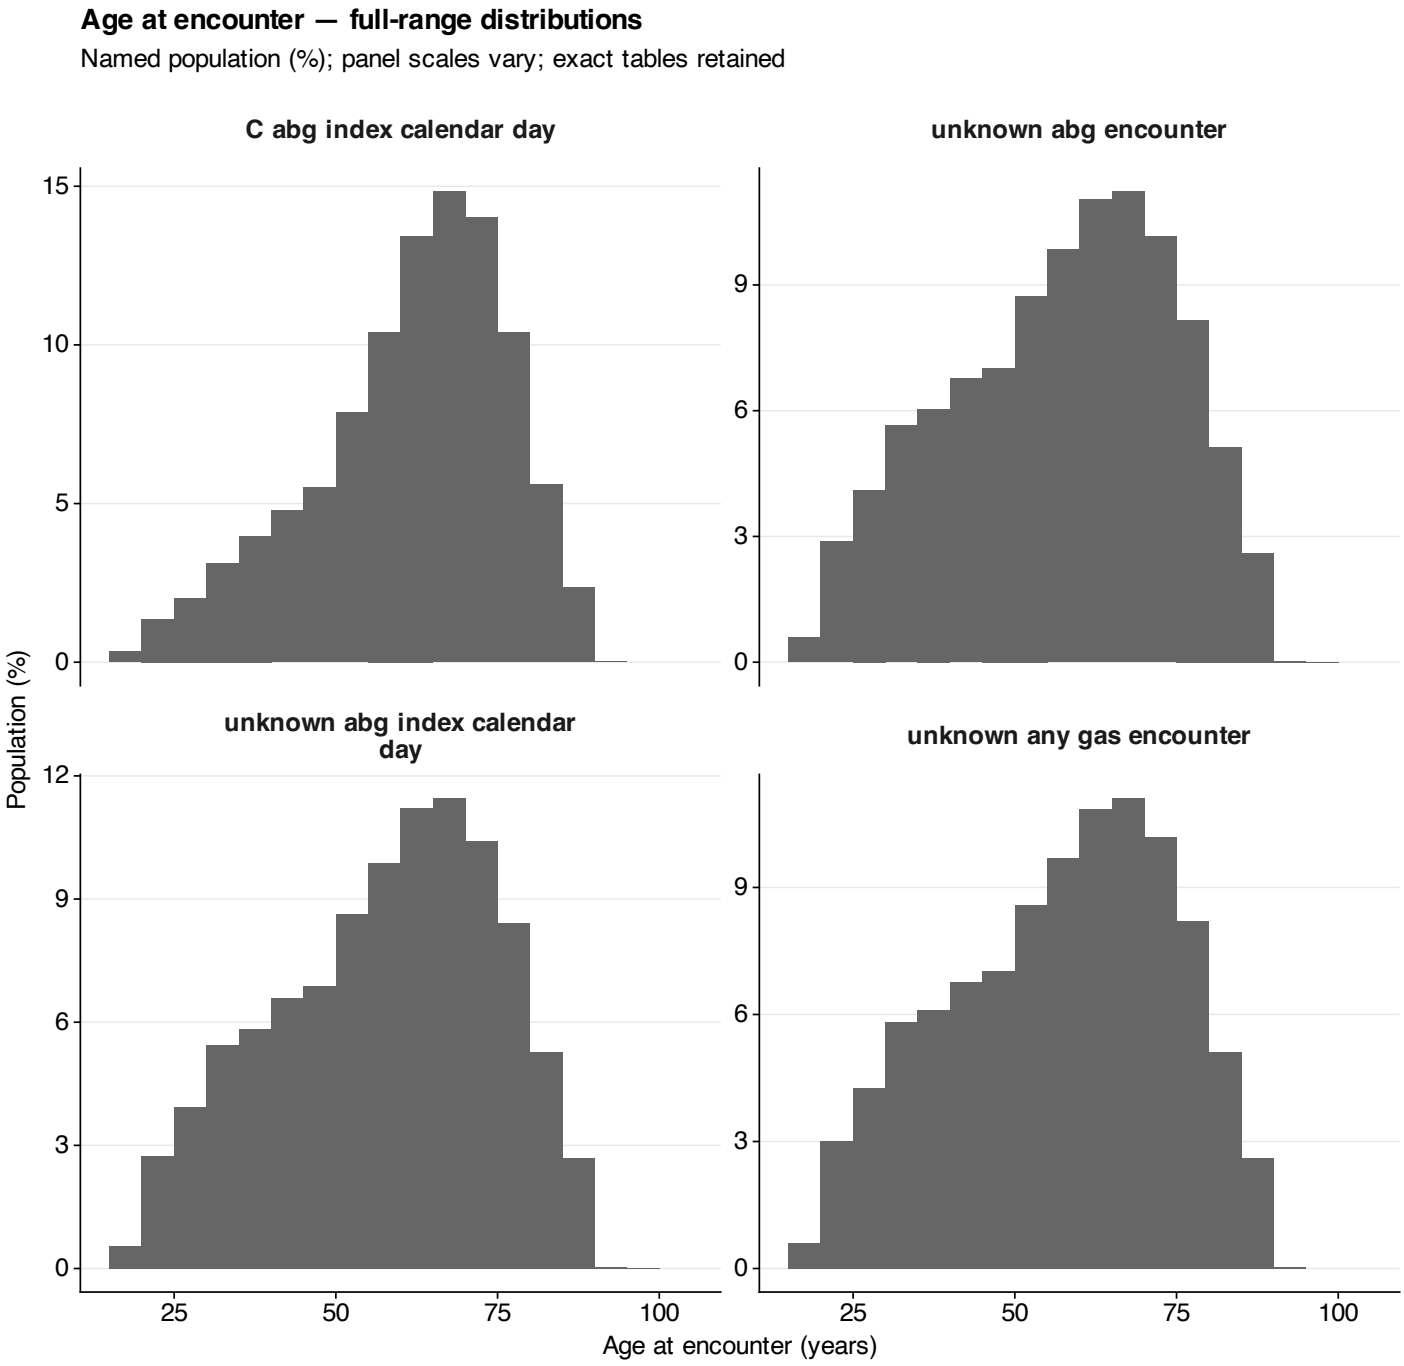

Figure 975: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete age_at_encounter stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

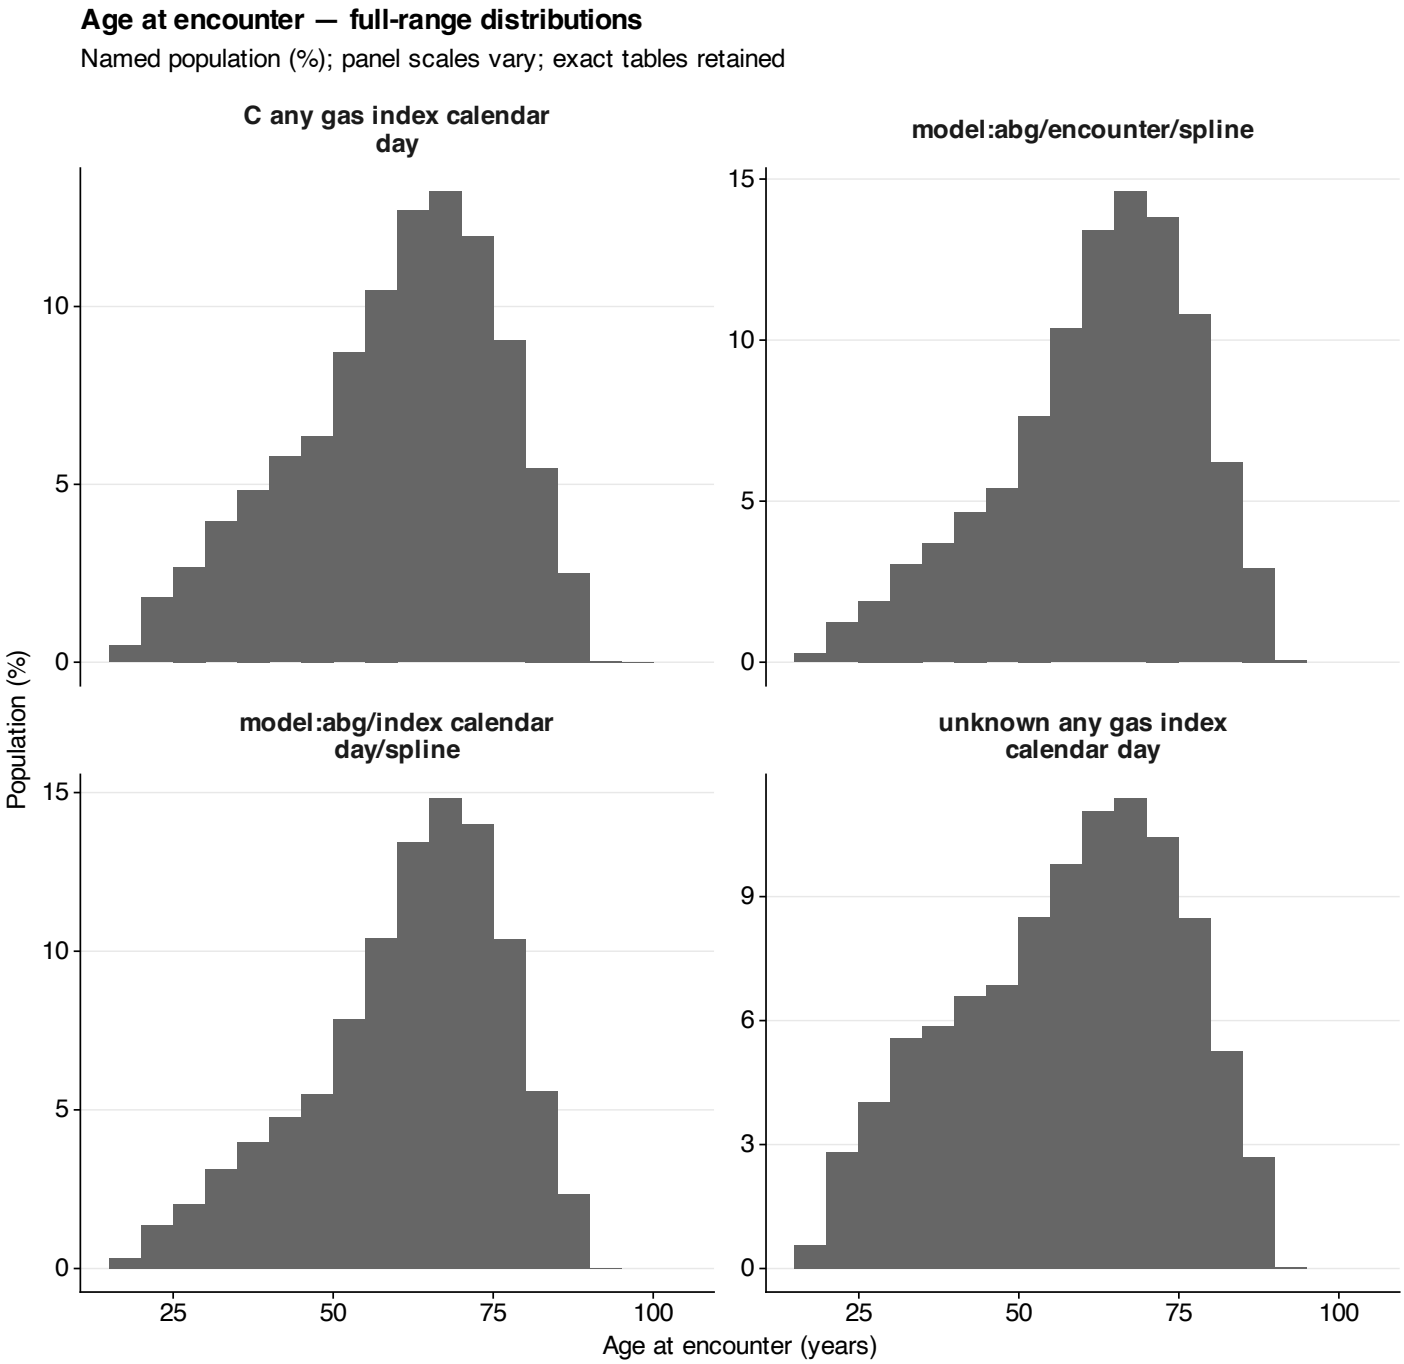

Figure 976: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Figure 1045: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete current_bmi_verified stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

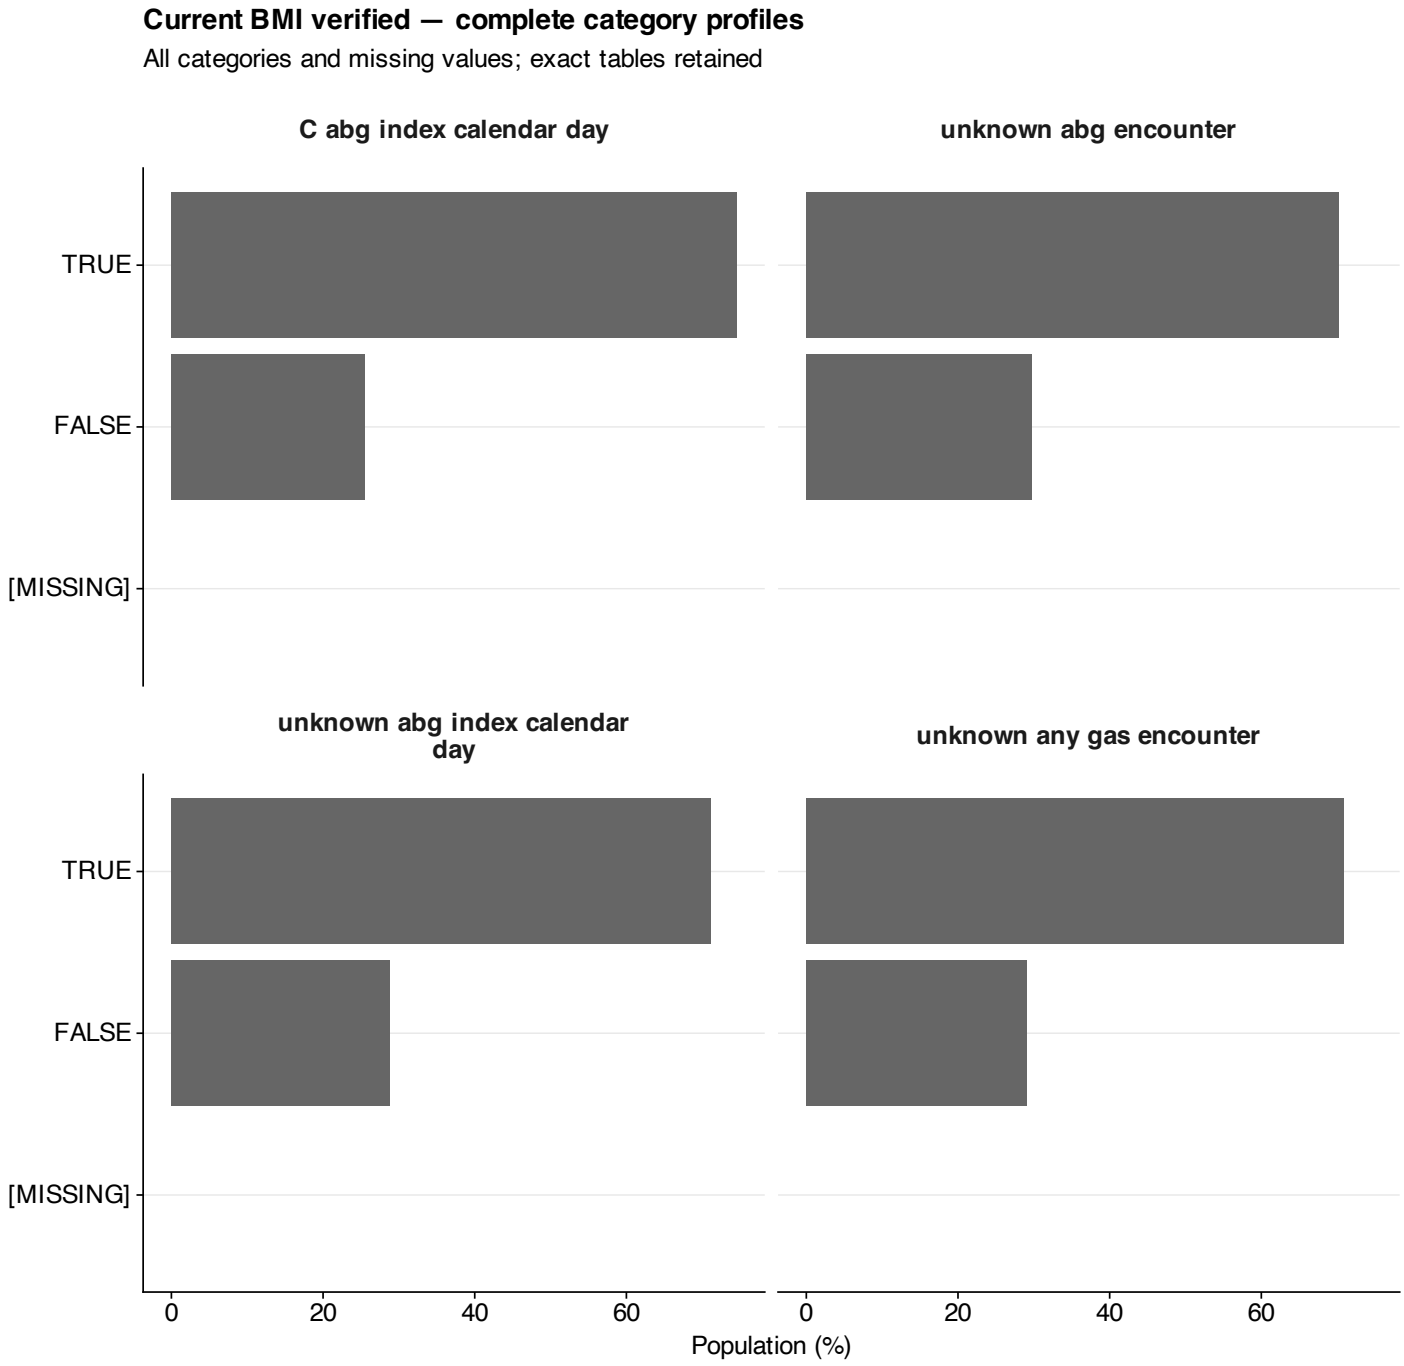

Figure 1046: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete current_bmi_verified stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

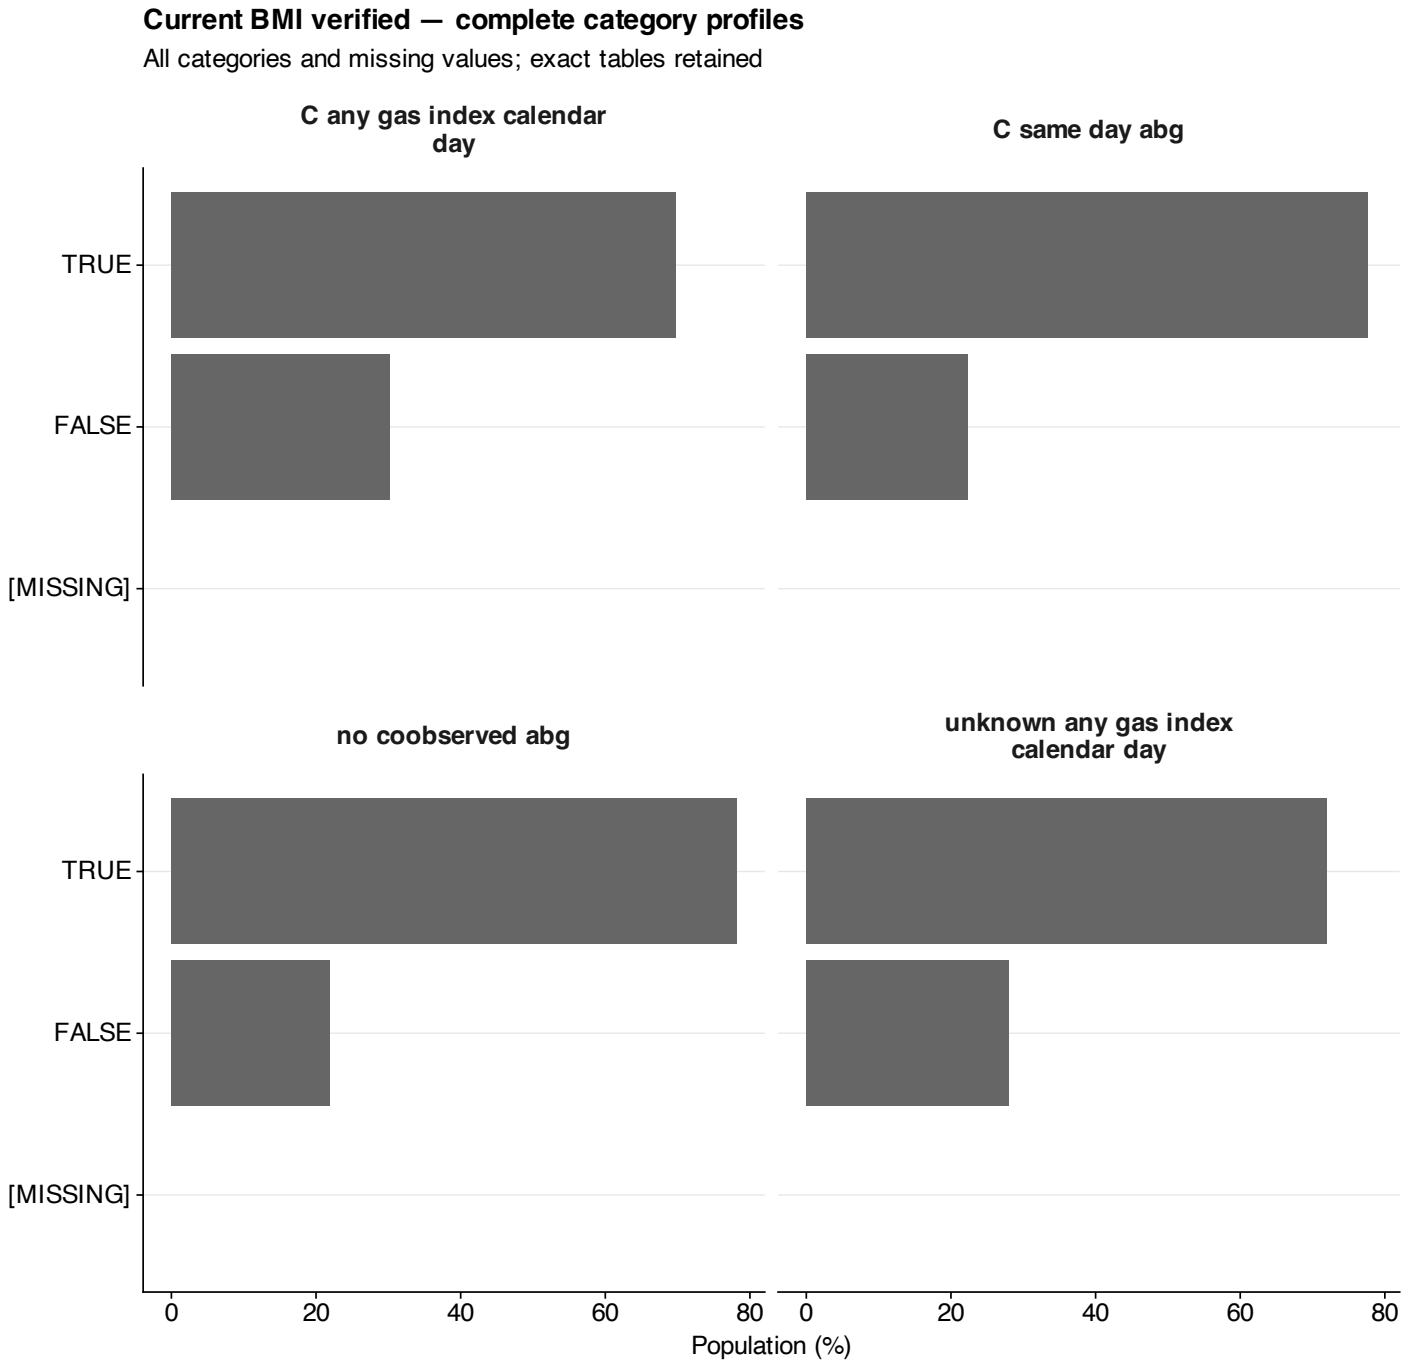

Figure 1047: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete current_bmi_verified stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

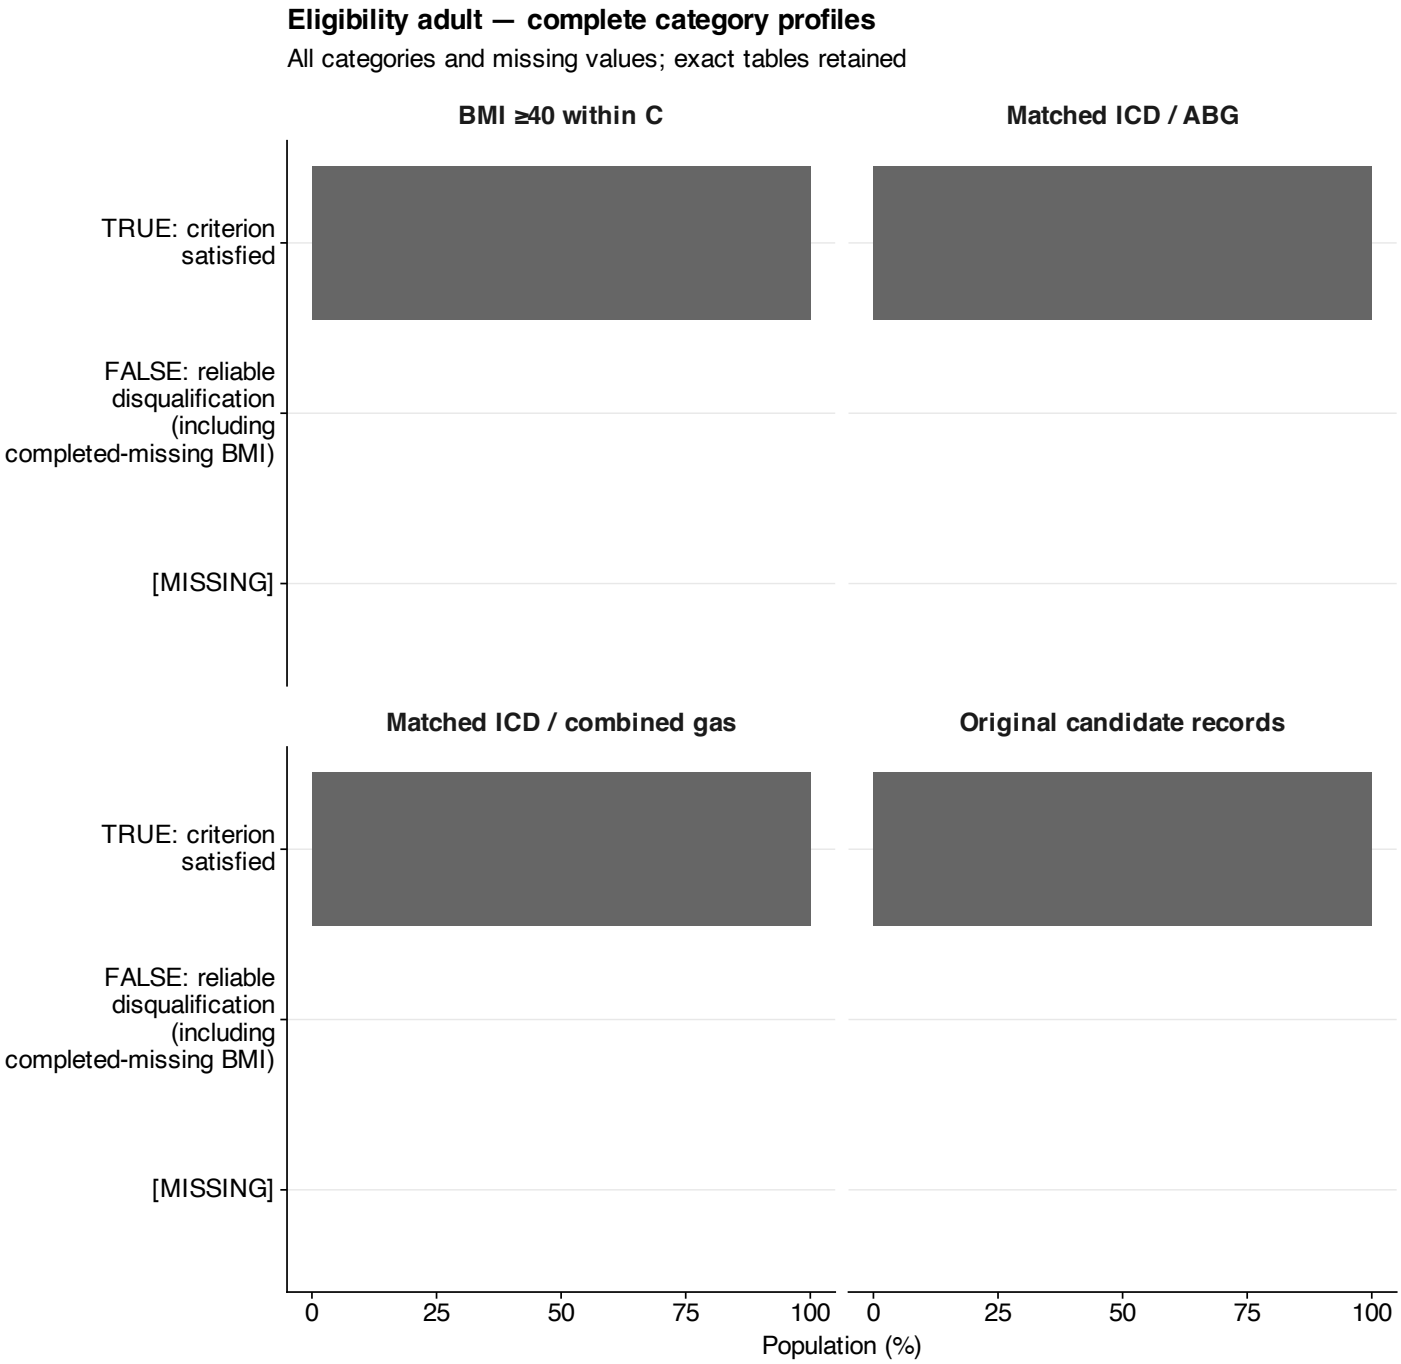

Figure 1048: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete eligibility_adult stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

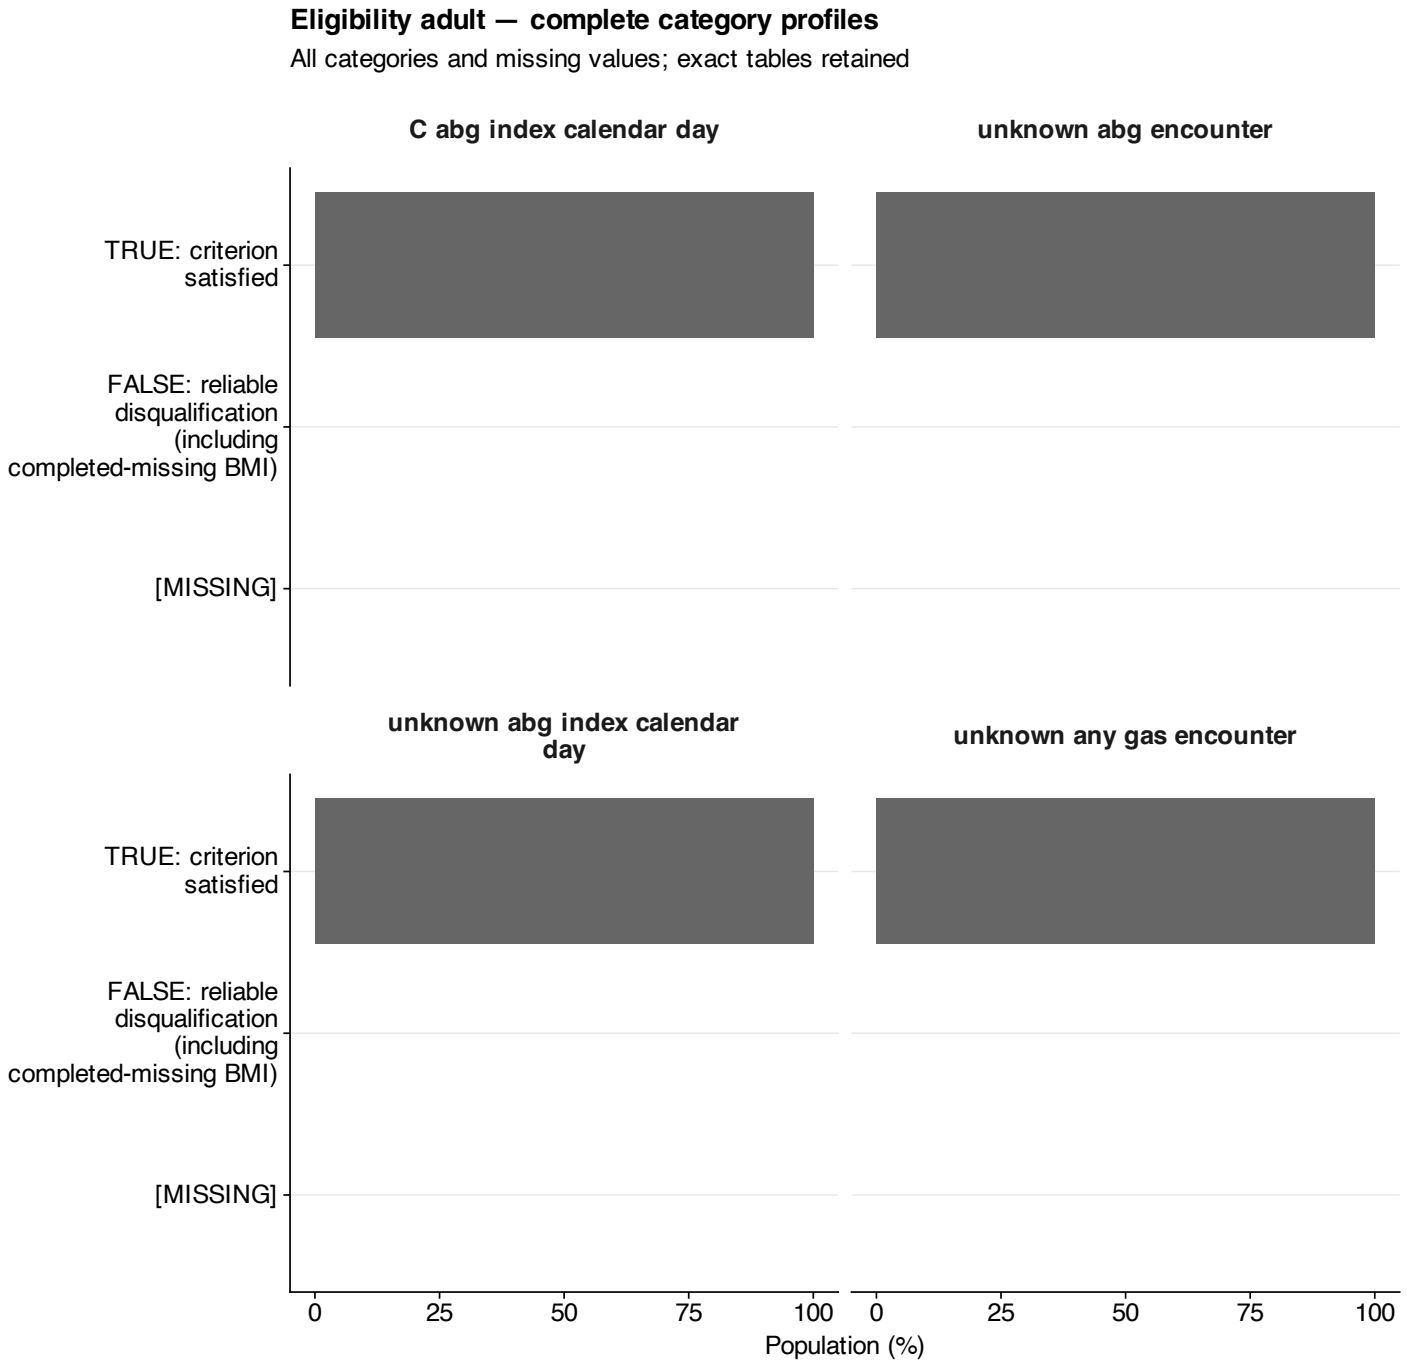

Figure 1049: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete eligibility_adult stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

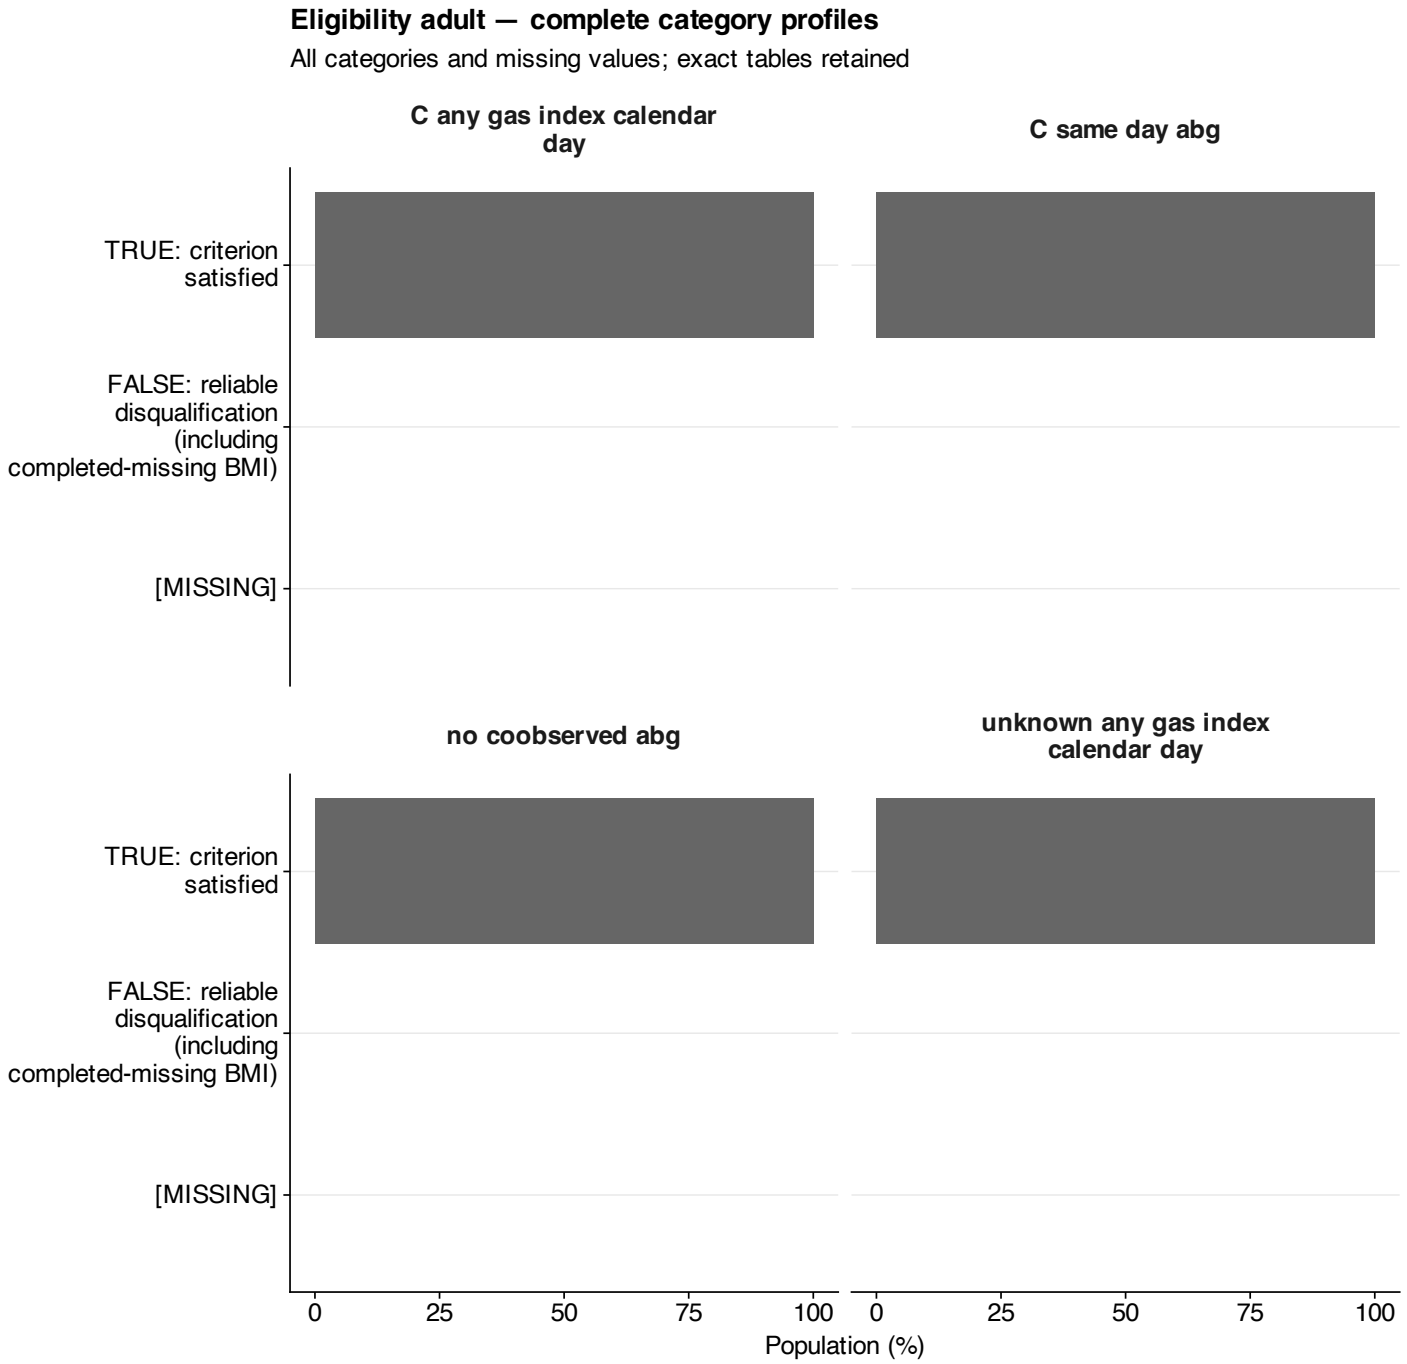

Figure 1050: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete eligibility_adult stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

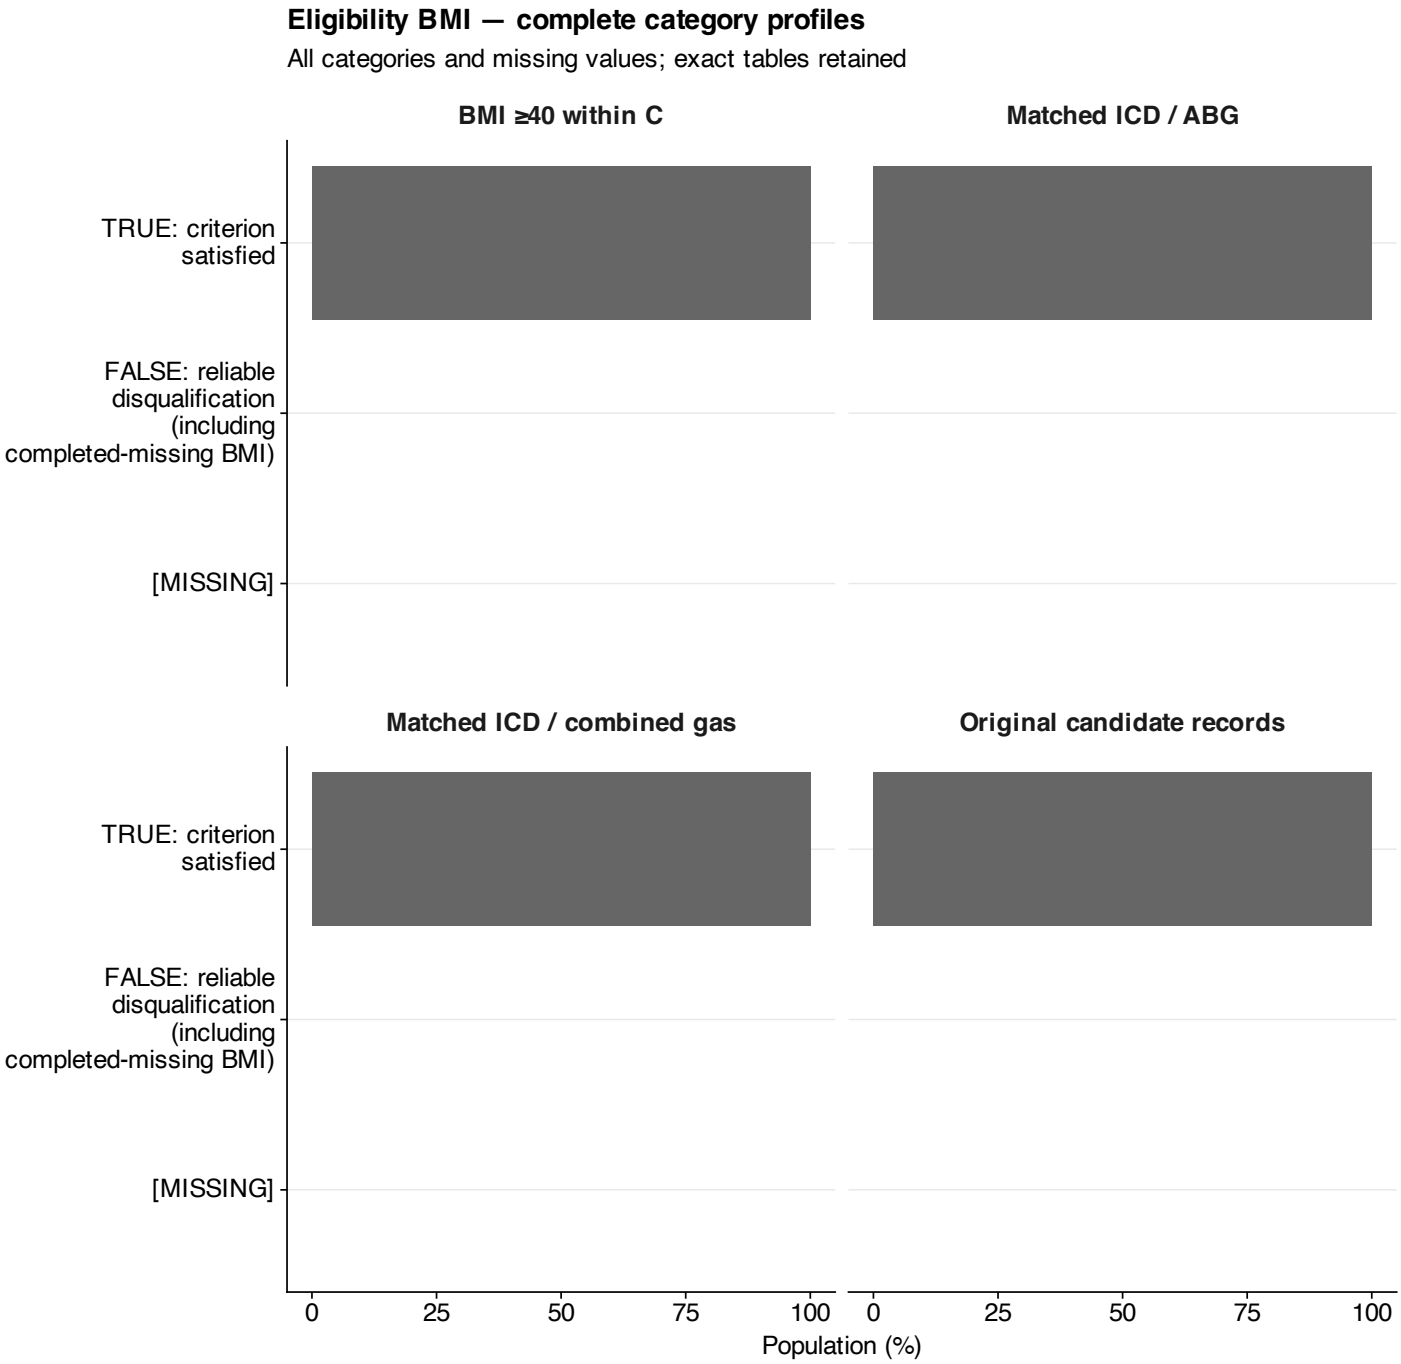

Figure 1051: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete eligibility_bmi stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

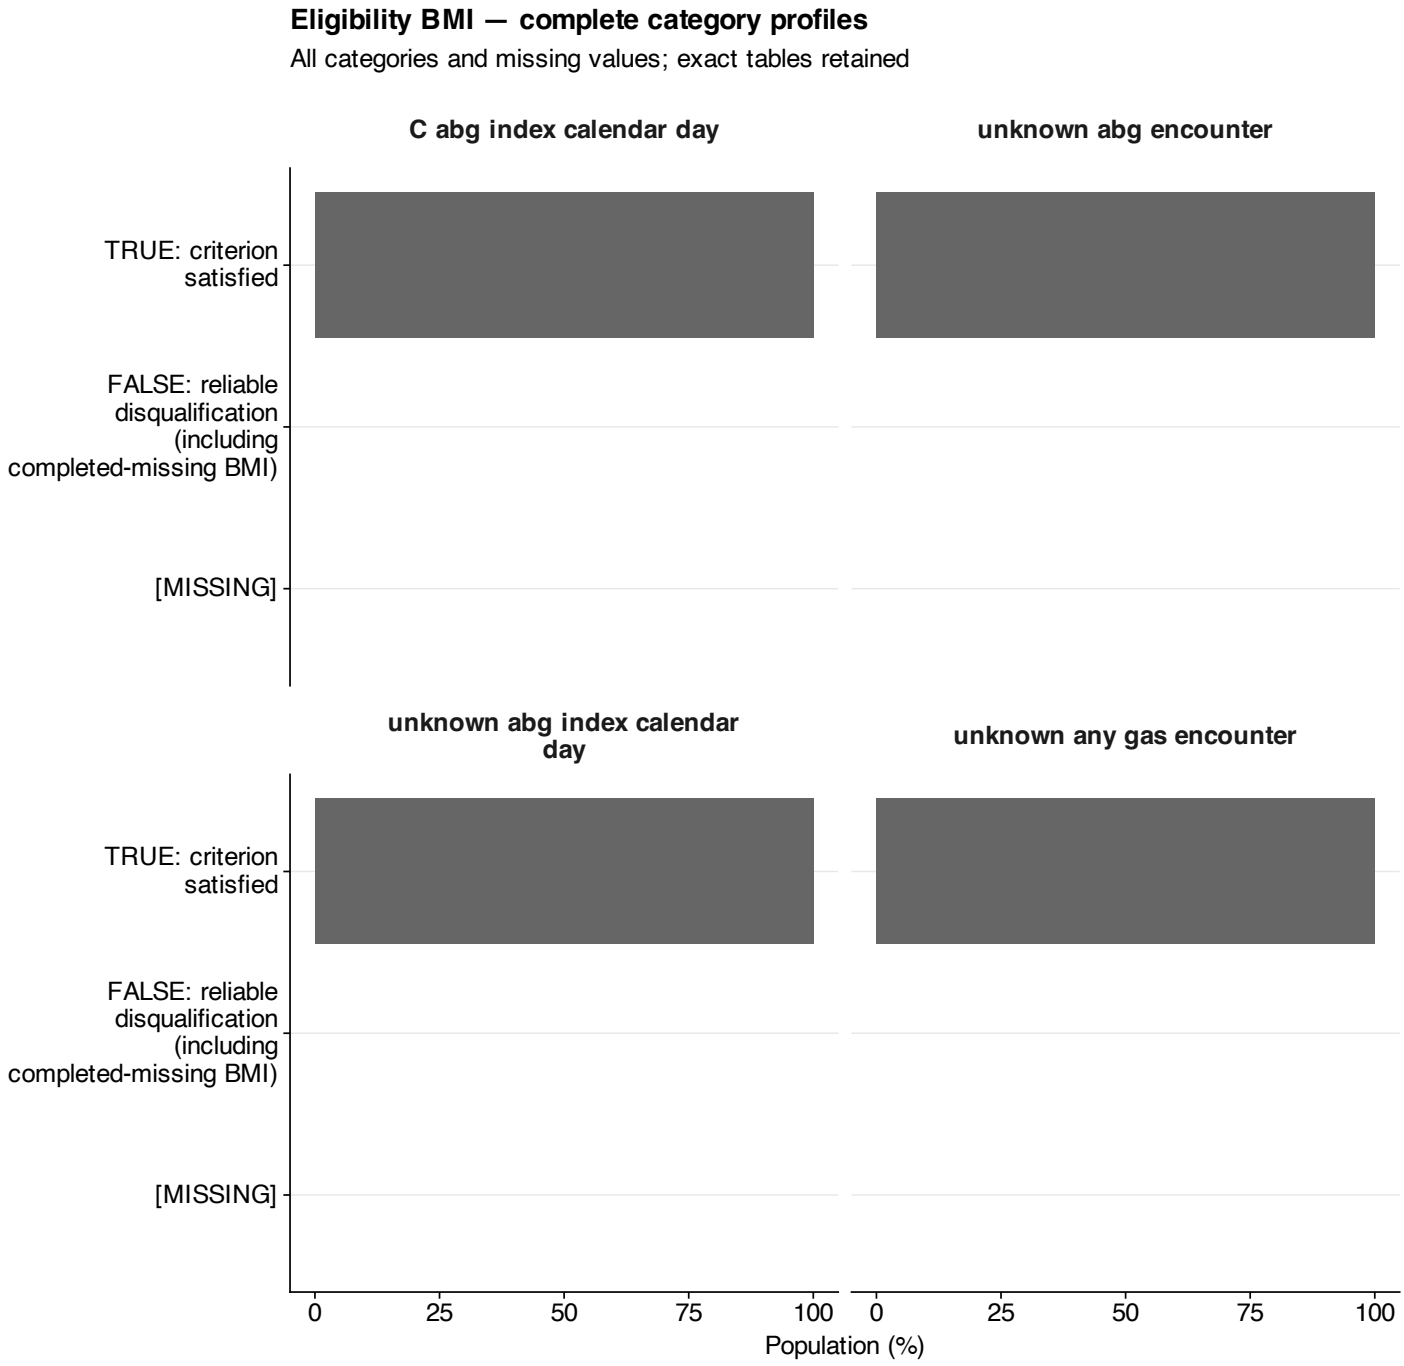

Figure 1052: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete eligibility_bmi stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

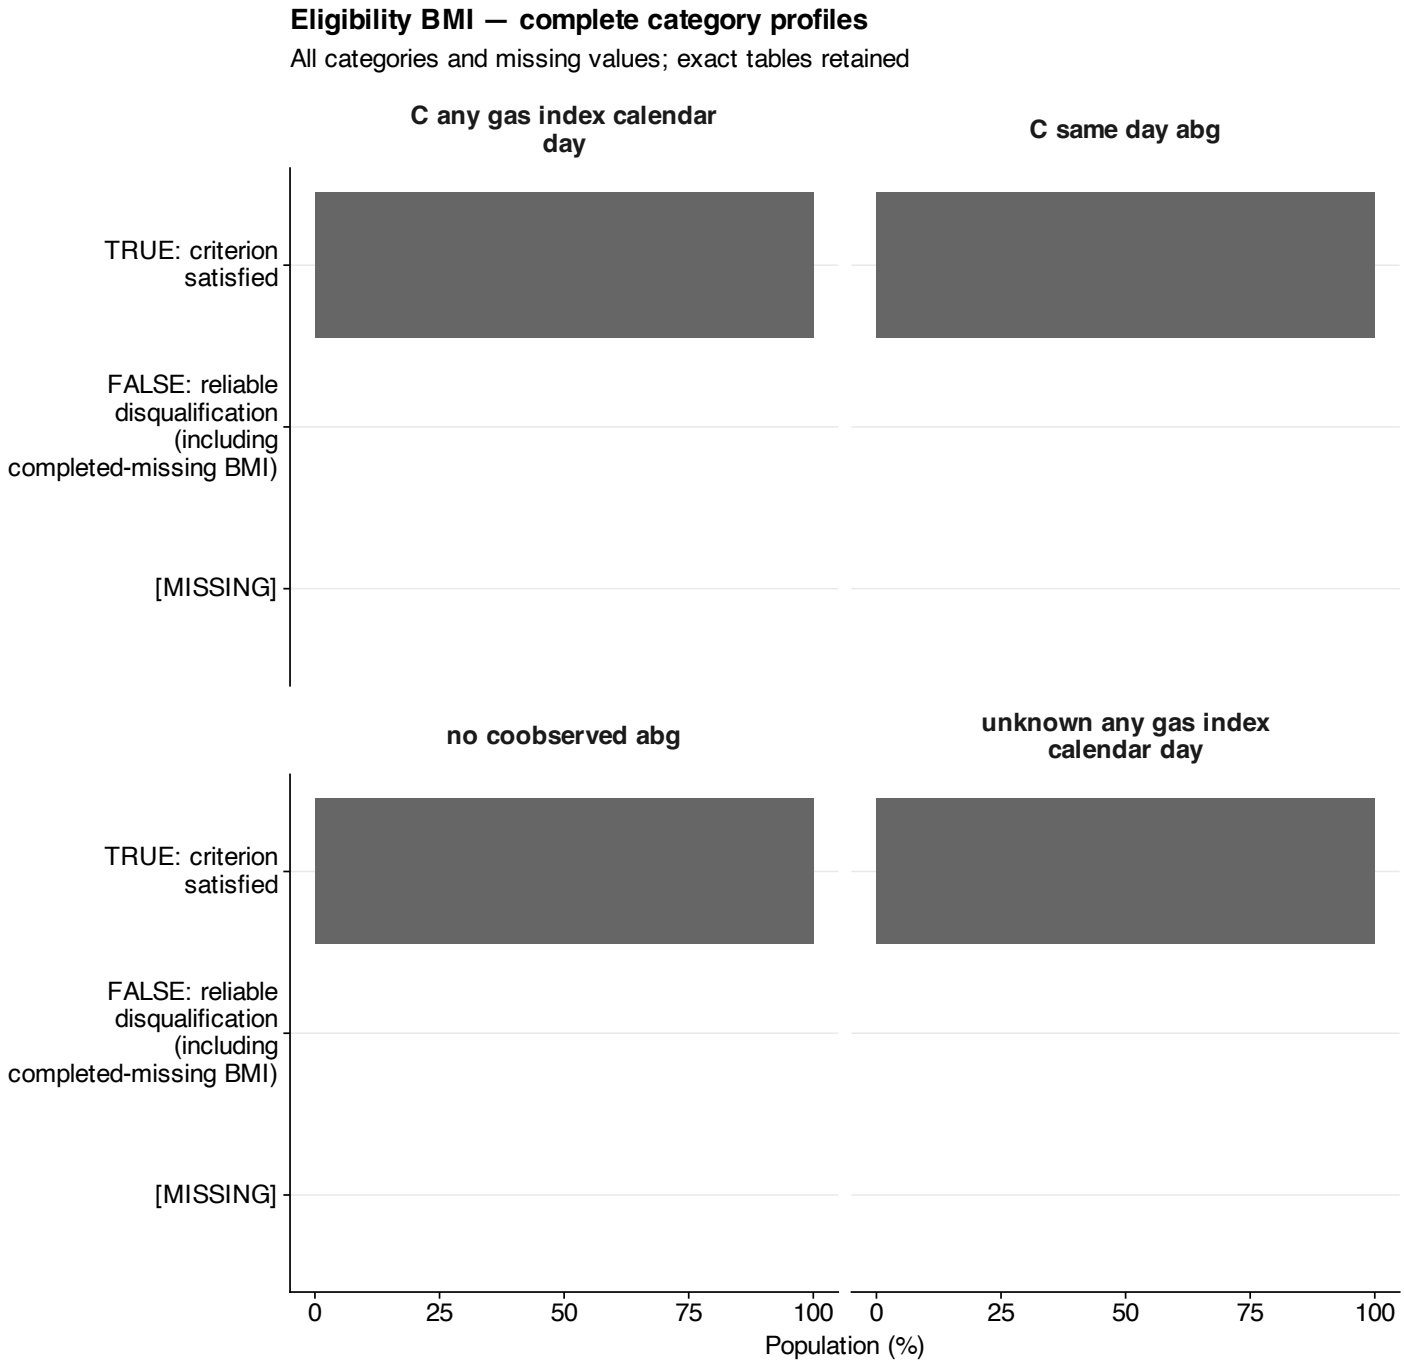

Figure 1053: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete eligibility_bmi stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

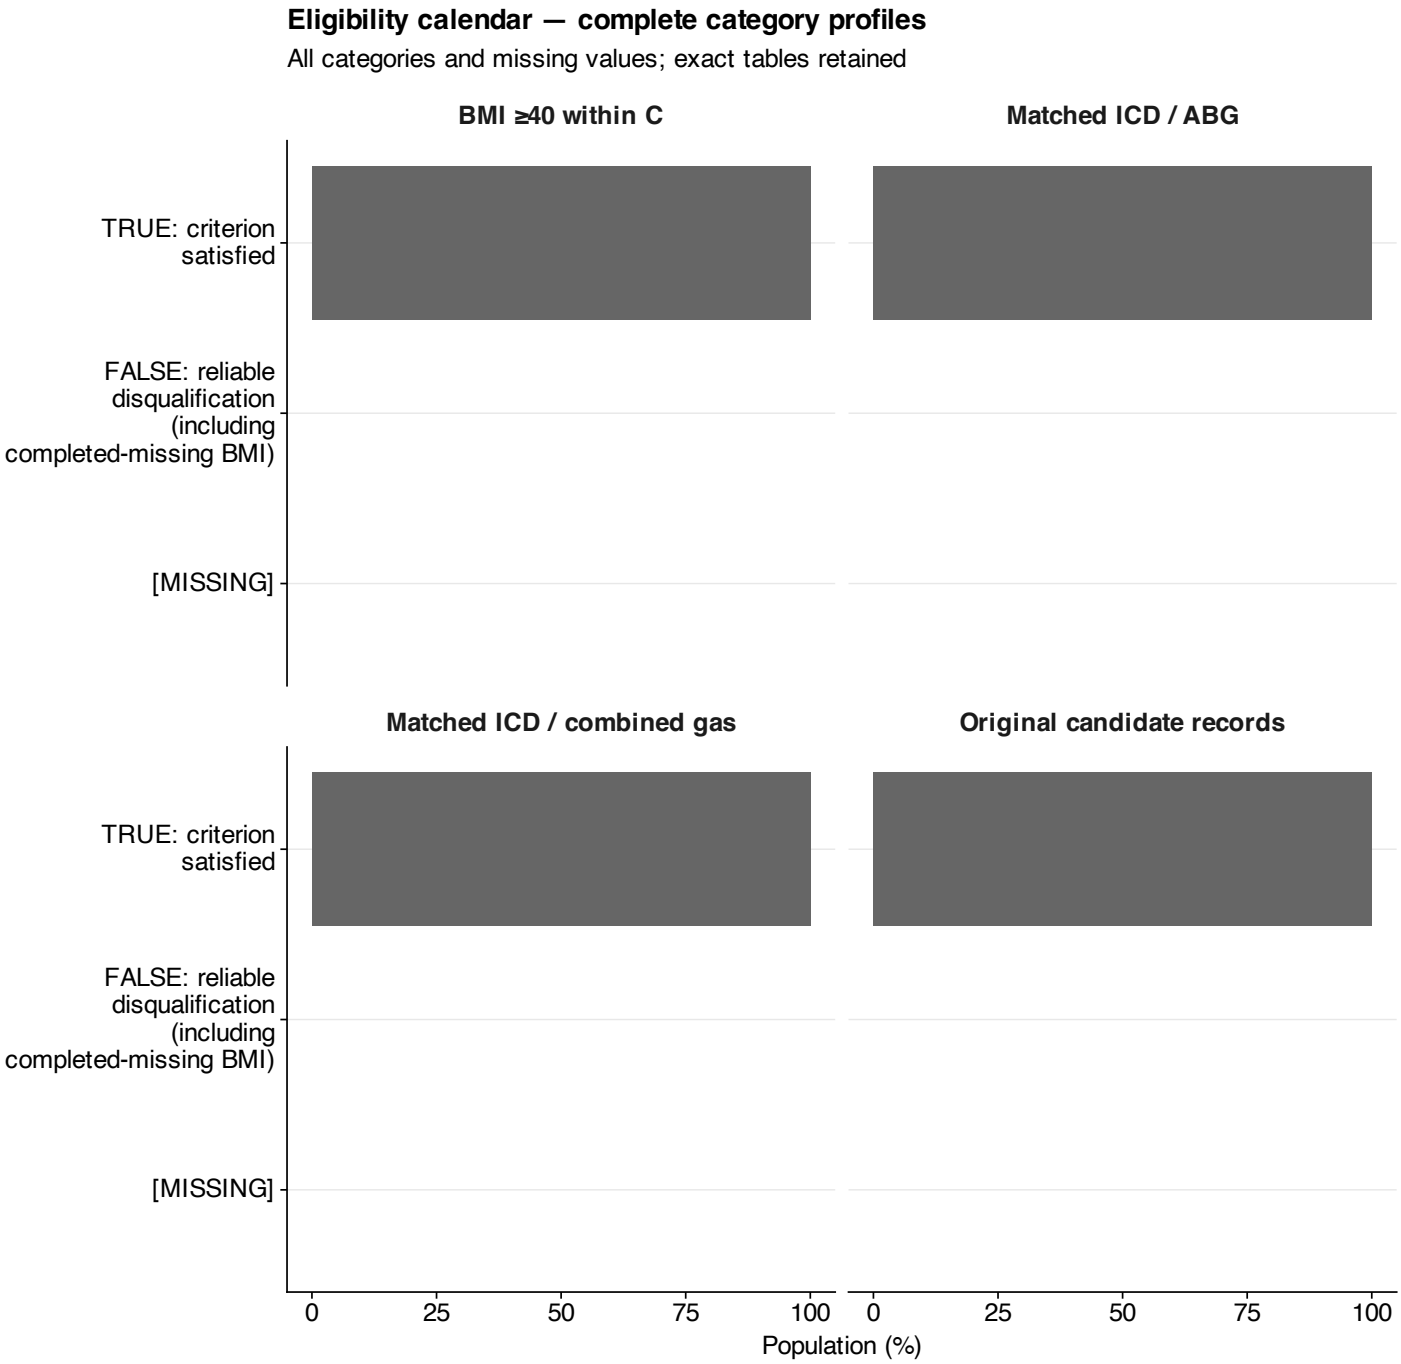

Figure 1054: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete eligibility_calendar stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

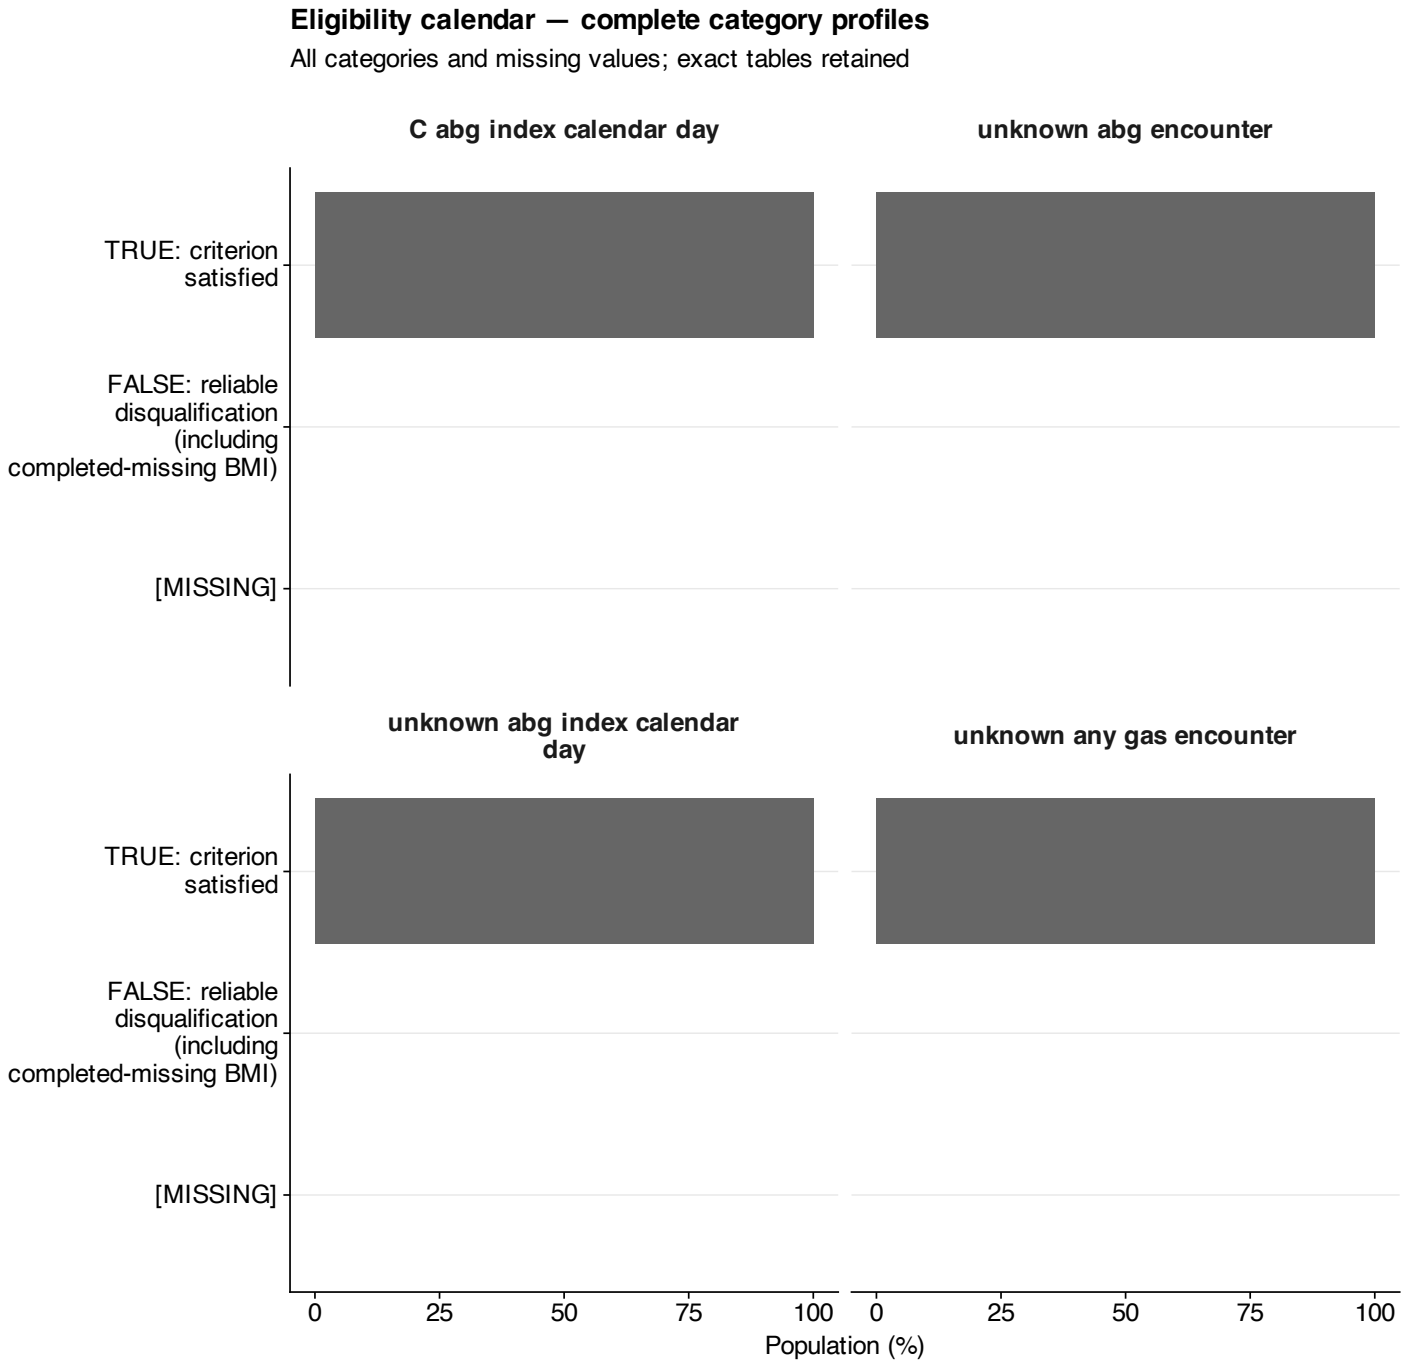

Figure 1055: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete eligibility_calendar stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

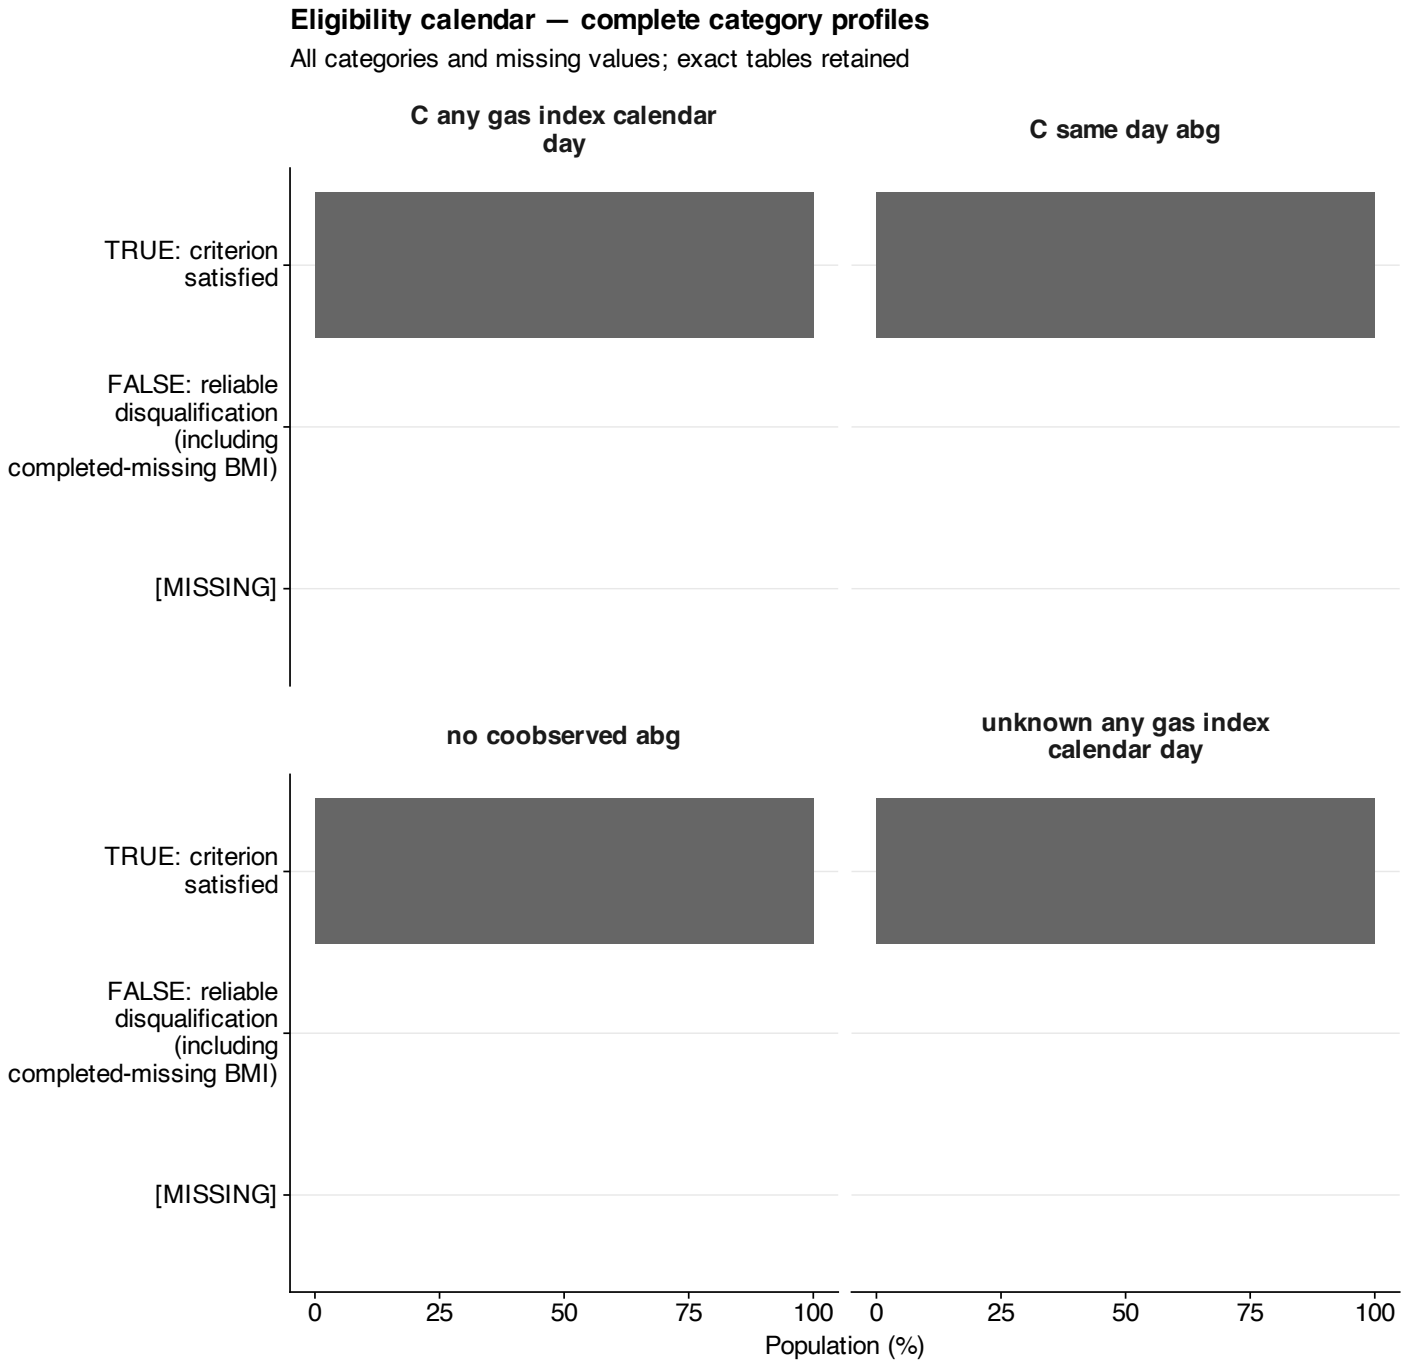

Figure 1056: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete eligibility_calendar stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

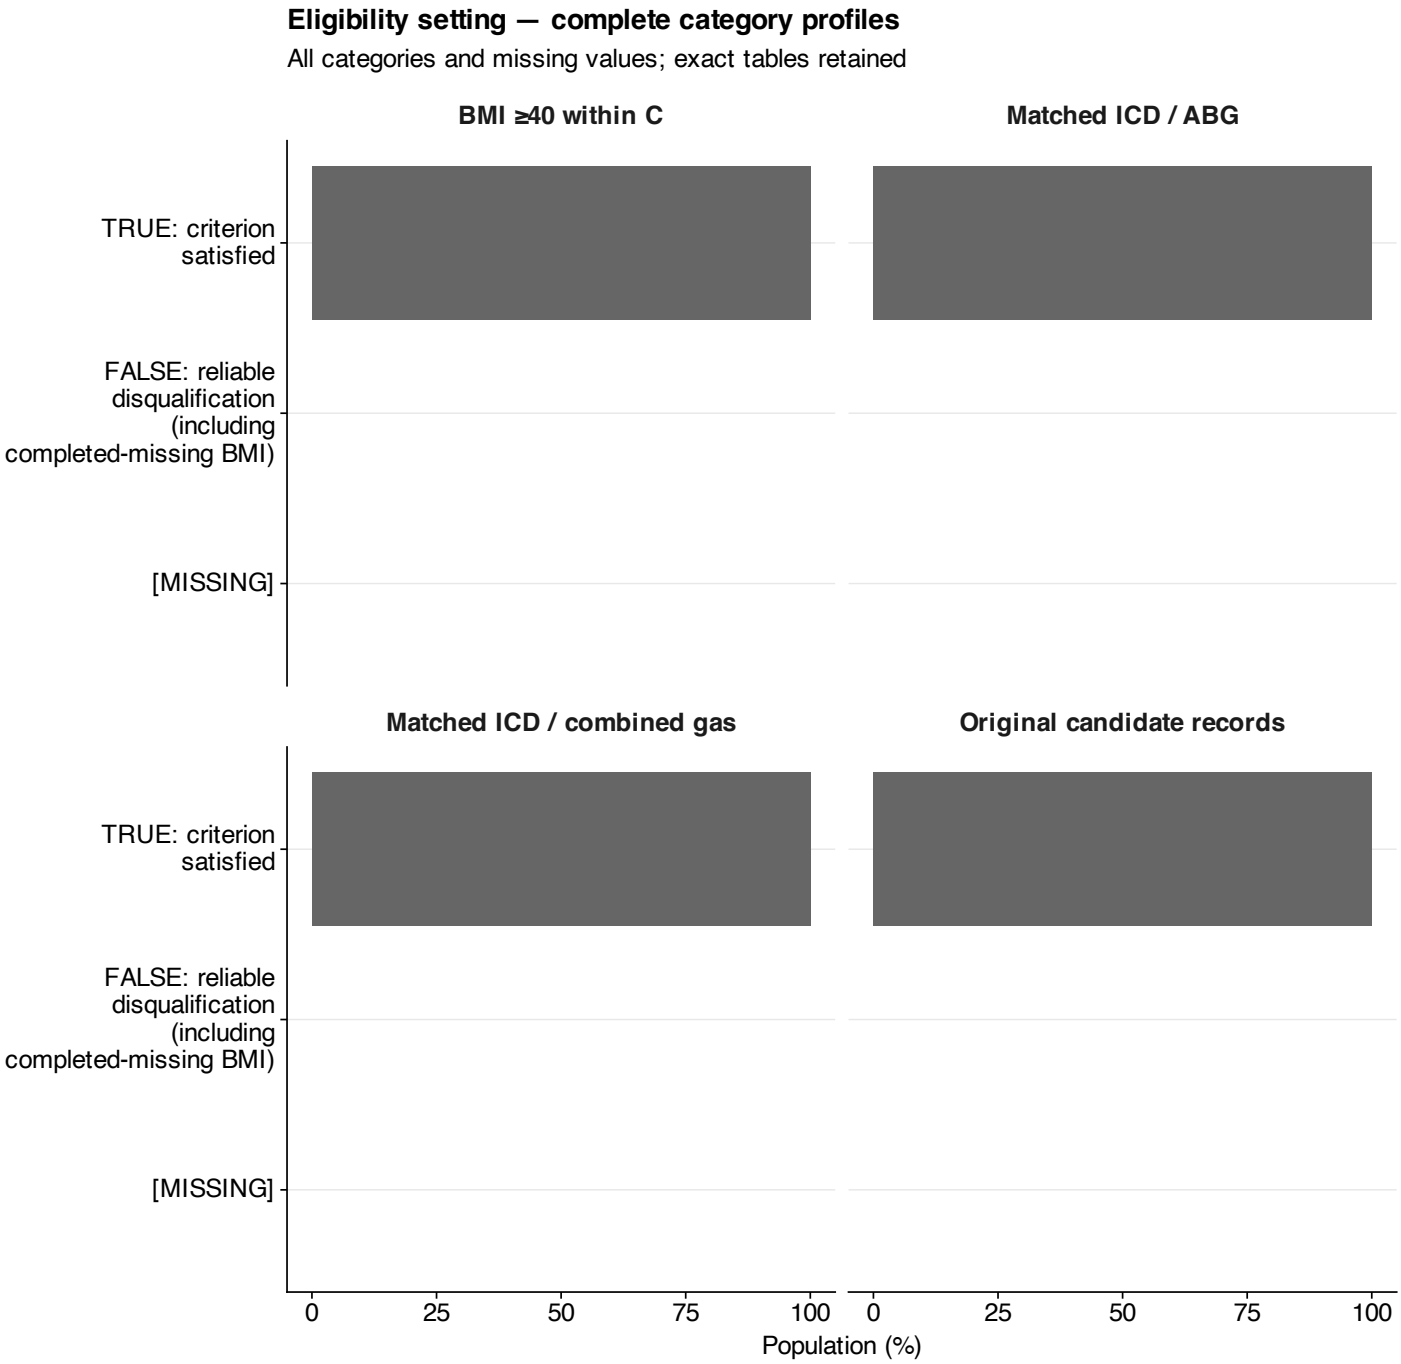

Figure 1057: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete eligibility_setting stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

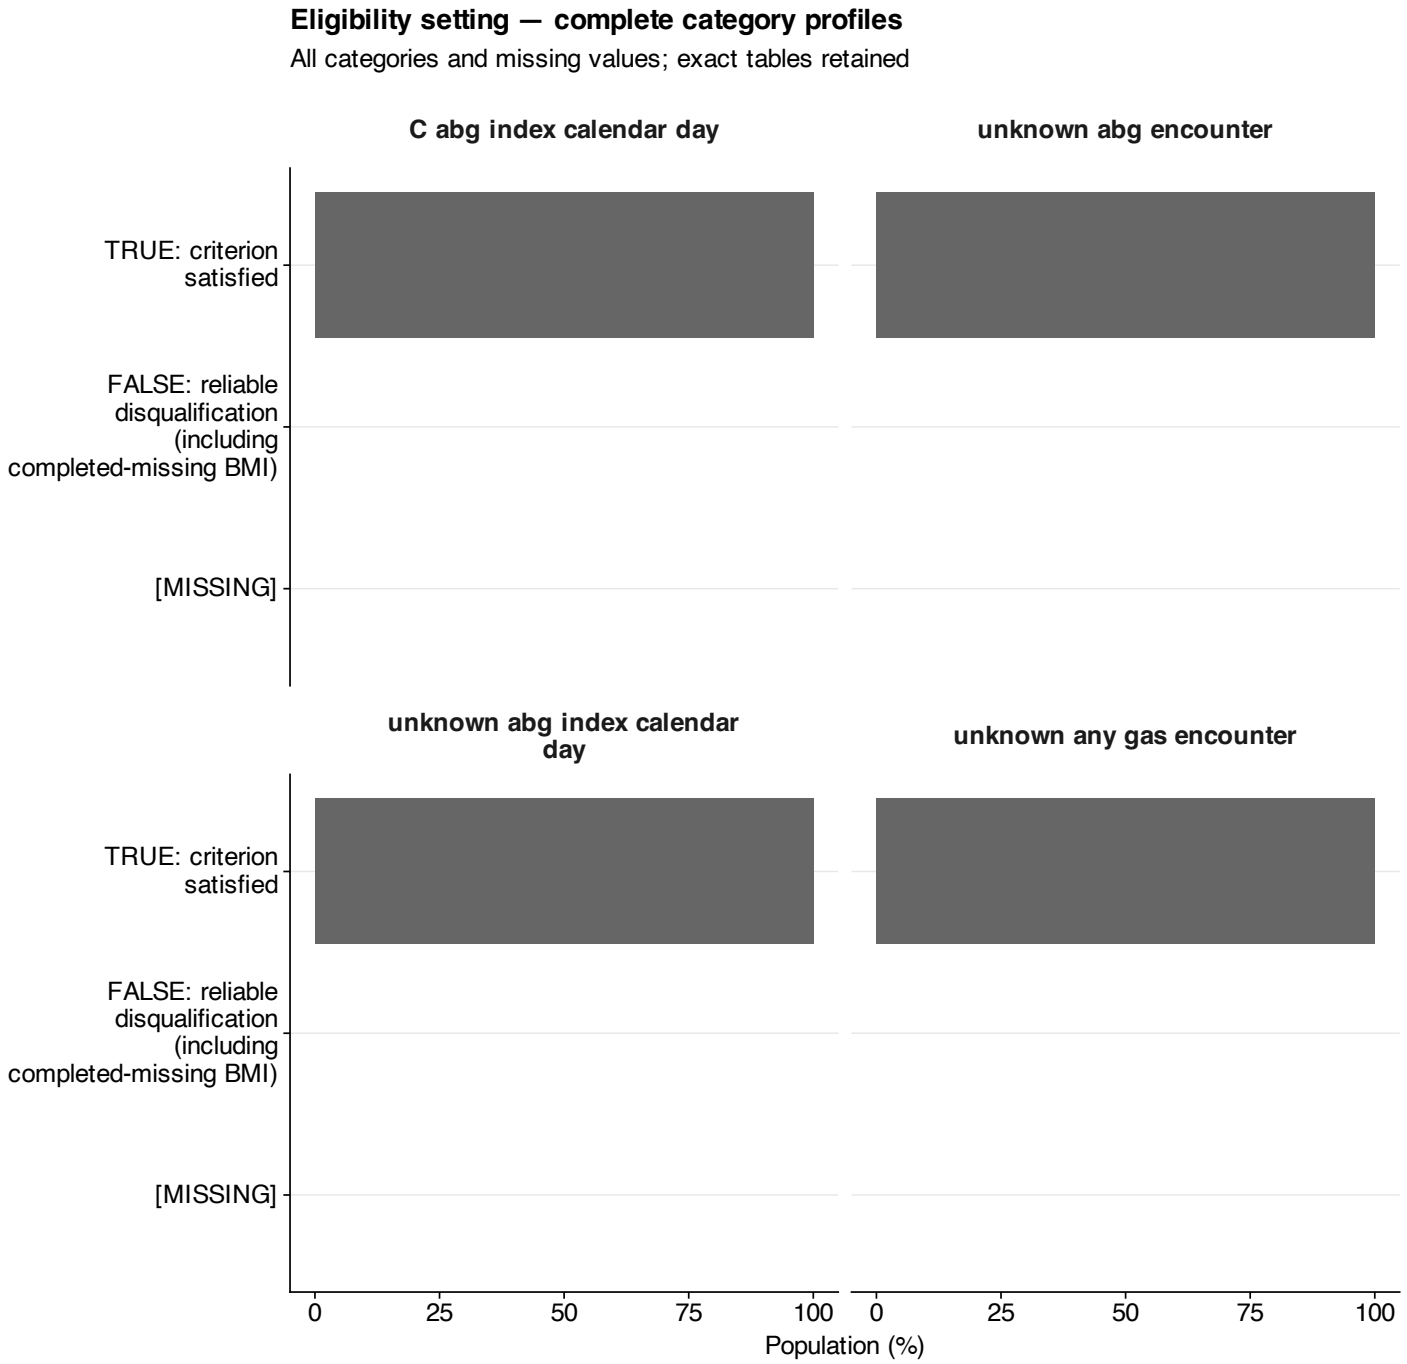

Figure 1058: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete eligibility_setting stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

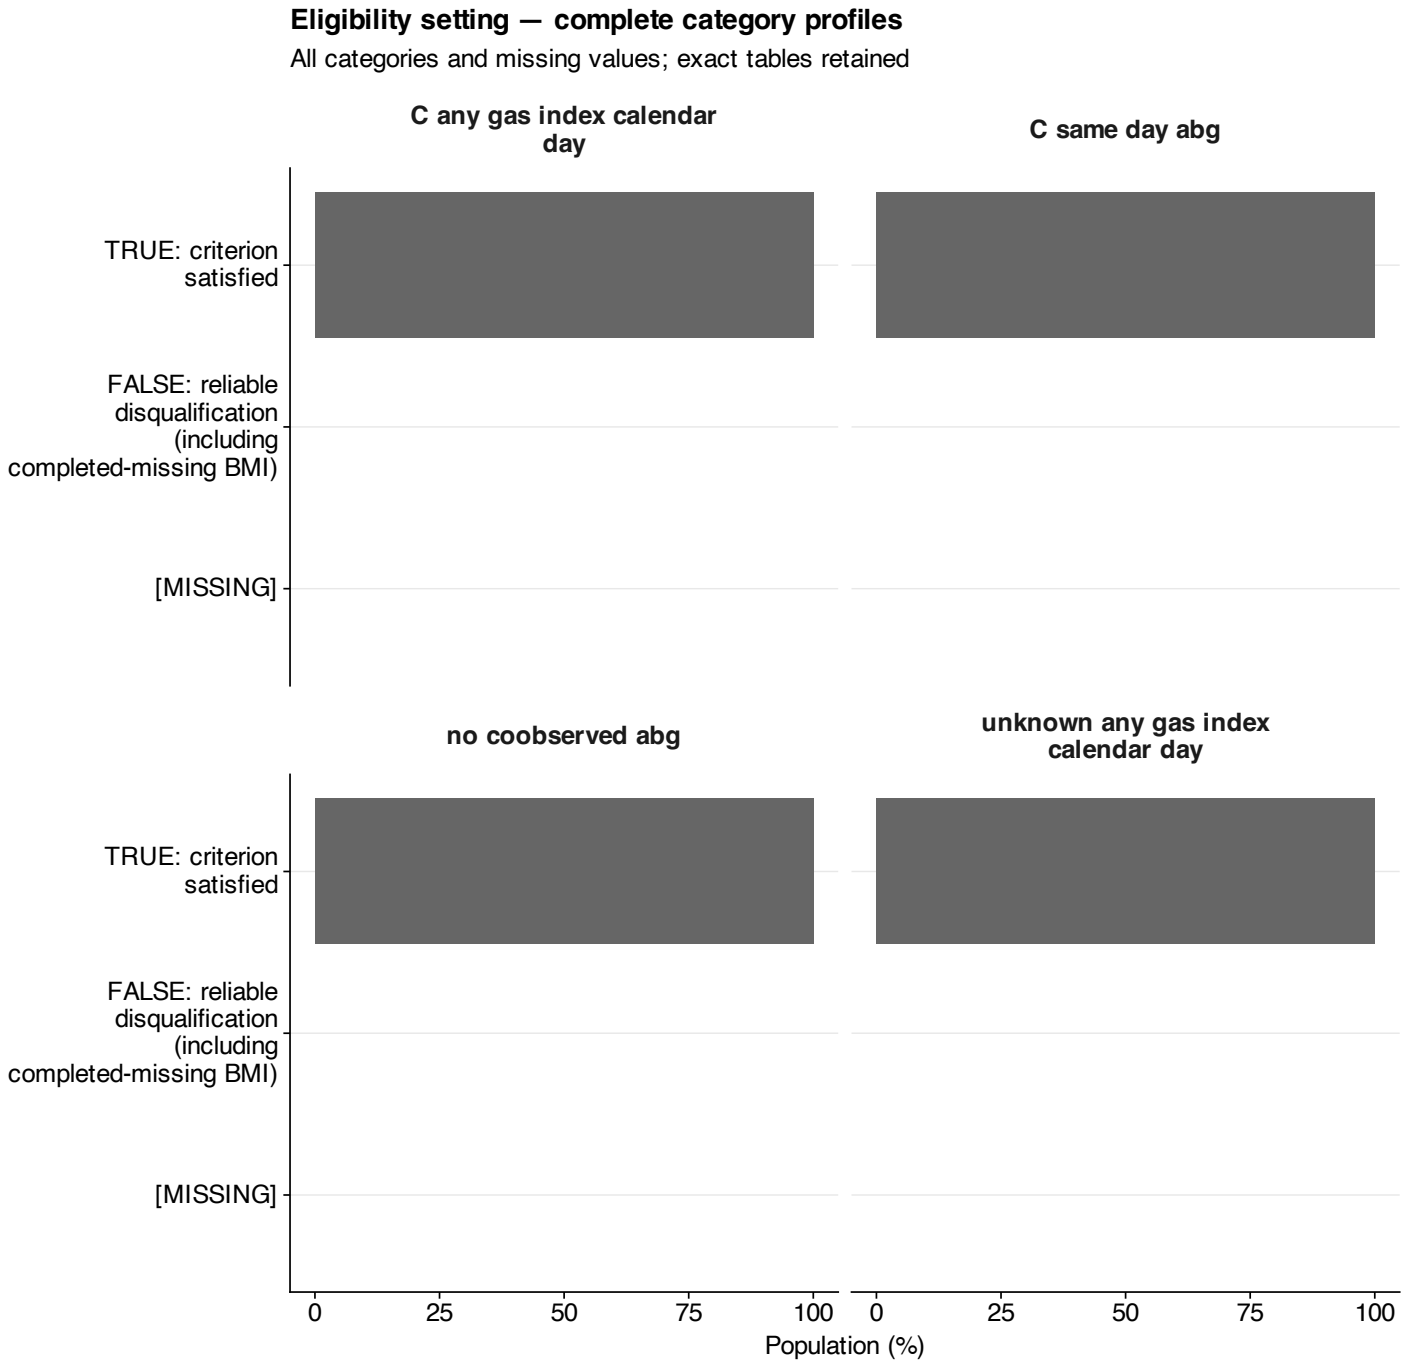

Figure 1059: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete eligibility_setting stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

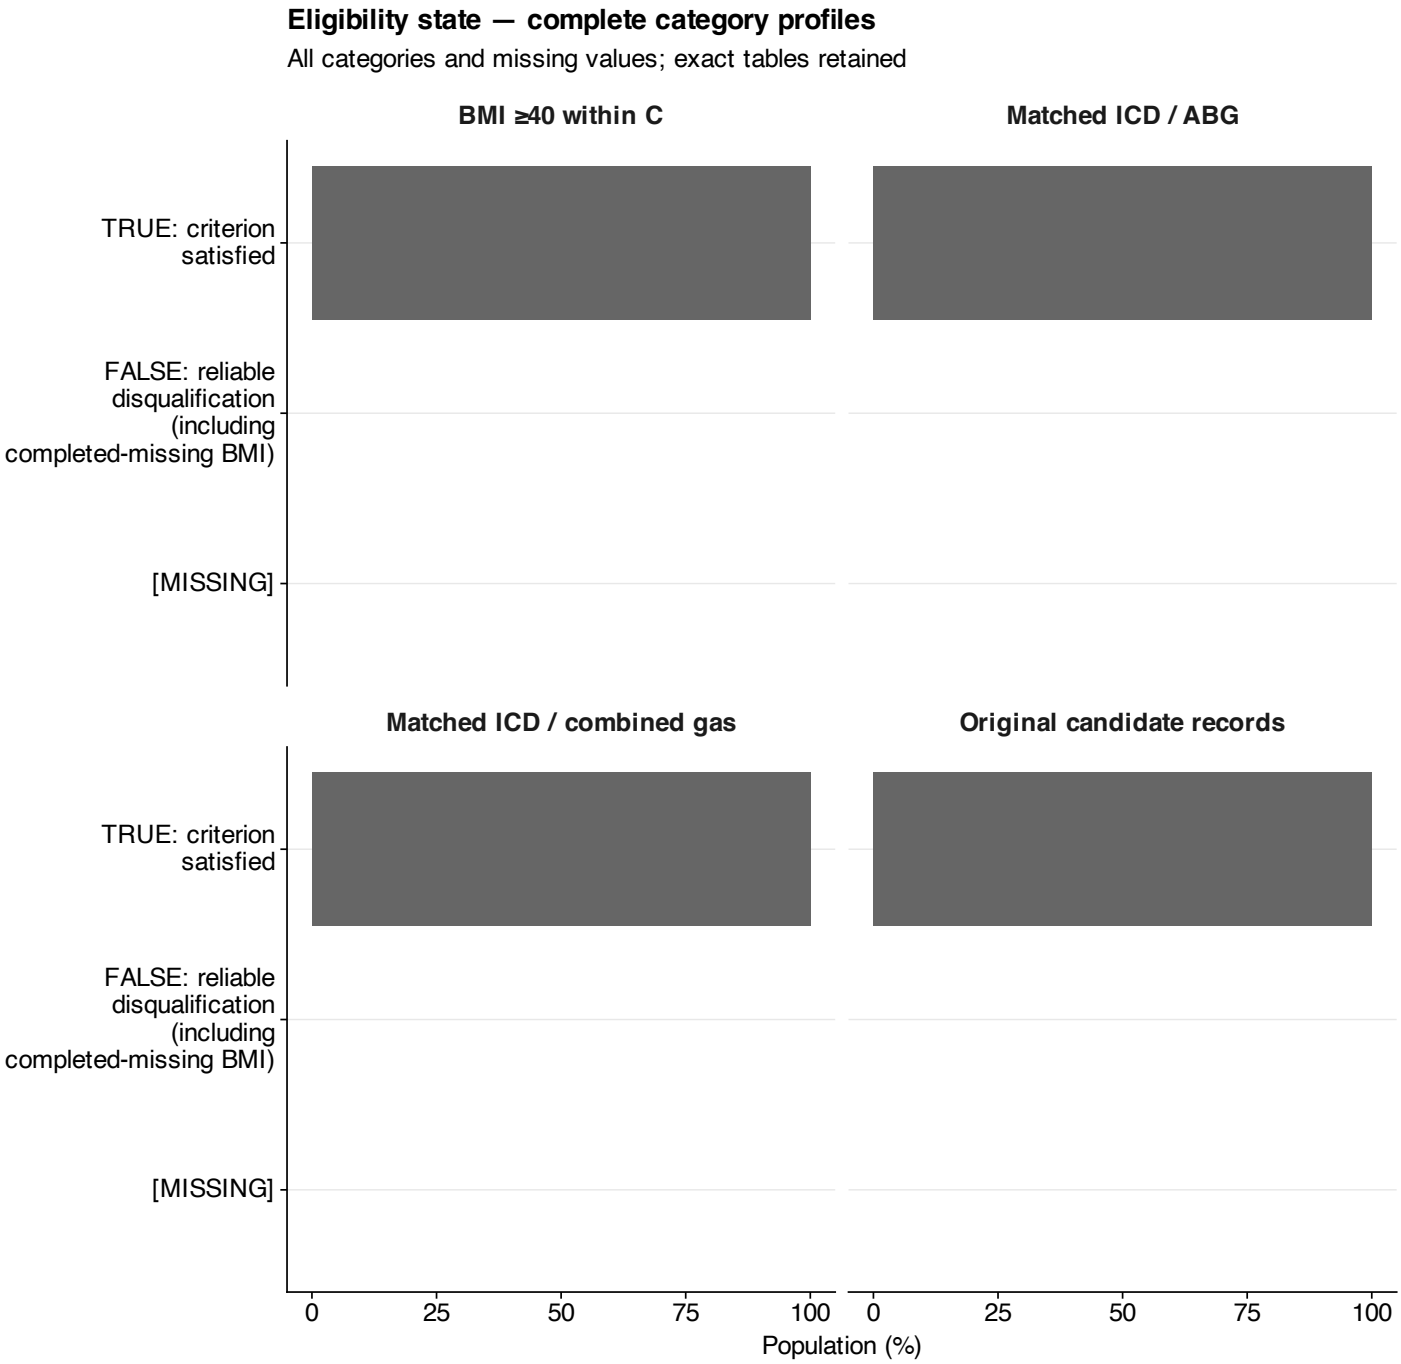

Figure 1060: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete eligibility_state stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

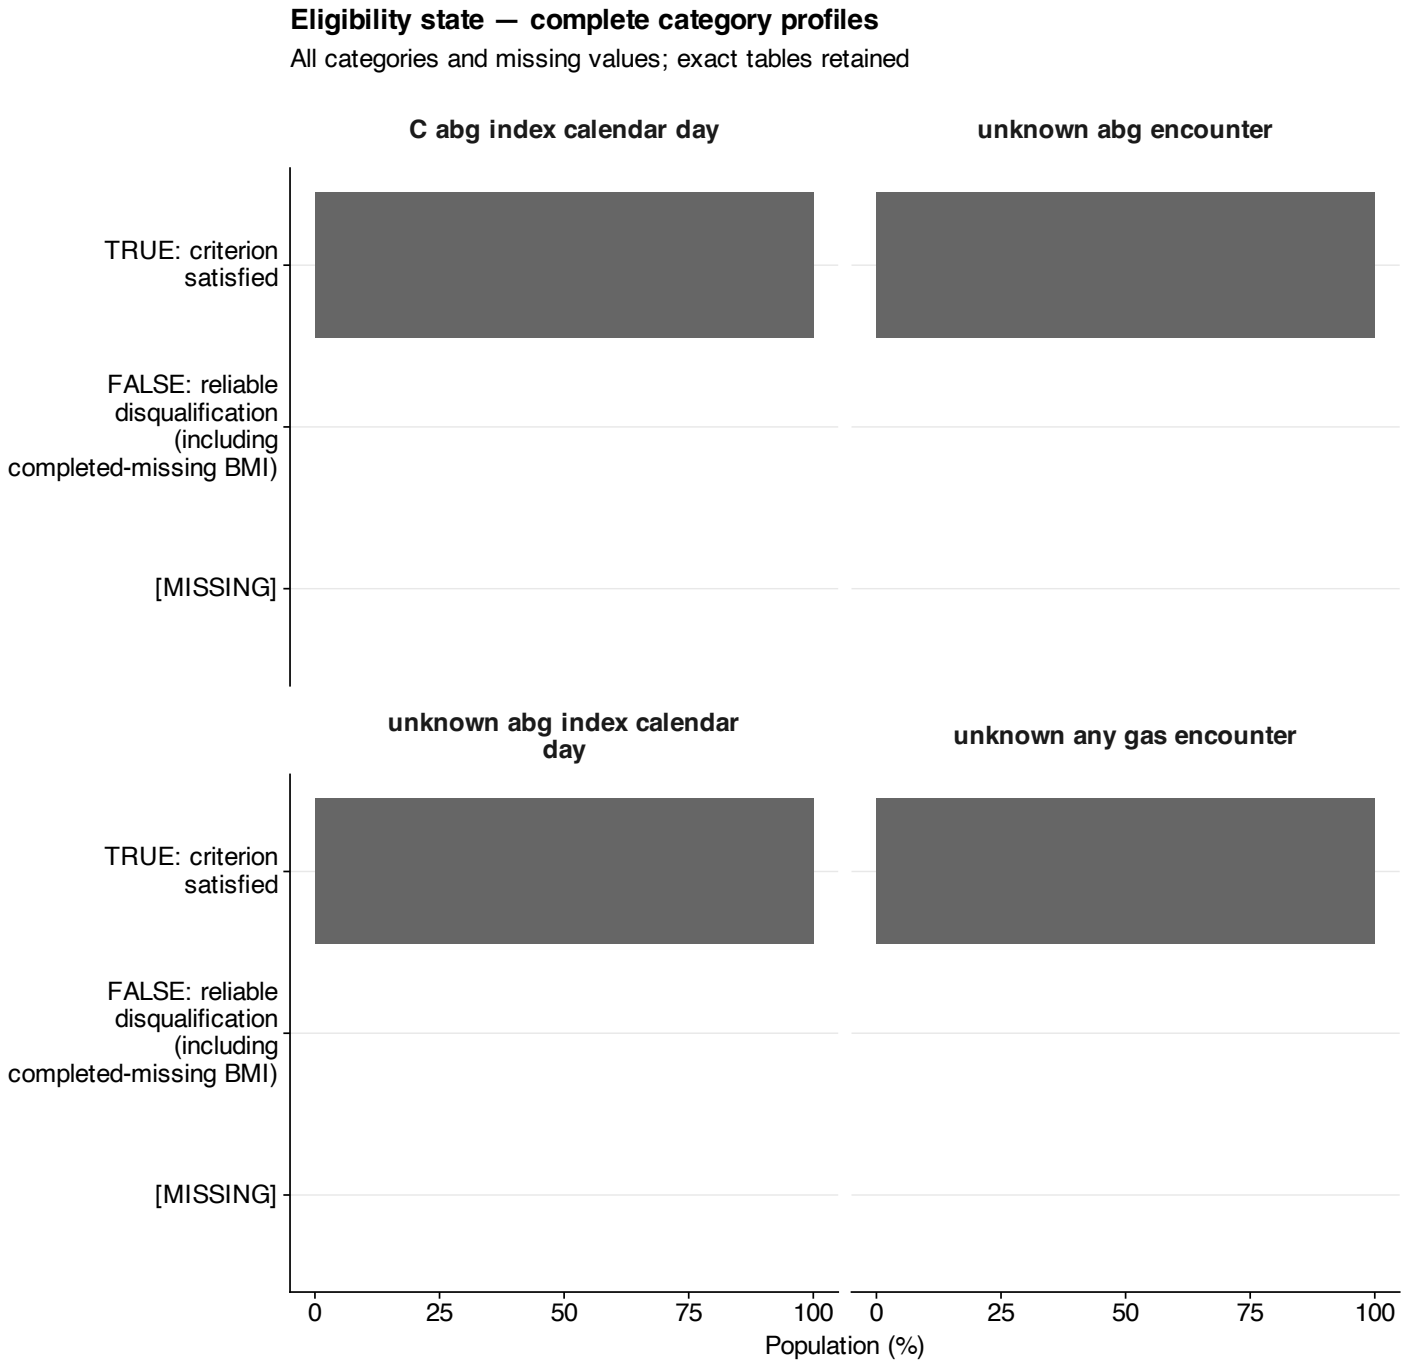

Figure 1061: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete eligibility_state stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

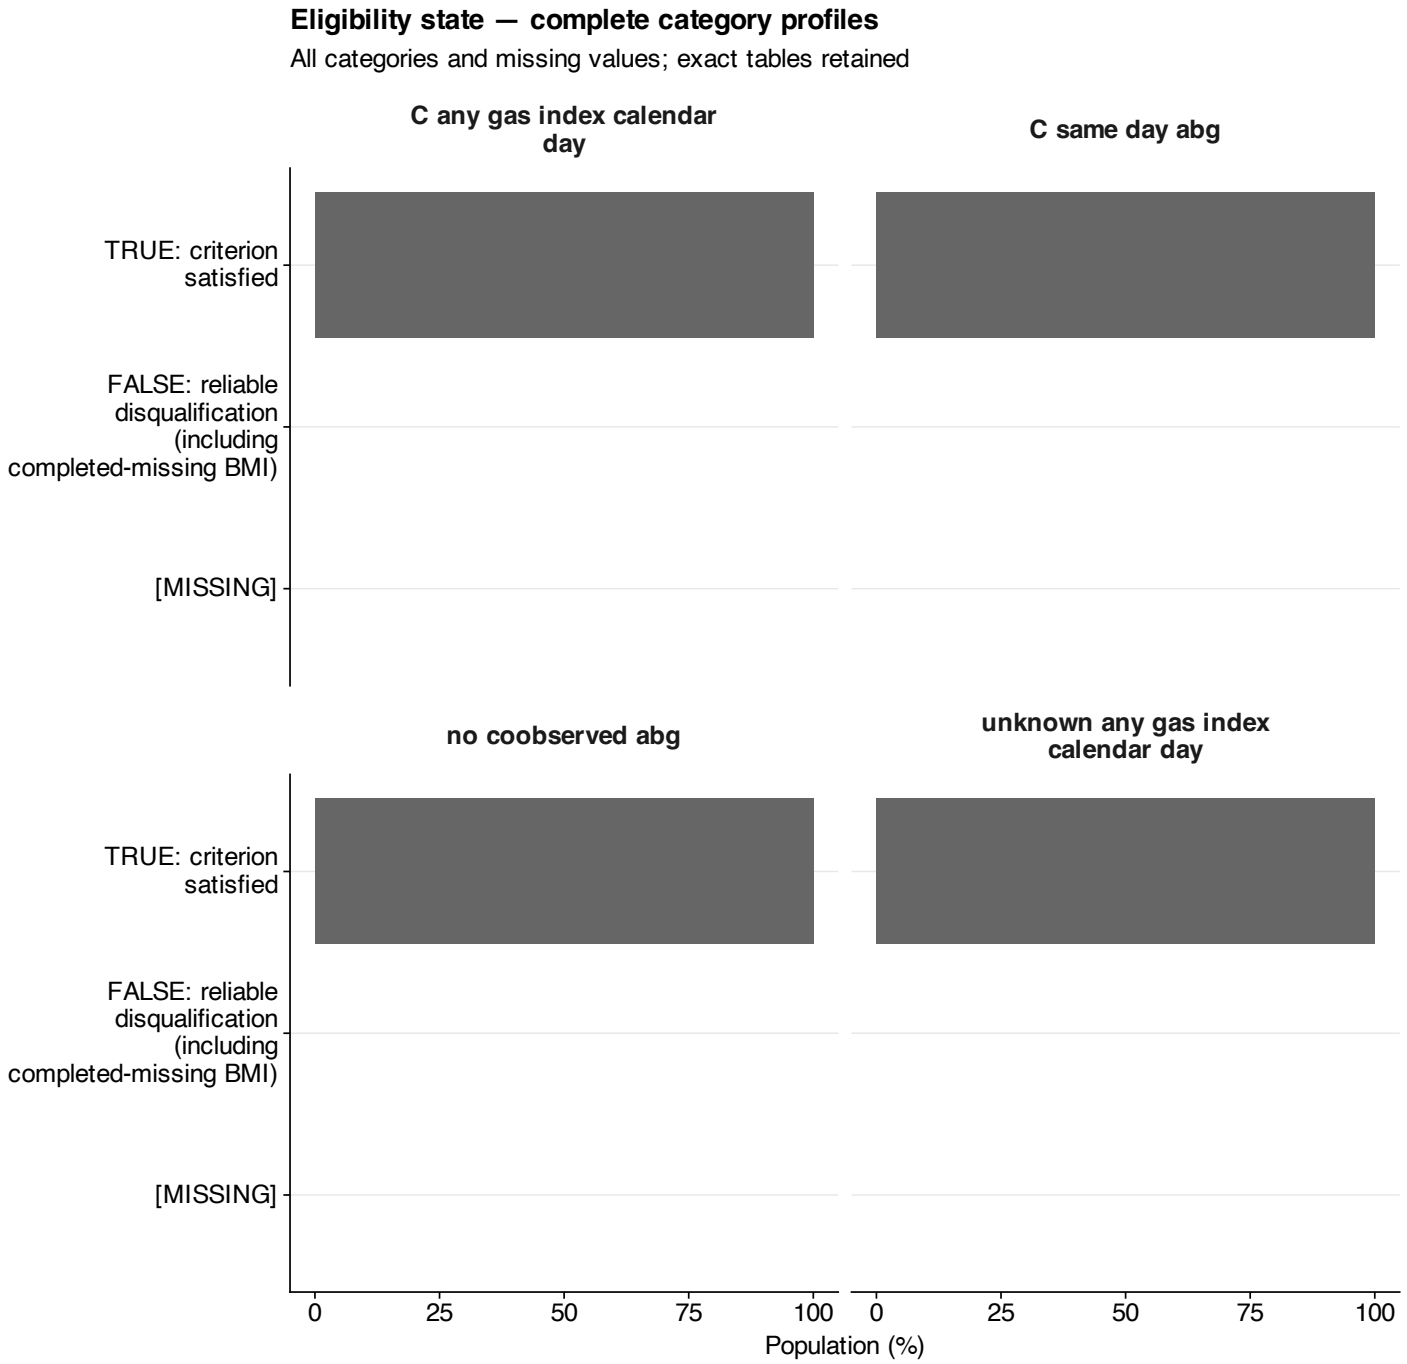

Figure 1062: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete eligibility_state stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

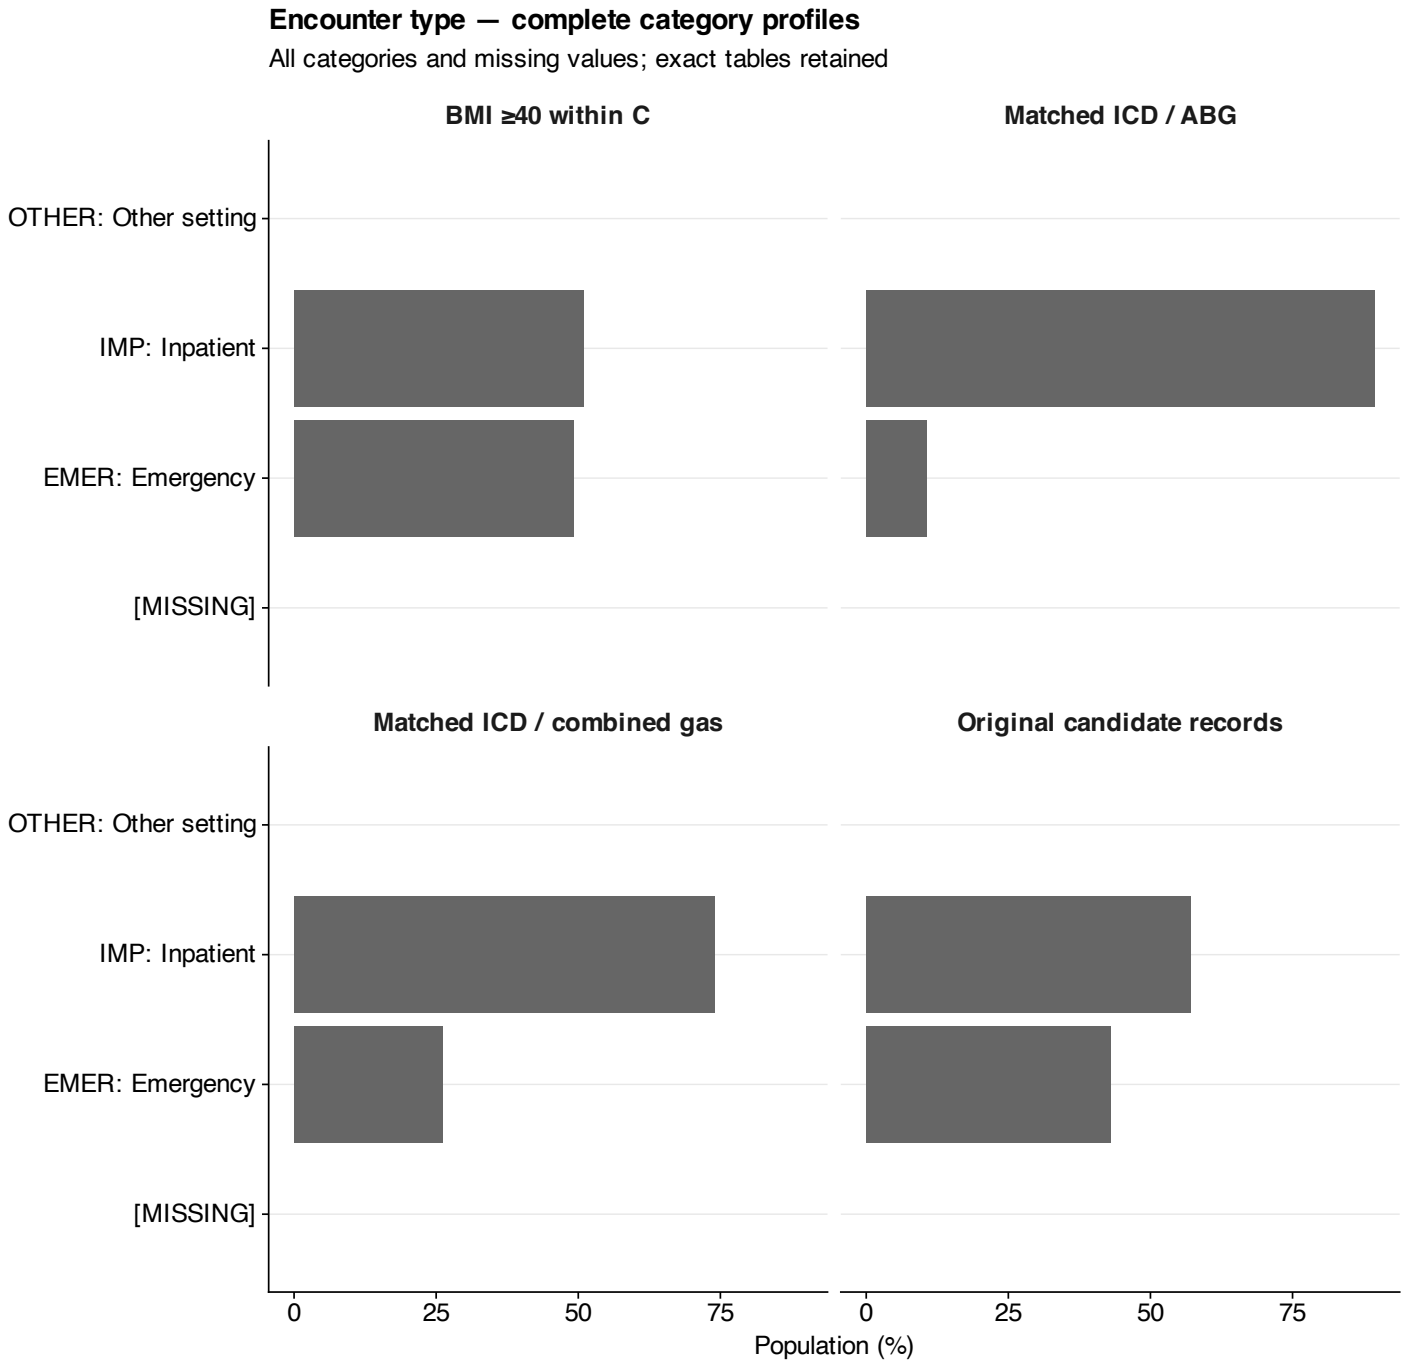

Figure 1063: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete encounter_type stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

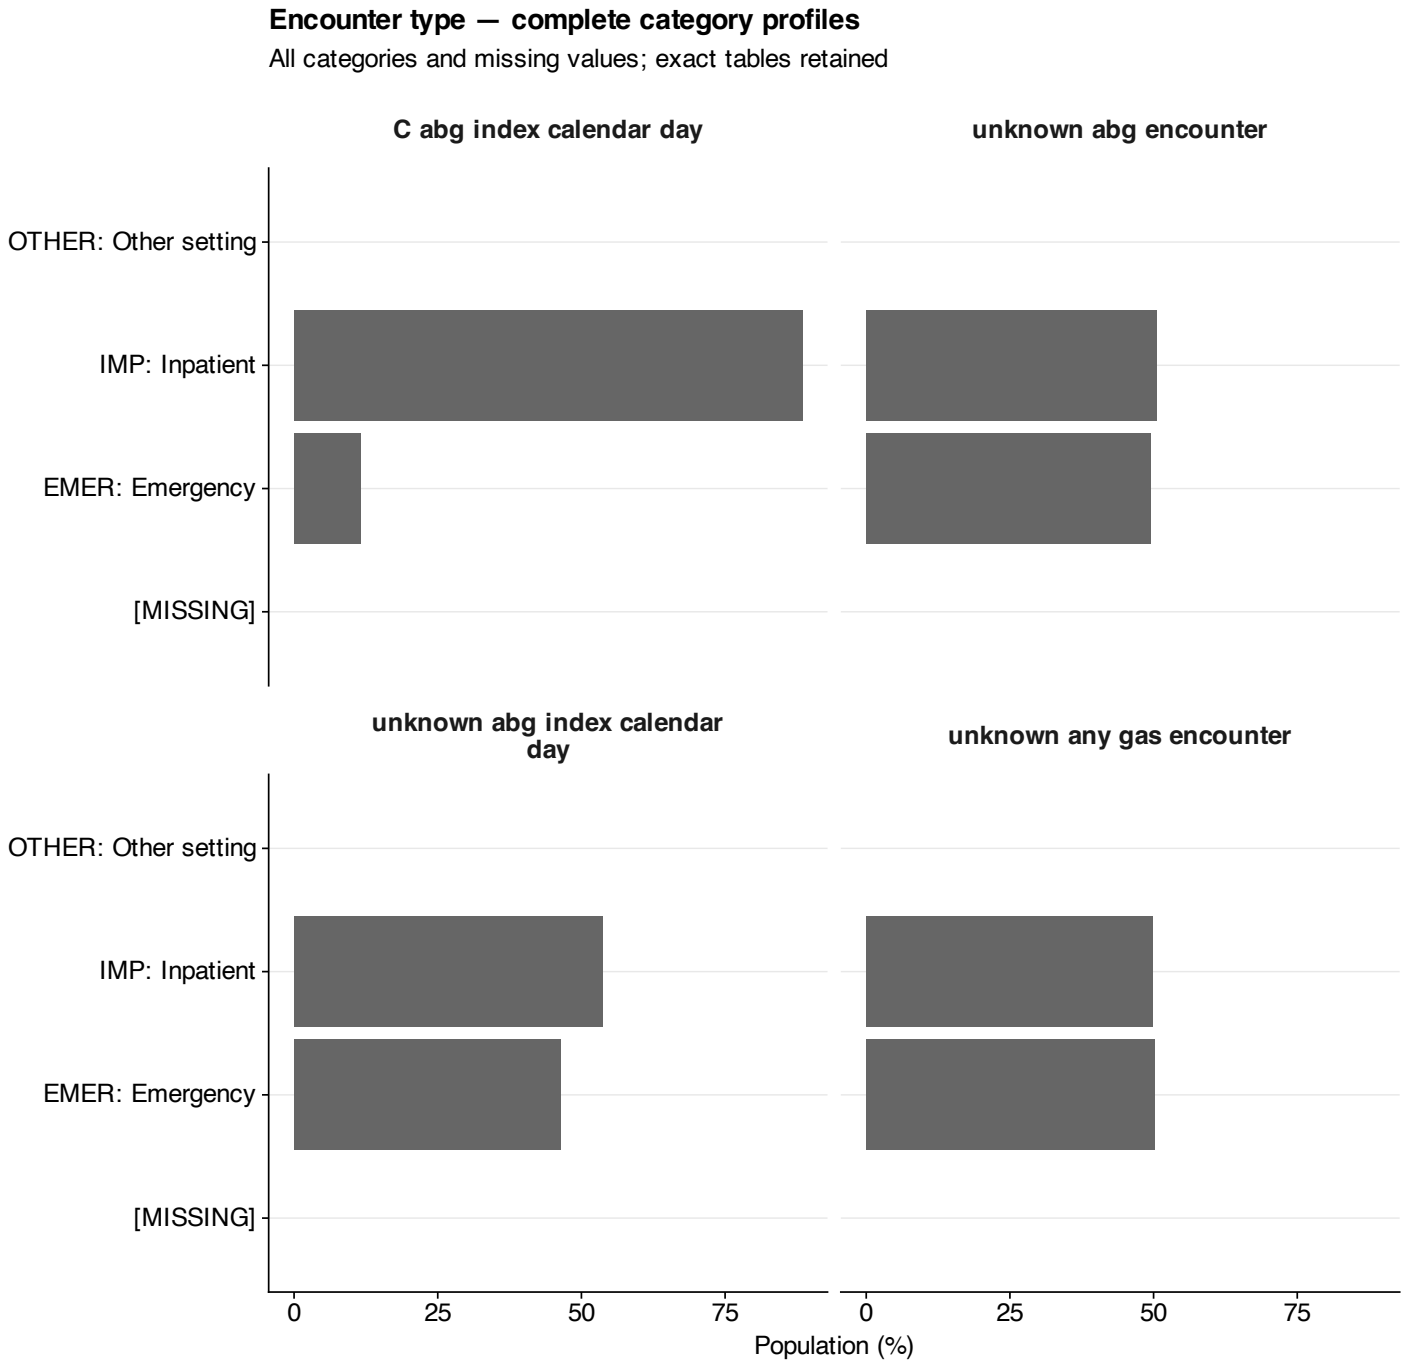

Figure 1064: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete encounter_type stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

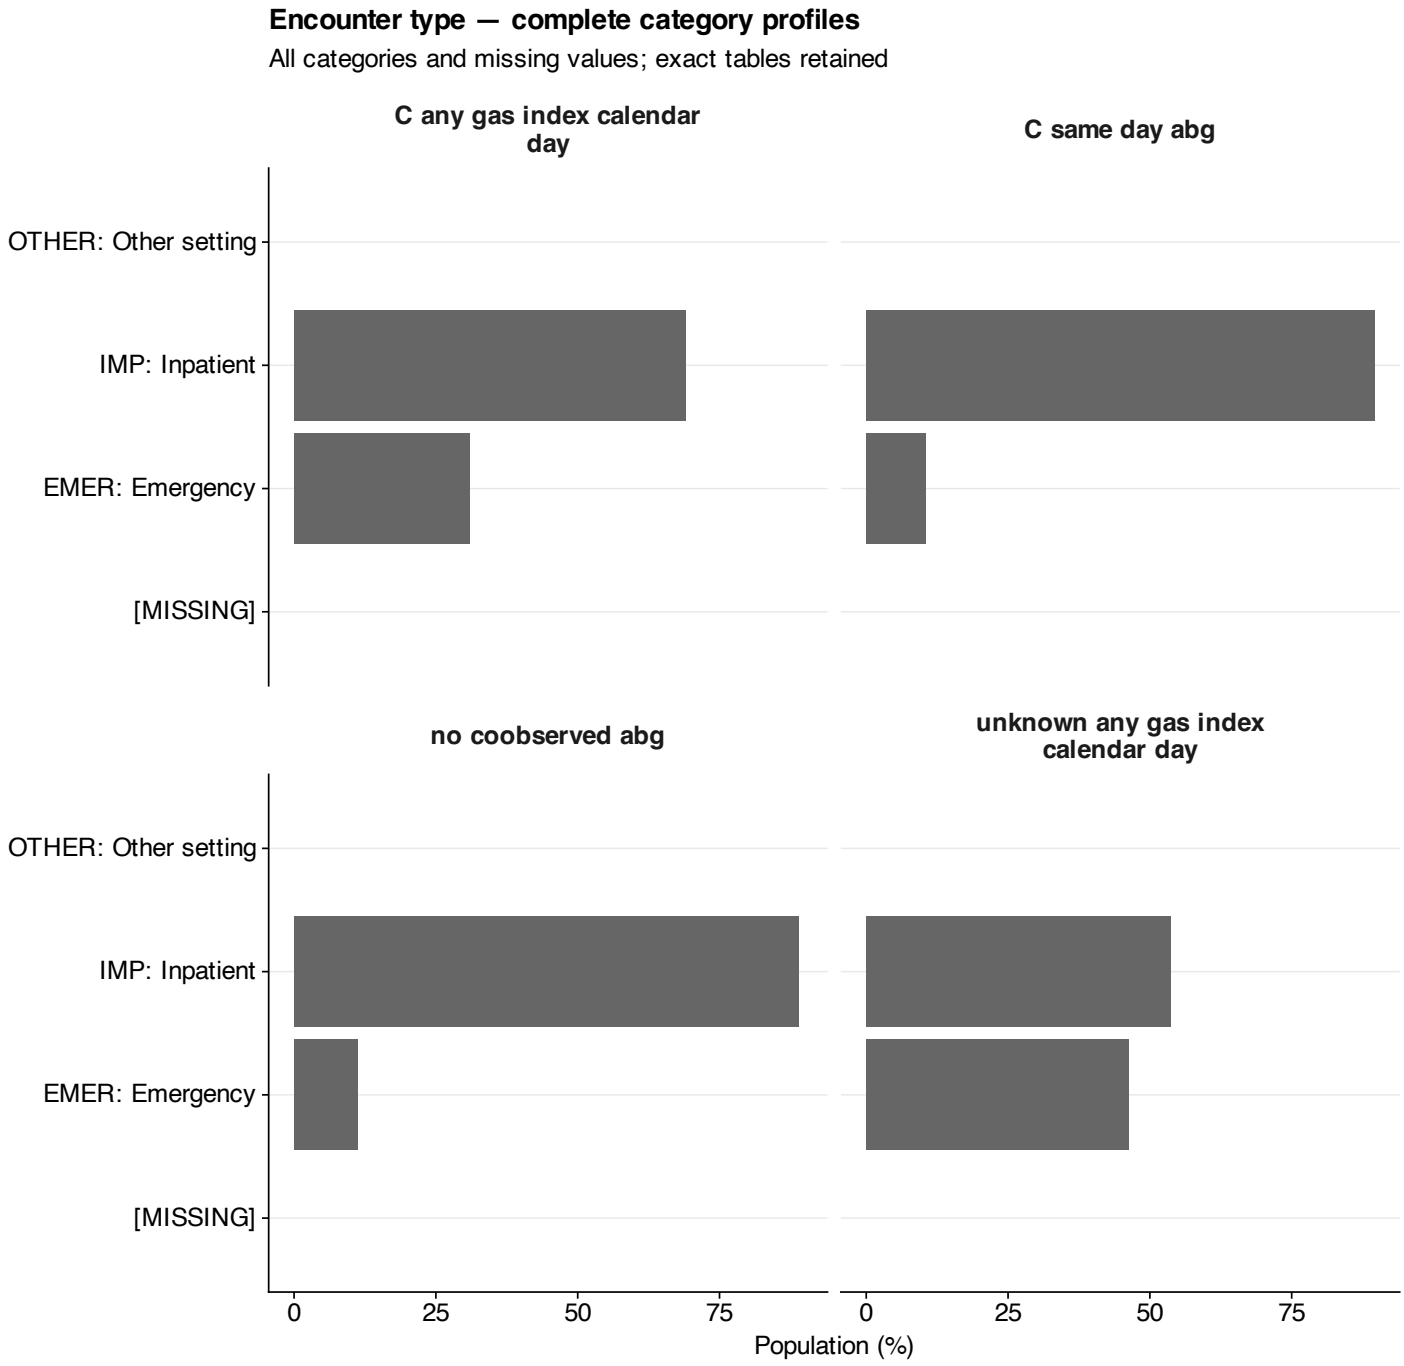

Figure 1065: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete encounter_type stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

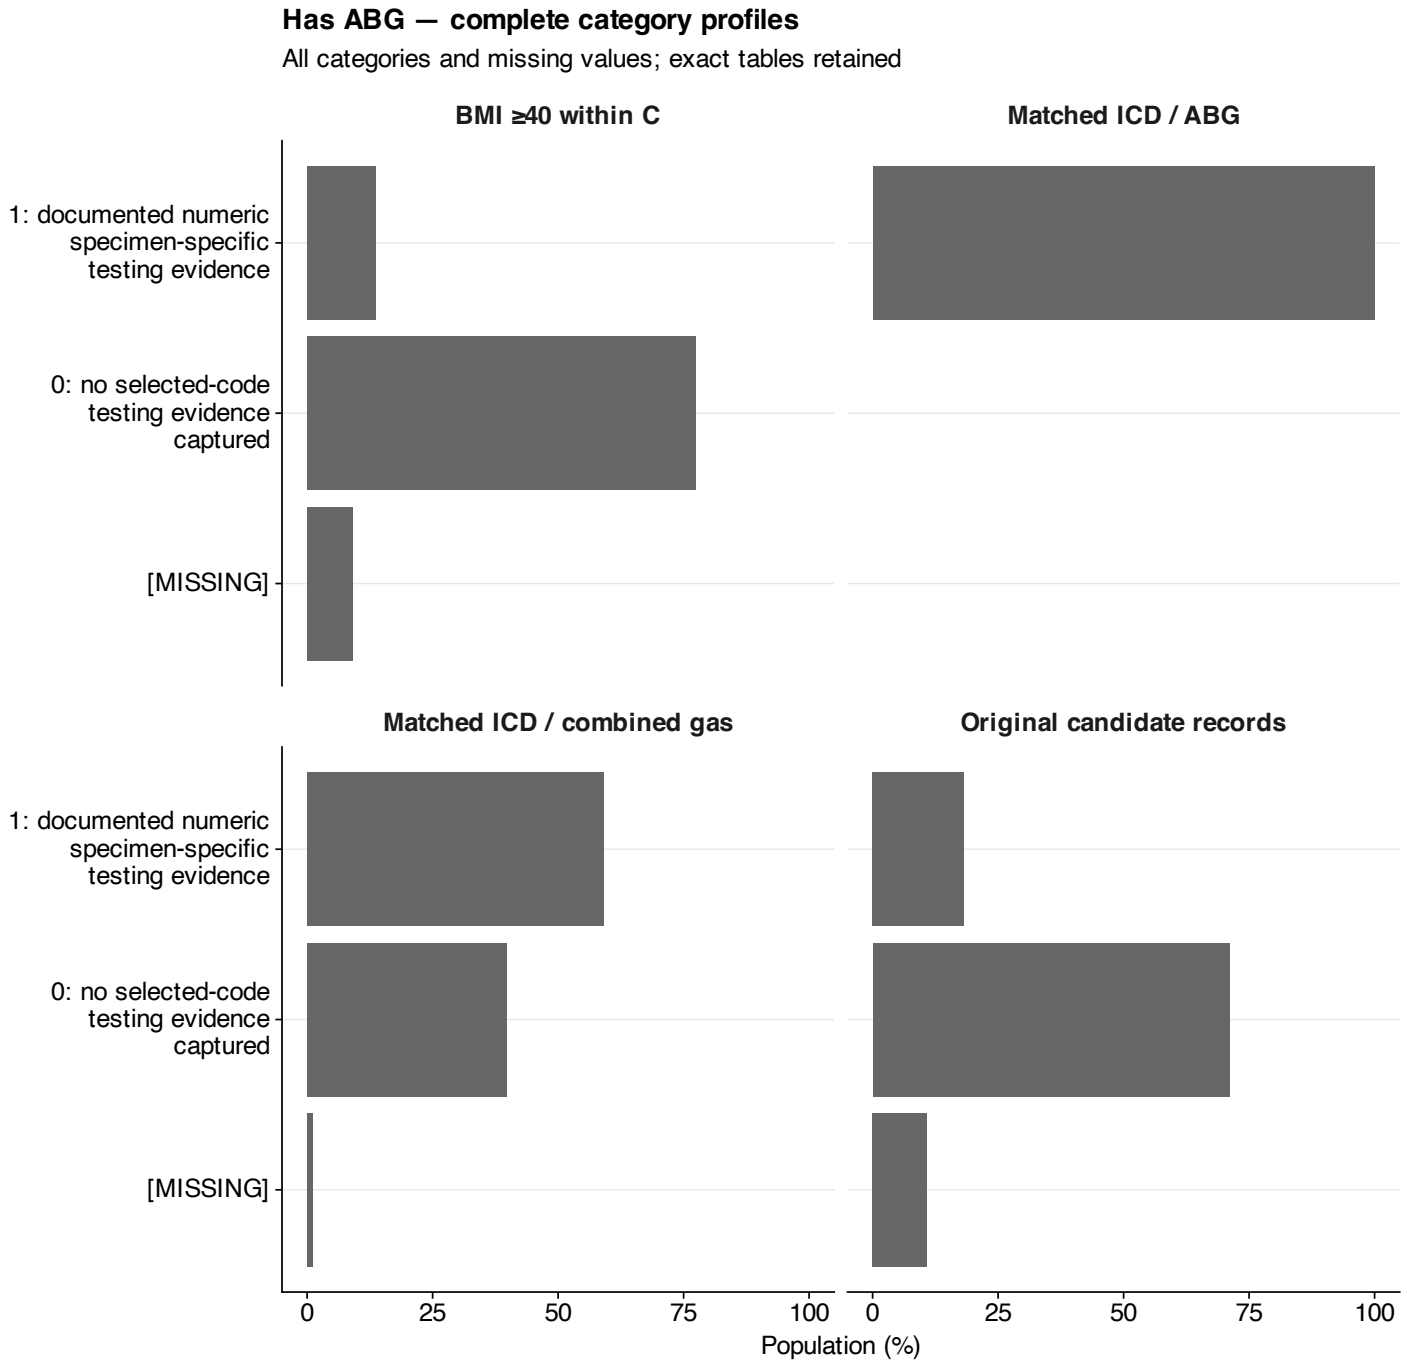

Figure 1066: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete has_abg stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

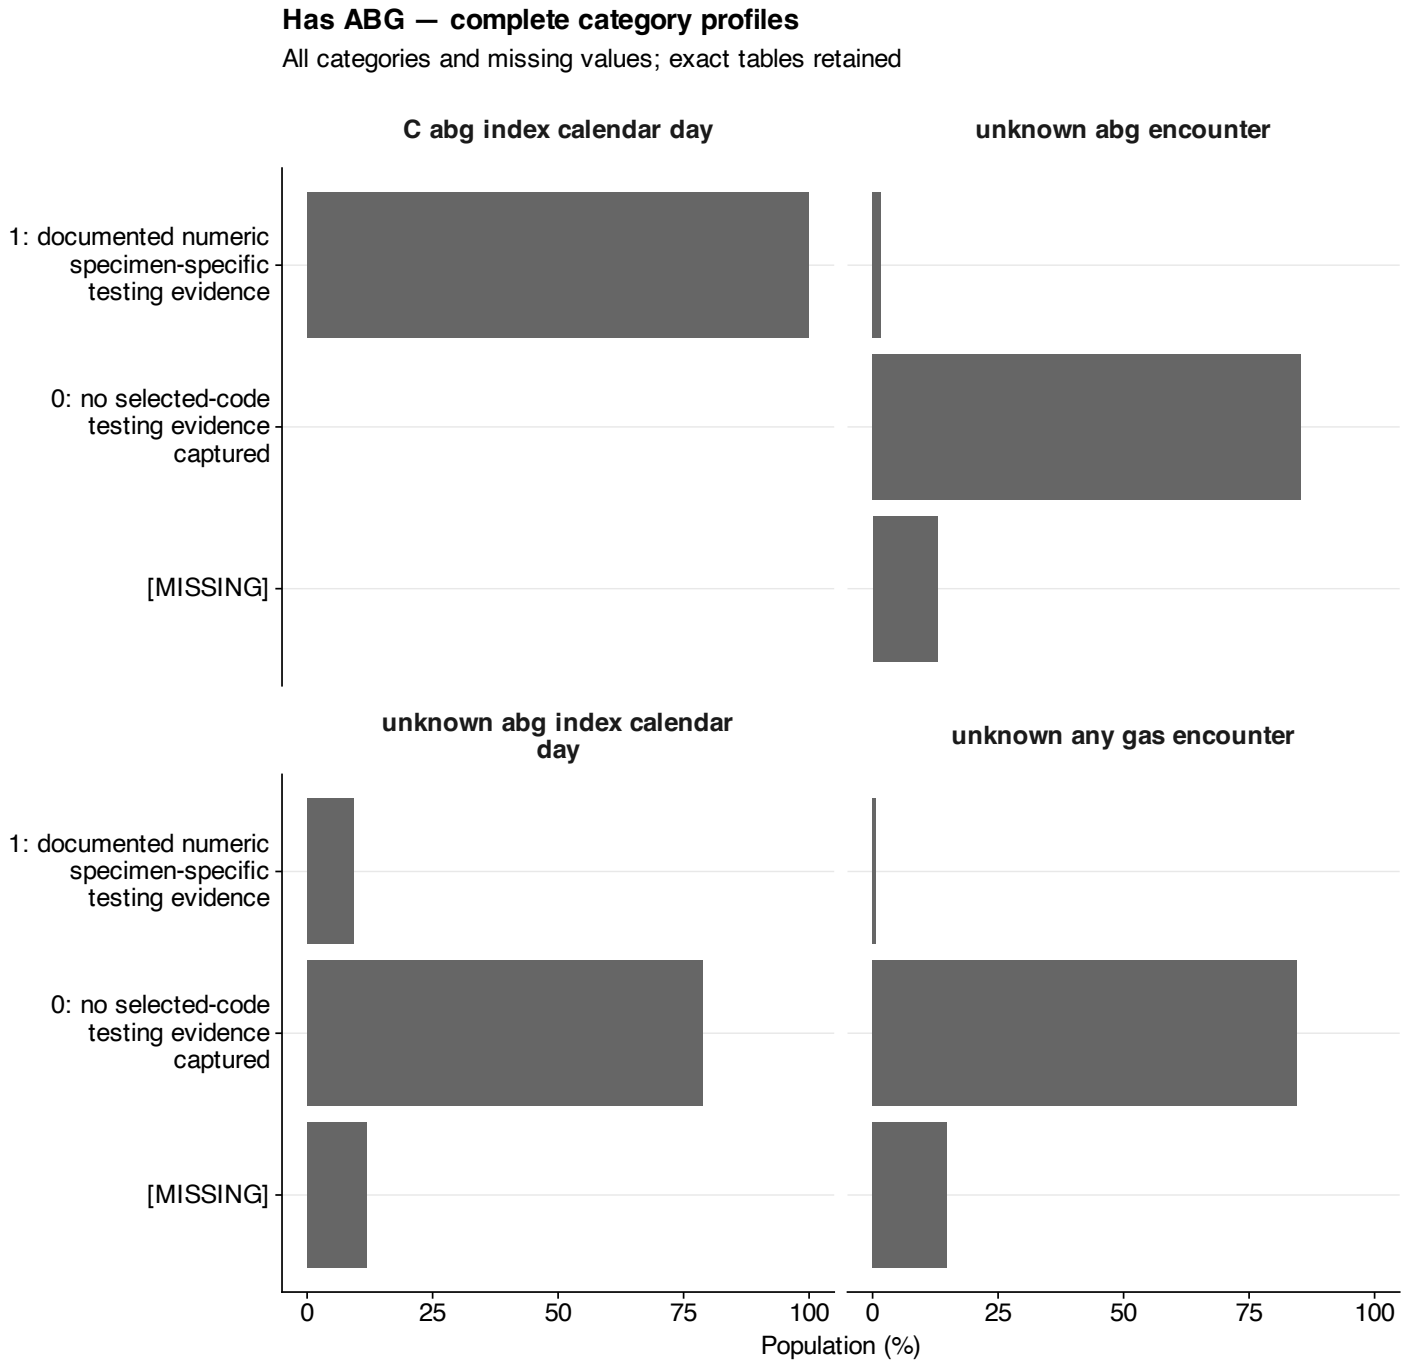

Figure 1067: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete has_abg stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

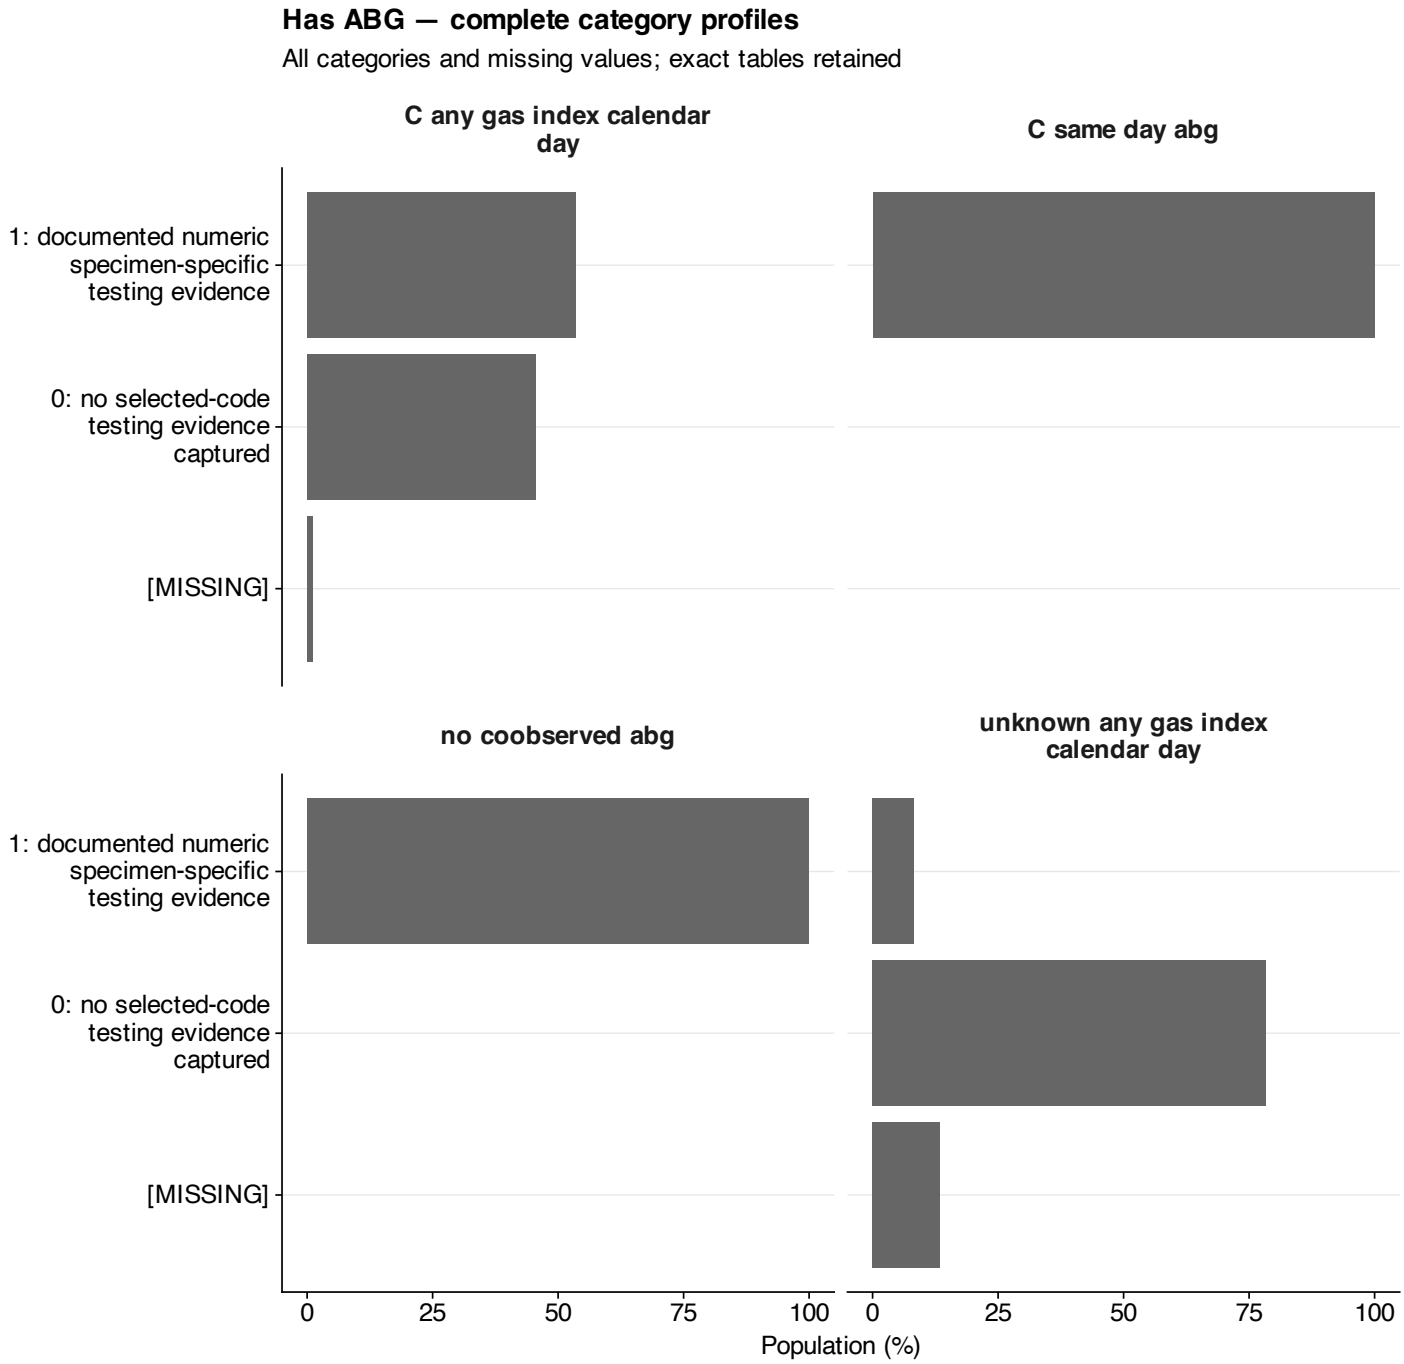

Figure 1068: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete has_abg stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

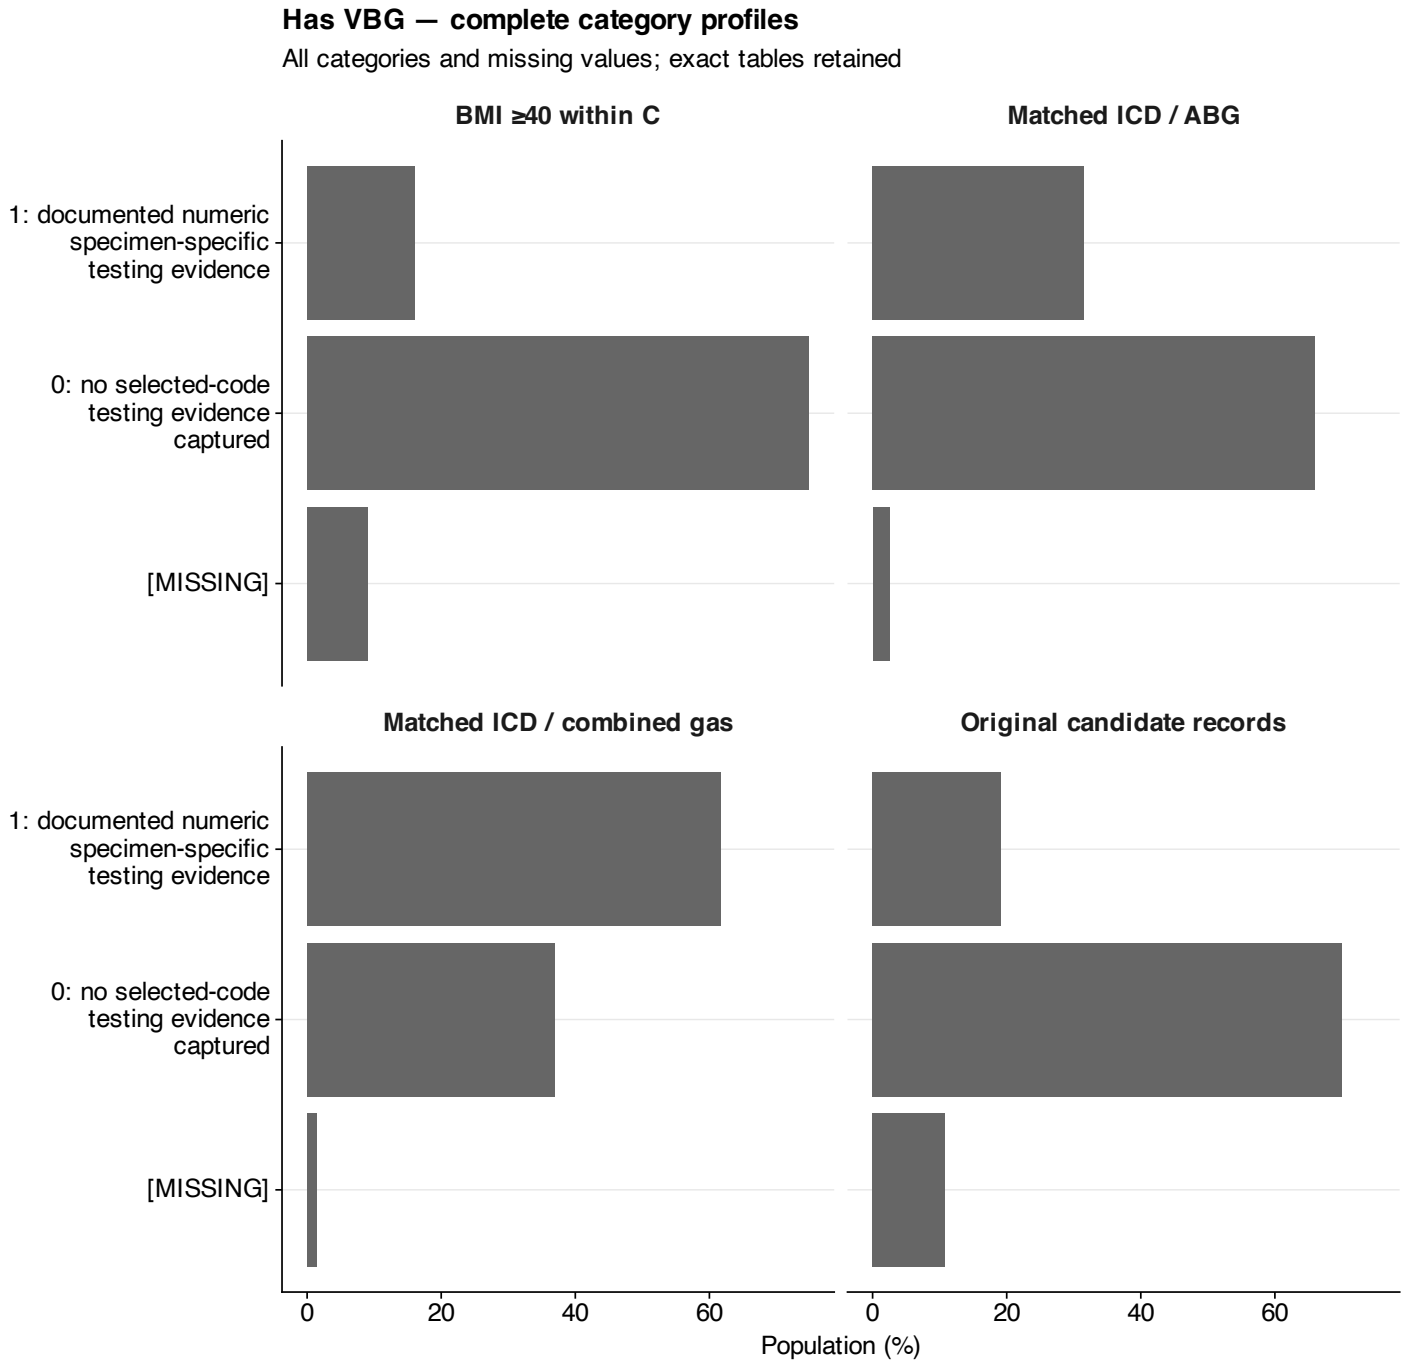

Figure 1069: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete has_vbg stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

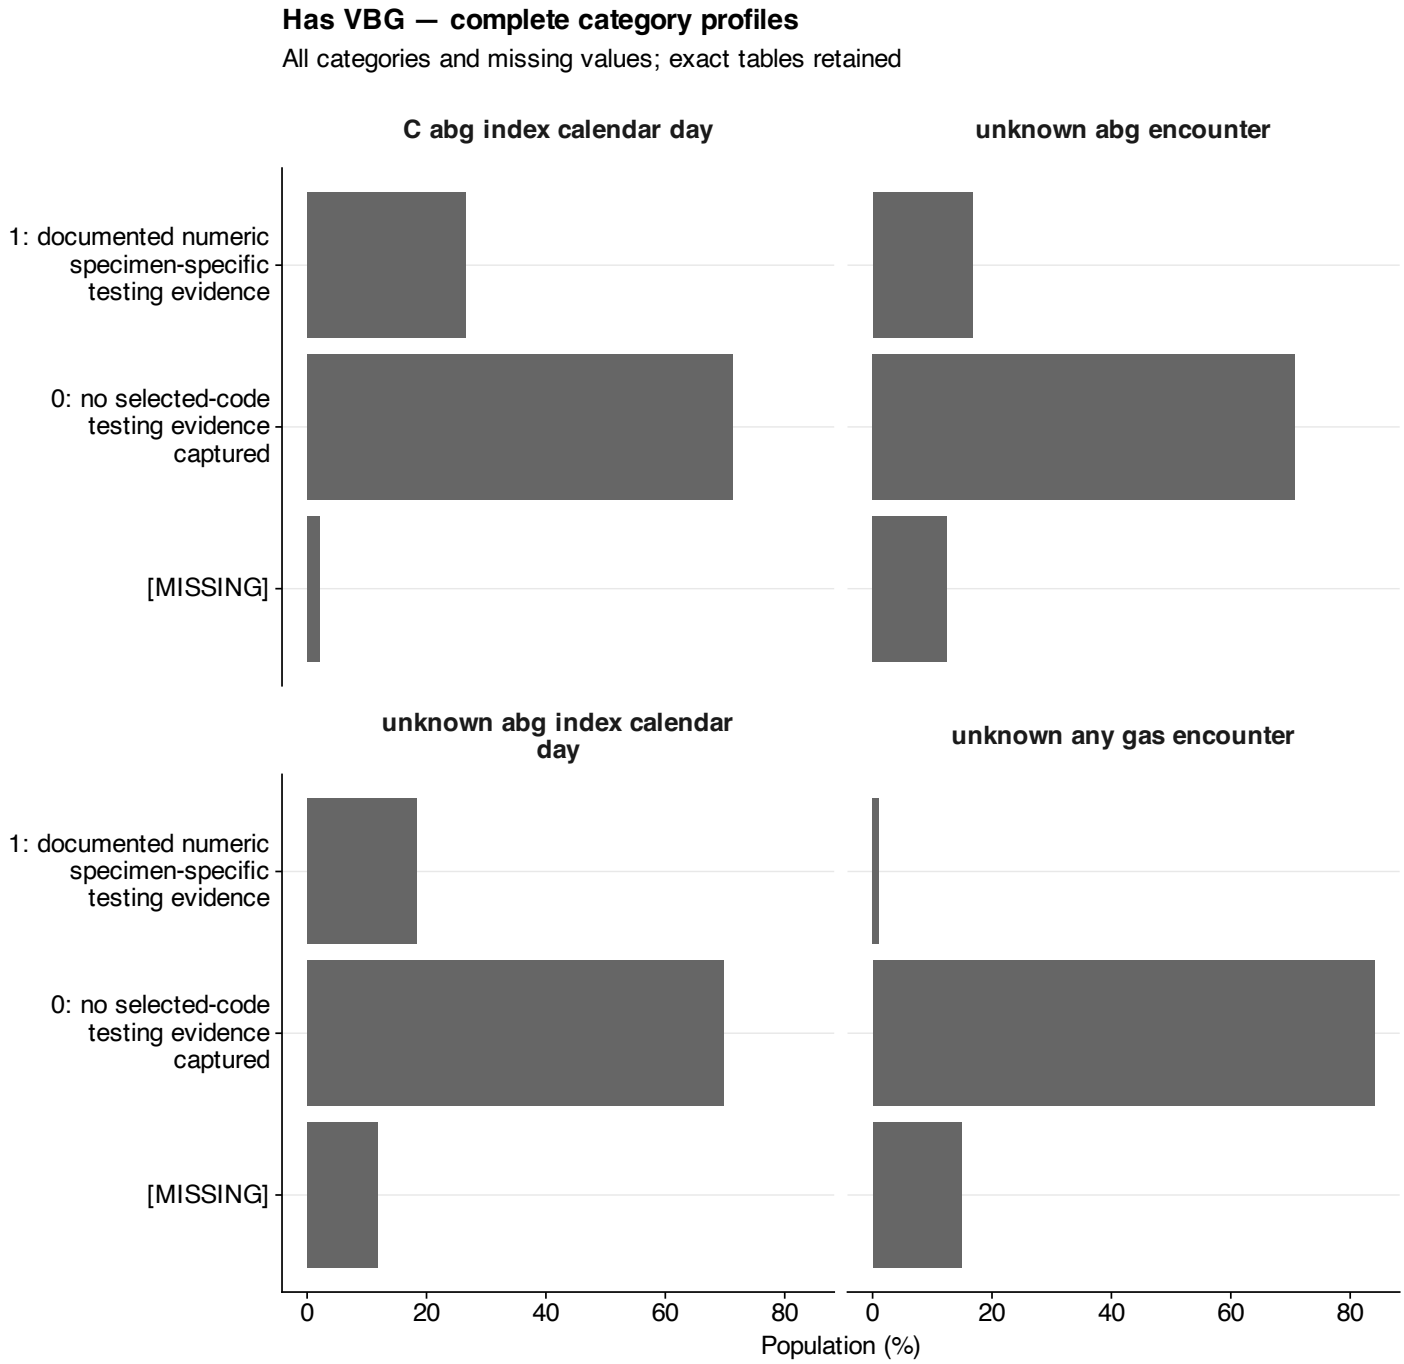

Figure 1070: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete has_vbg stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

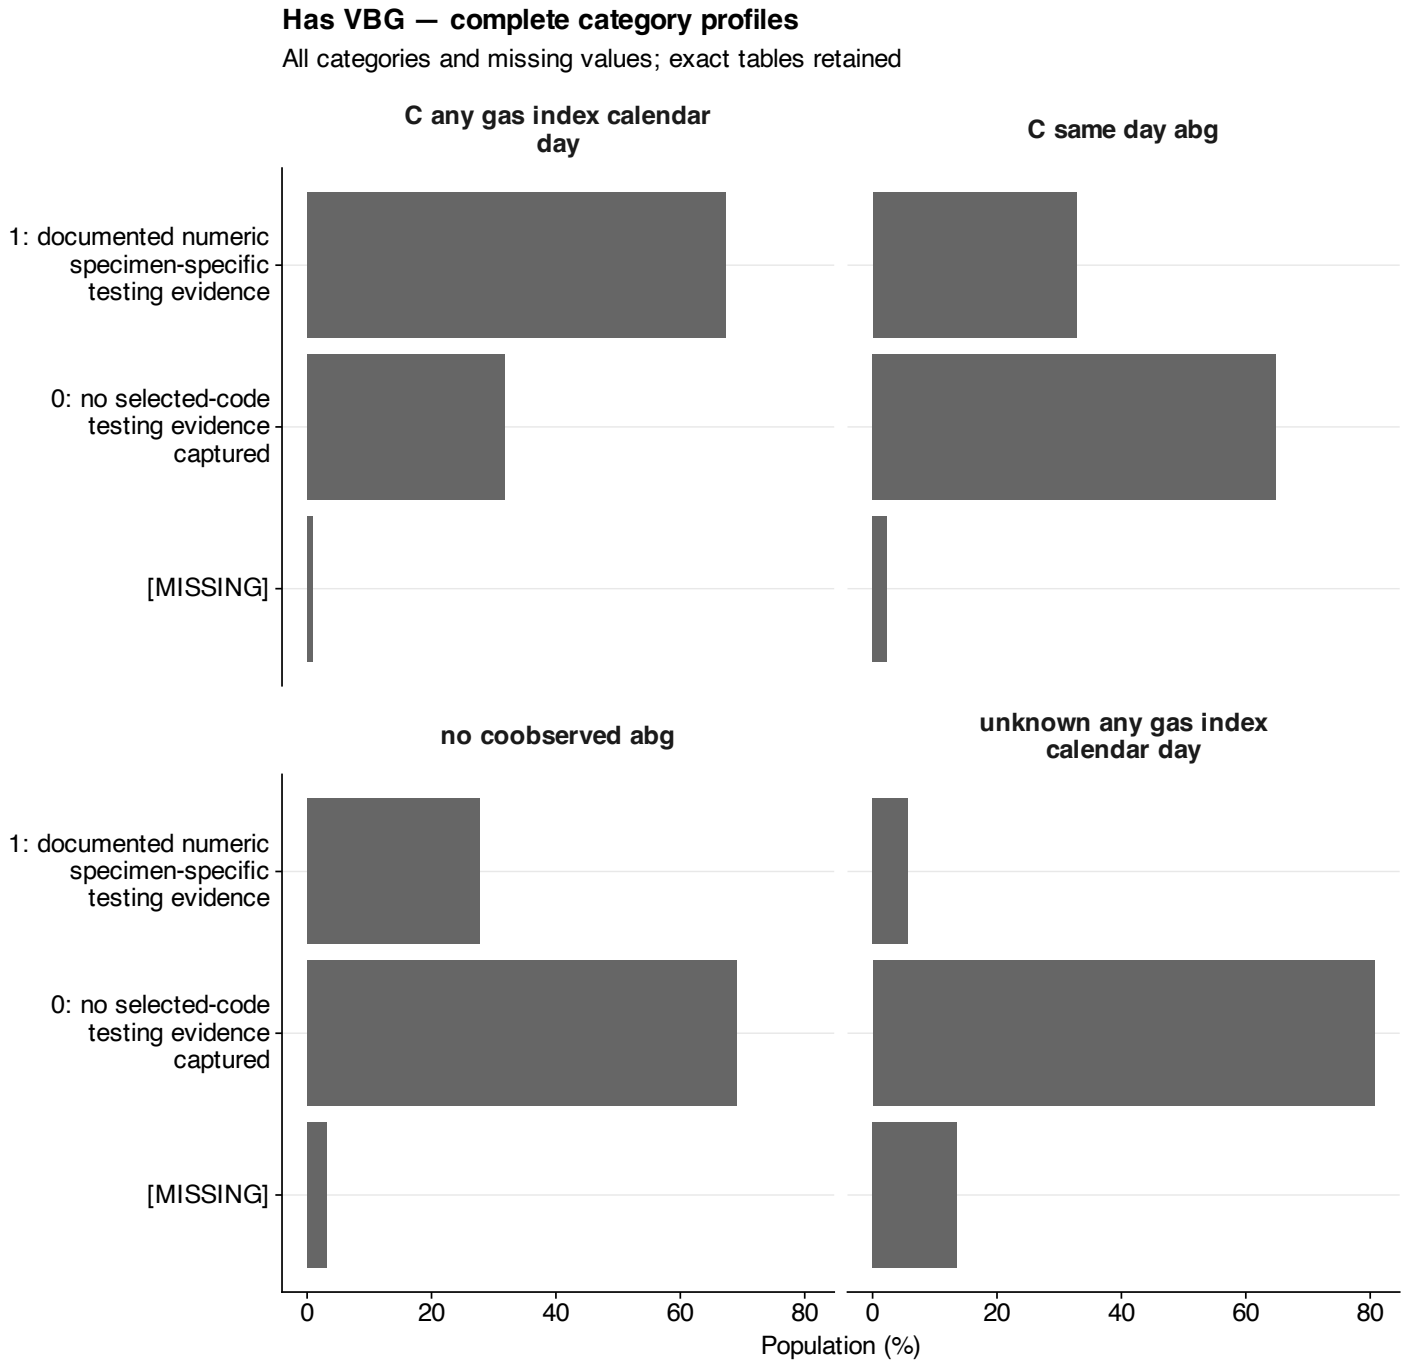

Figure 1071: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete has_vbg stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

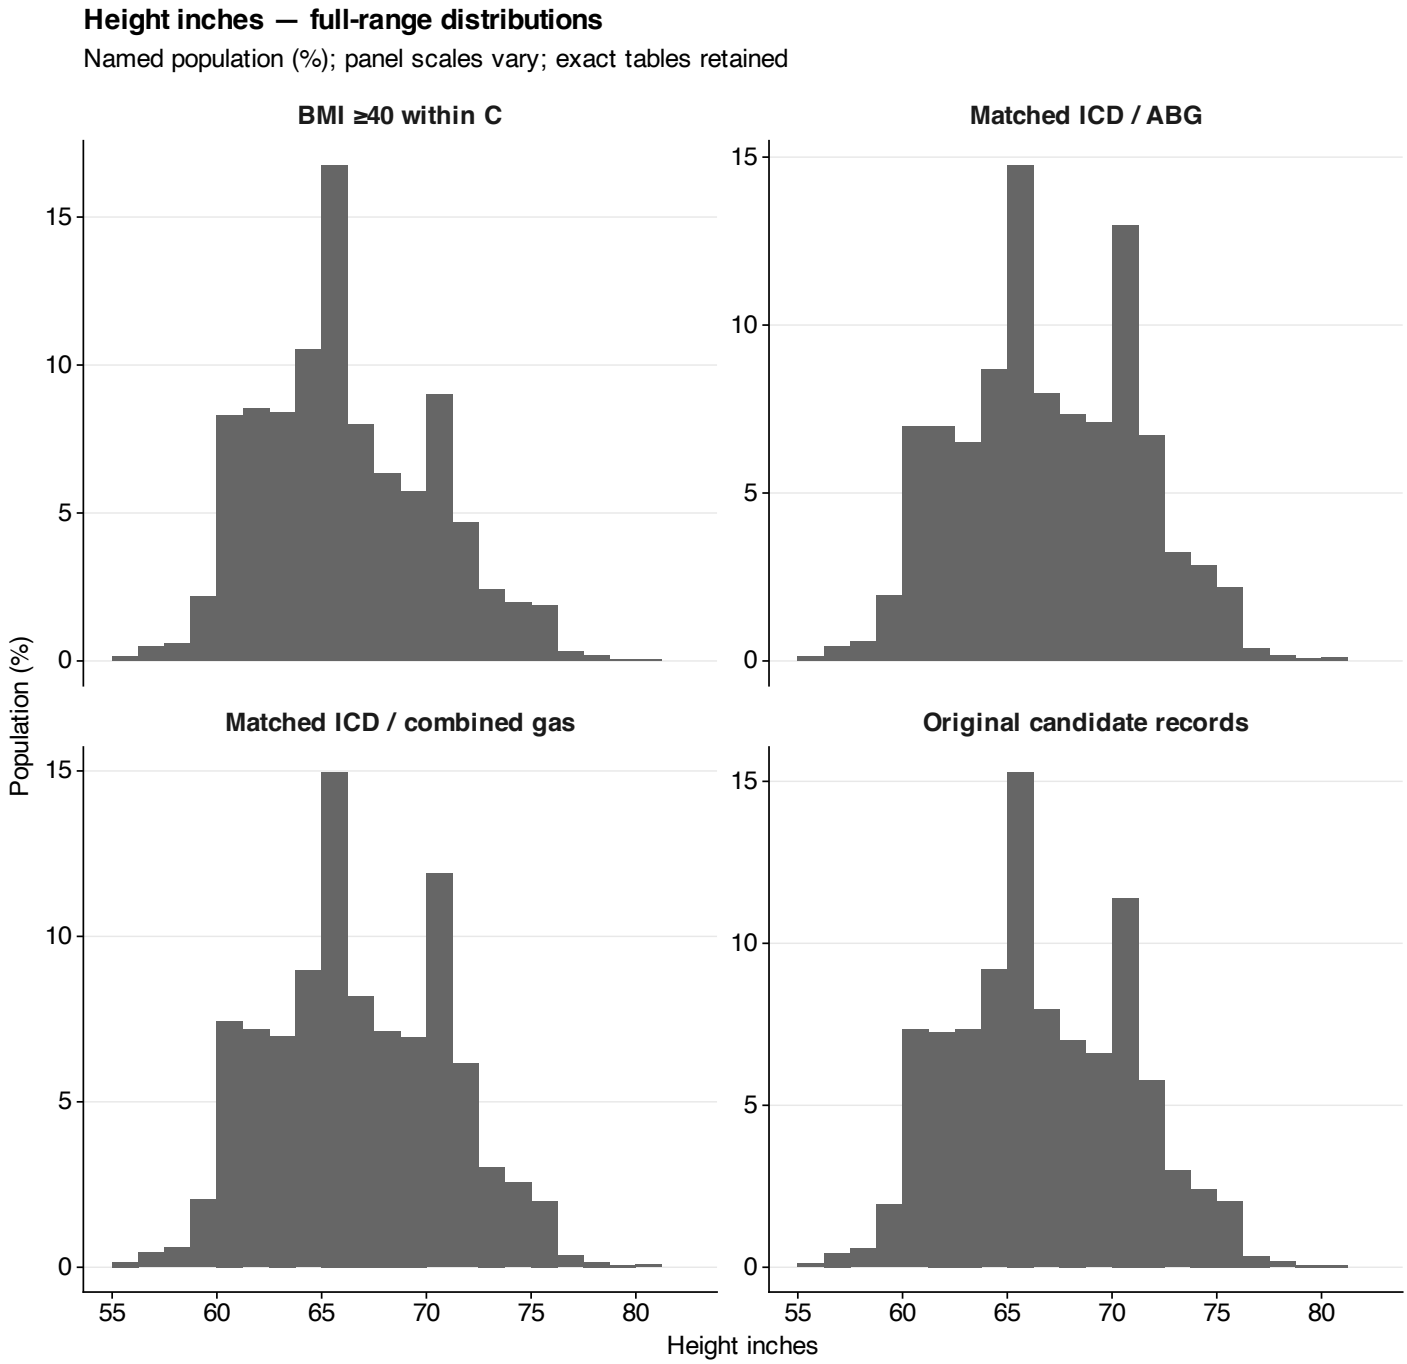

Figure 1072: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete height_inches stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

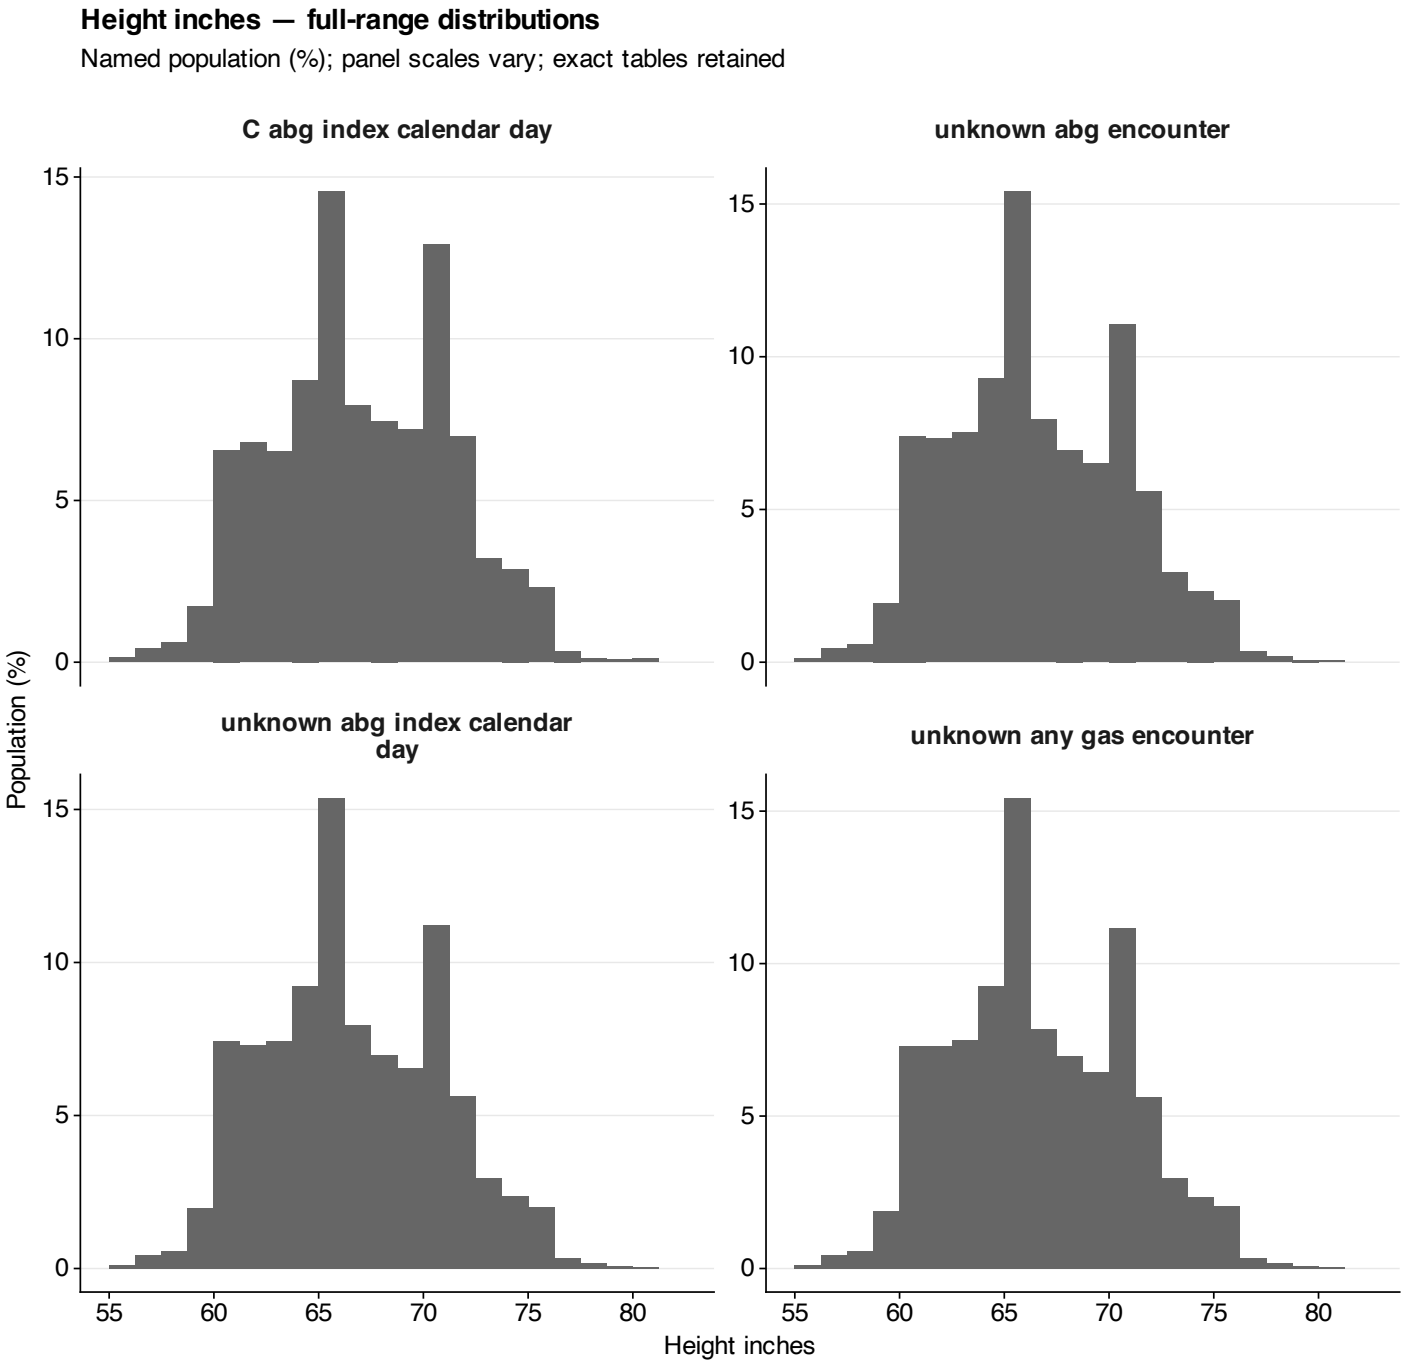

Figure 1073: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete height_inches stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

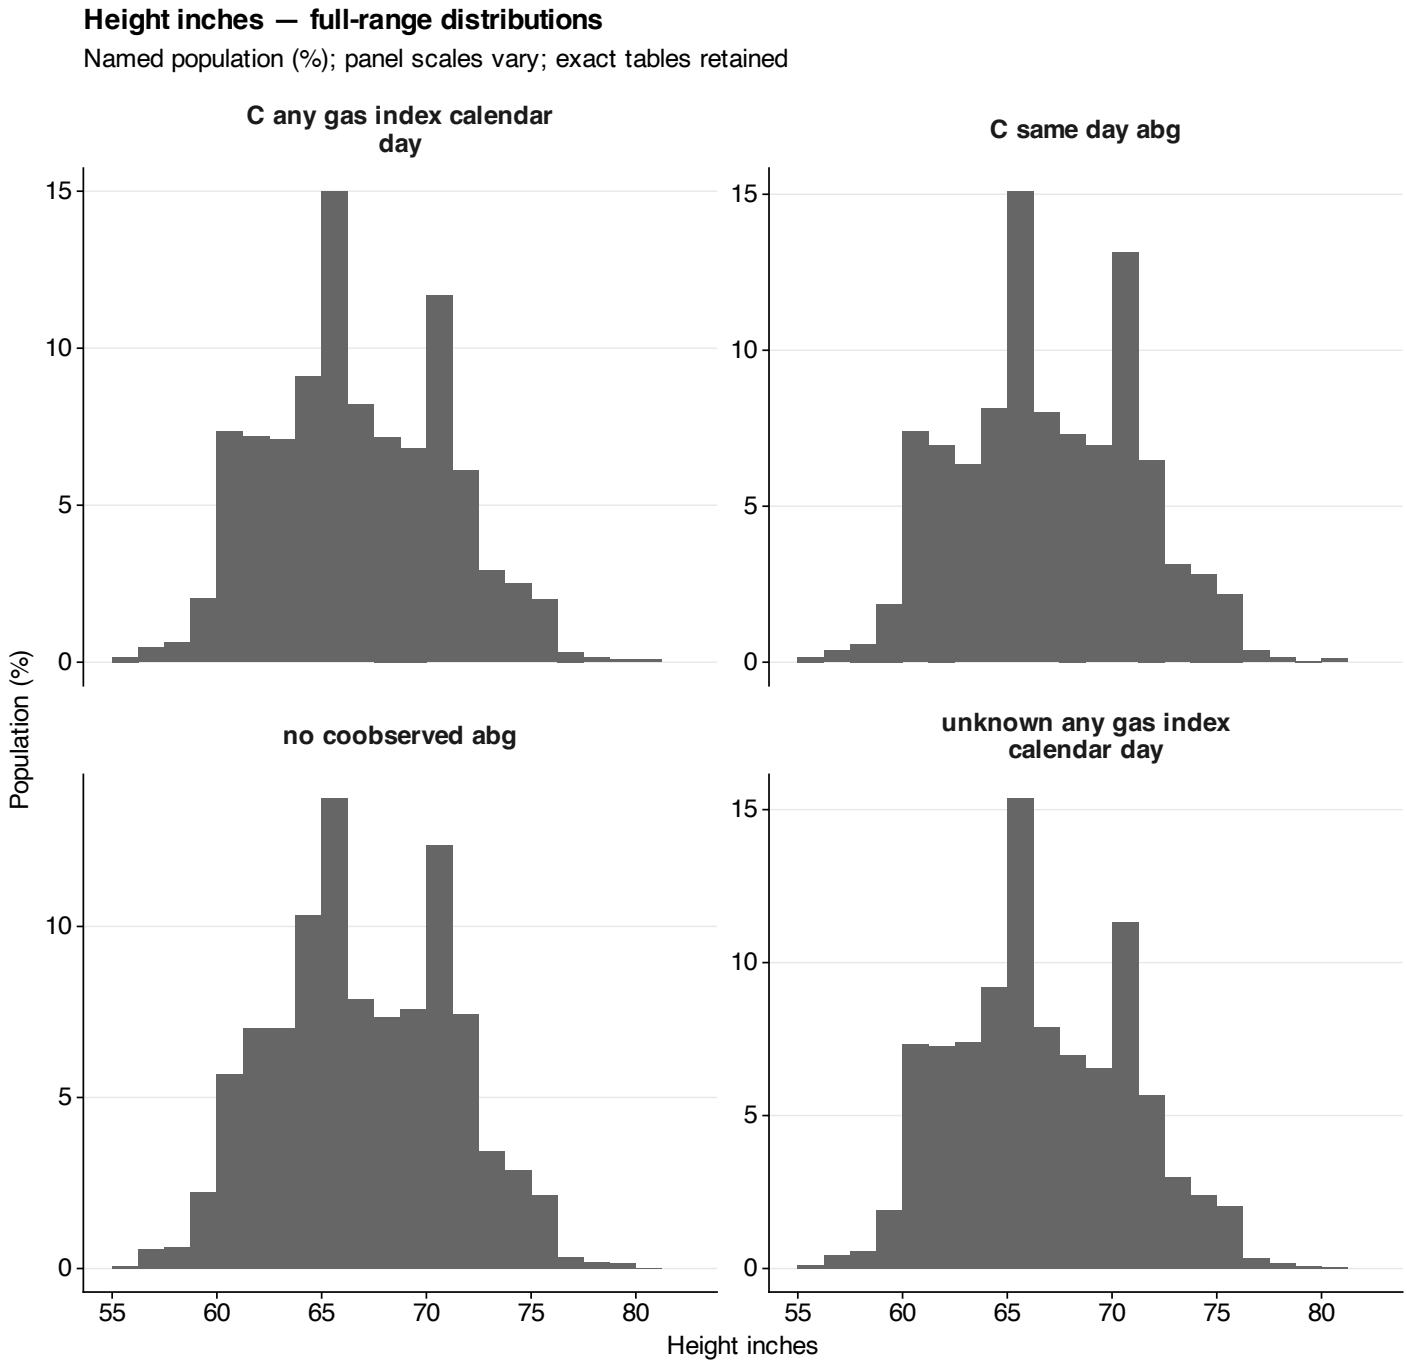

Figure 1074: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete height_inches stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

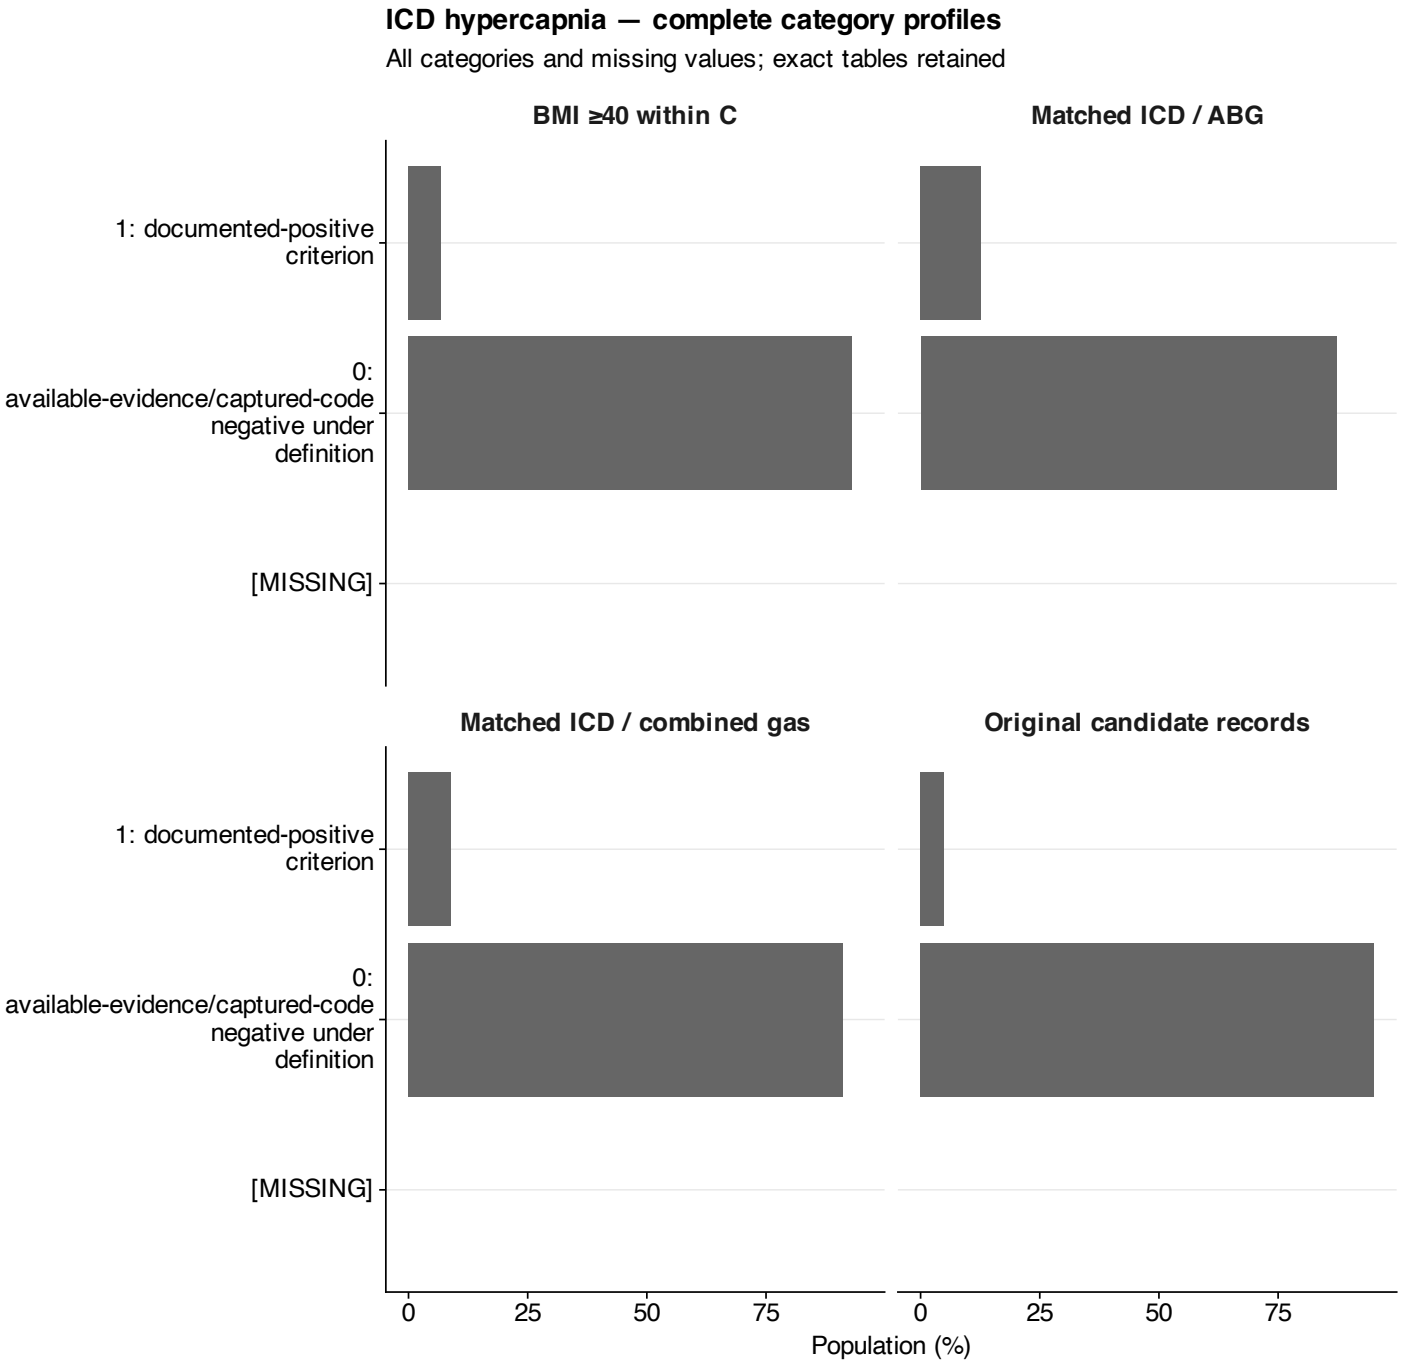

Figure 1091: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete icd_hypercapnia stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

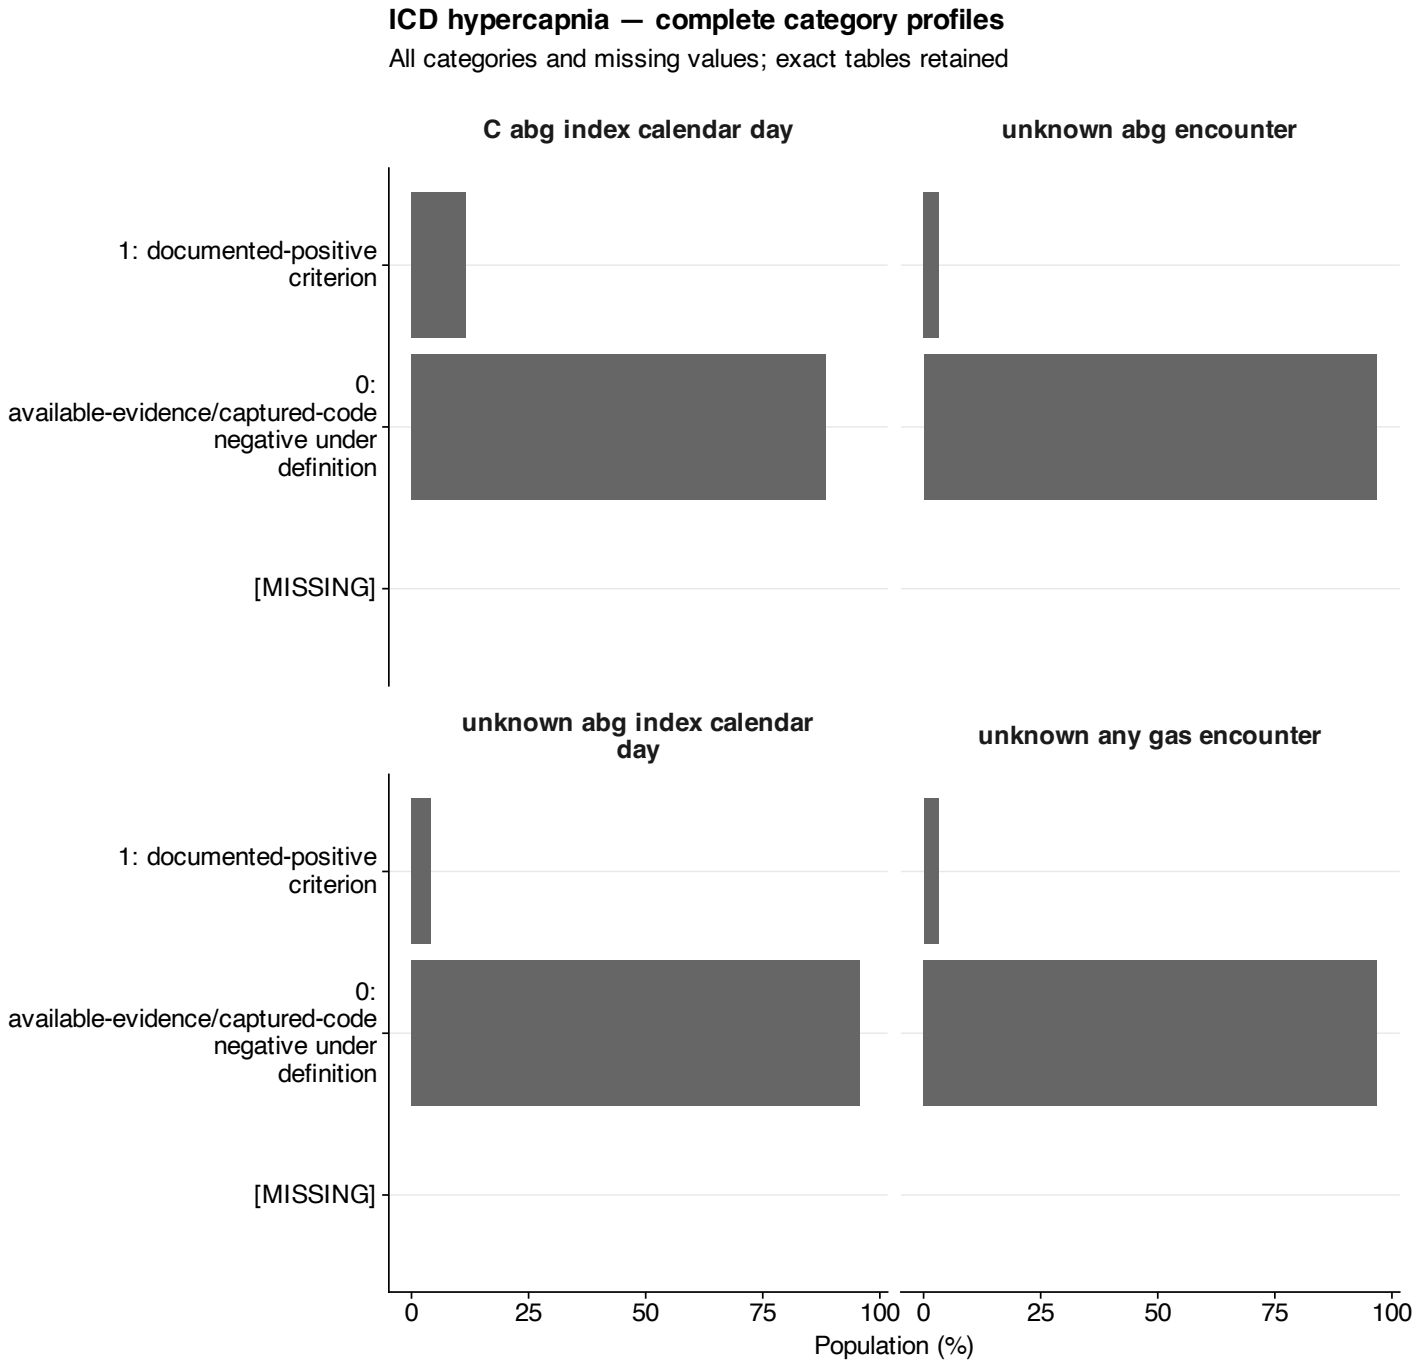

Figure 1092: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete icd_hypercapnia stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

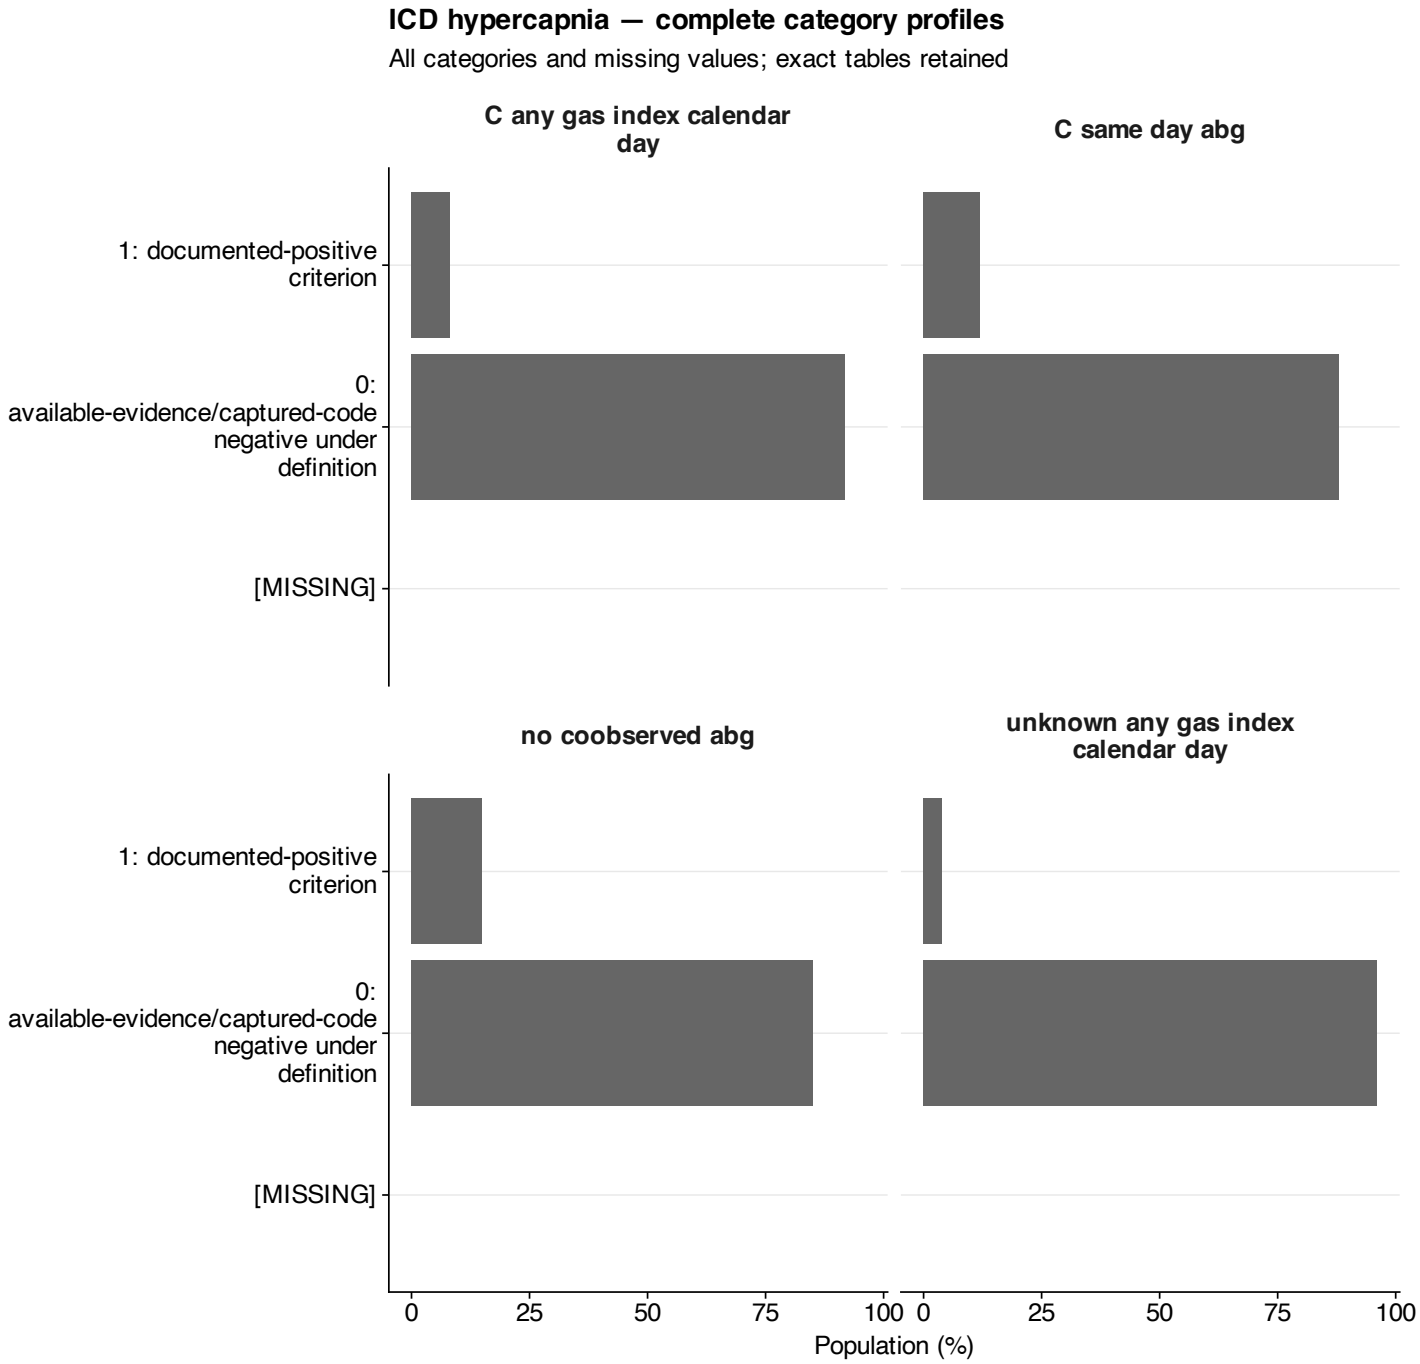

Figure 1093: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete icd_hypercapnia stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

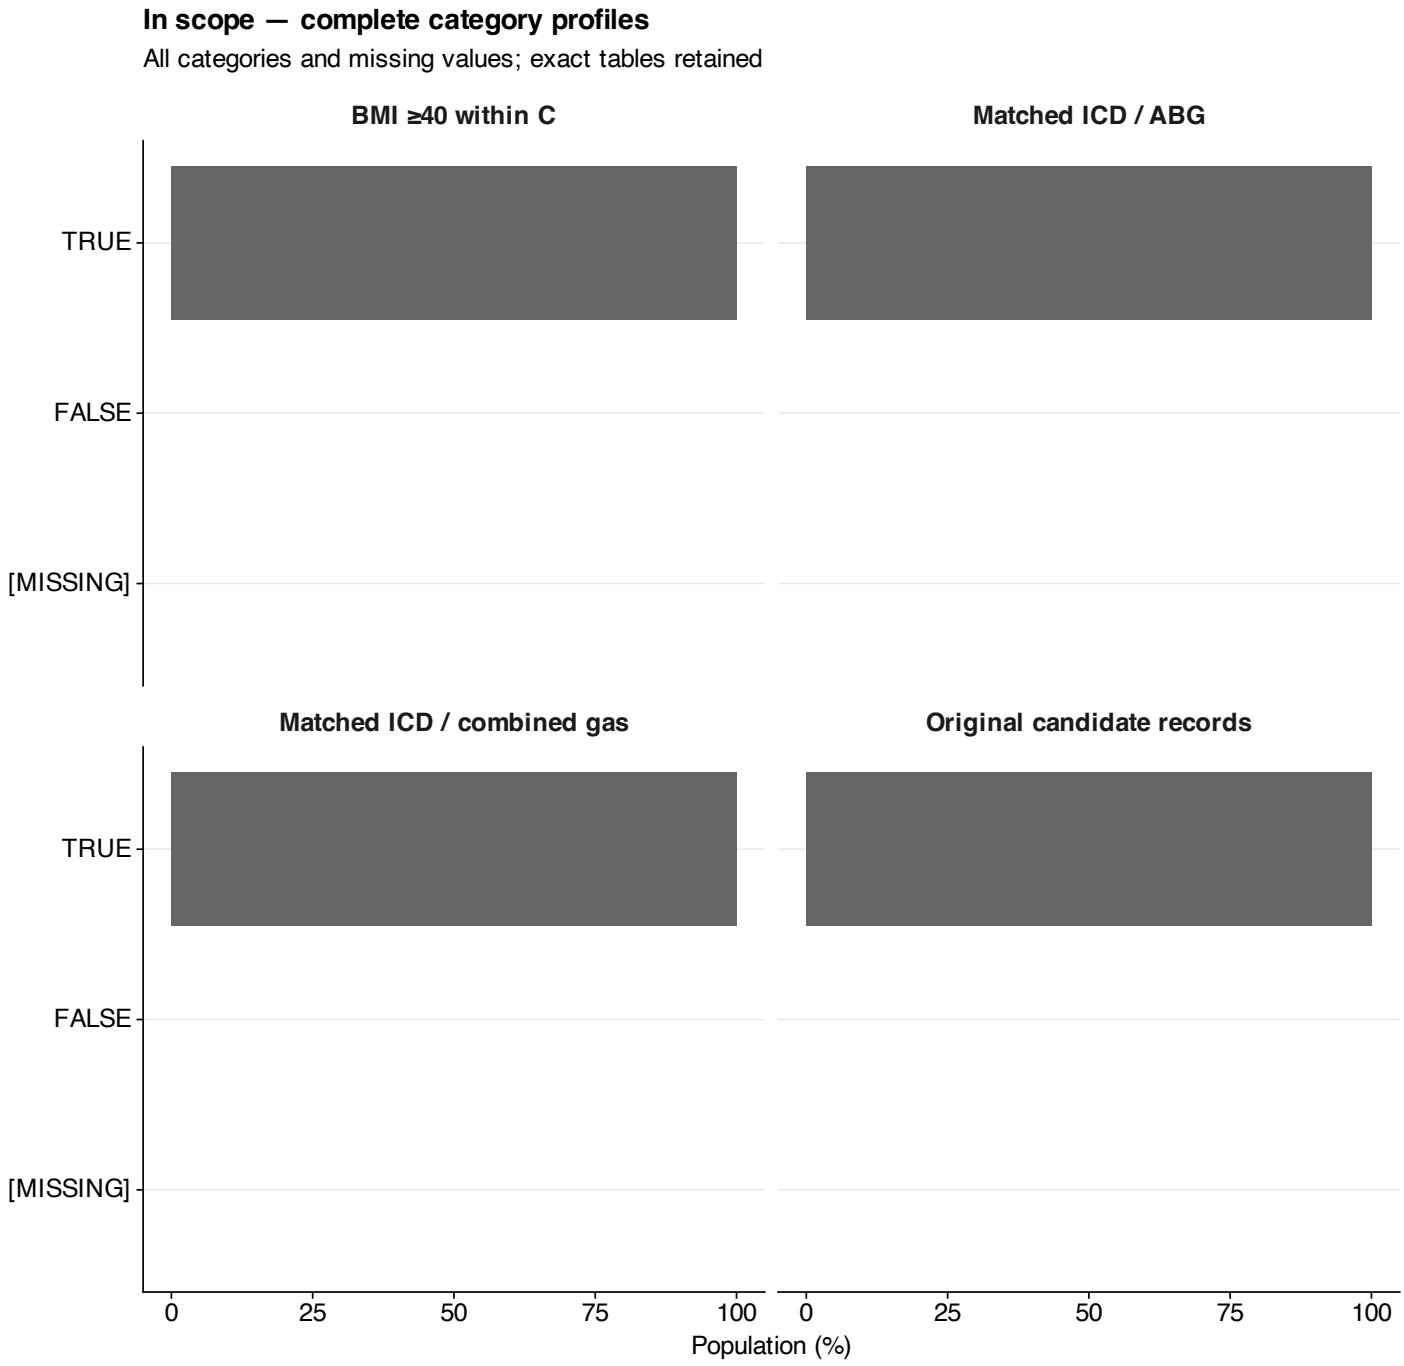

Figure 1094: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete in_scope stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

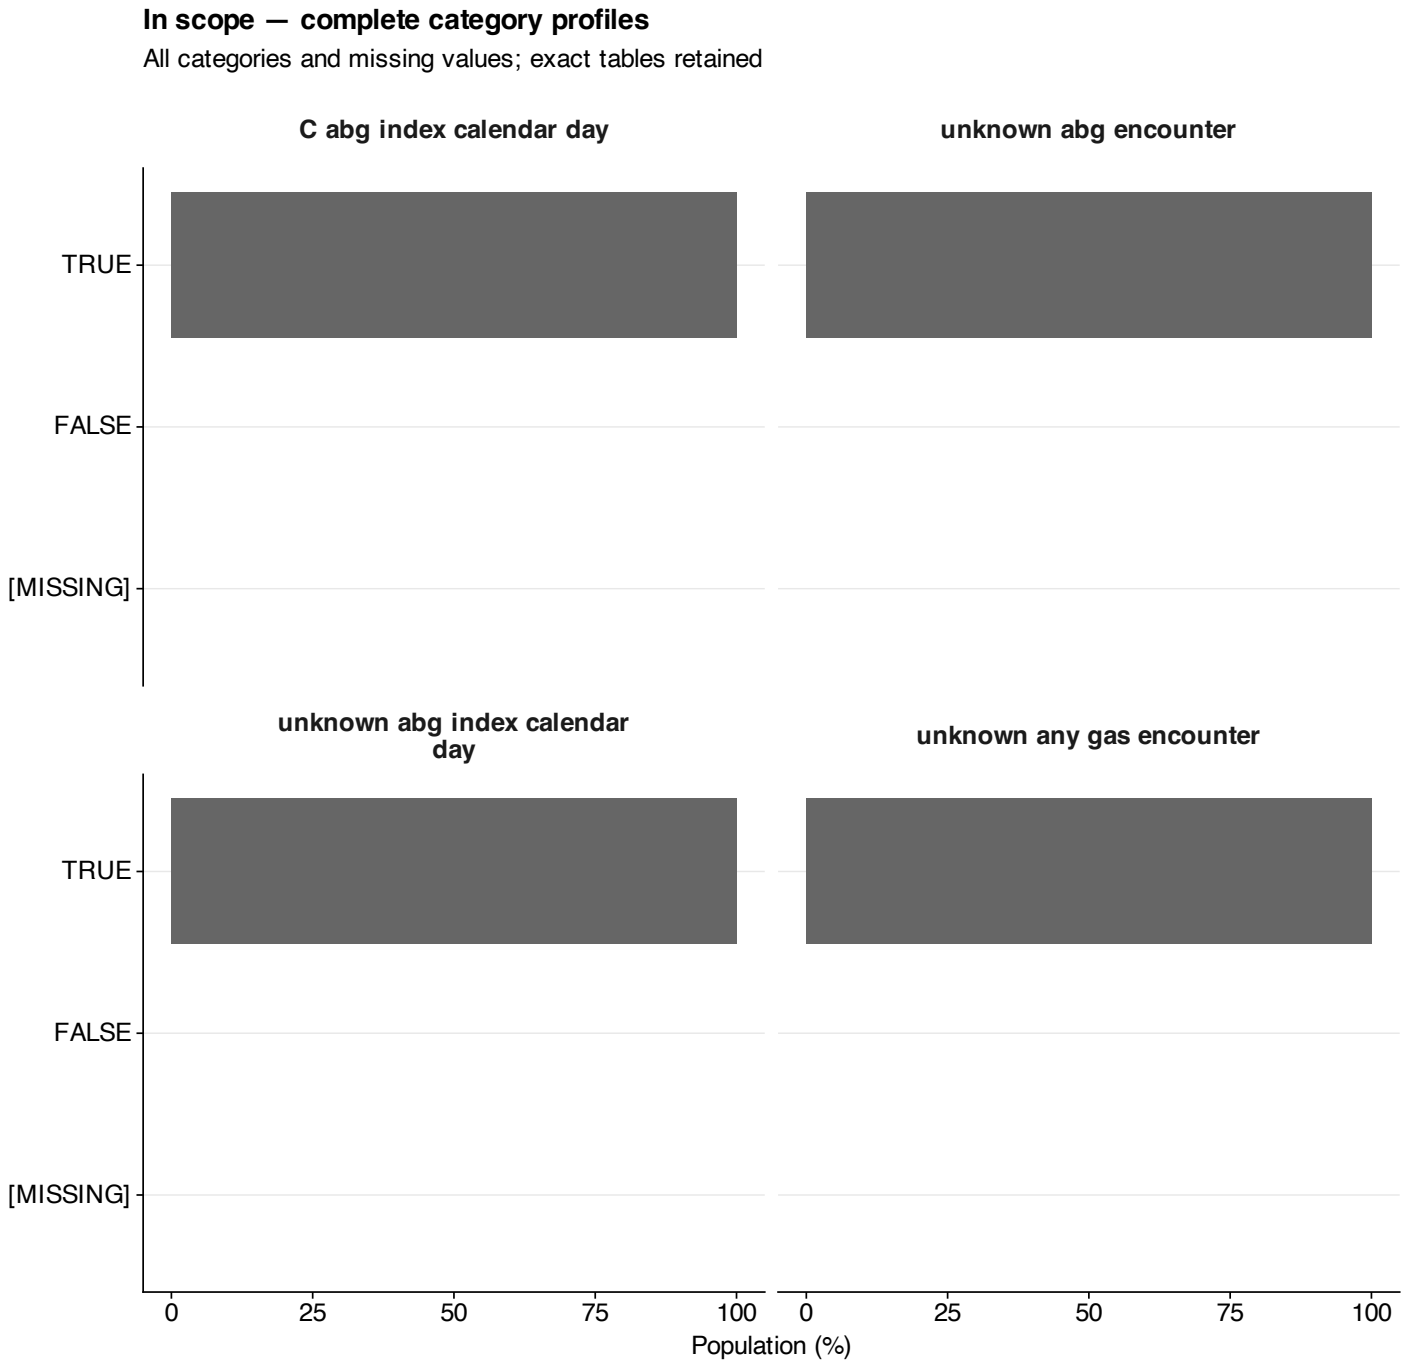

Figure 1095: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete in_scope stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

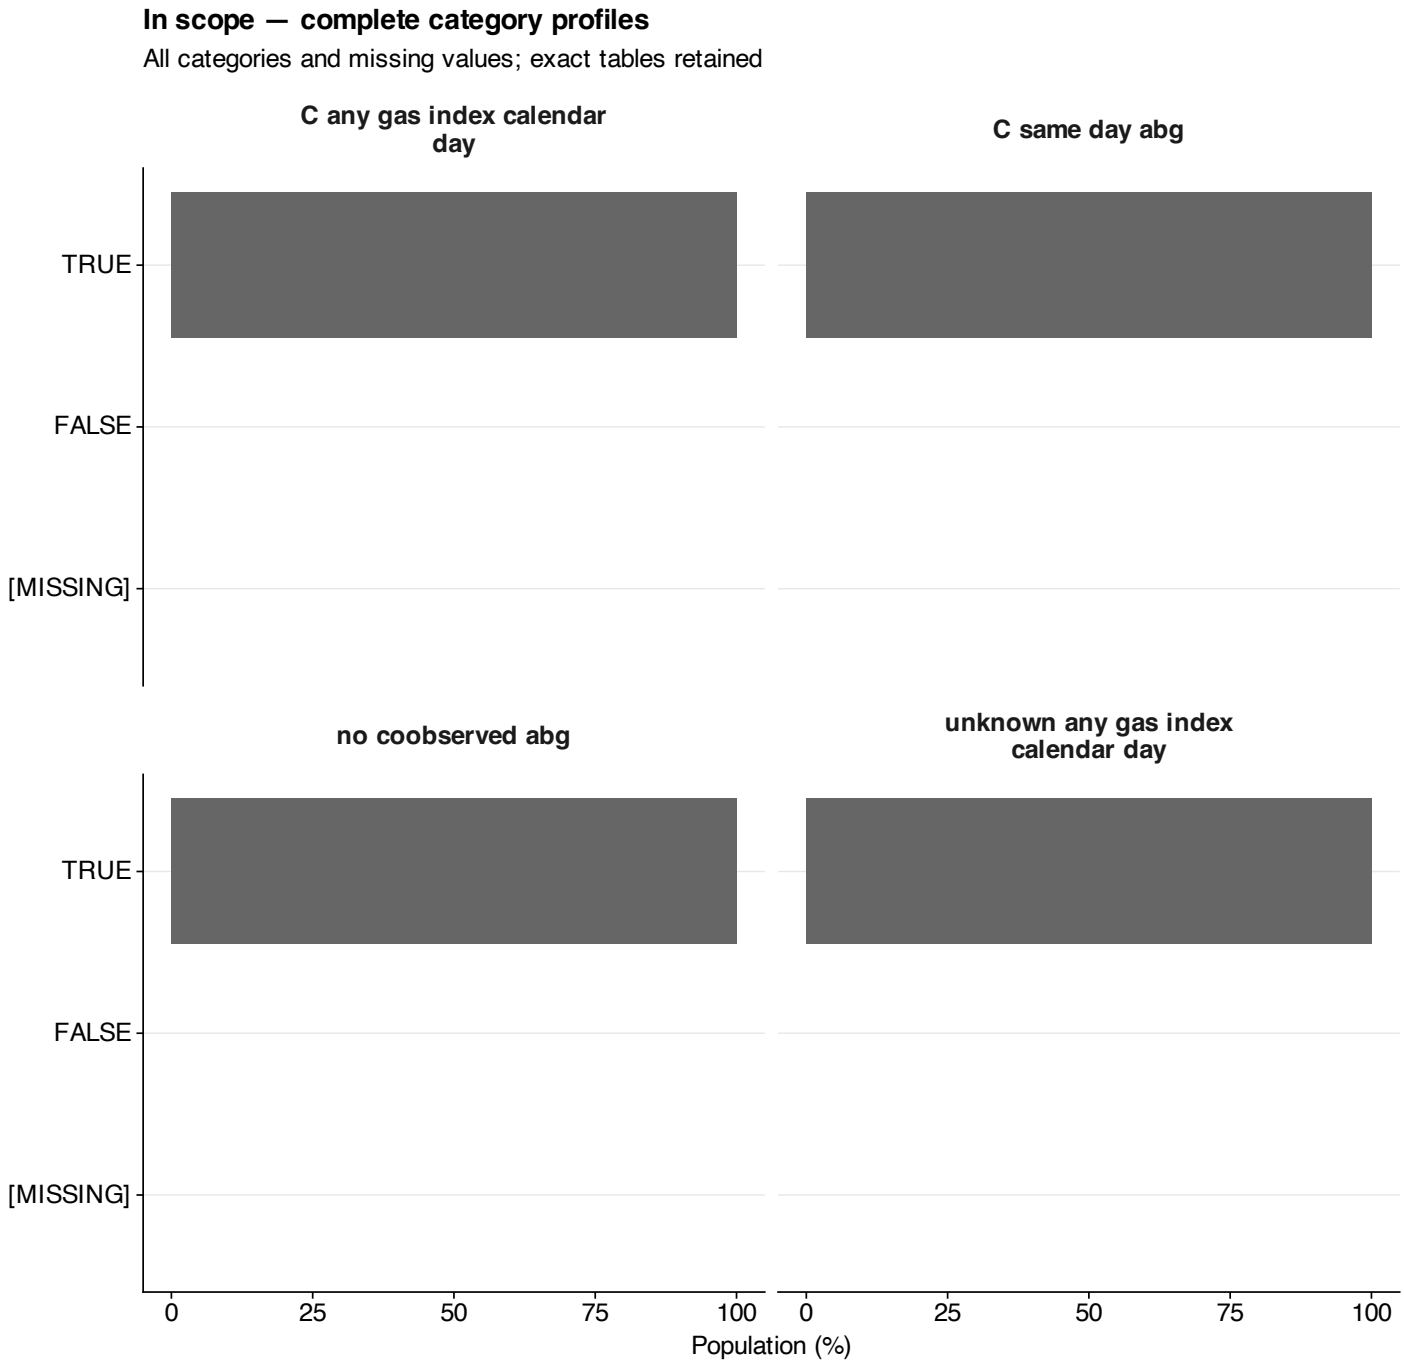

Figure 1096: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete in_scope stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

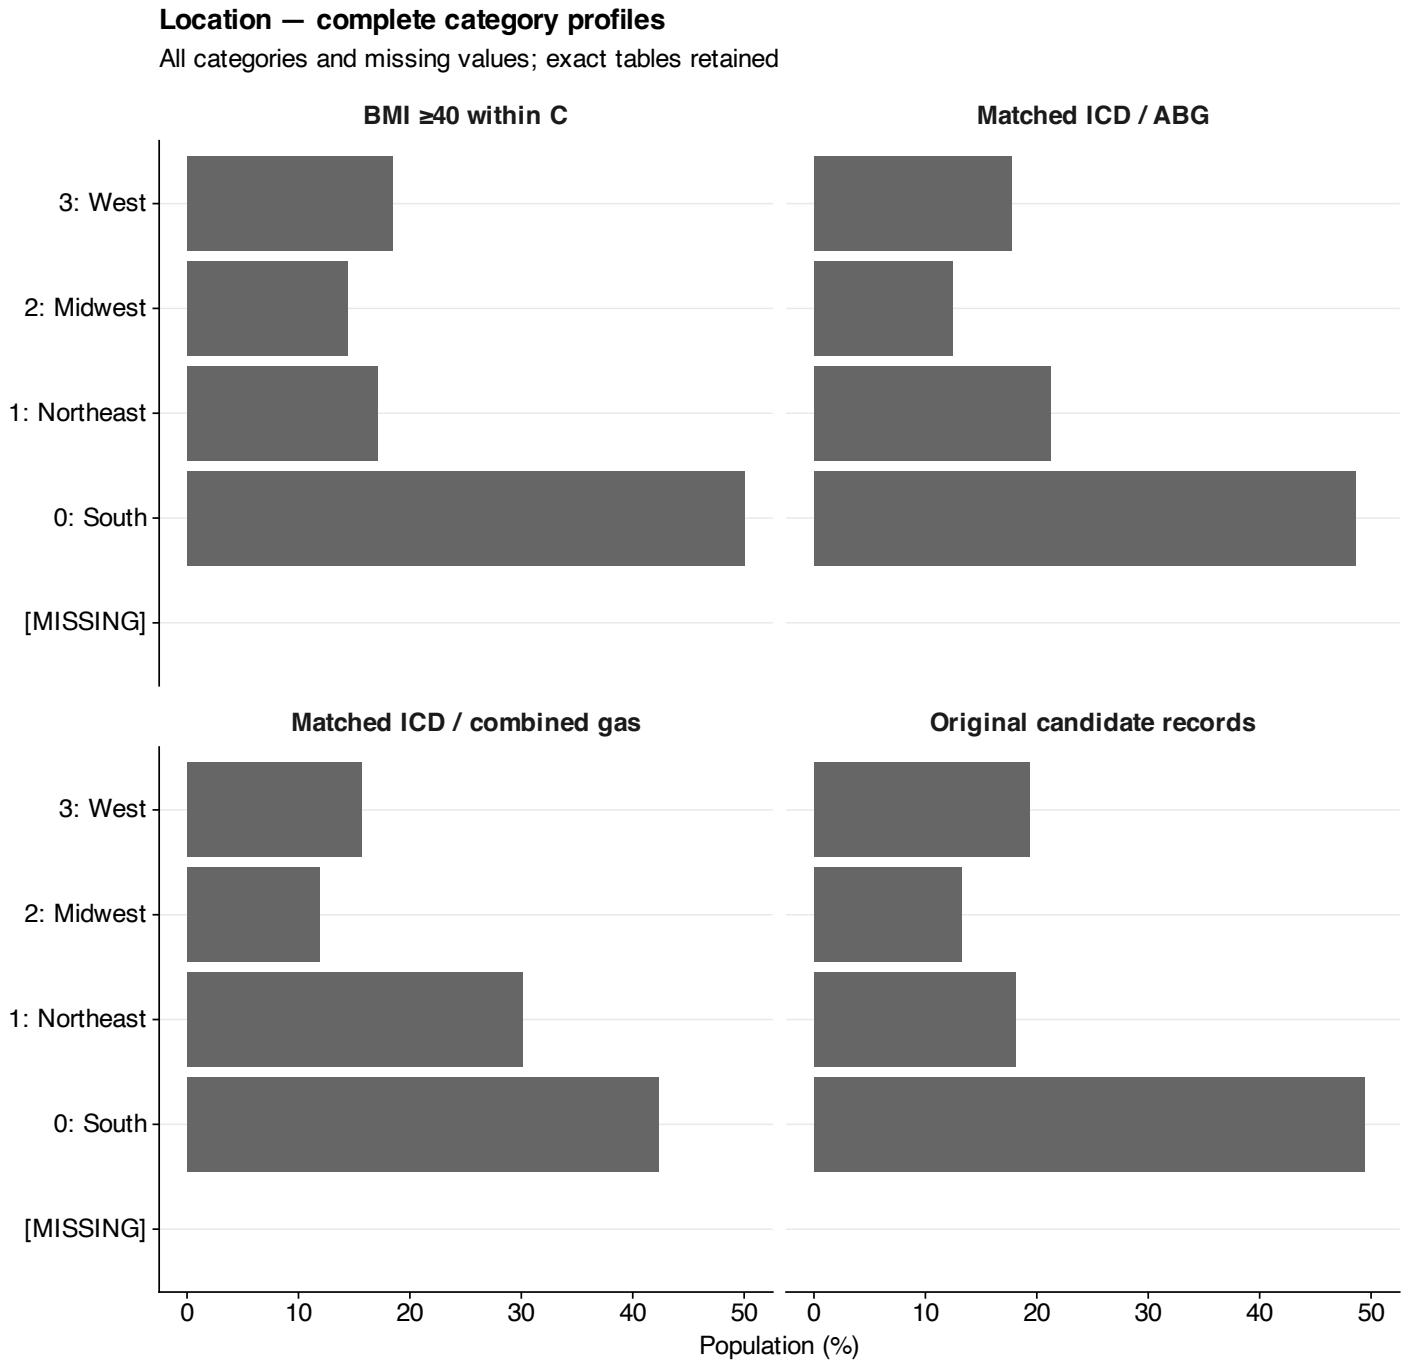

Figure 1097: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete location stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

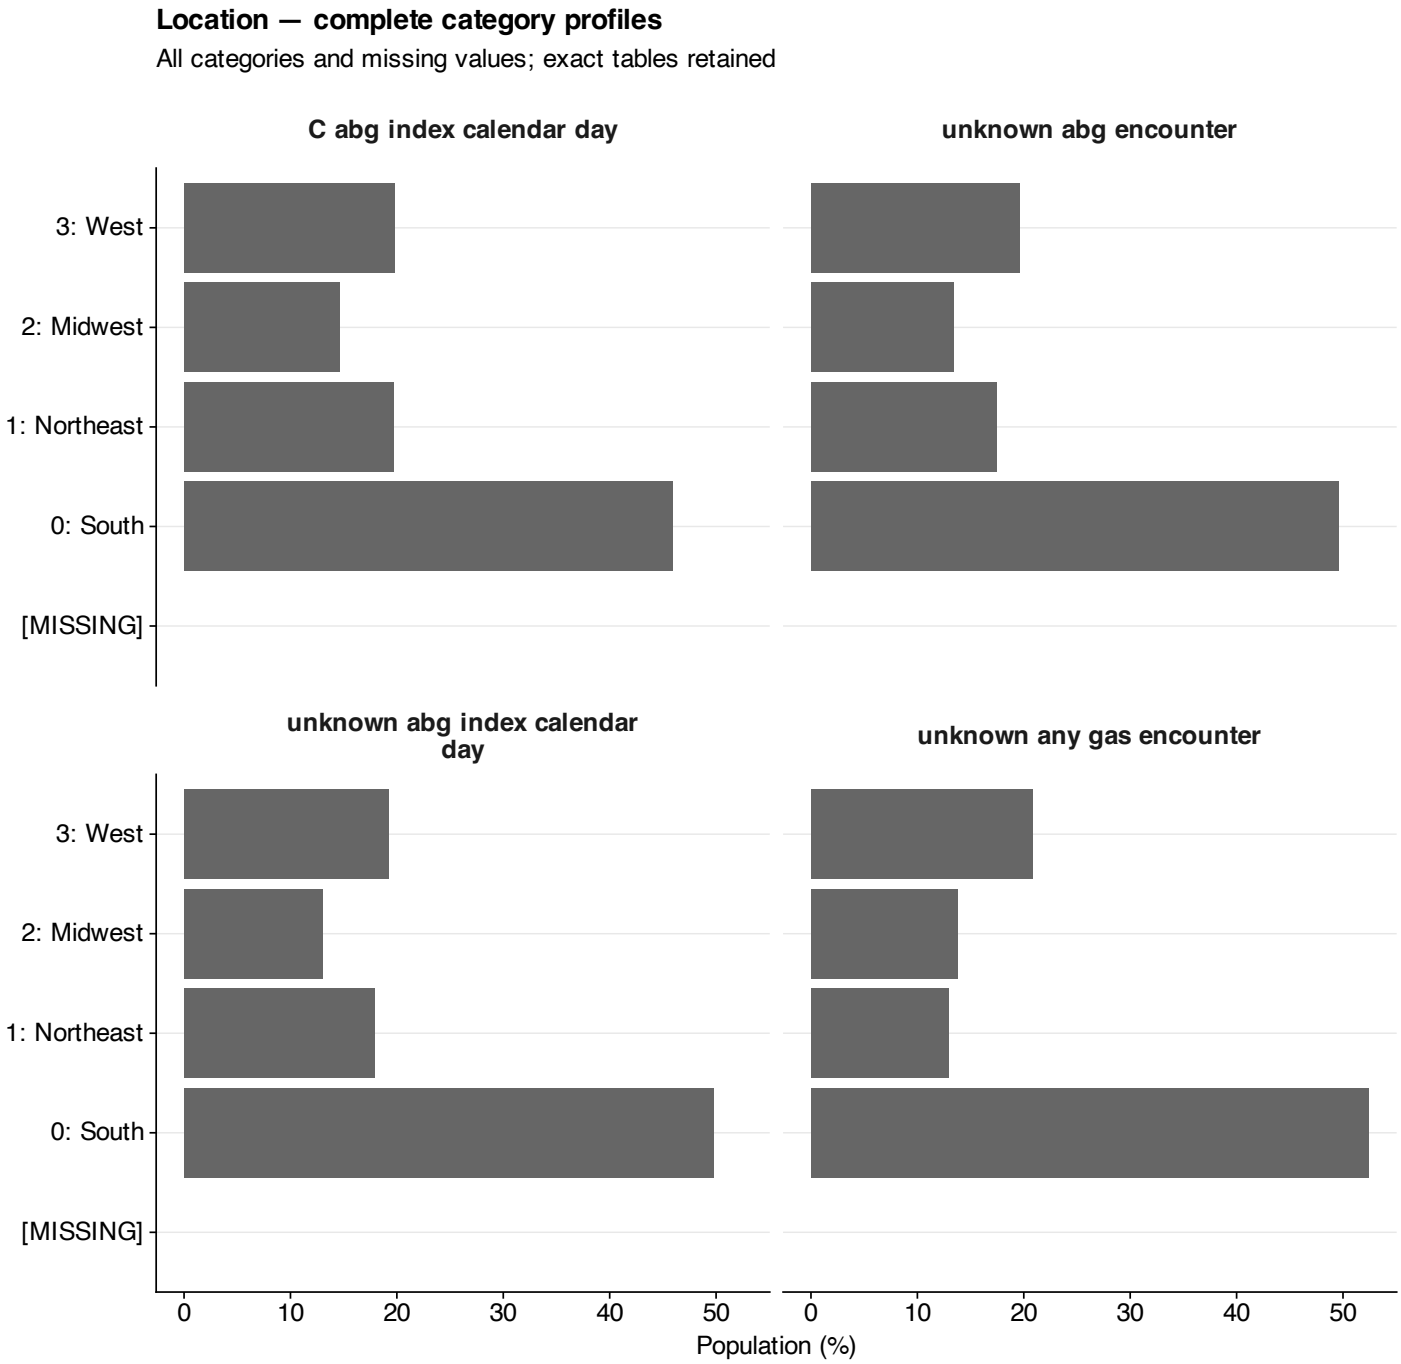

Figure 1098: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete location stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

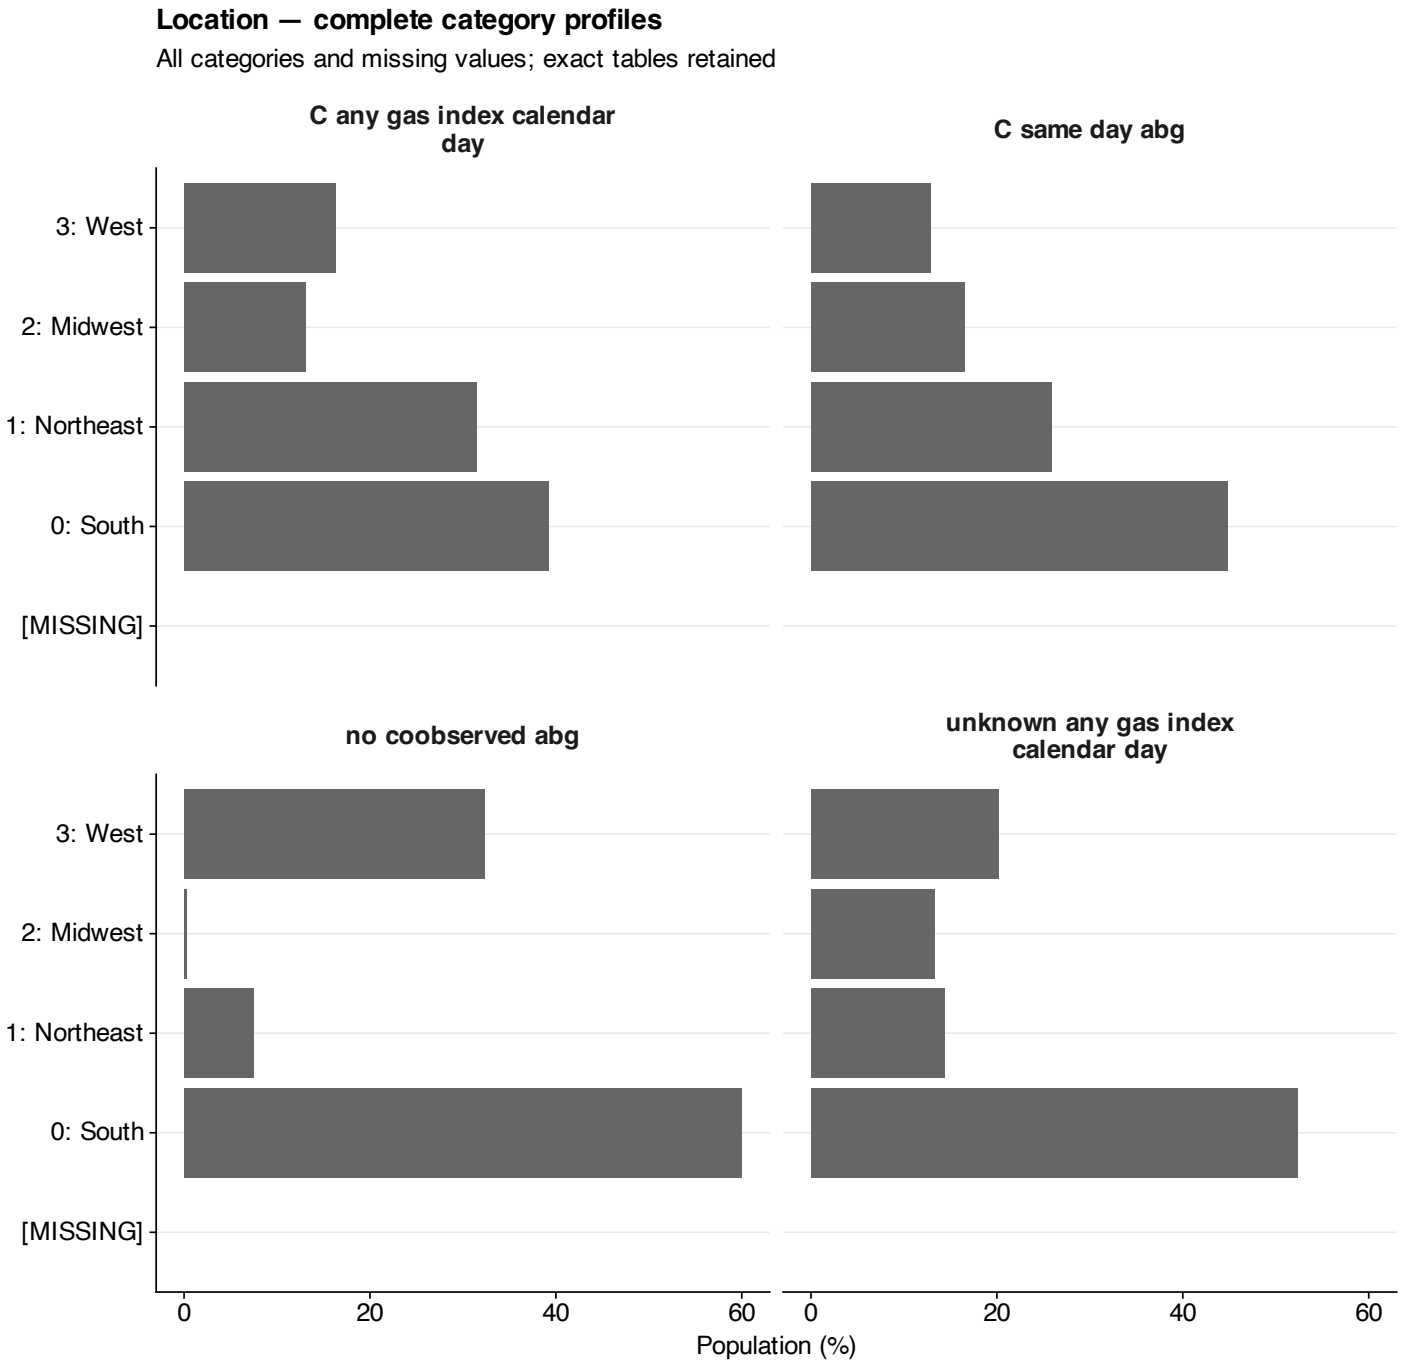

Figure 1099: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete location stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

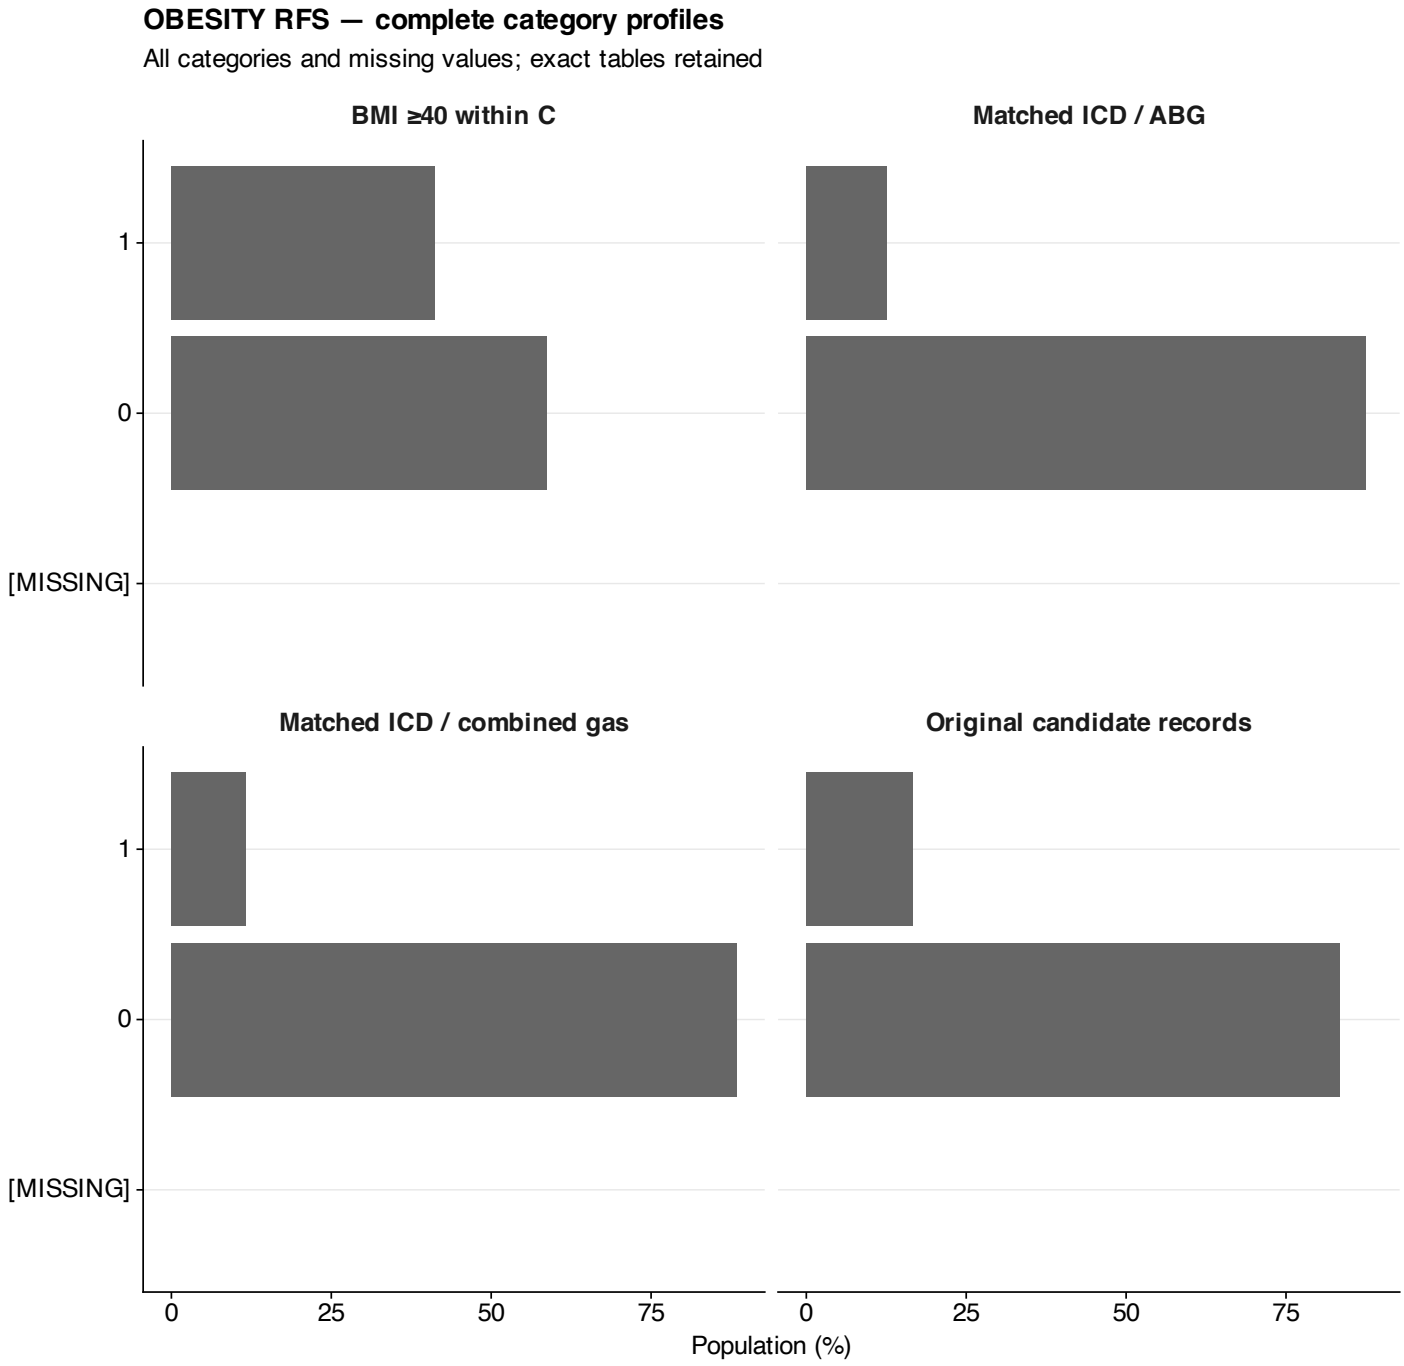

Figure 1100: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete OBESITY_rfs stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

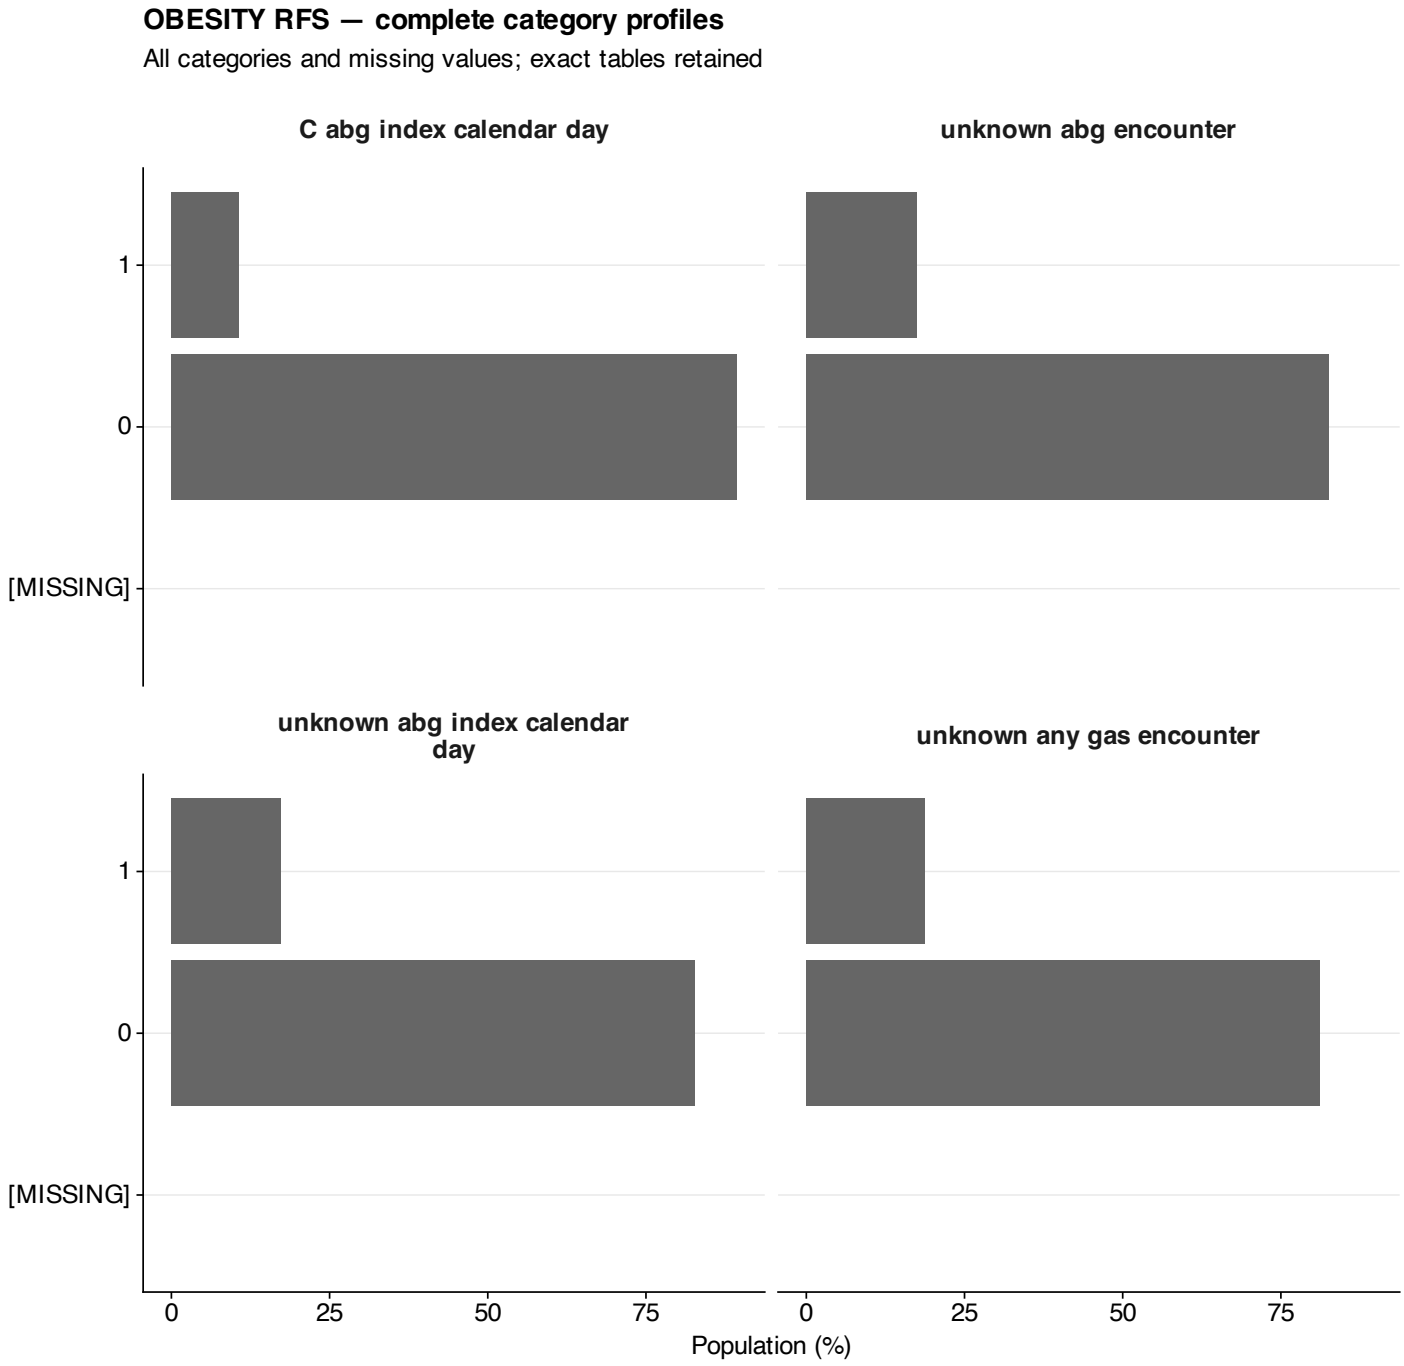

Figure 1101: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete OBESITY_rfs stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

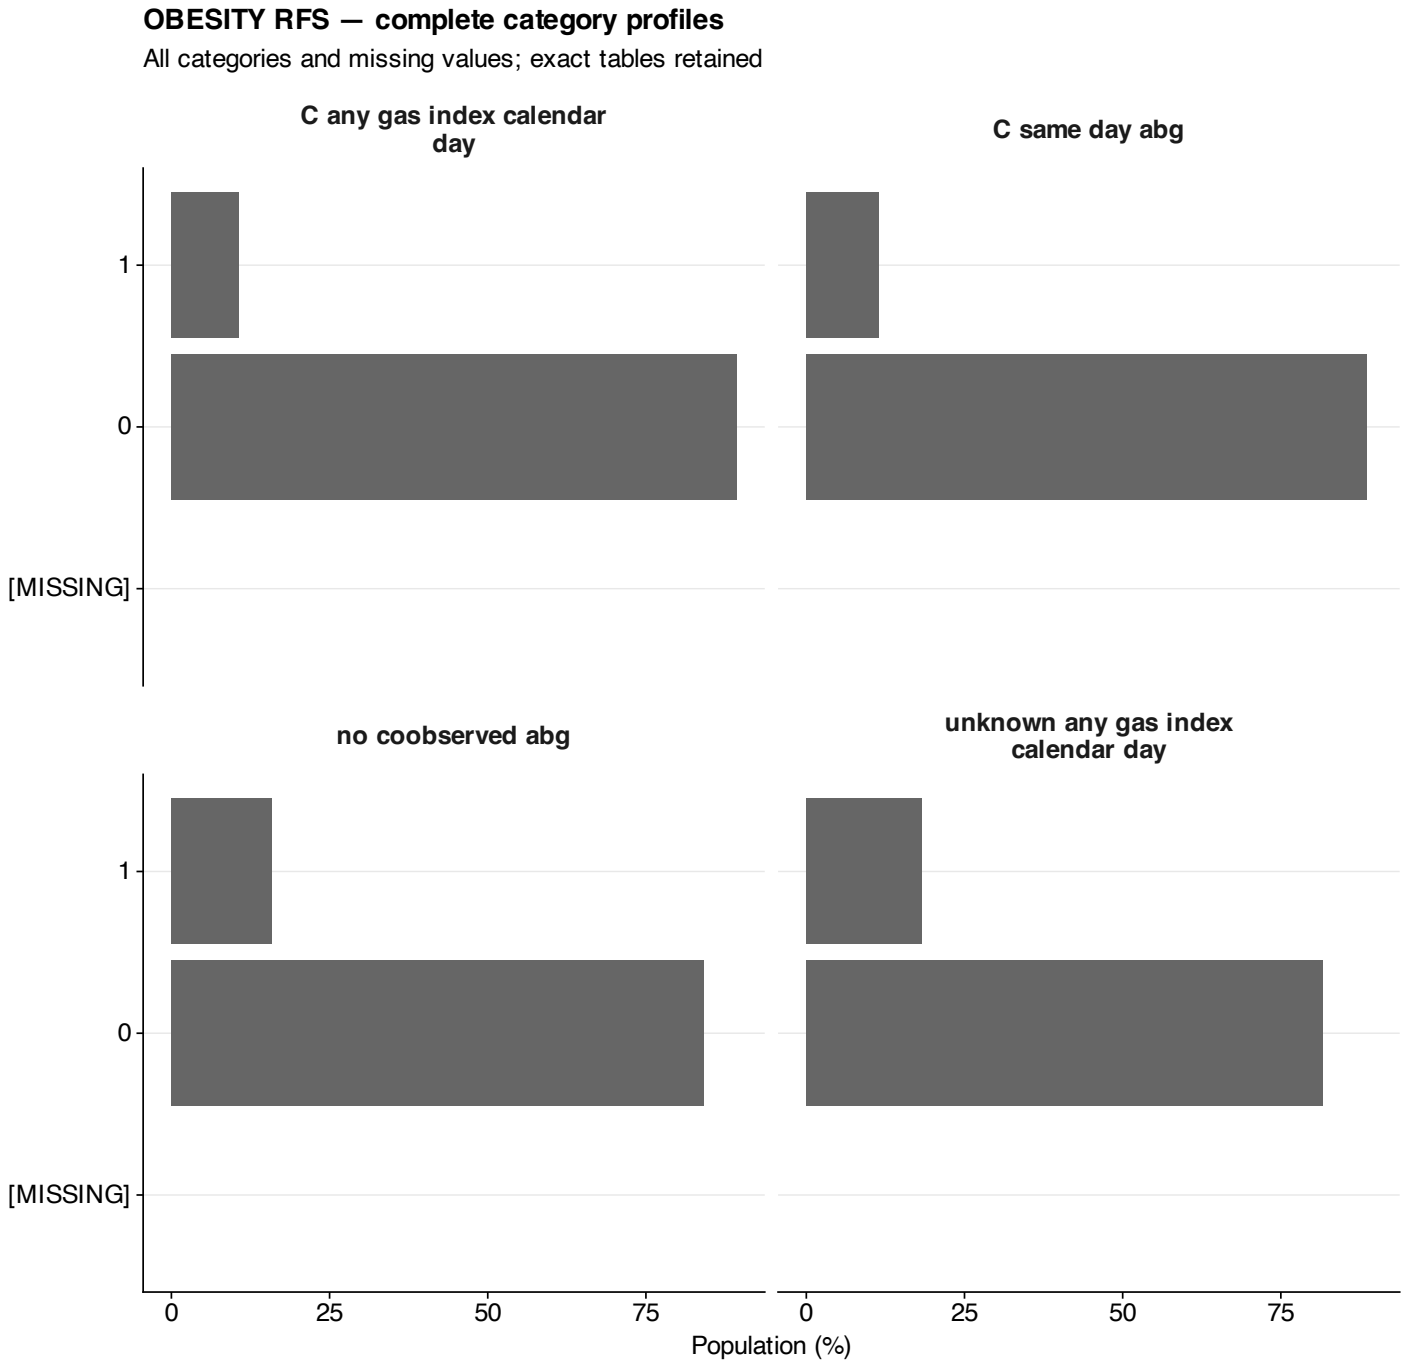

Figure 1102: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete OBESITY_rfs stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

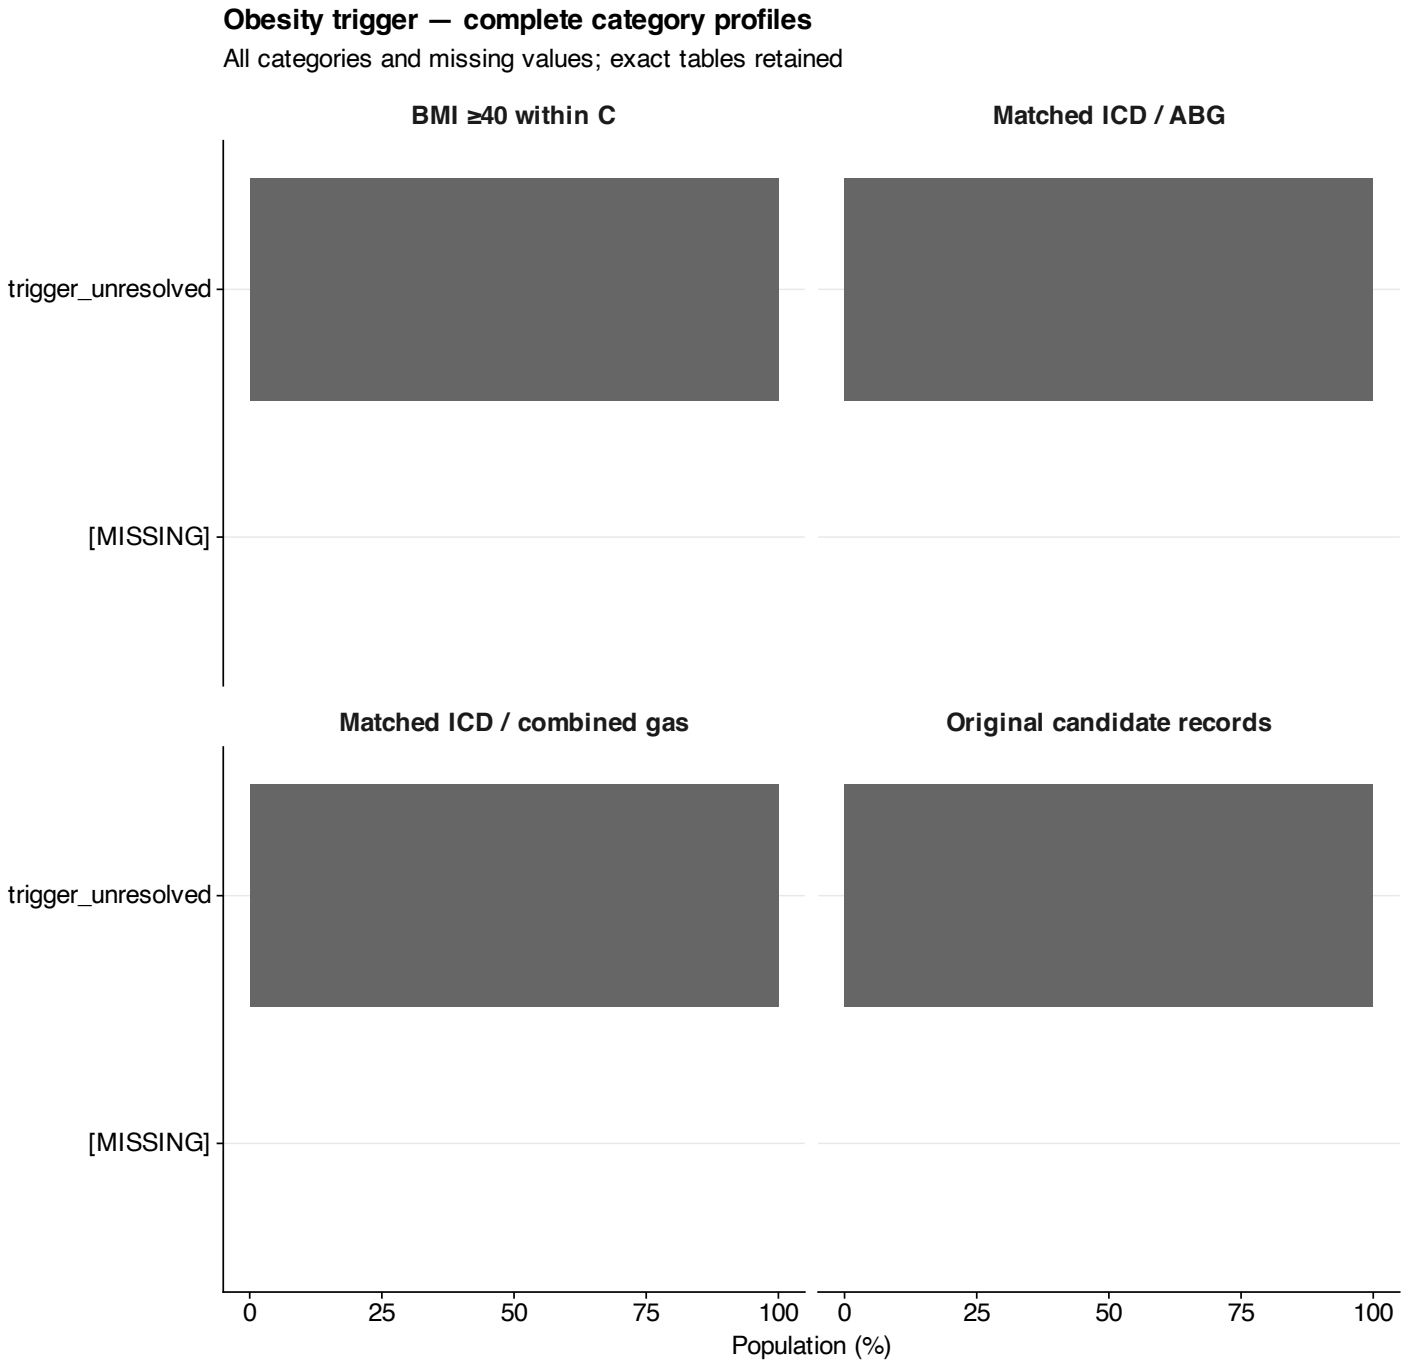

Figure 1103: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete obesity_trigger stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

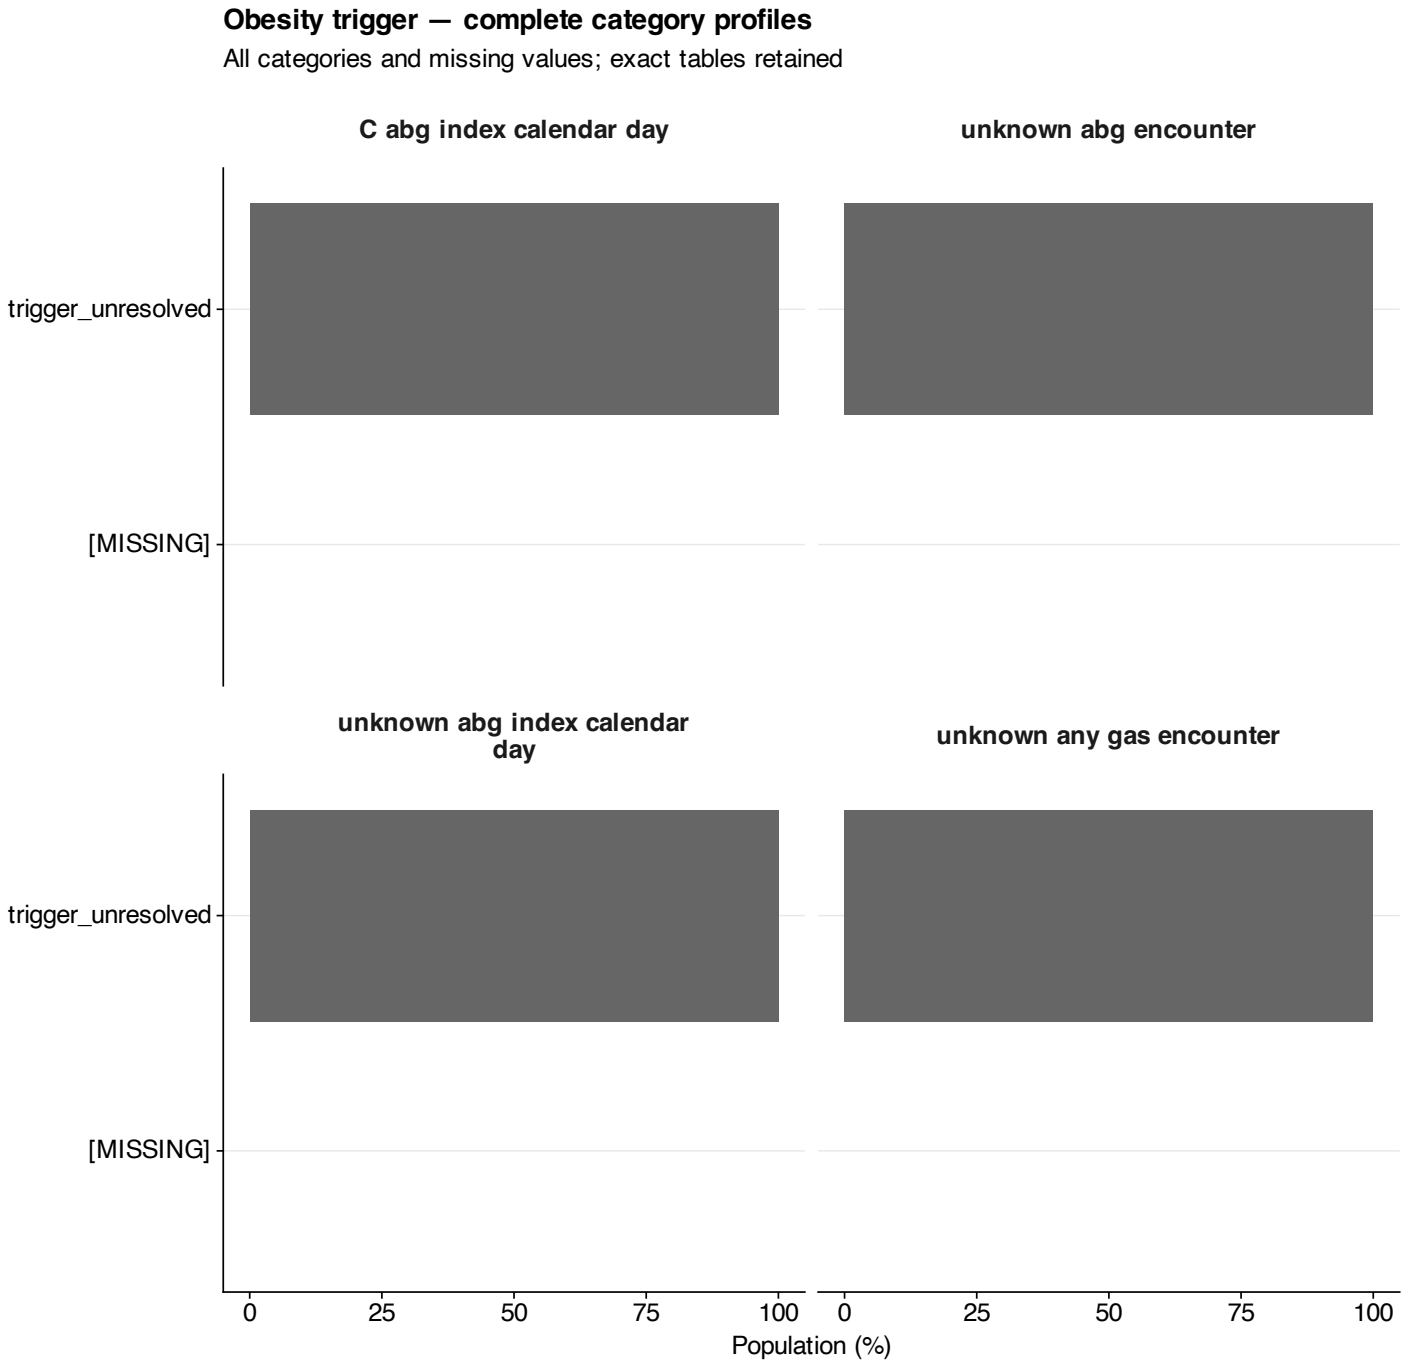

Figure 1104: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete obesity_trigger stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

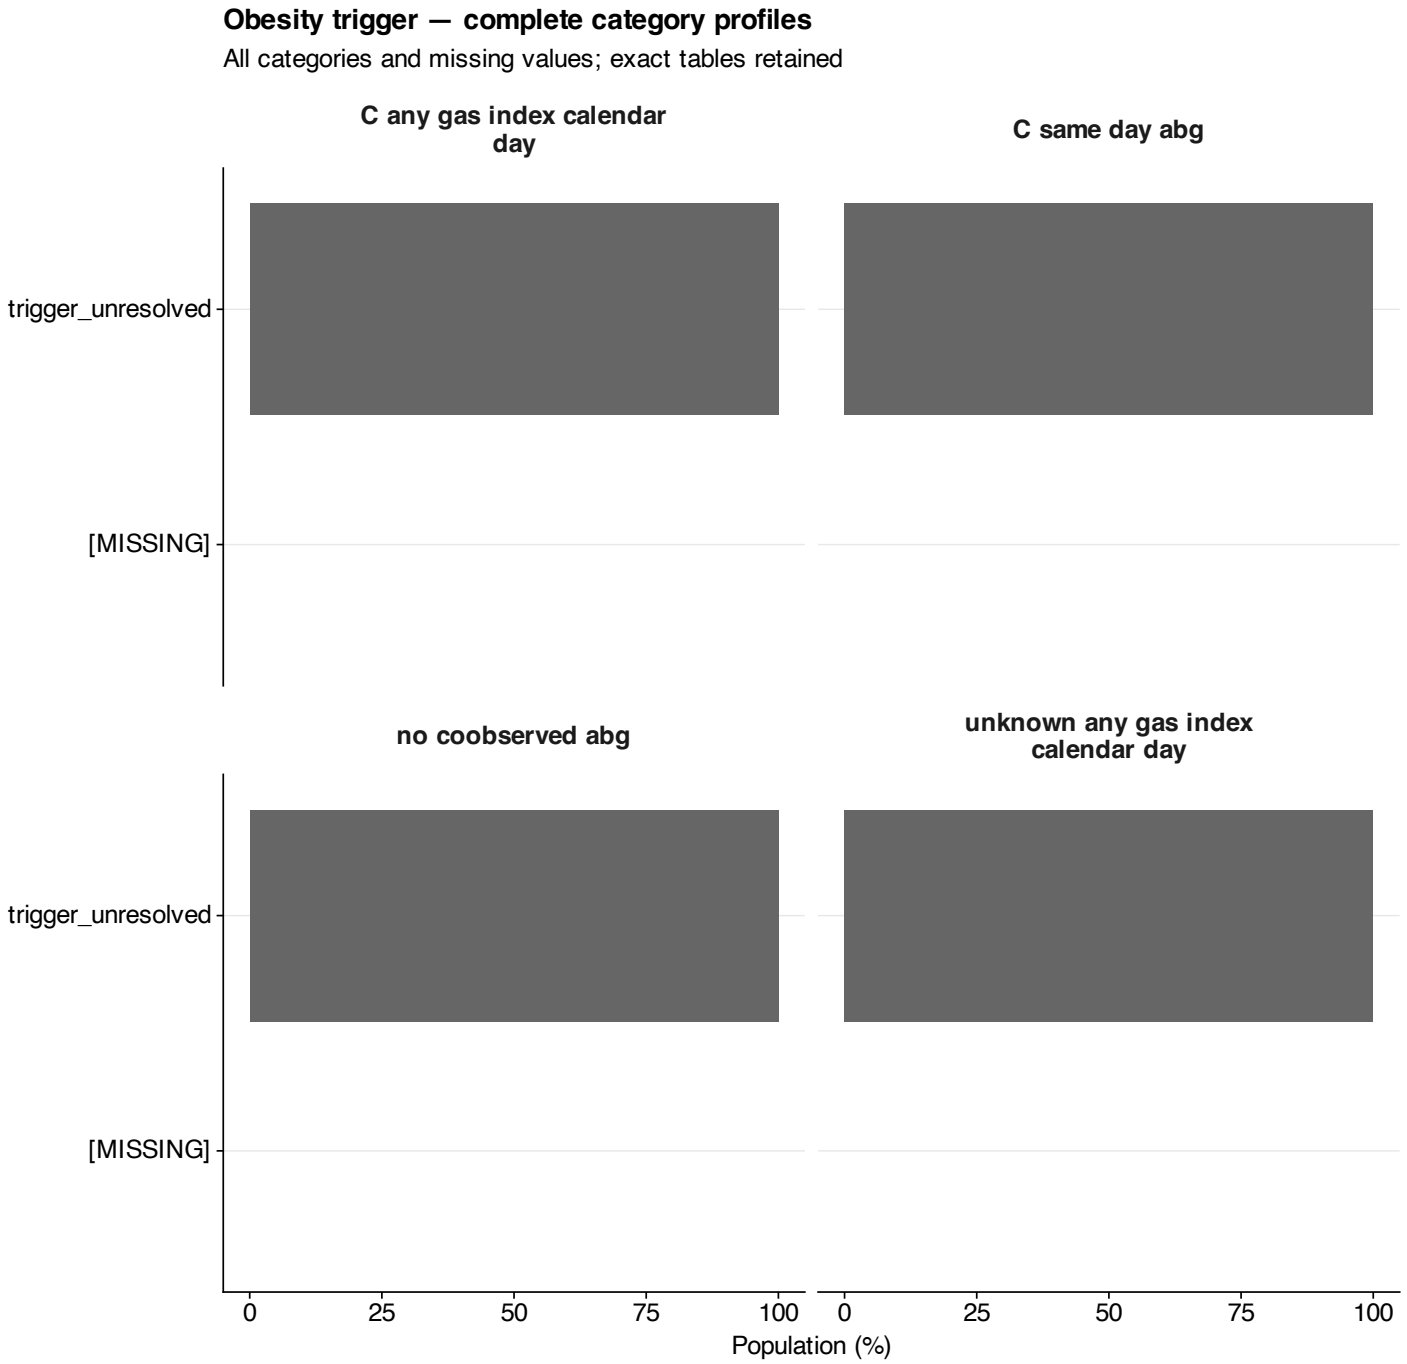

Figure 1105: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete obesity_trigger stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

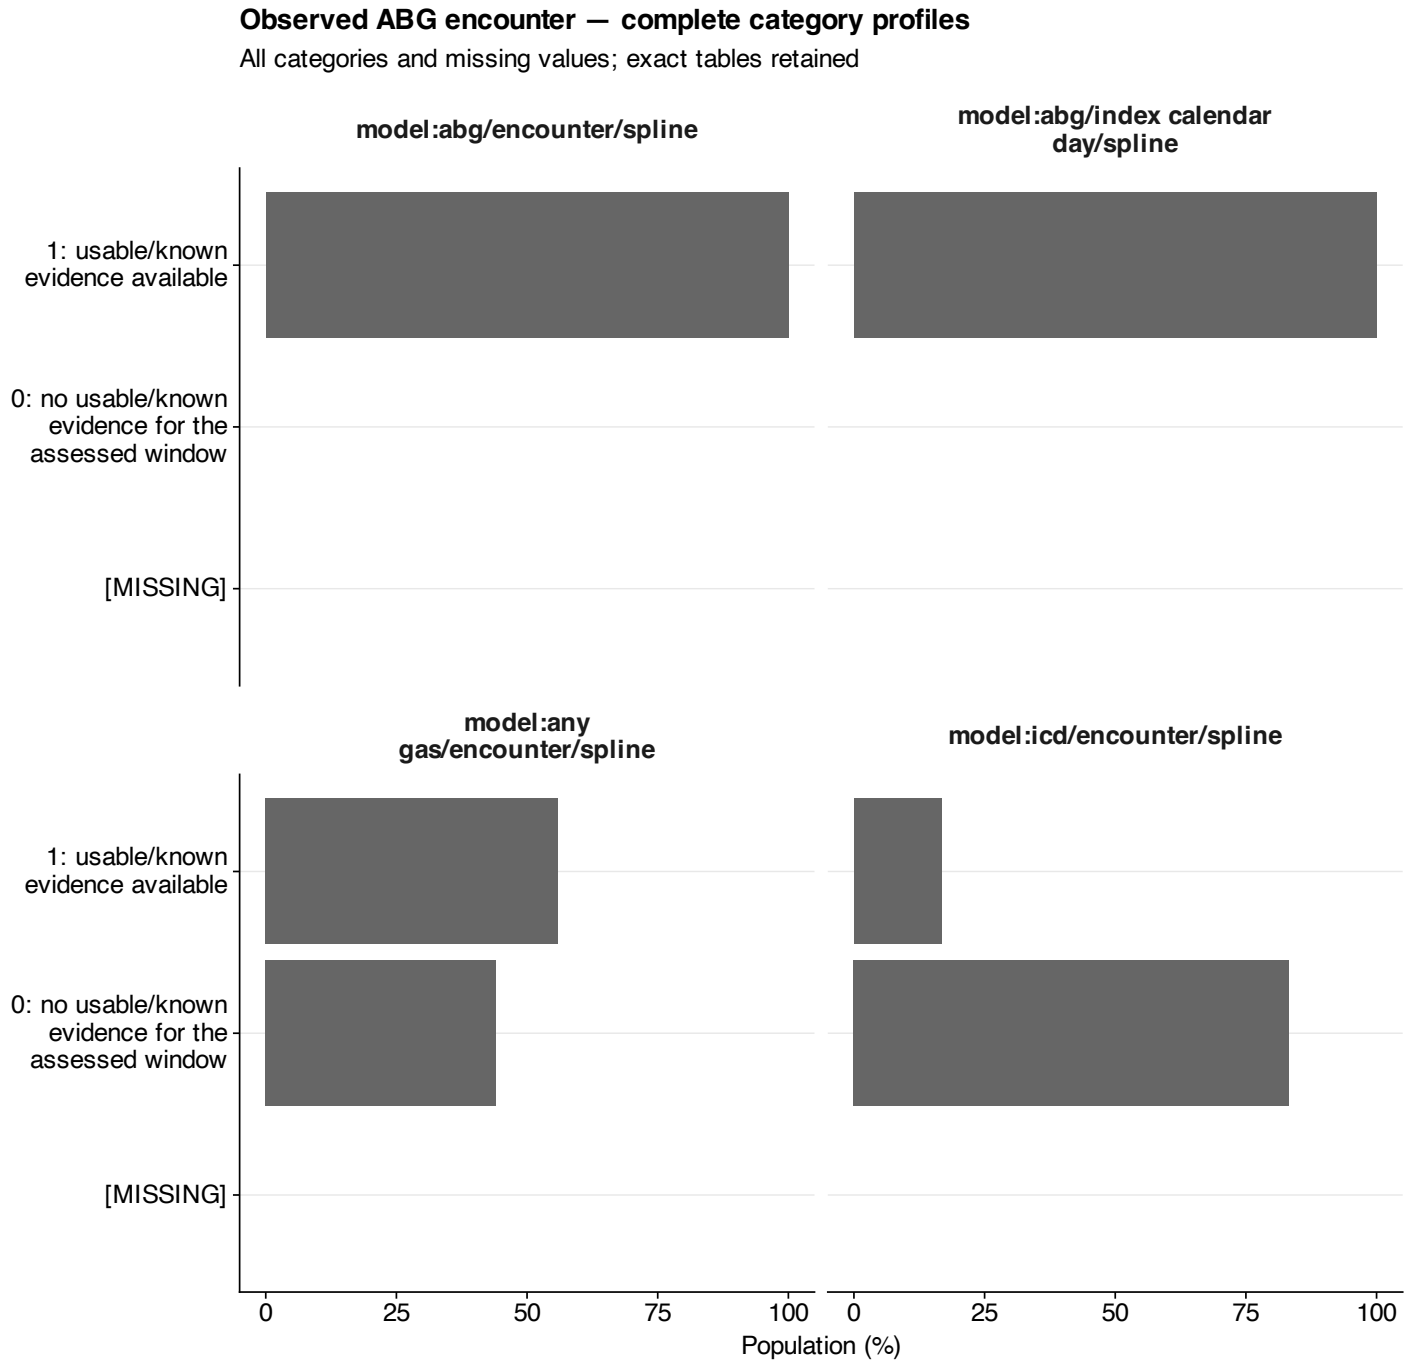

Figure 1106: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete observed_abg_encounter stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

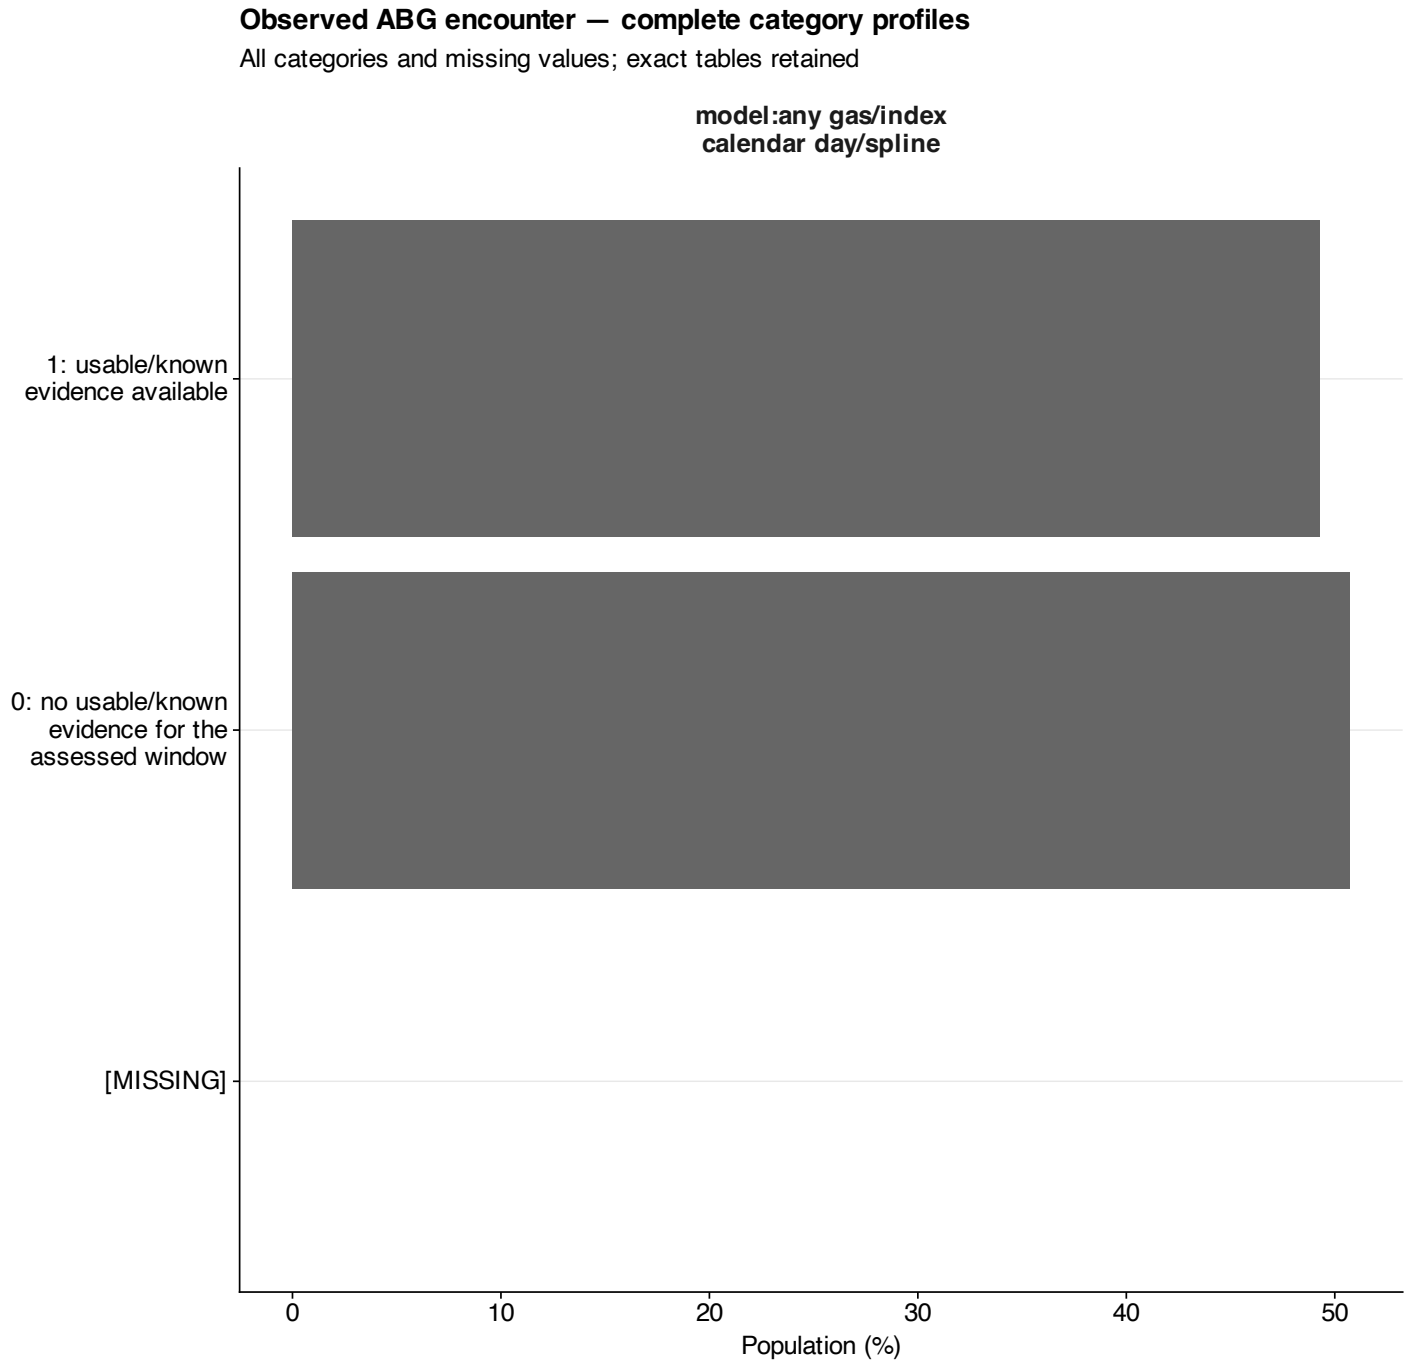

Figure 1107: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete observed_abg_encounter stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

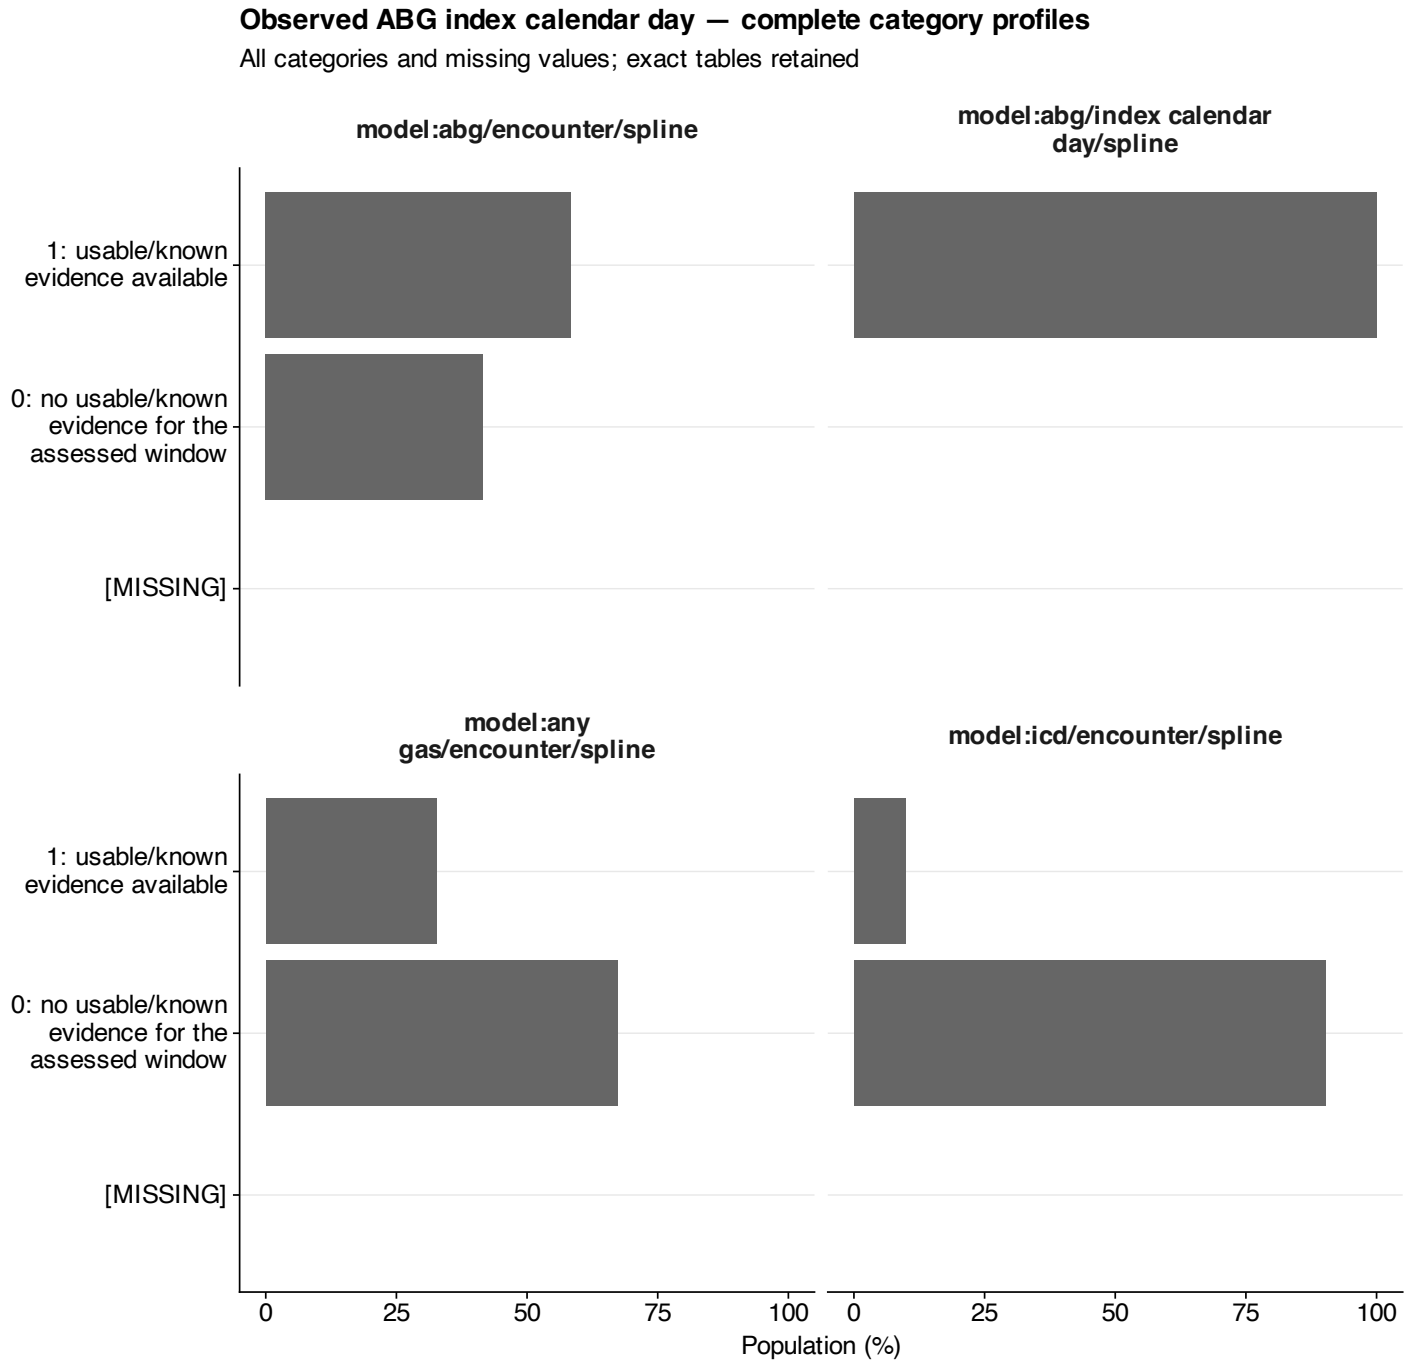

Figure 1108: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete observed_abg_index_calendar_day stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

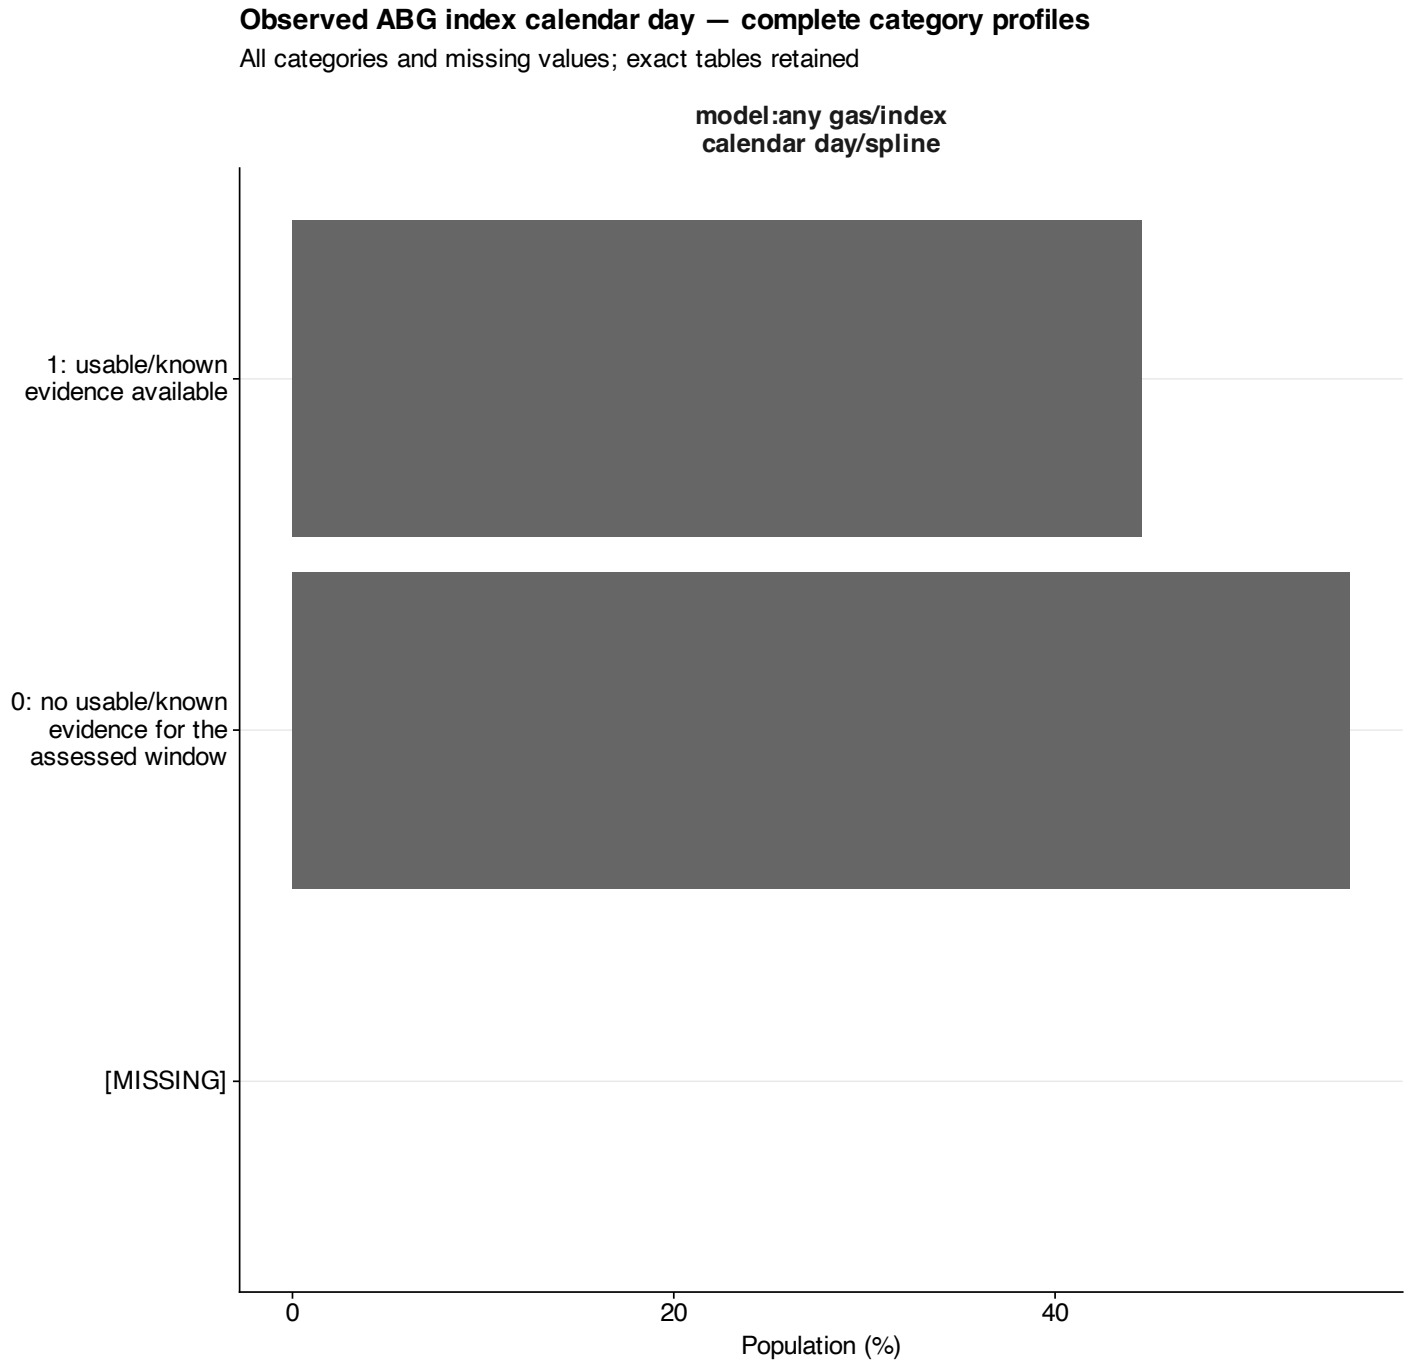

Figure 1109: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete observed_abg_index_calendar_day stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

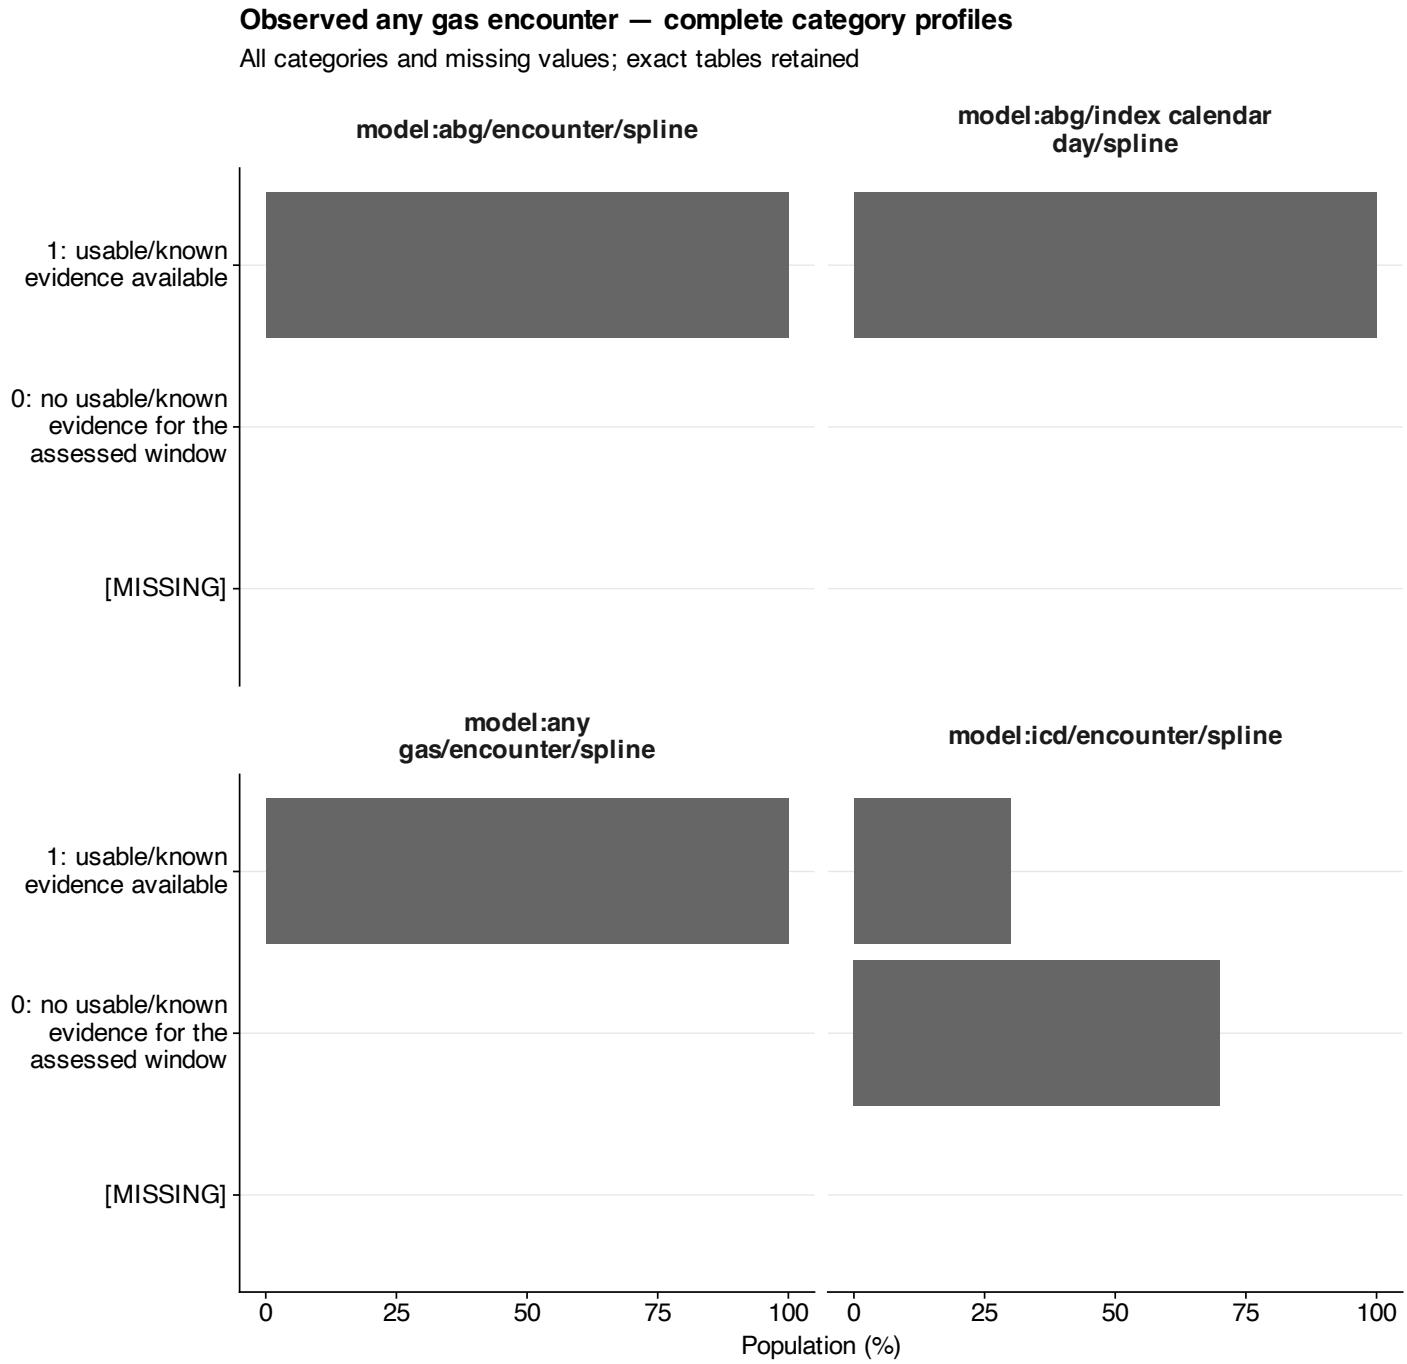

Figure 1110: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete observed_any_gas_encounter stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

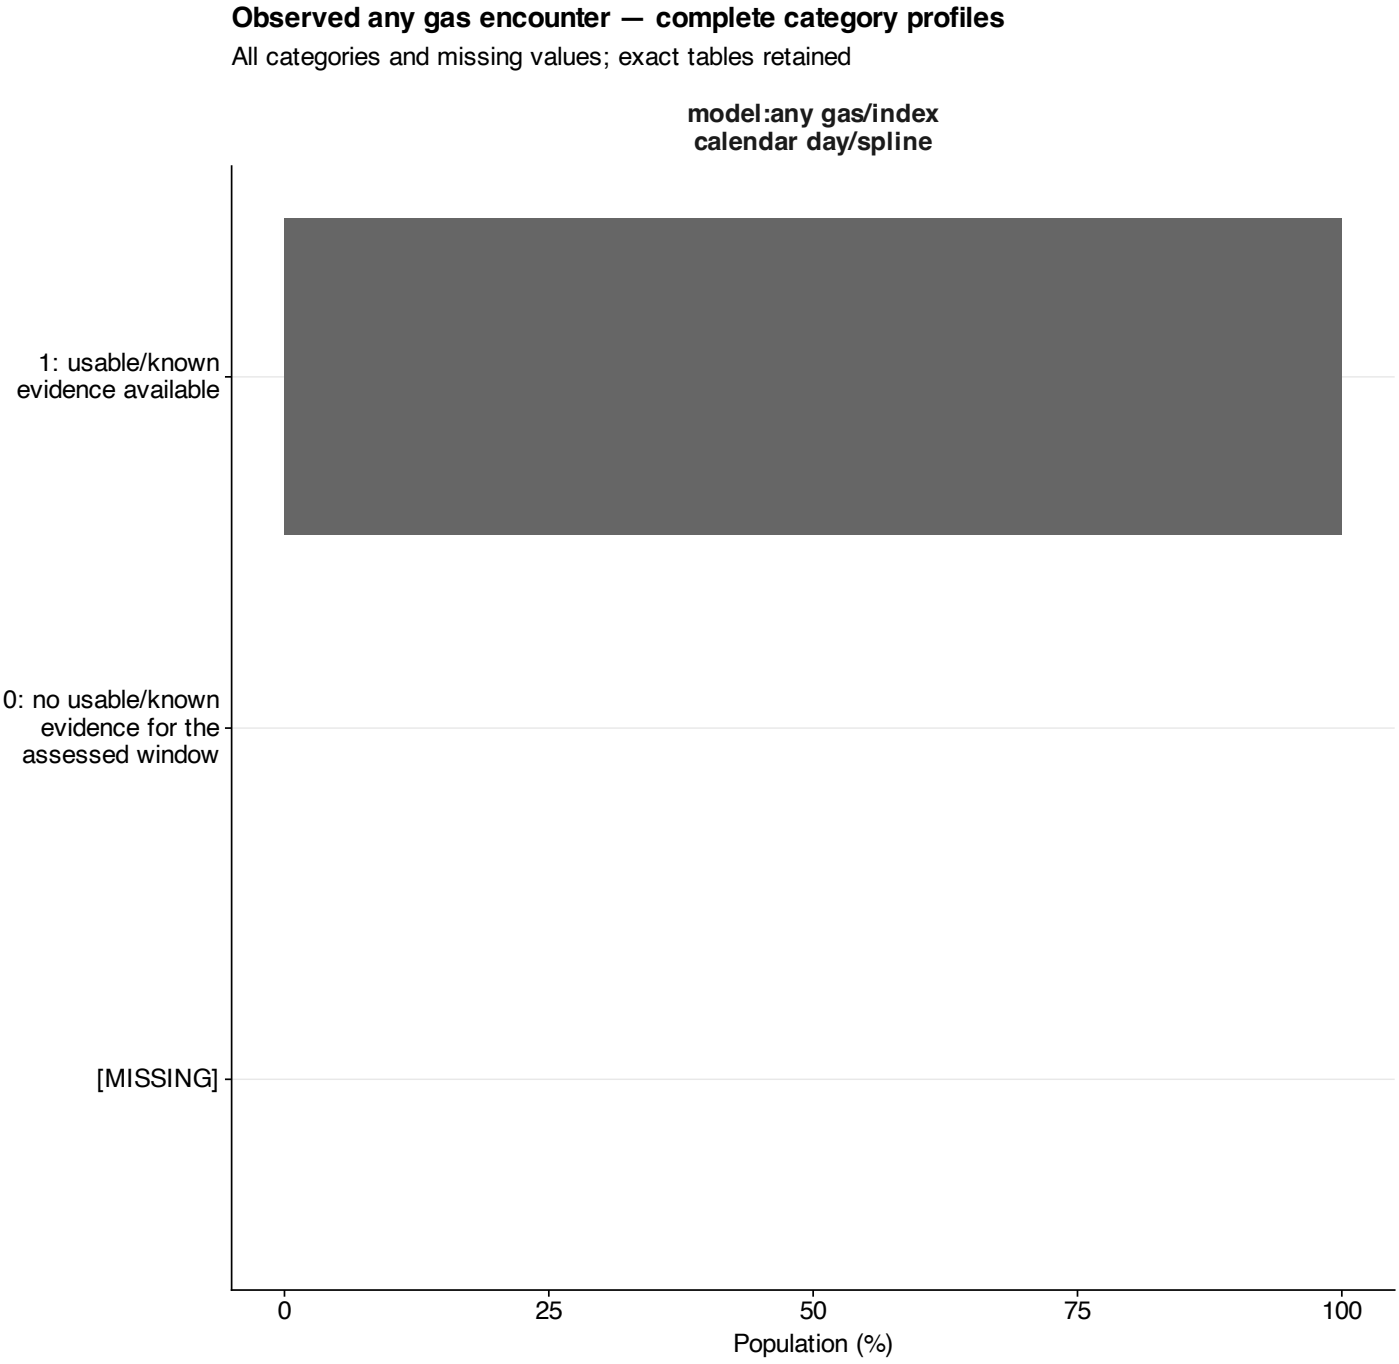

Figure 1111: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete observed_any_gas_encounter stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

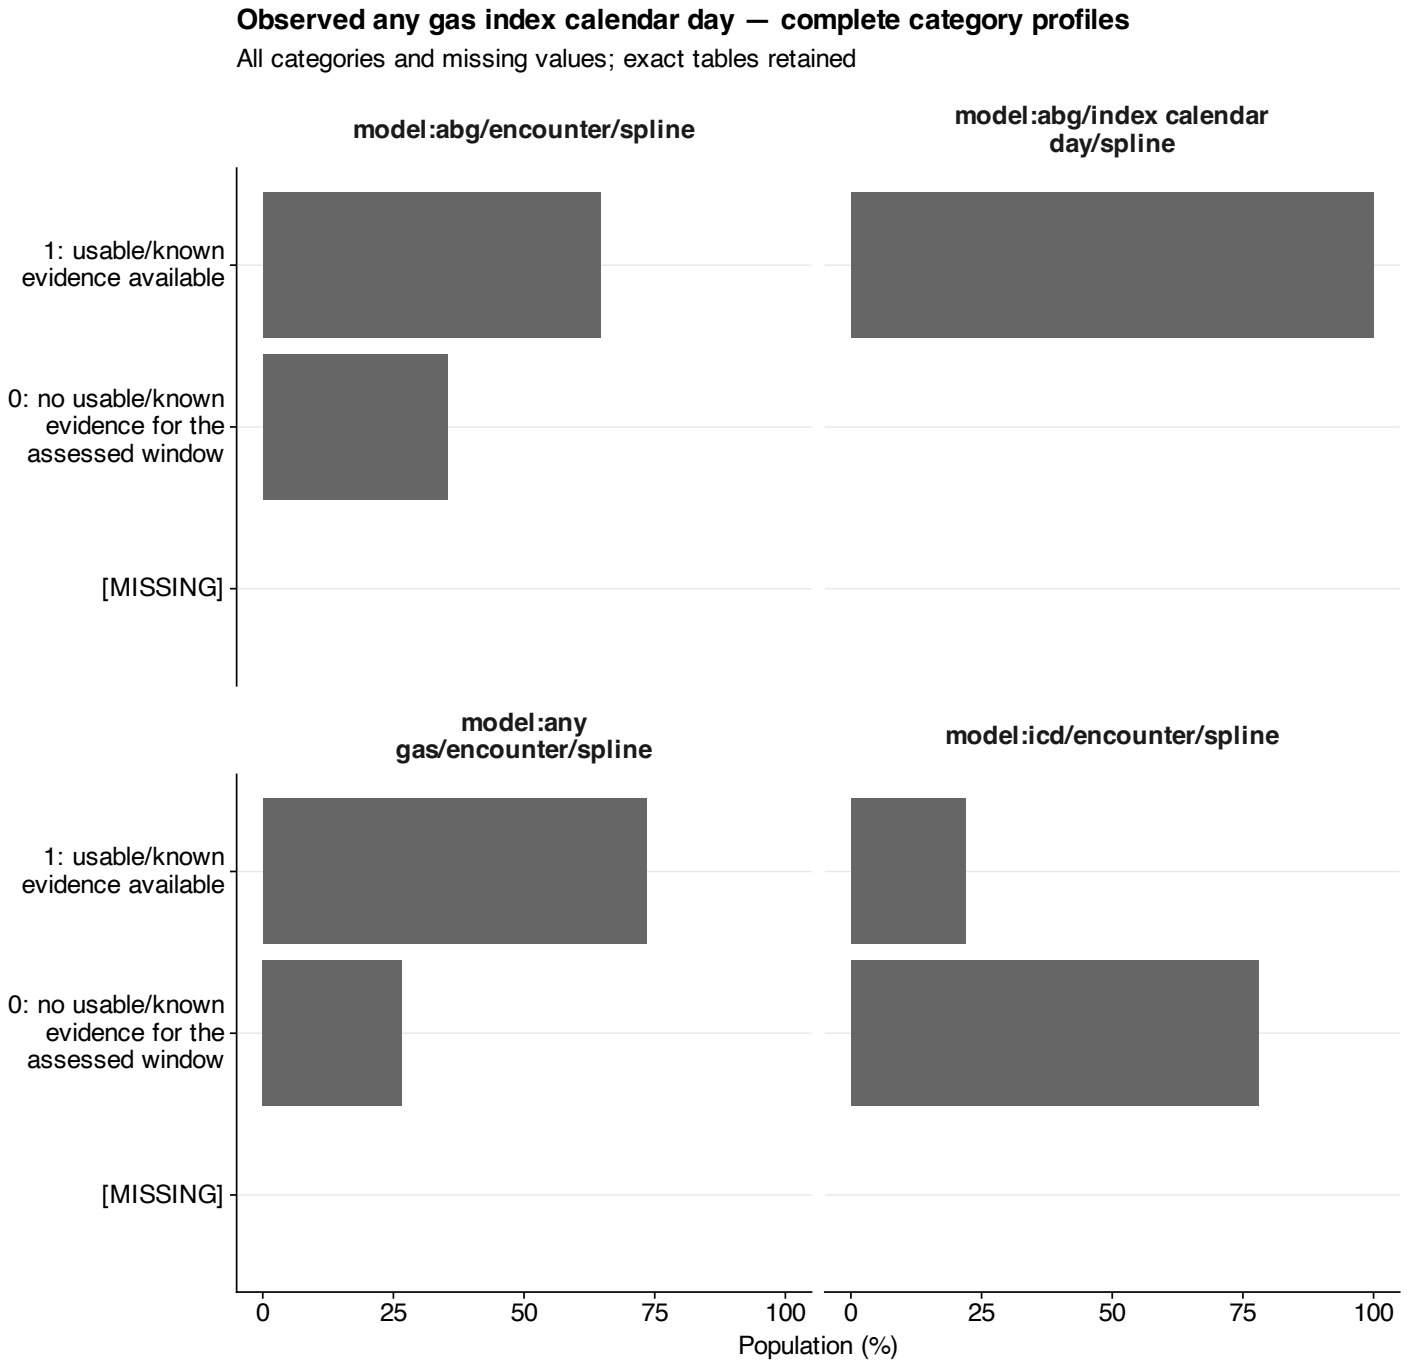

Figure 1112: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete observed_any_gas_index_calendar_day stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

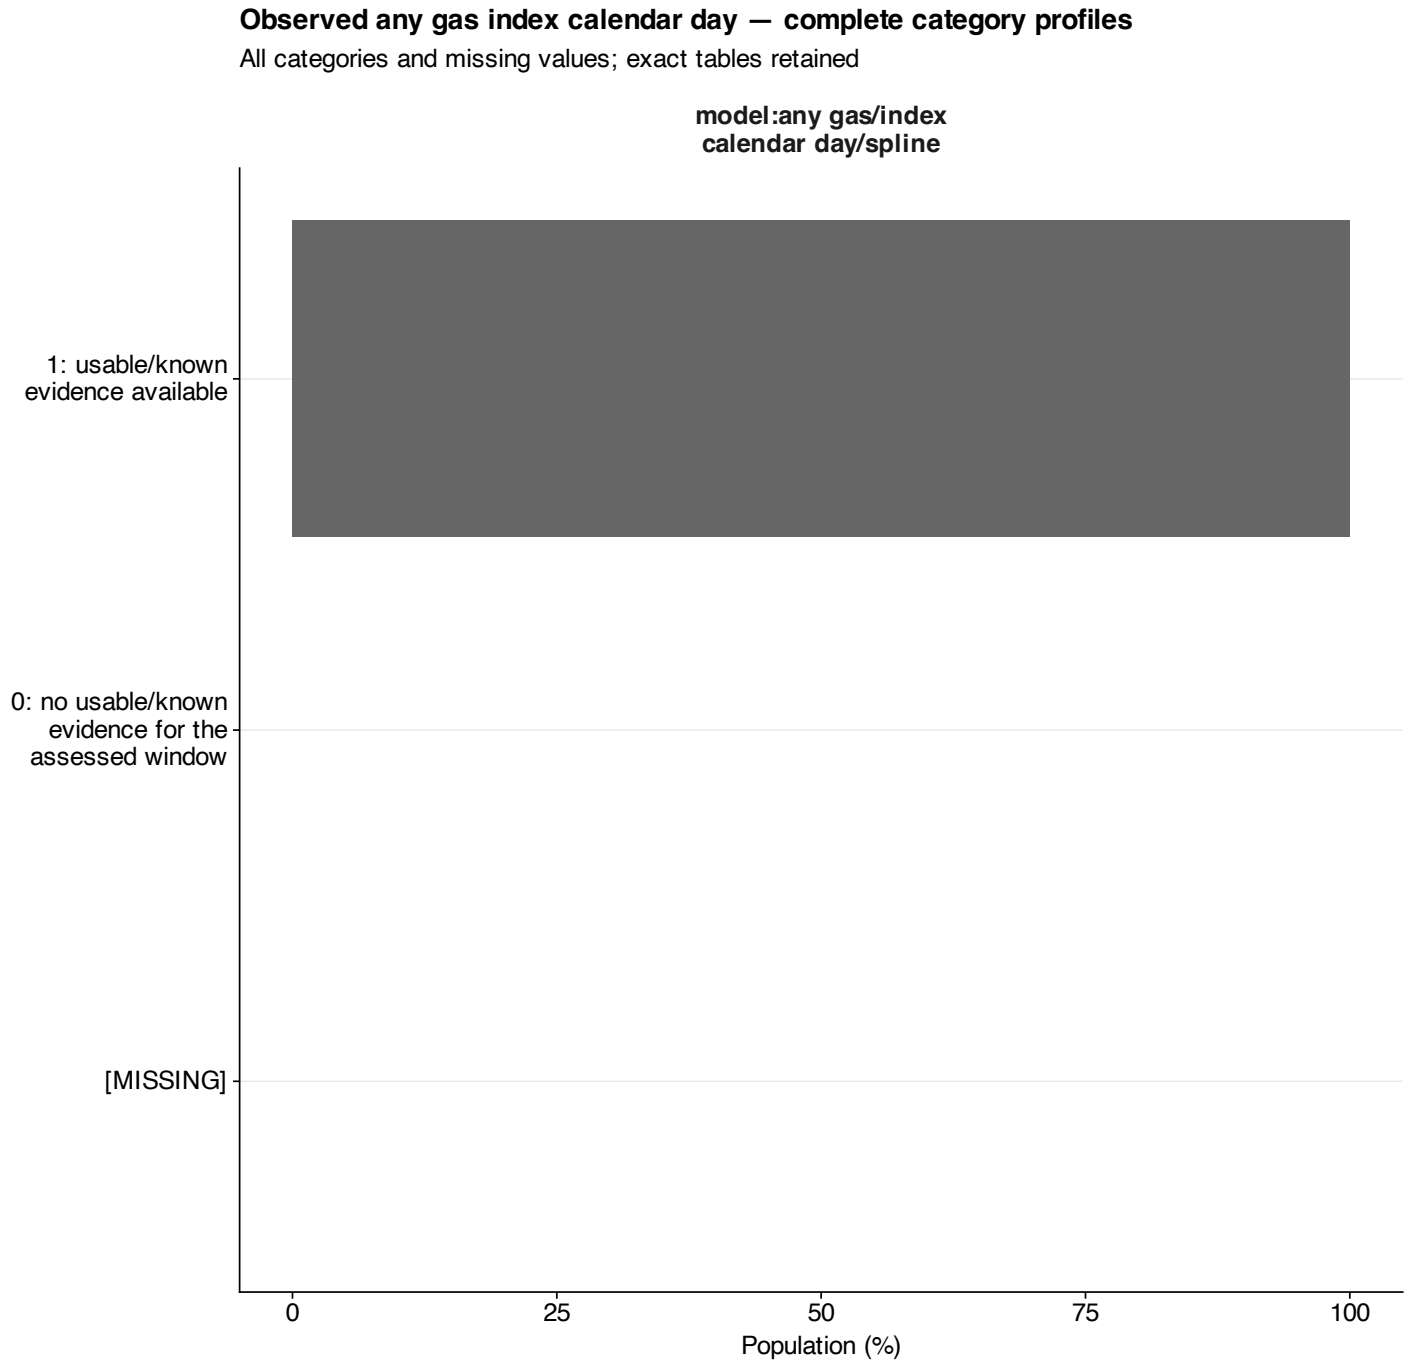

Figure 1113: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete observed_any_gas_index_calendar_day stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

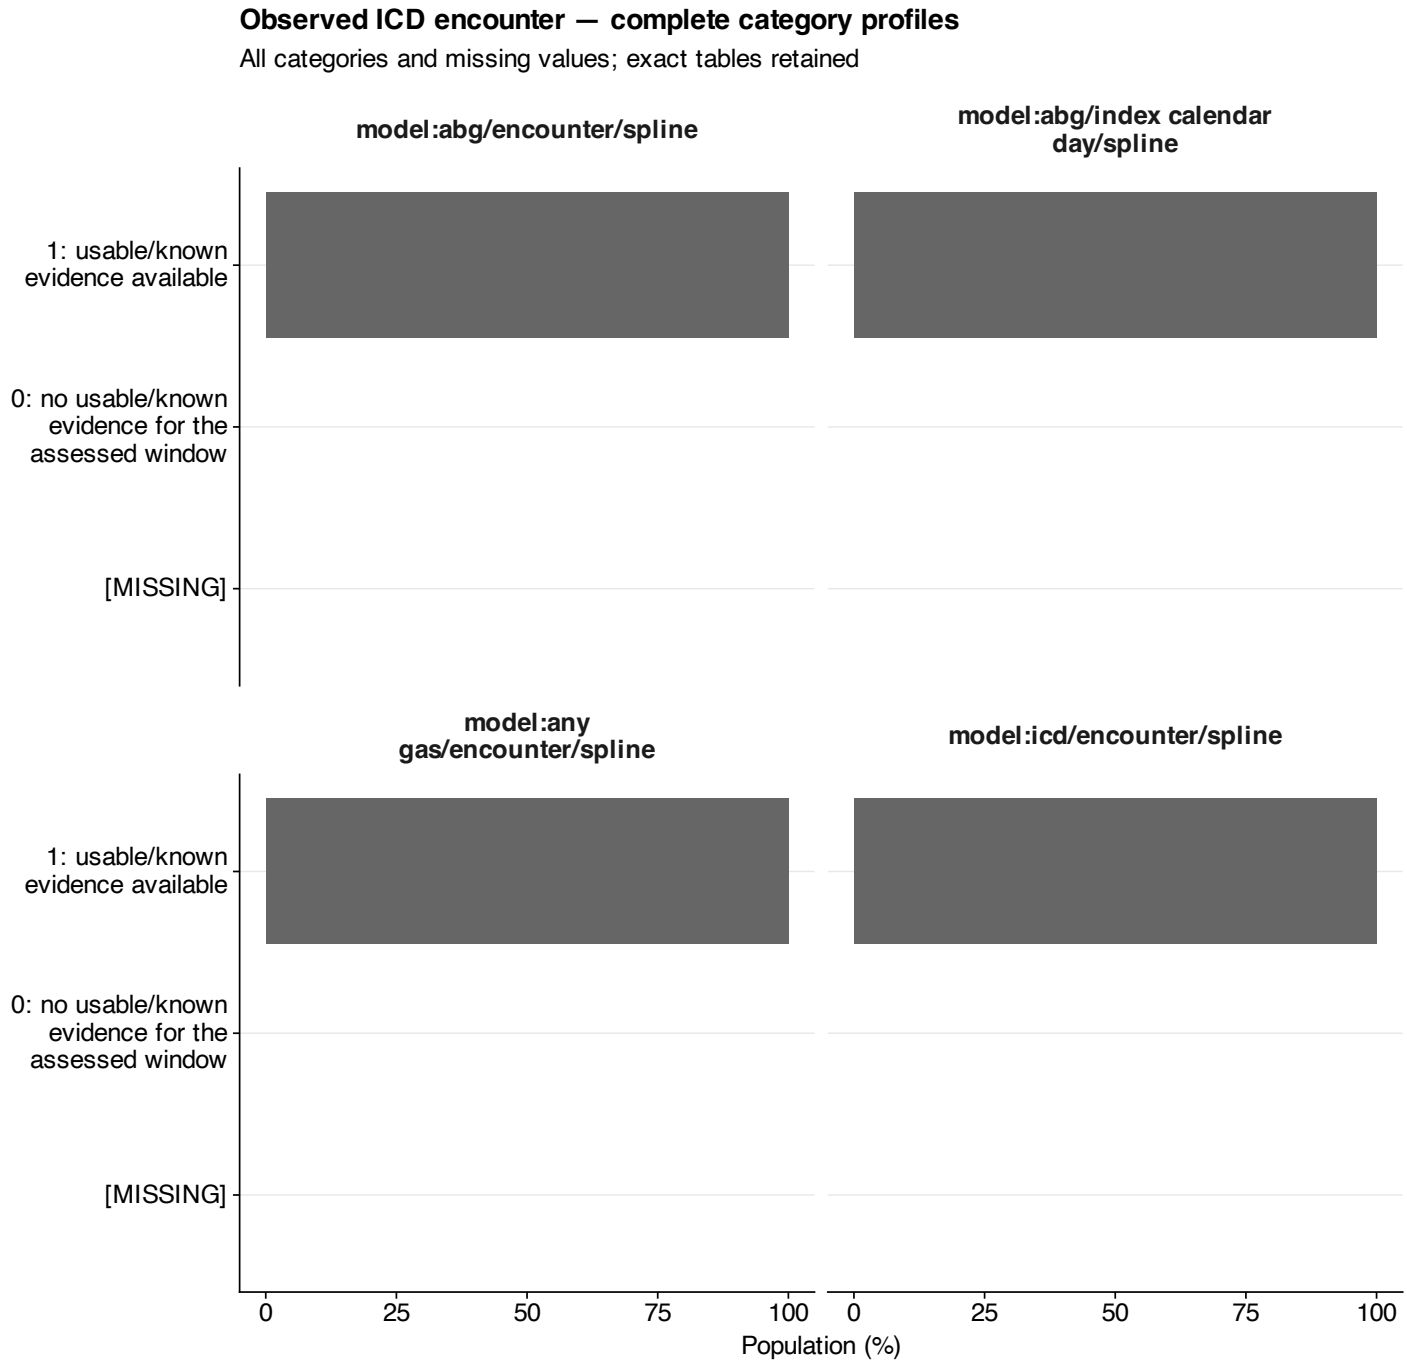

Figure 1114: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete observed_icd_encounter stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

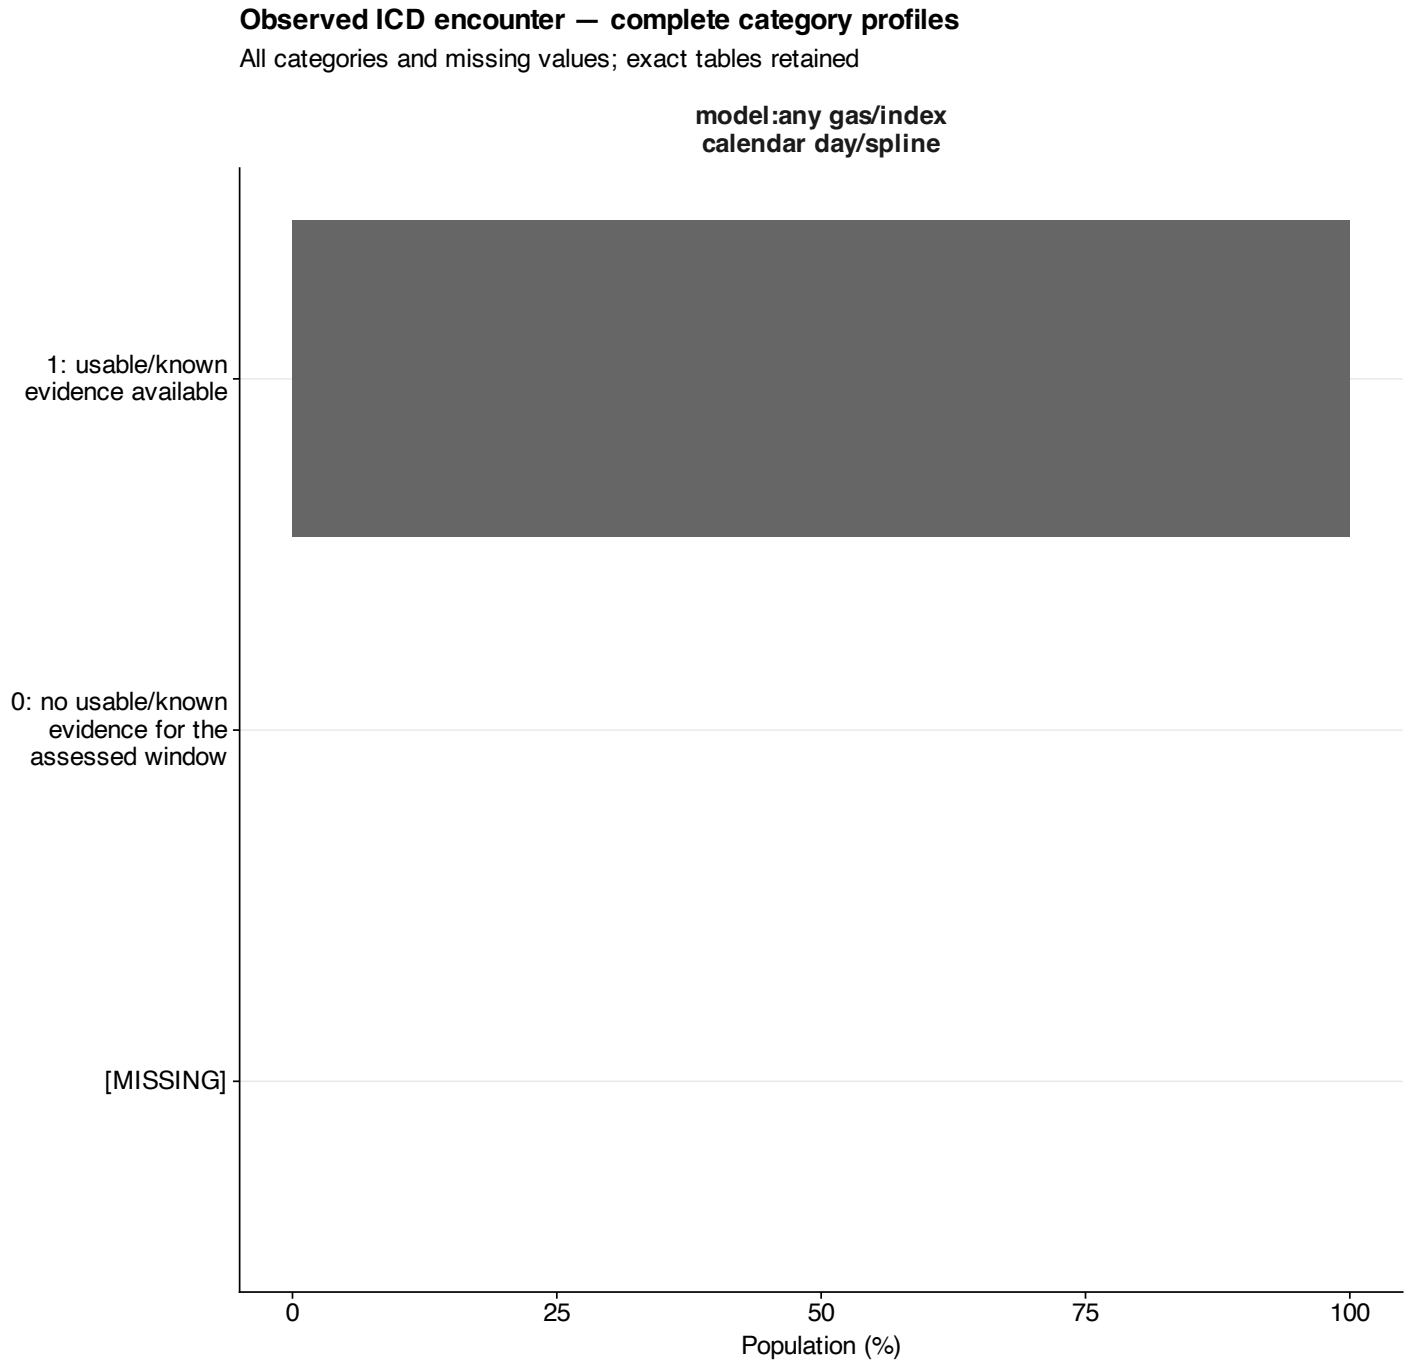

Figure 1115: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete observed_icd_encounter stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

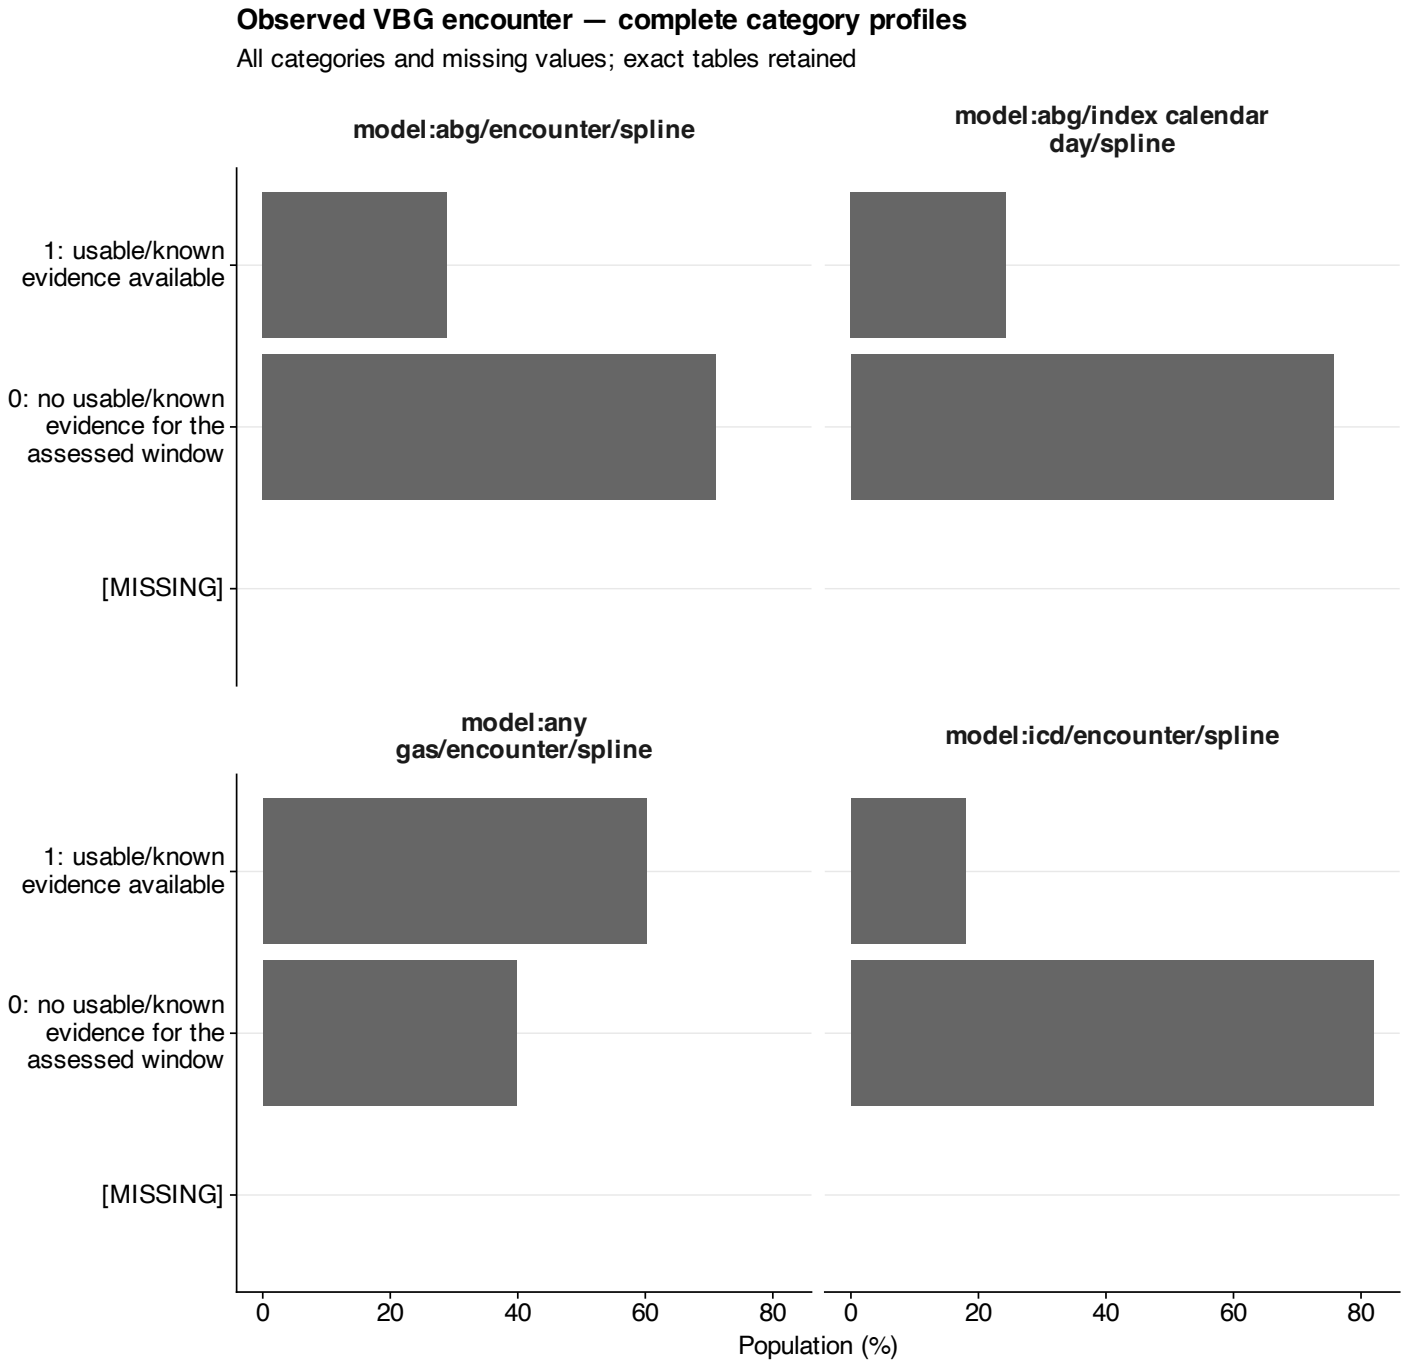

Figure 1116: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete observed_vbg_encounter stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

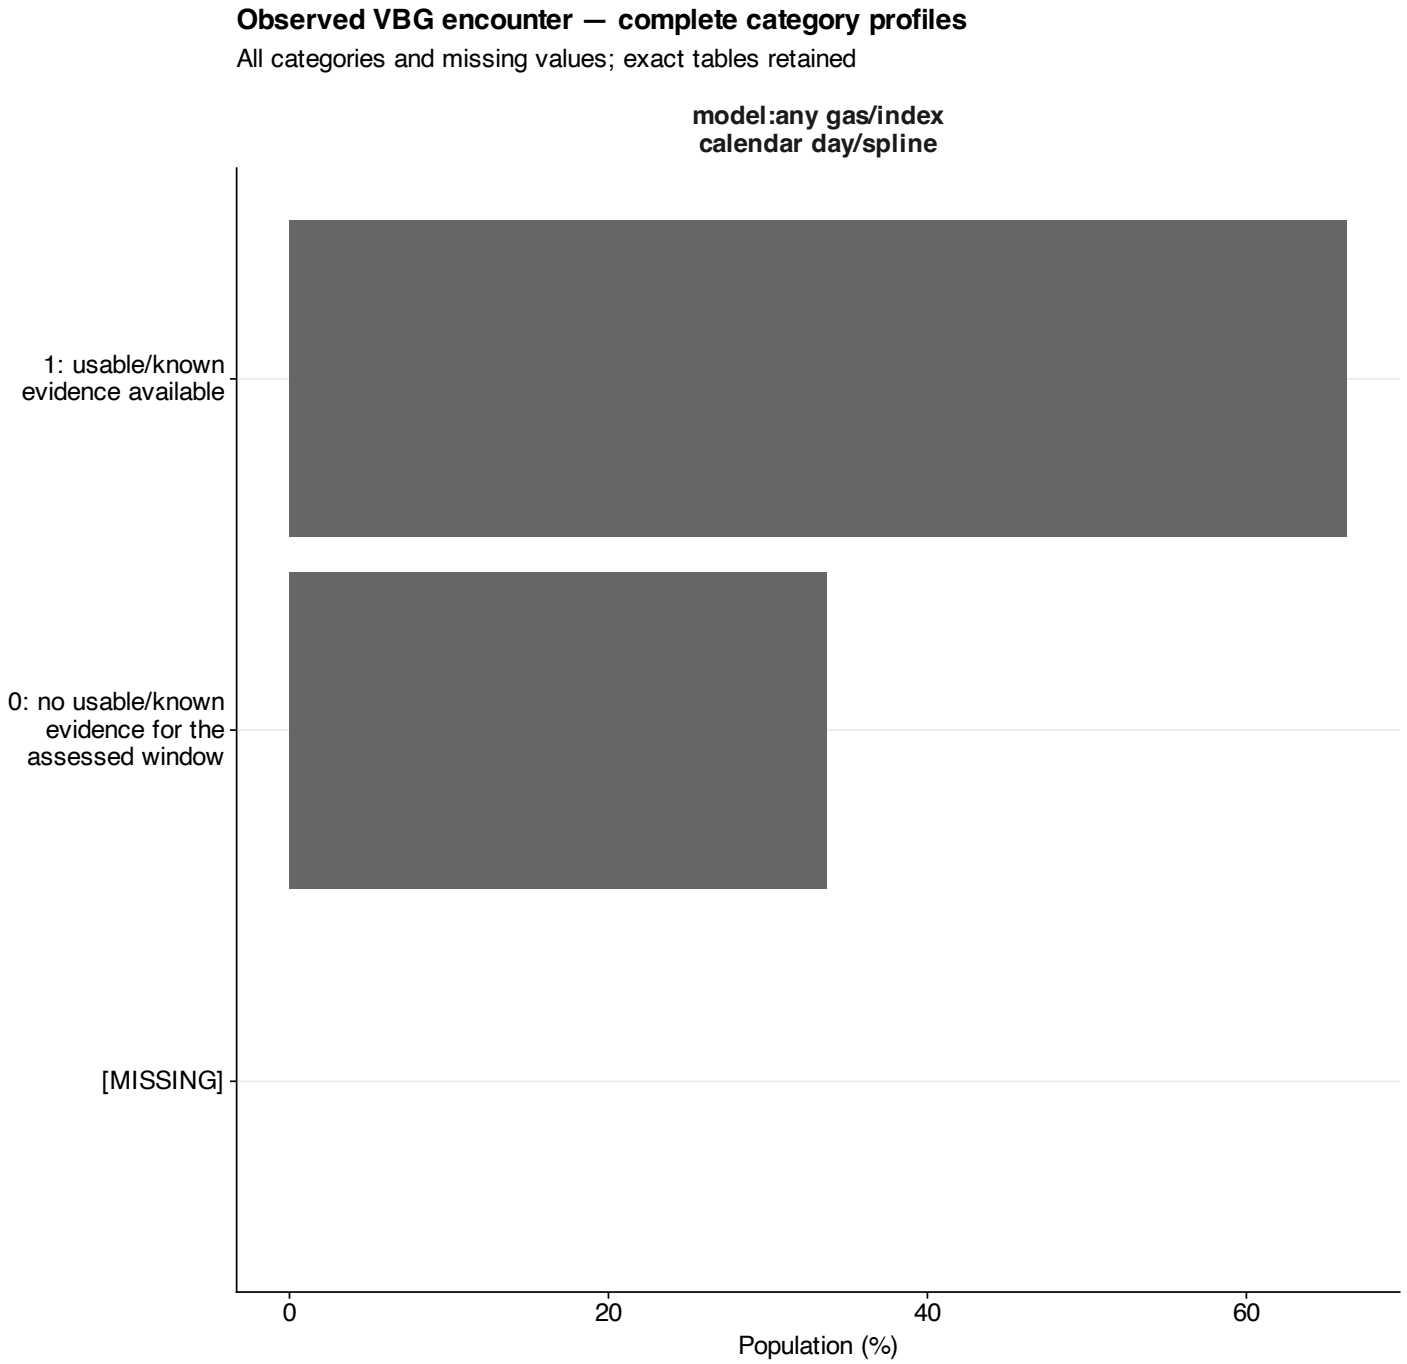

Figure 1117: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete observed_vbg_encounter stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

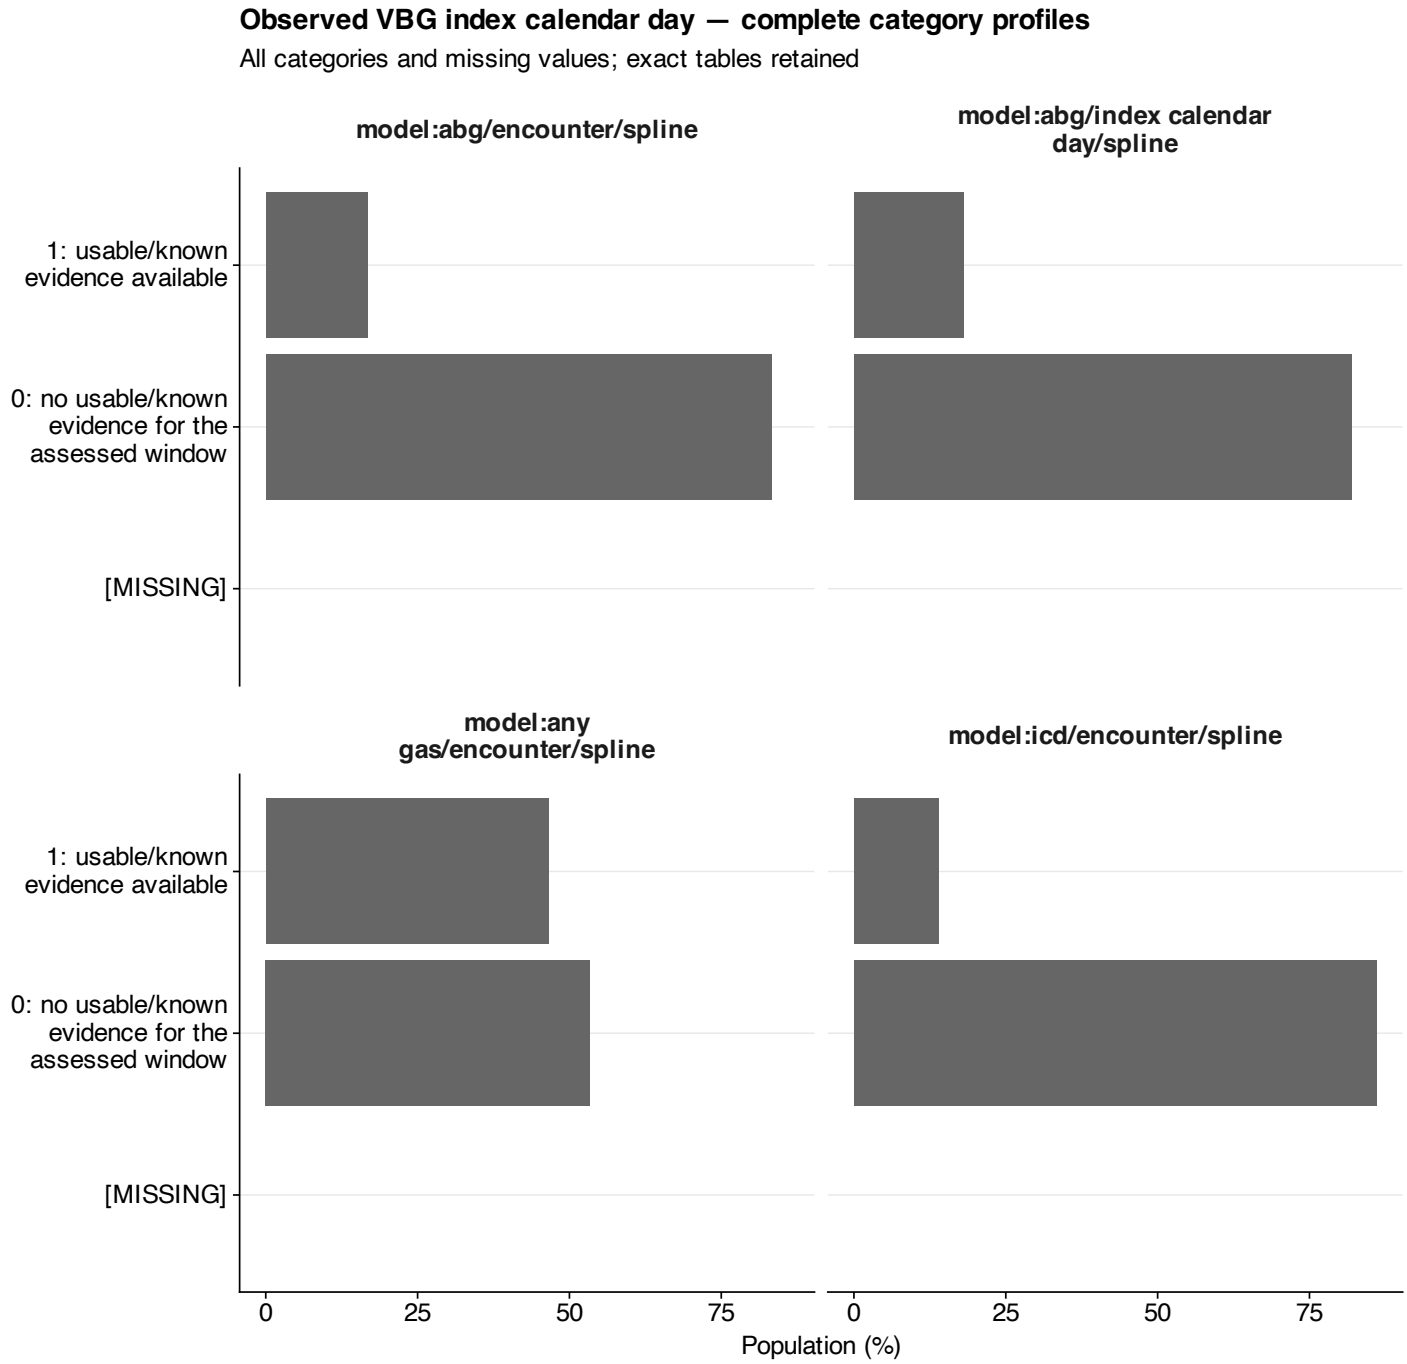

Figure 1118: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete observed_vbg_index_calendar_day stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

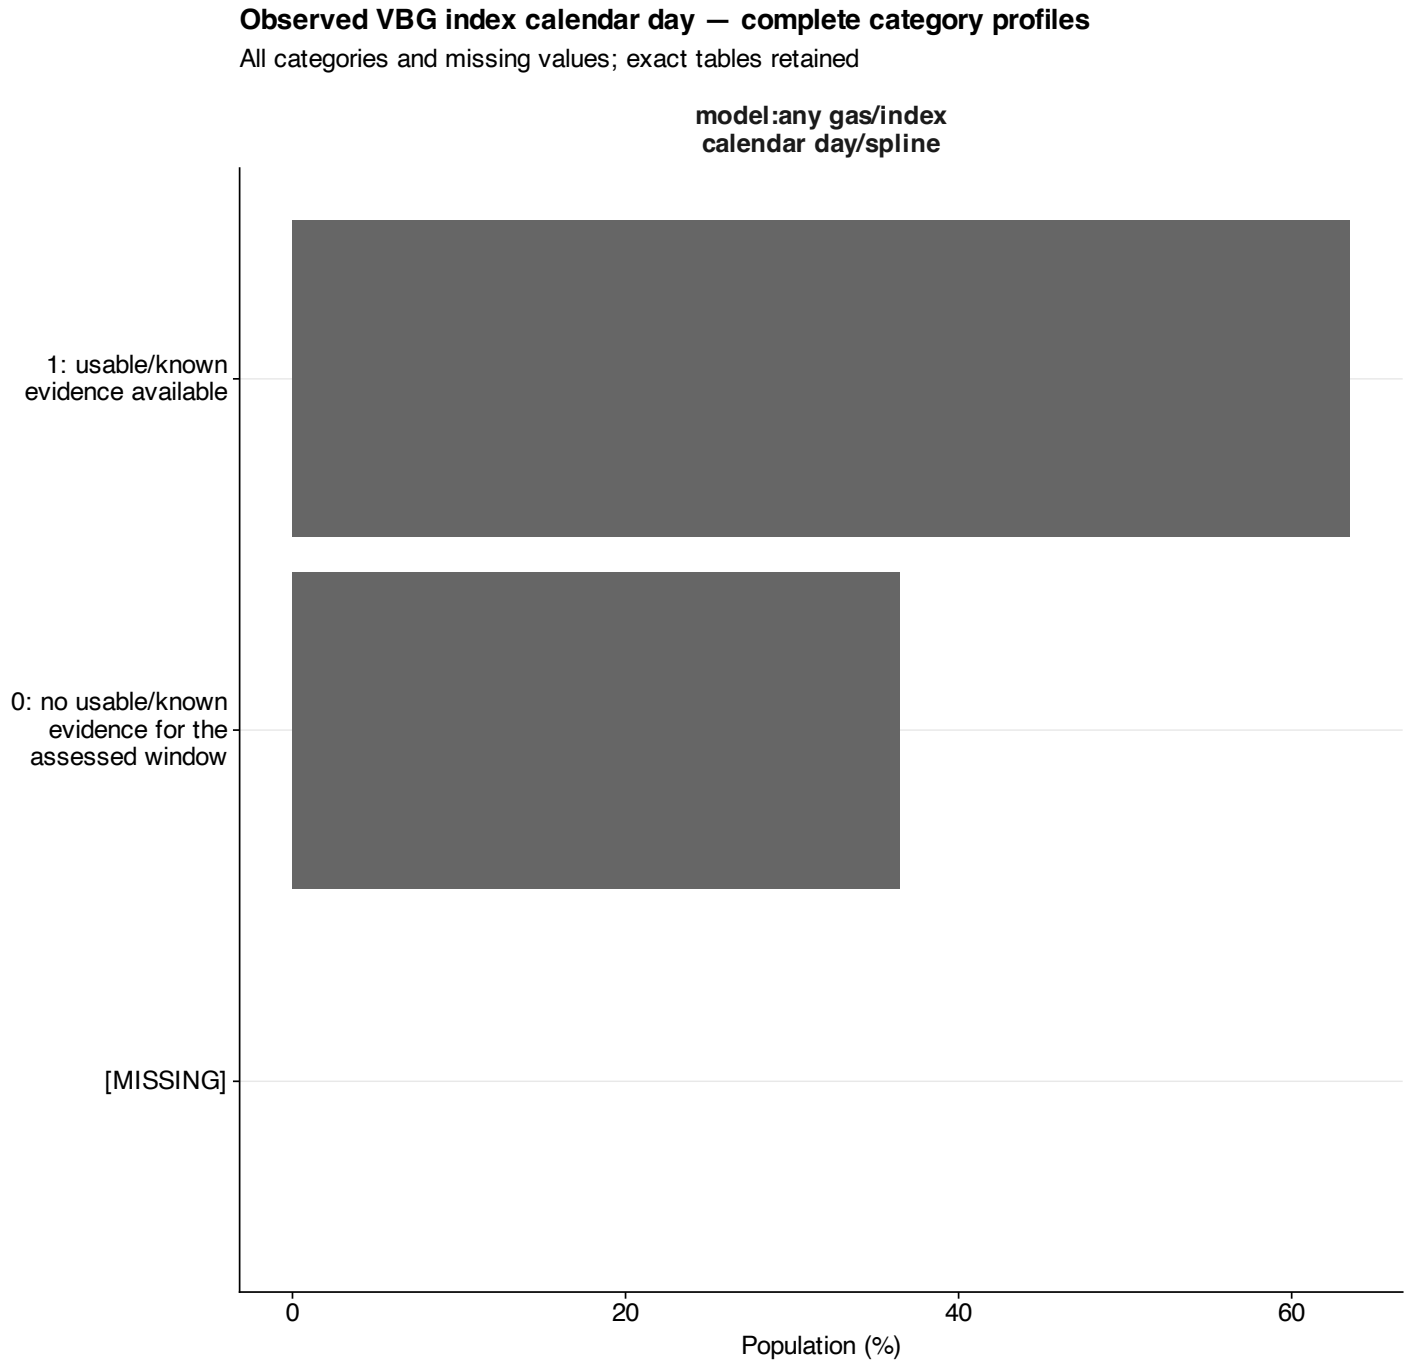

Figure 1119: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete observed_vbg_index_calendar_day stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

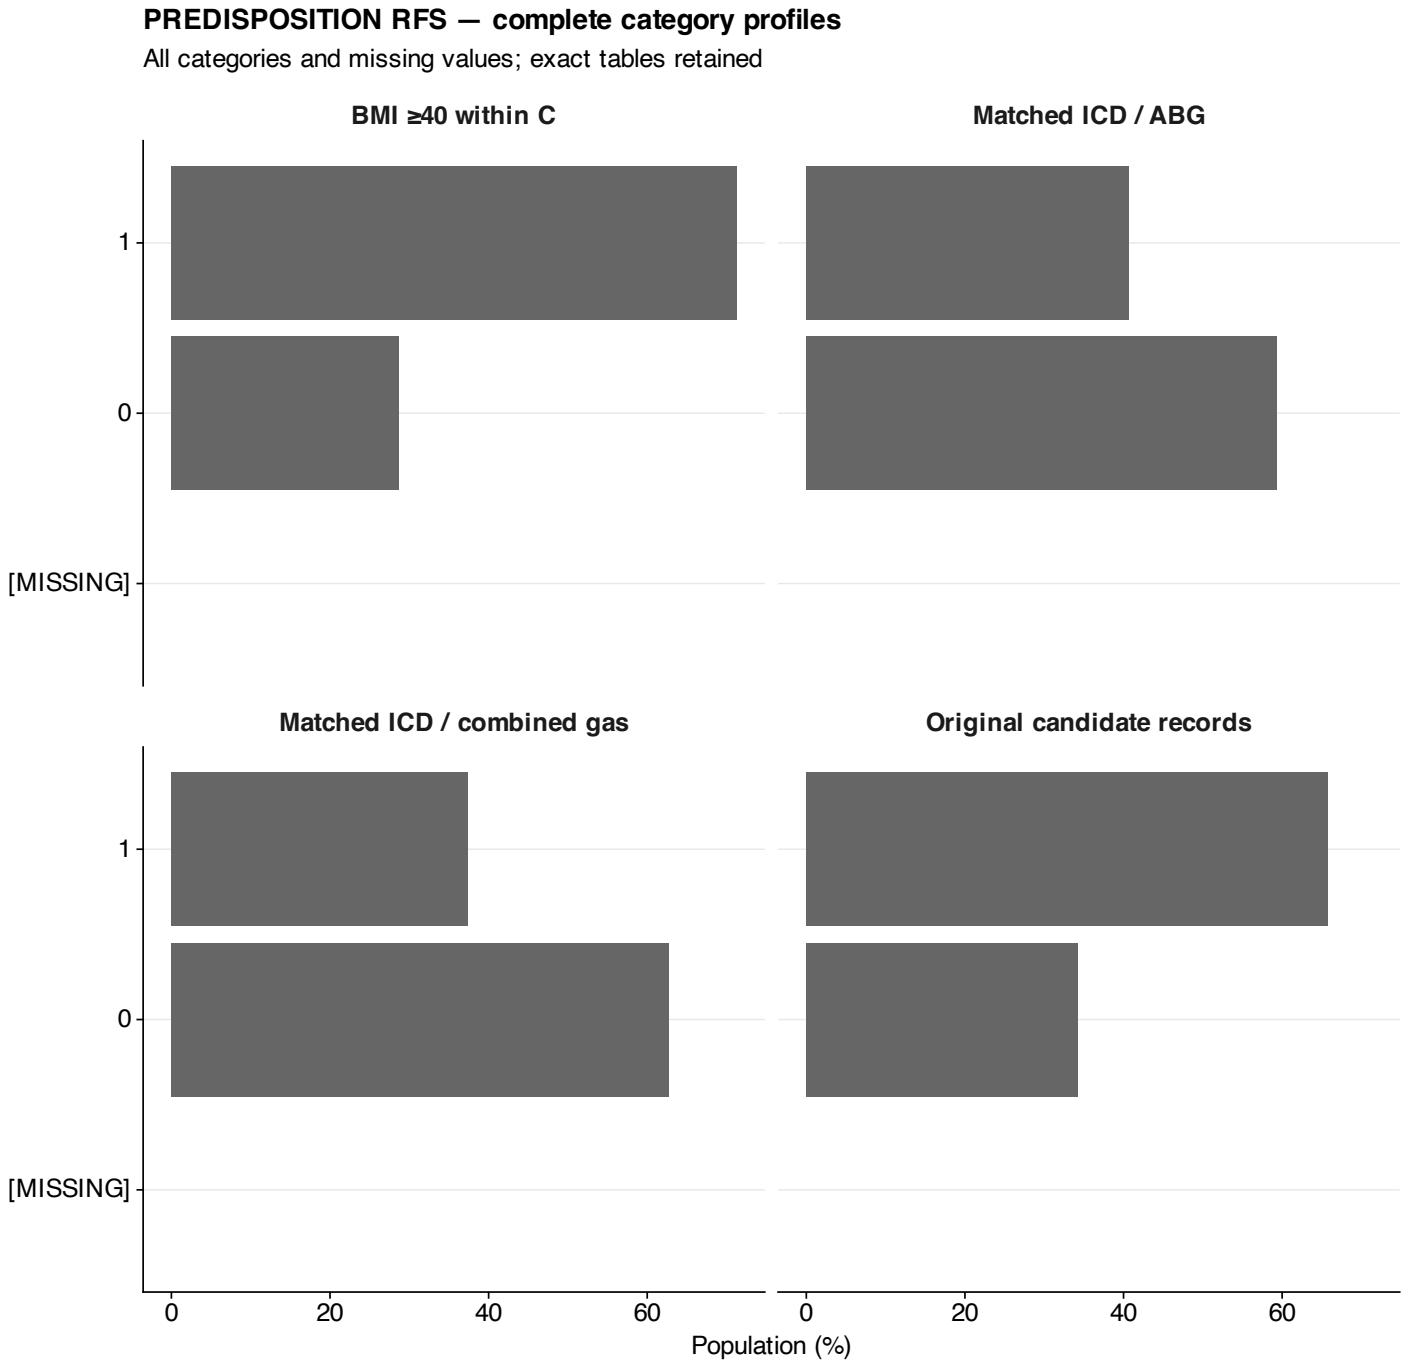

Figure 1120: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete PREDISPOSITION_rfs stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

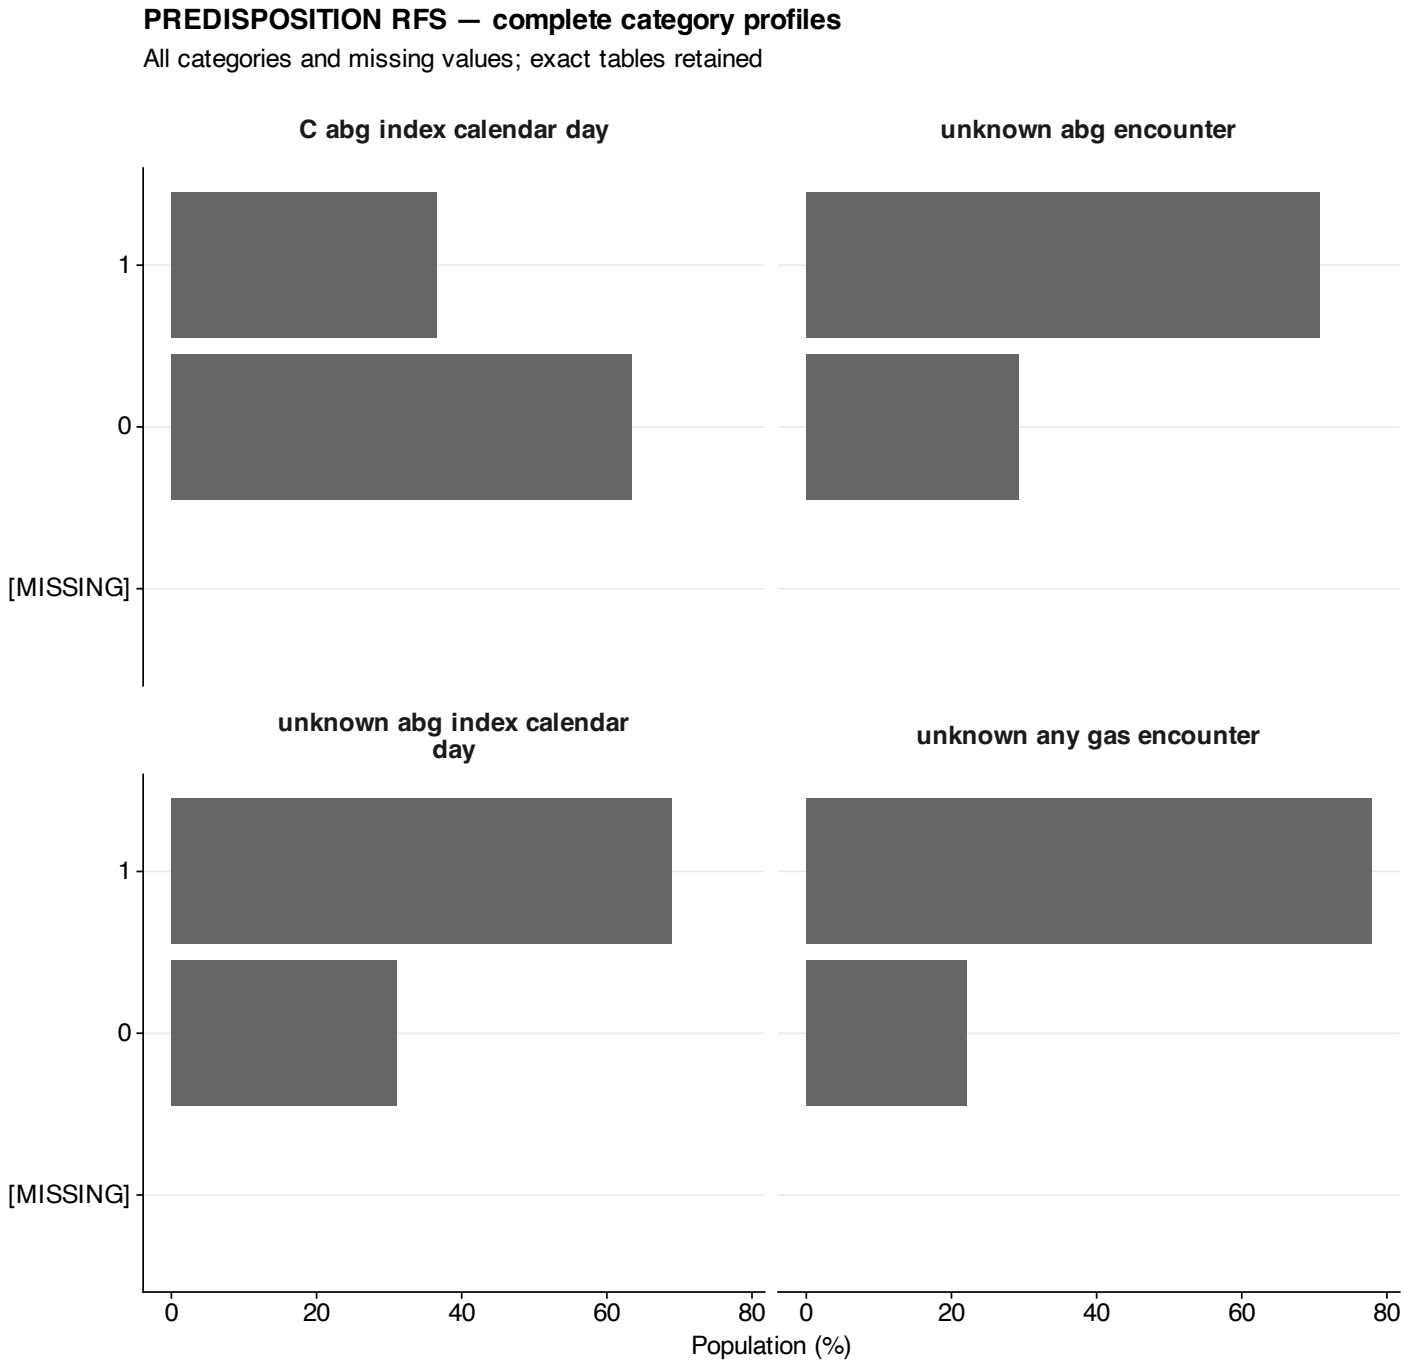

Figure 1121: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete PREDISPOSITION_rfs stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

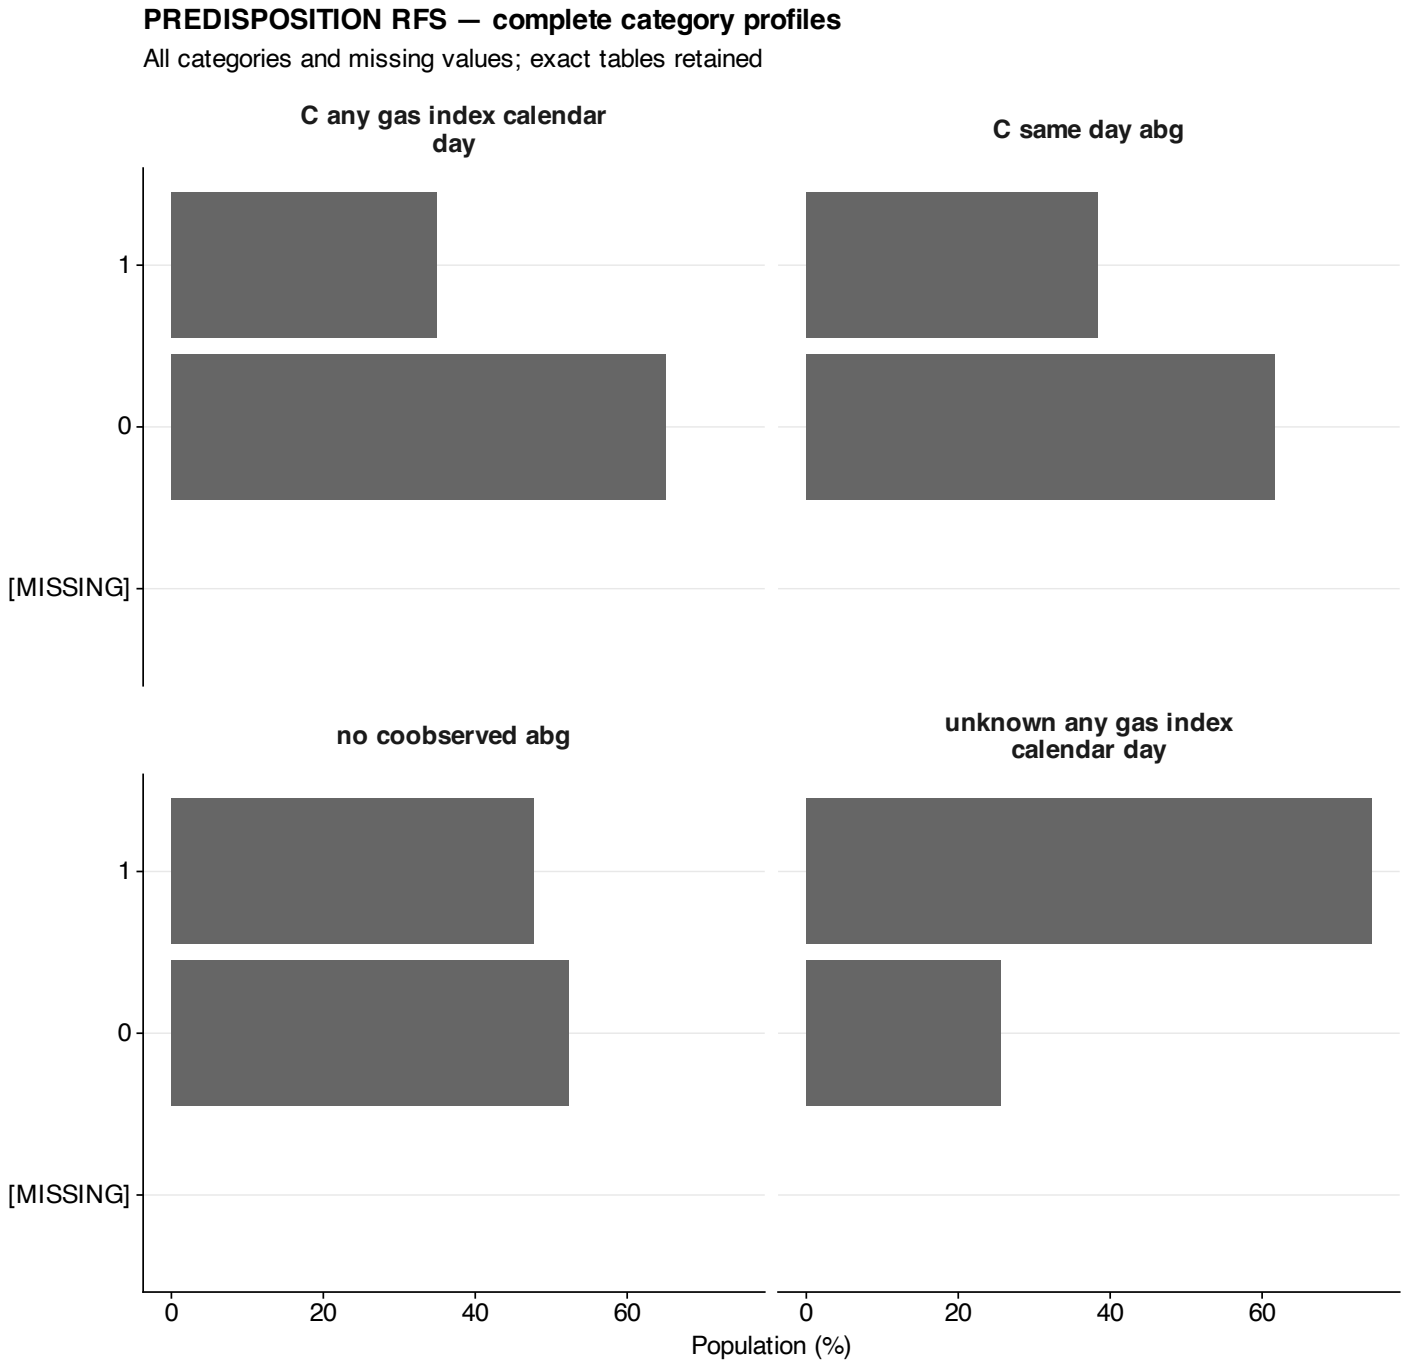

Figure 1122: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete PREDISPOSITION_rfs stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

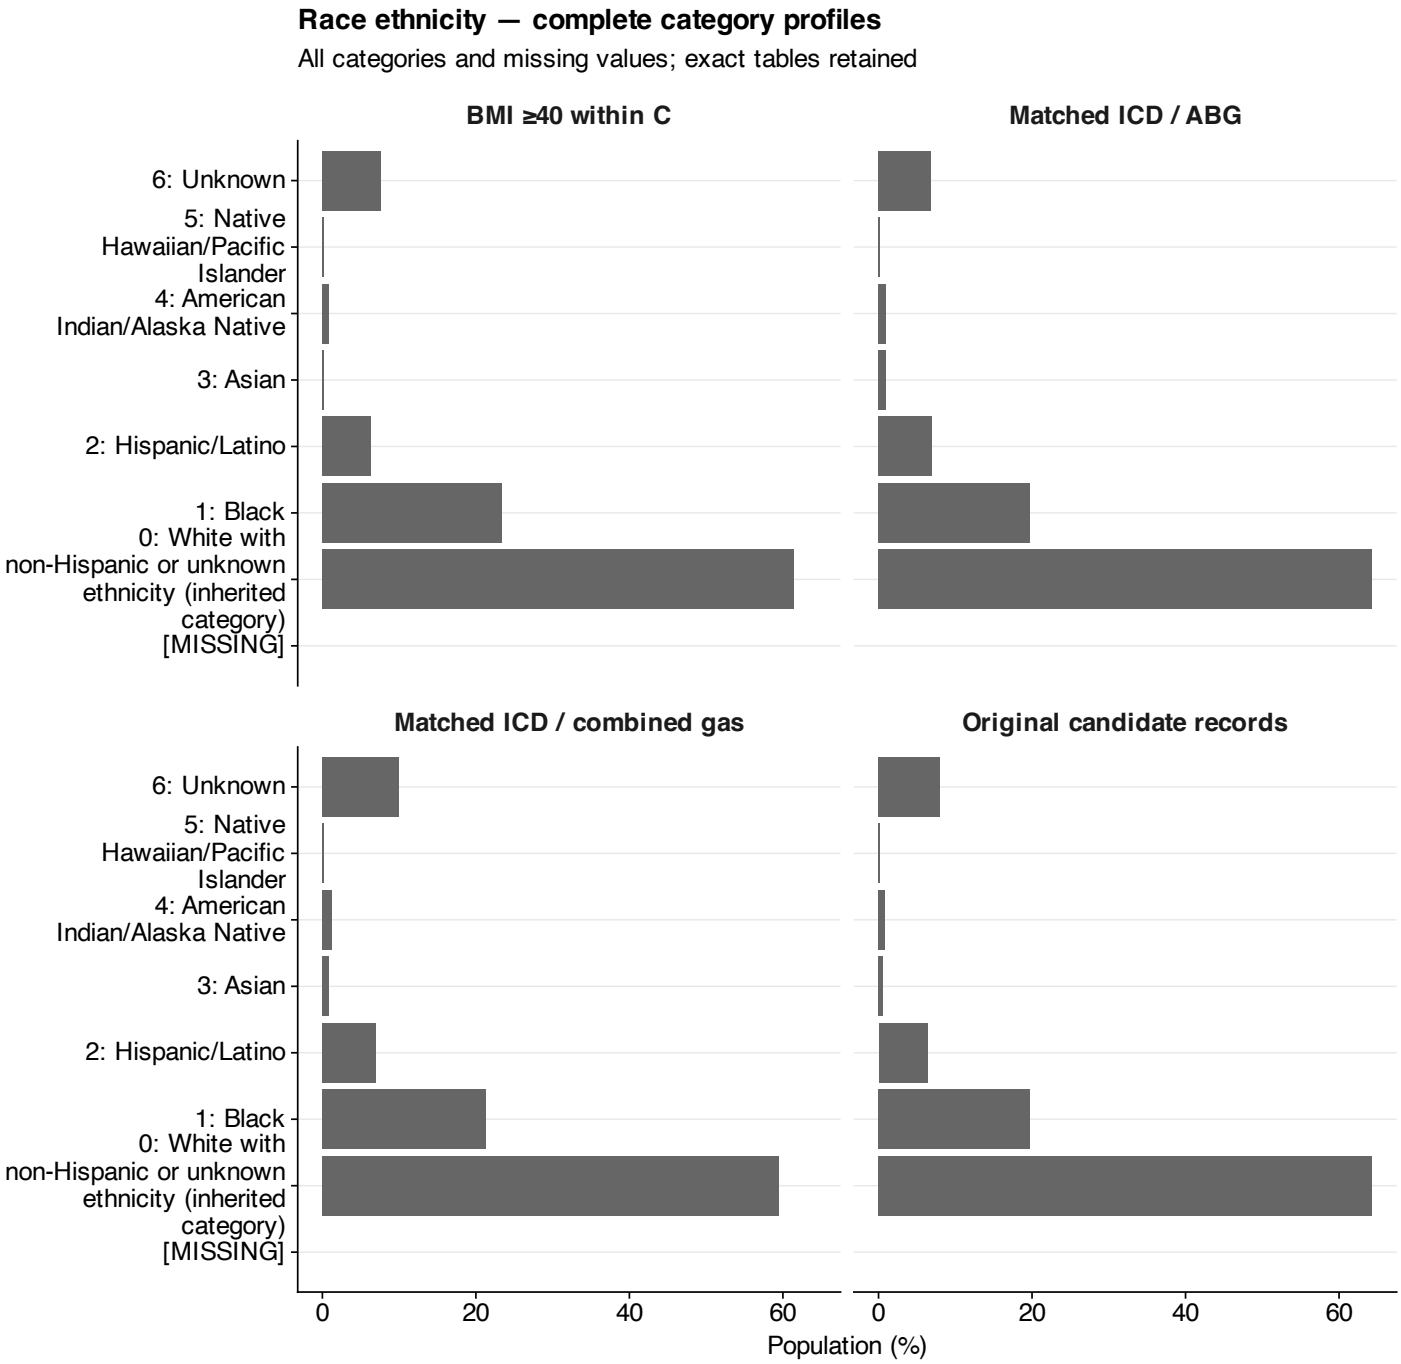

Figure 1123: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete race_ethnicity stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

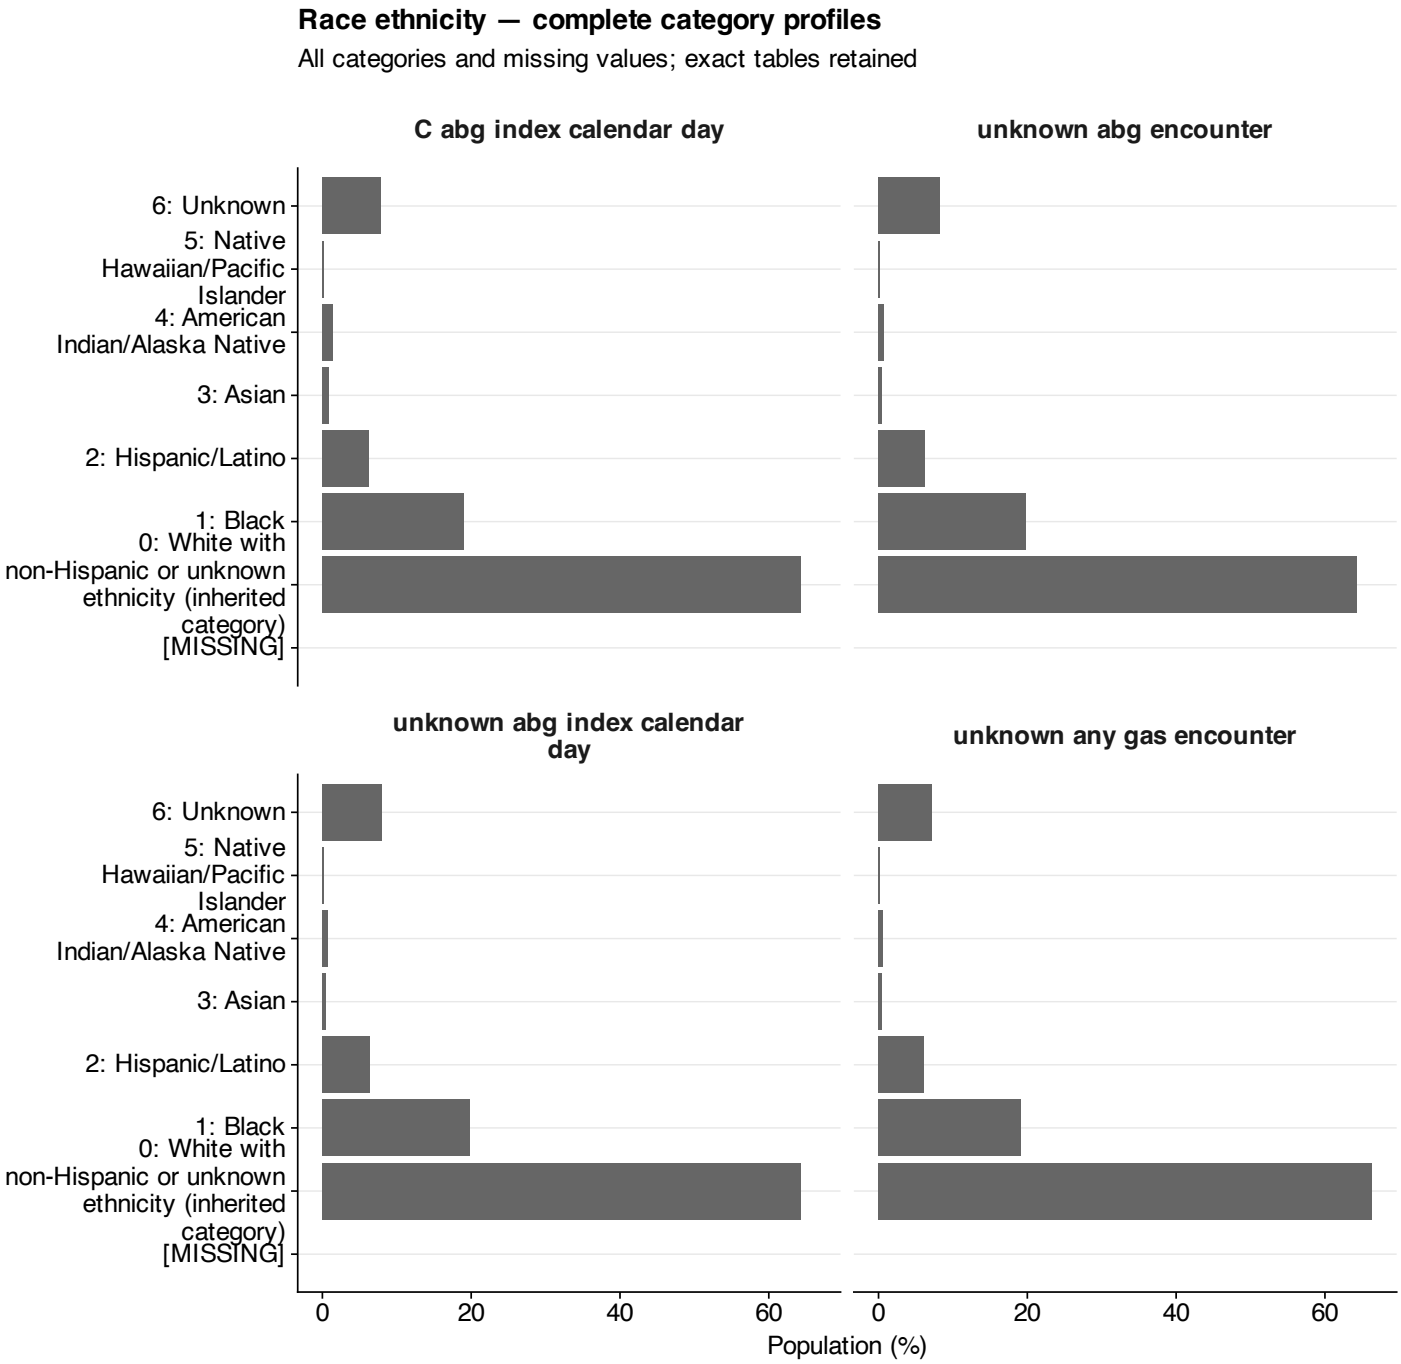

Figure 1124: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete race_ethnicity stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

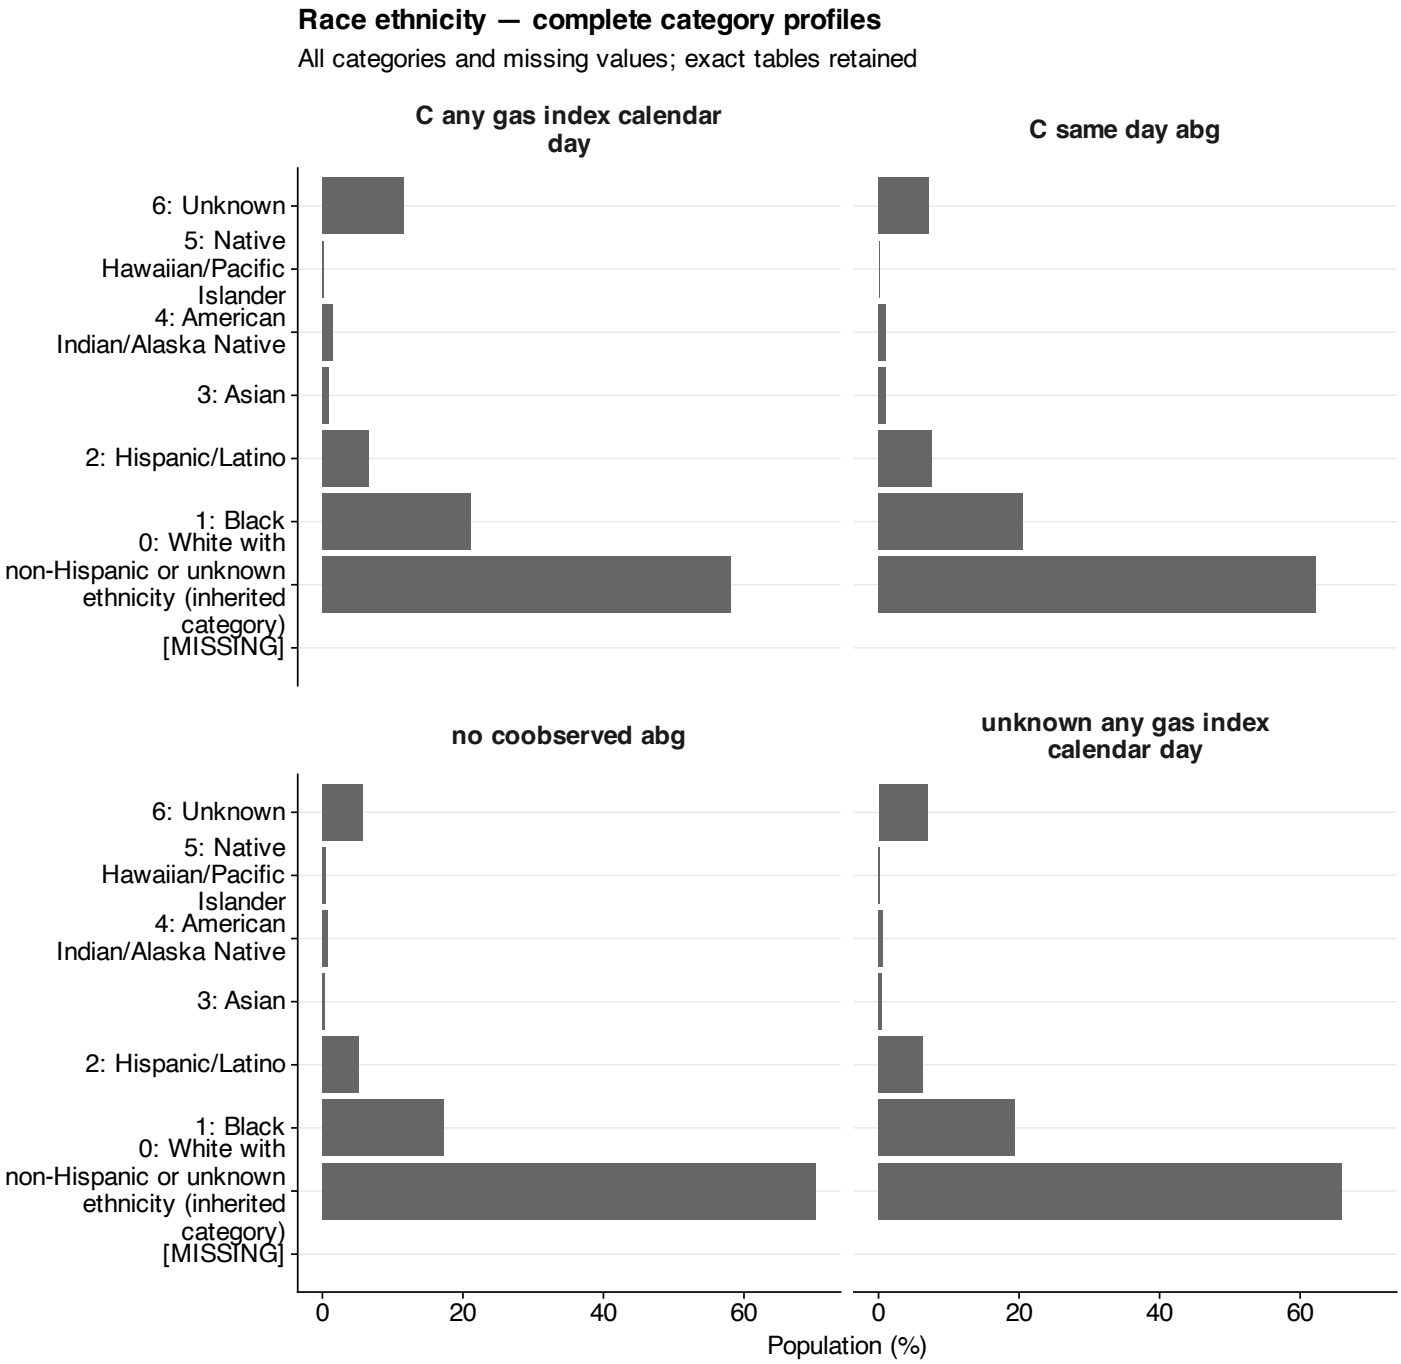

Figure 1125: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete race_ethnicity stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

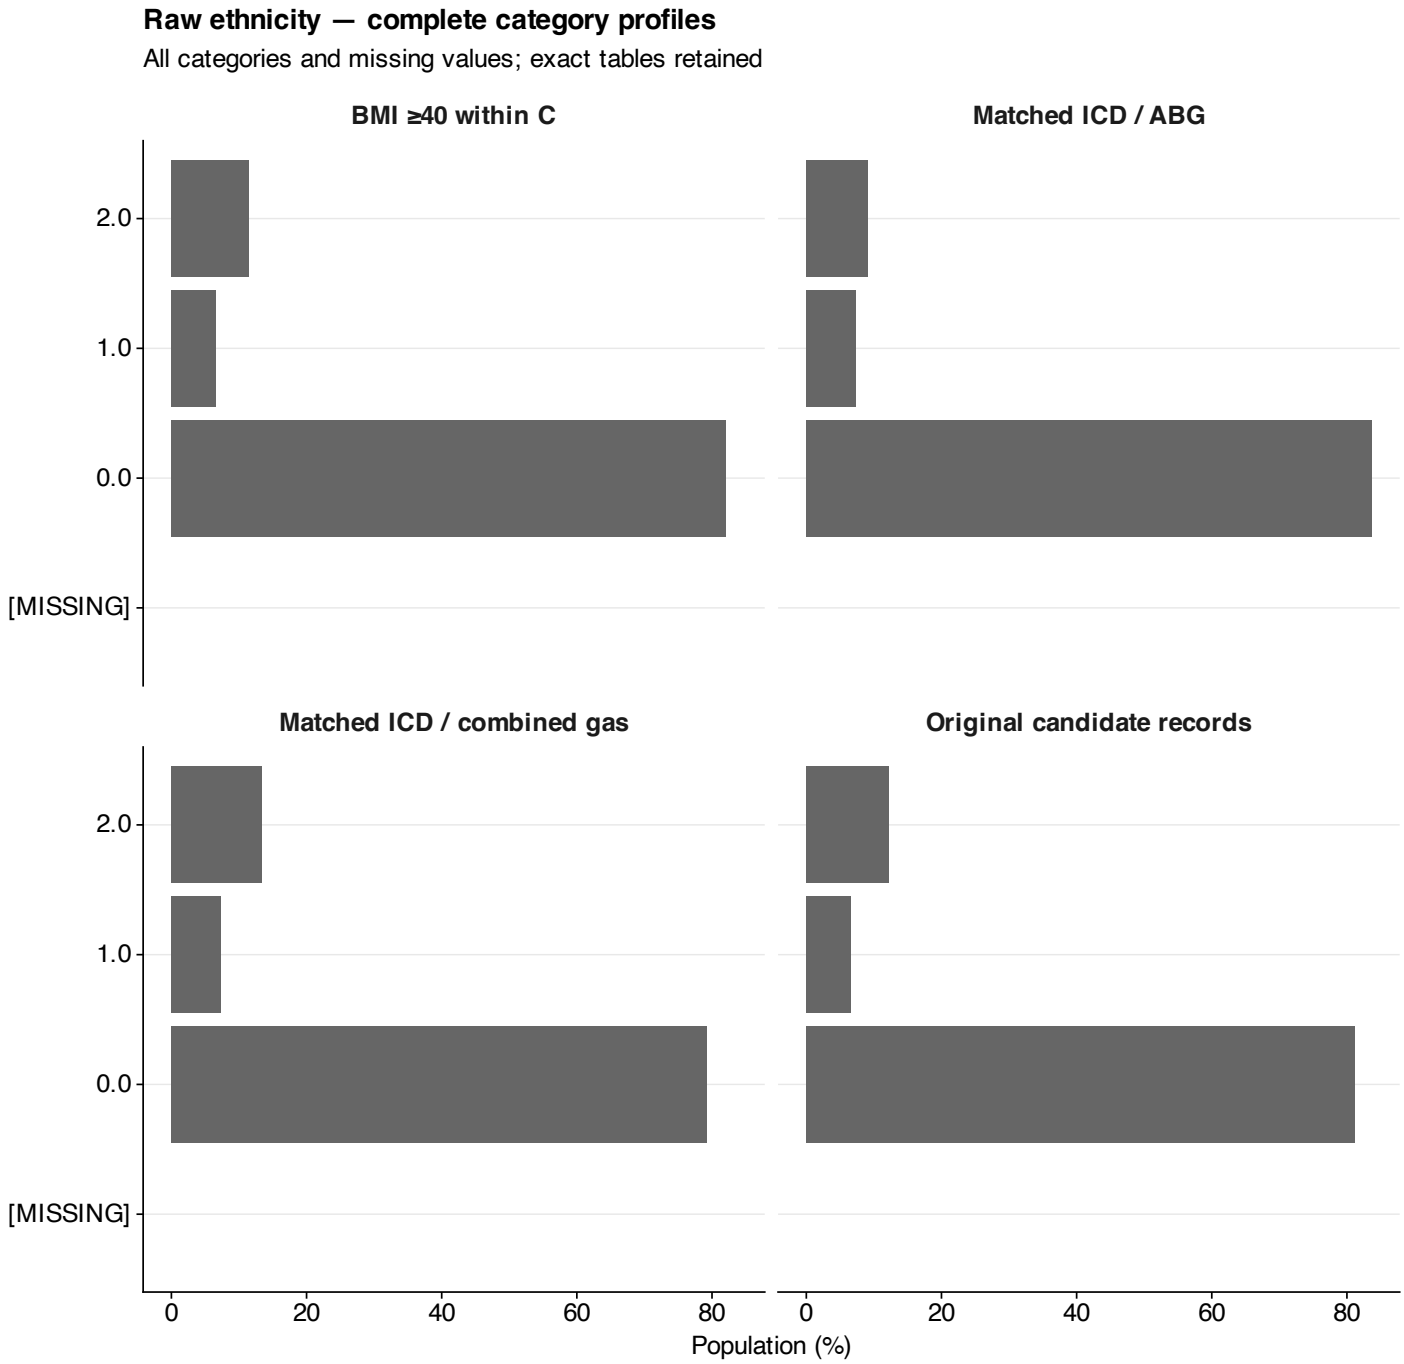

Figure 1126: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete raw_ethnicity stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

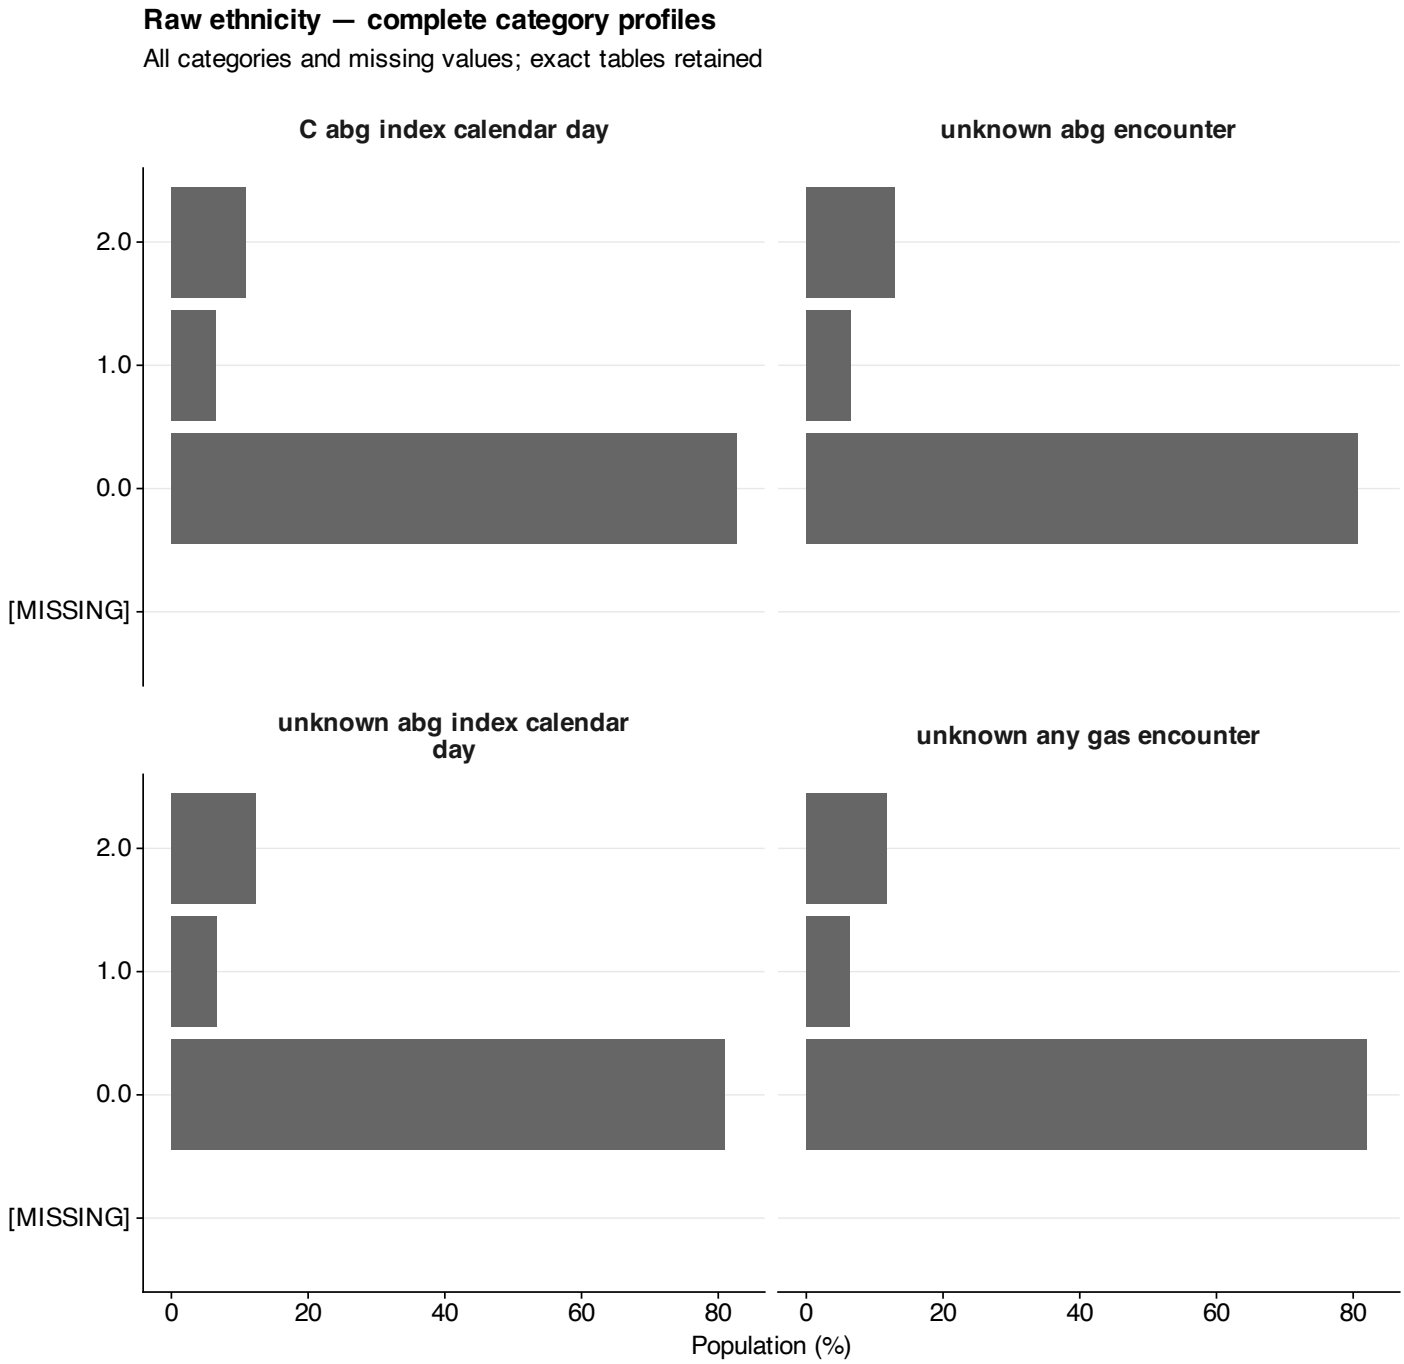

Figure 1127: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete raw_ethnicity stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

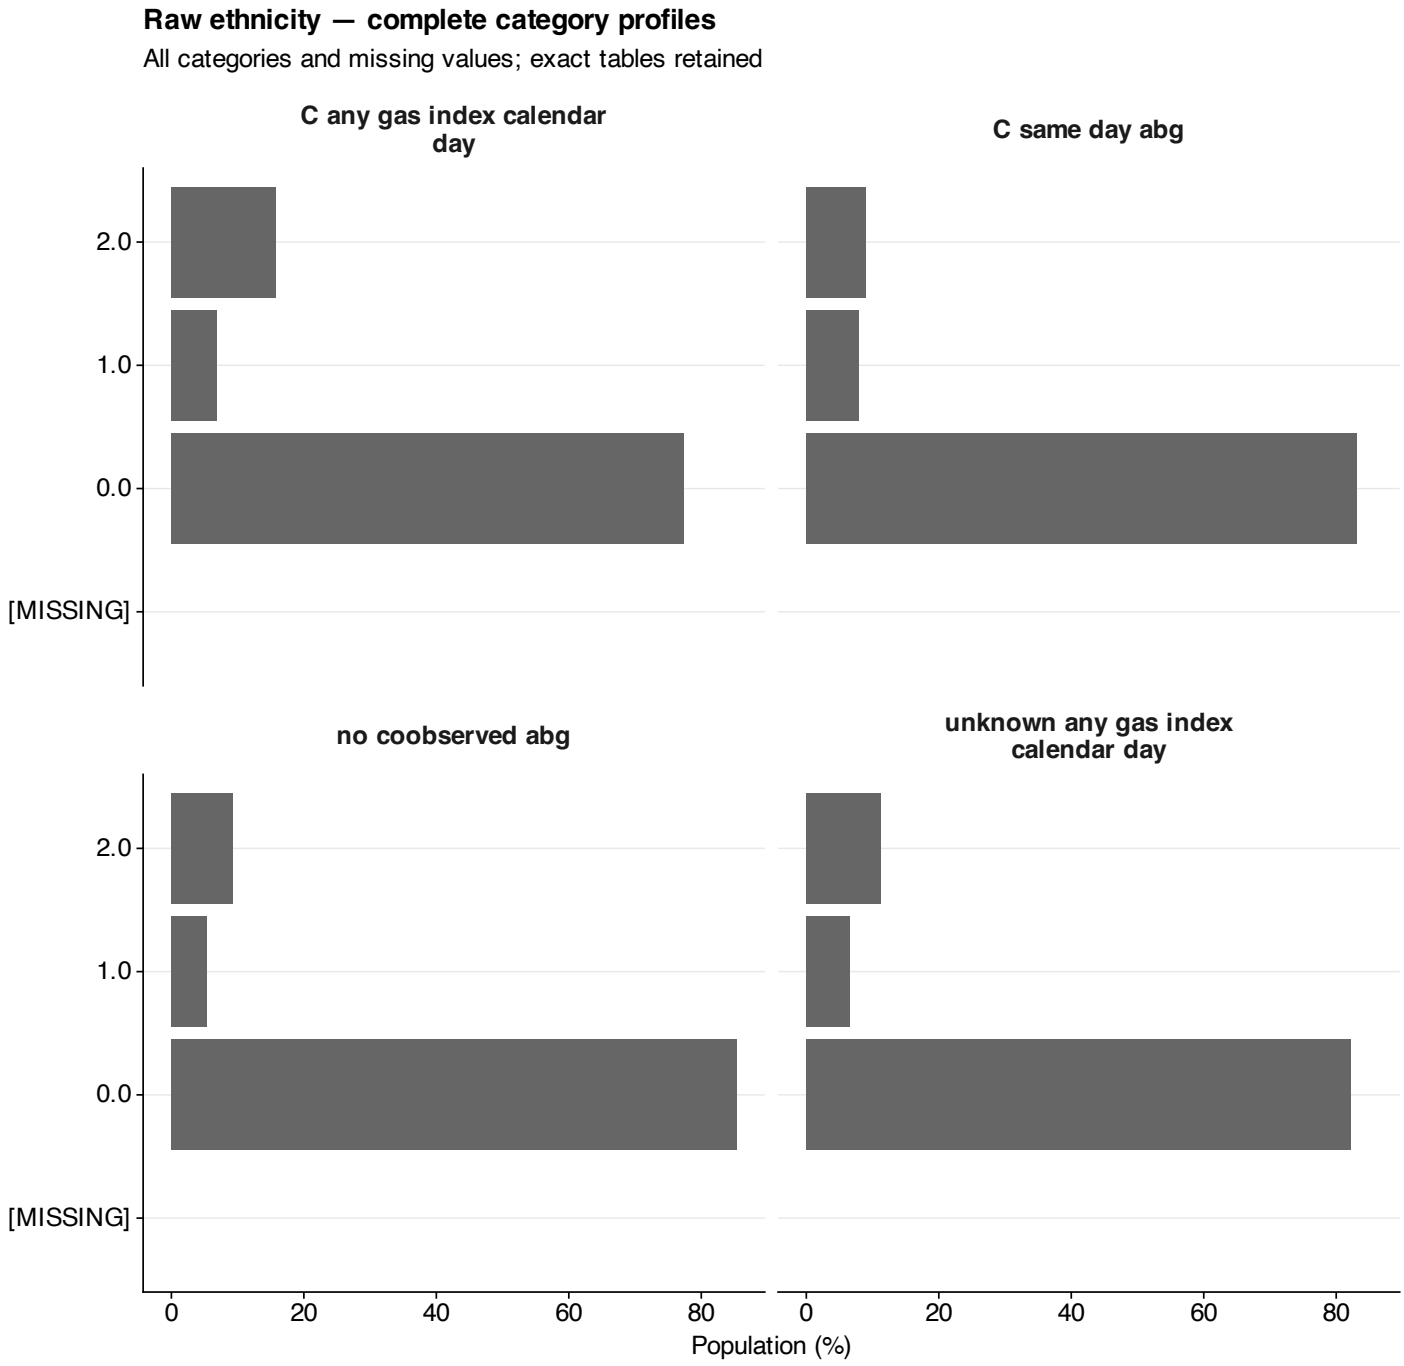

Figure 1128: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete raw_ethnicity stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

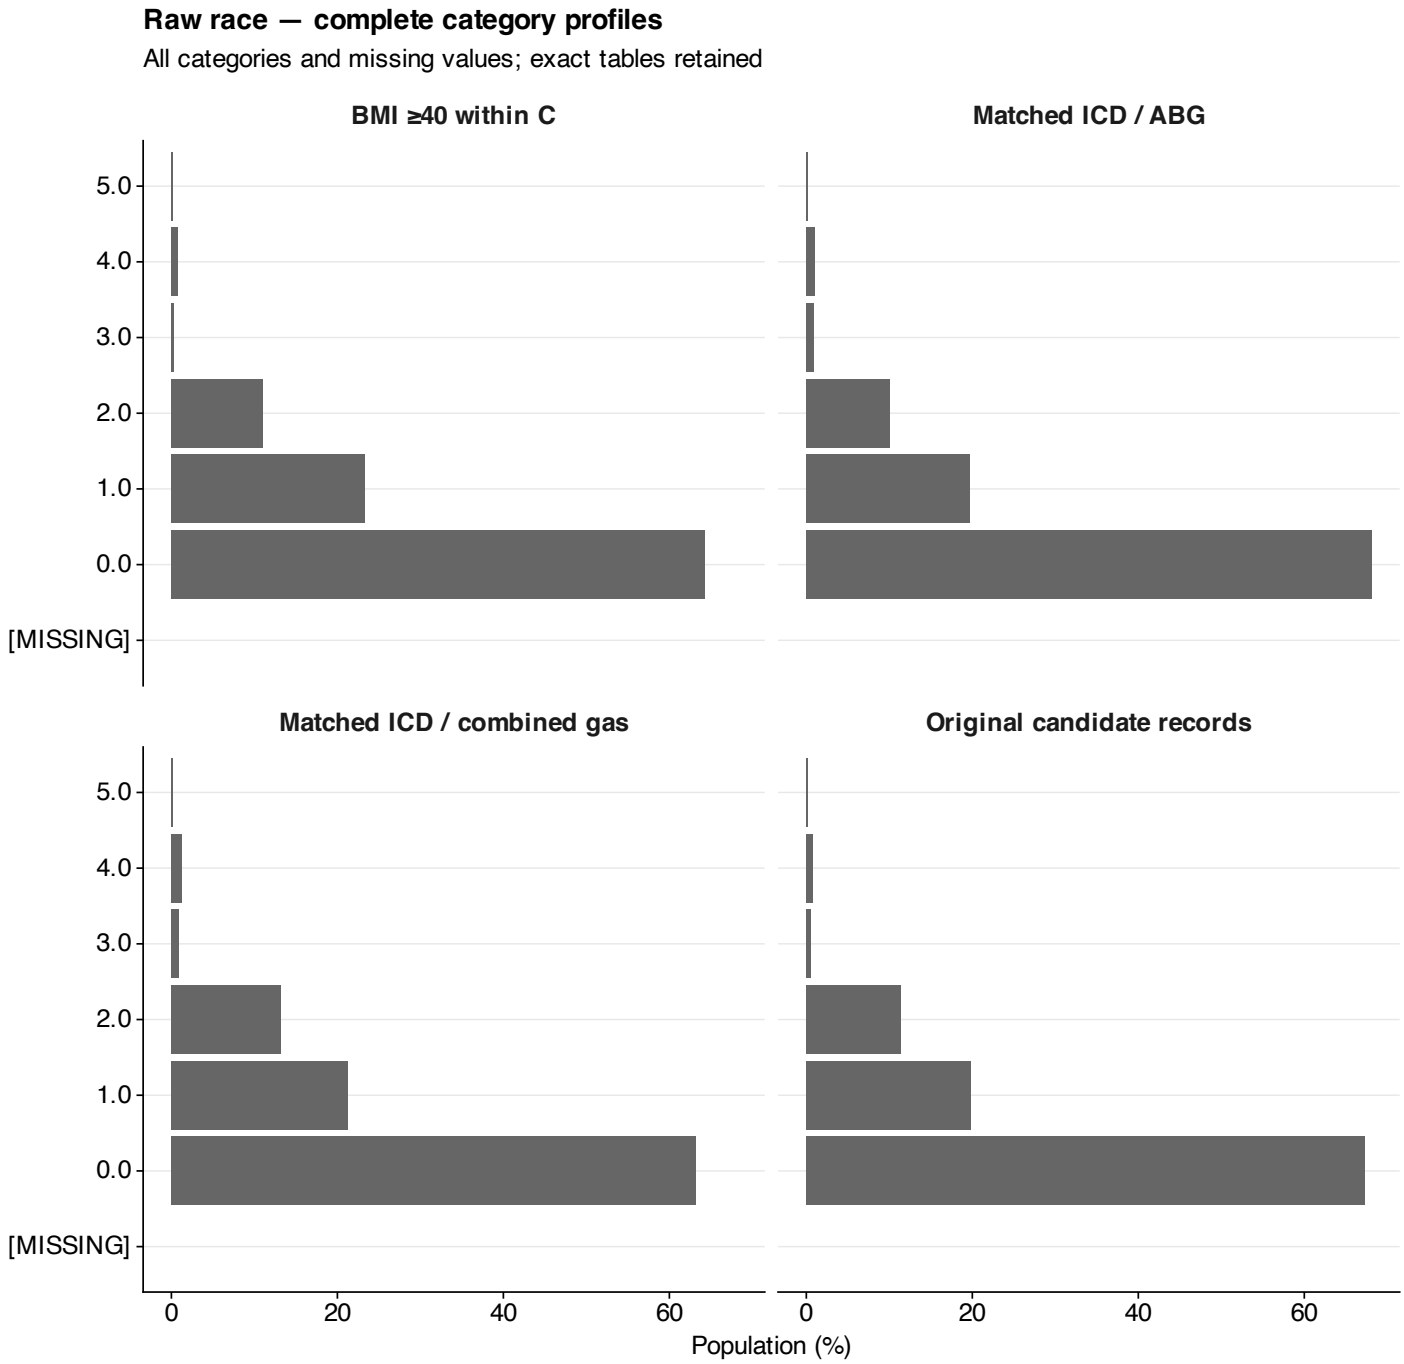

Figure 1129: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete raw_race stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

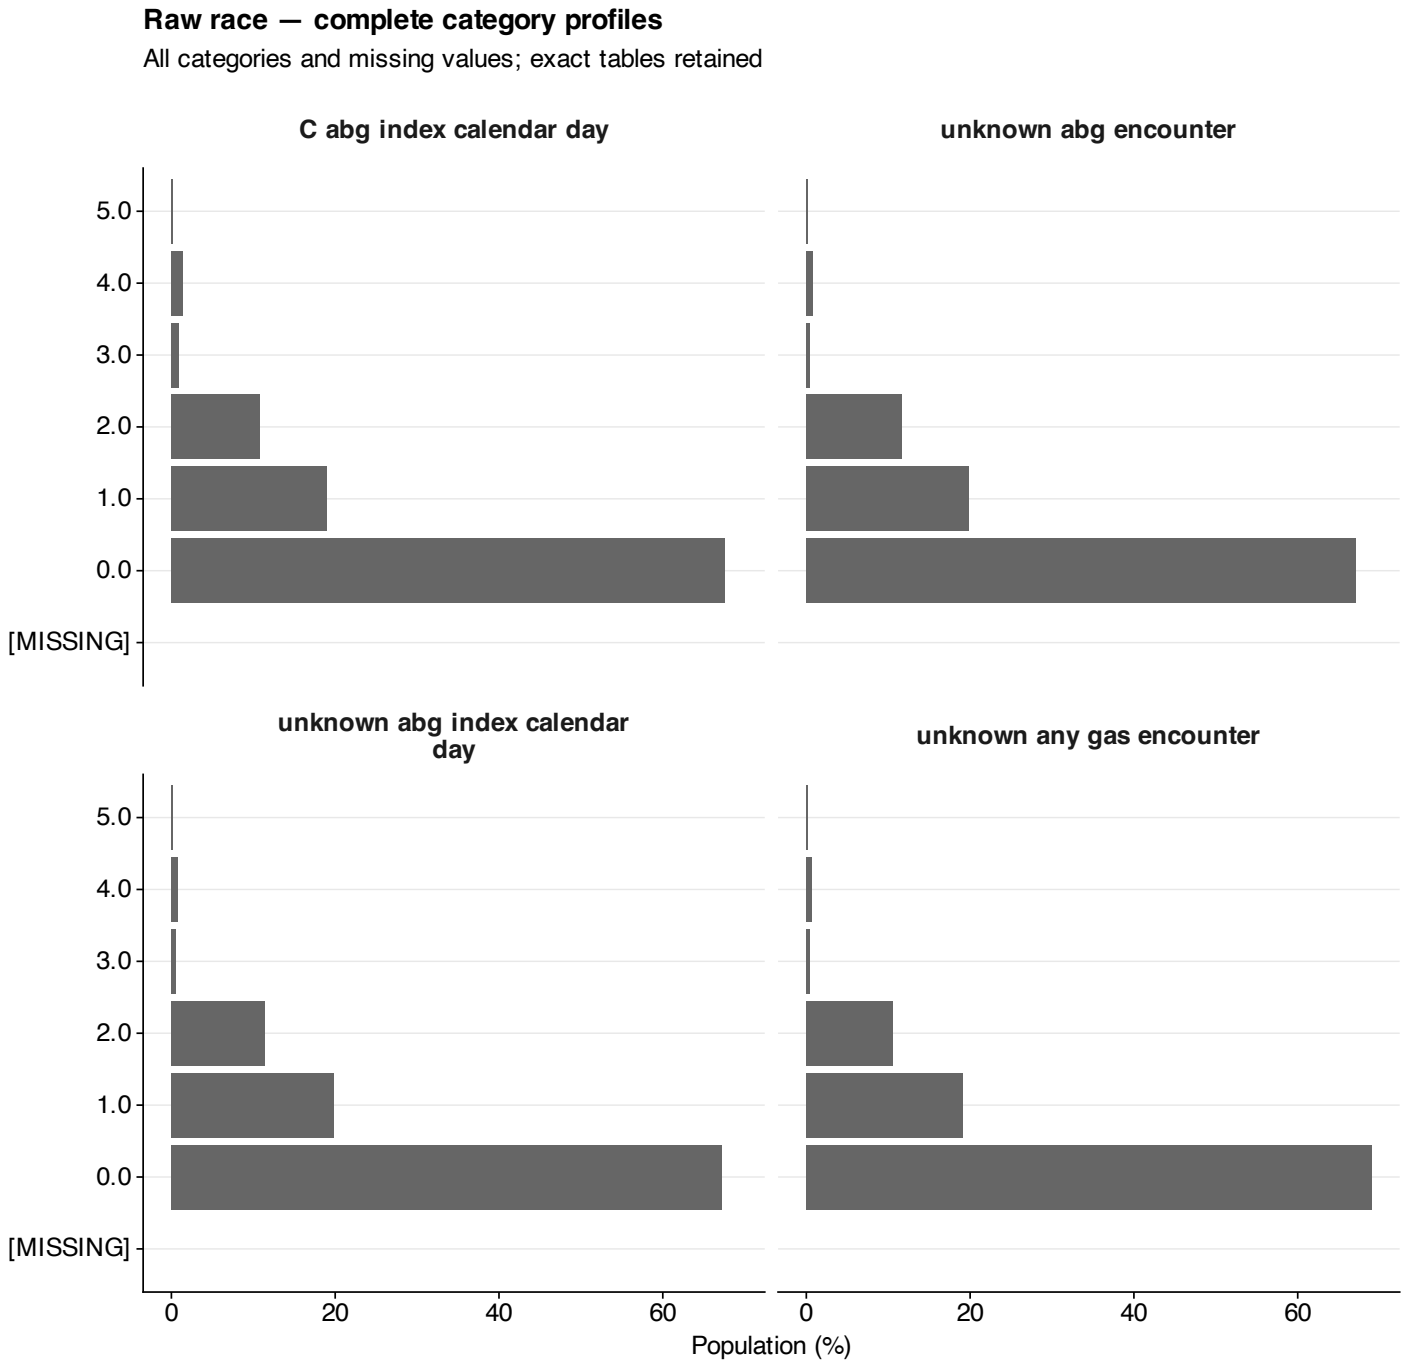

Figure 1130: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete raw_race stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

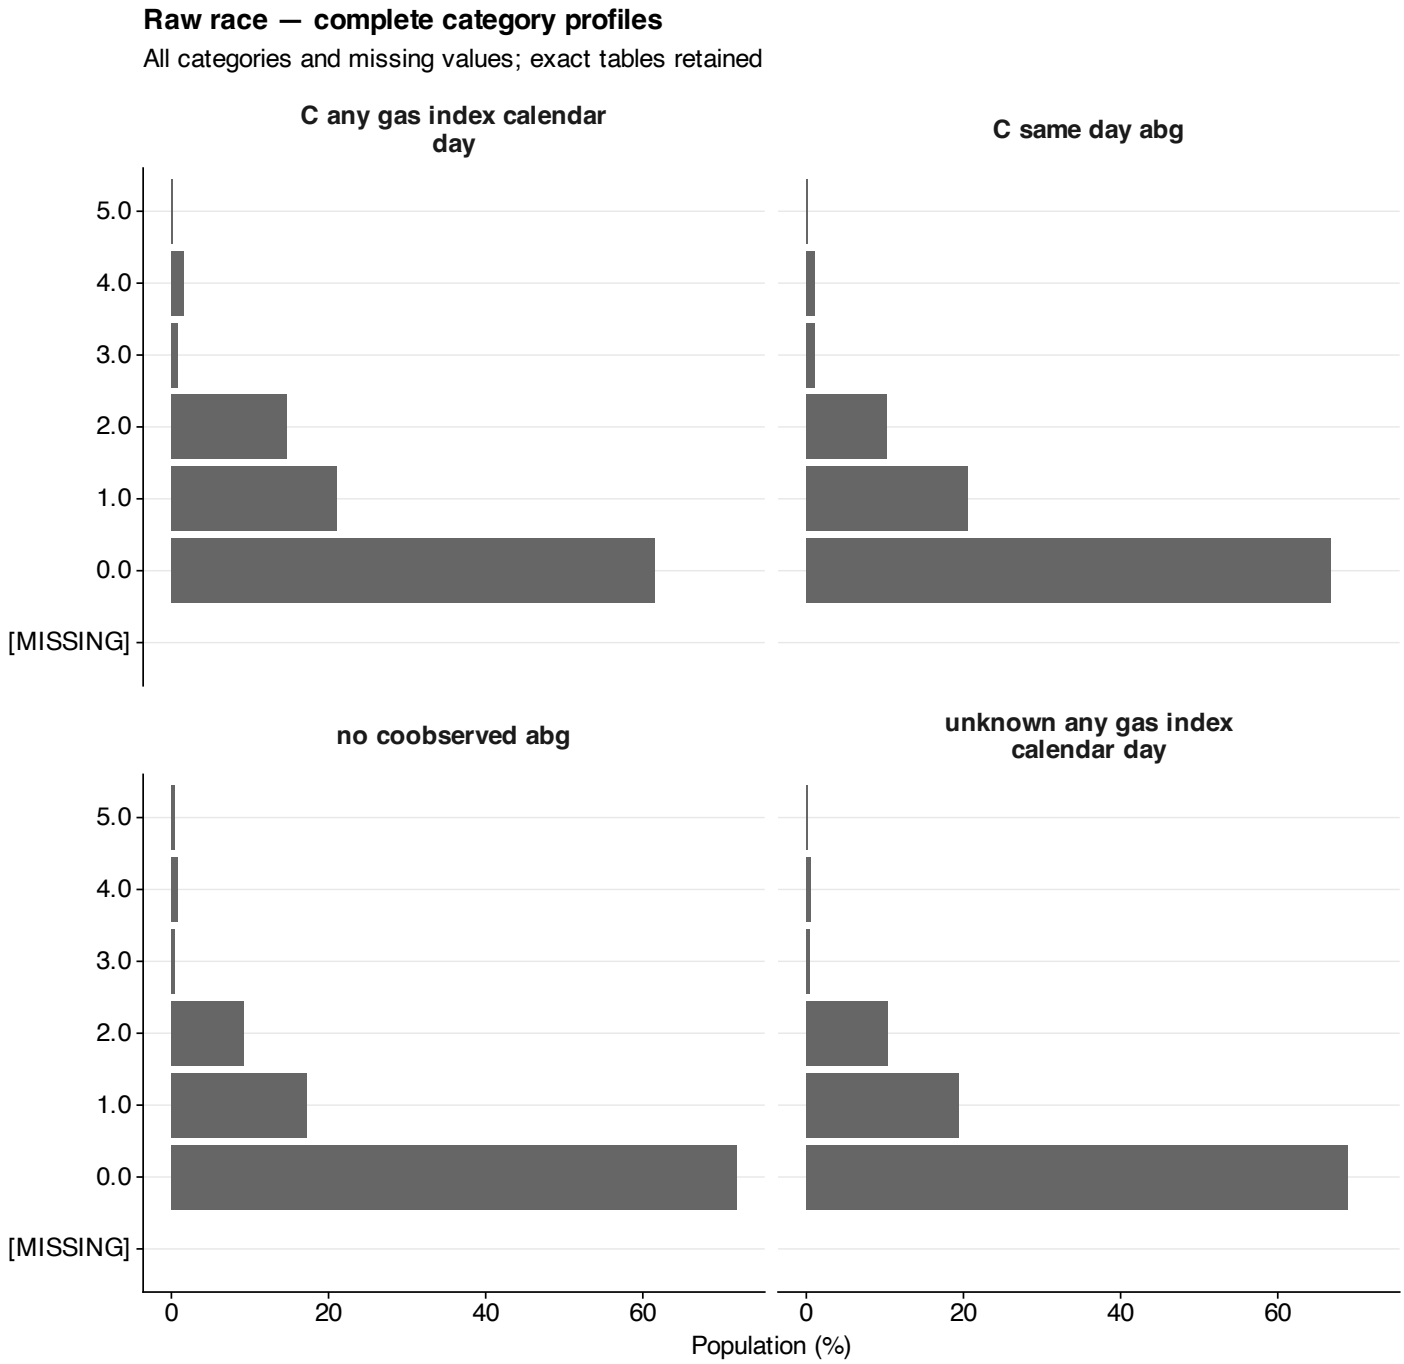

Figure 1131: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete raw_race stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

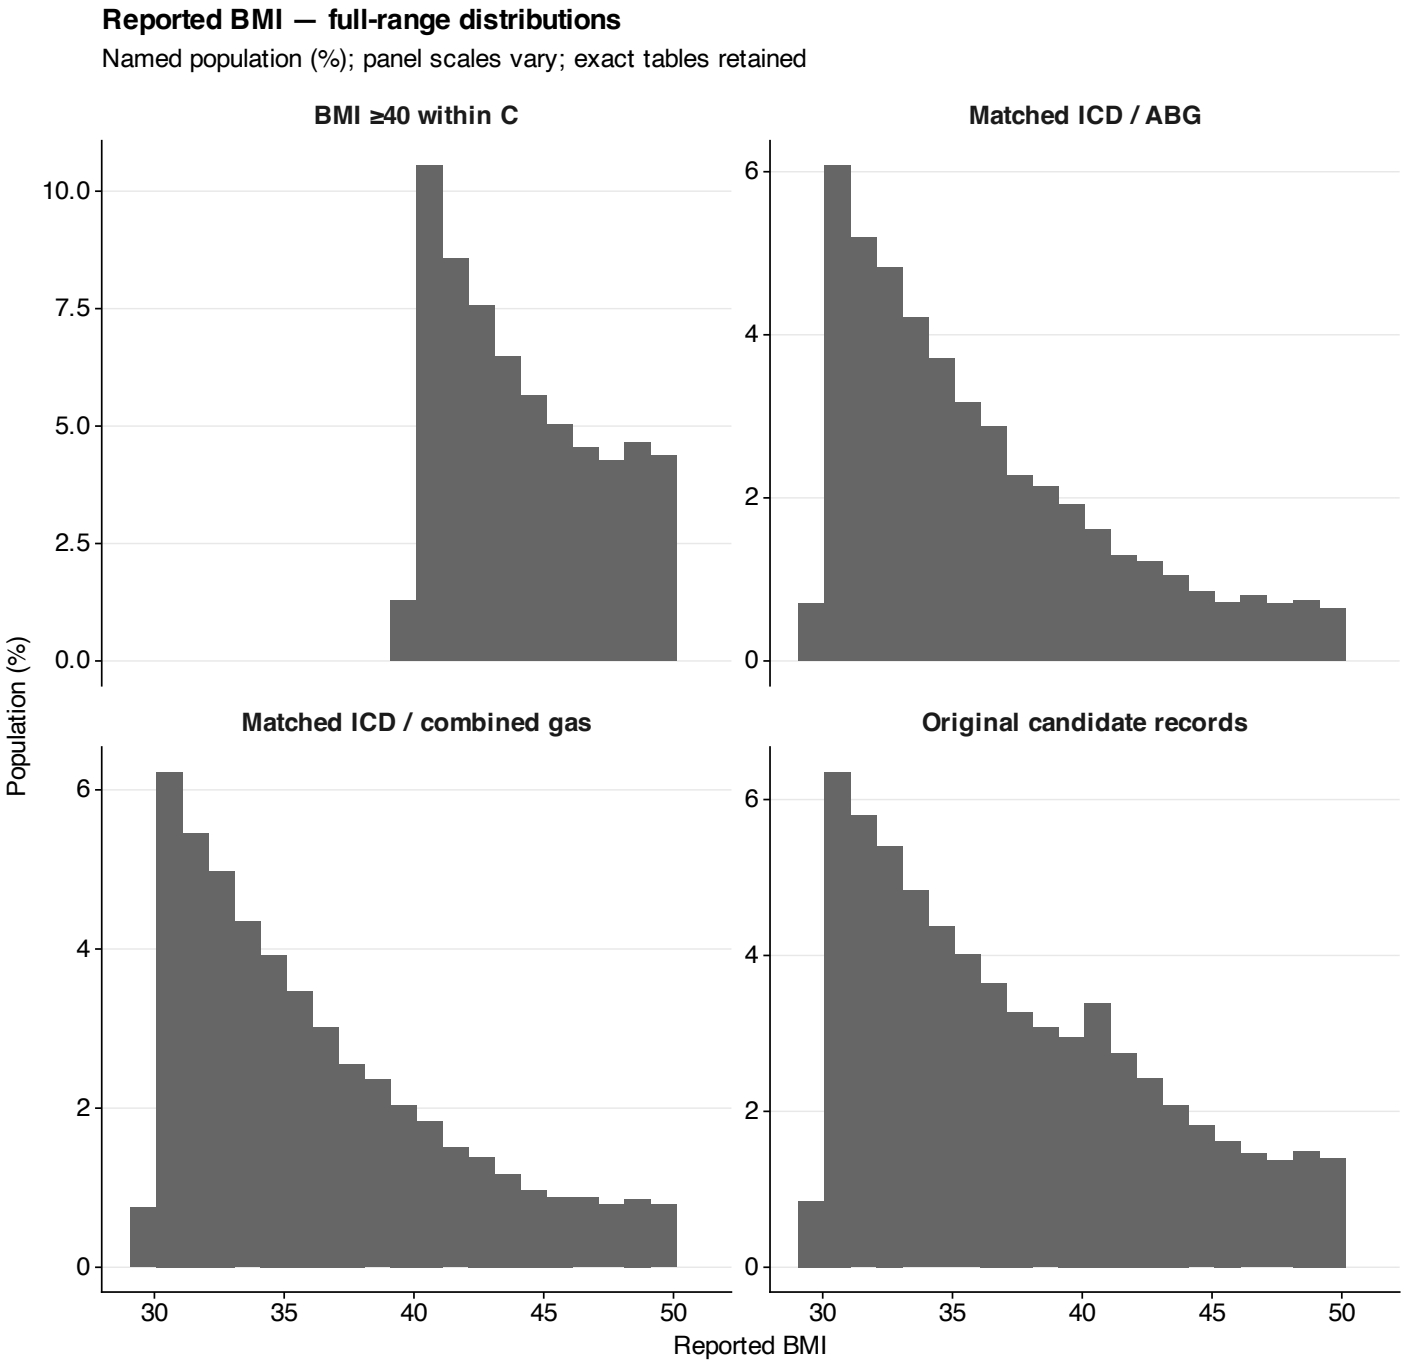

Figure 1132: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete reported_bmi stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

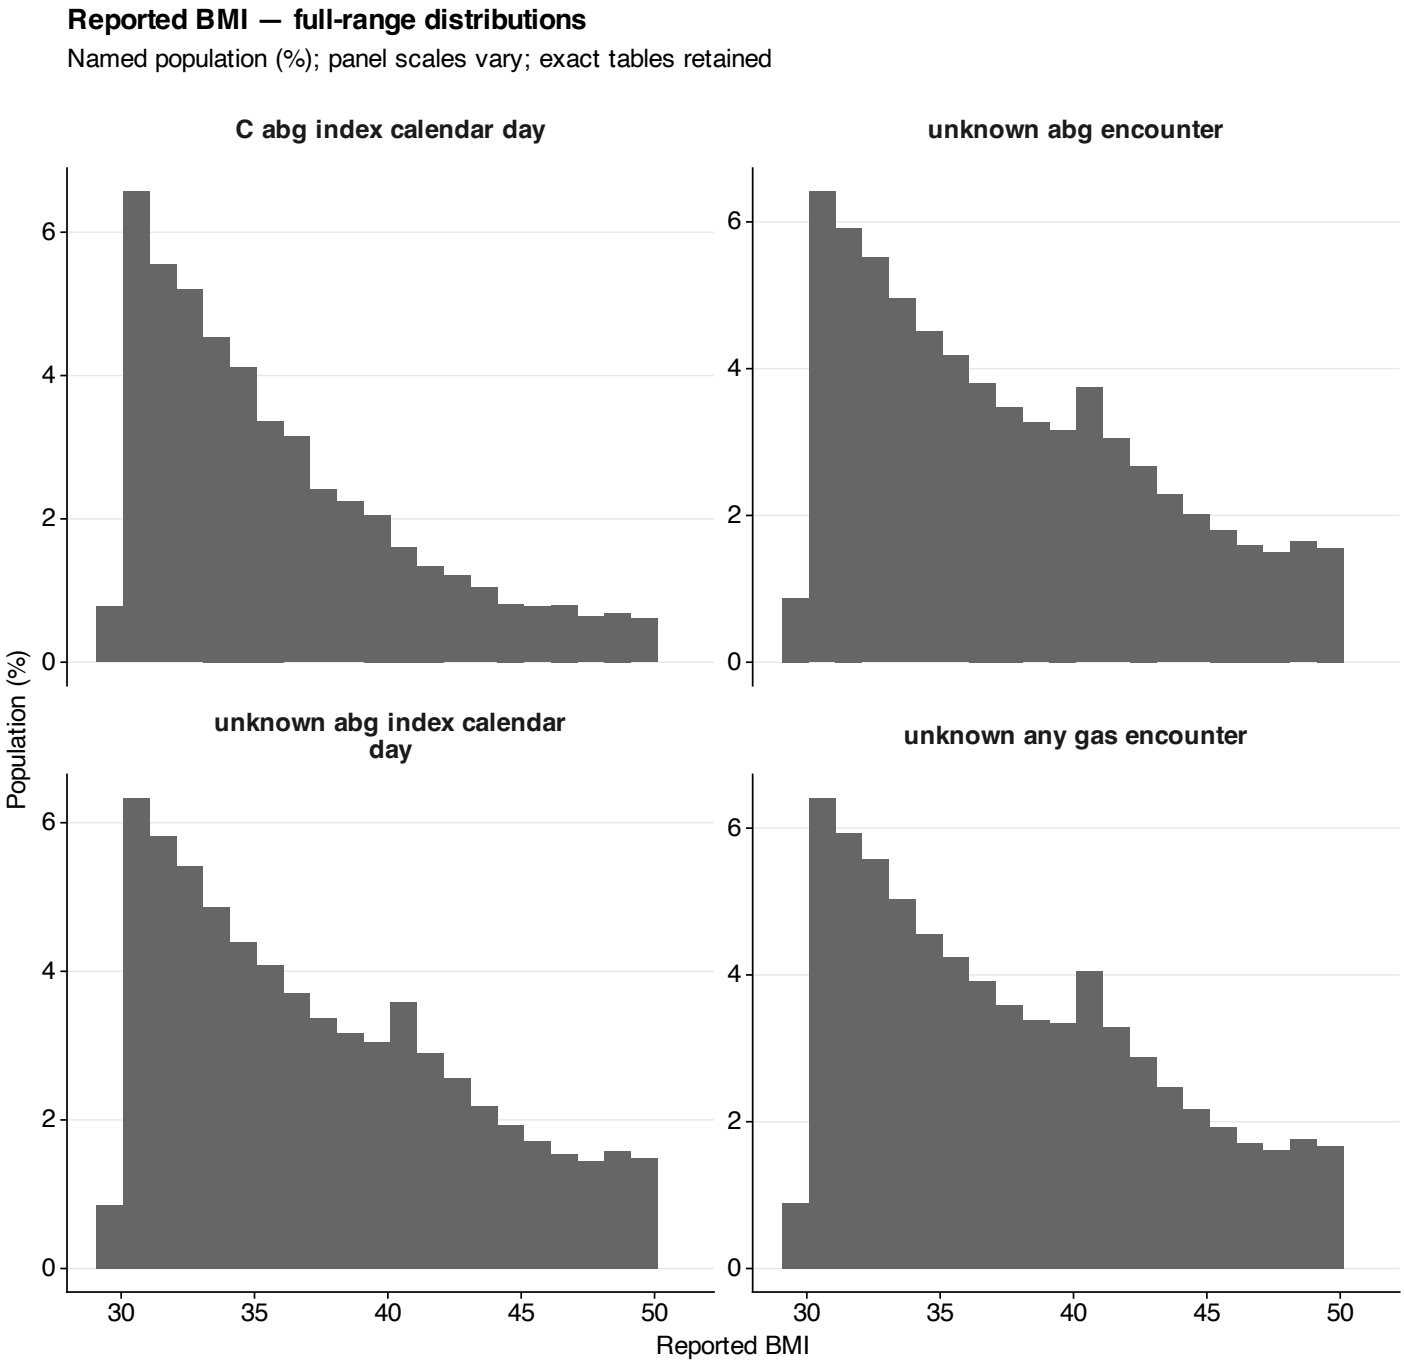

Figure 1133: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete reported_bmi stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

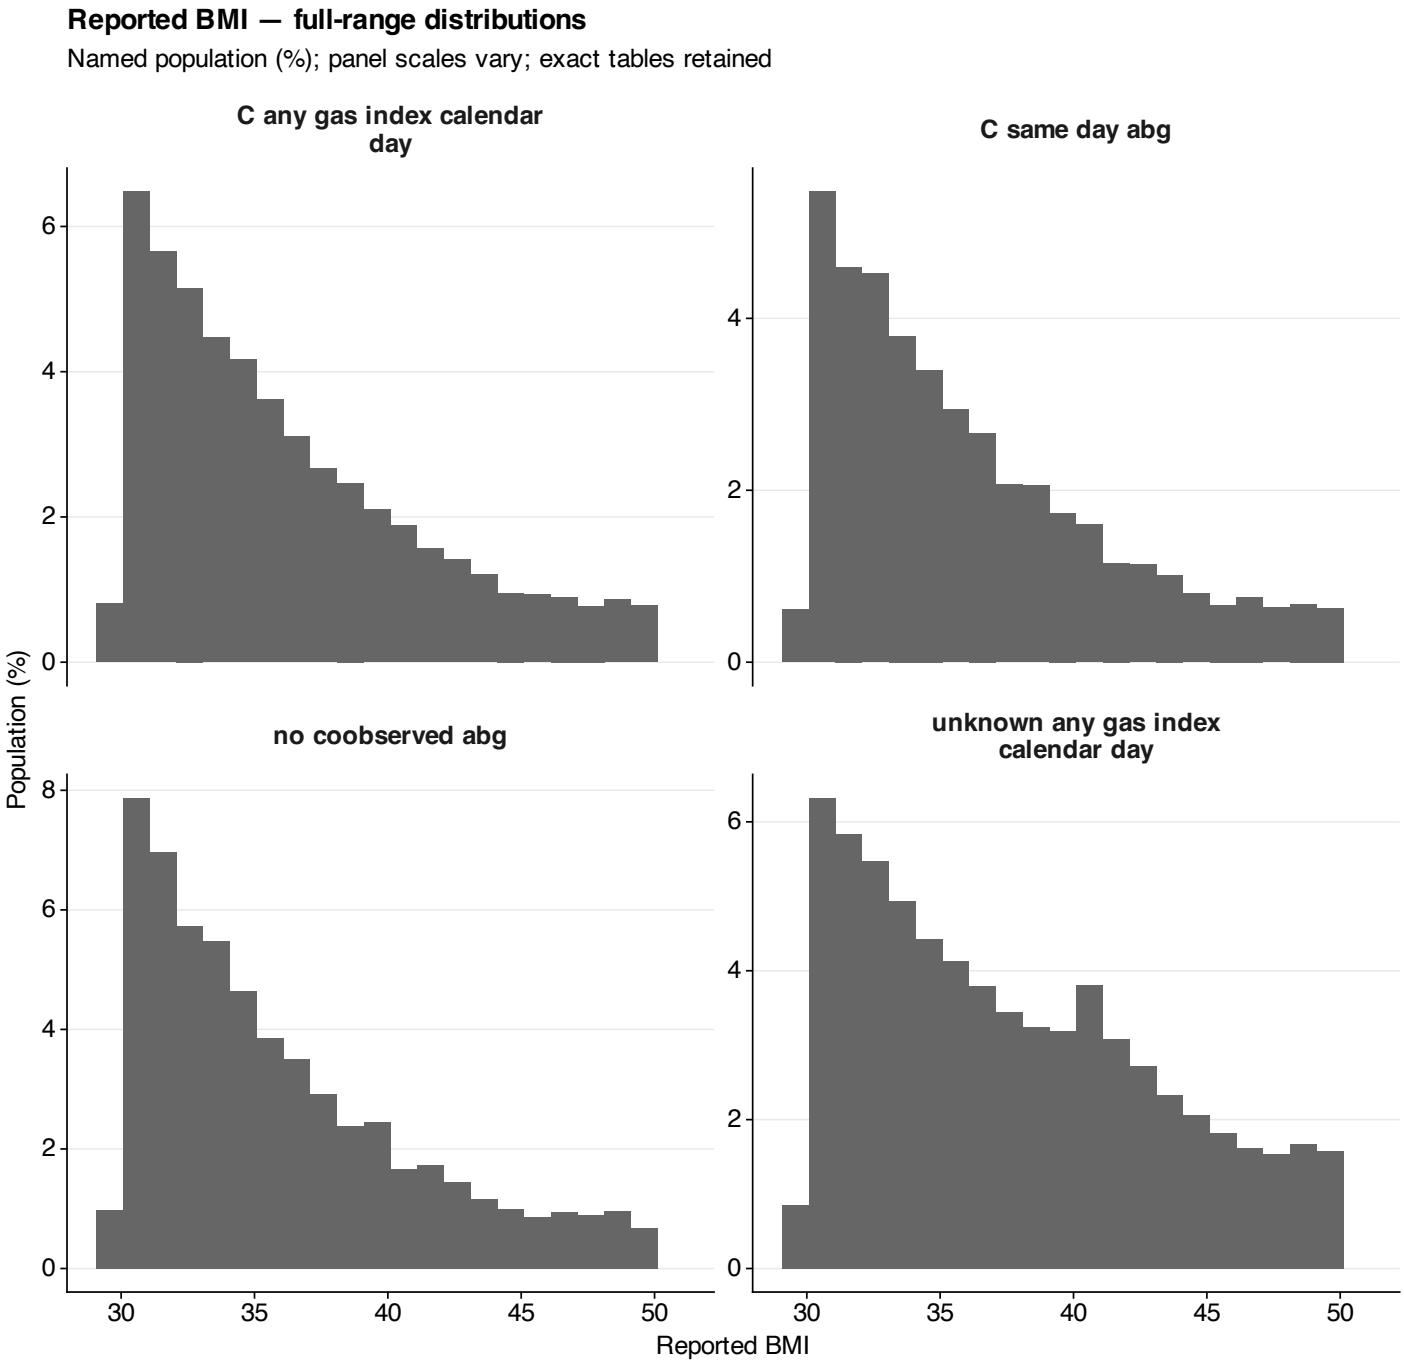

Figure 1134: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete reported_bmi stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

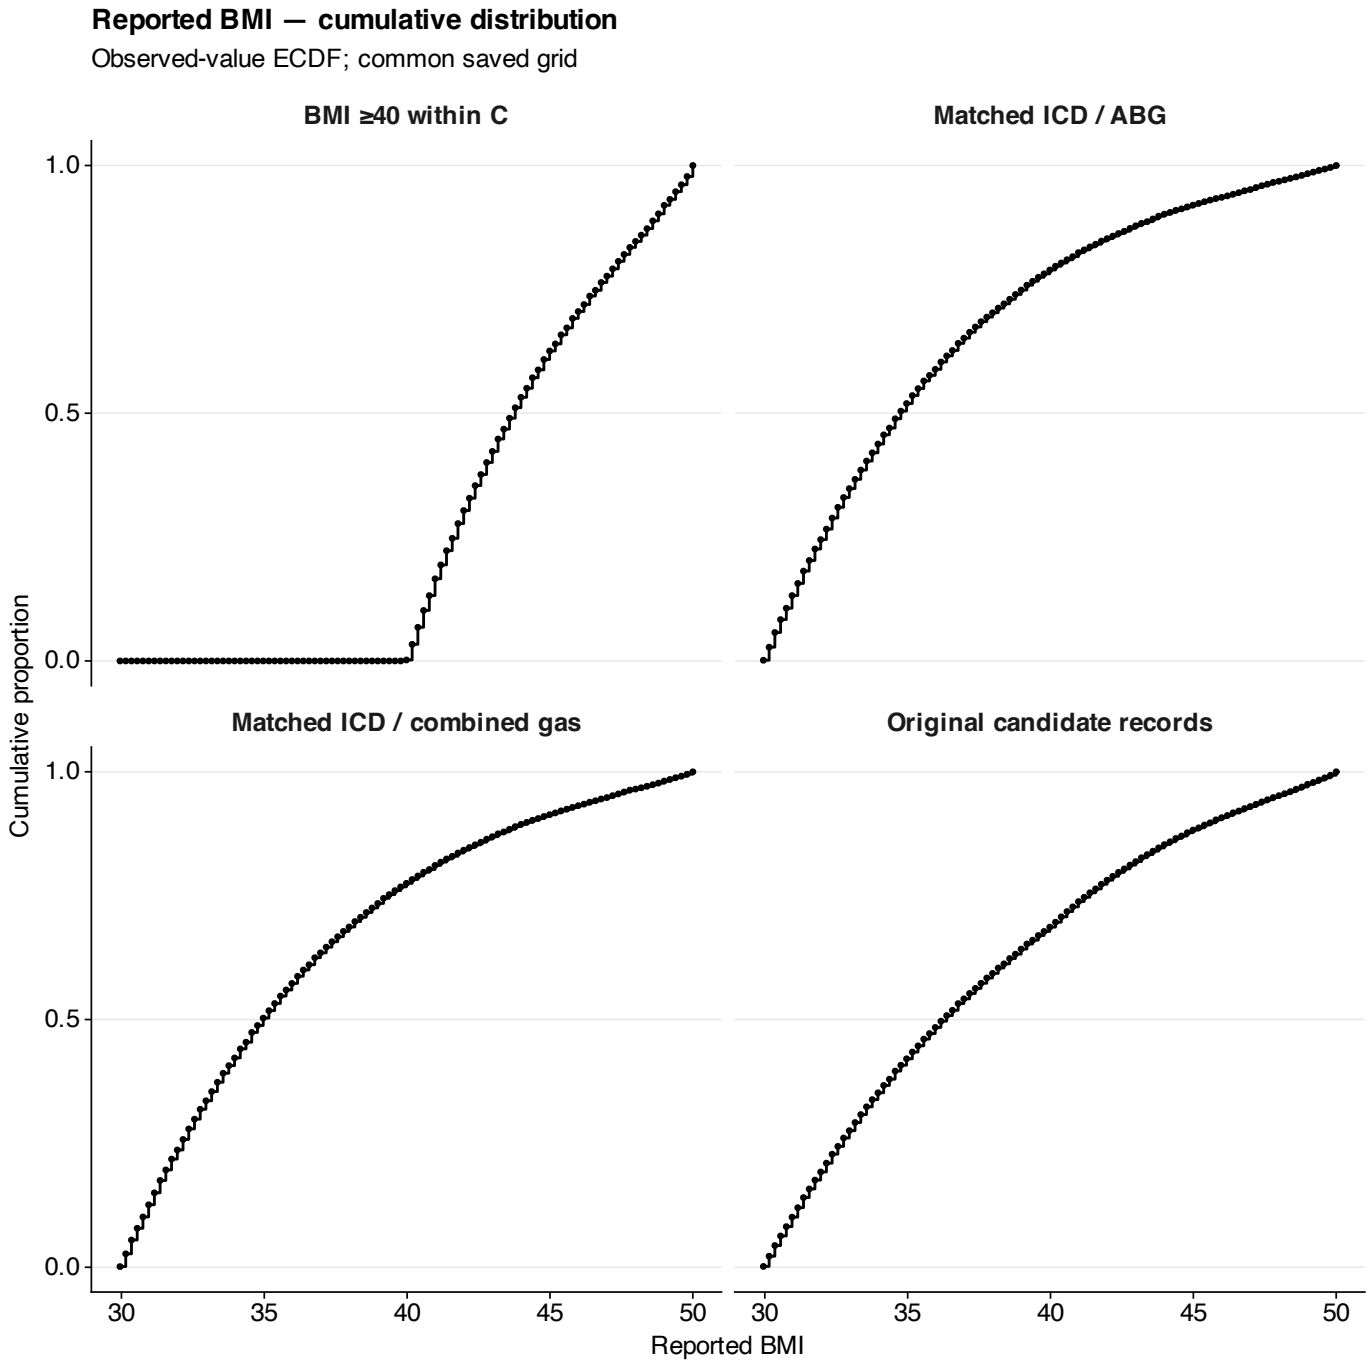

Figure 1135: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. reported_bmi ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

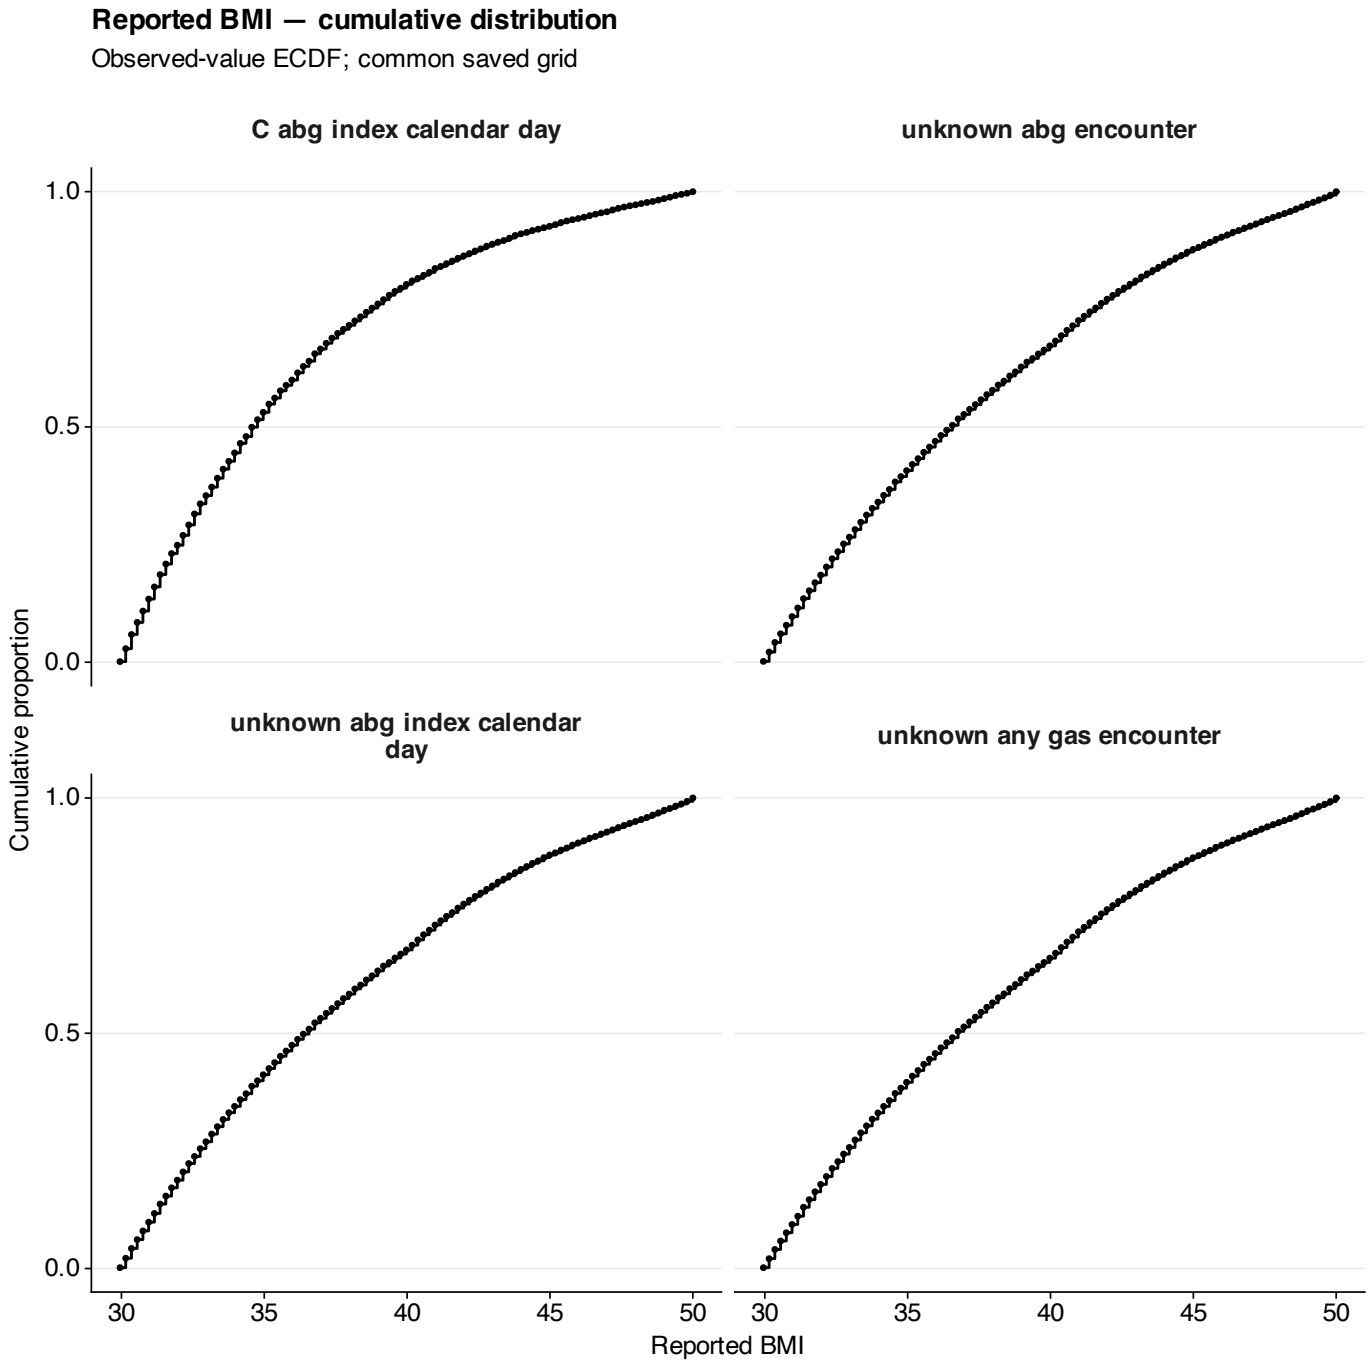

Figure 1136: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. reported_bmi ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

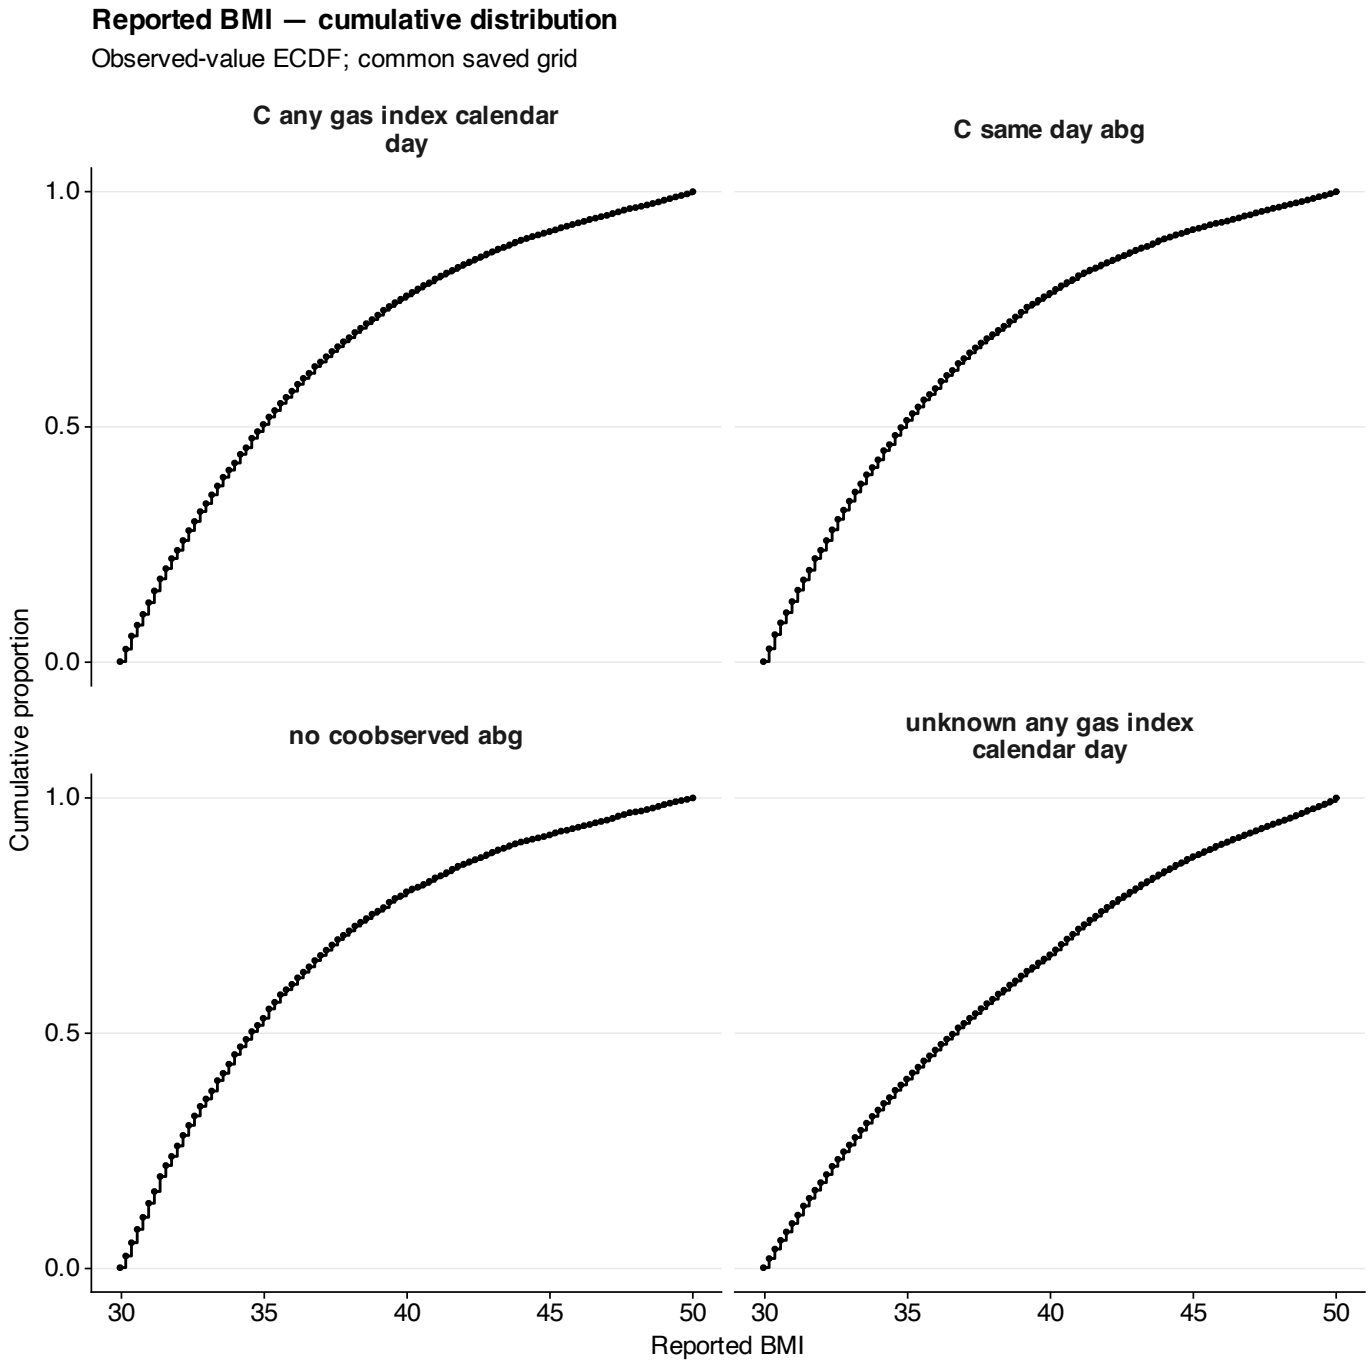

Figure 1137: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. reported_bmi ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

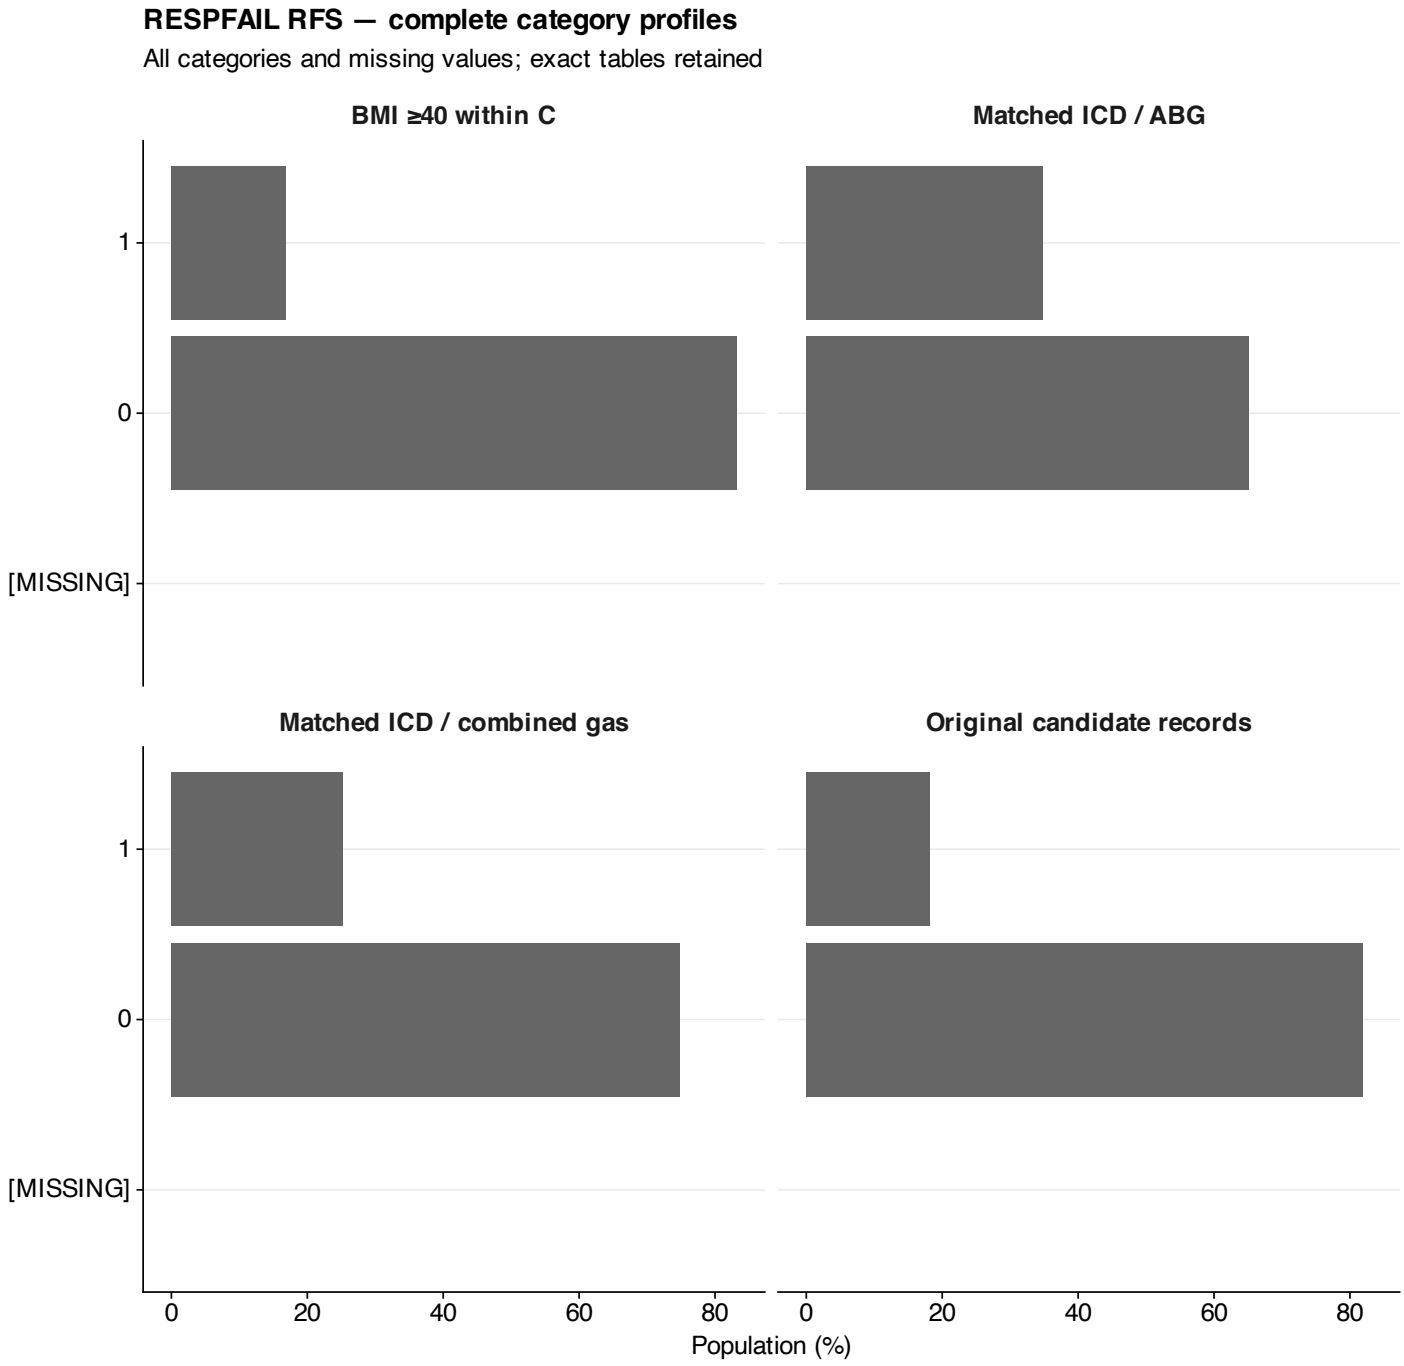

Figure 1138: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete RESPFAIL_rfs stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

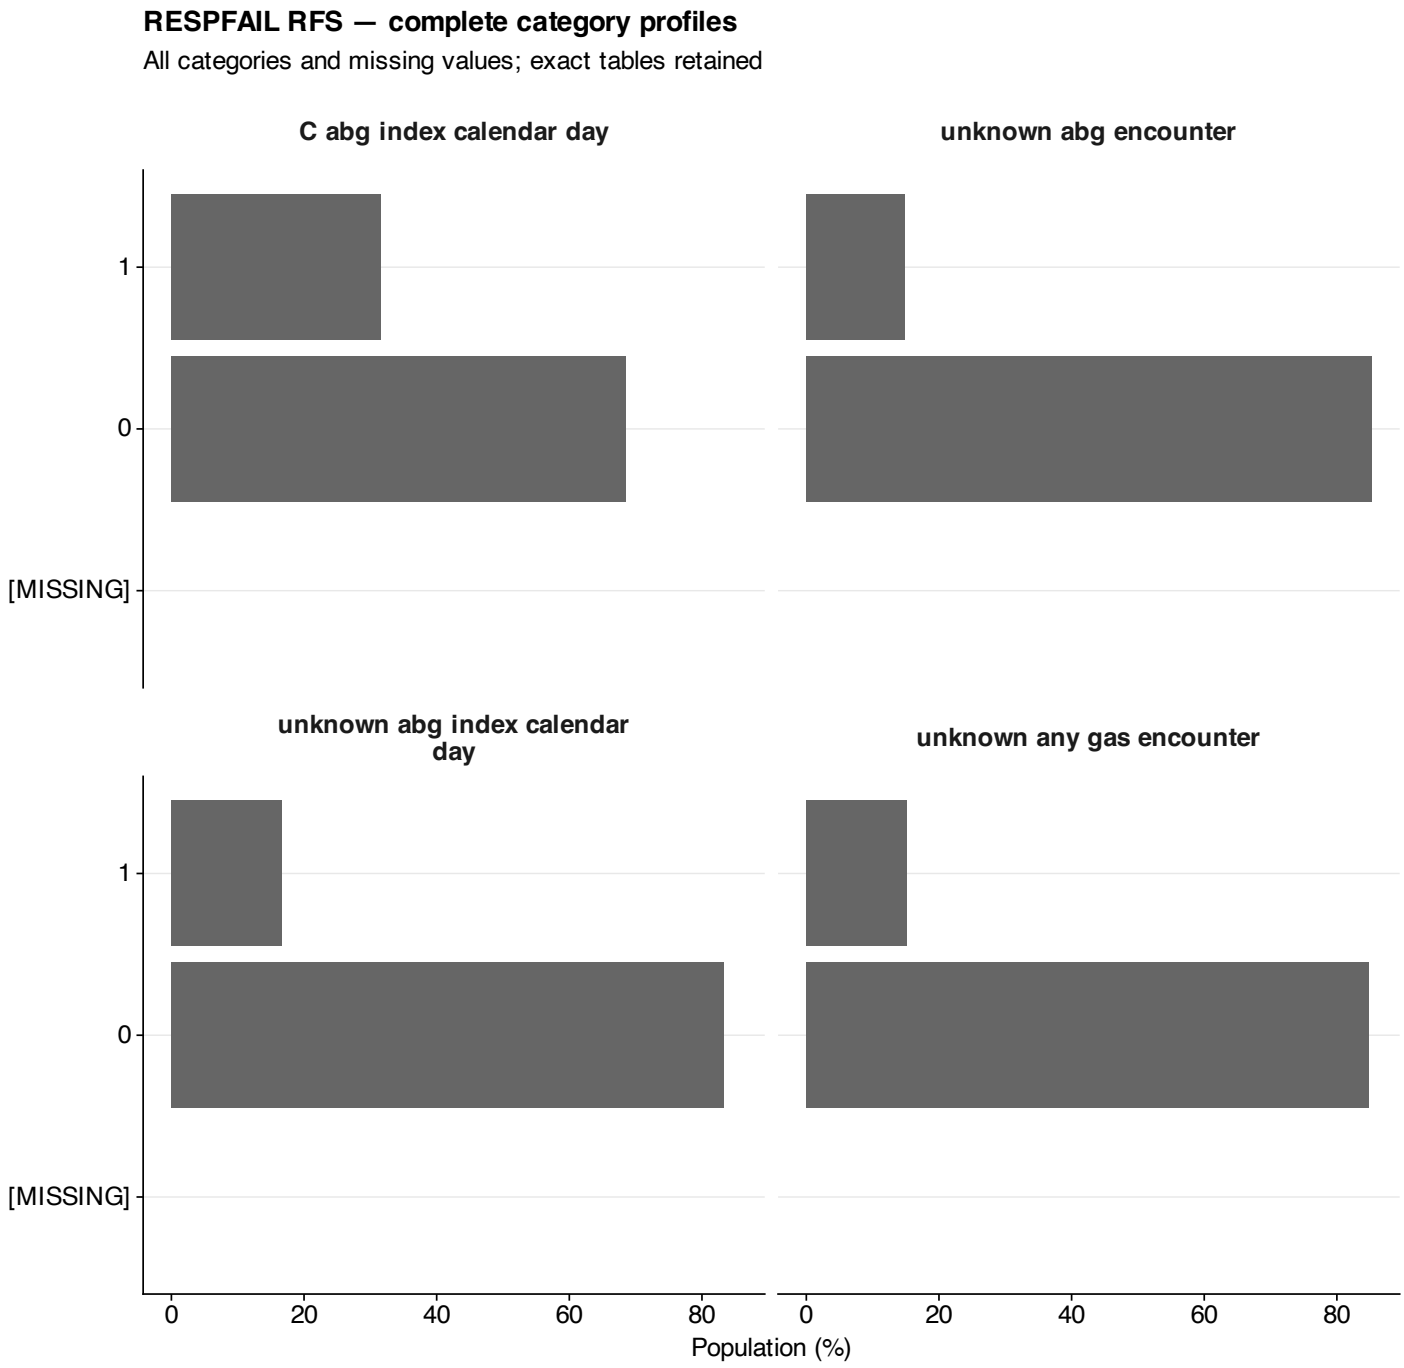

Figure 1139: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete RESPFAIL_rfs stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

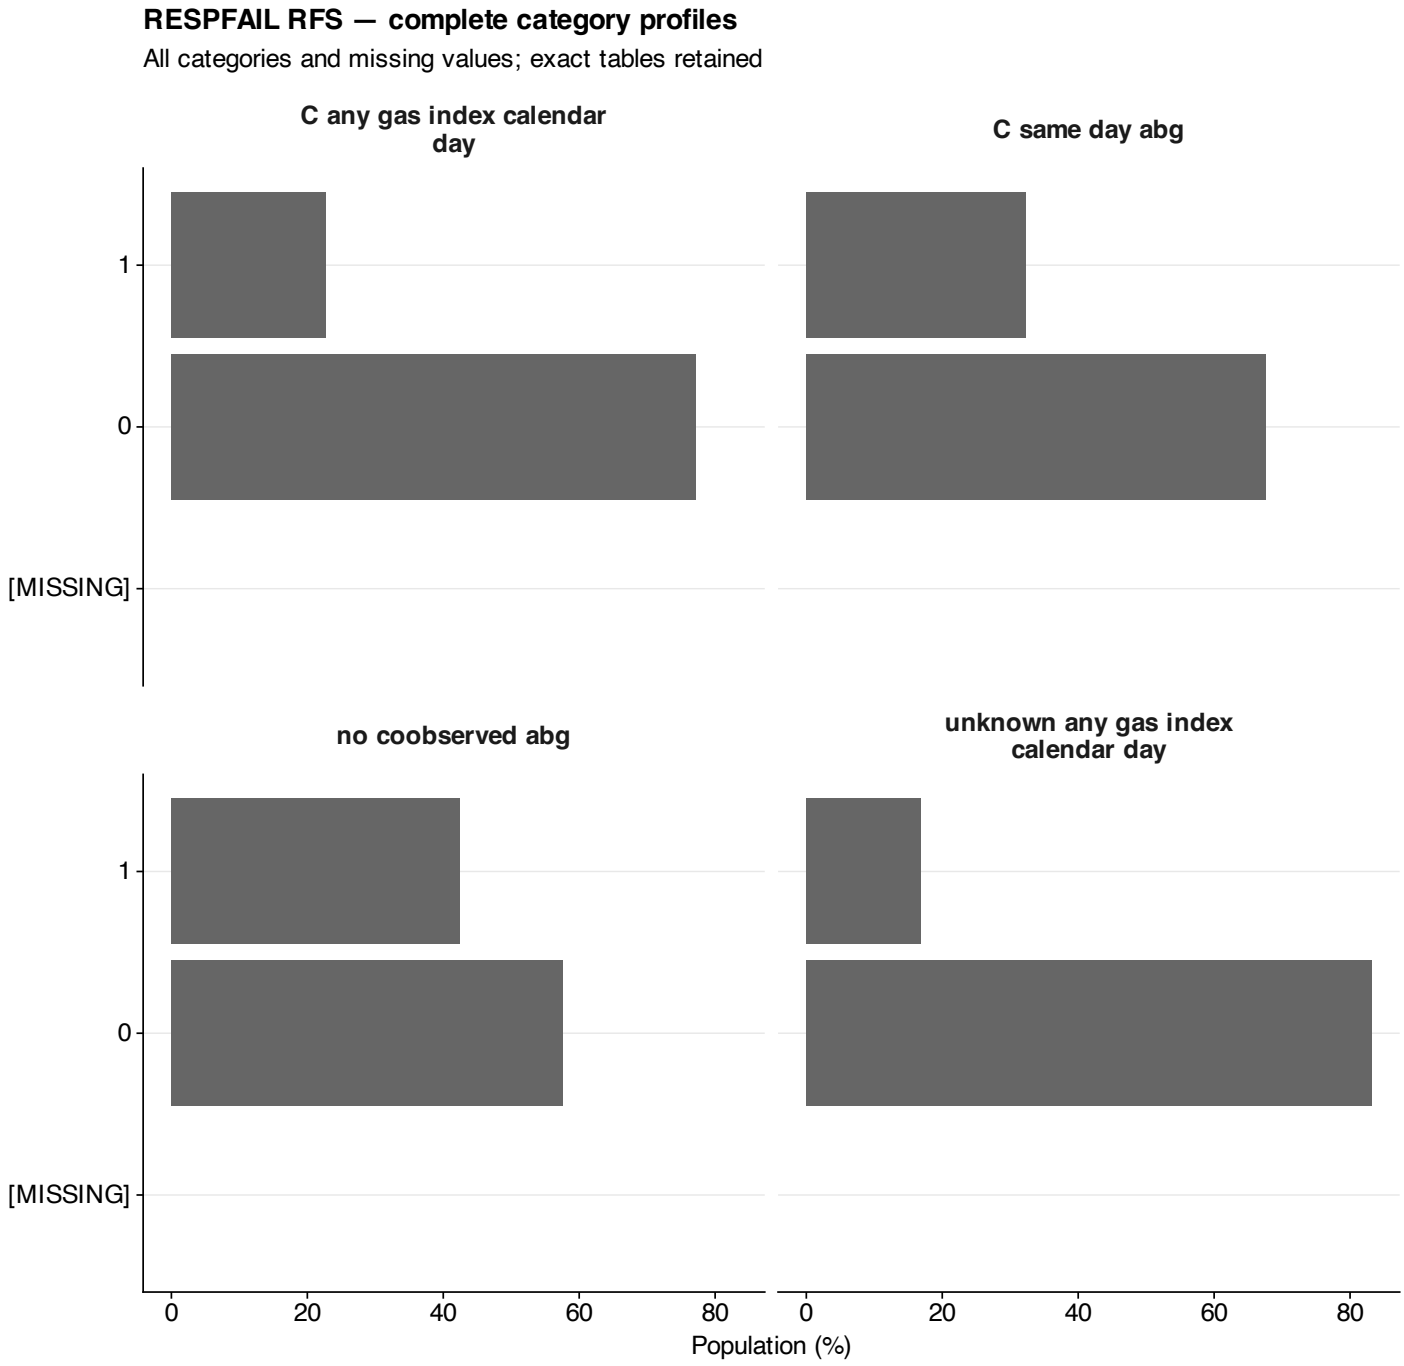

Figure 1140: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete RESPFAIL_rfs stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

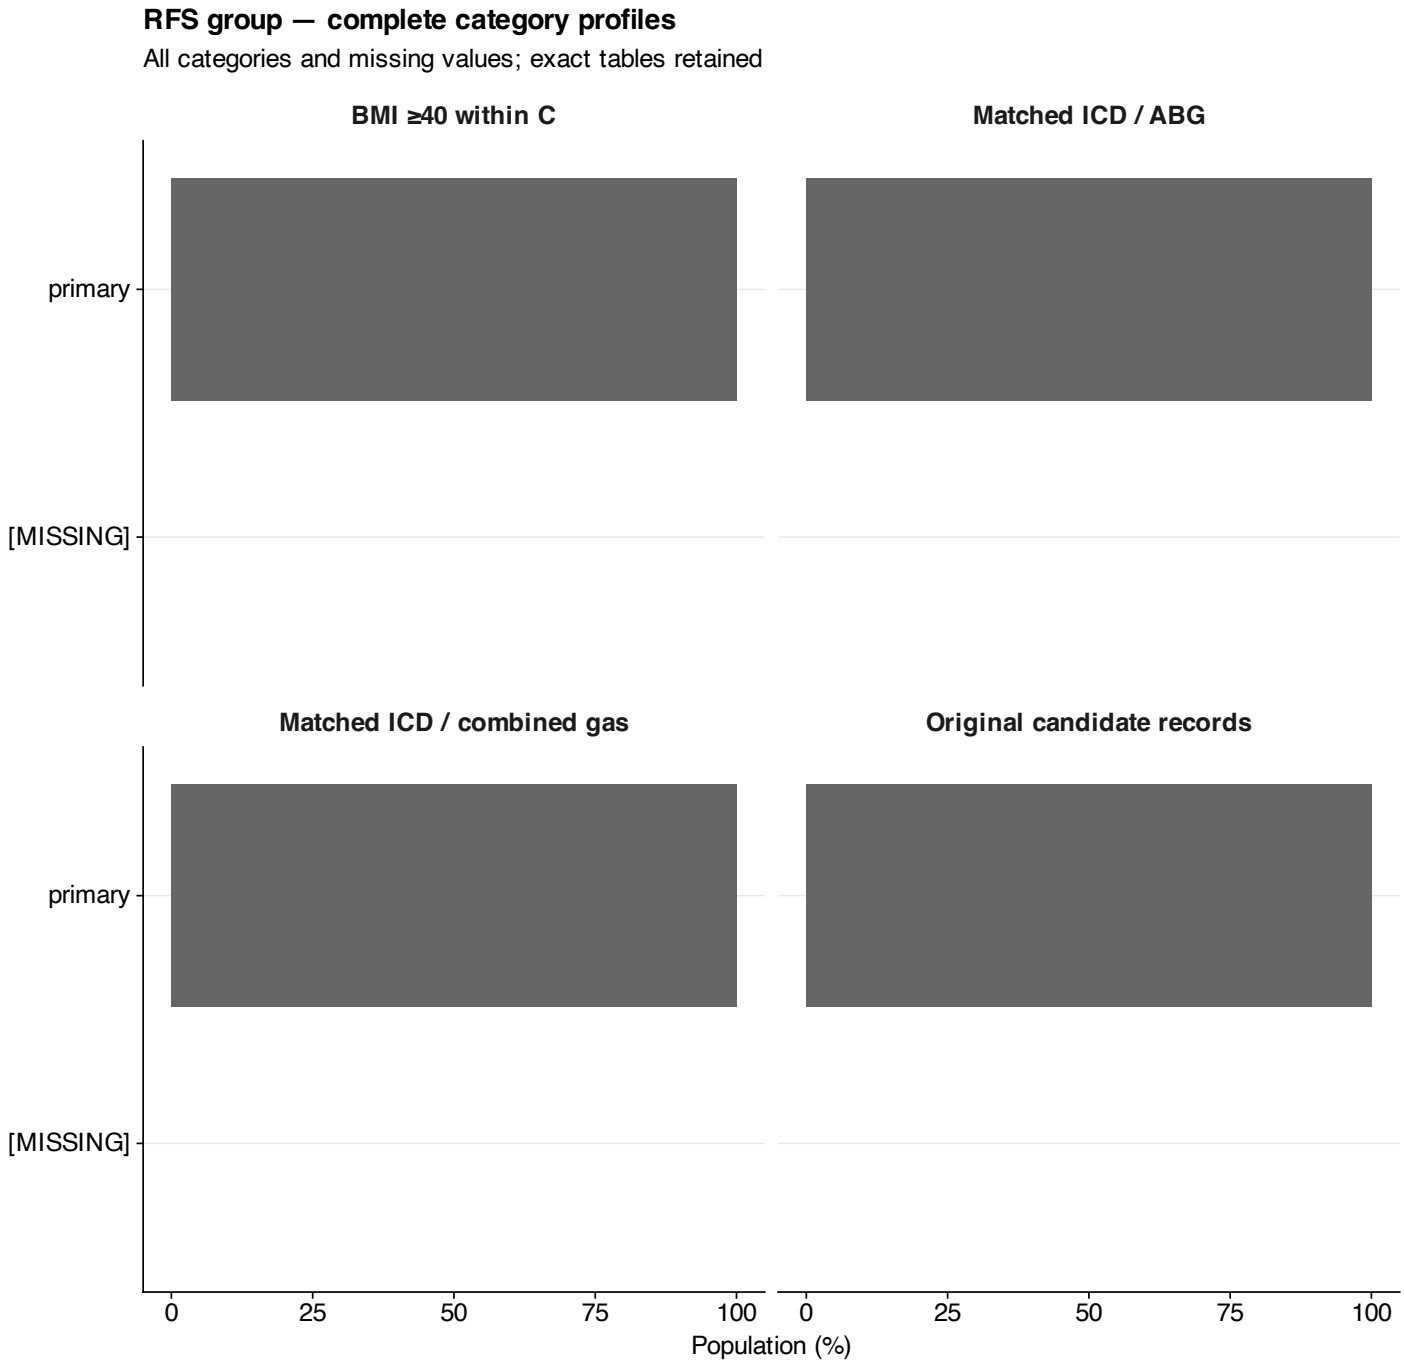

Figure 1141: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete rfs_group stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

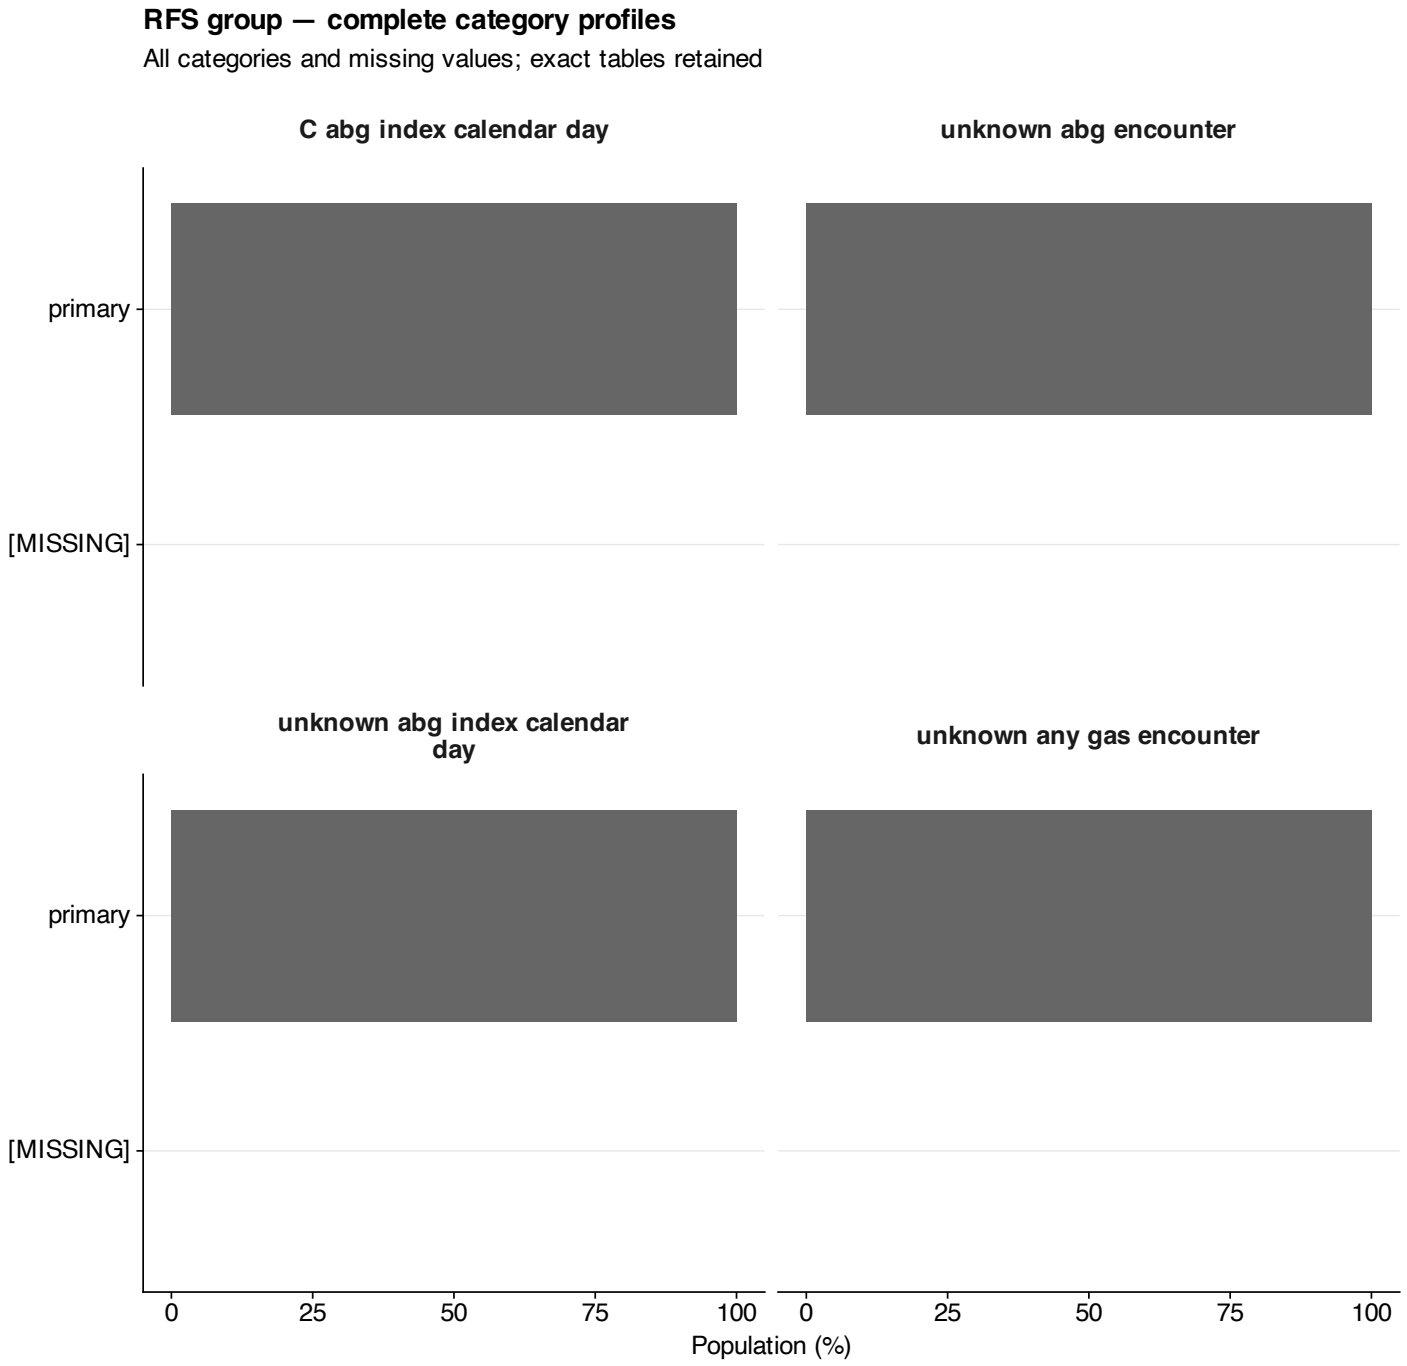

Figure 1142: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete rfs_group stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

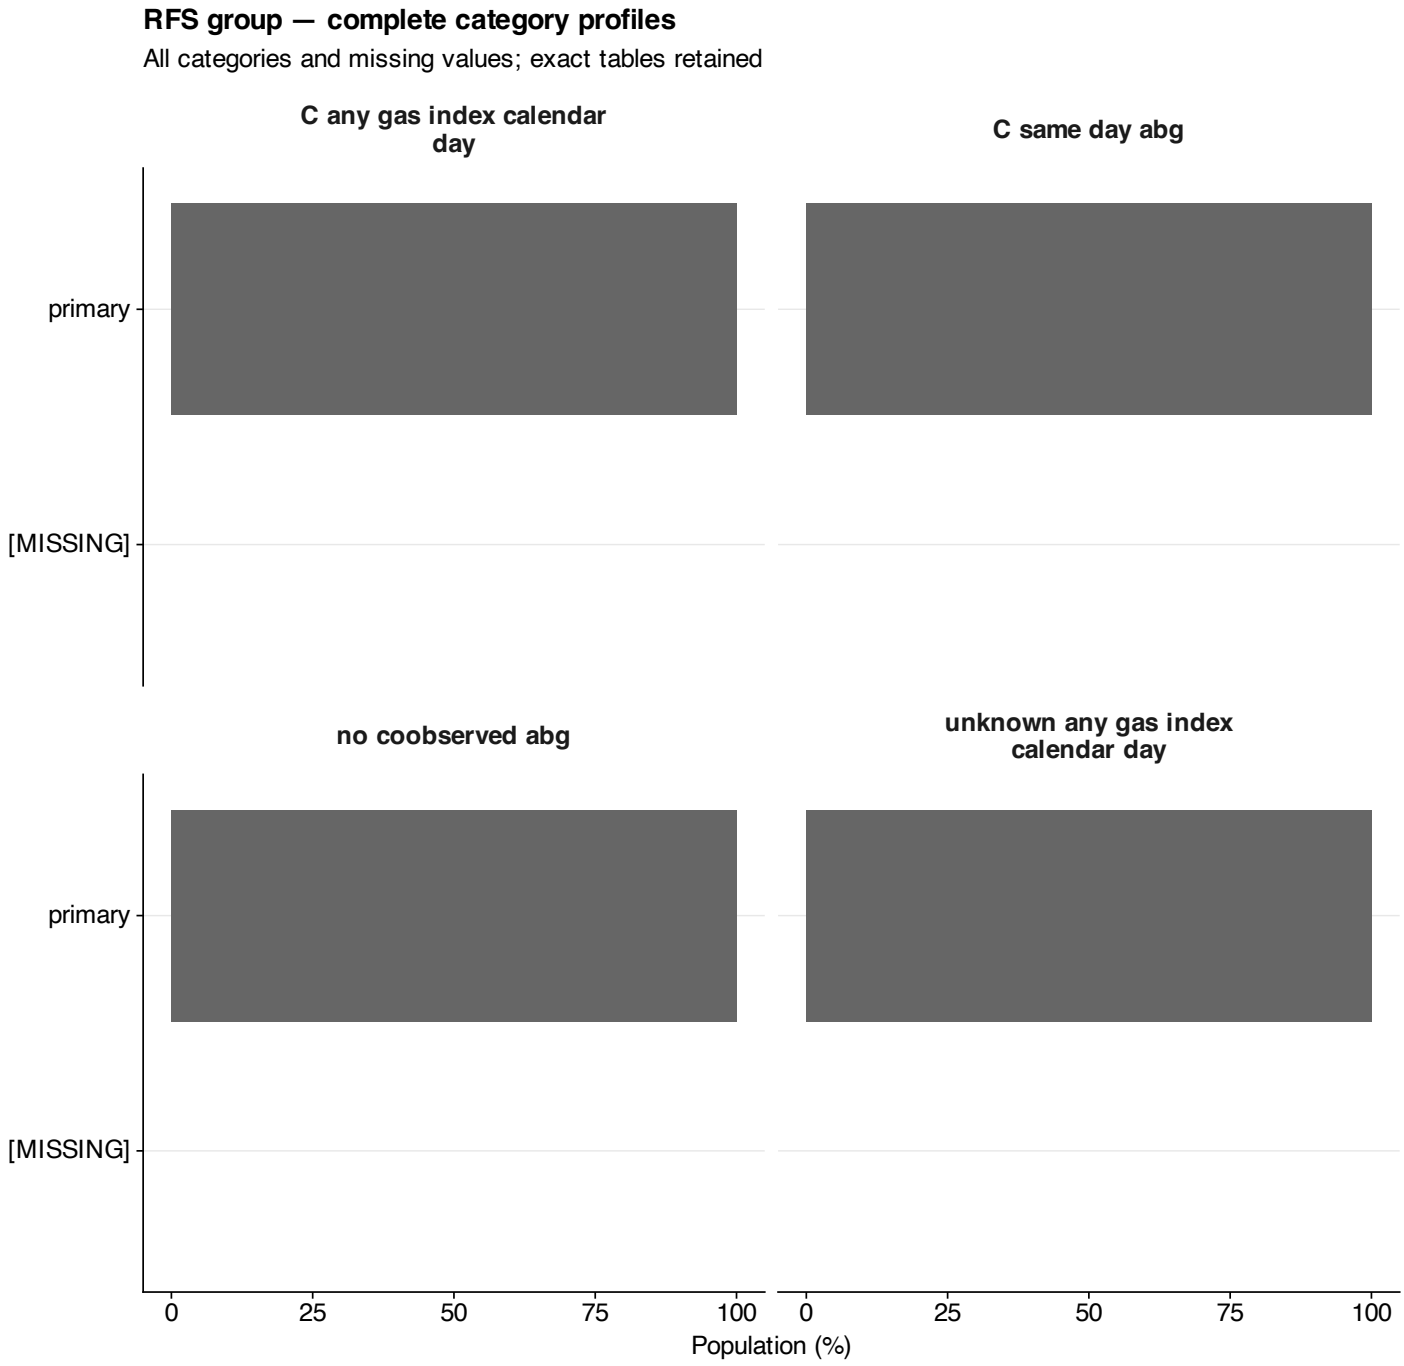

Figure 1143: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete rfs_group stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

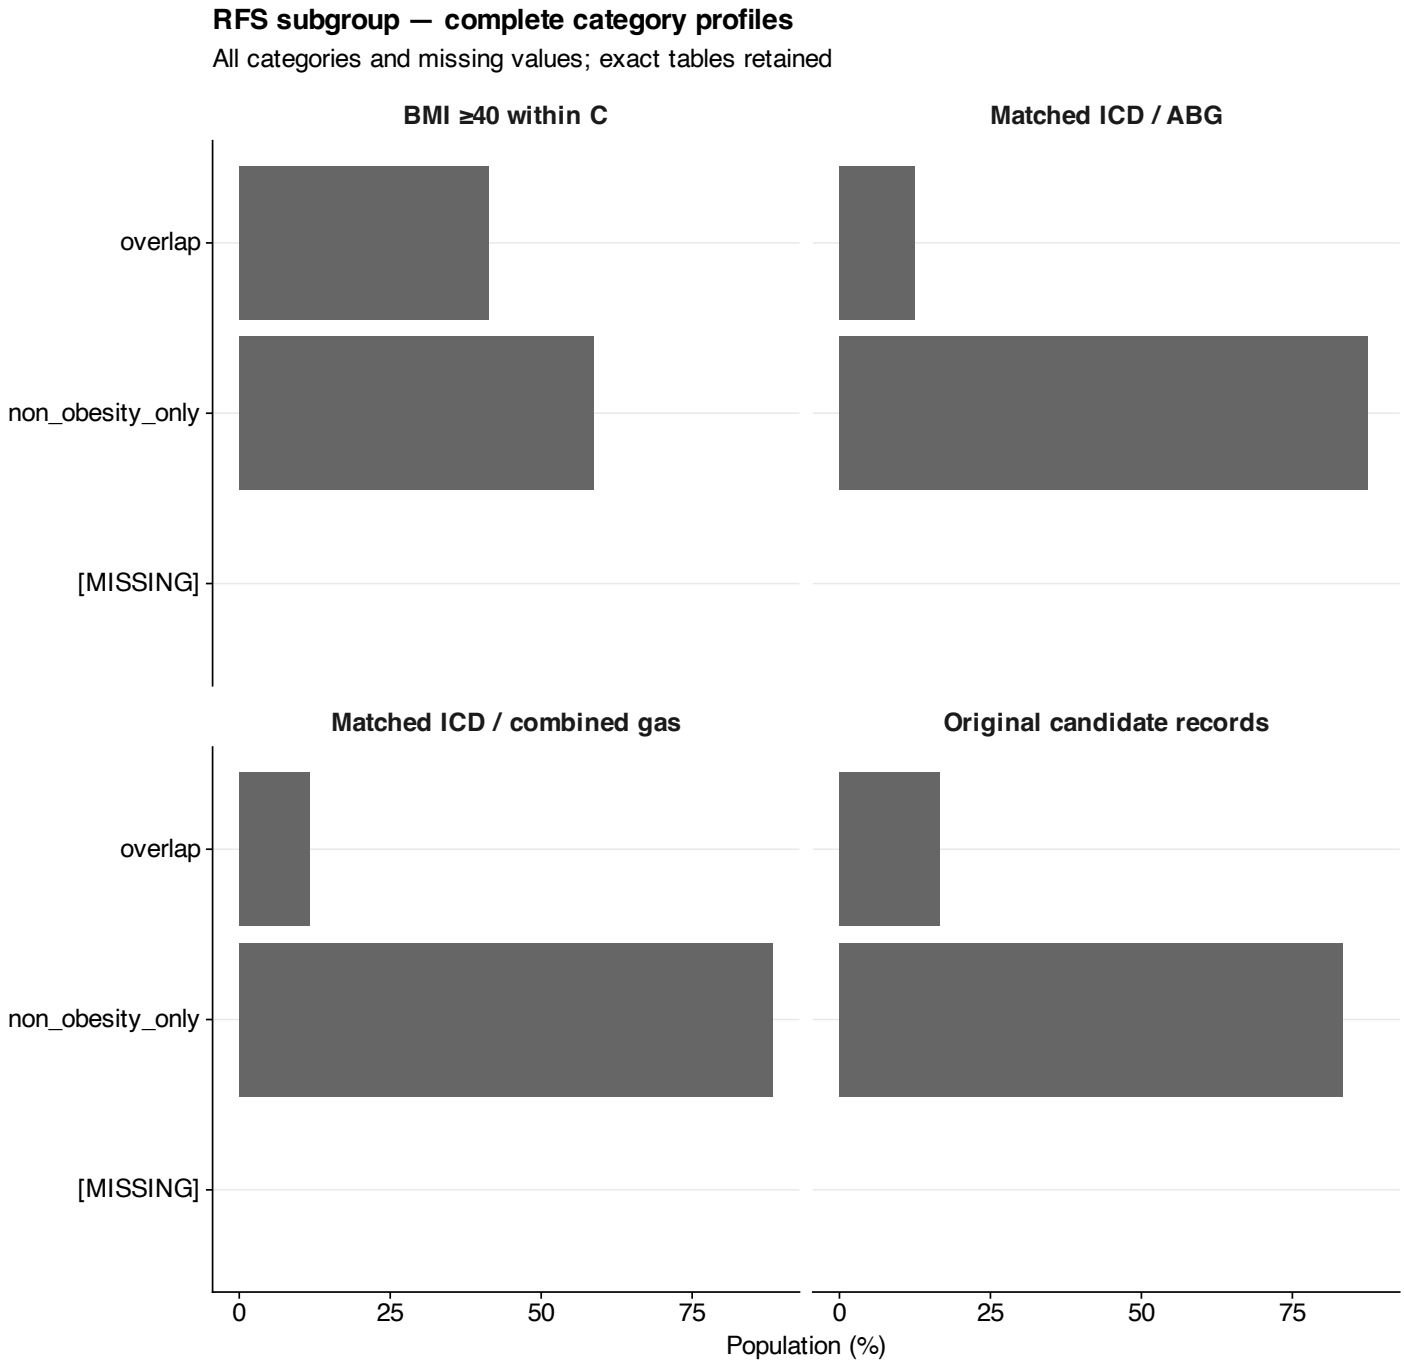

Figure 1144: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete rfs_subgroup stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

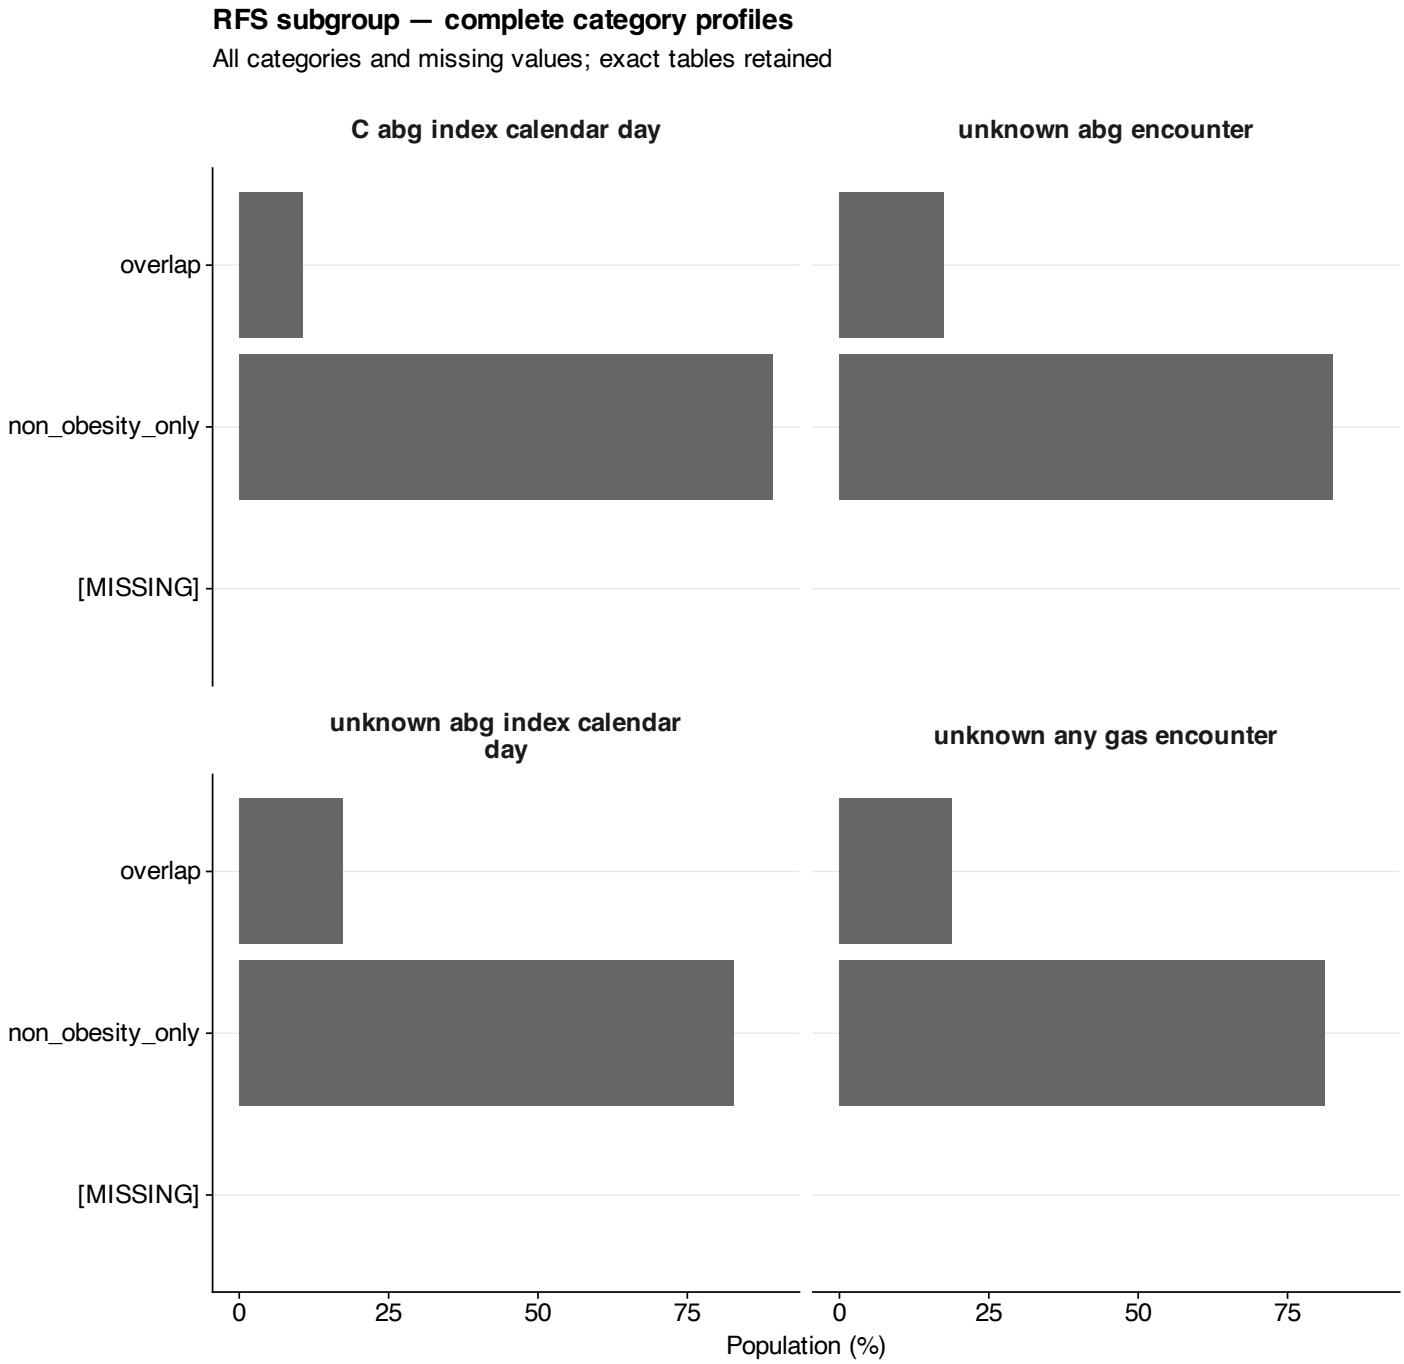

Figure 1145: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete rfs_subgroup stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

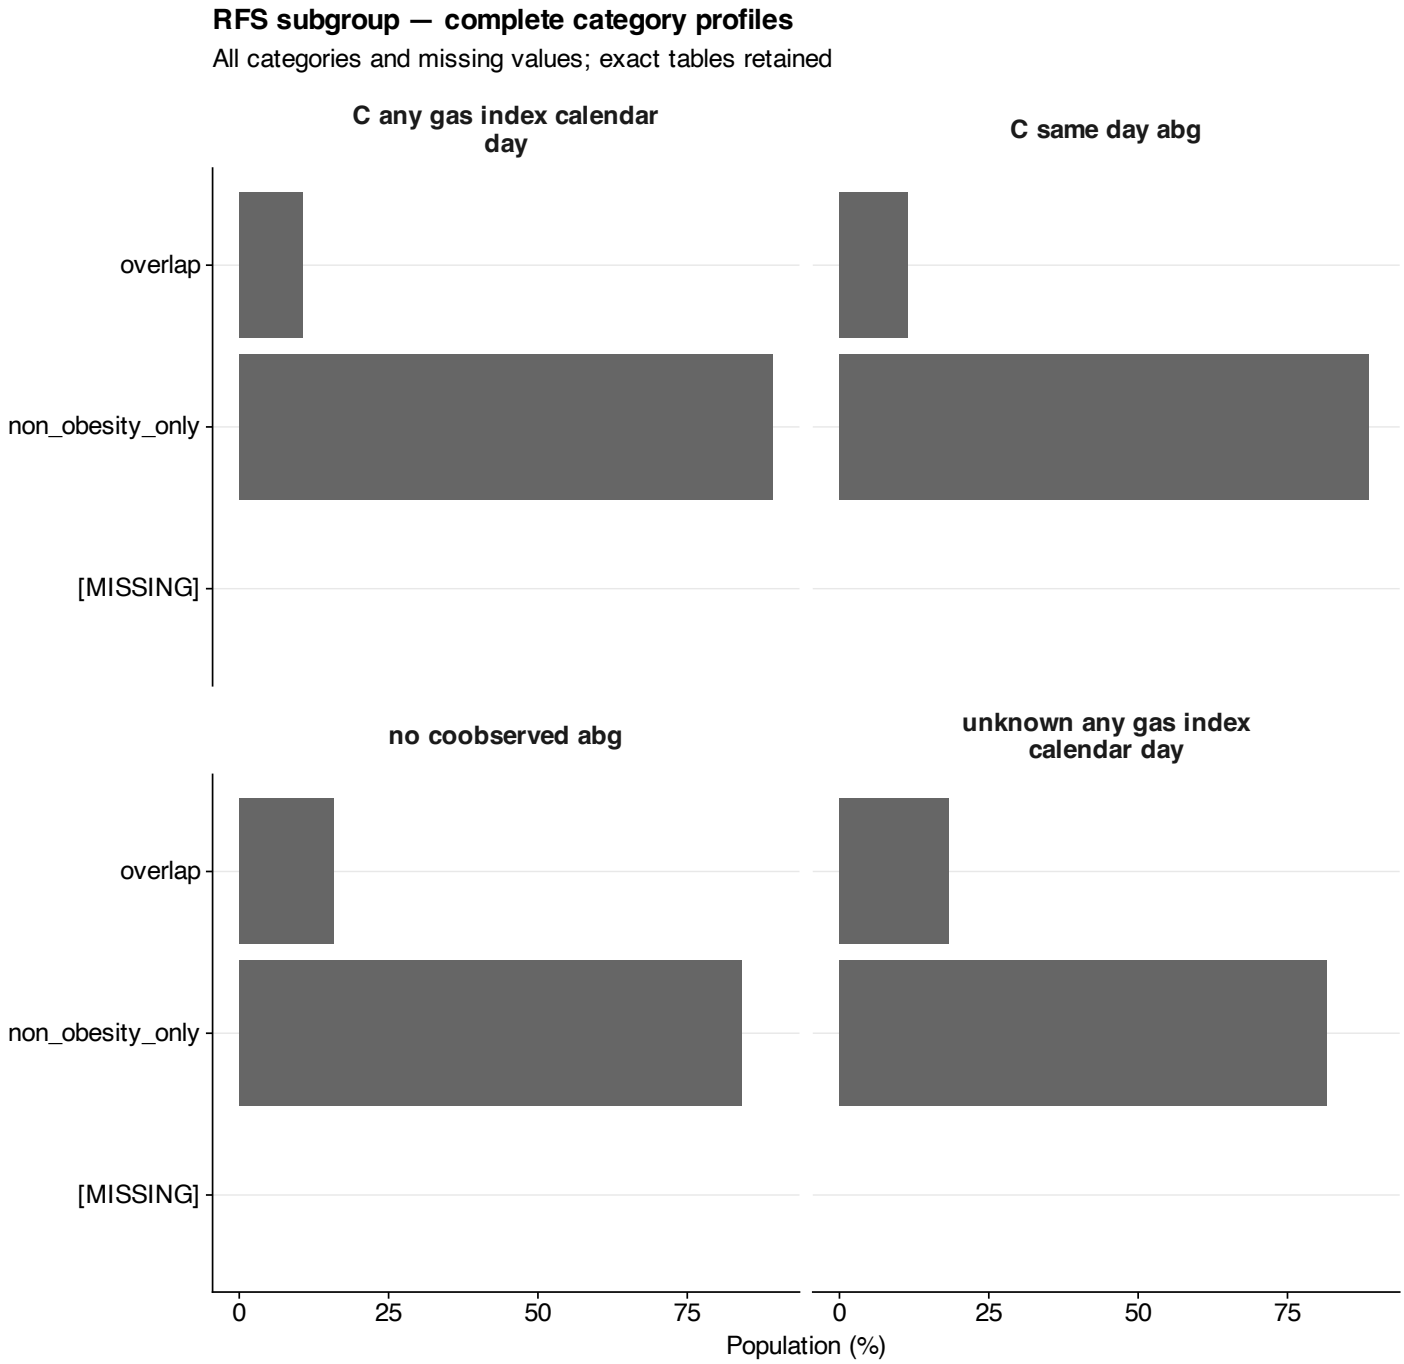

Figure 1146: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete rfs_subgroup stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

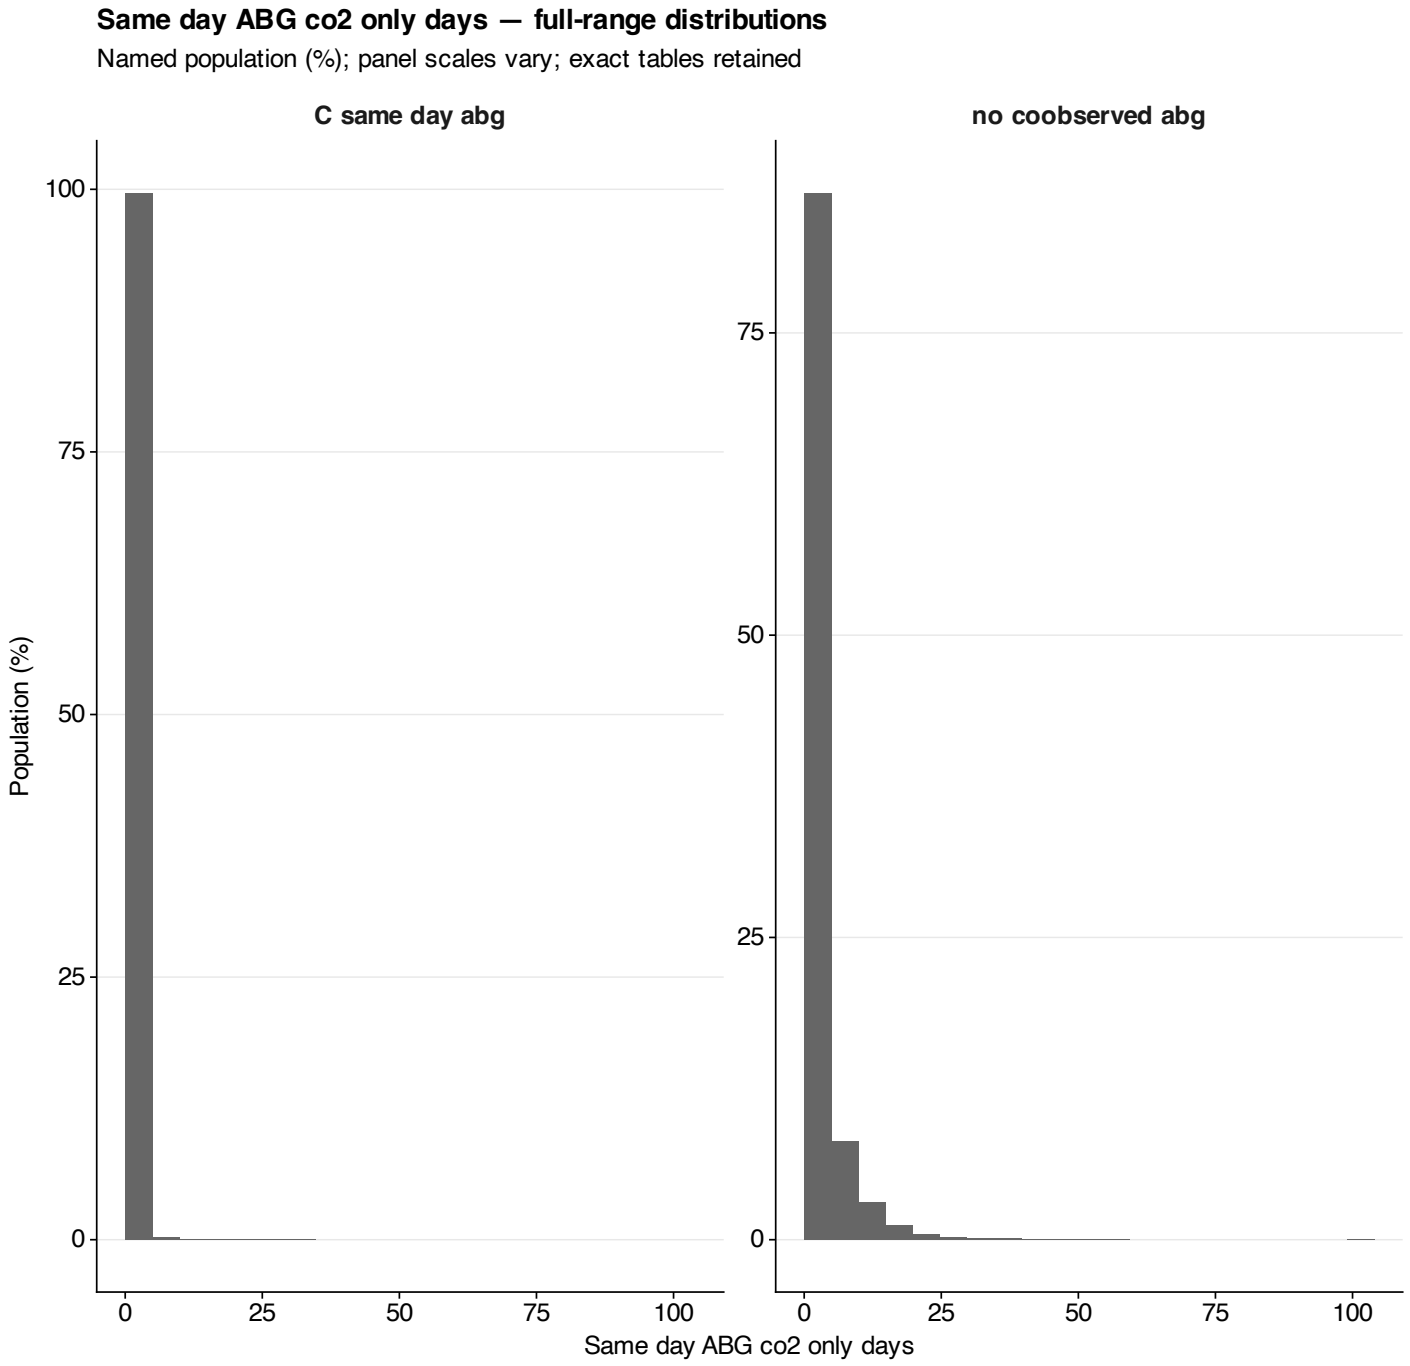

Figure 1147: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete same_day_abg_co2_only_days stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

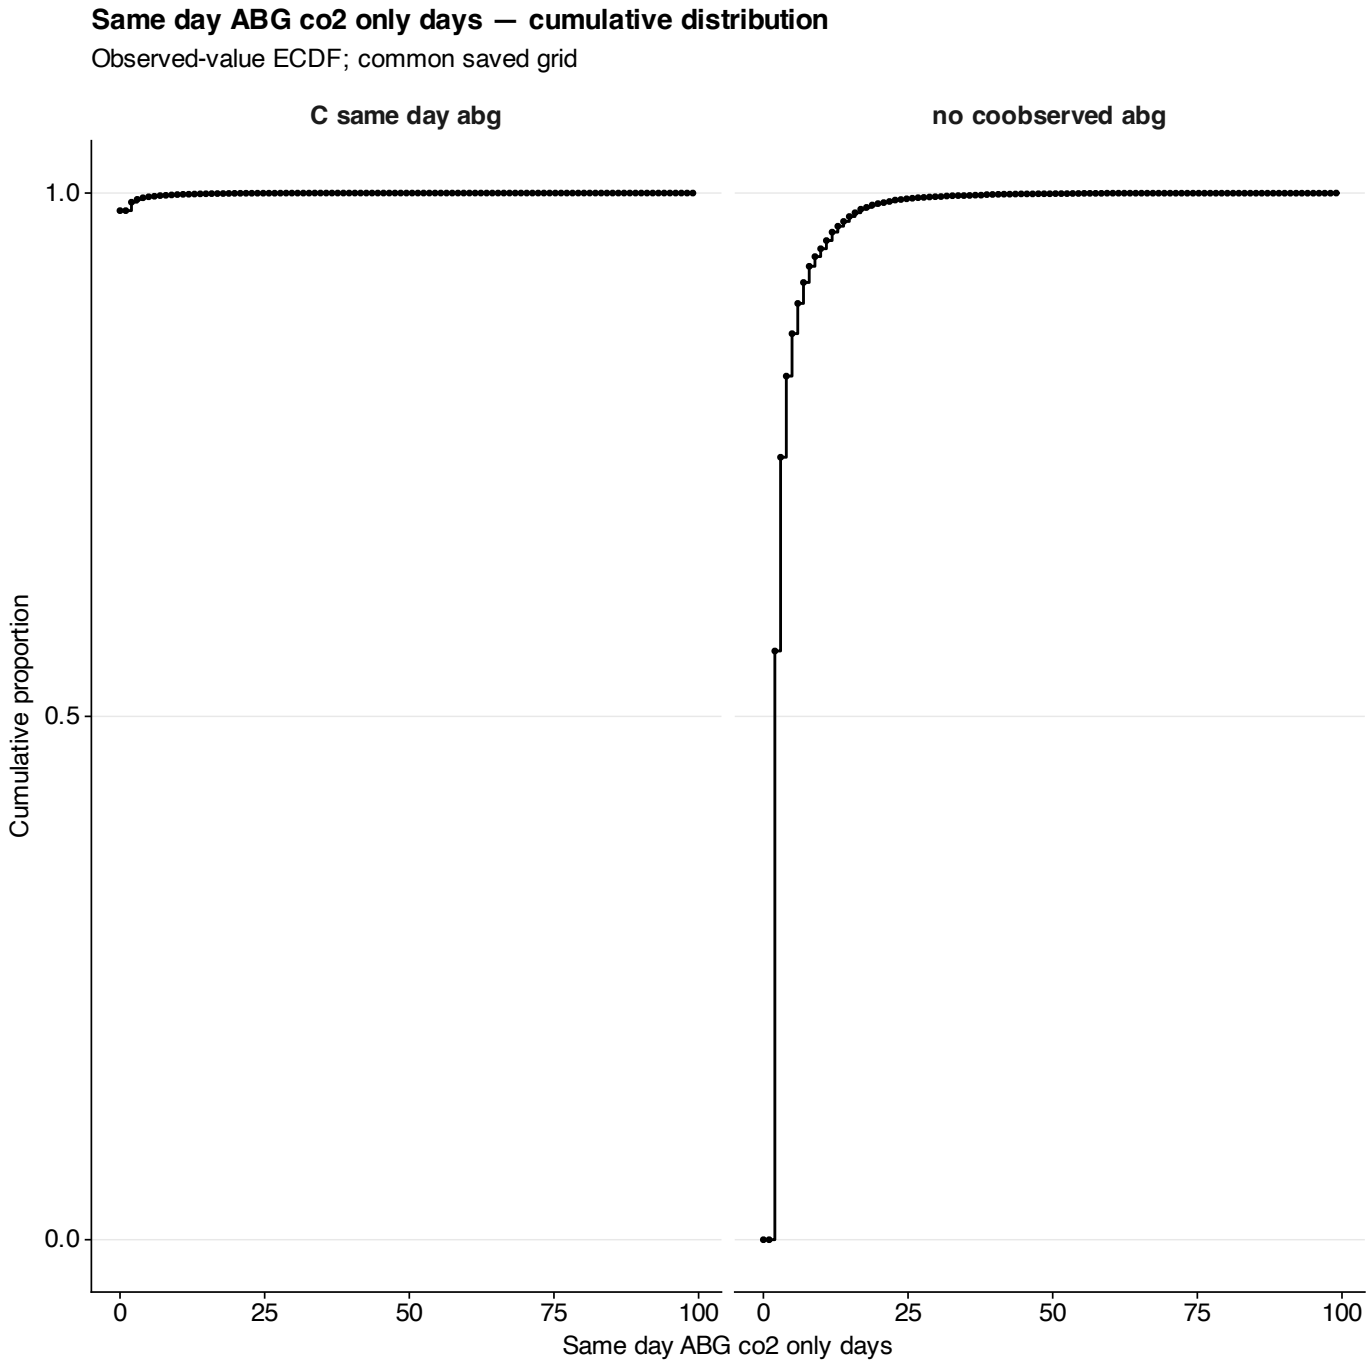

Figure 1148: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. same_day_abg_co2_only_days ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

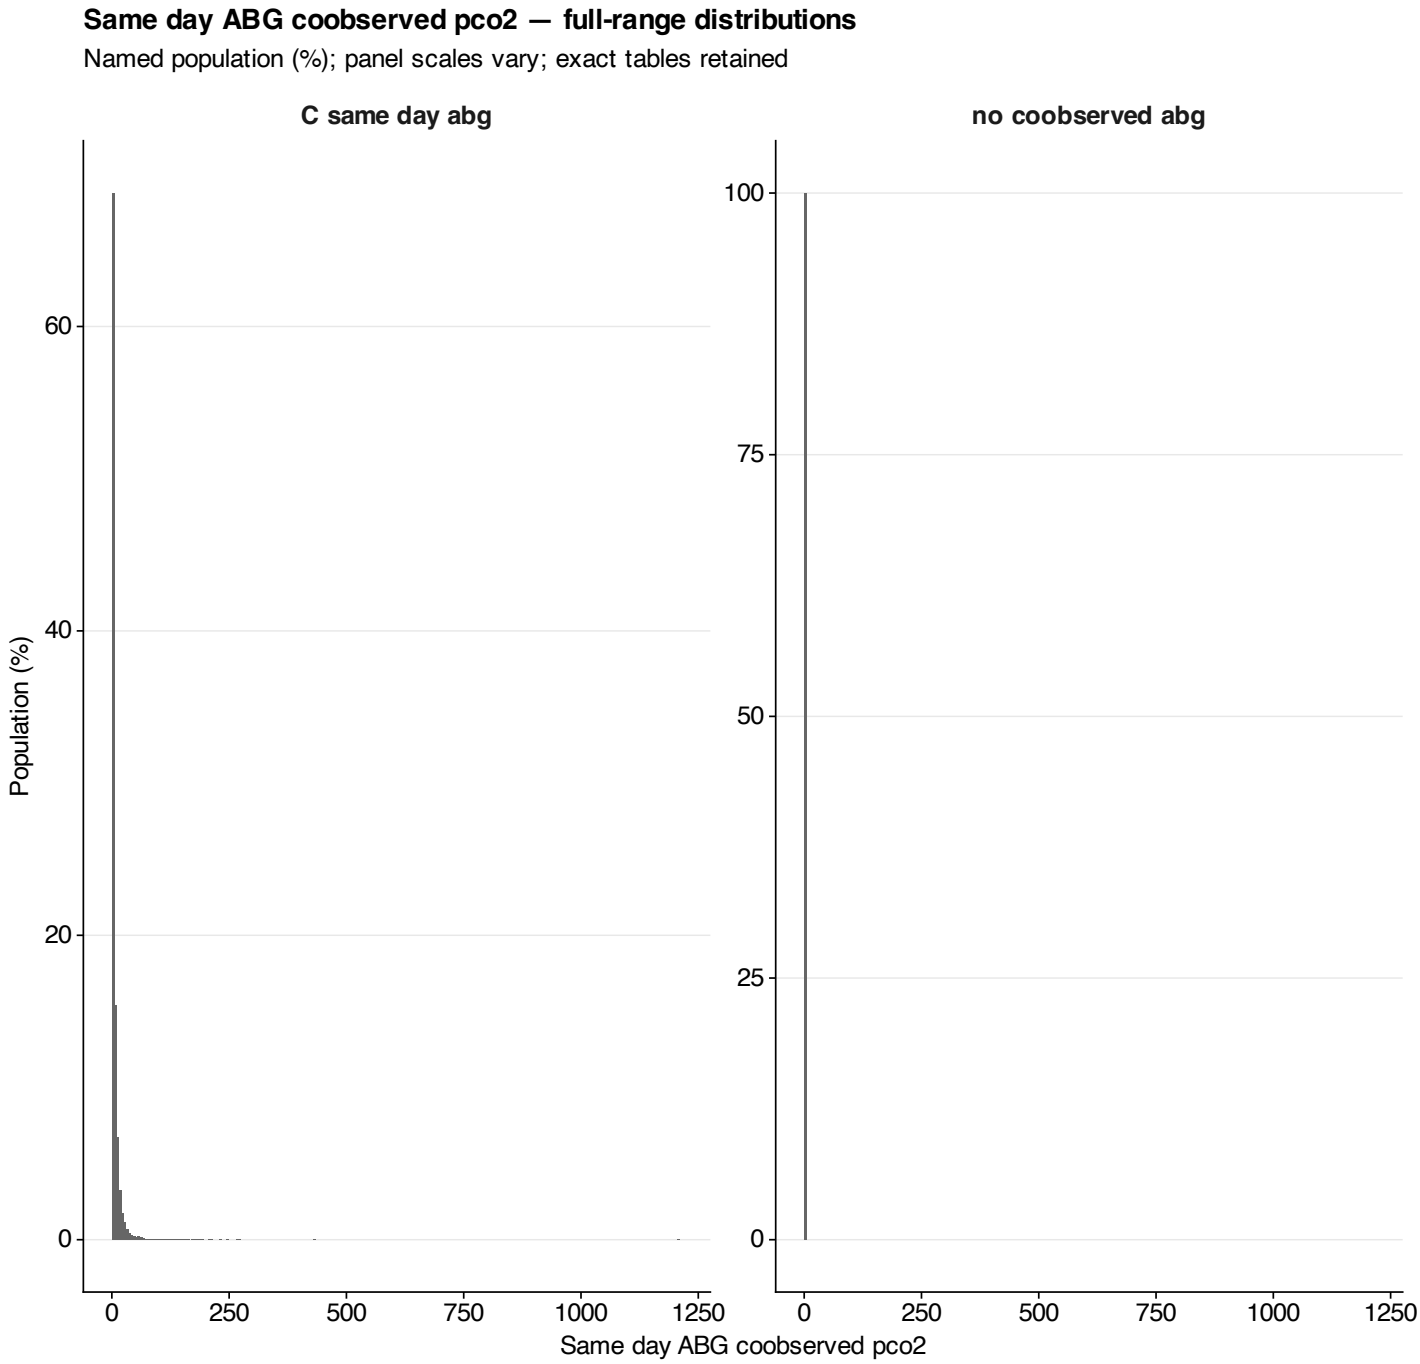

Figure 1149: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete same_day_abg_coobserved_pco2 stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

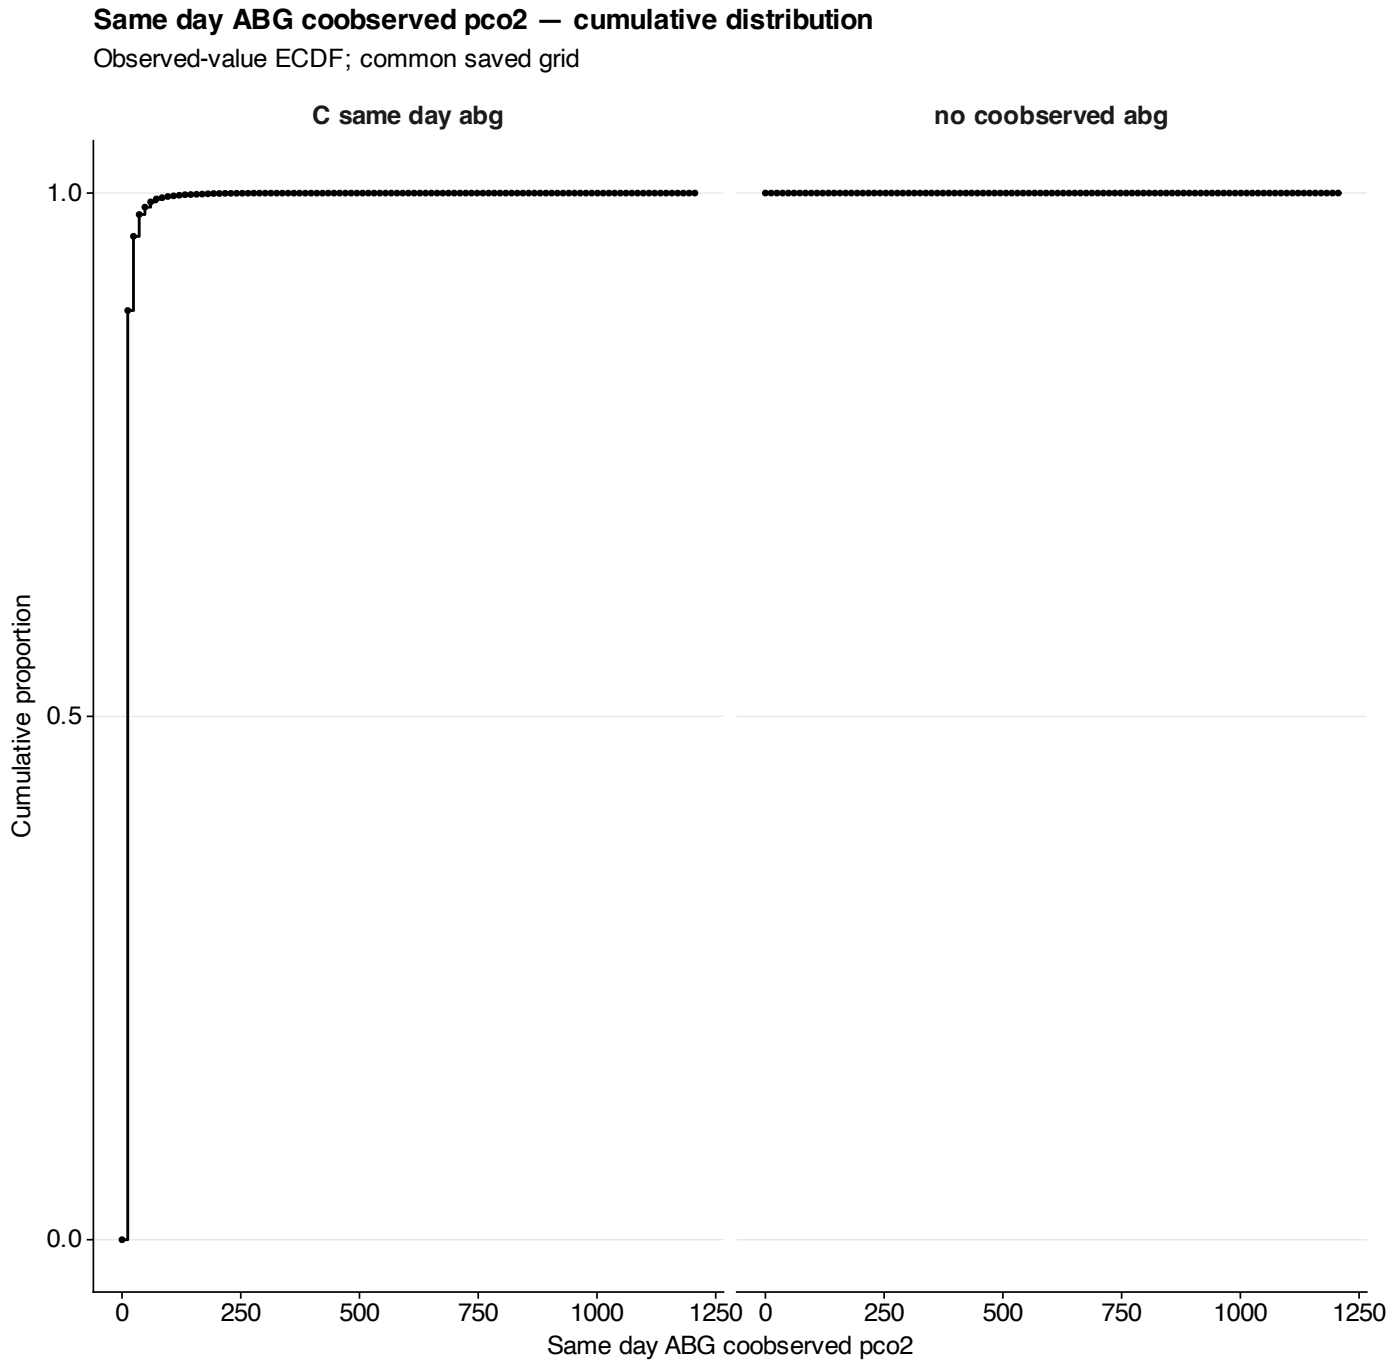

Figure 1150: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. same_day_abg_coobserved_pco2 ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

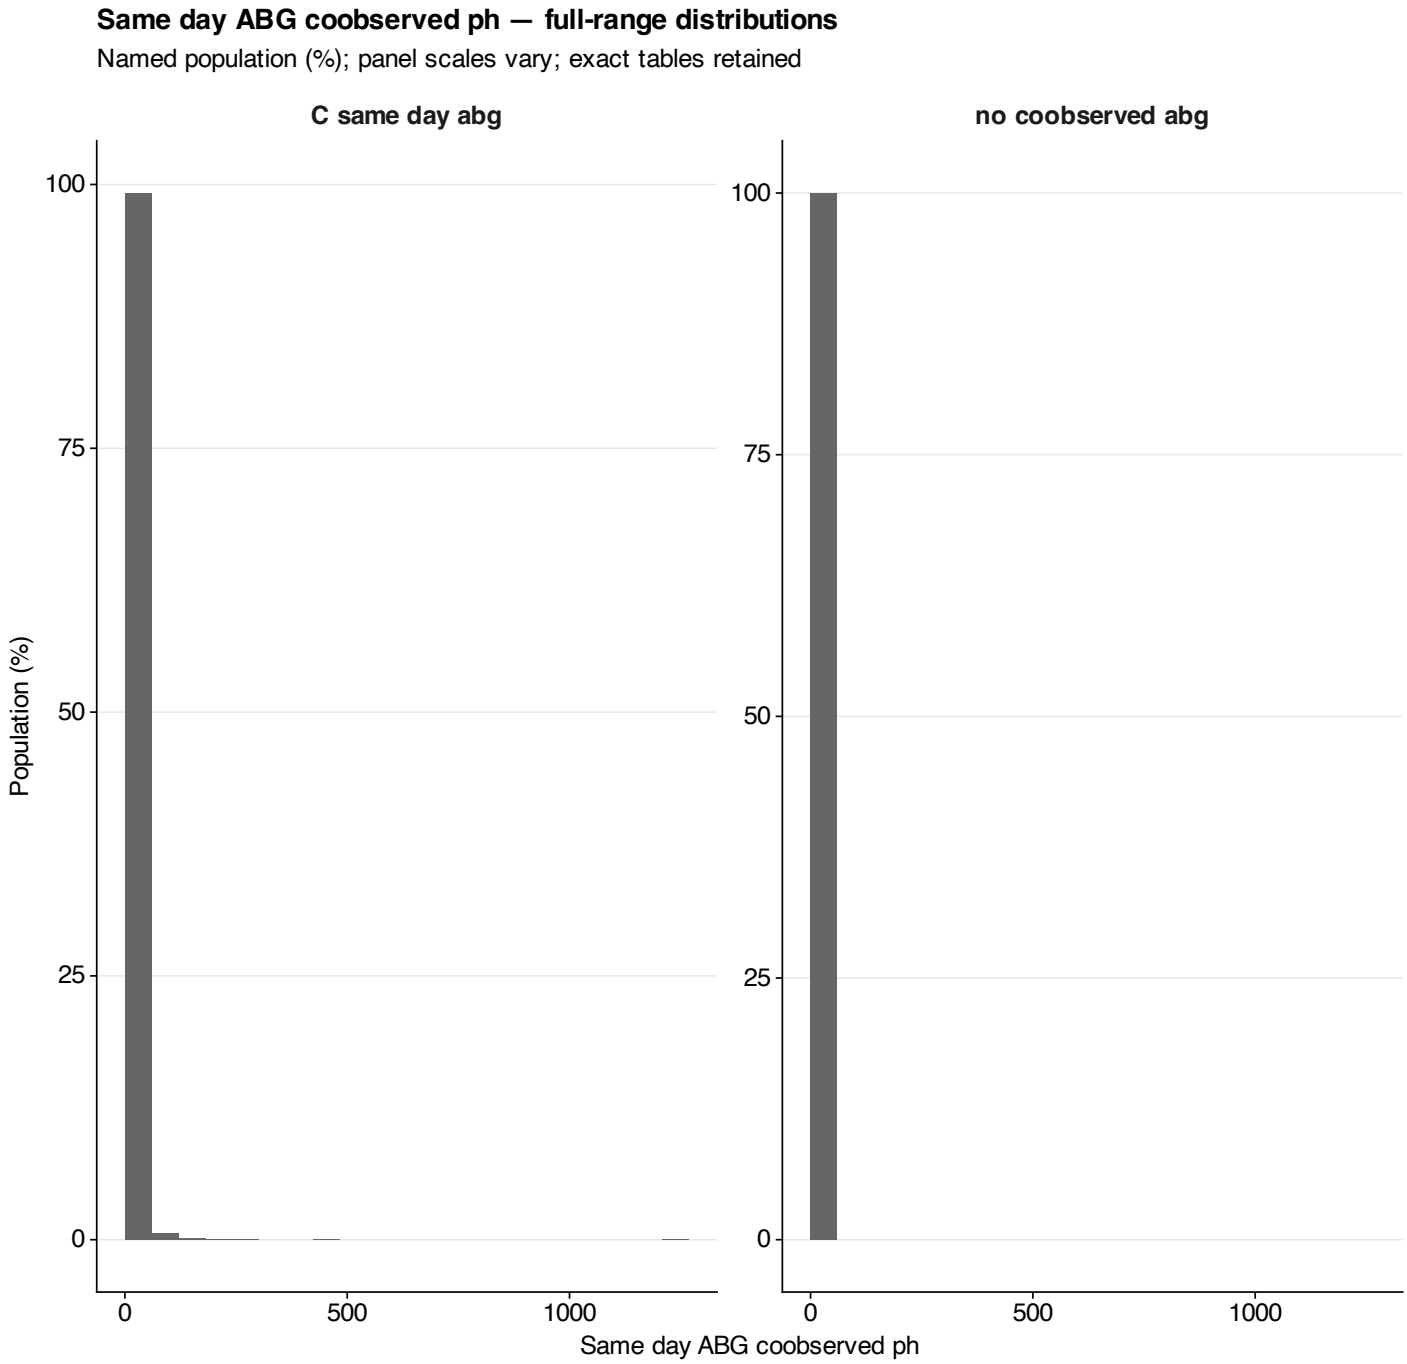

Figure 1151: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete same_day_abg_coobserved_ph stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

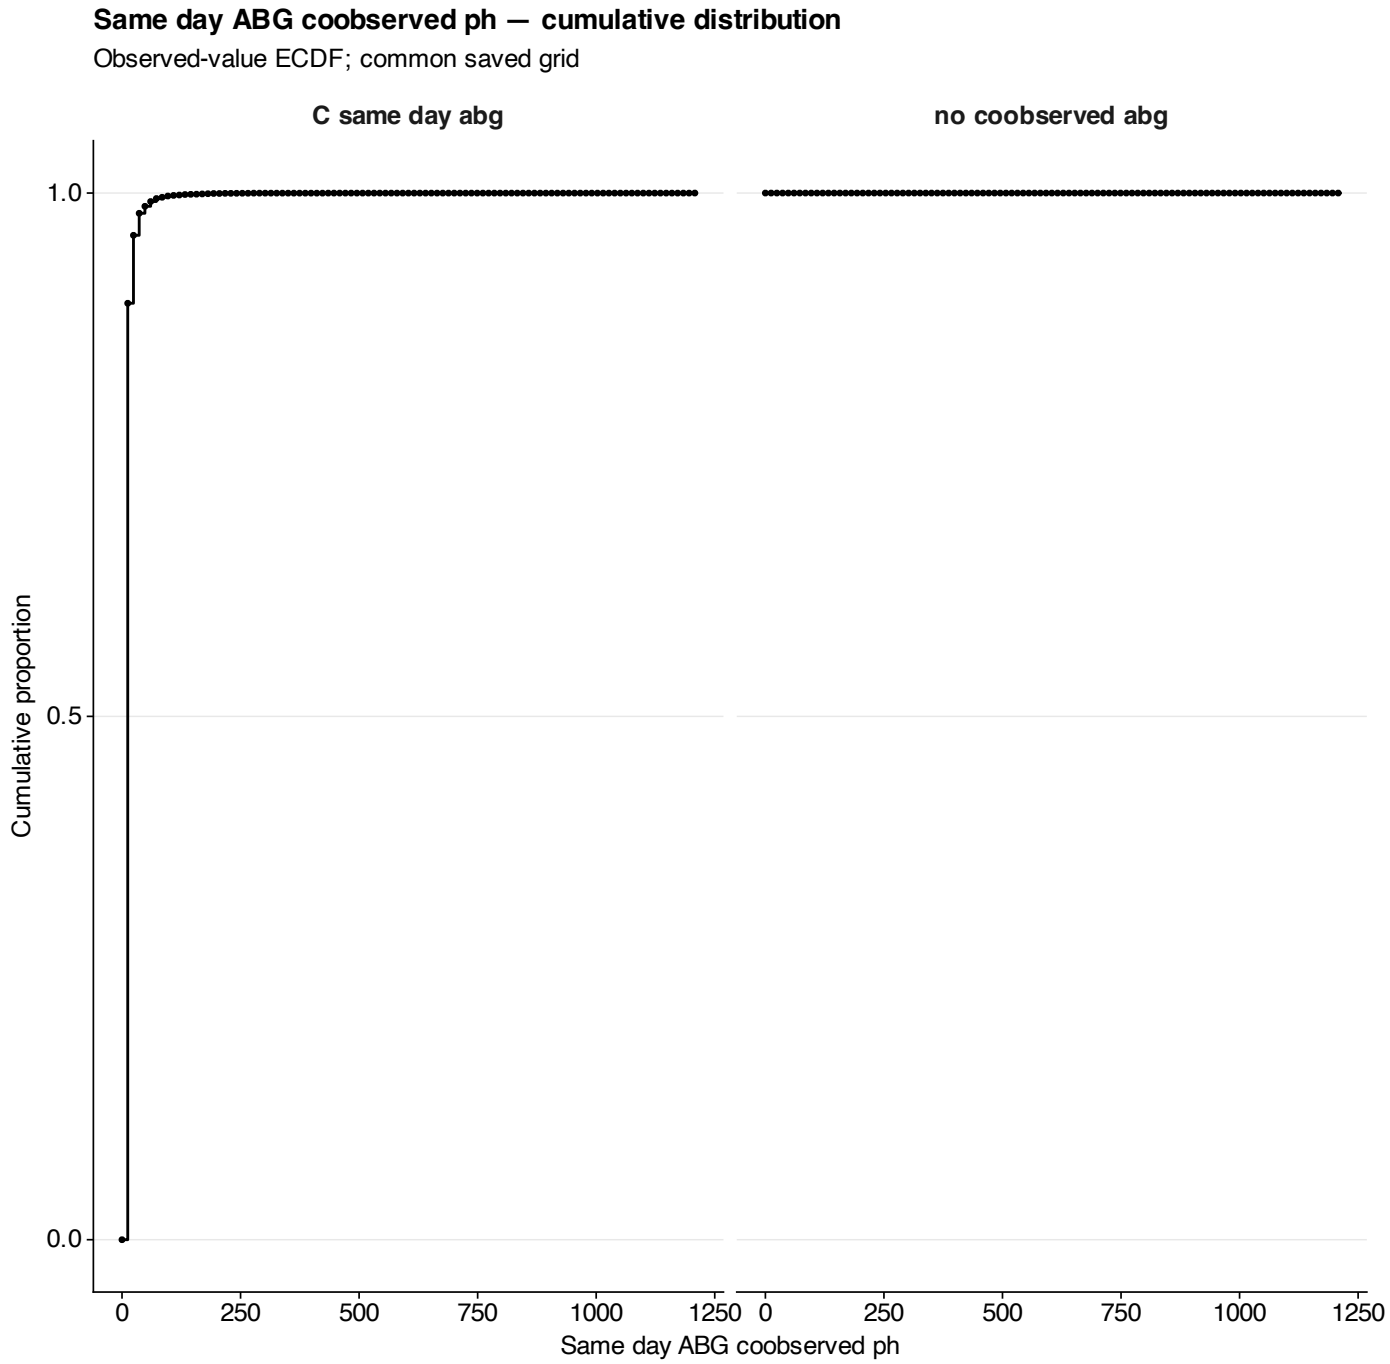

Figure 1152: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. same_day_abg_coobserved_ph ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

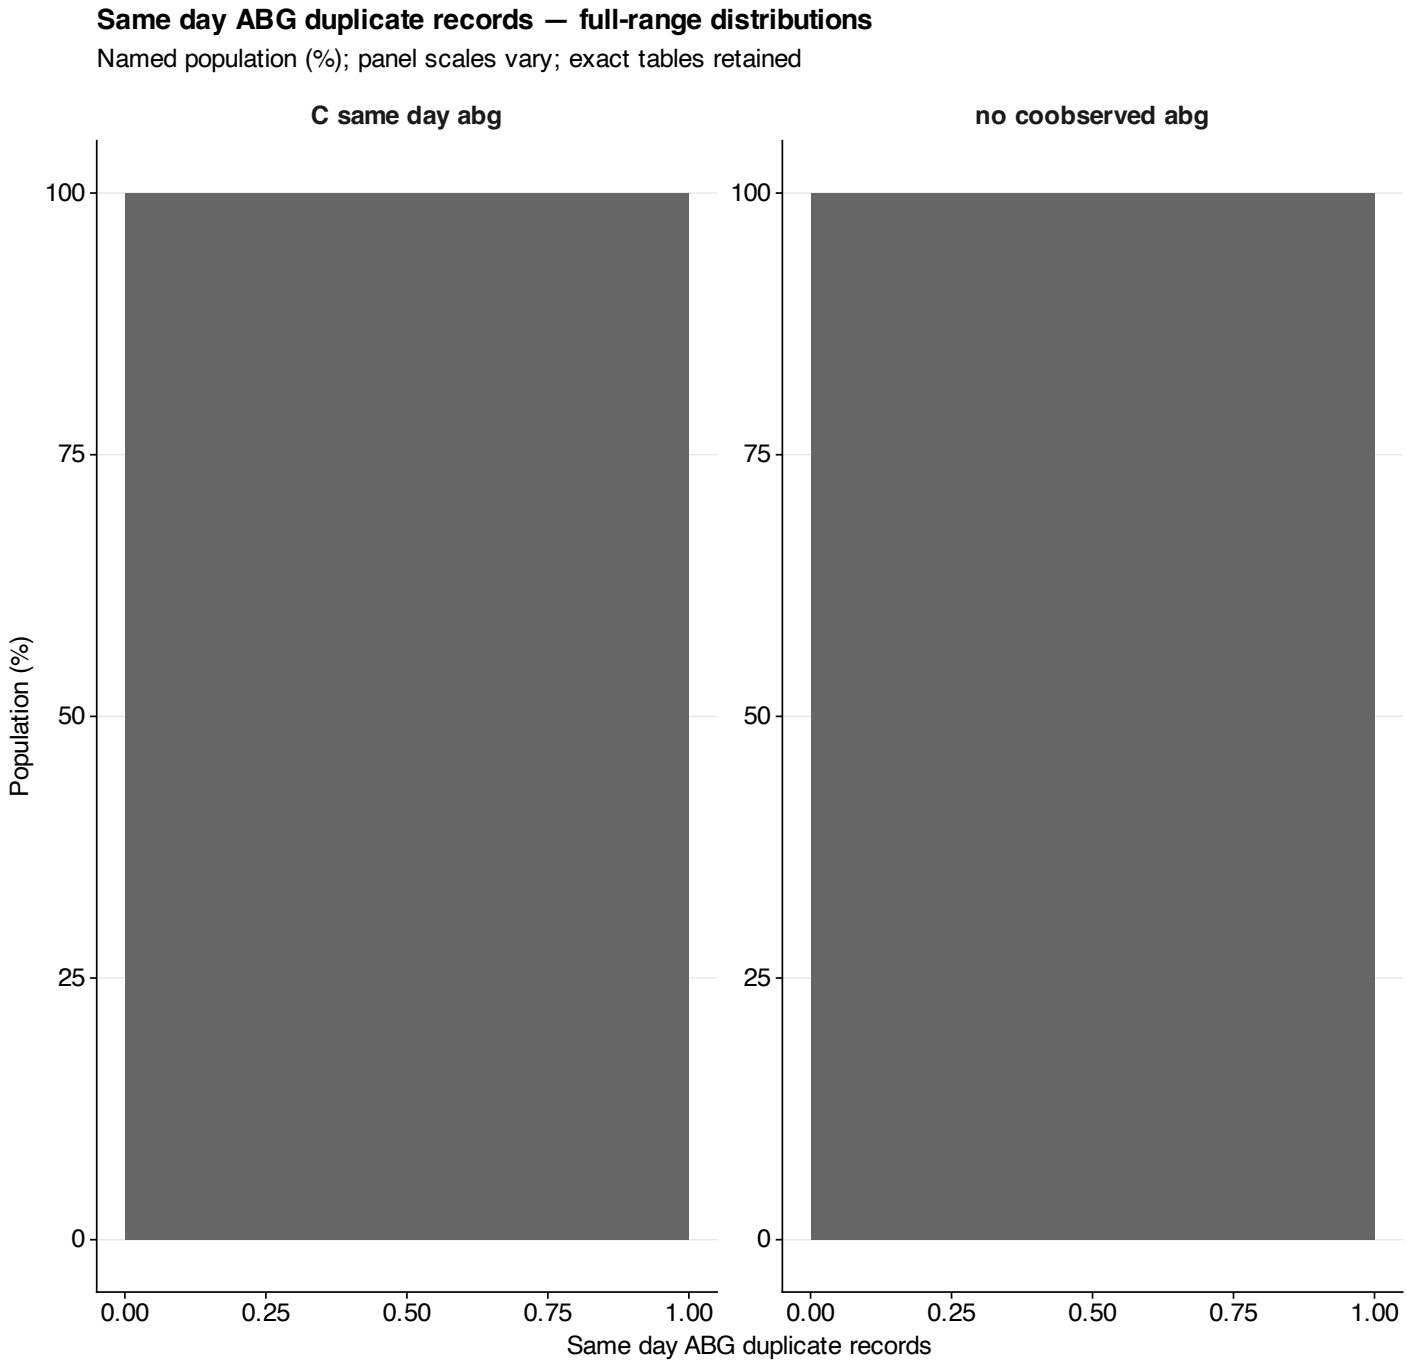

Figure 1153: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete same_day_abg_duplicate_records stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

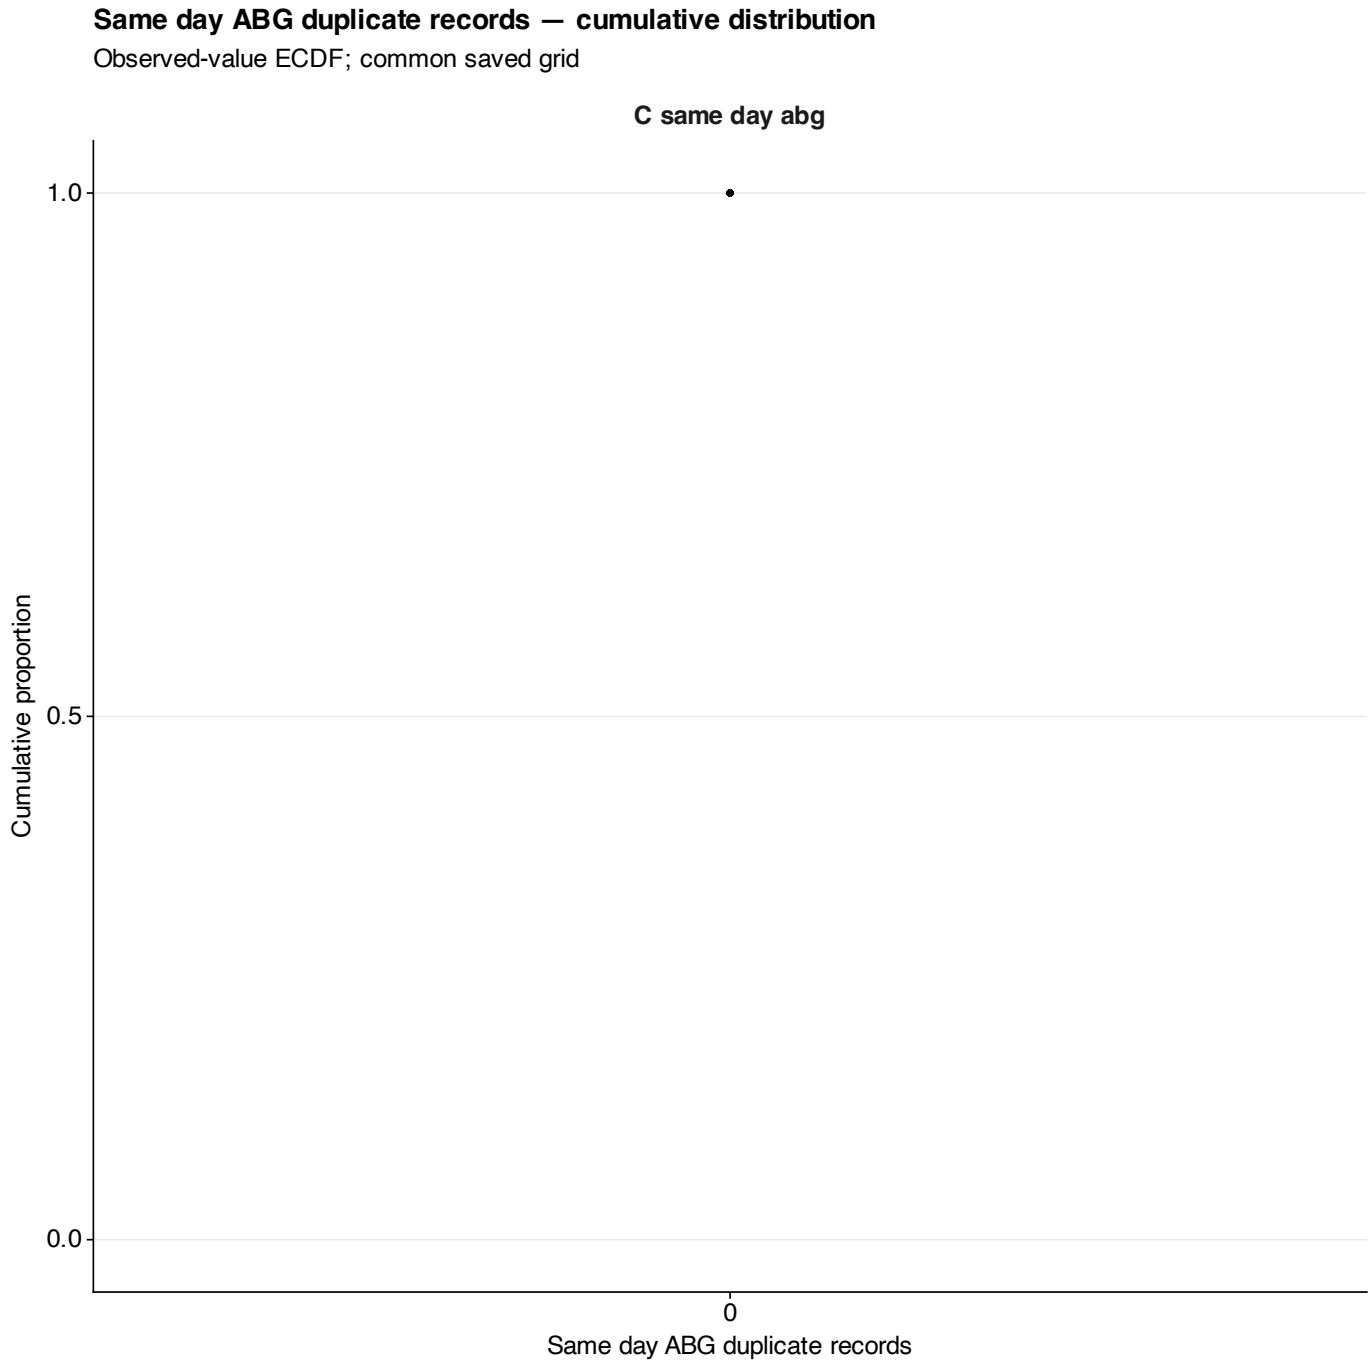

Figure 1154: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. same_day_abg_duplicate_records ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

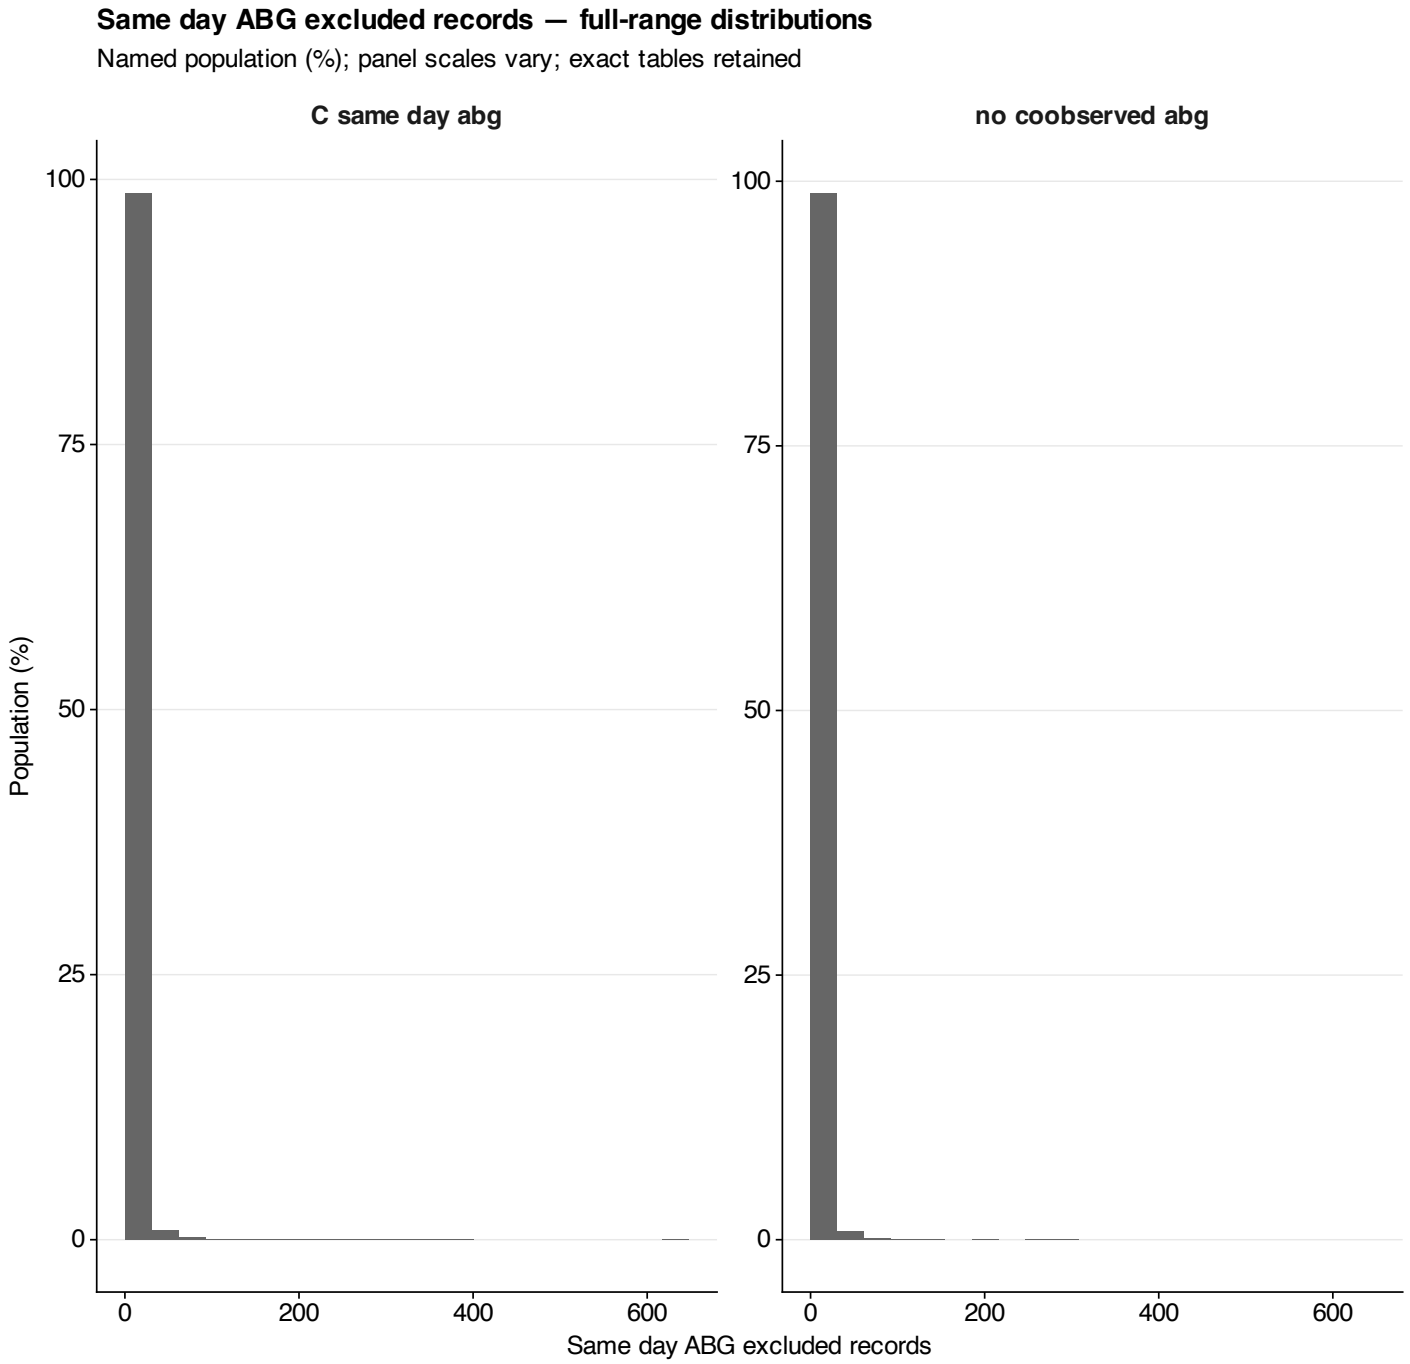

Figure 1155: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete same_day_abg_excluded_records stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

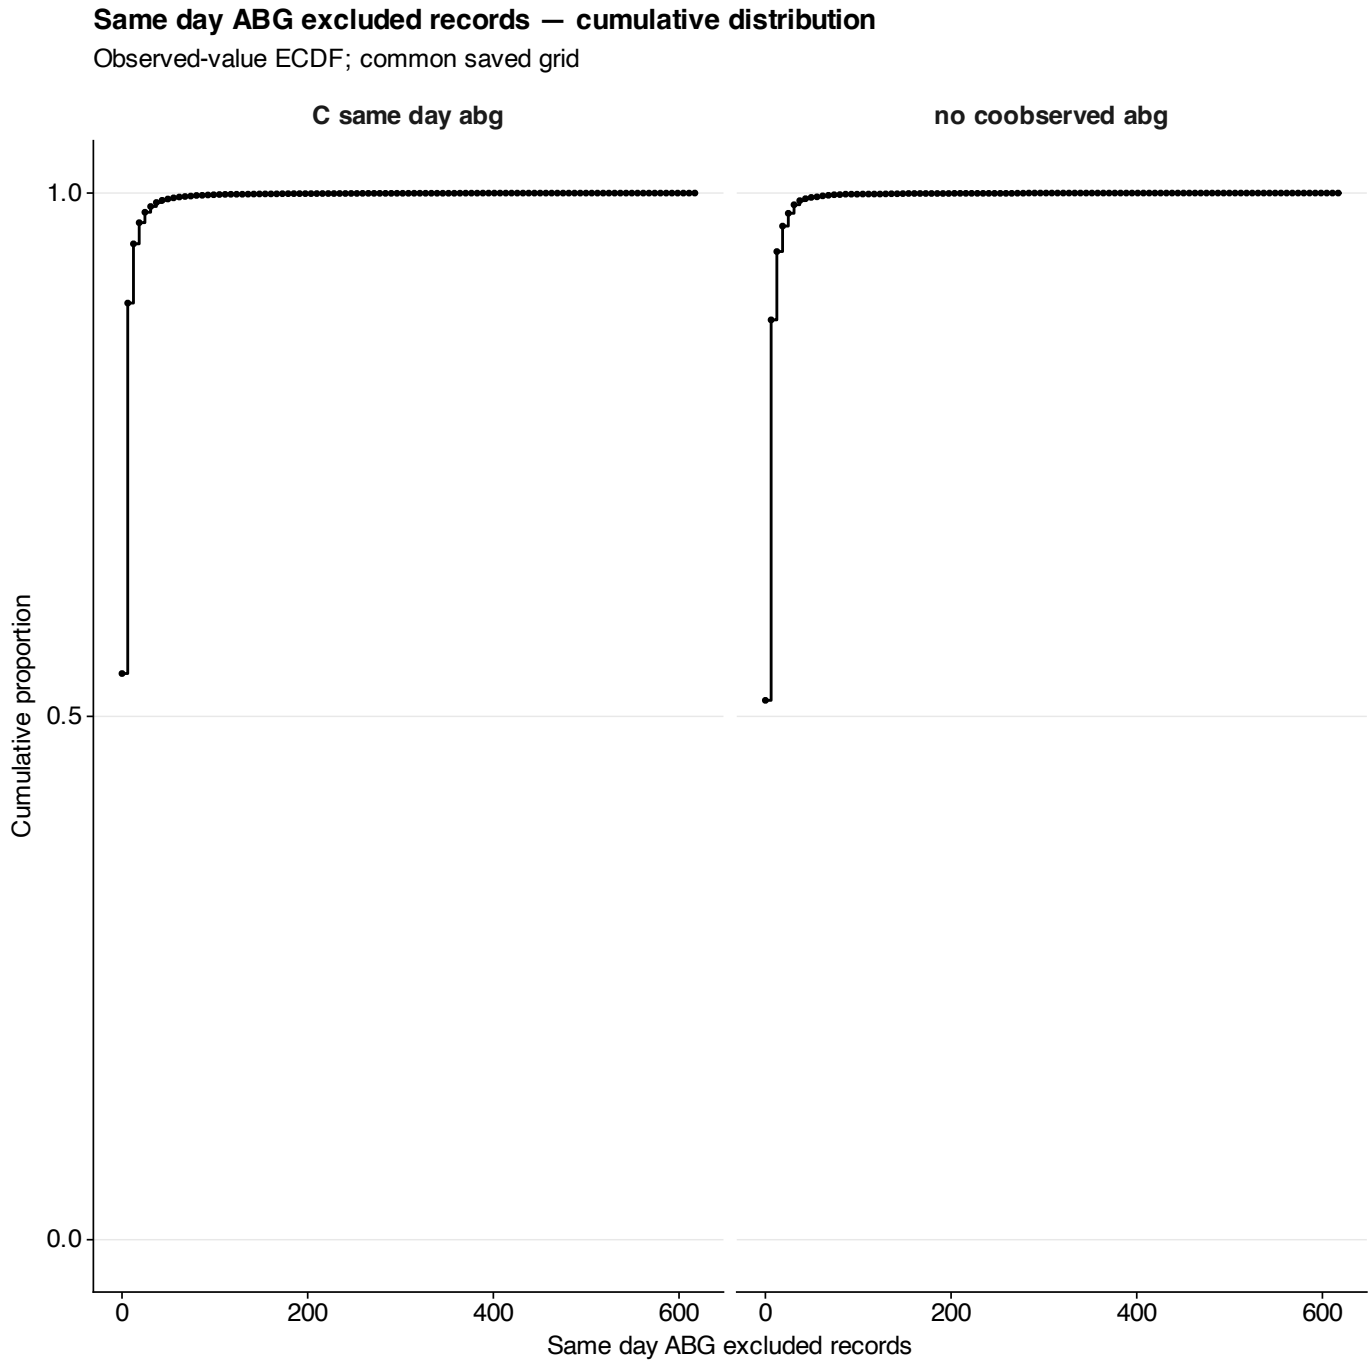

Figure 1156: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. same_day_abg_excluded_records ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

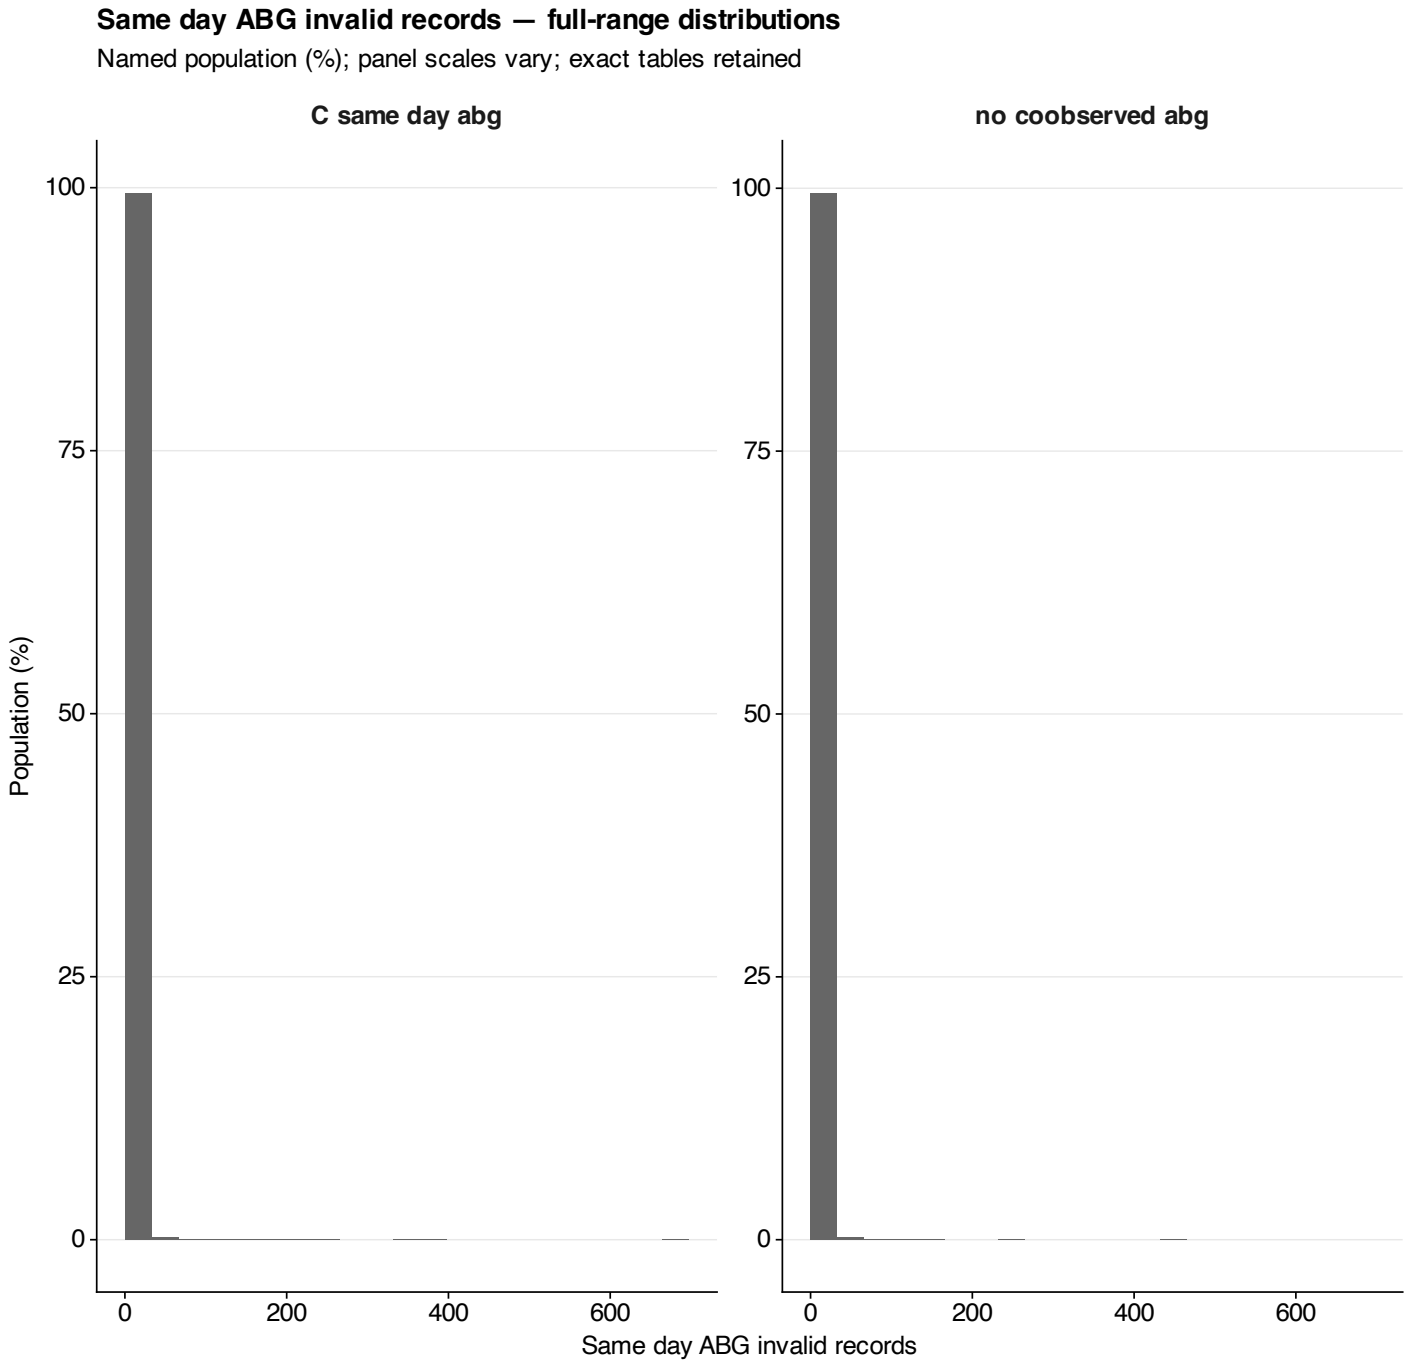

Figure 1157: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete same_day_abg_invalid_records stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

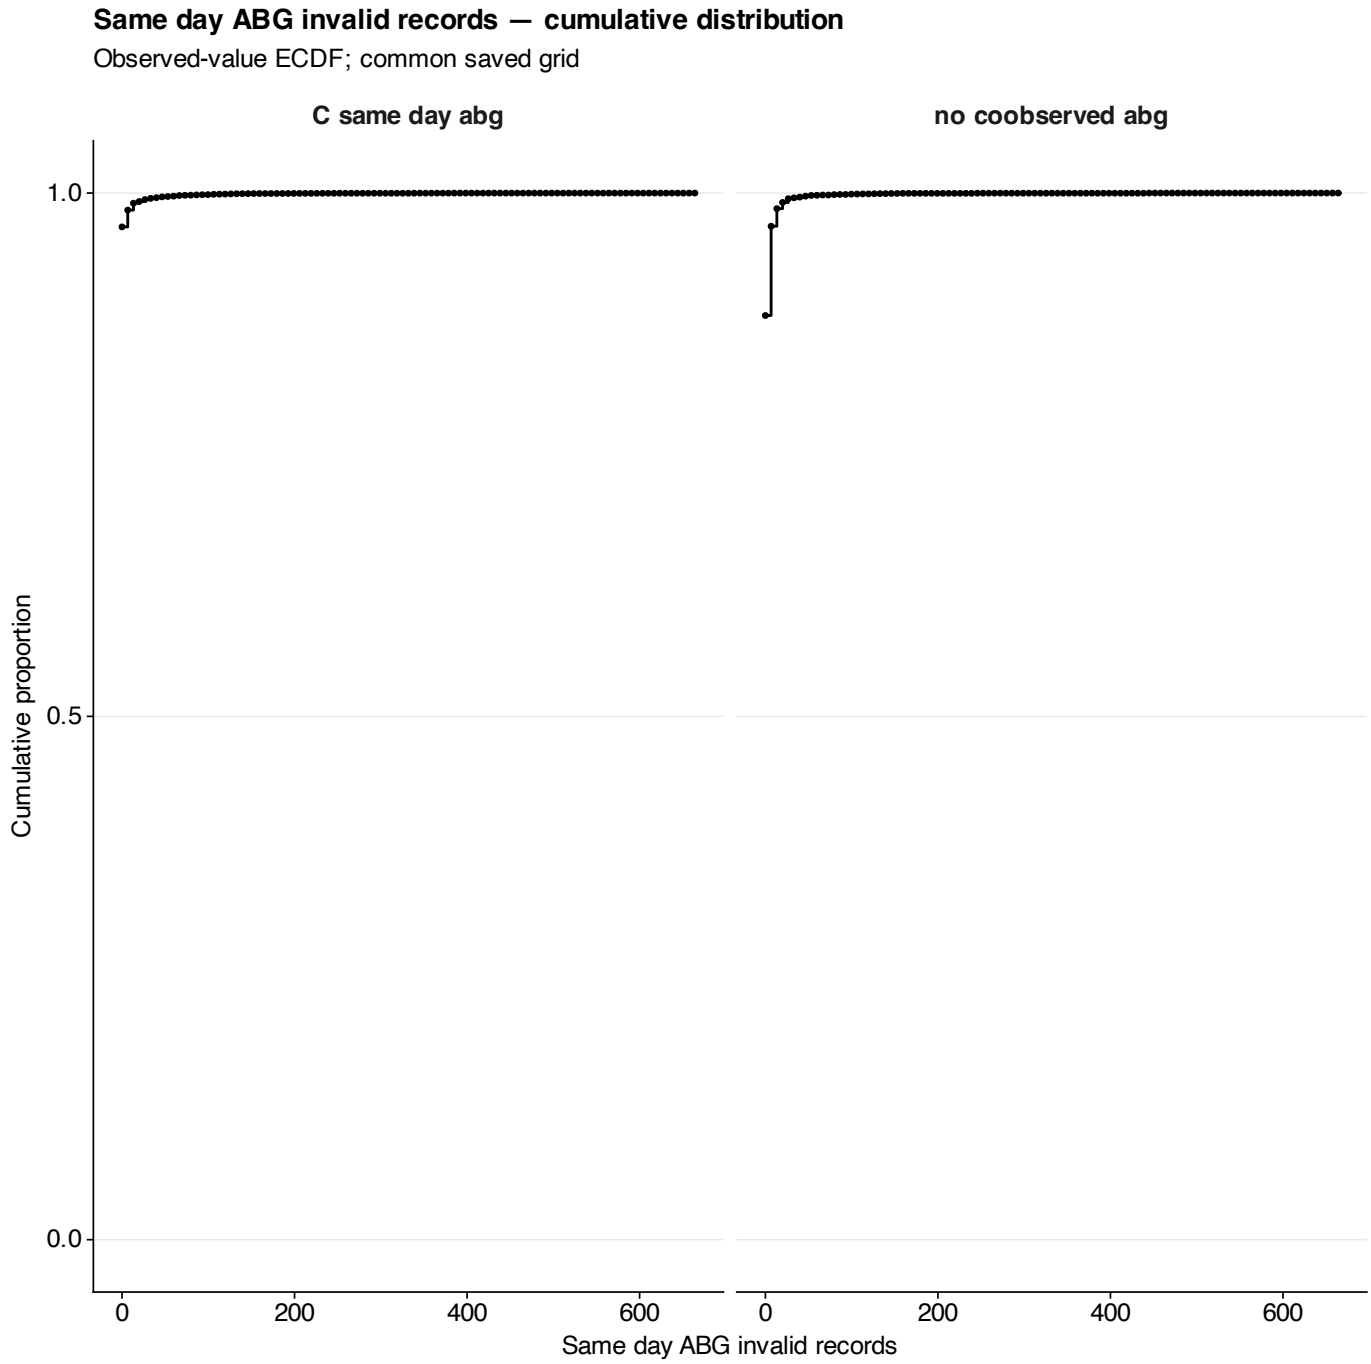

Figure 1158: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. same_day_abg_invalid_records ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

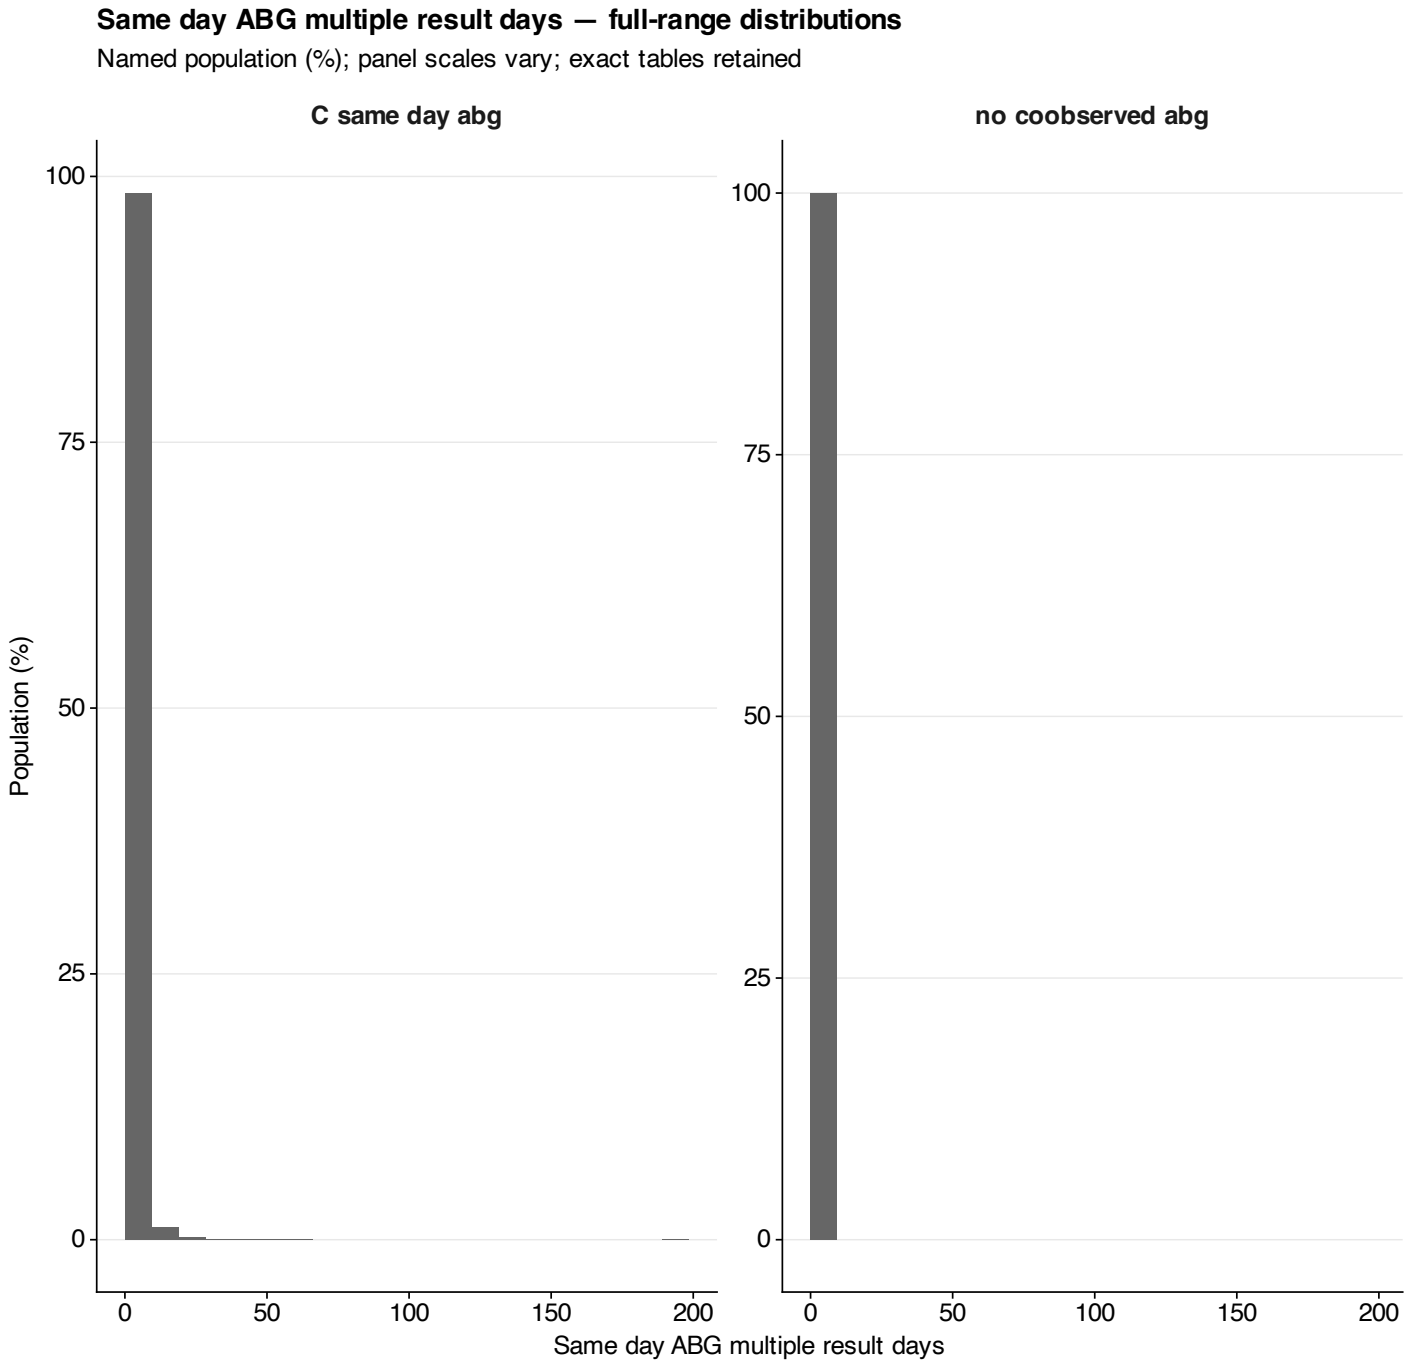

Figure 1159: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete same_day_abg_multiple_result_days stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

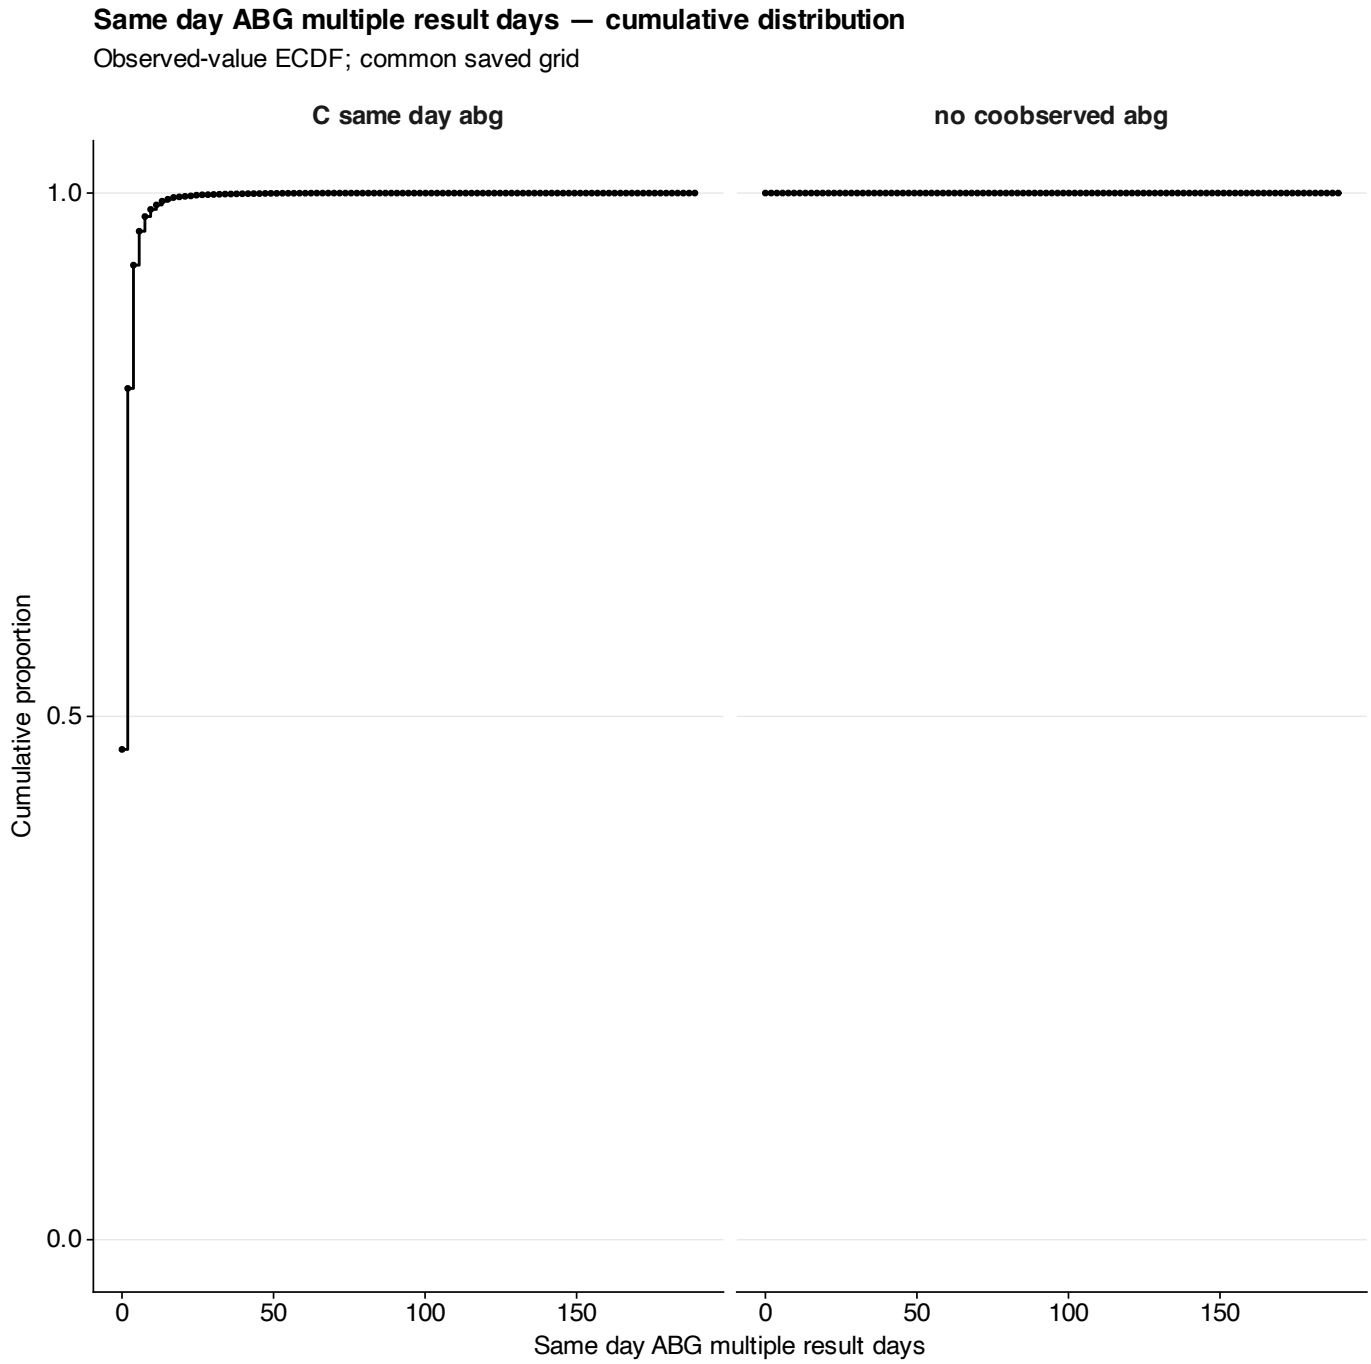

Figure 1160: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. same_day_abg_multiple_result_days ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

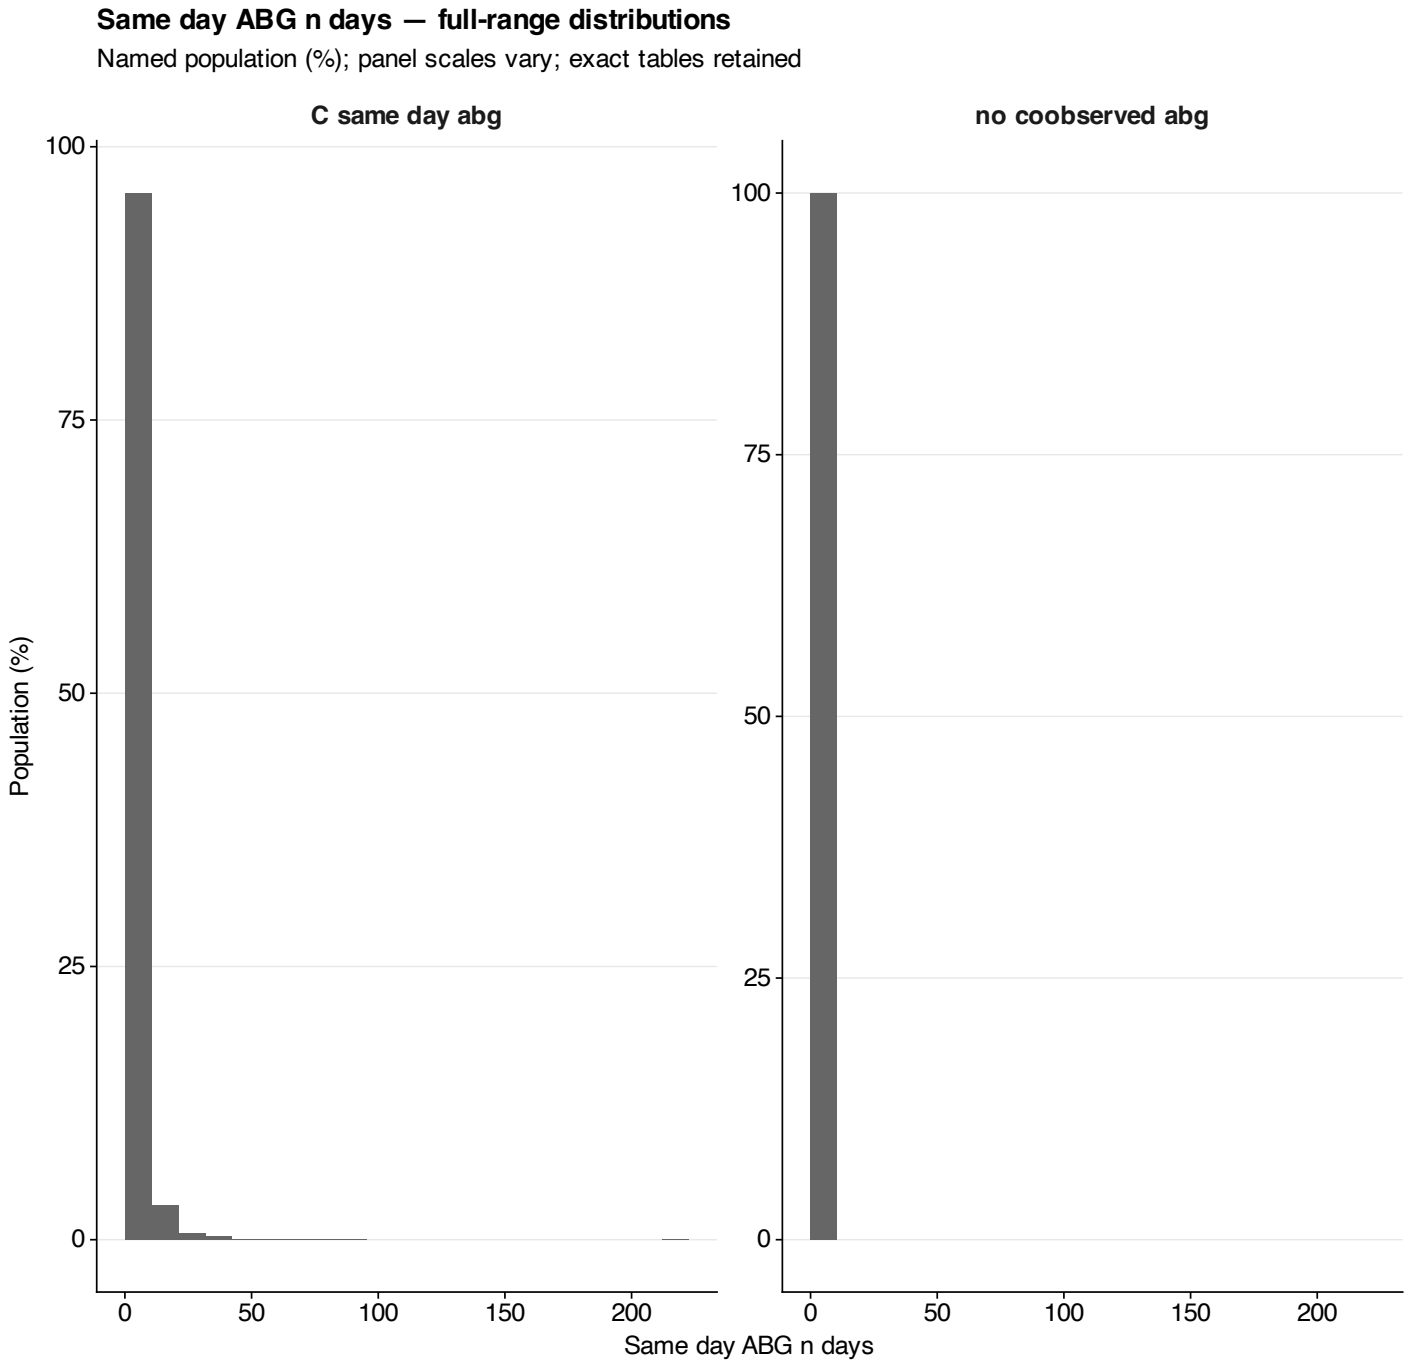

Figure 1161: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete same_day_abg_n_days stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

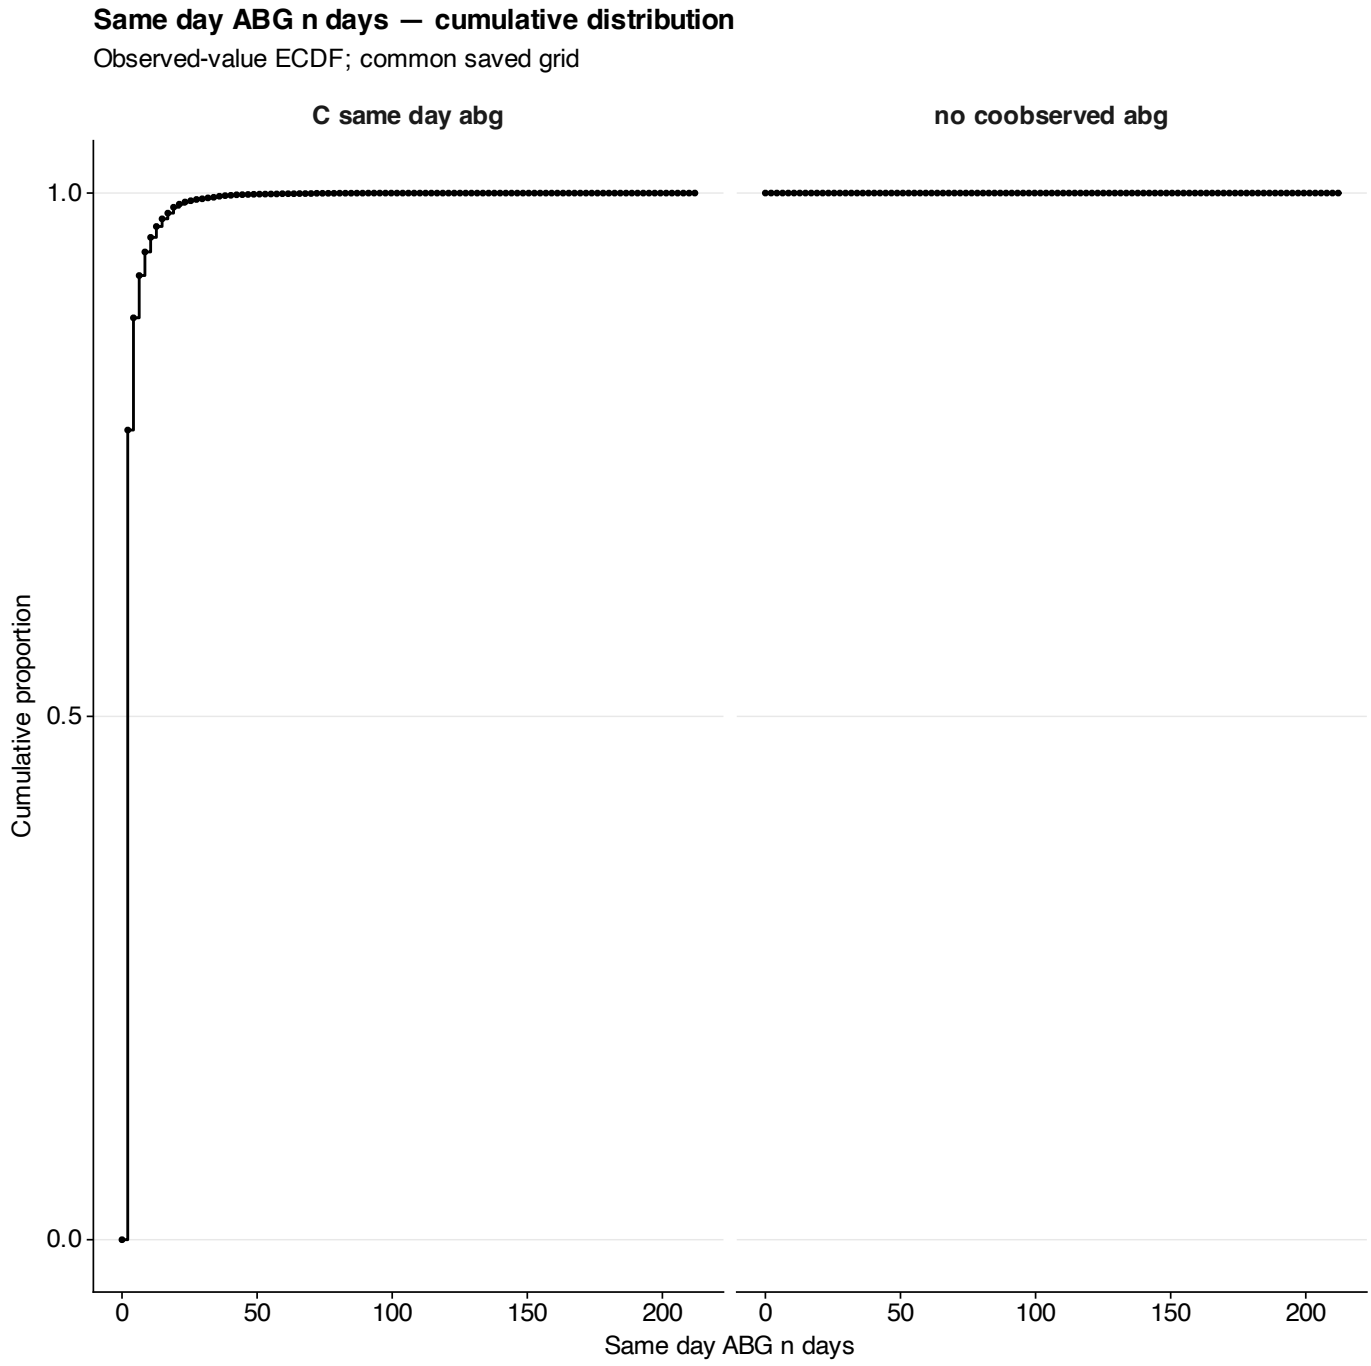

Figure 1162: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. same_day_abg_n_days ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

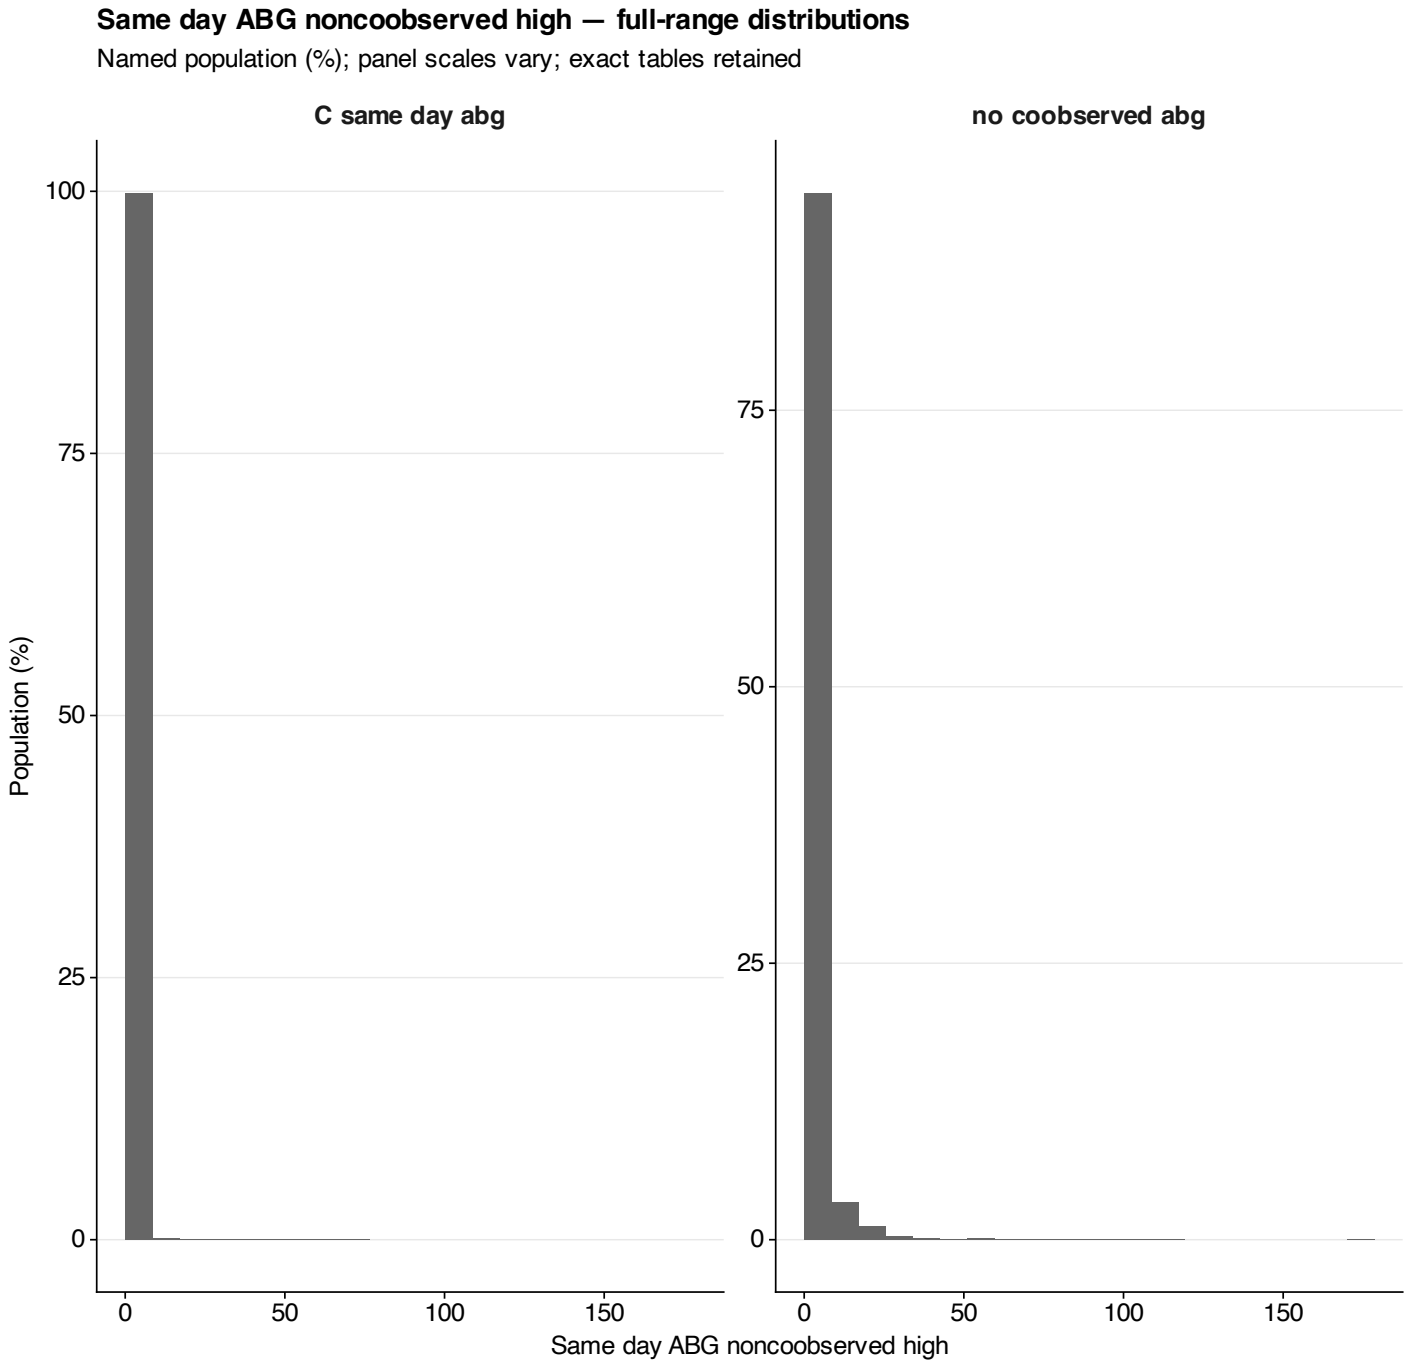

Figure 1163: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete same_day_abg_noncoobserved_high stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

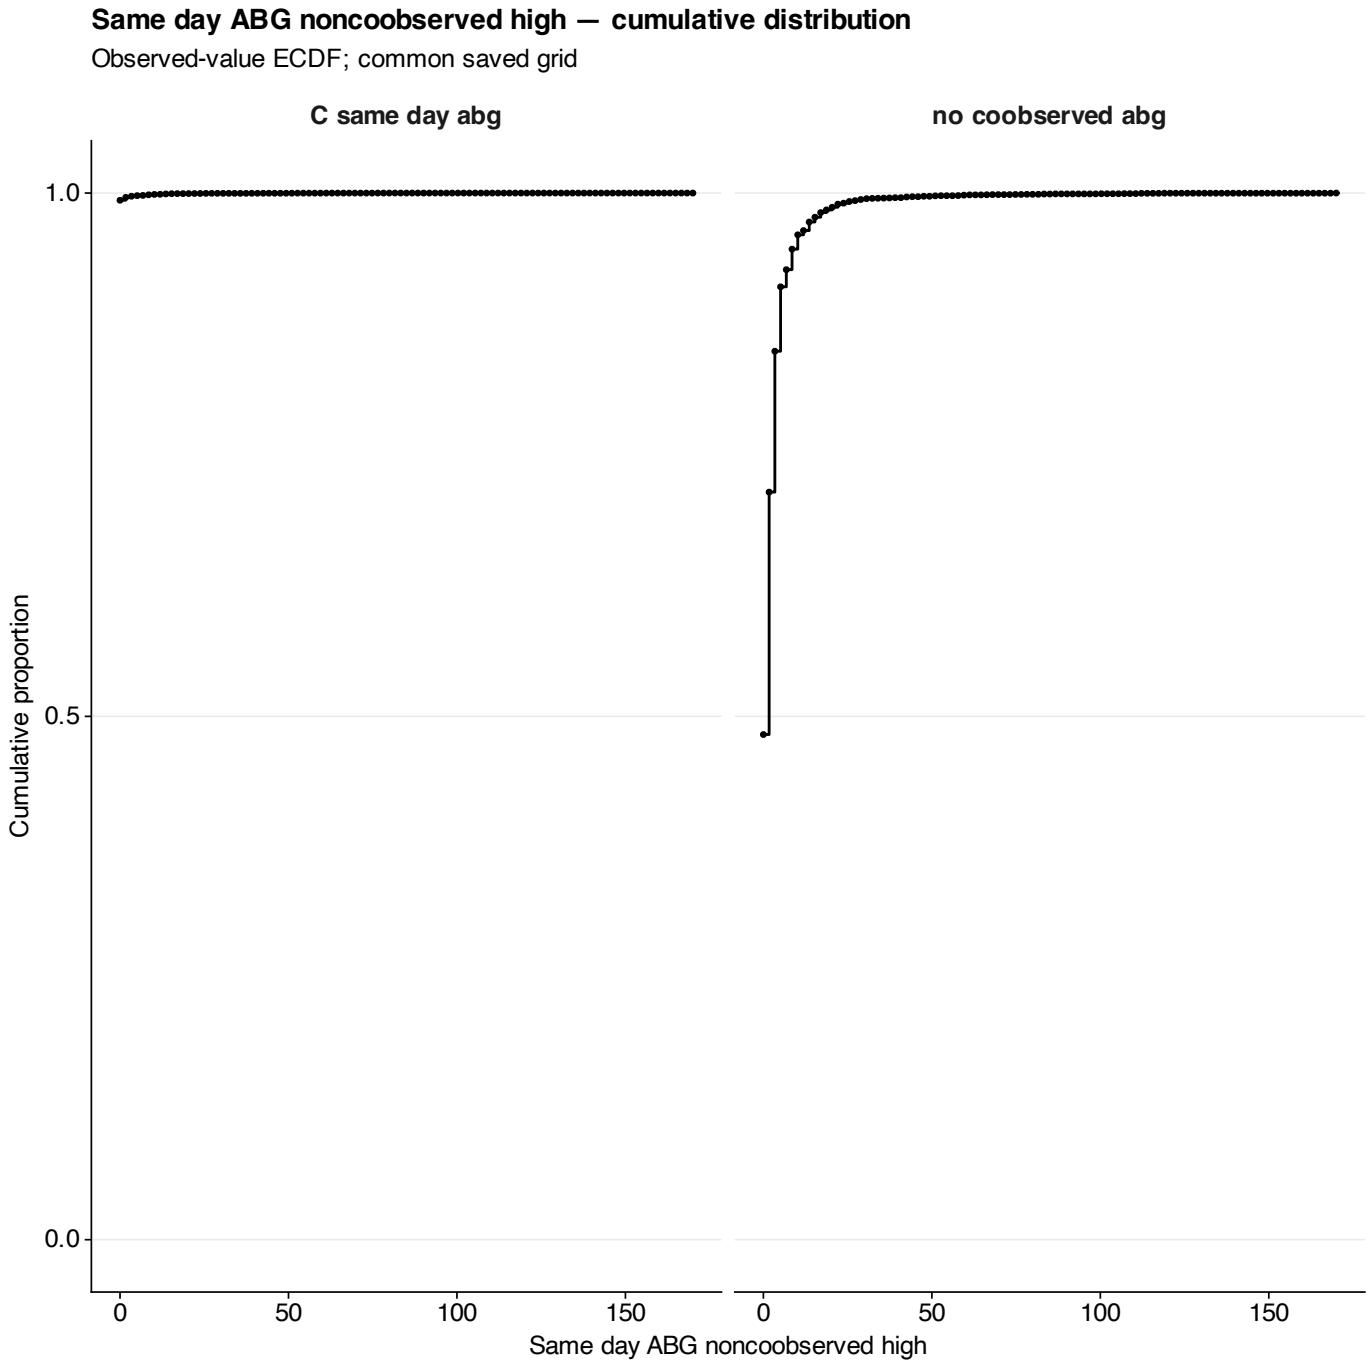

Figure 1164: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. same_day_abg_noncoobserved_high ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

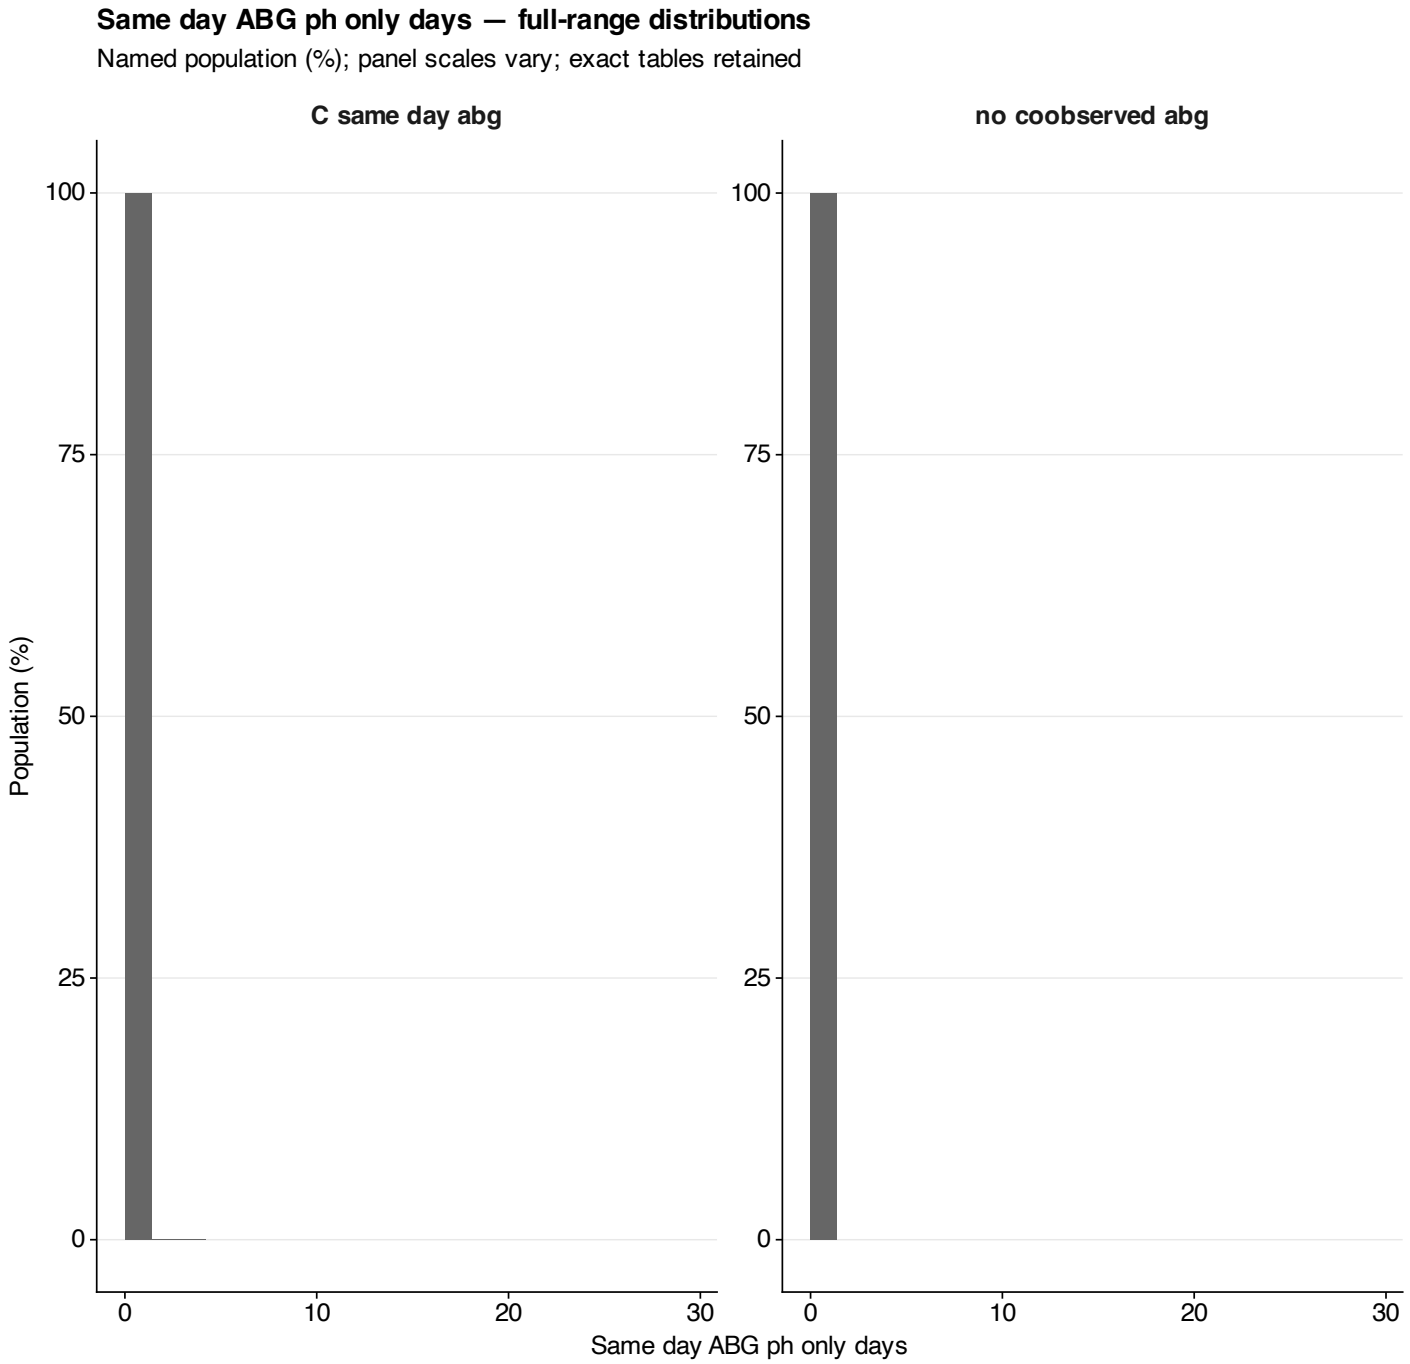

Figure 1165: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete same_day_abg_ph_only_days stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

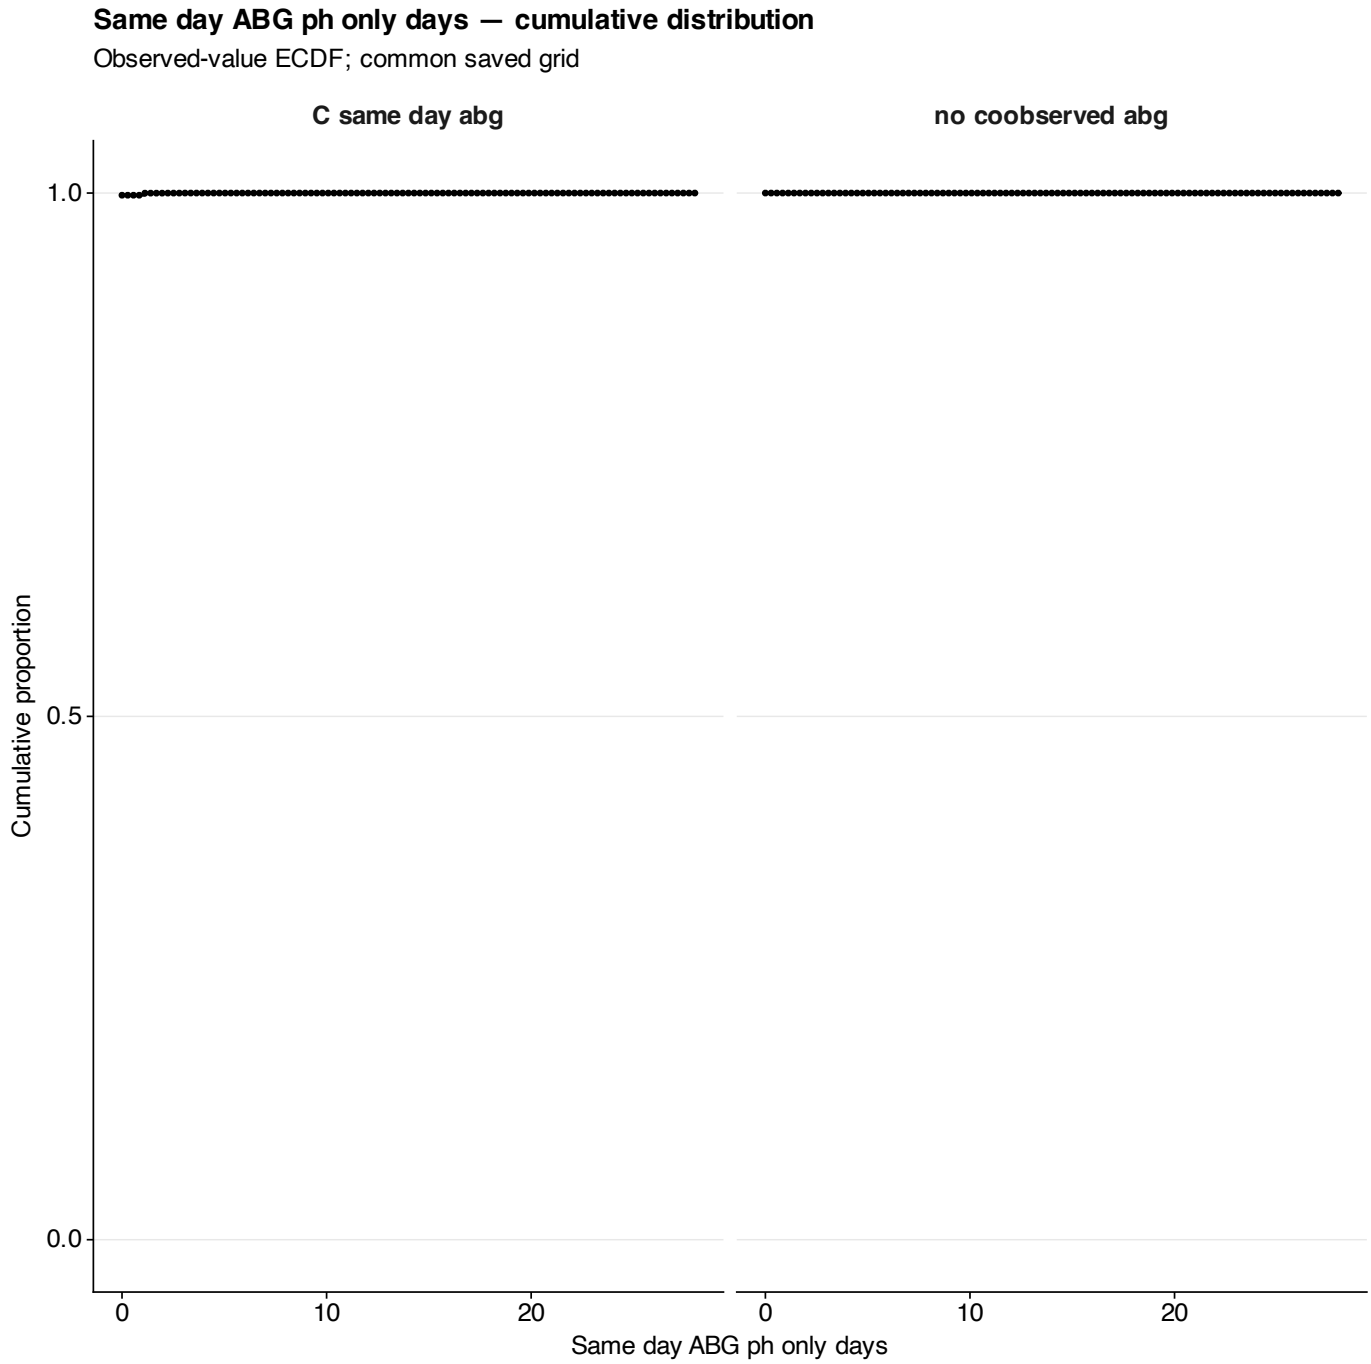

Figure 1166: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. same_day_abg_ph_only_days ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

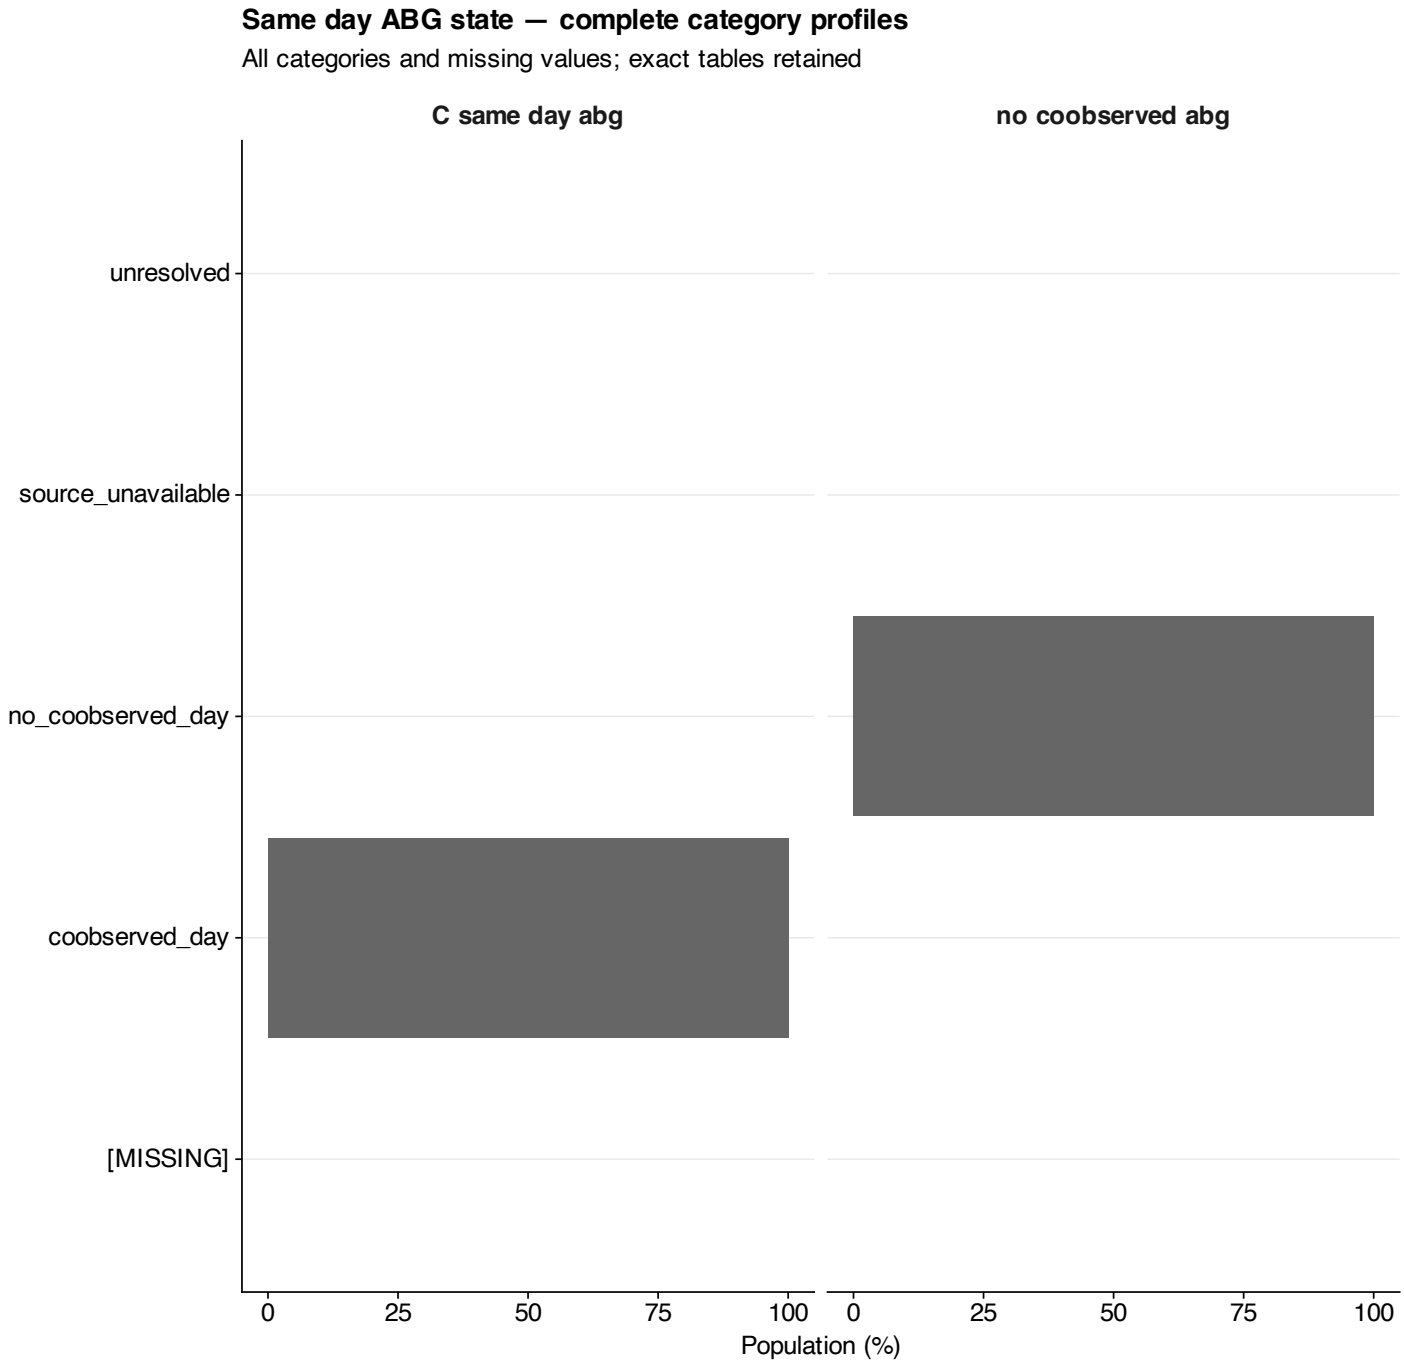

Figure 1167: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete same_day_abg_state stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

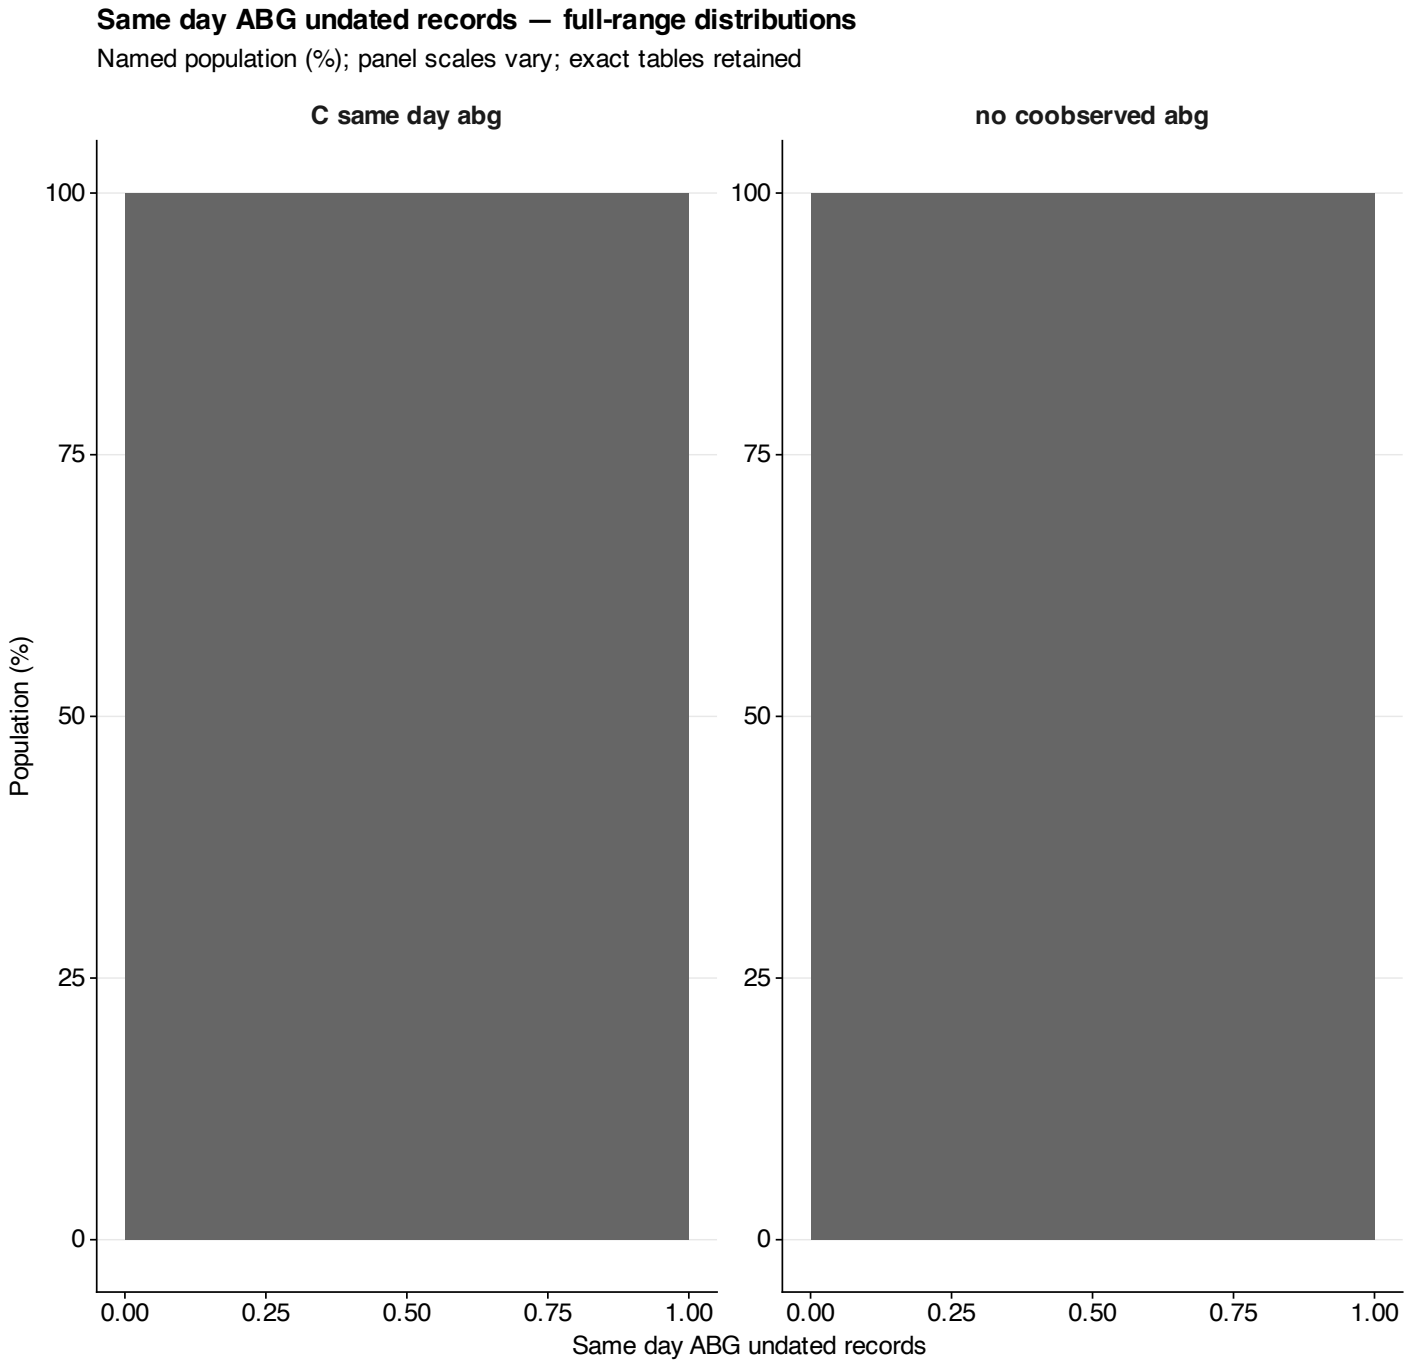

Figure 1168: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete same_day_abg_undated_records stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

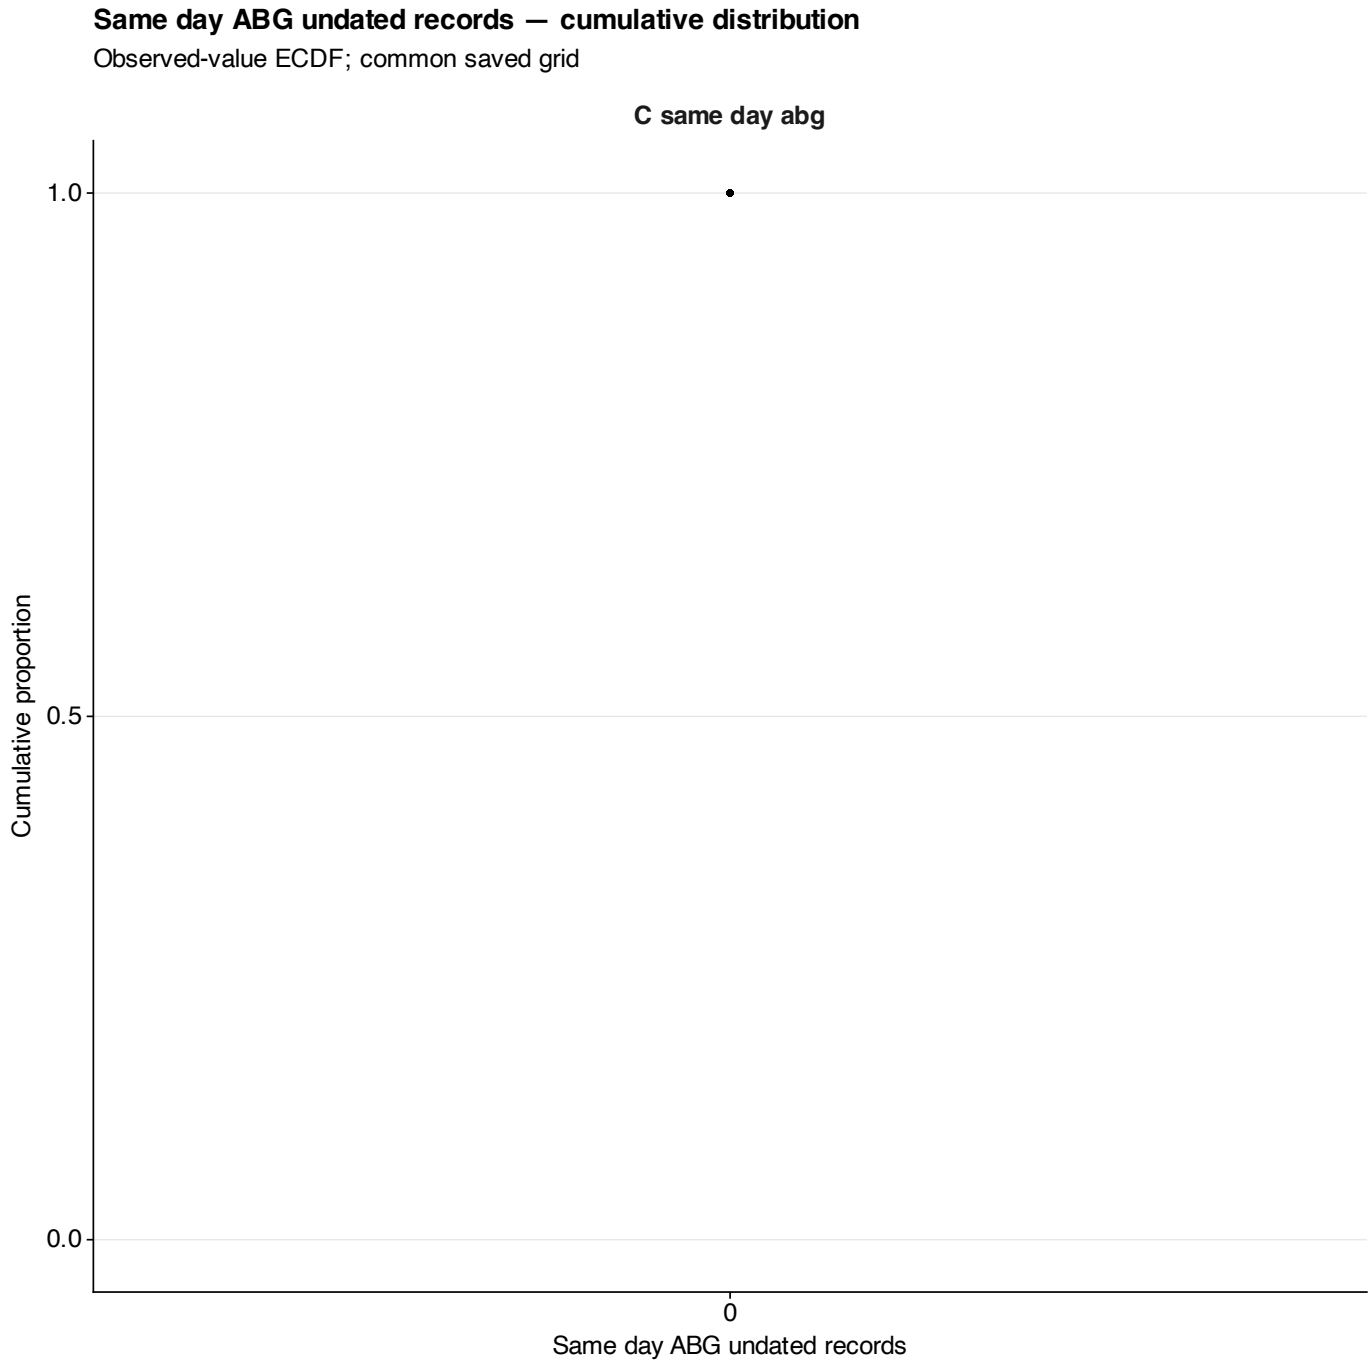

Figure 1169: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. same_day_abg_undated_records ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

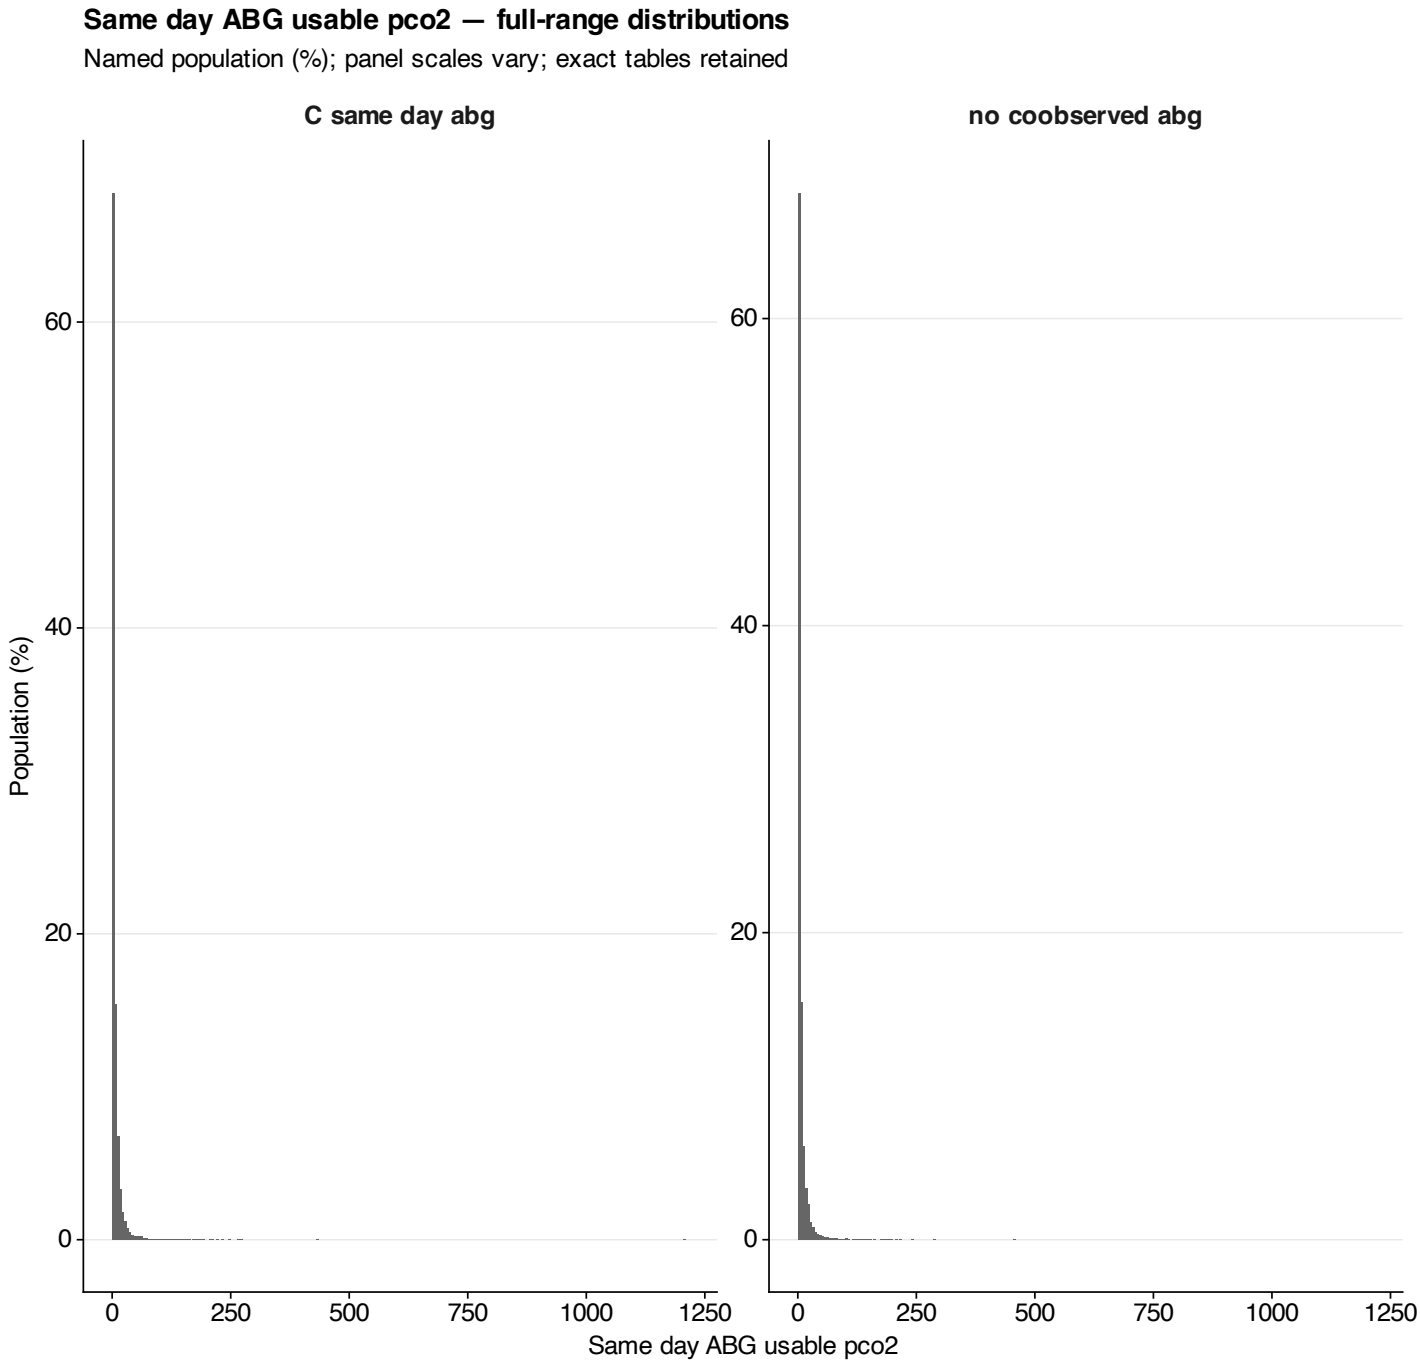

Figure 1170: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete same_day_abg_usable_pco2 stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

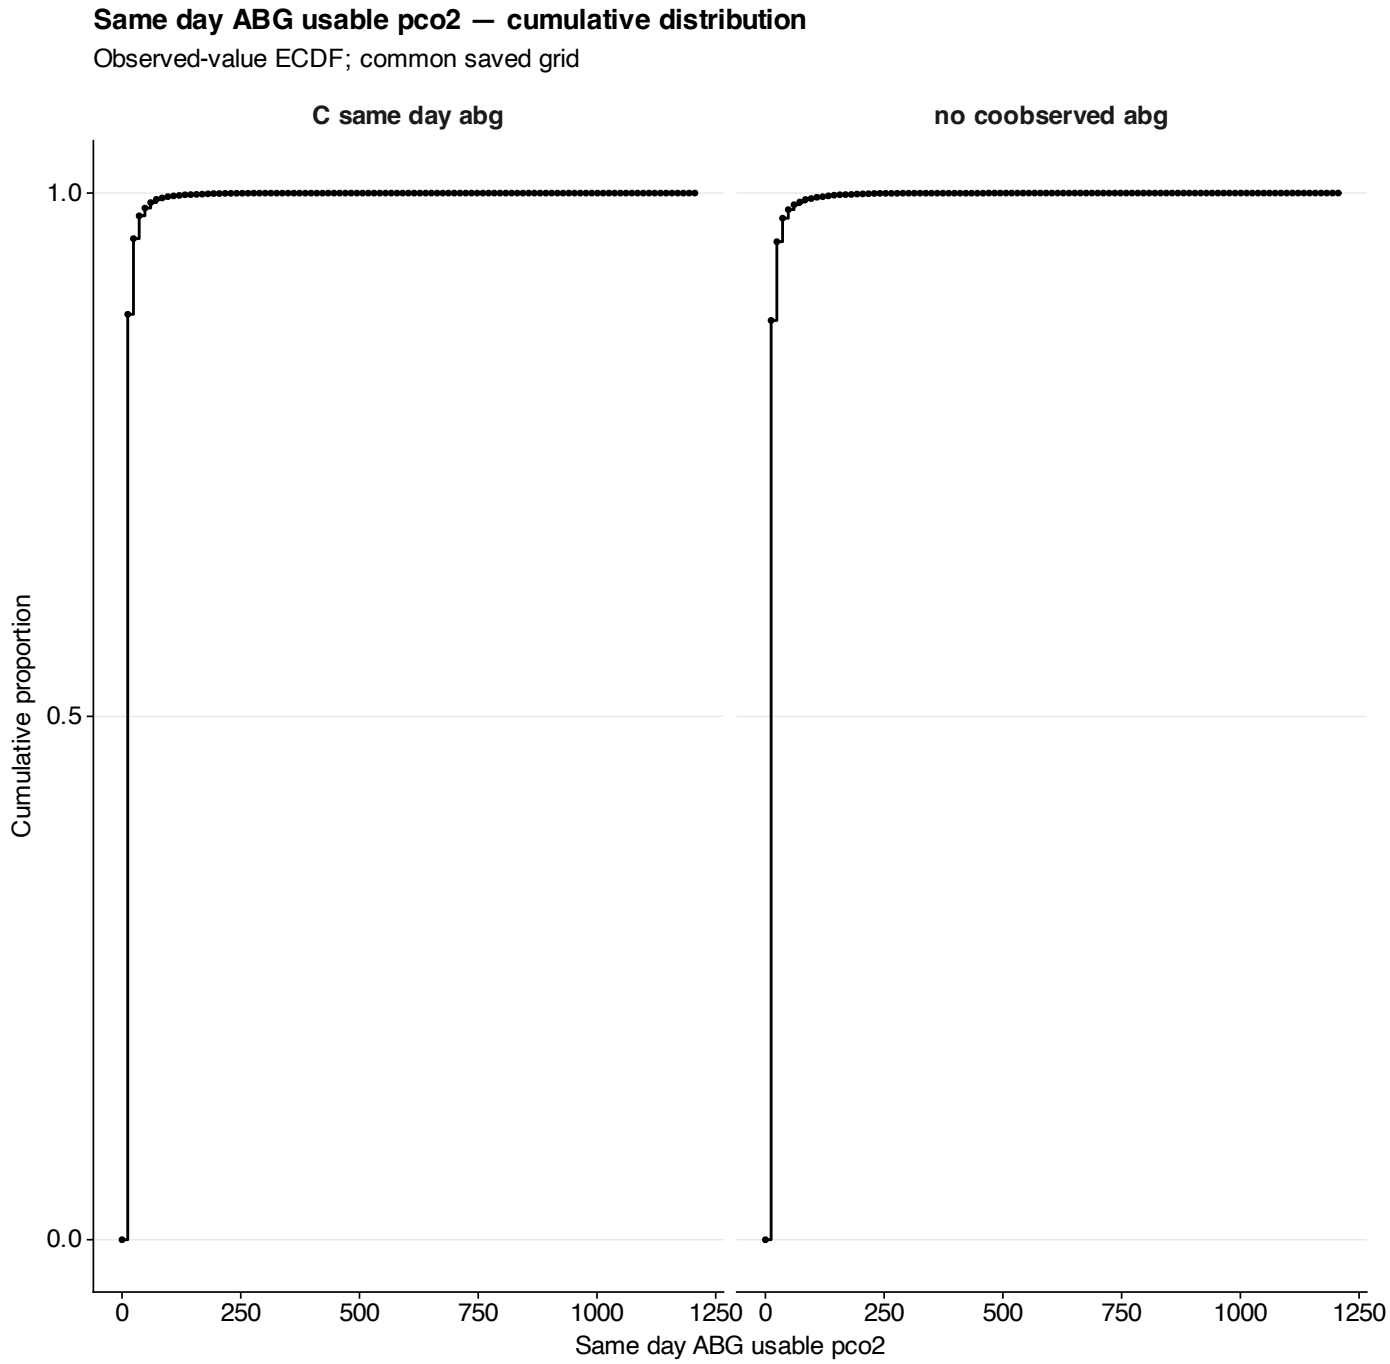

Figure 1171: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. same_day_abg_usable_pco2 ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

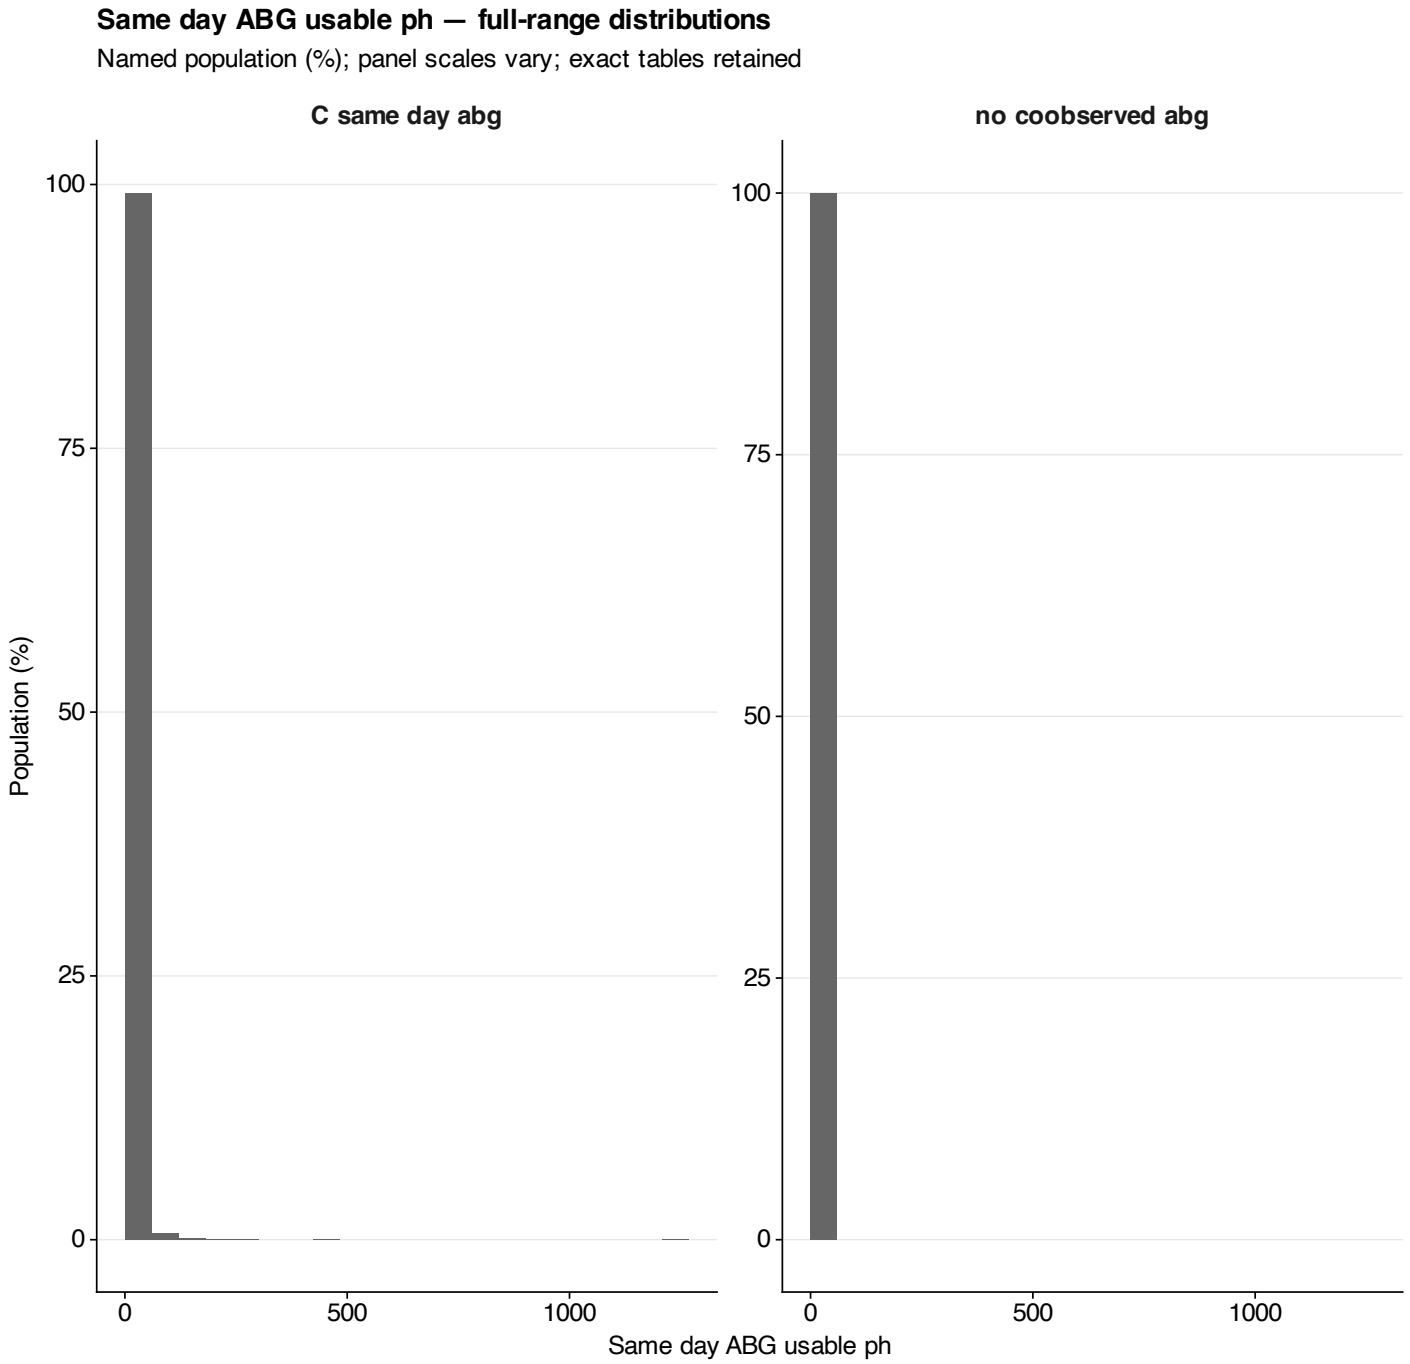

Figure 1172: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete same_day_abg_usable_ph stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

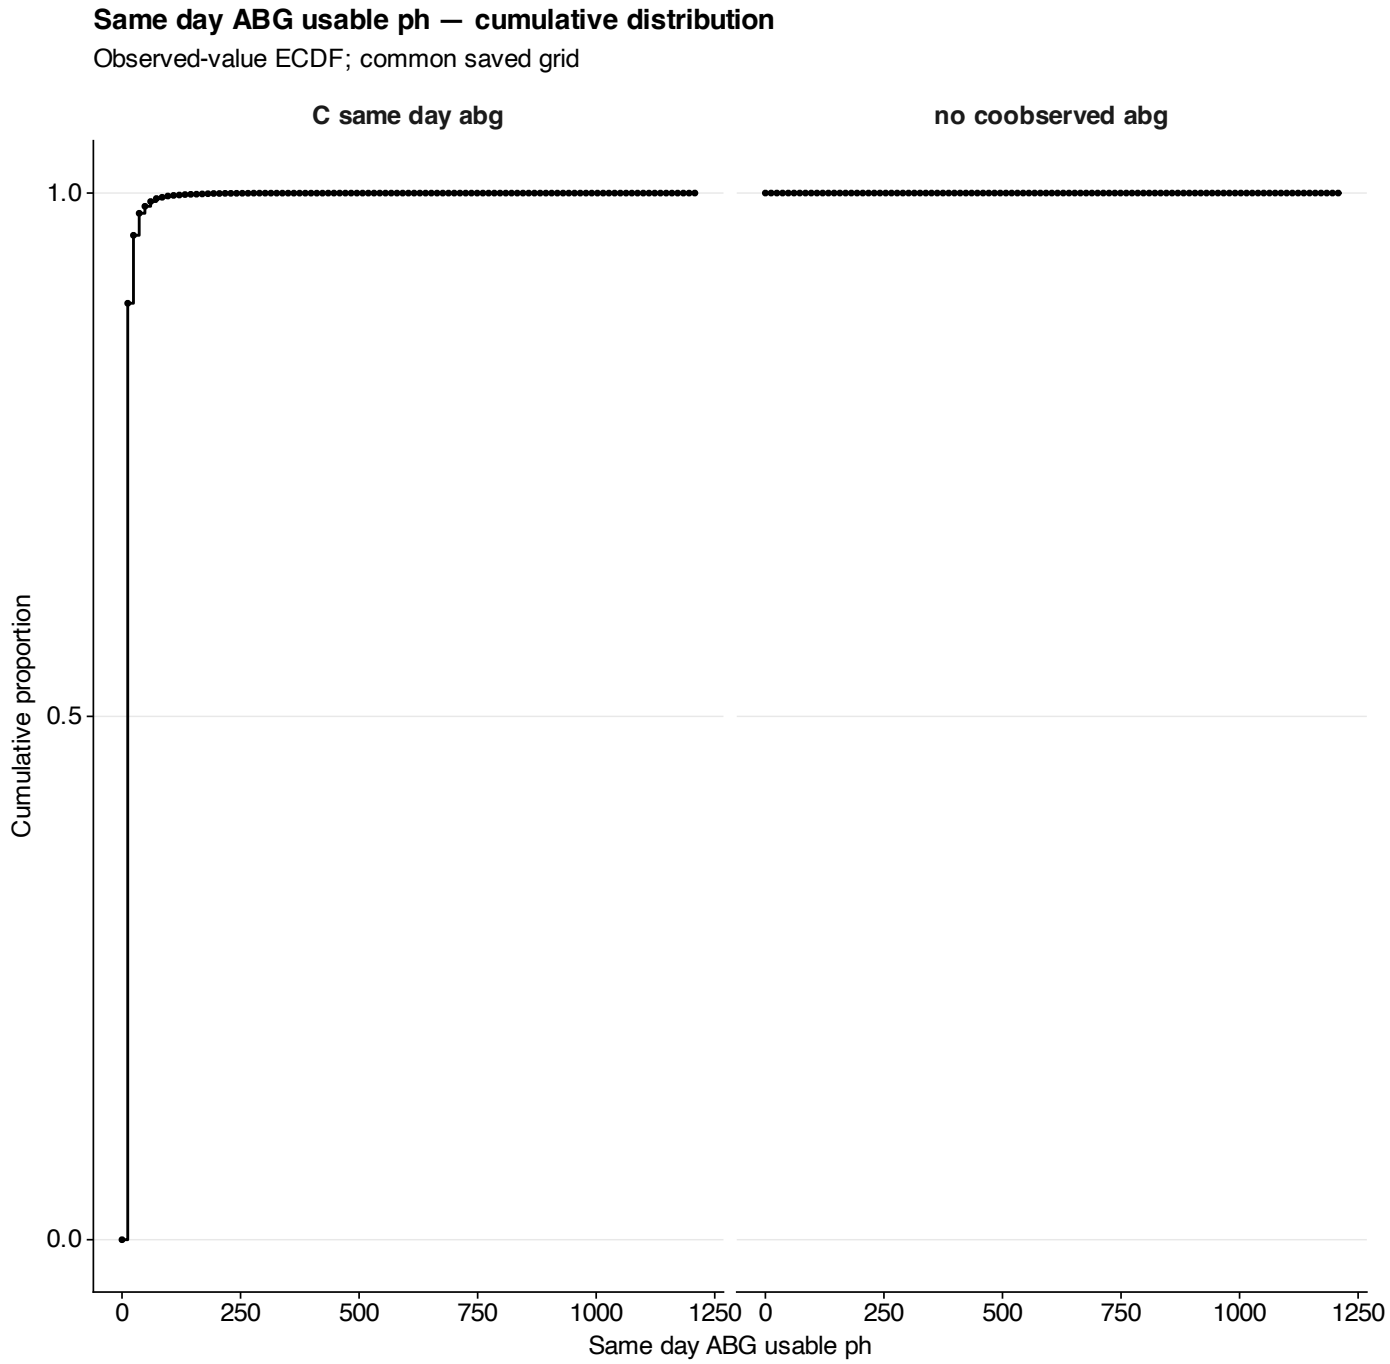

Figure 1173: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. same_day_abg_usable_ph ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

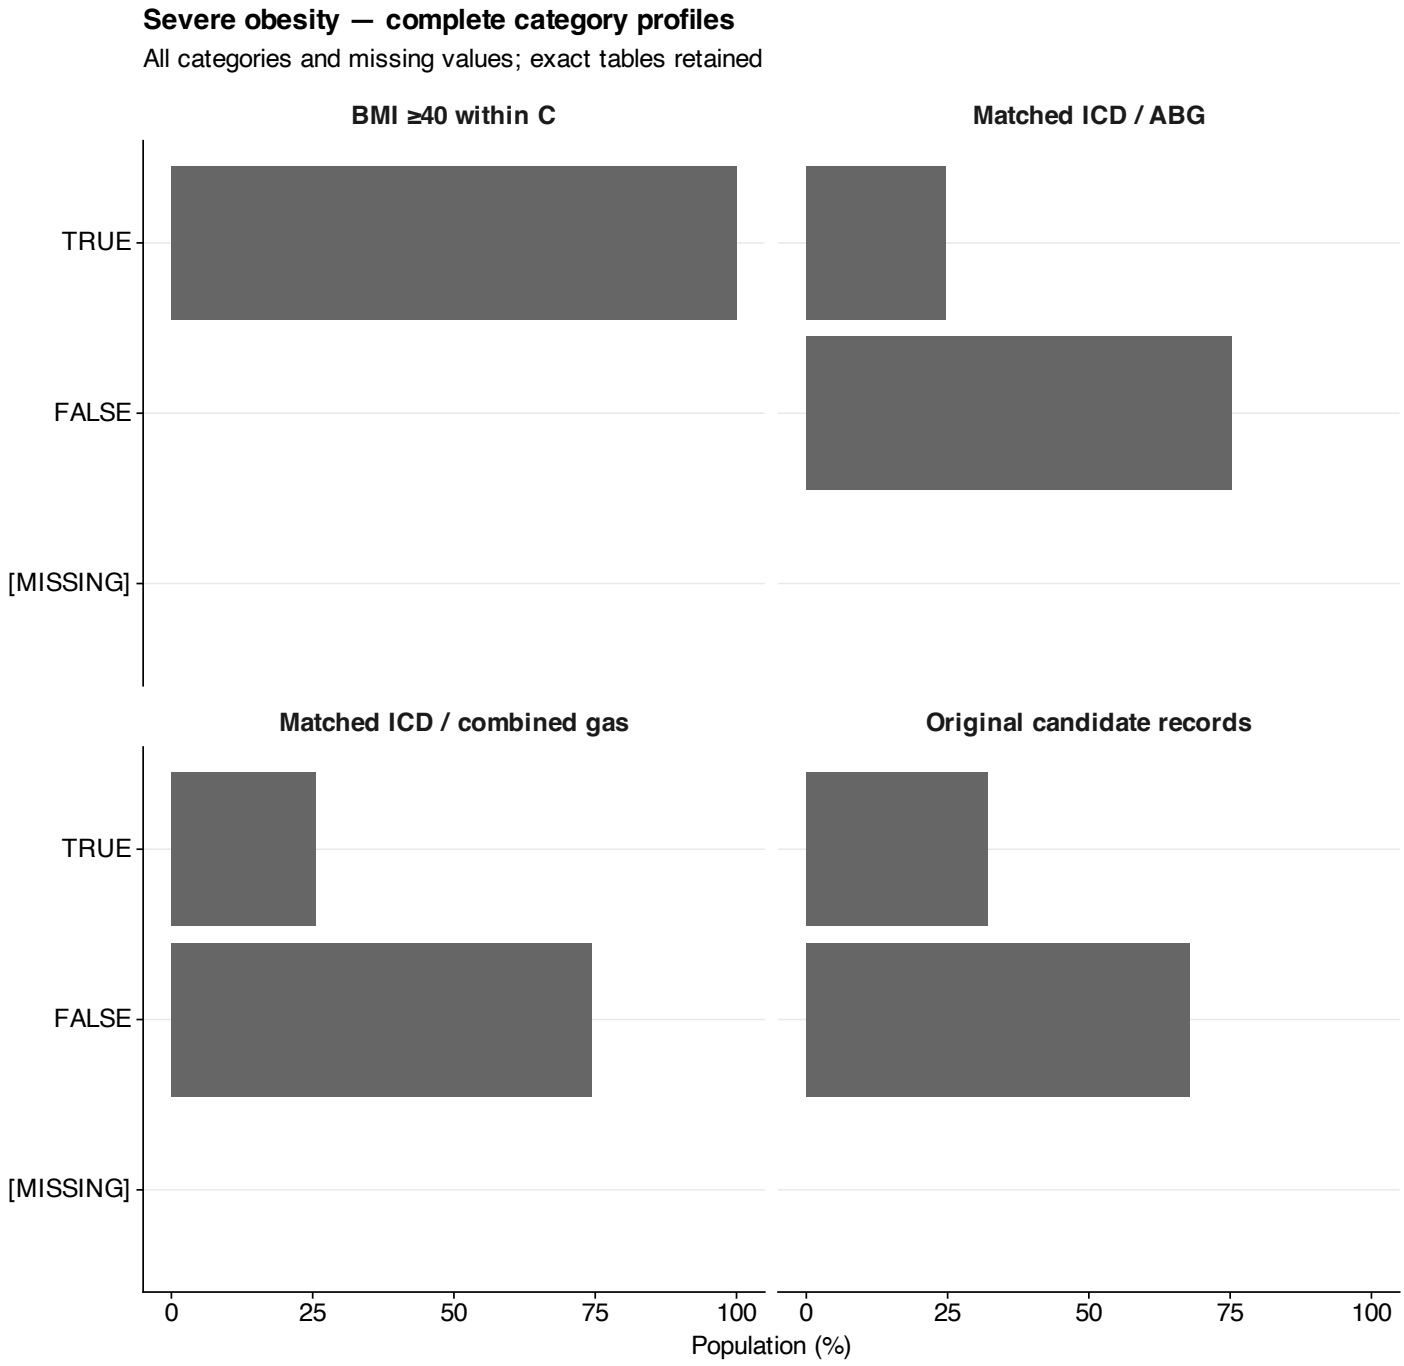

Figure 1174: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete severe_obesity stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

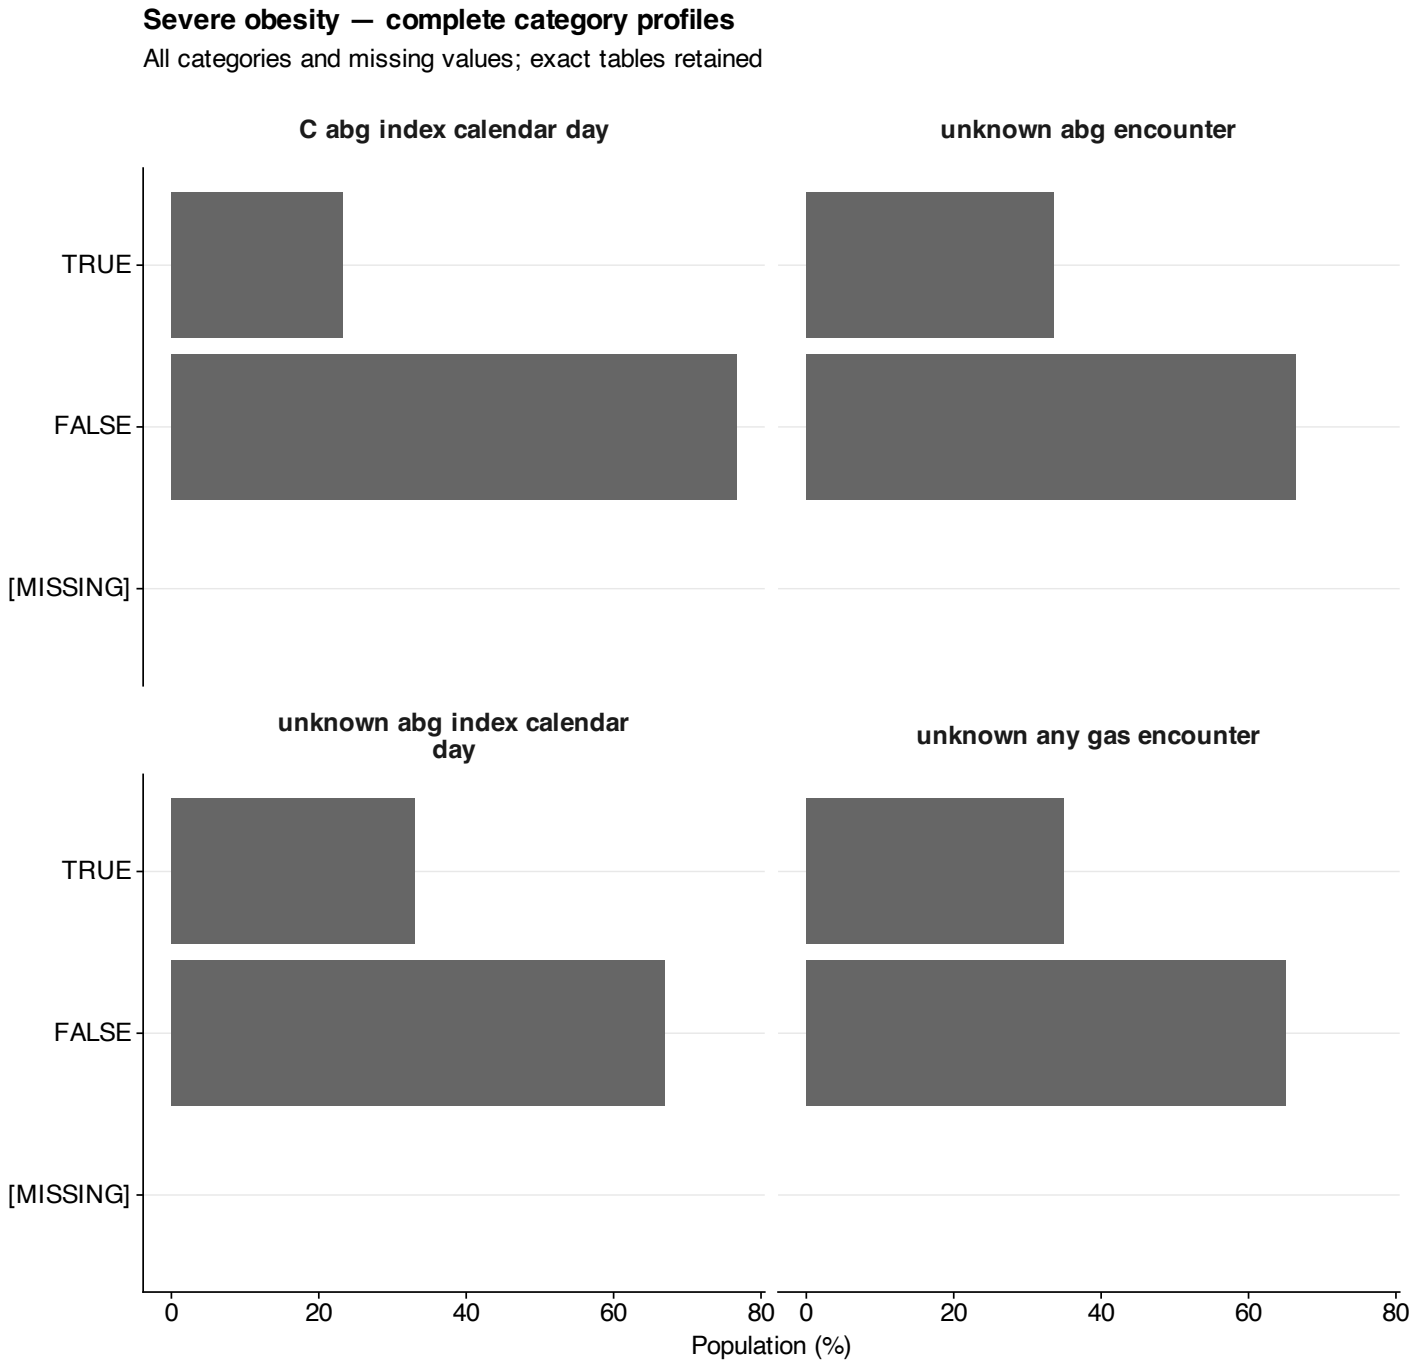

Figure 1175: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete severe_obesity stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

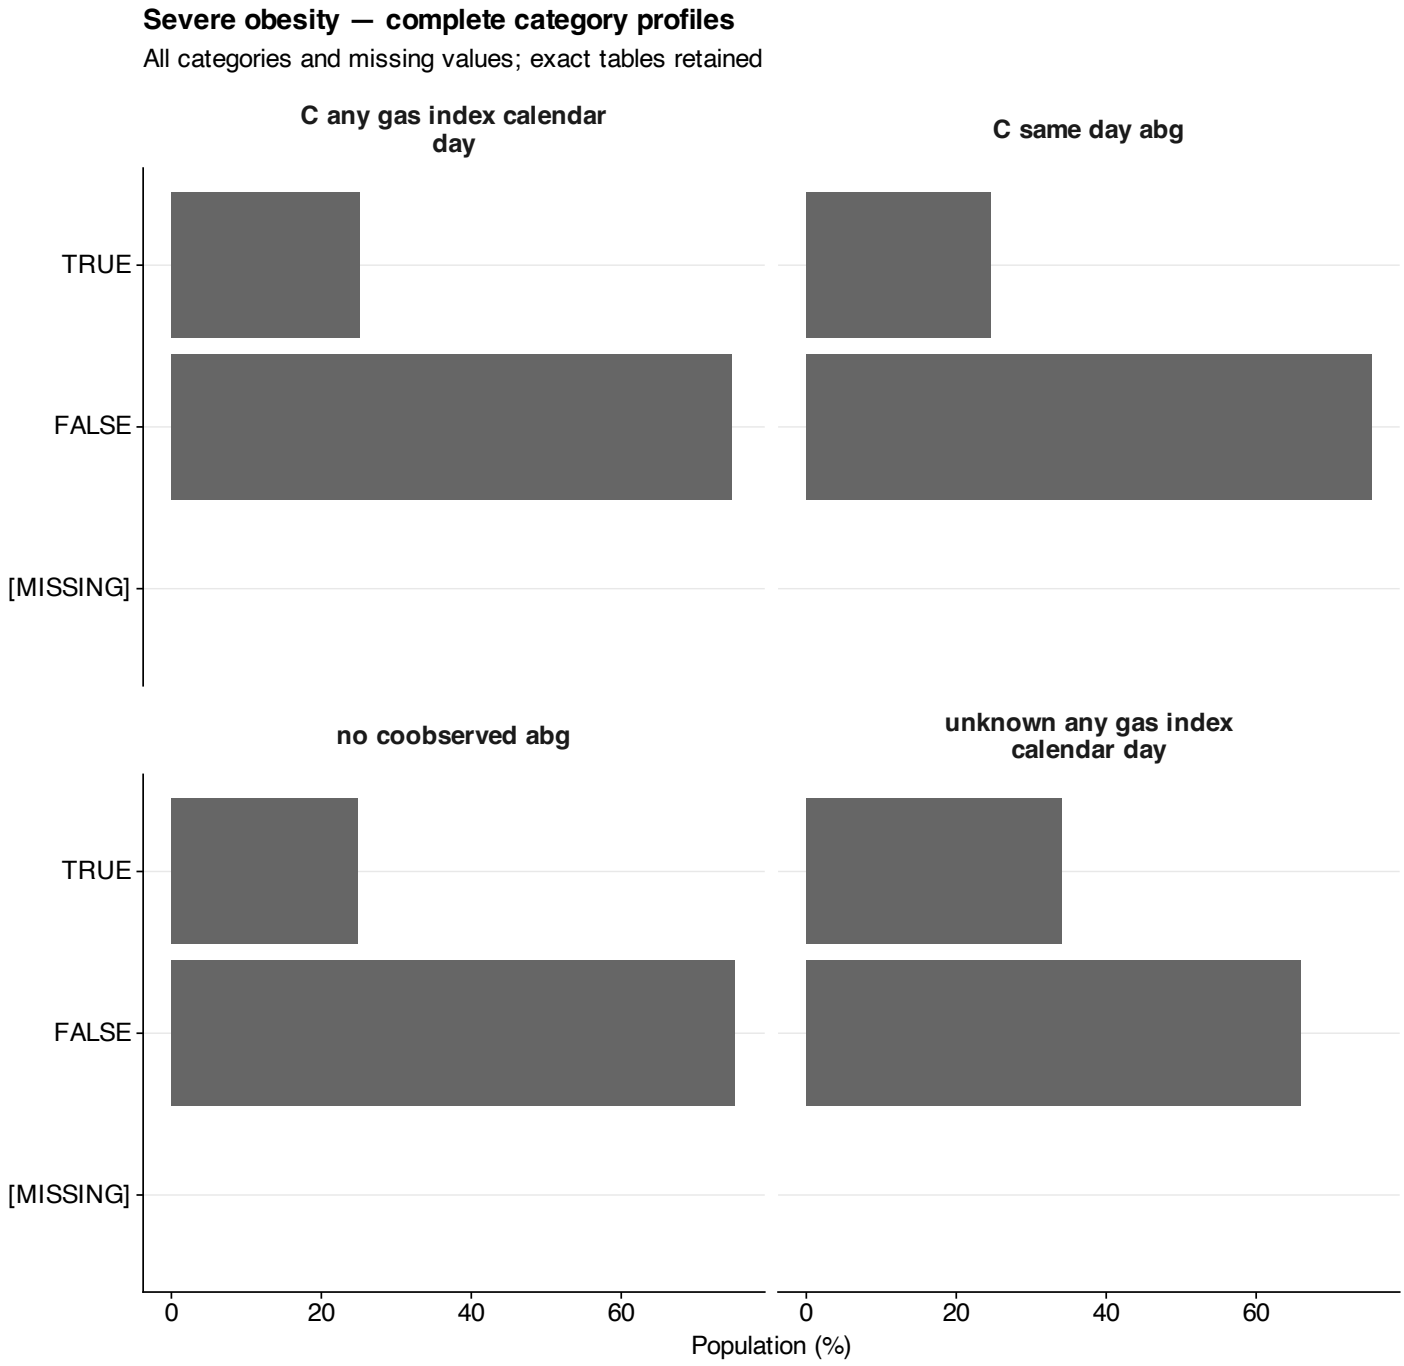

Figure 1176: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete severe_obesity stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

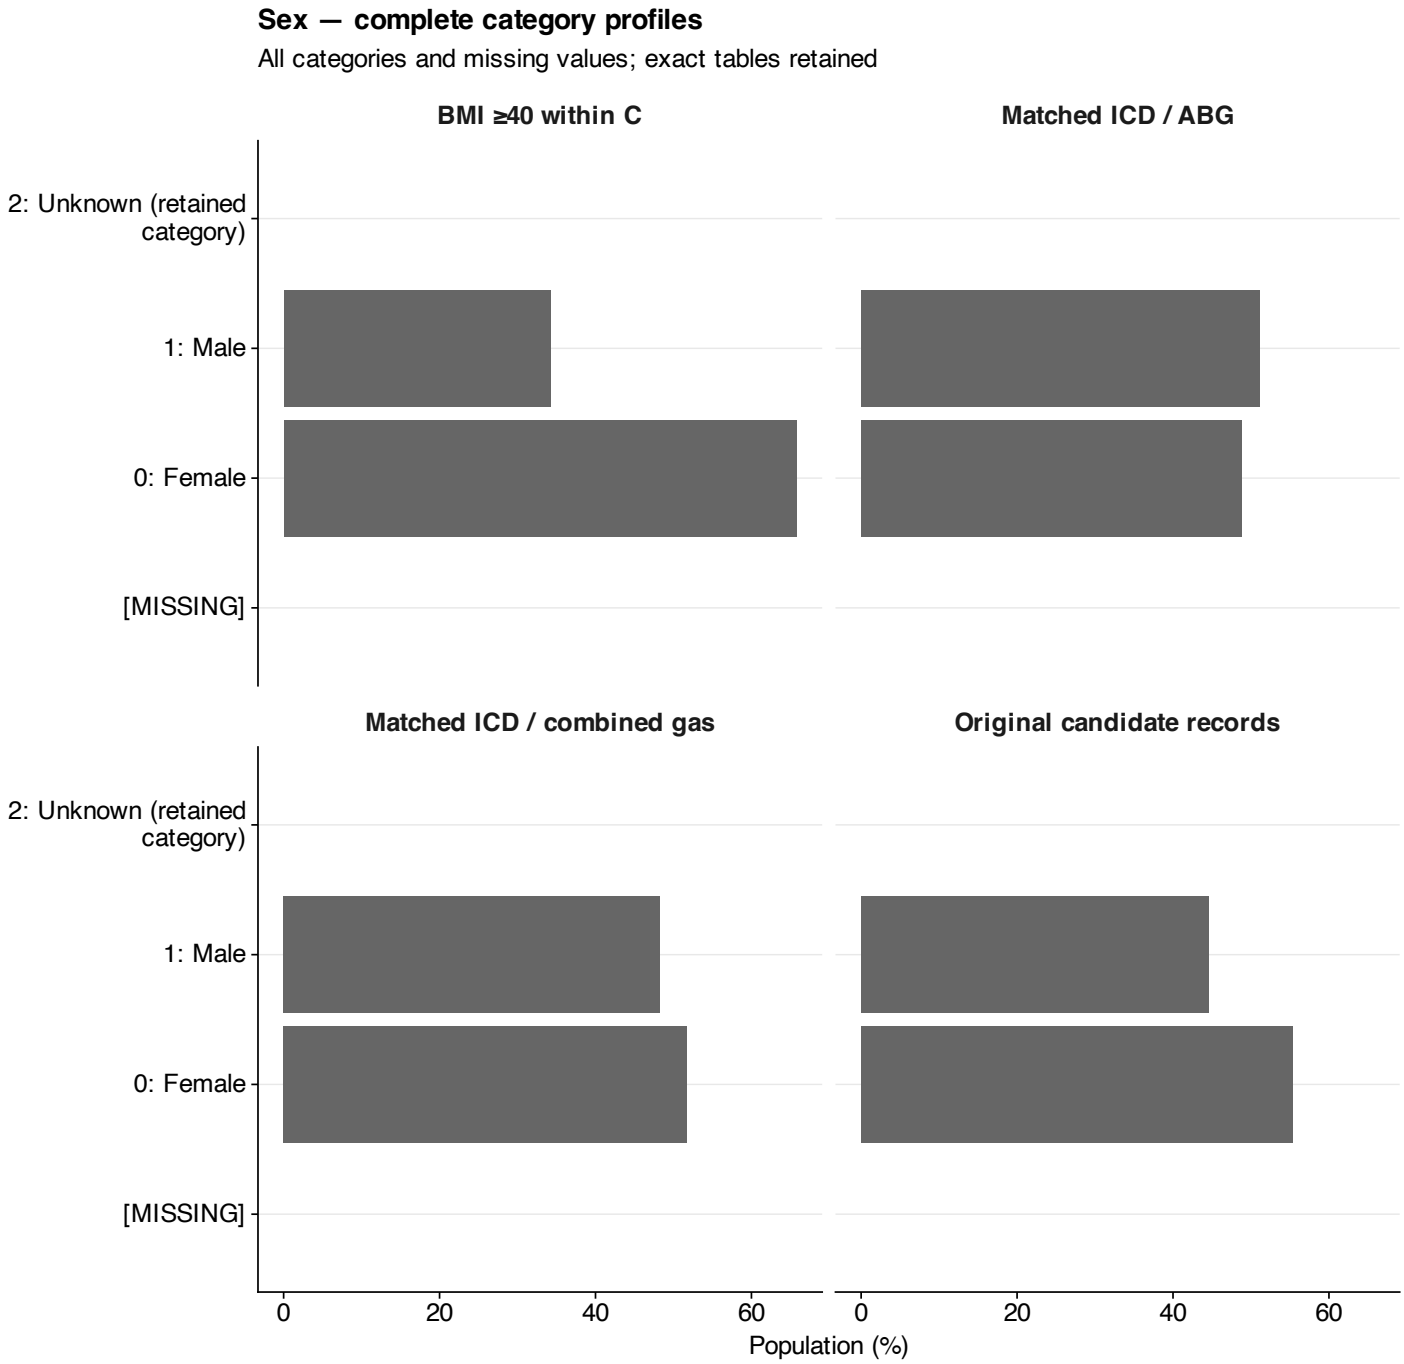

Figure 1177: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete sex stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

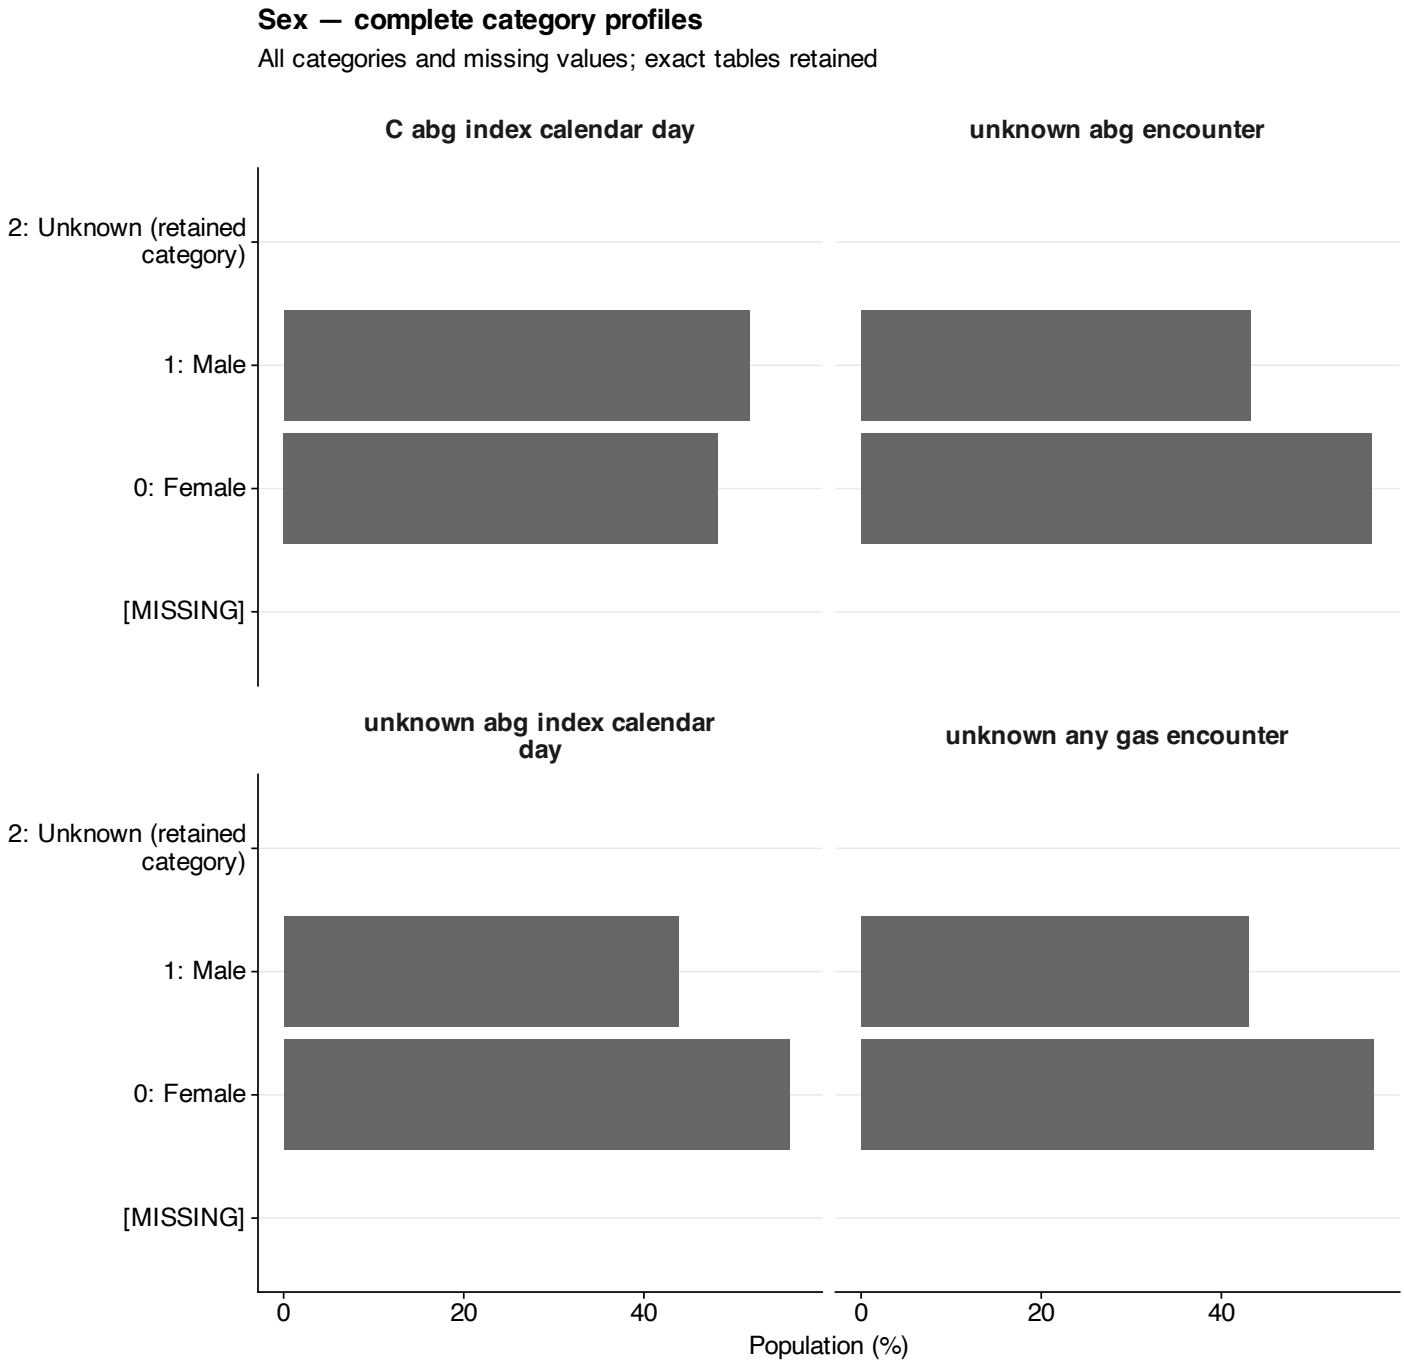

Figure 1178: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete sex stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

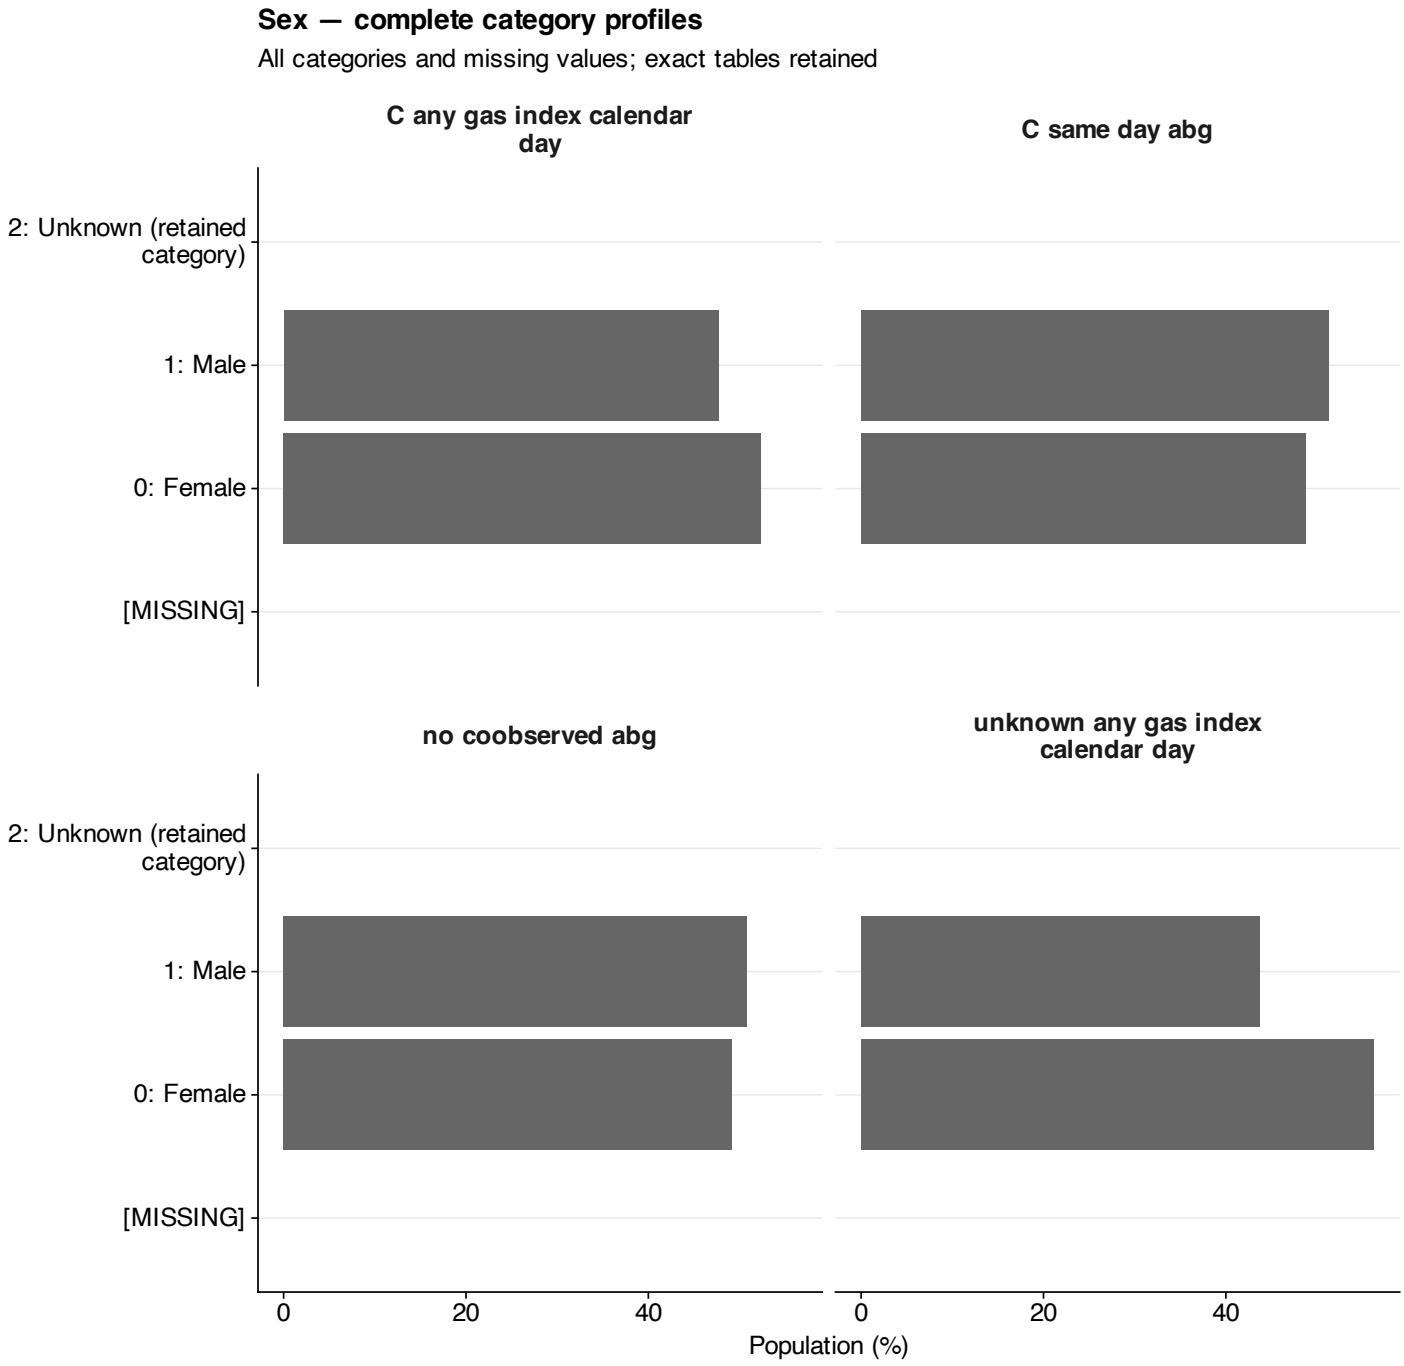

Figure 1179: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete sex stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

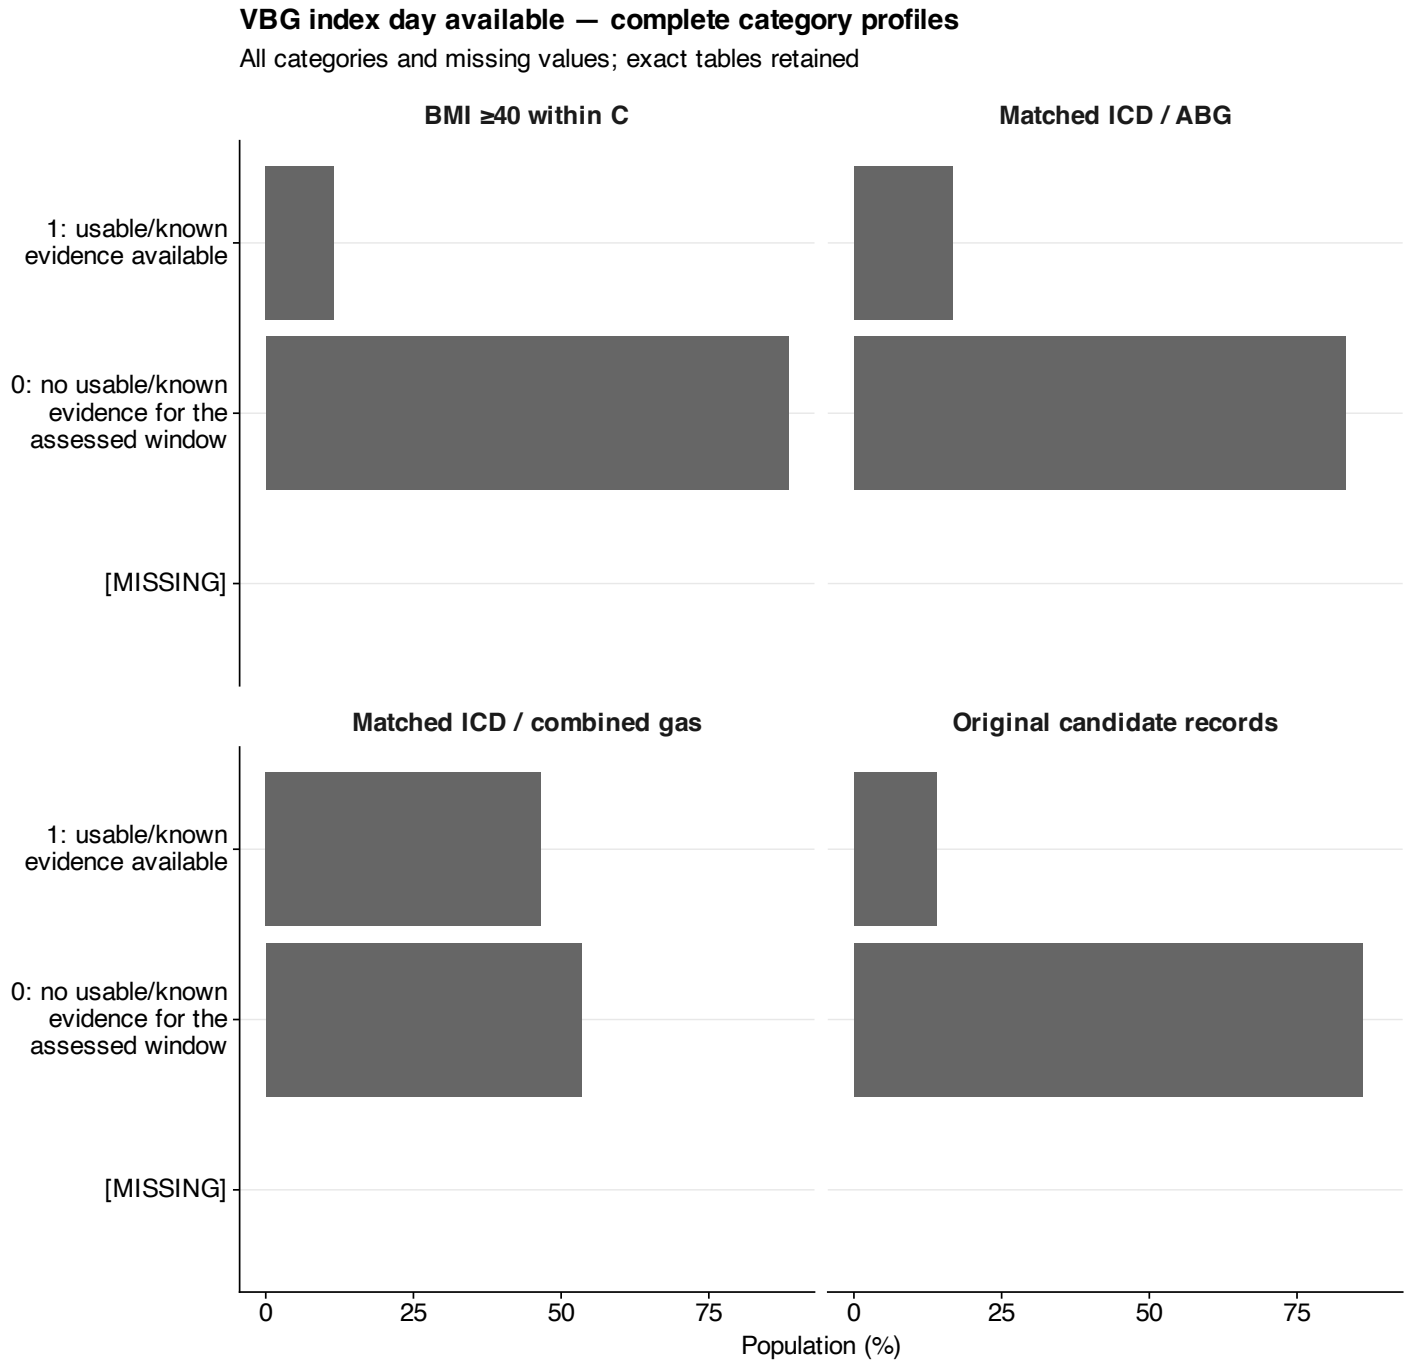

Figure 1180: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete vbg_index_day_available stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

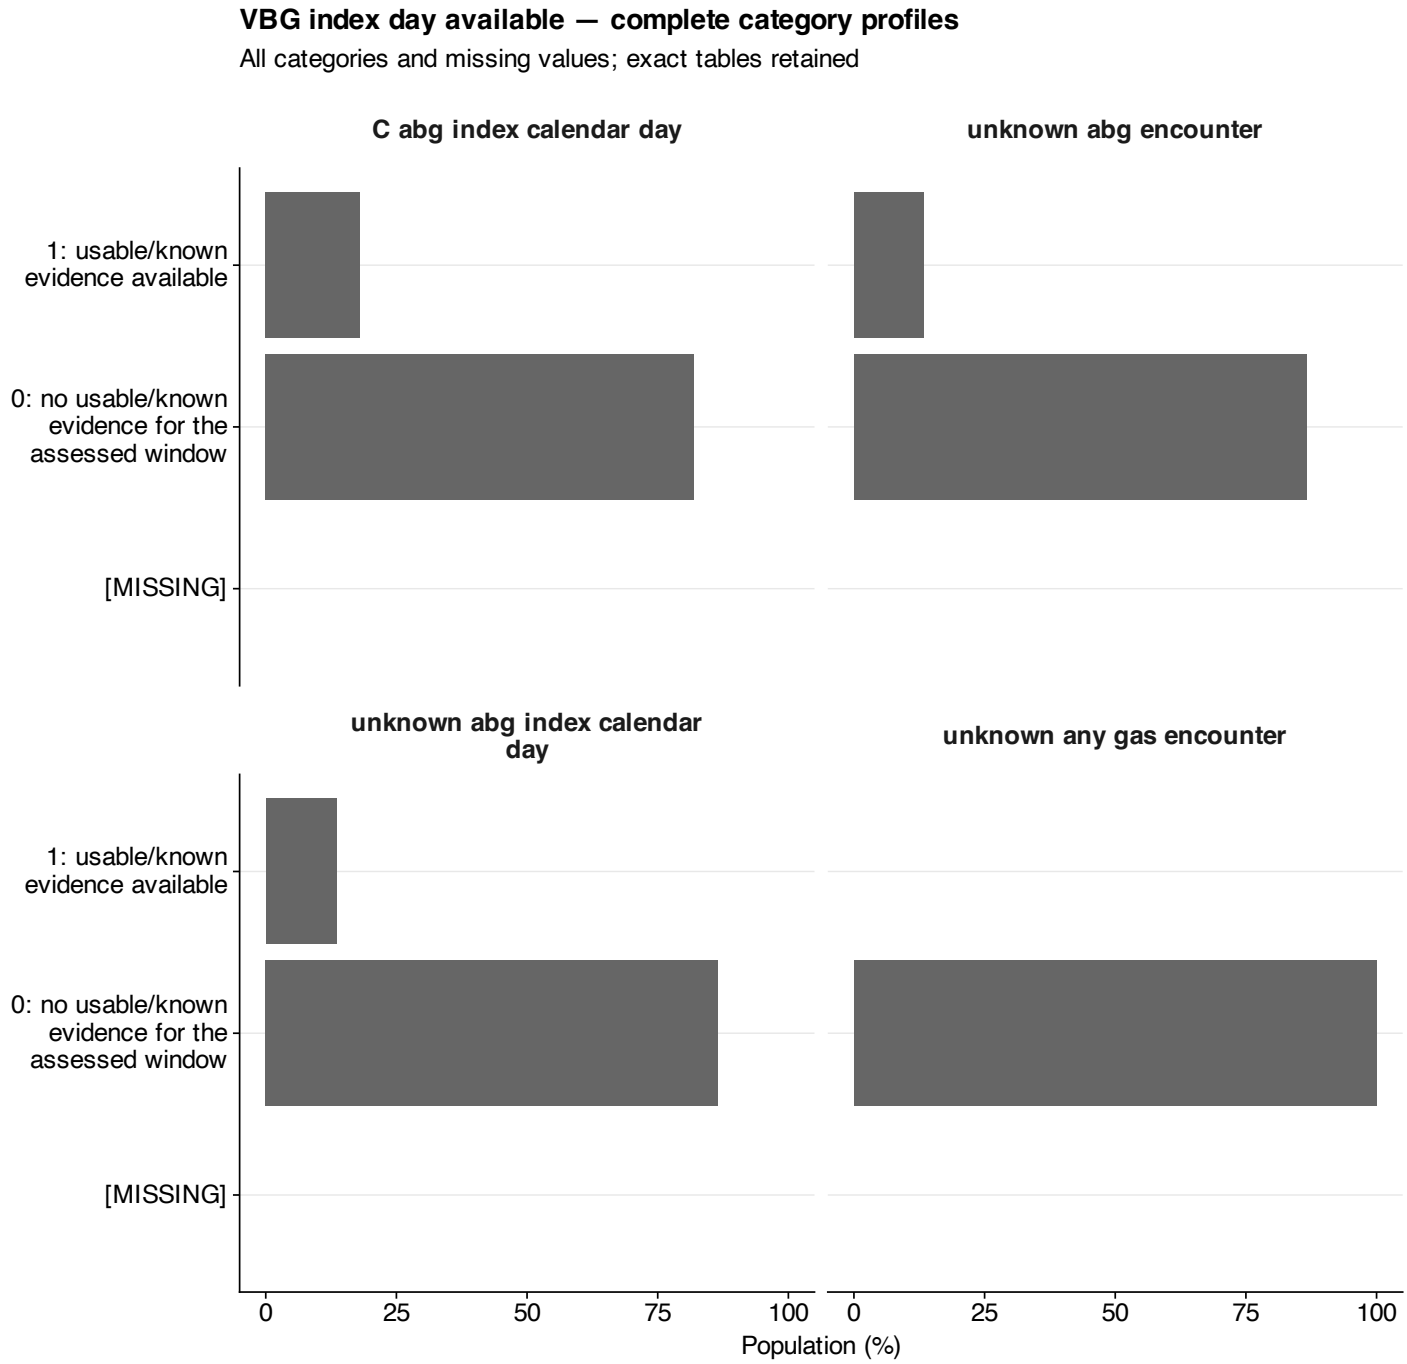

Figure 1181: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete vbg_index_day_available stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

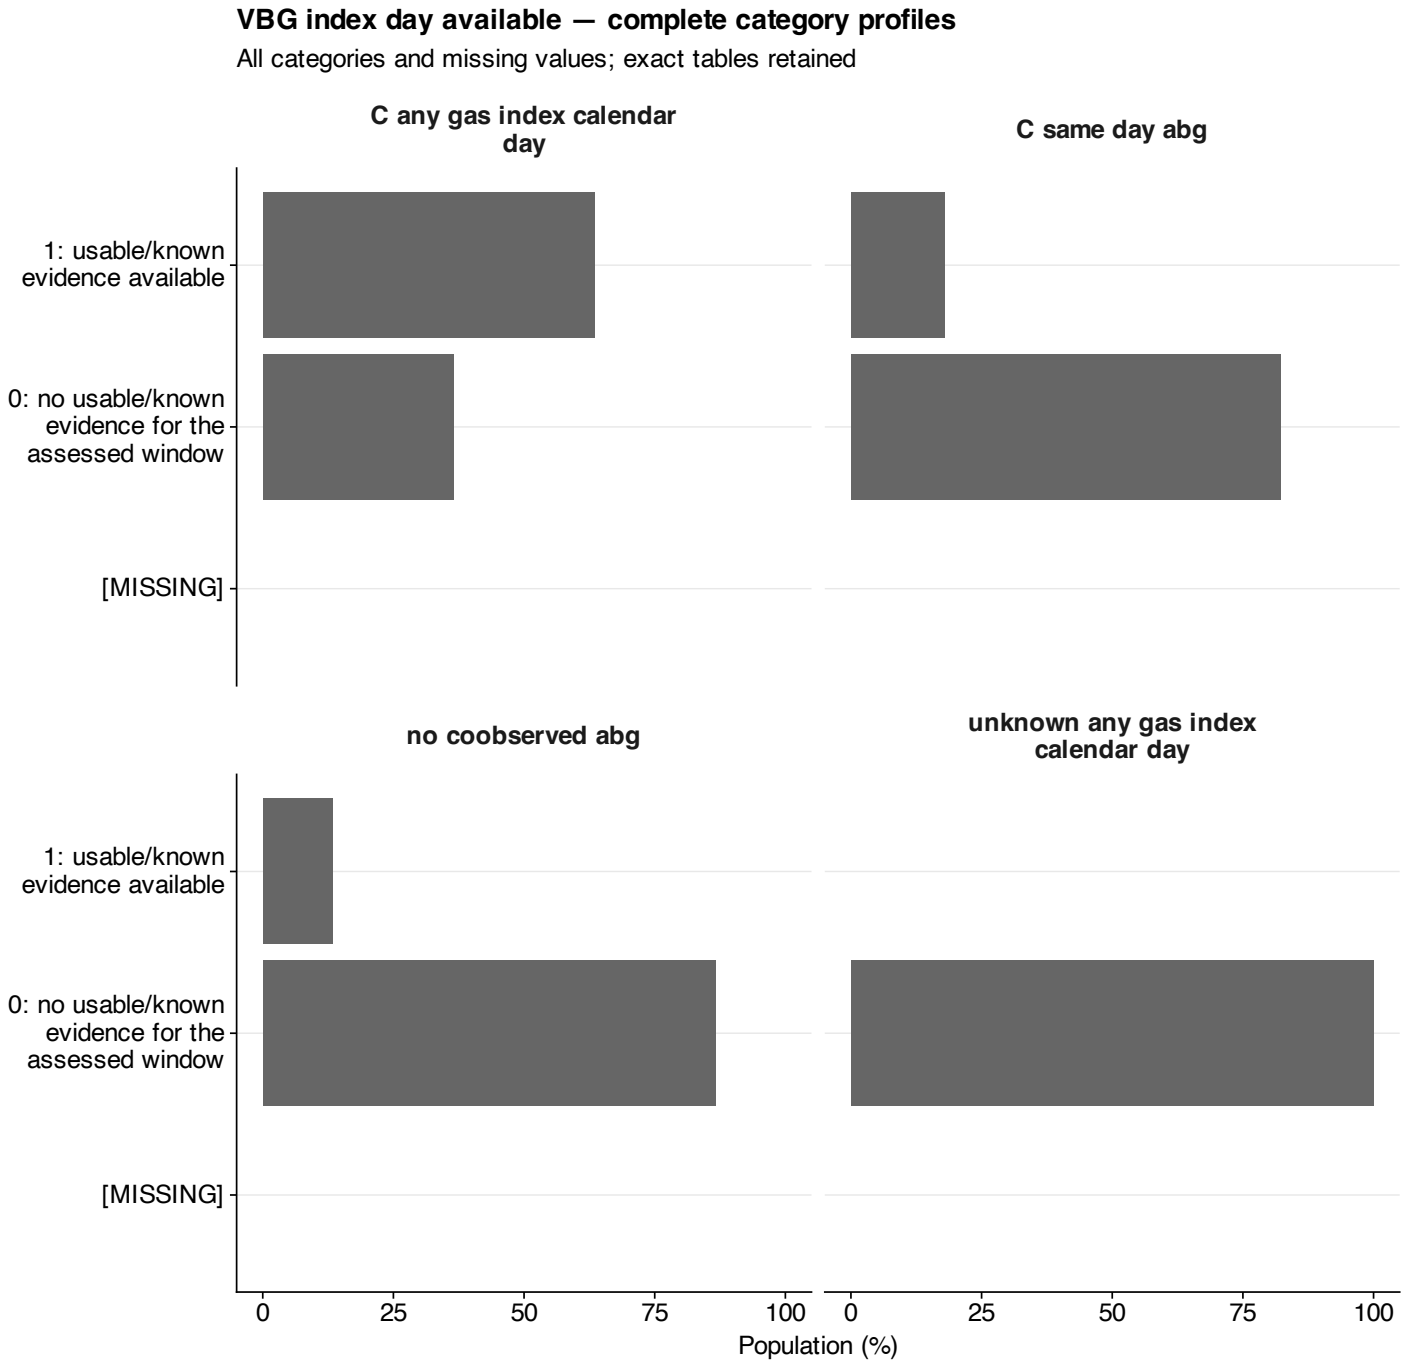

Figure 1182: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete vbg_index_day_available stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

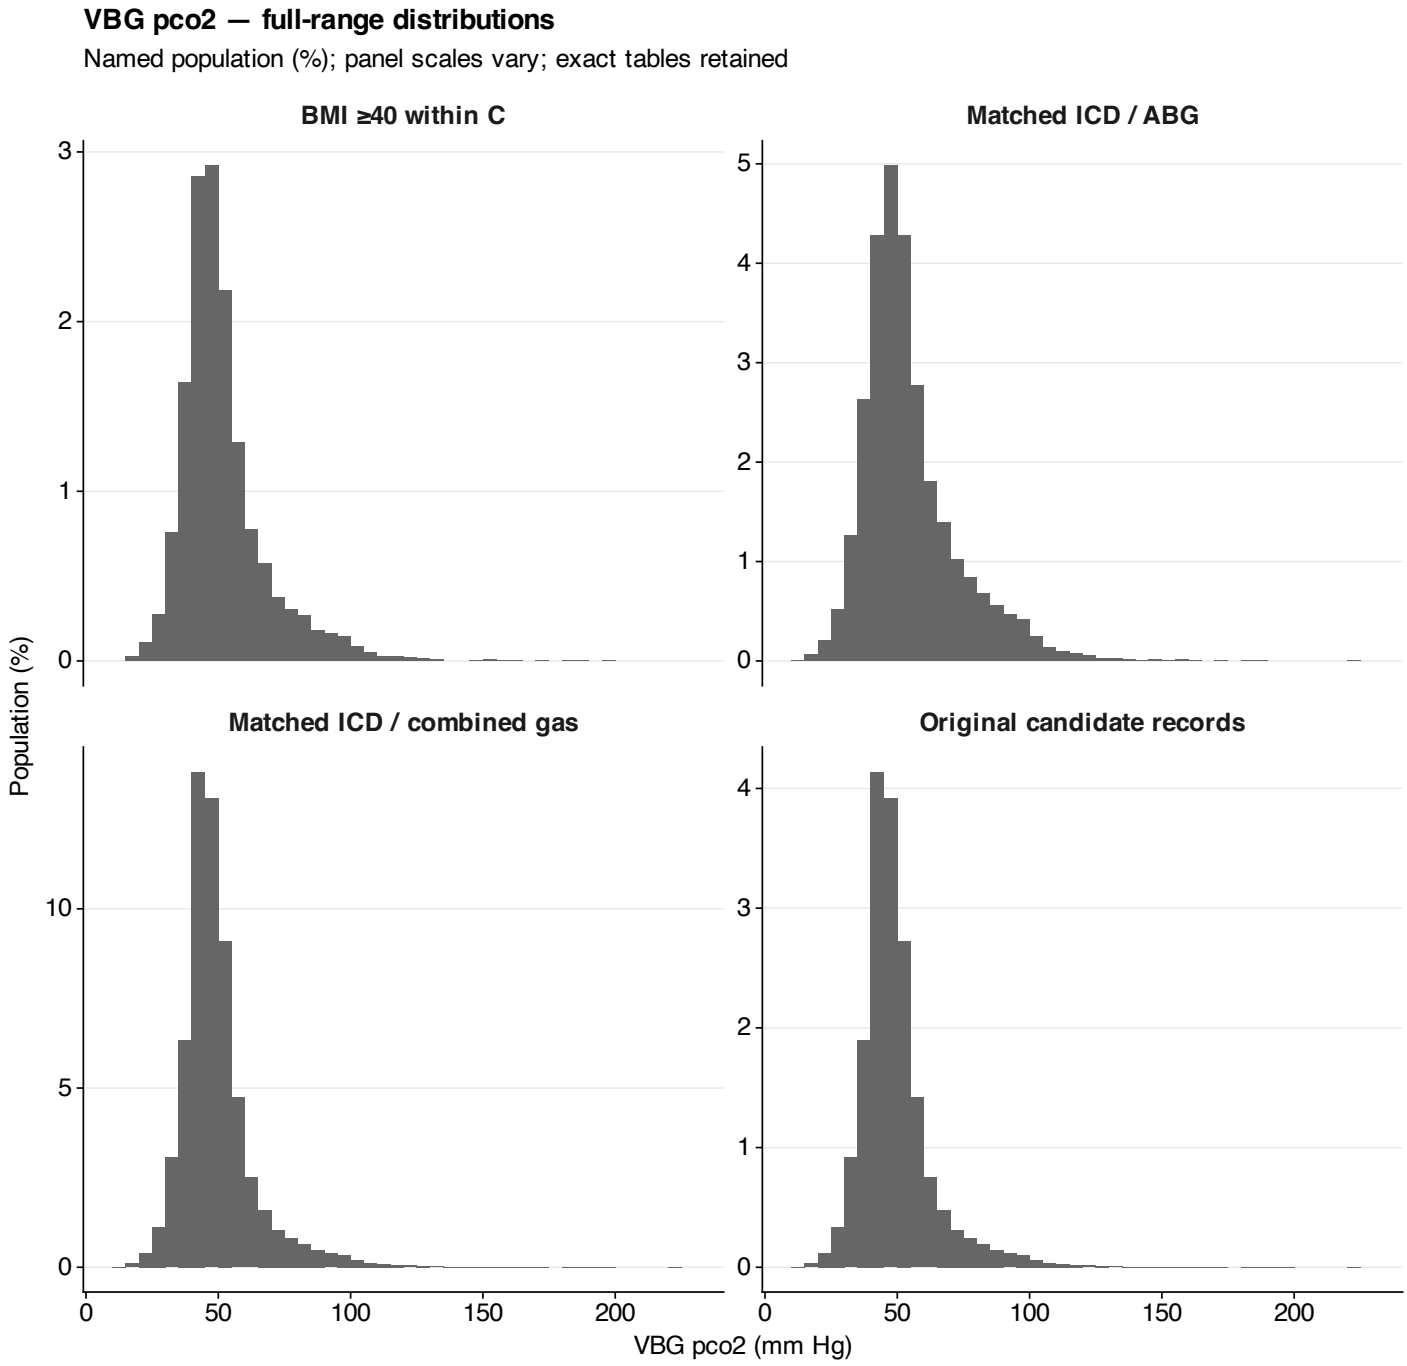

Figure 1183: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete vbg_pco2 stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

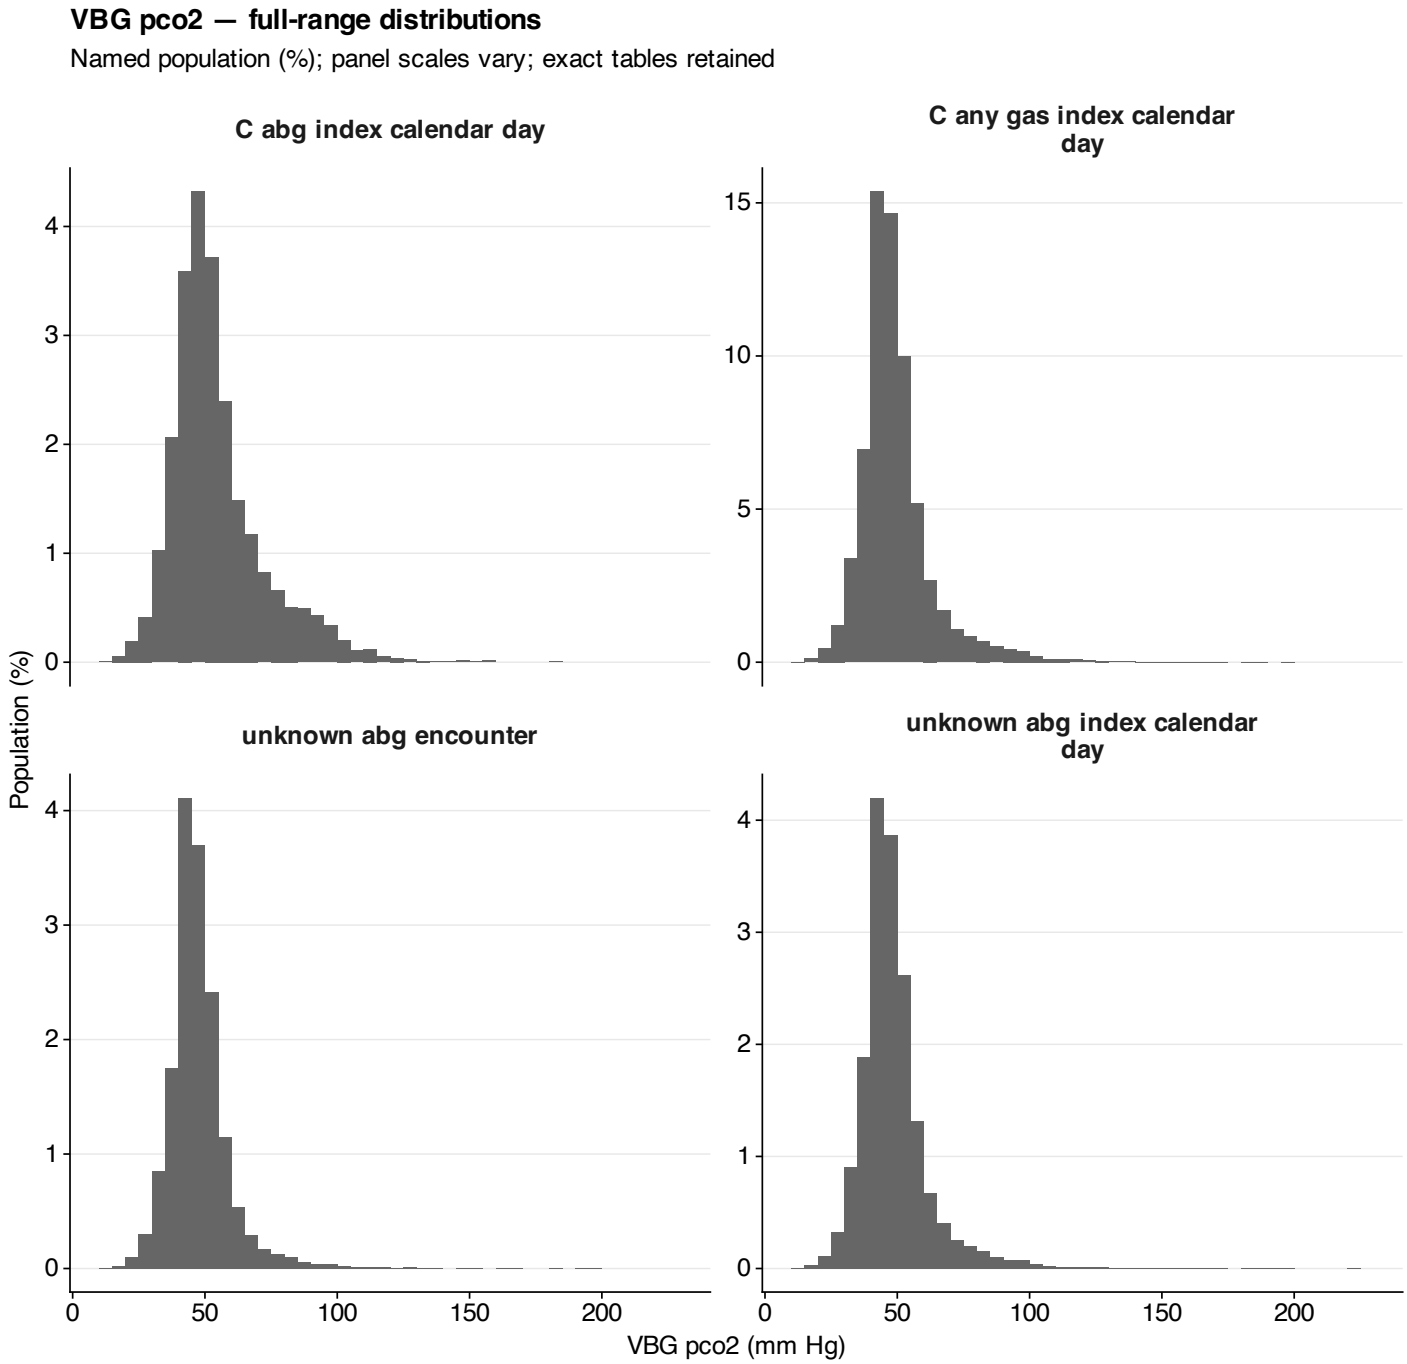

Figure 1184: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete vbg_pco2 stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

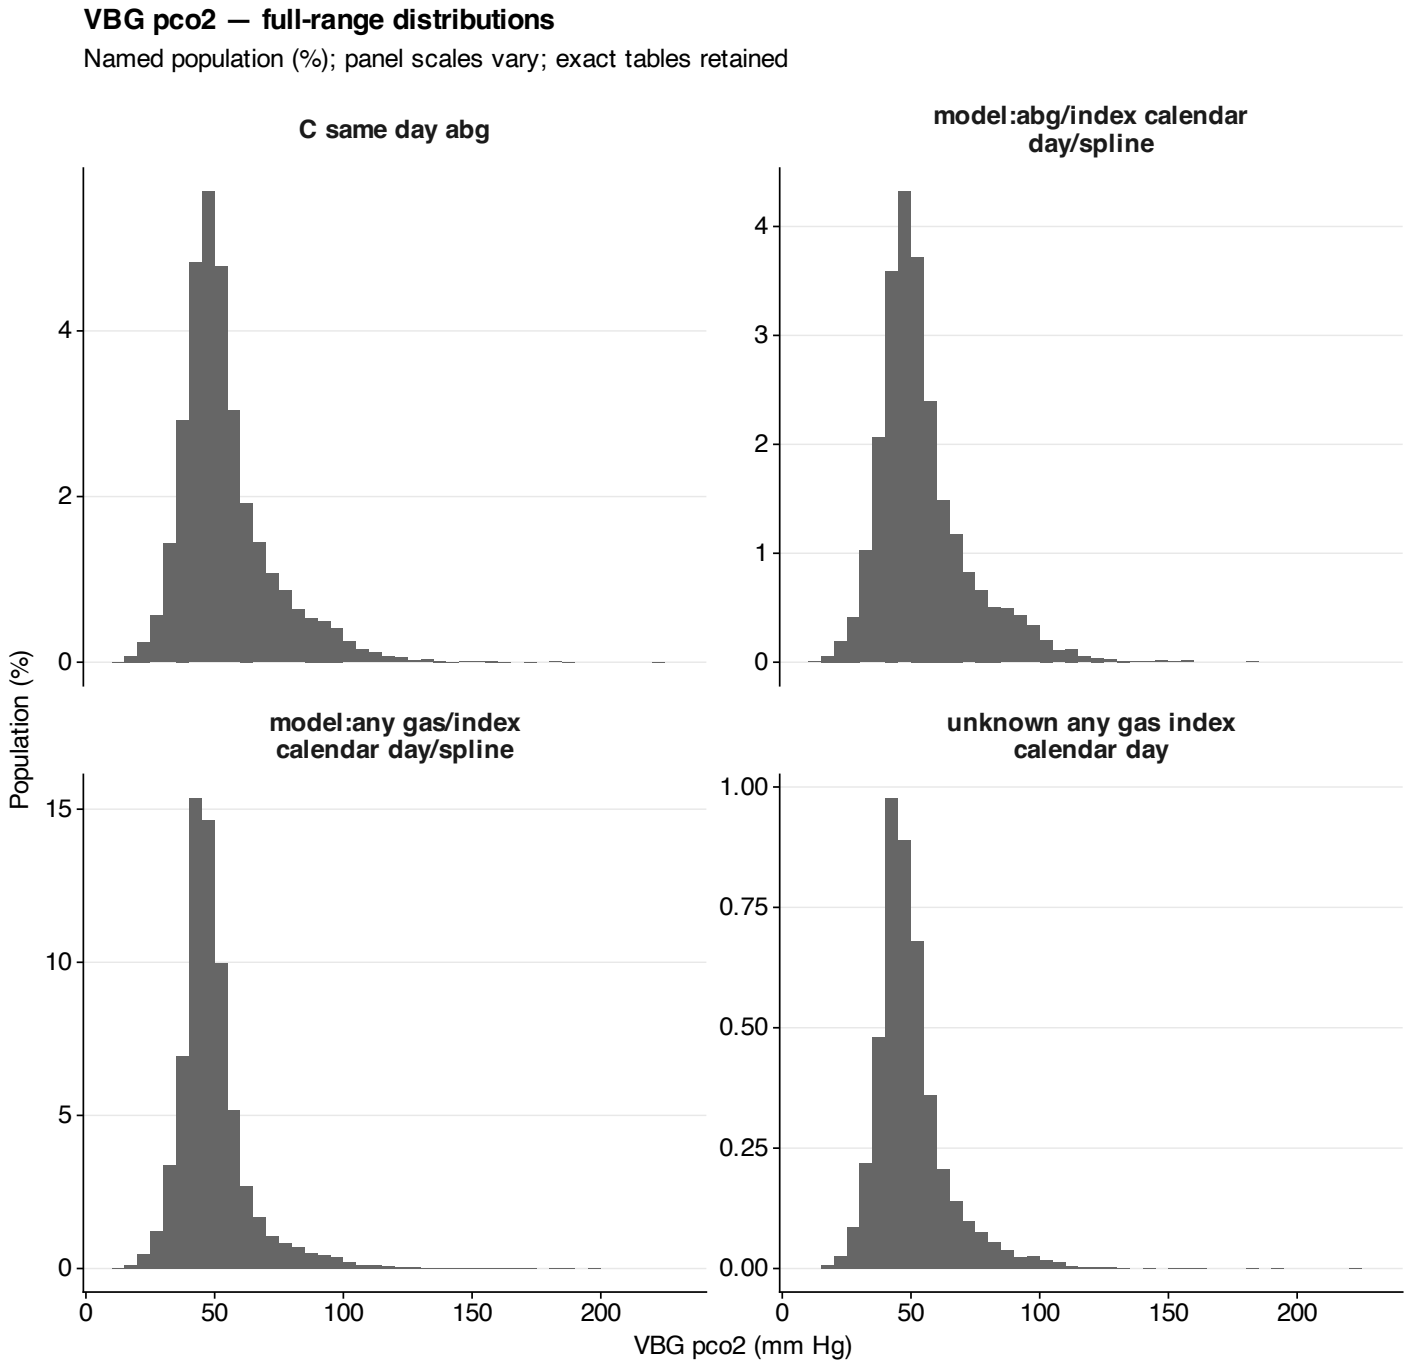

Figure 1185: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete vbg_pco2 stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

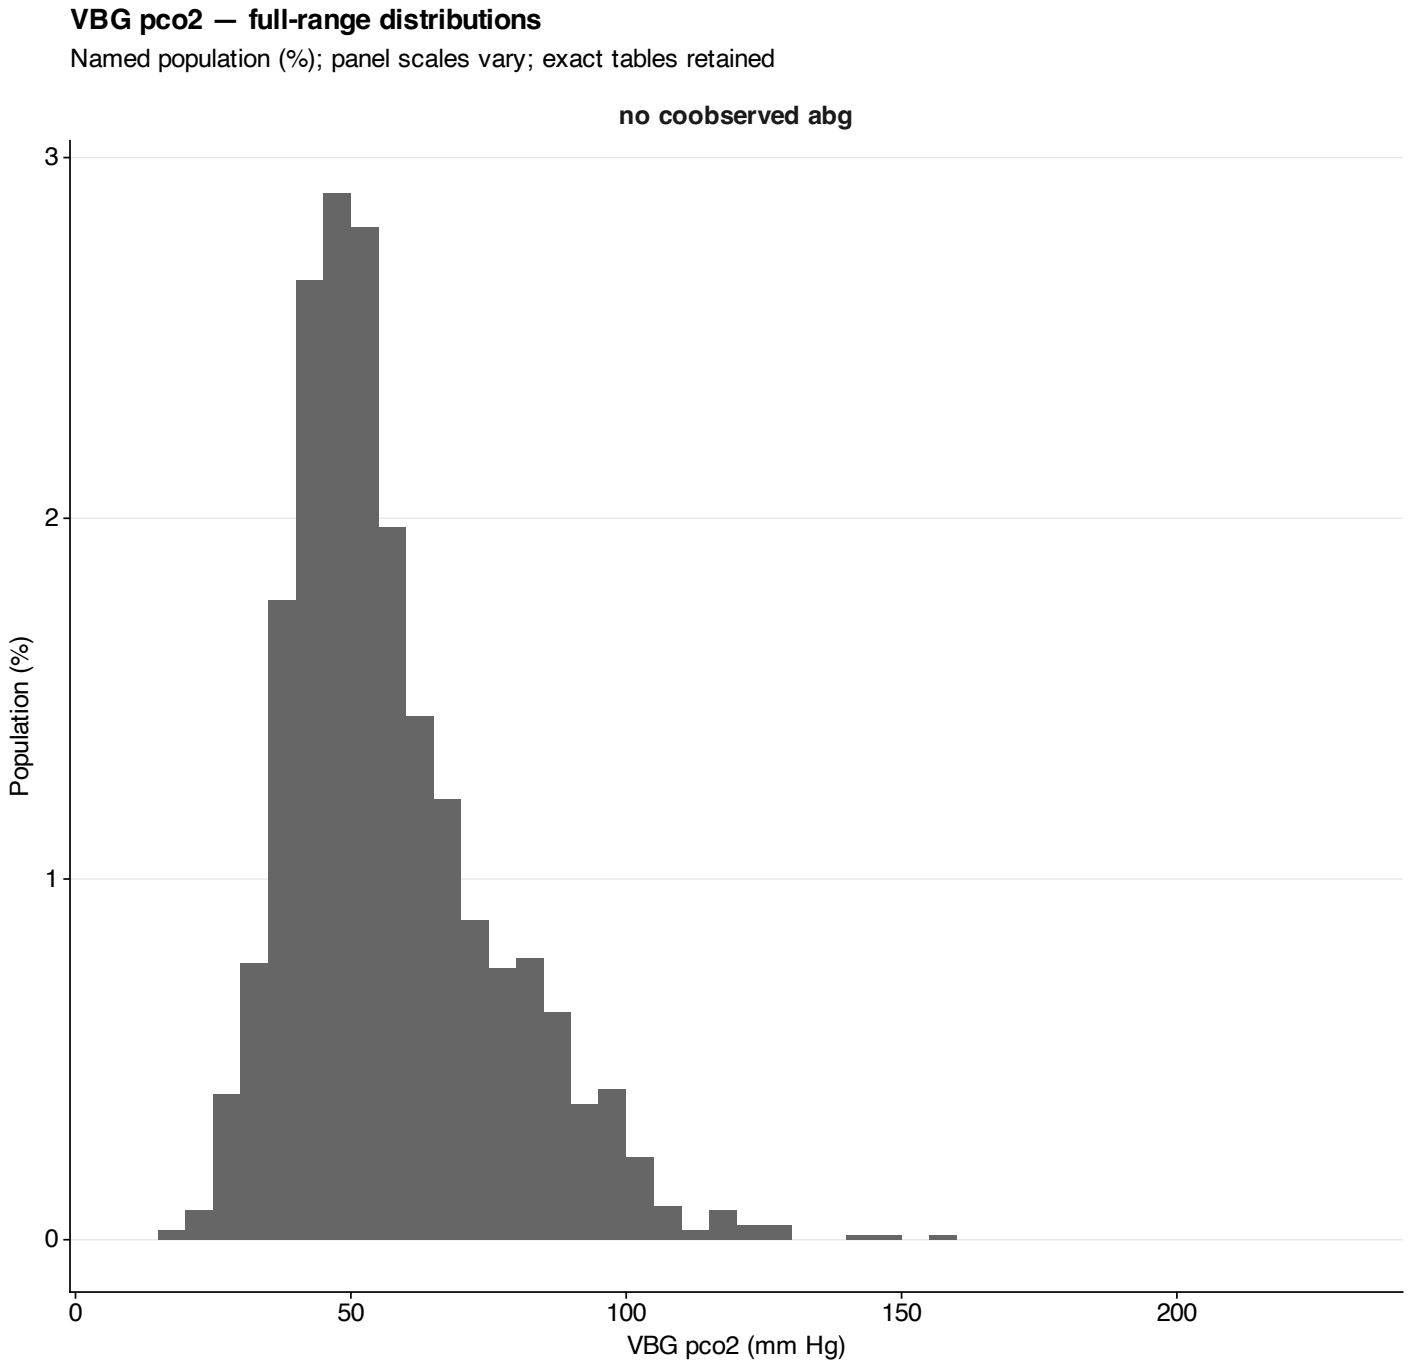

Figure 1186: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete vbg_pco2 stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

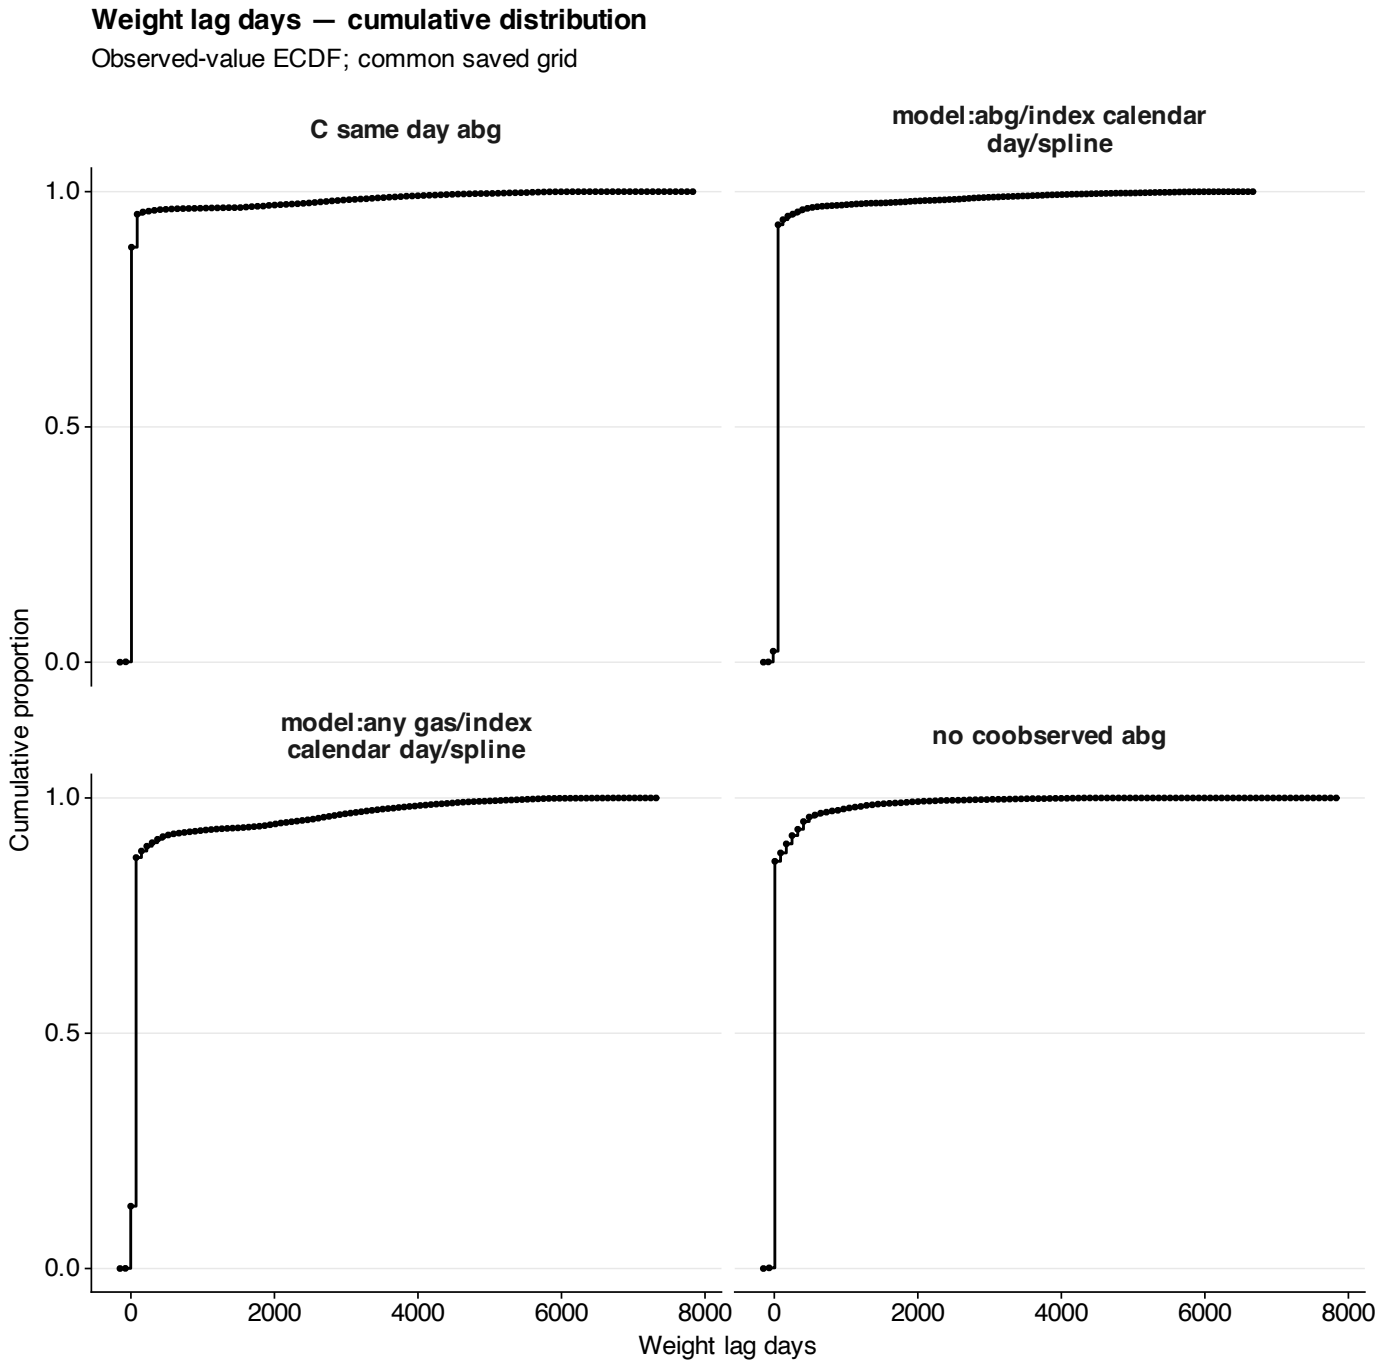

Figure 1209: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. weight_lag_days ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

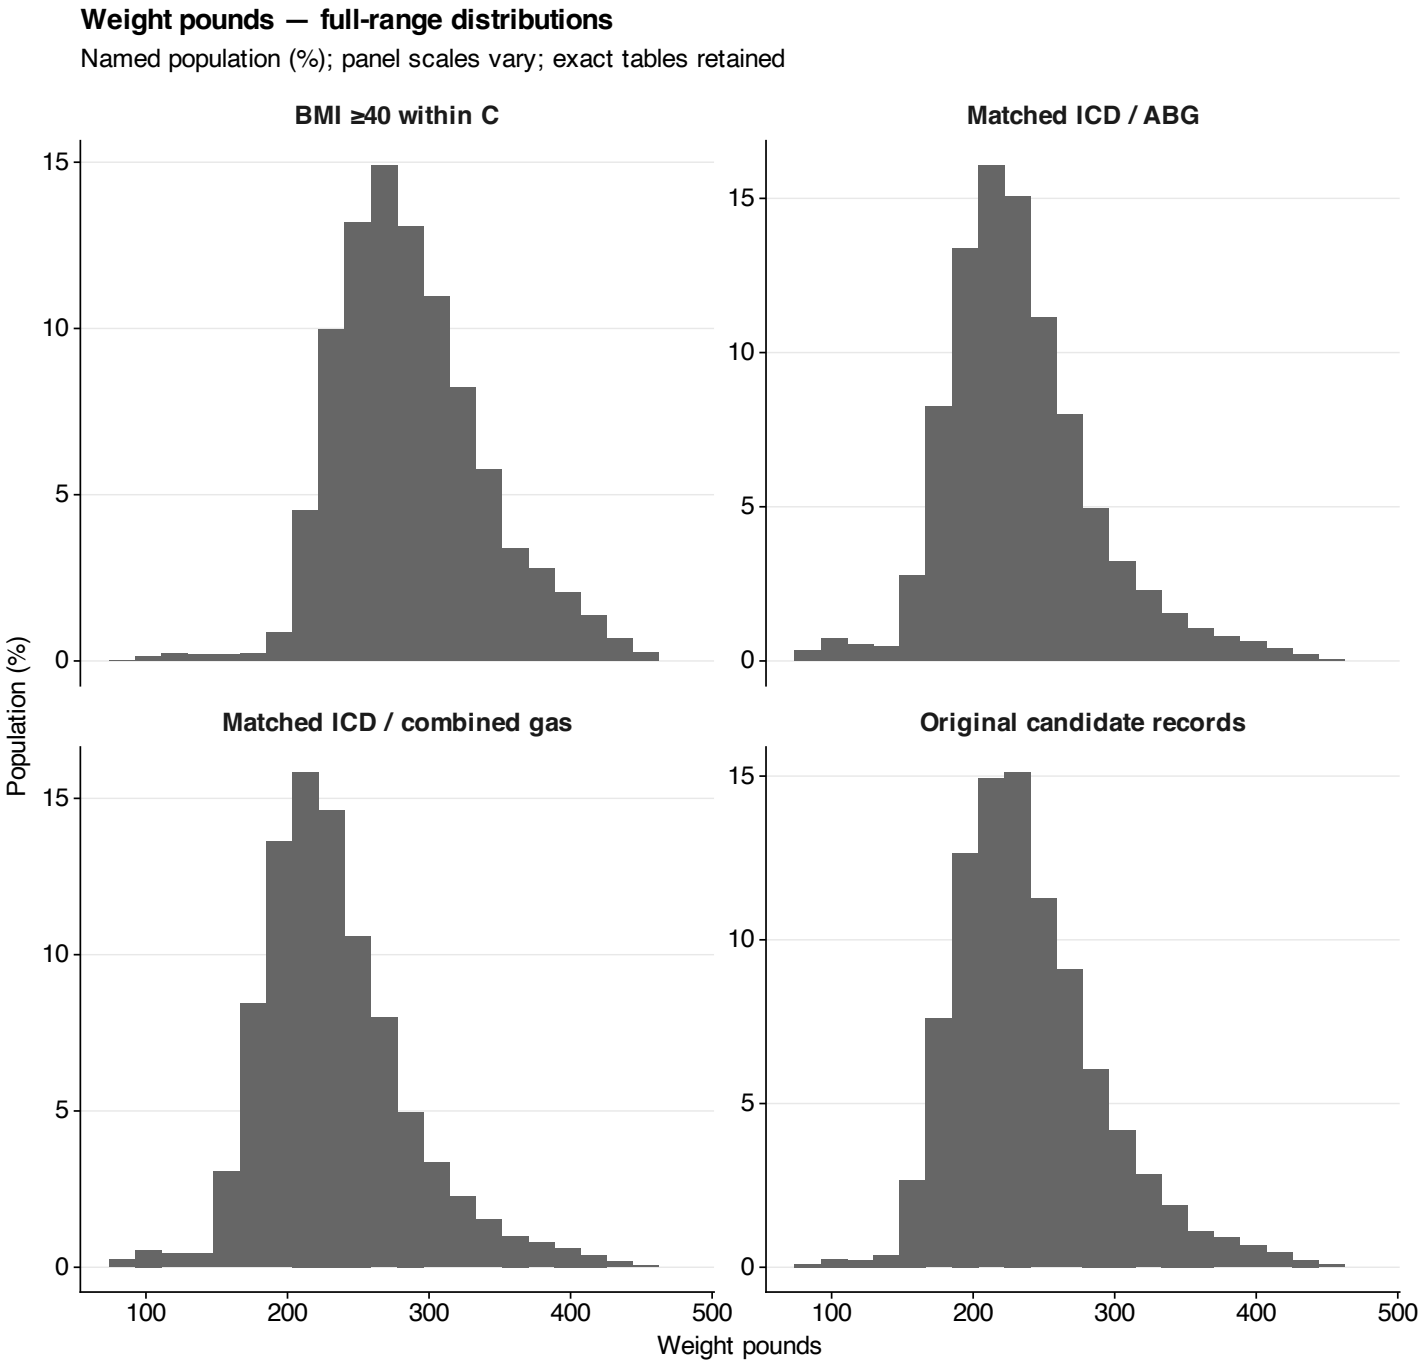

Figure 1210: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete weight_pounds stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

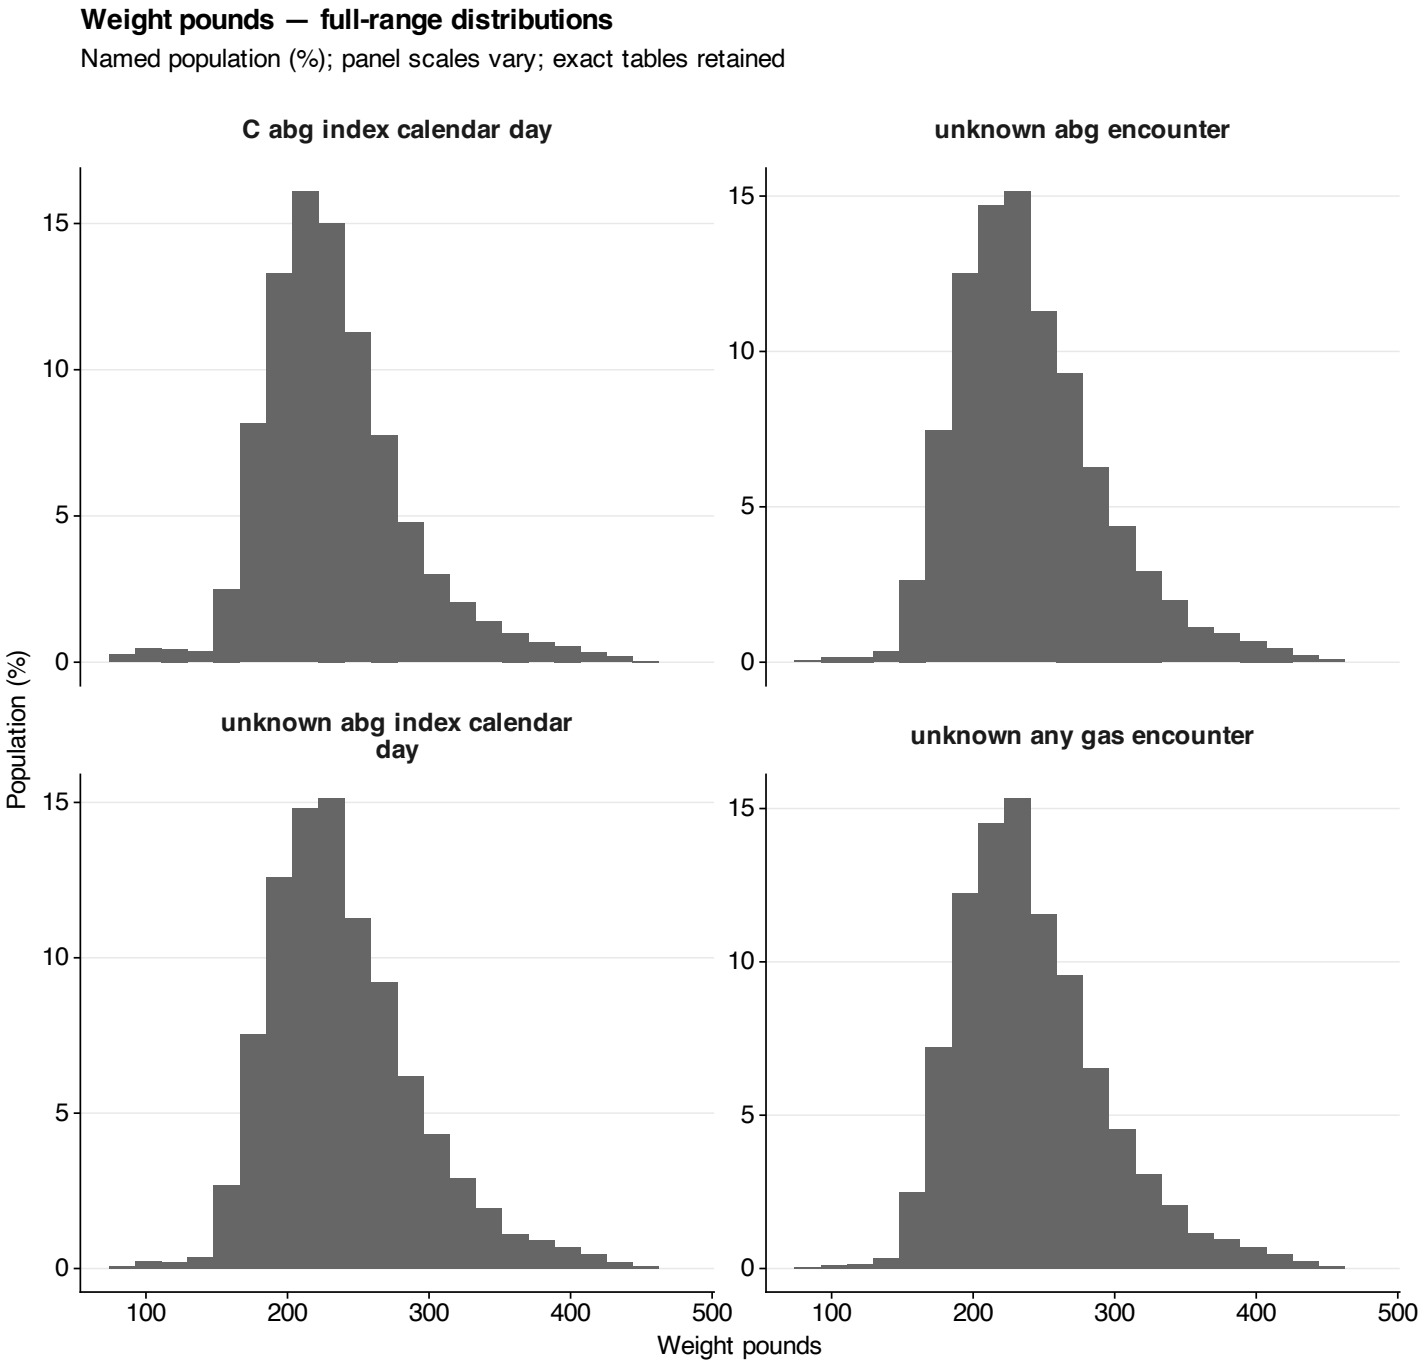

Figure 1211: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete weight_pounds stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

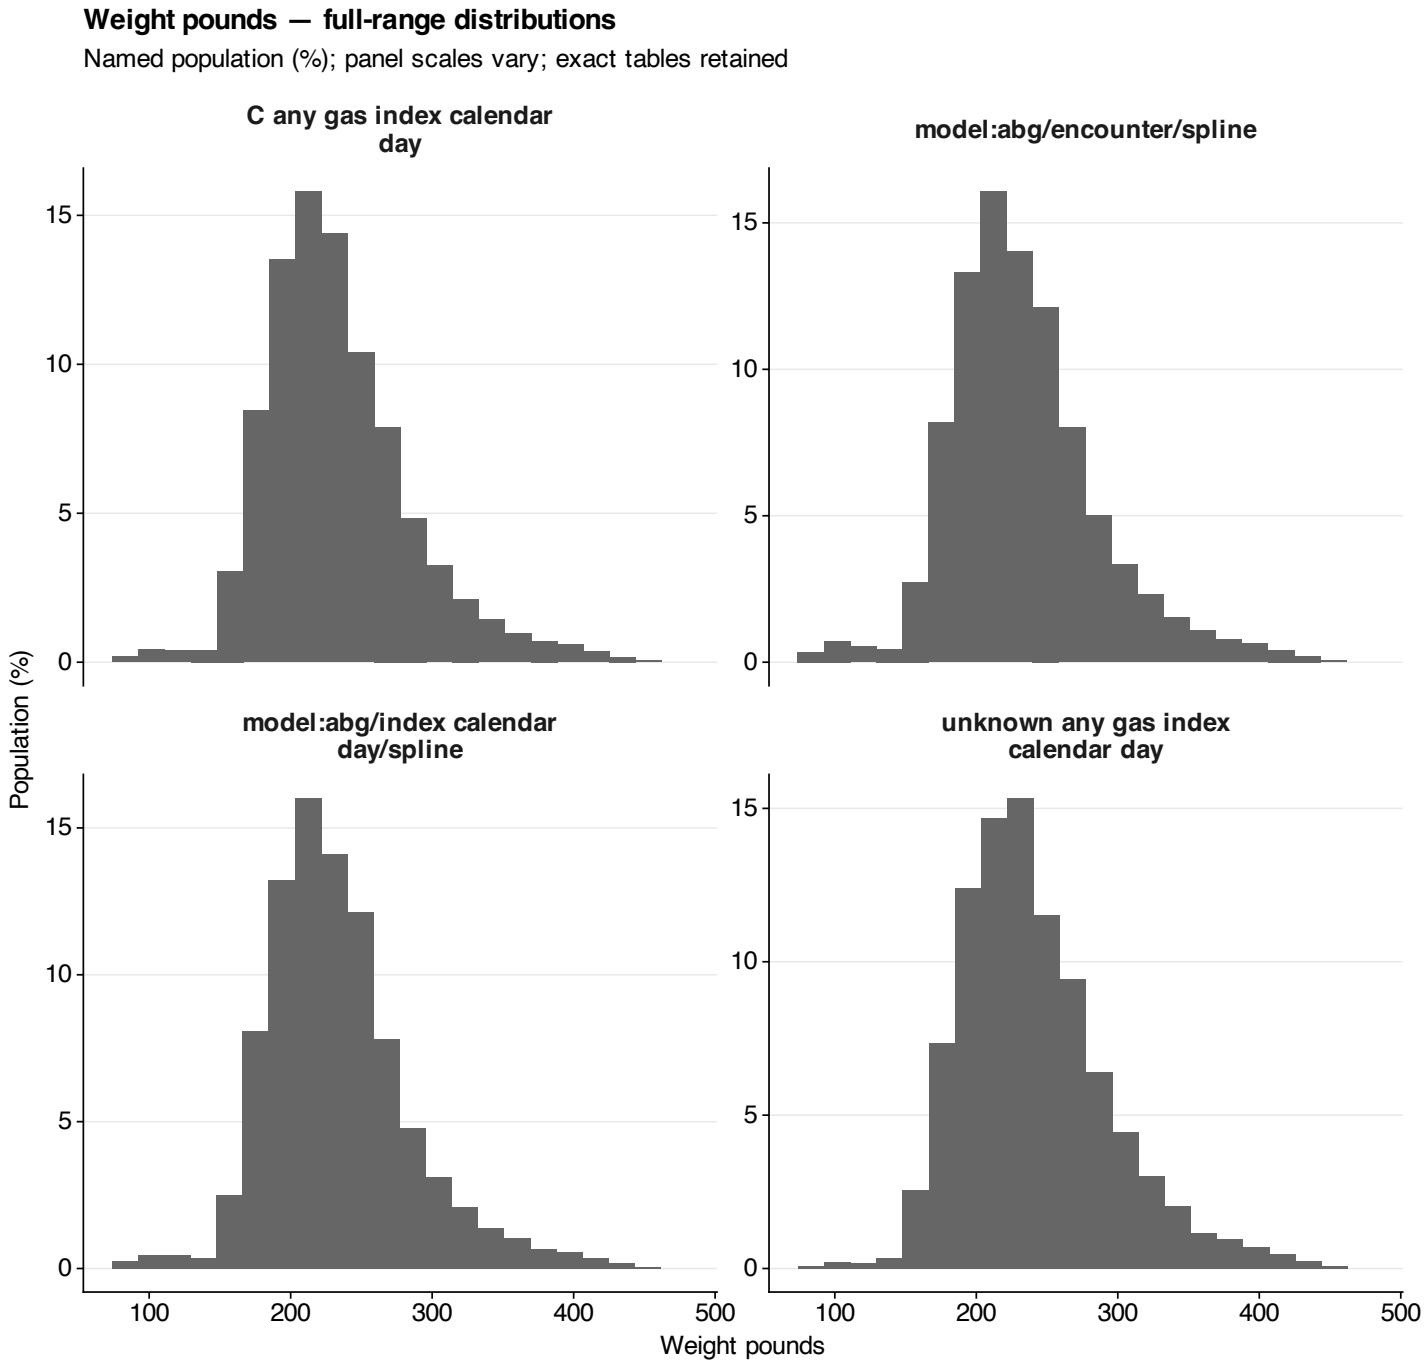

Figure 1212: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete weight_pounds stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

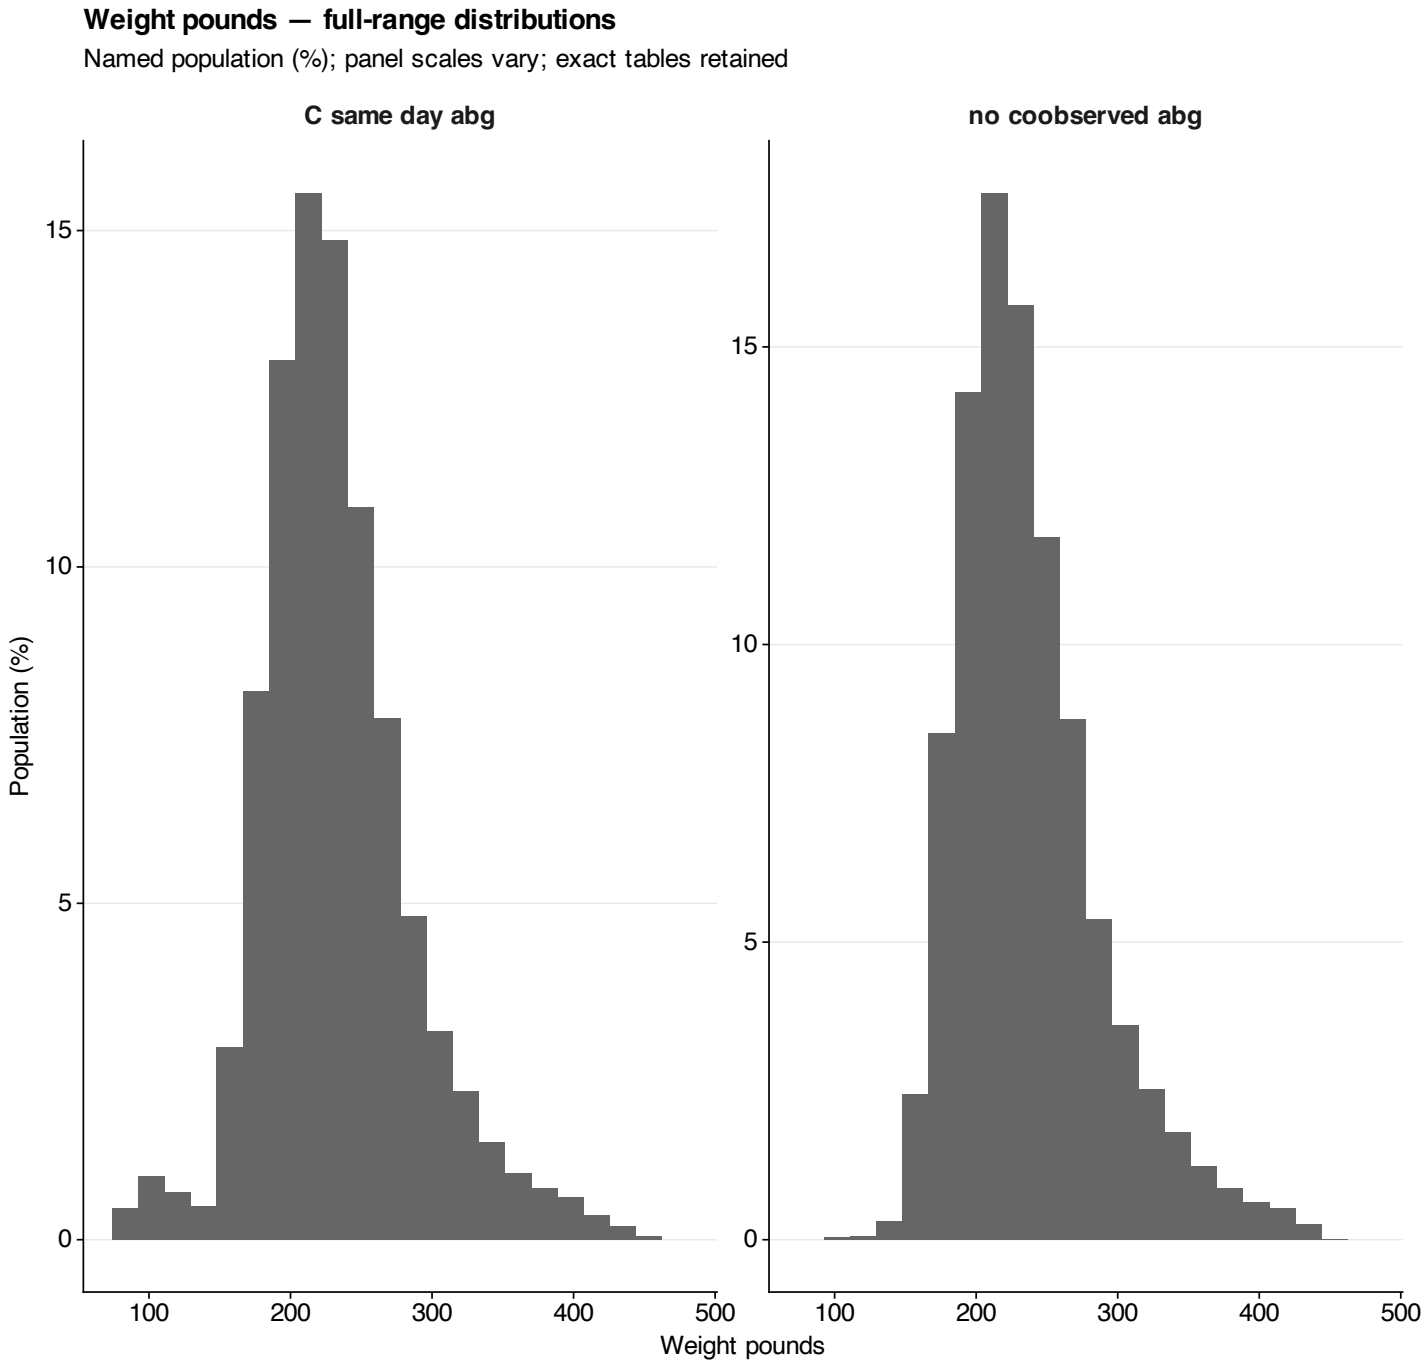

Figure 1213: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. Complete weight_pounds stage atlas; each facet names its denominator. All categories, tails and missingness are retained in the matching aggregate tables.

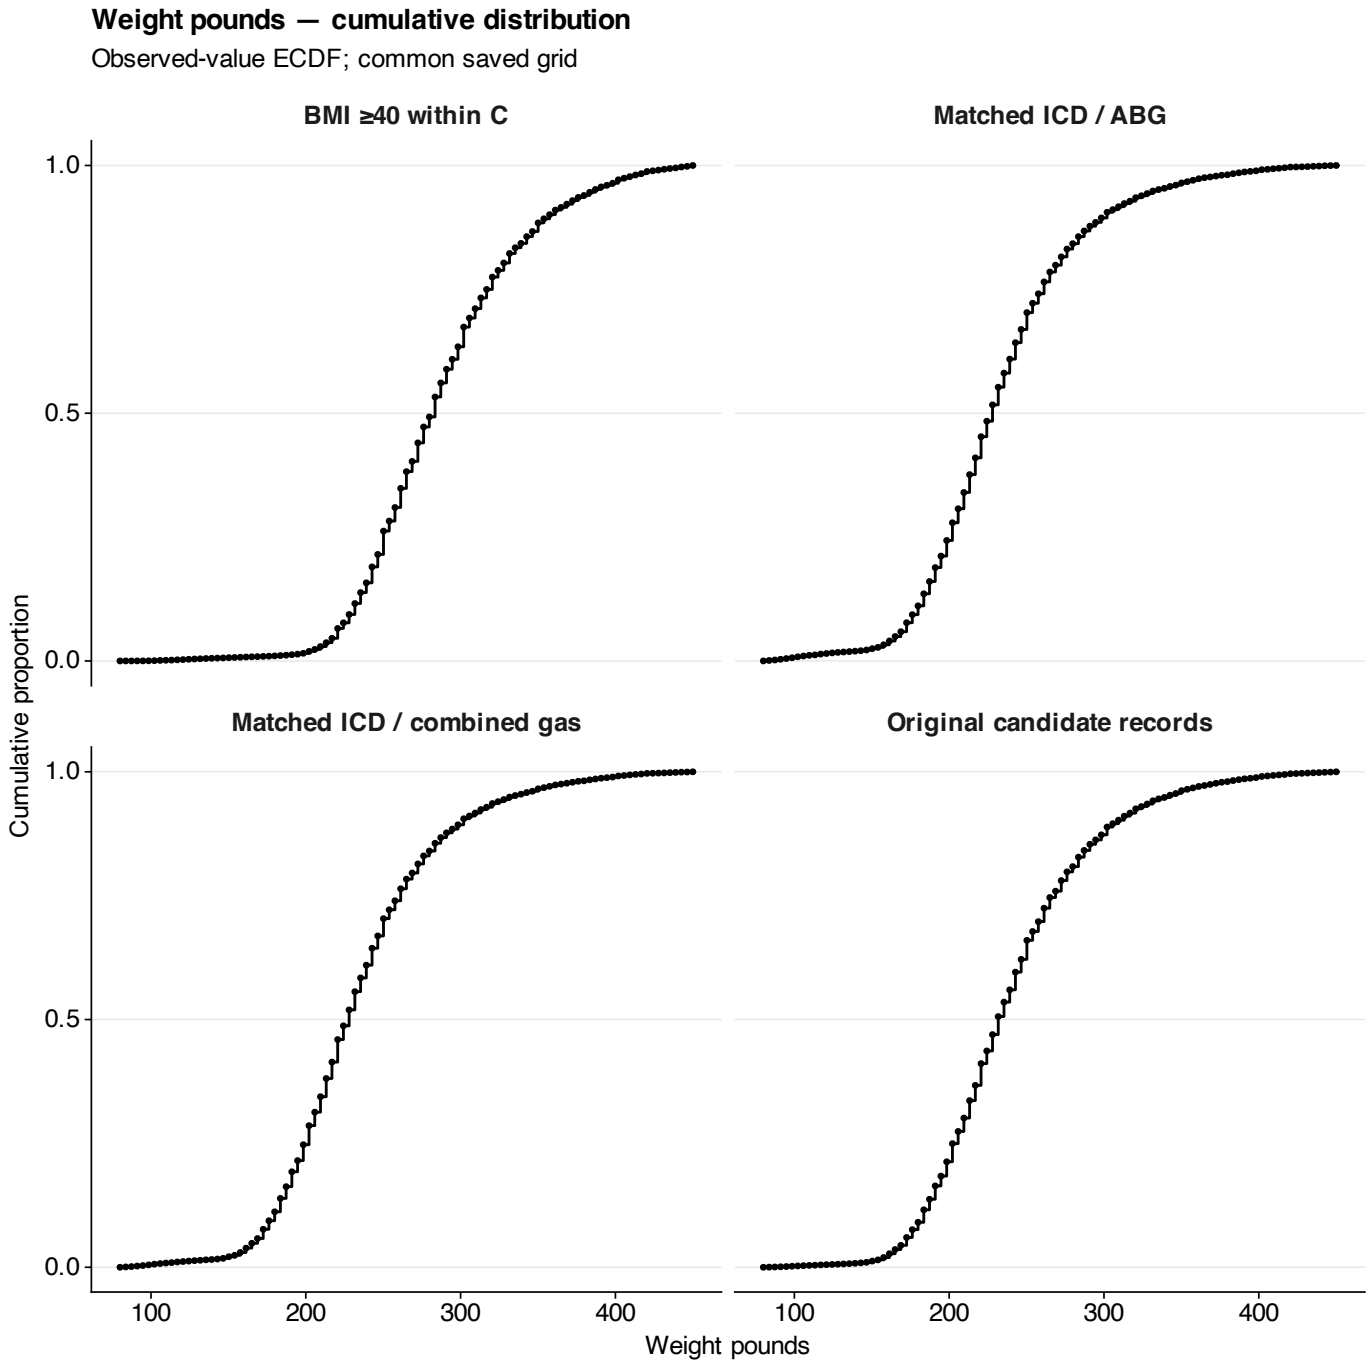

Figure 1214: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. weight_pounds ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

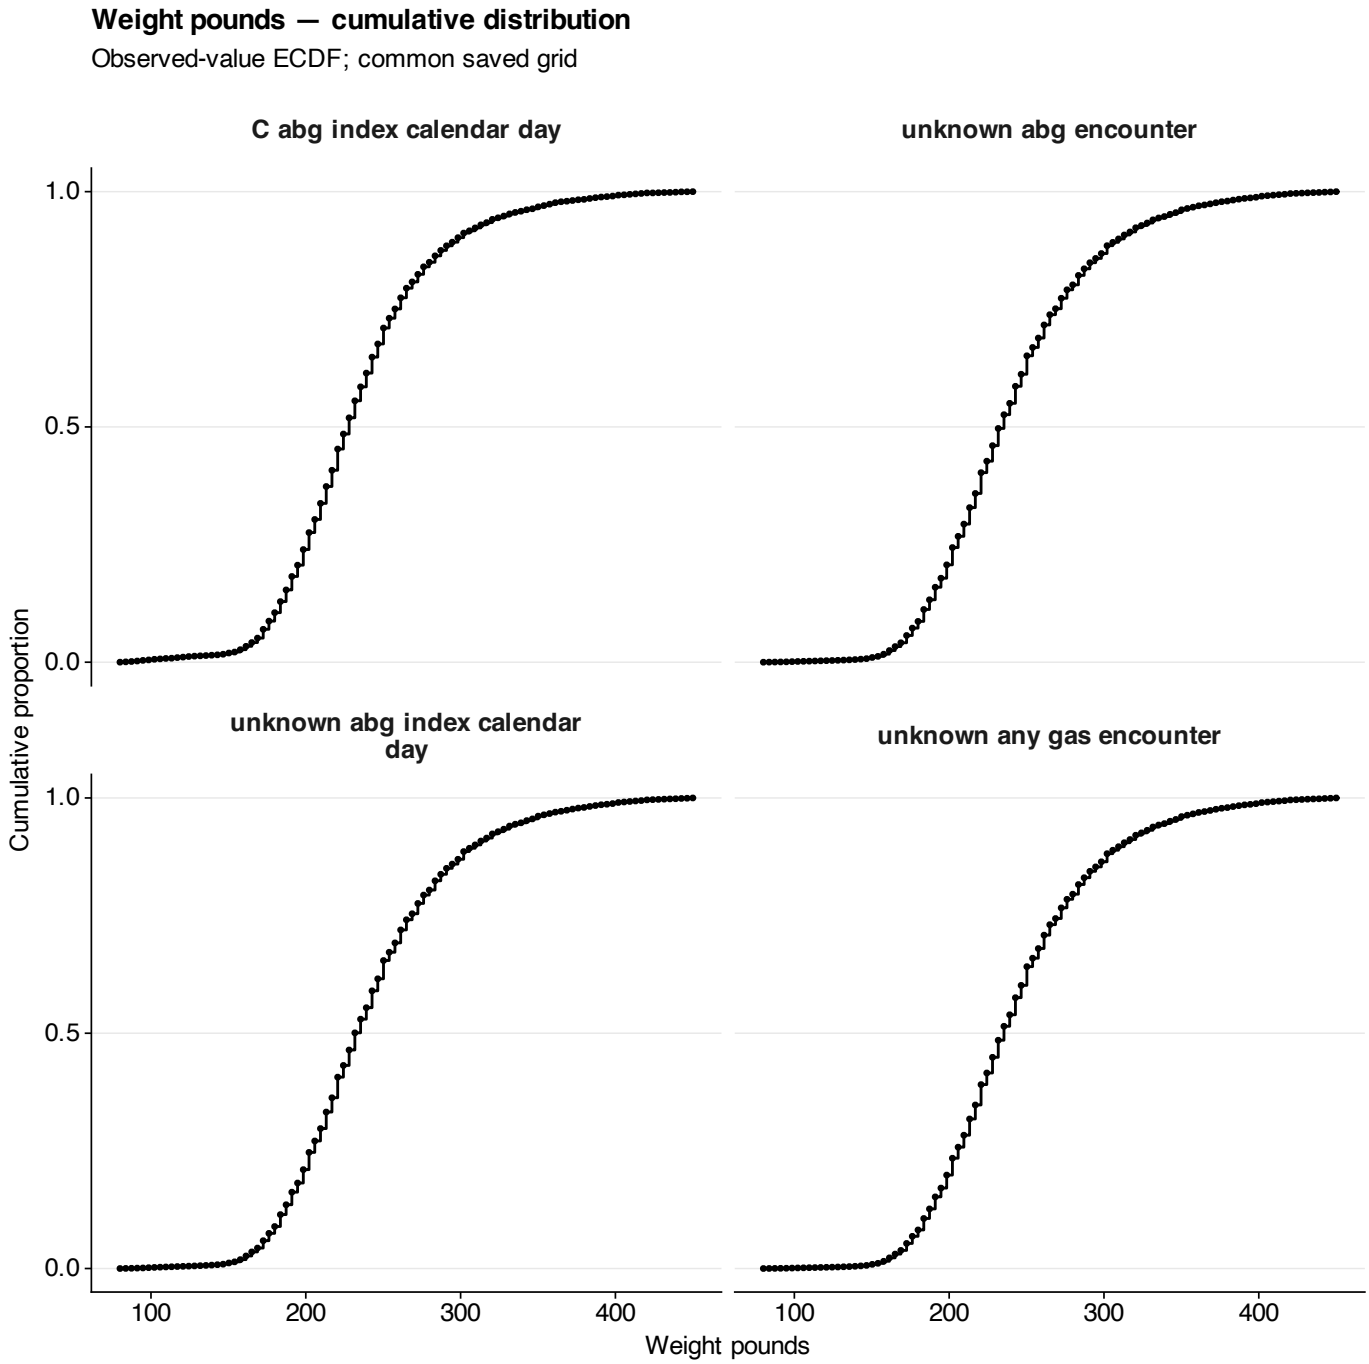

Figure 1215: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. weight_pounds ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

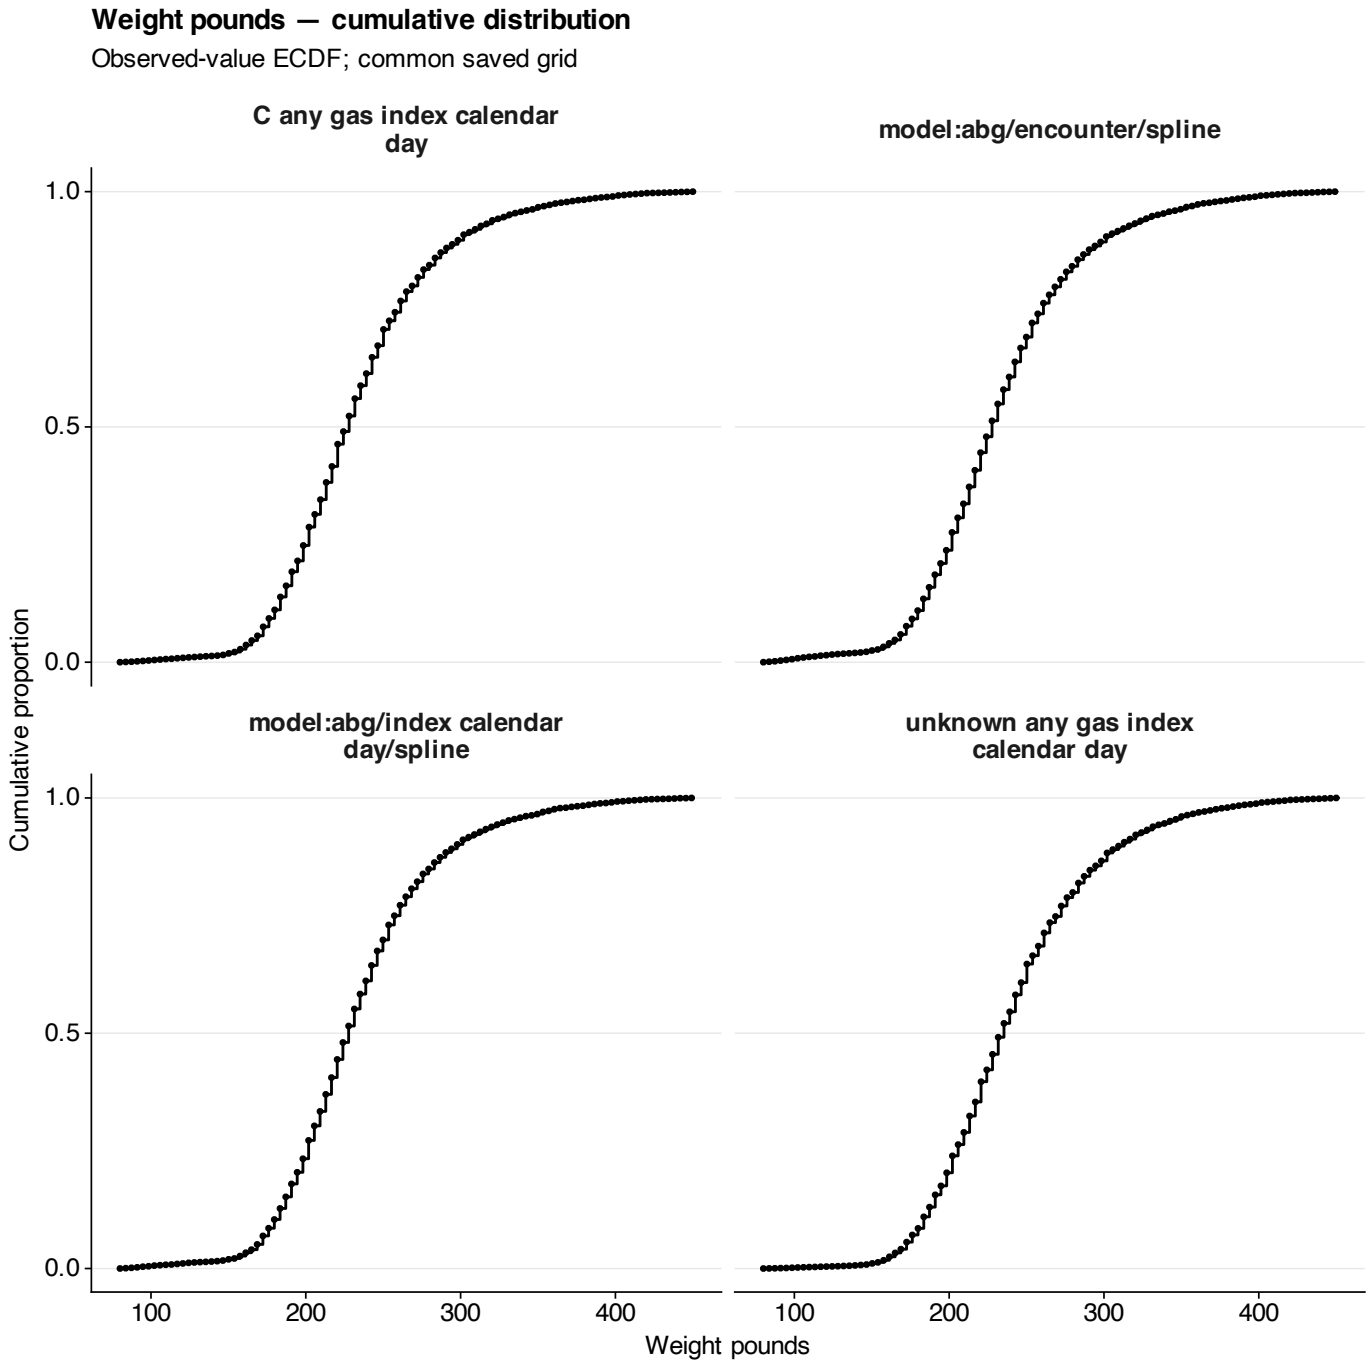

Figure 1216: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. weight_pounds ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

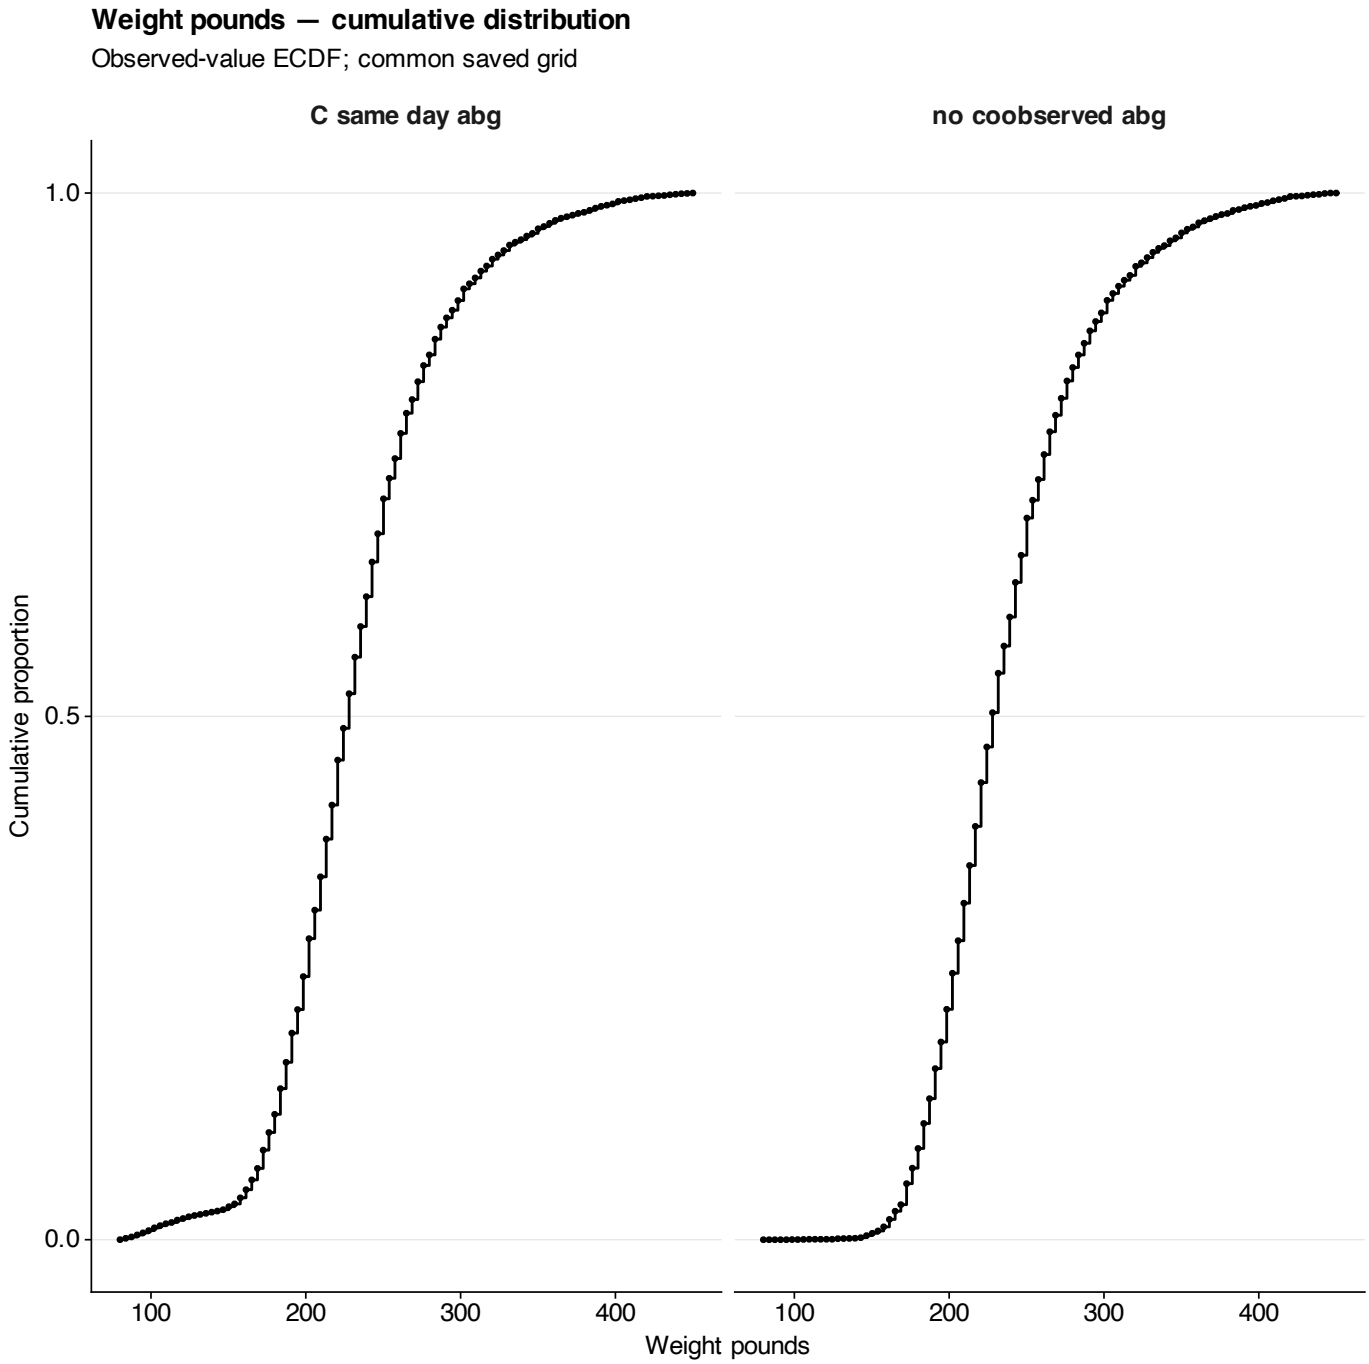

Figure 1217: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F3. weight_pounds ecdf across named stages; full coordinate export and normalization metadata in distribution_curves.

4 Every planned regression

Each population basis is fixed at its adjustment-complete BMI percentiles 5, 35, 65 and 95; age remains linear. No automatic estimator substitution, category pooling or model selection occurs. Model-based intervals condition on the empirical reference. Apparent fit is assessed on training data. Influence flags do not remove patients.

quantile type: 7; status: resolved; basis: splines::ns; intercept FALSE; 3 columns.

Complete model diagnostics

Training N = 29,639; events = 15,541; in-sample diagnostics

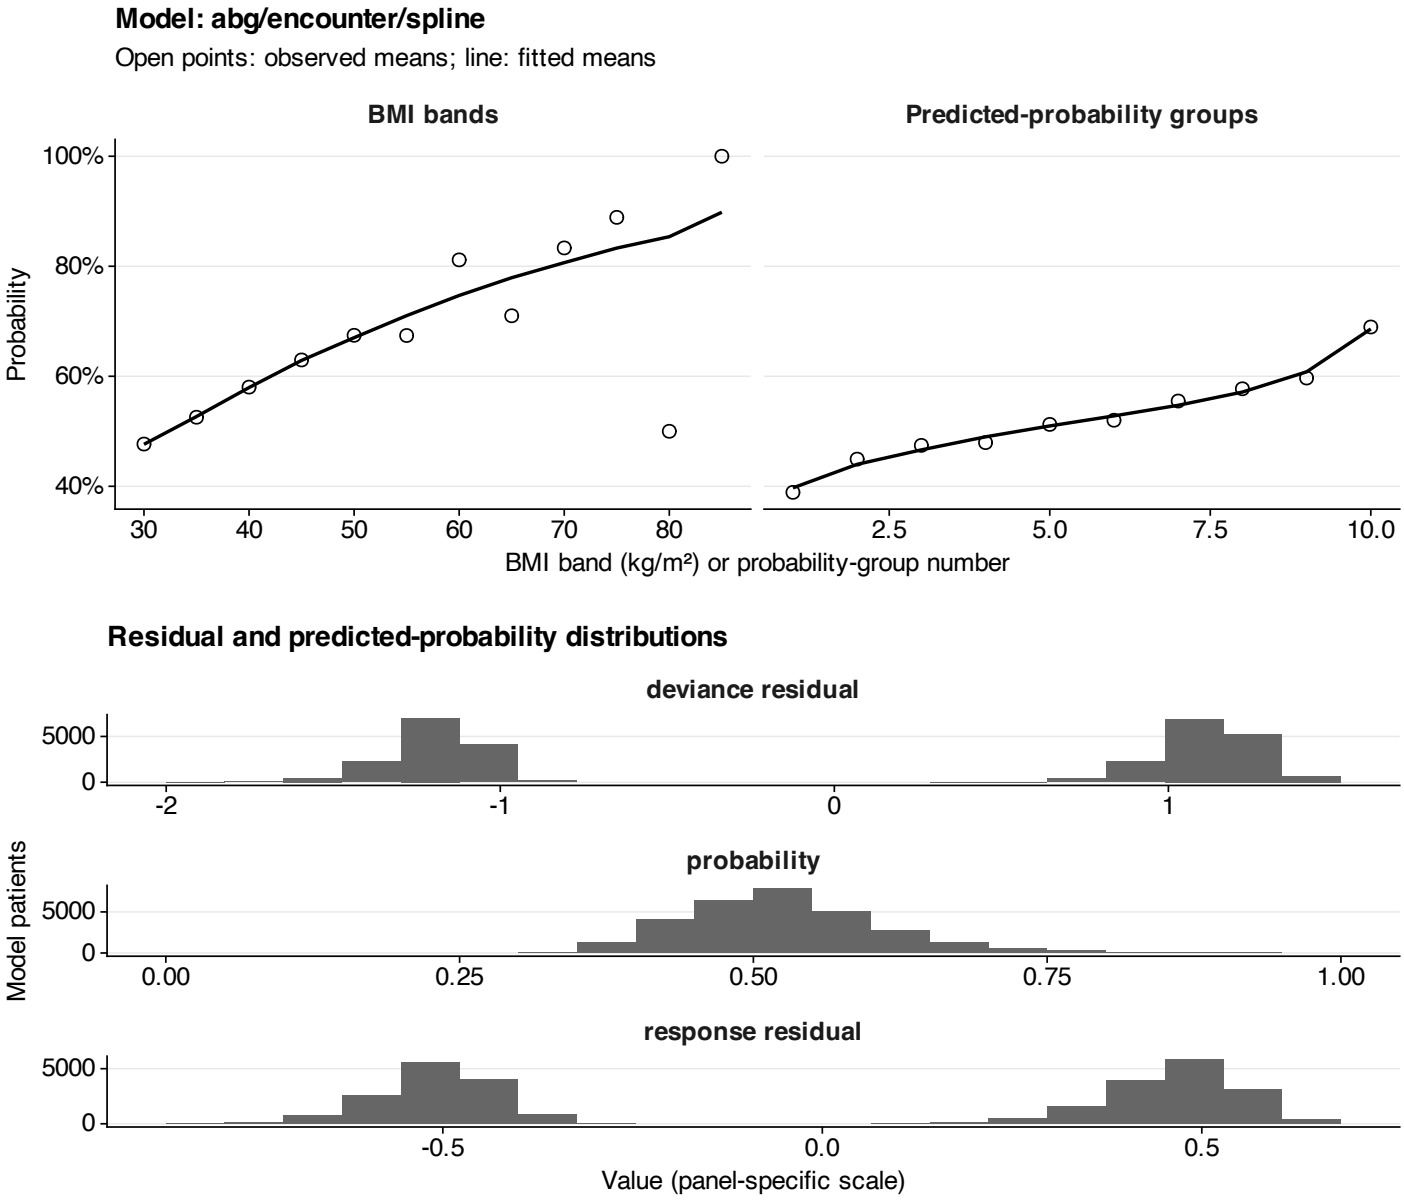

Figure 1218: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F4. Model abg/encounter/spline apparent fit and full-sample diagnostics. Influence flags do not exclude observations. Failure positions remain visible.

Complete model diagnostics

Training N = 176,922; events = 8,634; in-sample diagnostics

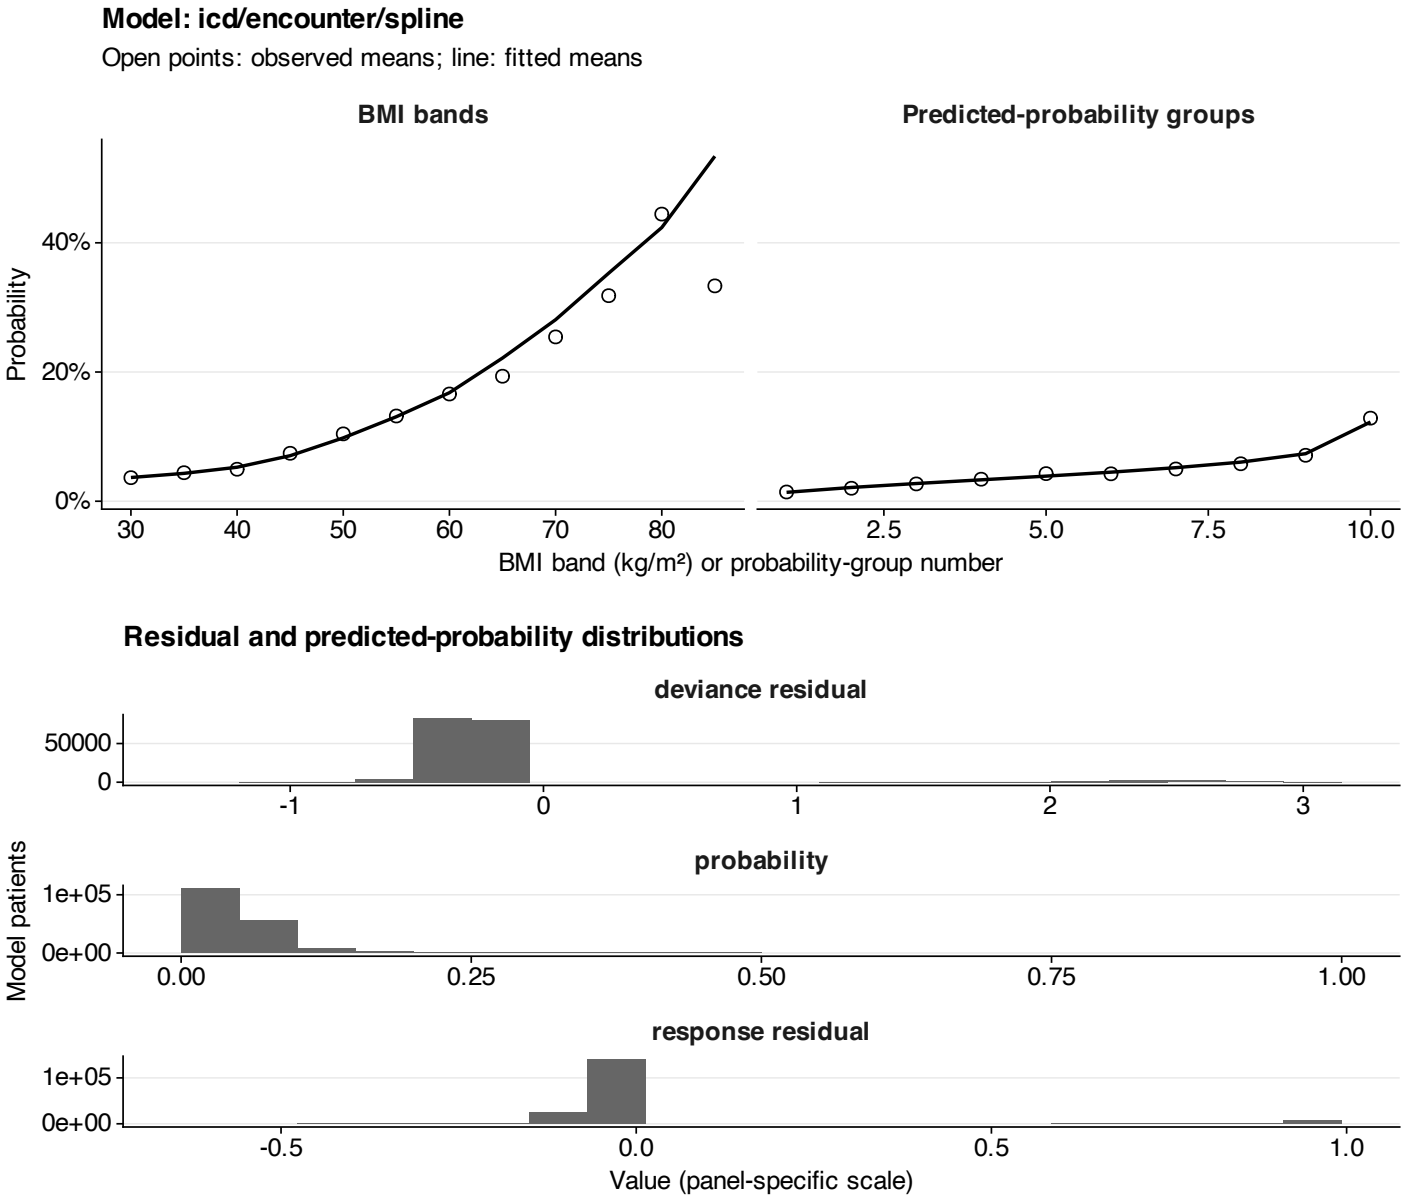

Figure 1222: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F4. Model icd/encounter/spline apparent fit and full-sample diagnostics. Influence flags do not exclude observations. Failure positions remain visible.

Complete model diagnostics

Training N = 176,922; events = 8,634; in-sample diagnostics

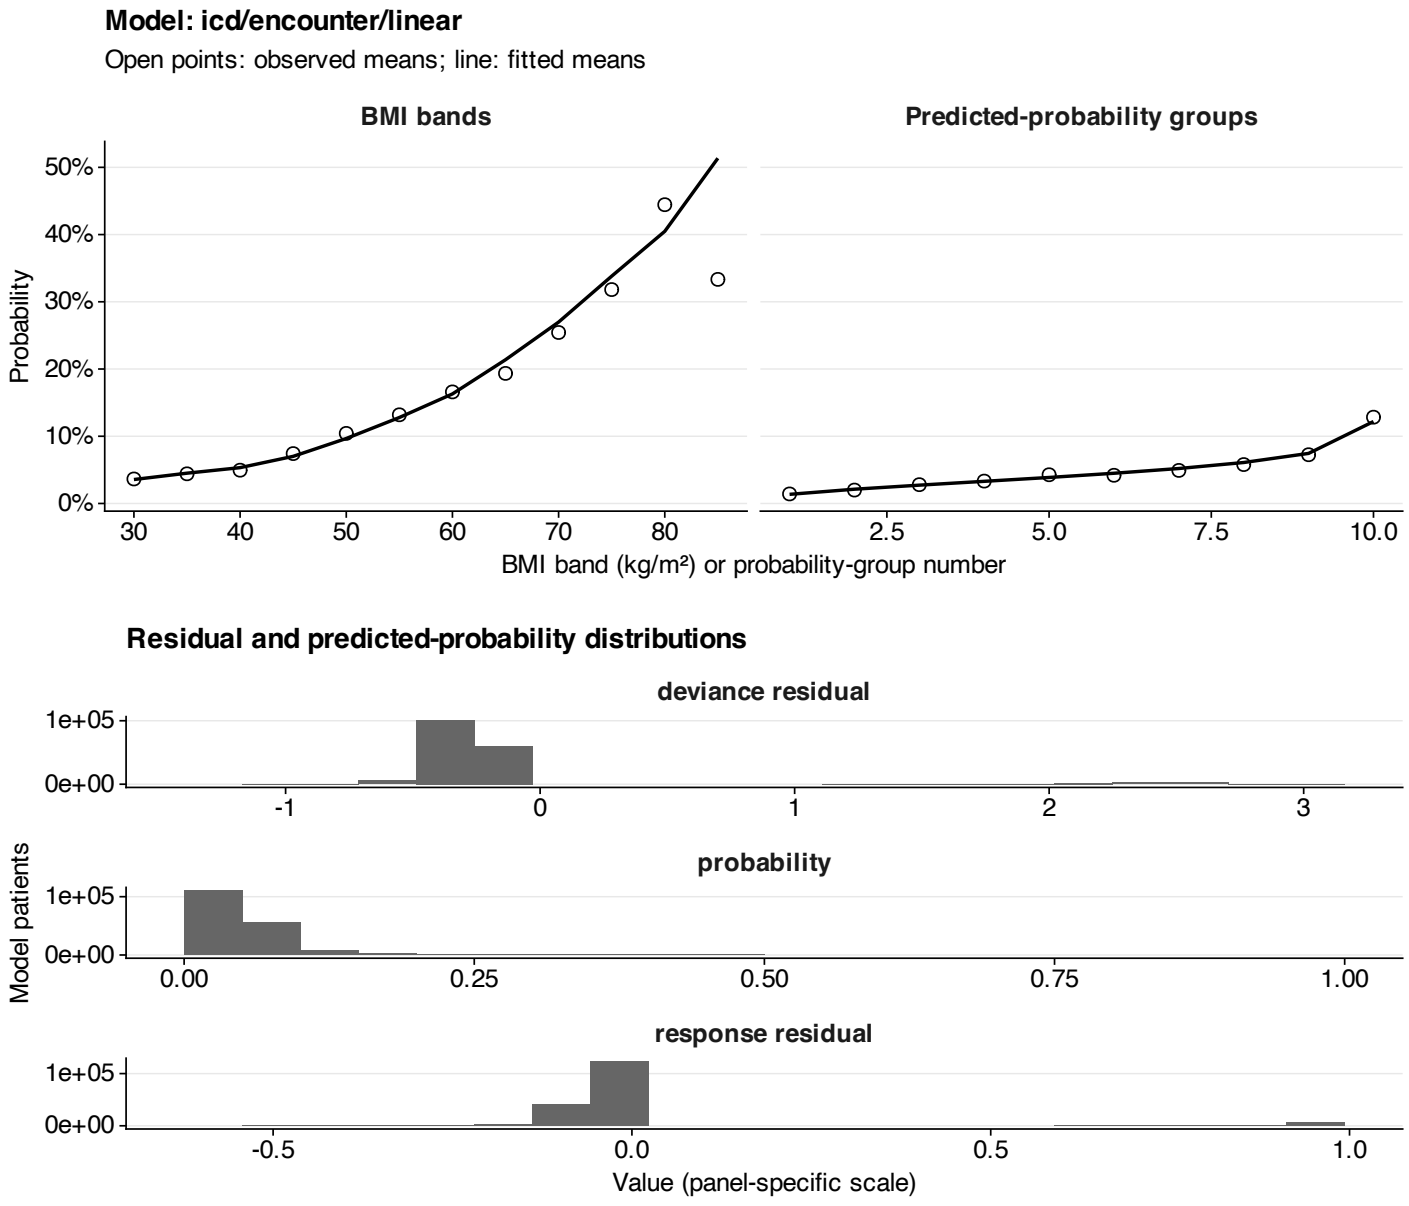

Figure 1223: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F4. Model icd/encounter/linear apparent fit and full-sample diagnostics. Influence flags do not exclude observations. Failure positions remain visible.

Complete model diagnostics

Training N = 17,316; events = 8,000; in-sample diagnostics

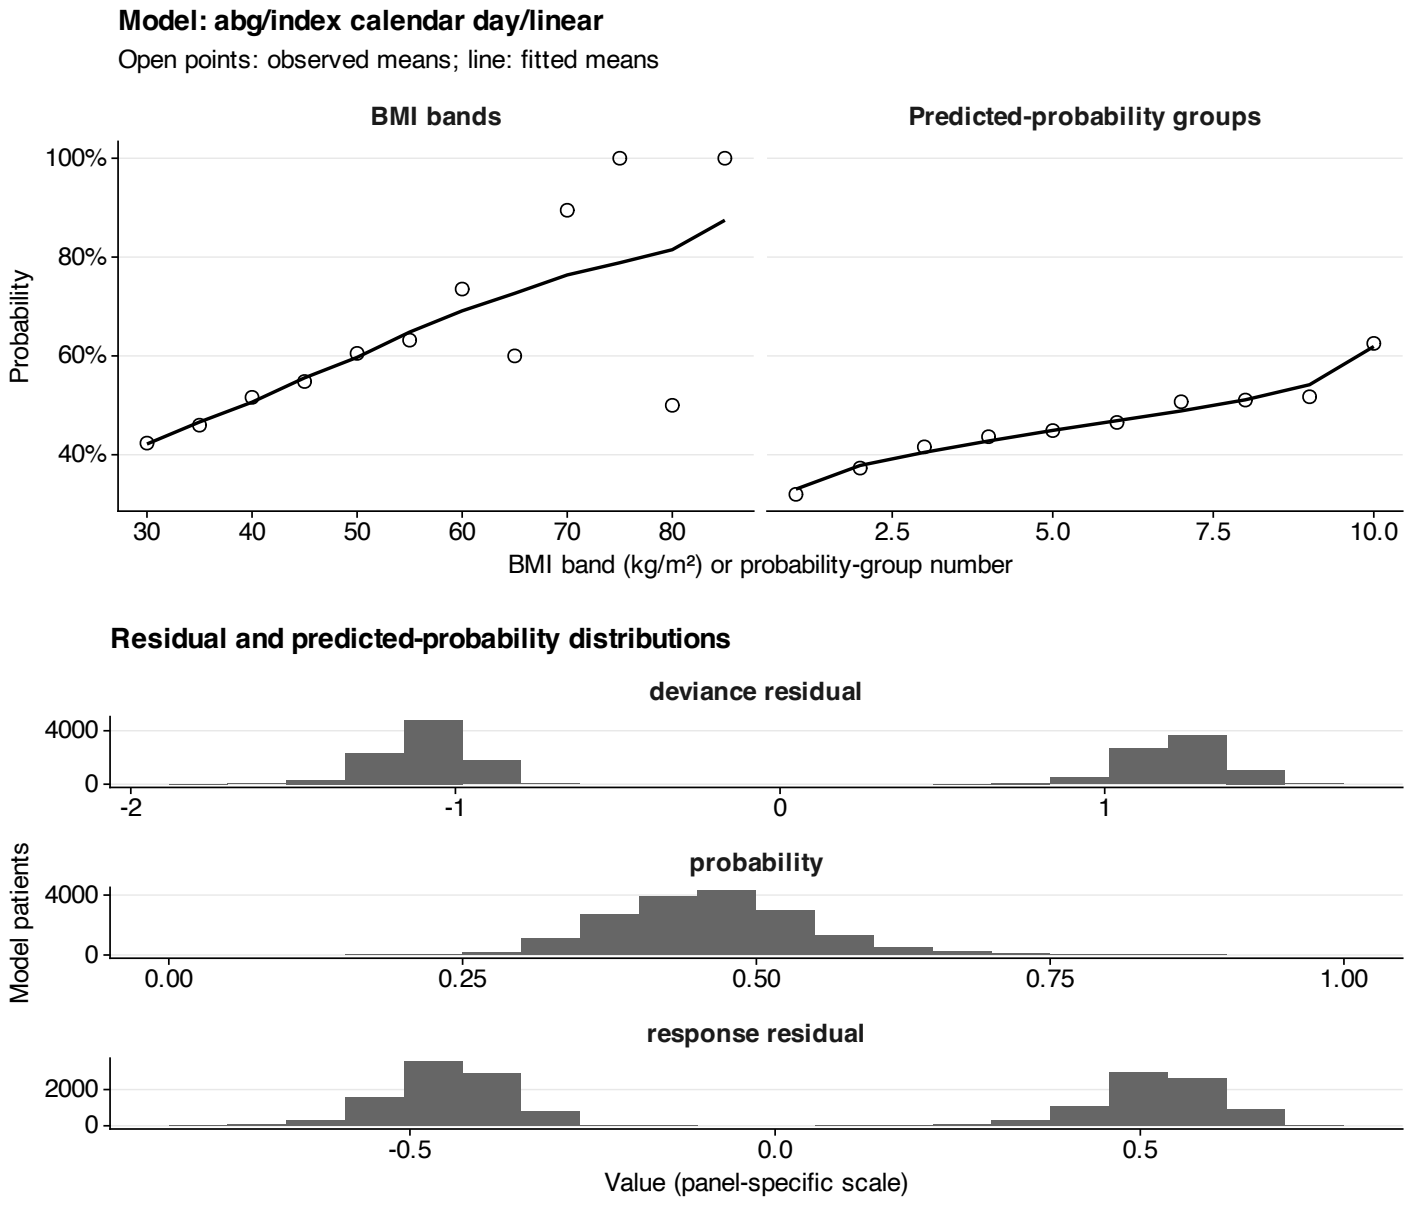

Figure 1225: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F4. Model abg/index_calendar_day/linear apparent fit and full-sample diagnostics. Influence flags do not exclude observations. Failure positions remain visible.

4.9 Model: primary::any_gas/index_calendar_day/spline

Complete model diagnostics

Training N = 38,877; events = 15,224; in-sample diagnostics

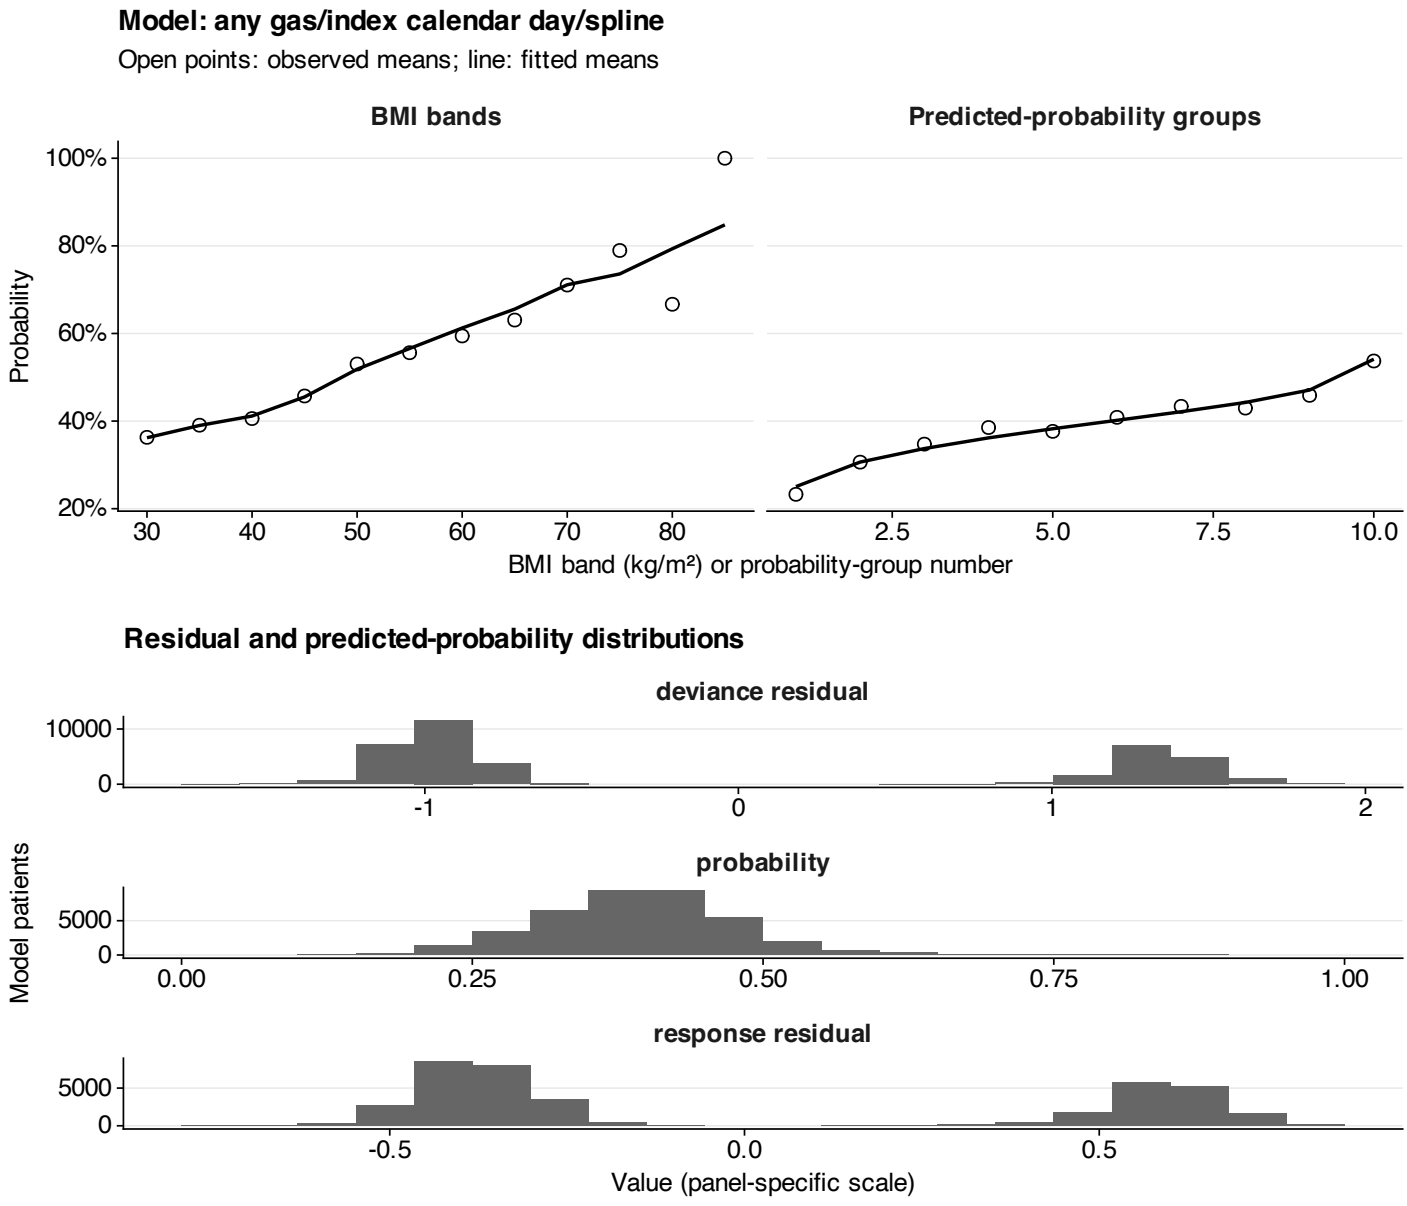

Figure 1226: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F4. Model any_gas/index_calendar_day/spline apparent fit and full-sample diagnostics. Influence flags do not exclude observations. Failure positions remain visible.

Complete model diagnostics

Training N = 38,877; events = 15,224; in-sample diagnostics

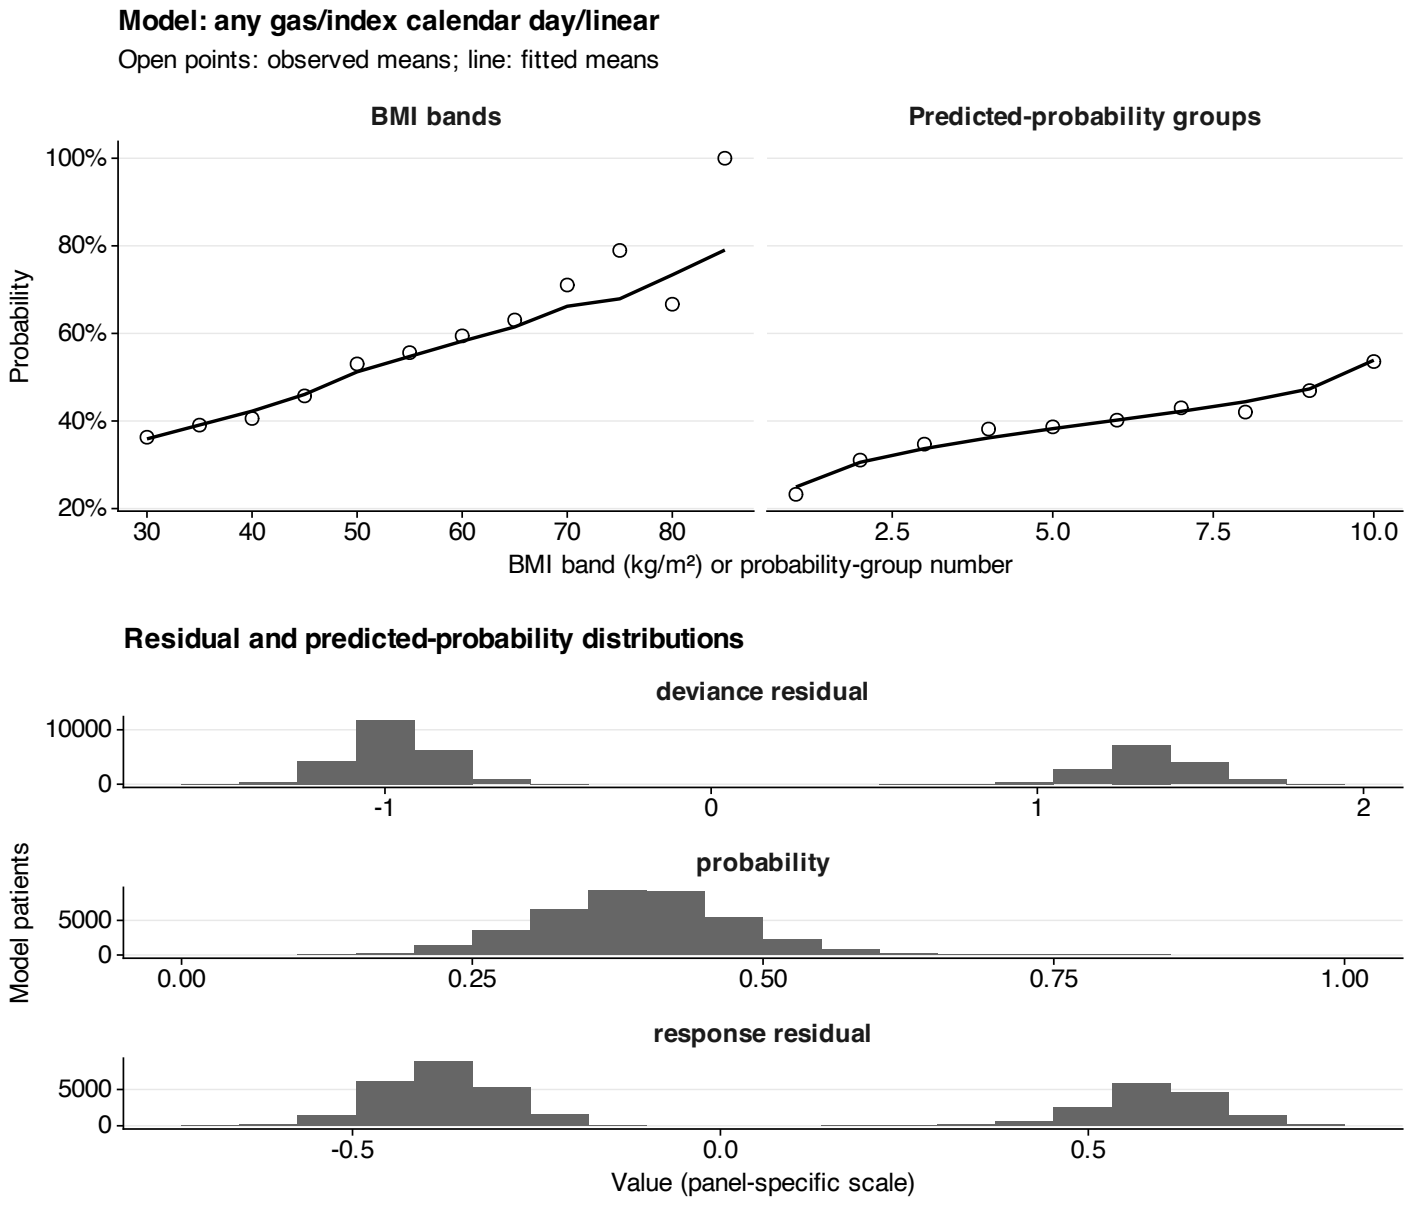

Figure 1227: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F4. Model any_gas/index_calendar_day/linear apparent fit and full-sample diagnostics. Influence flags do not exclude observations. Failure positions remain visible.

4.11 Model: primary::observation/abg/encounter

Complete model diagnostics

Training N = 176,922; events = 29,639; in-sample diagnostics

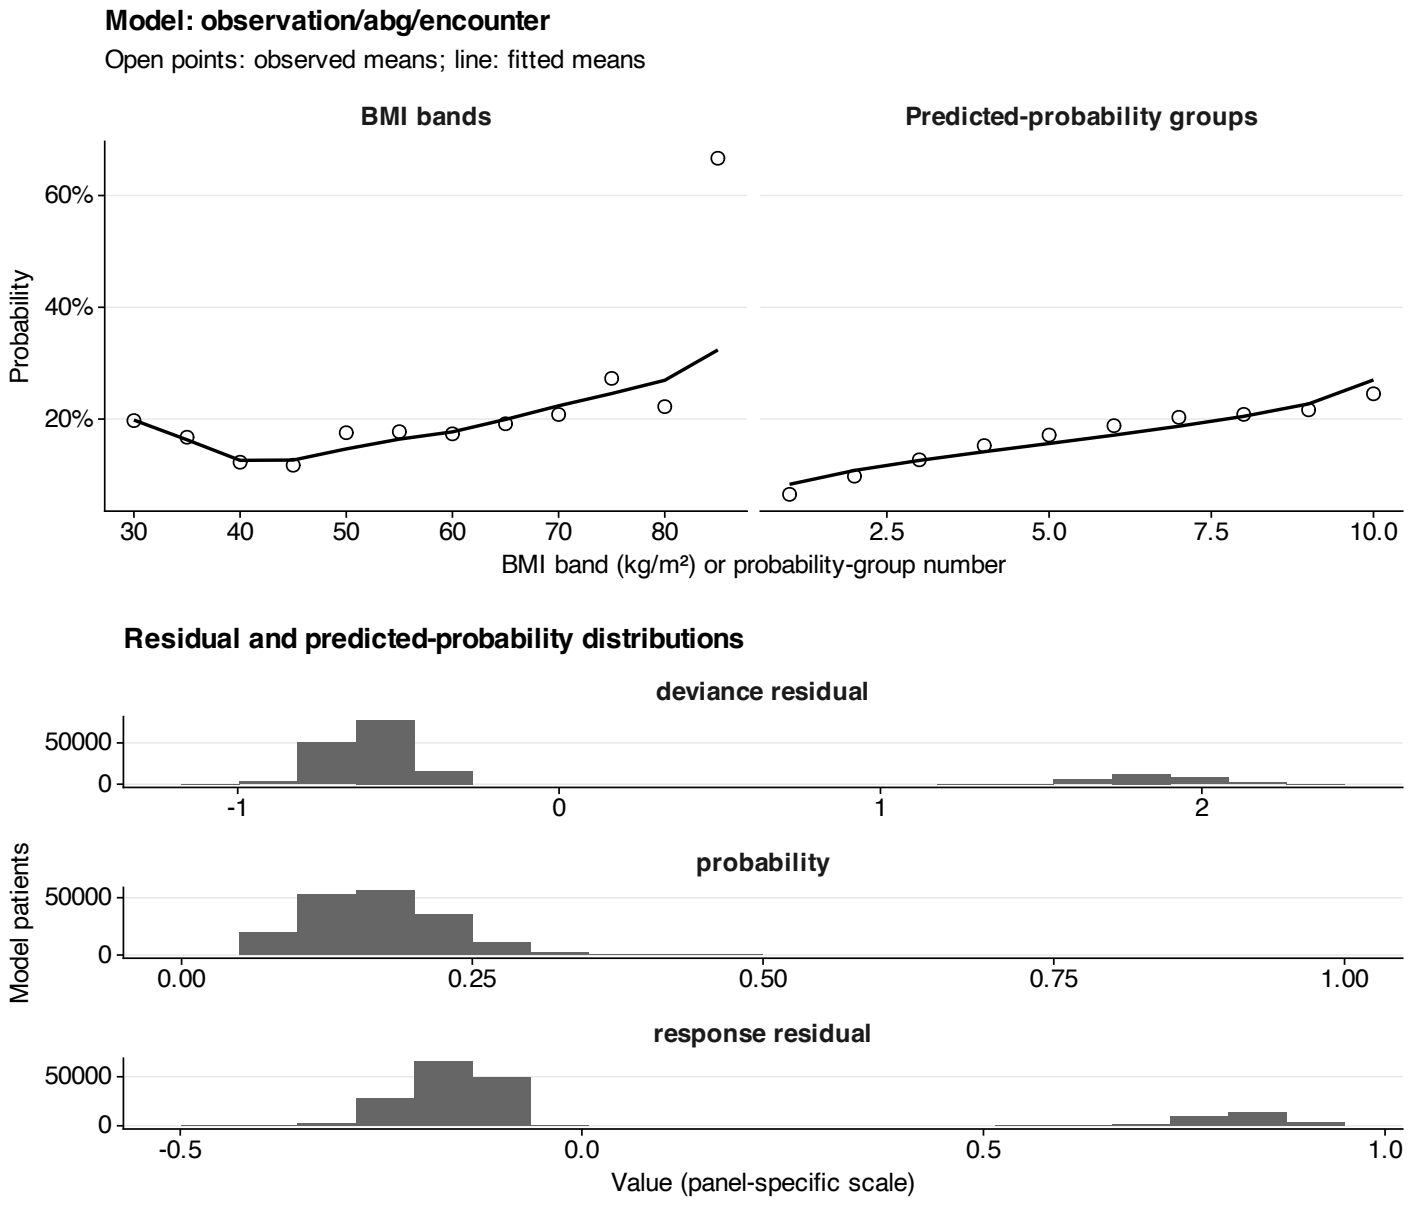

Figure 1228: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F4. Model observation/abg/encounter apparent fit and full-sample diagnostics. Influence flags do not exclude observations. Failure positions remain visible.

Complete model diagnostics

Training N = 176,922; events = 31,905; in-sample diagnostics

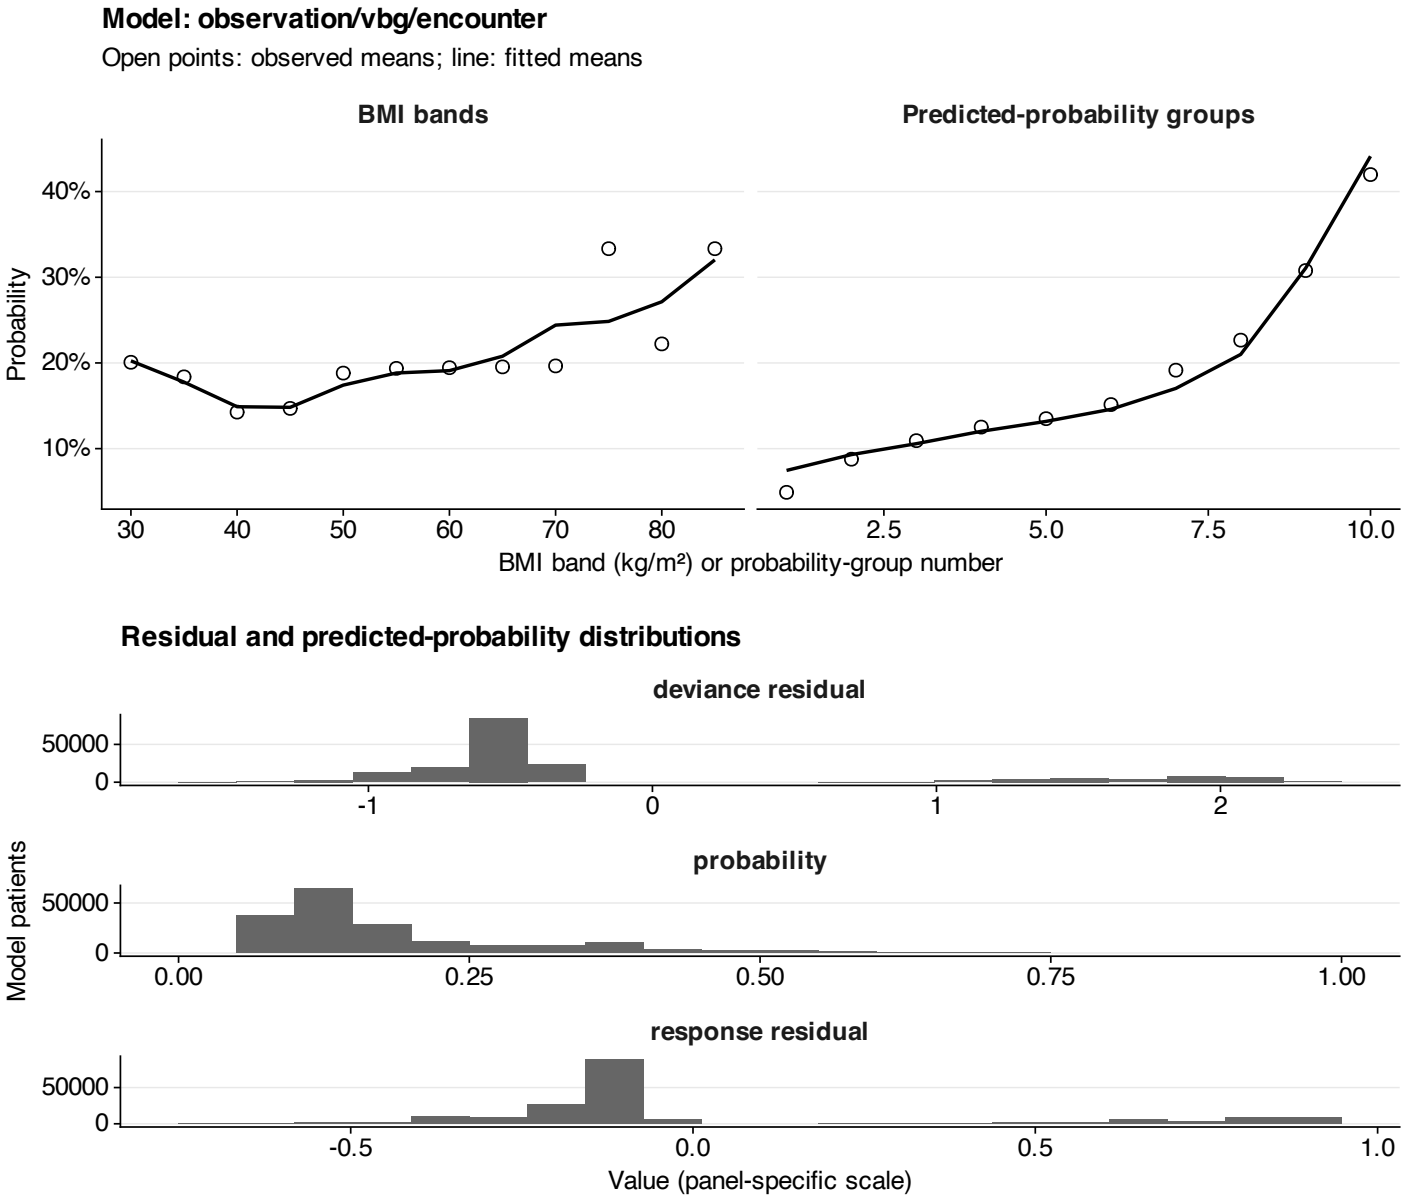

Figure 1229: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F4. Model observation/vbg/encounter apparent fit and full-sample diagnostics. Influence flags do not exclude observations. Failure positions remain visible.

Complete model diagnostics

Training N = 176,922; events = 52,978; in-sample diagnostics

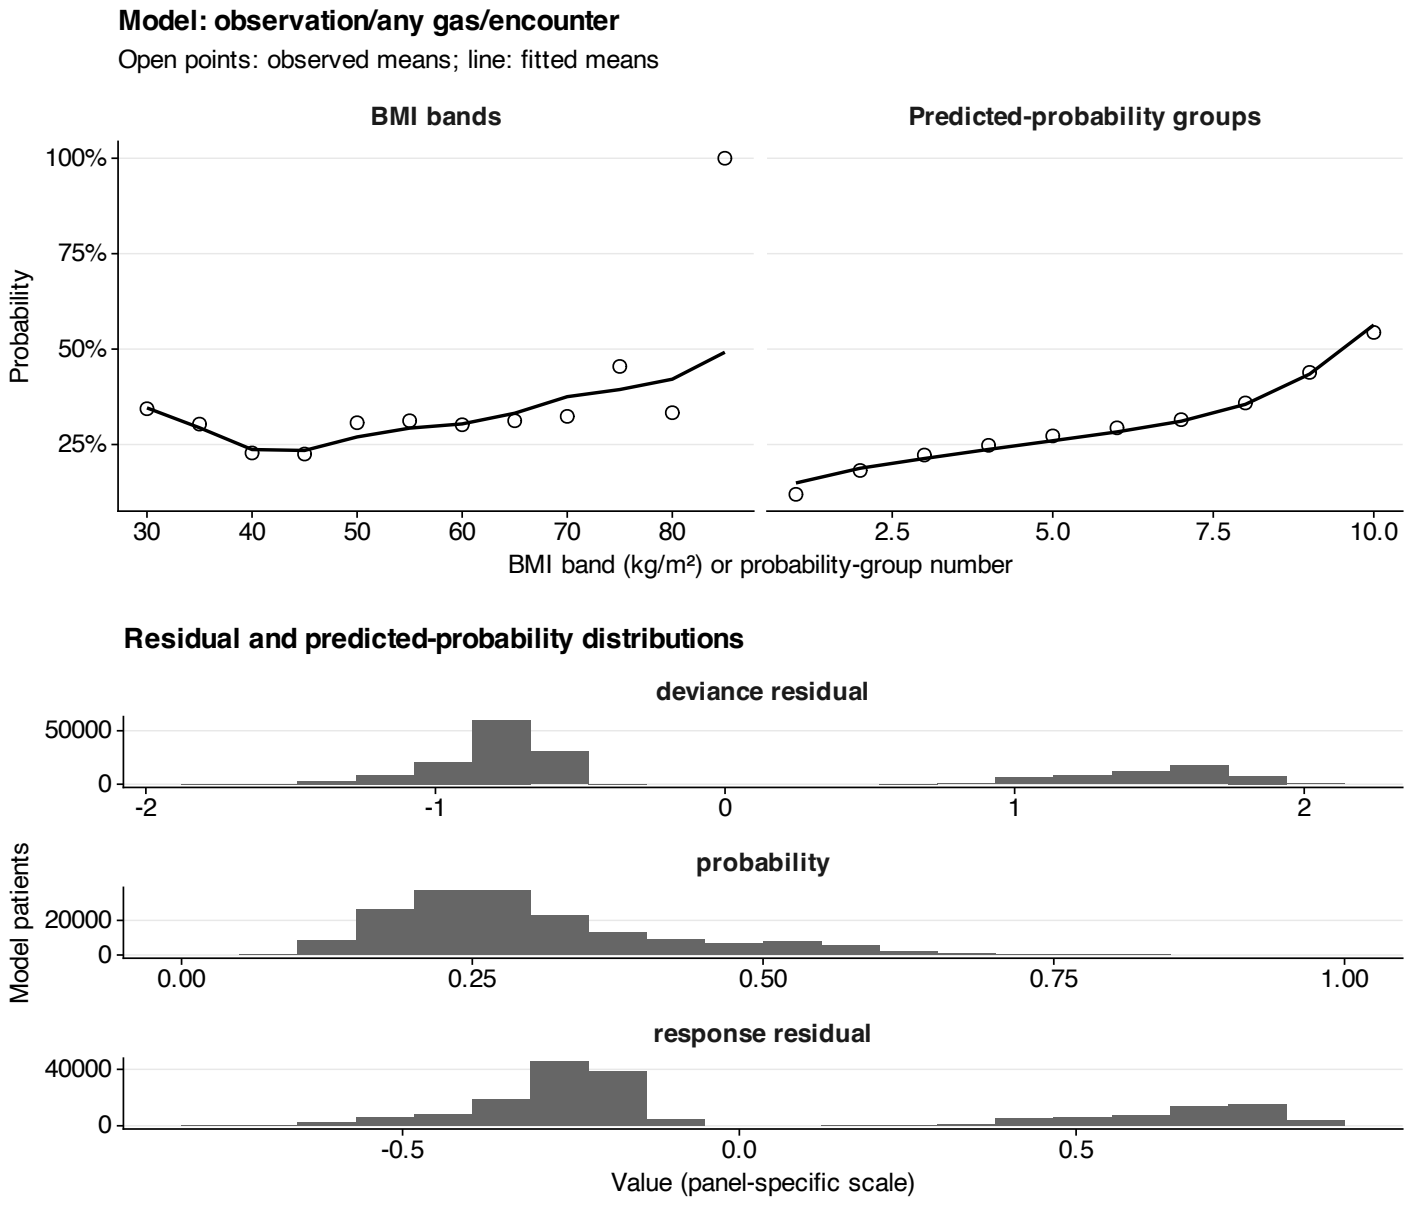

Figure 1230: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F4. Model observation/any_gas/encounter apparent fit and full-sample diagnostics. Influence flags do not exclude observations. Failure positions remain visible.

Complete model diagnostics

Training N = 176,922; events = 17,316; in-sample diagnostics

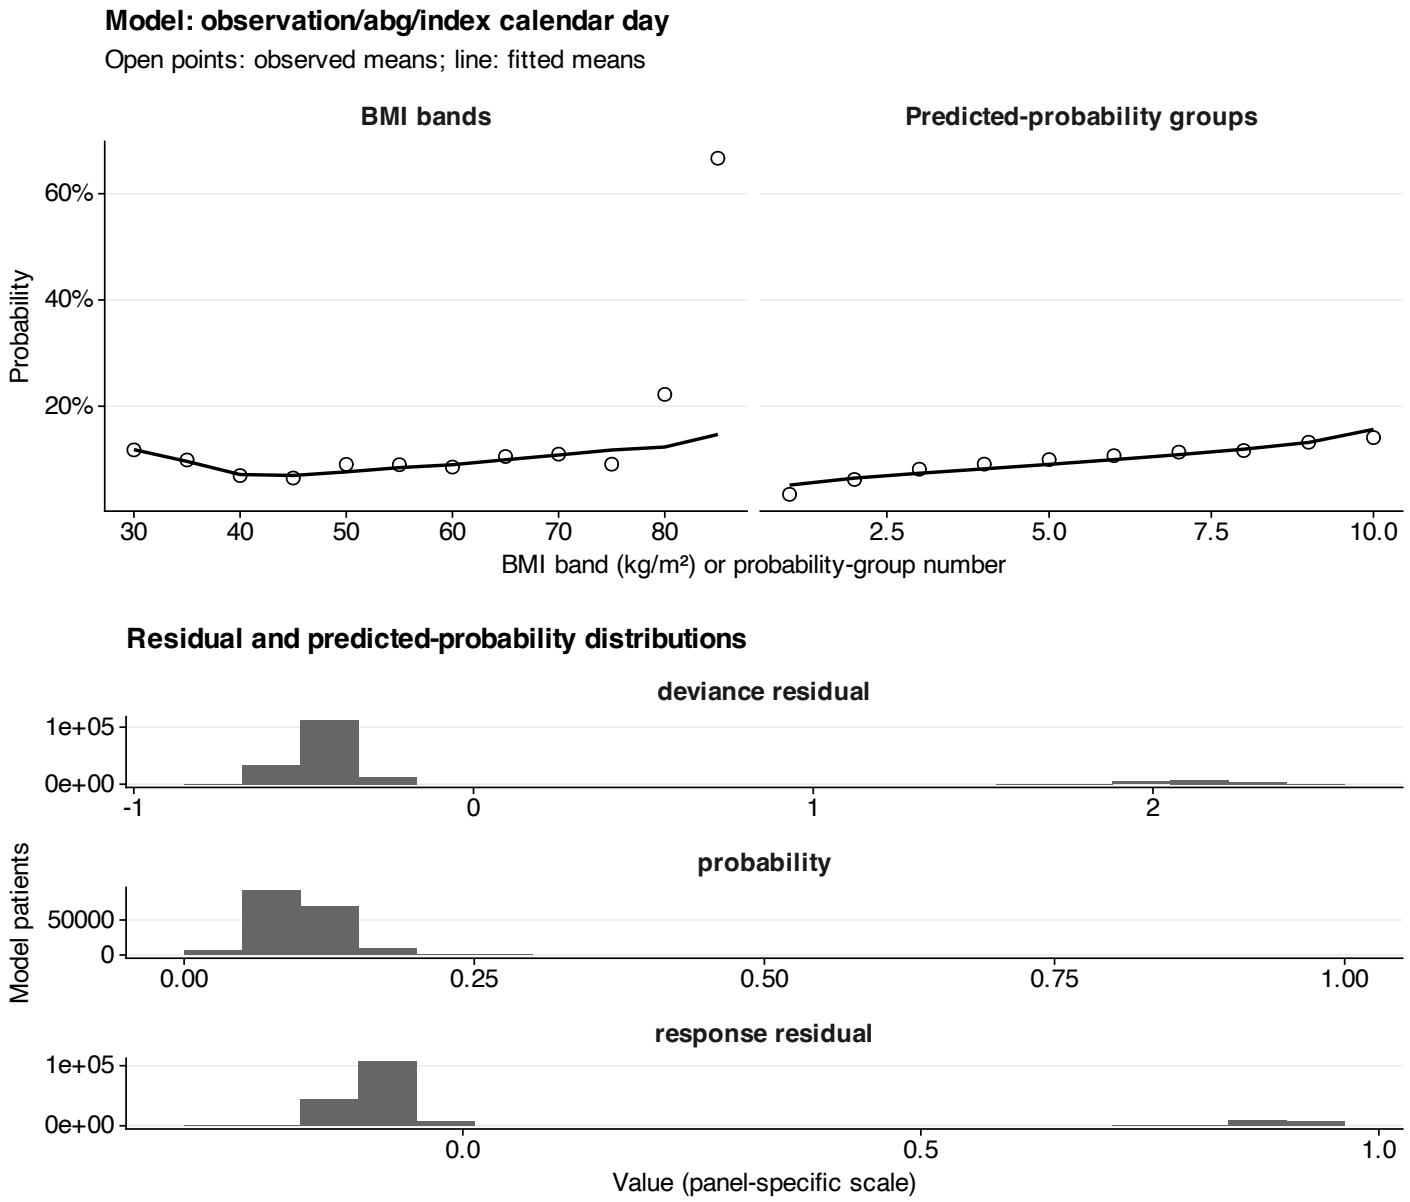

Figure 1232: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F4. Model observation/abg/index_calendar_day apparent fit and full-sample diagnostics. Influence flags do not exclude observations. Failure positions remain visible.

Complete model diagnostics

Training N = 176,922; events = 24,684; in-sample diagnostics

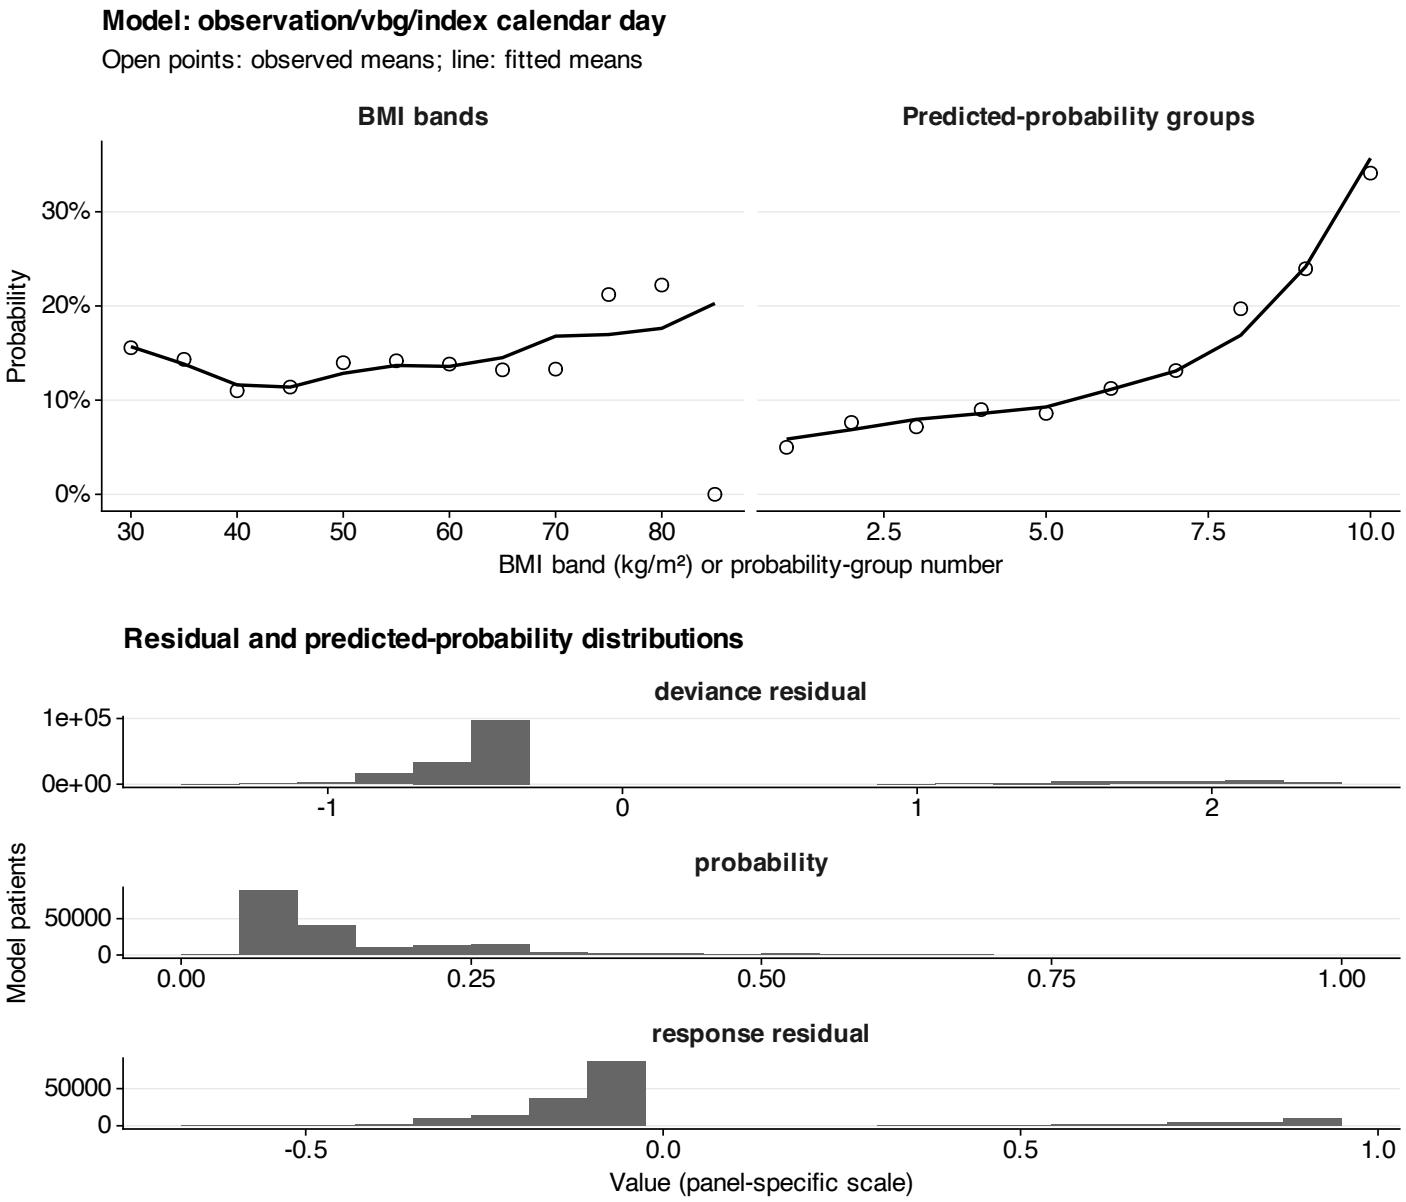

Figure 1233: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F4. Model observation/vbg/index_calendar_day apparent fit and full-sample diagnostics. Influence flags do not exclude observations. Failure positions remain visible.

Complete model diagnostics

Training N = 176,922; events = 38,877; in-sample diagnostics

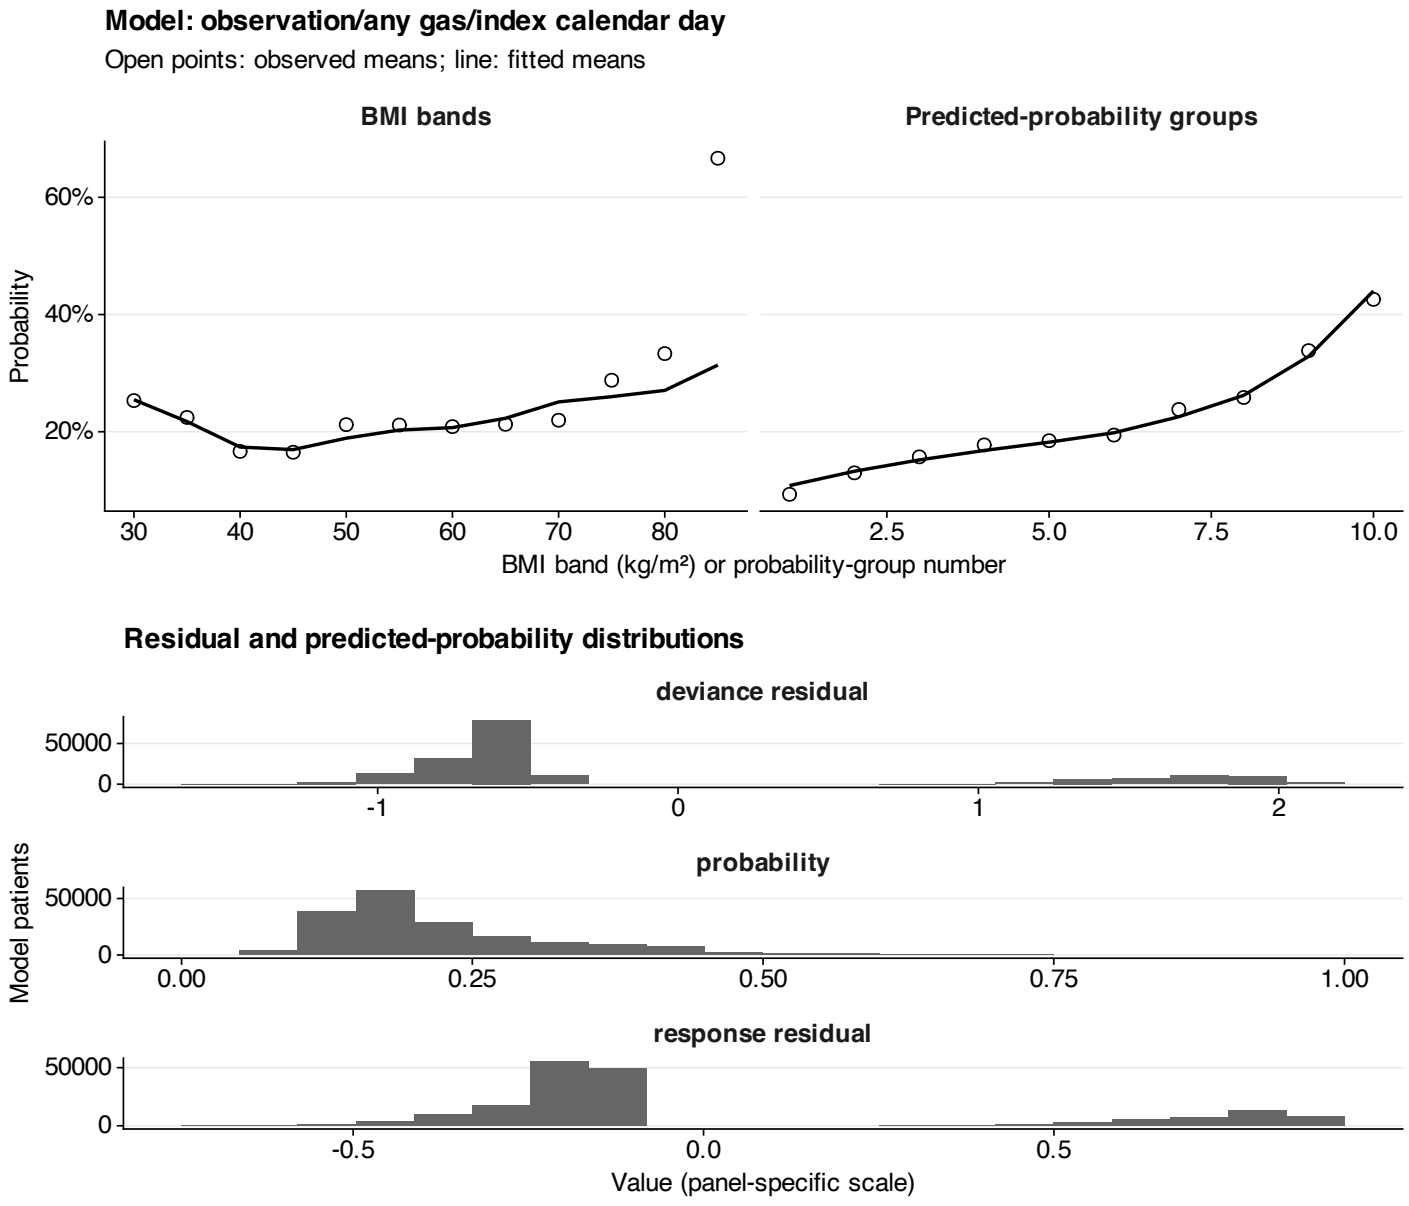

Figure 1234: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F4. Model observation/any_gas/index_calendar_day apparent fit and full-sample diagnostics. Influence flags do not exclude observations. Failure positions remain visible.

Complete model diagnostics

Training N = 29,639; events = 3,777; in-sample diagnostics

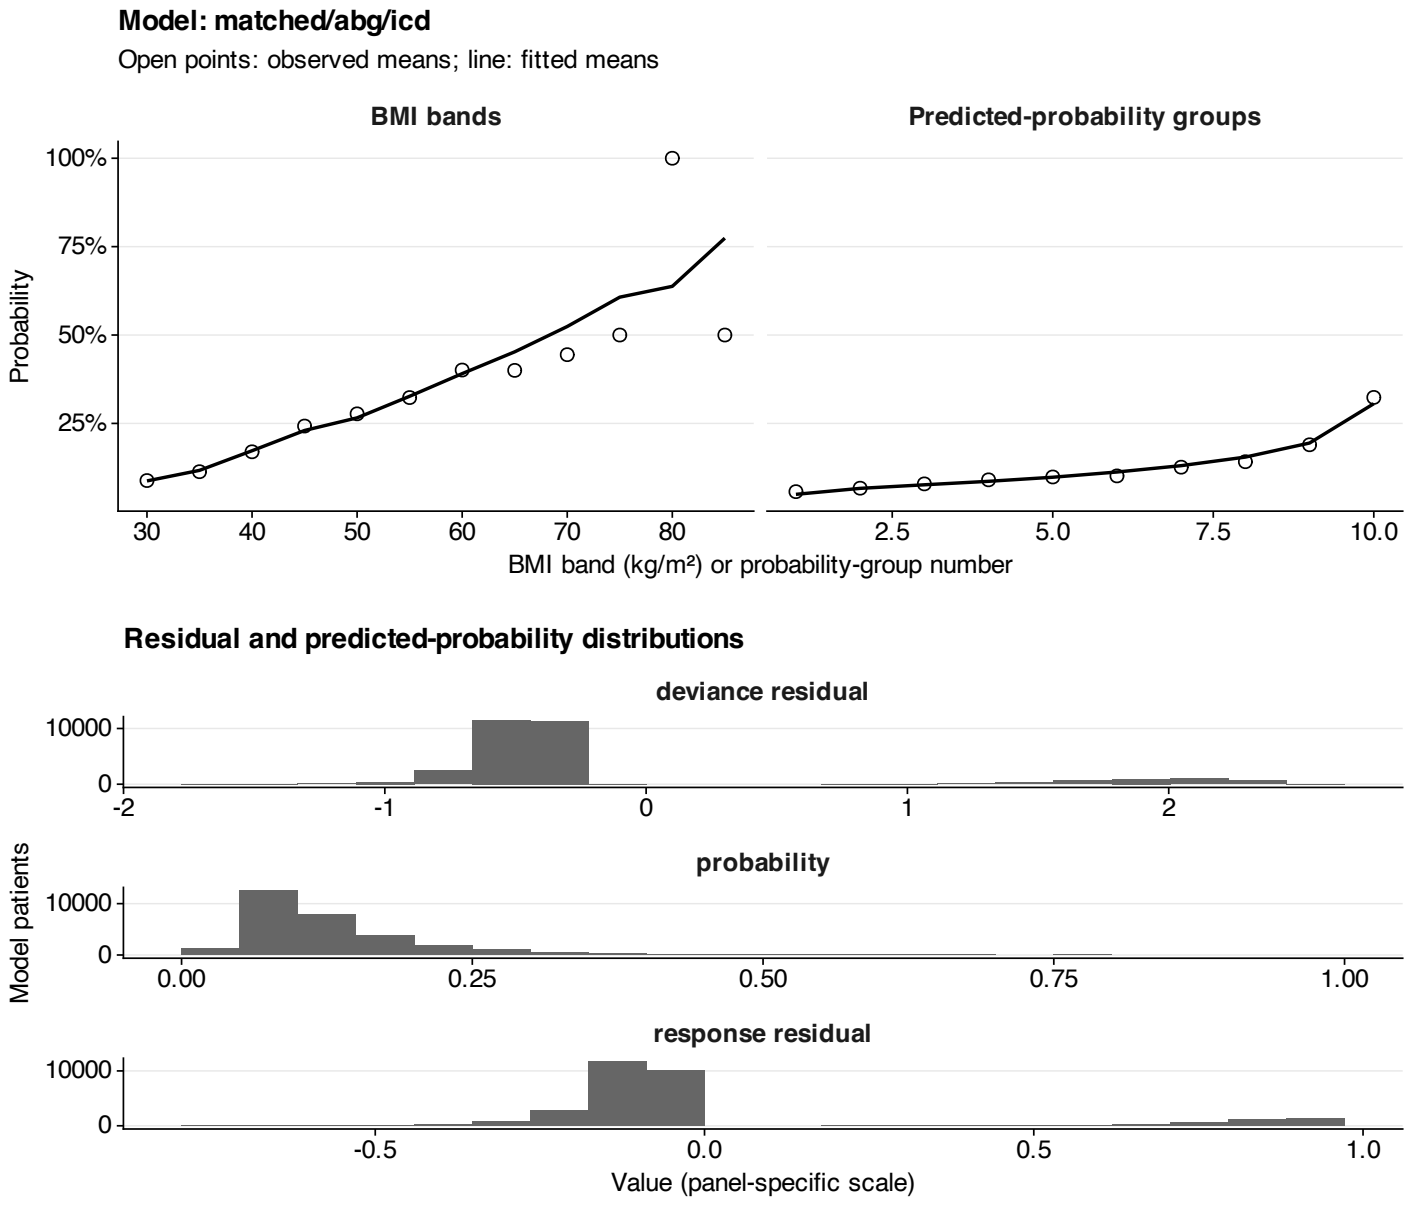

Figure 1235: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F4. Model matched/abg/icd apparent fit and full-sample diagnostics. Influence flags do not exclude observations. Failure positions remain visible.

Complete model diagnostics

Training N = 29,639; events = 15,541; in-sample diagnostics

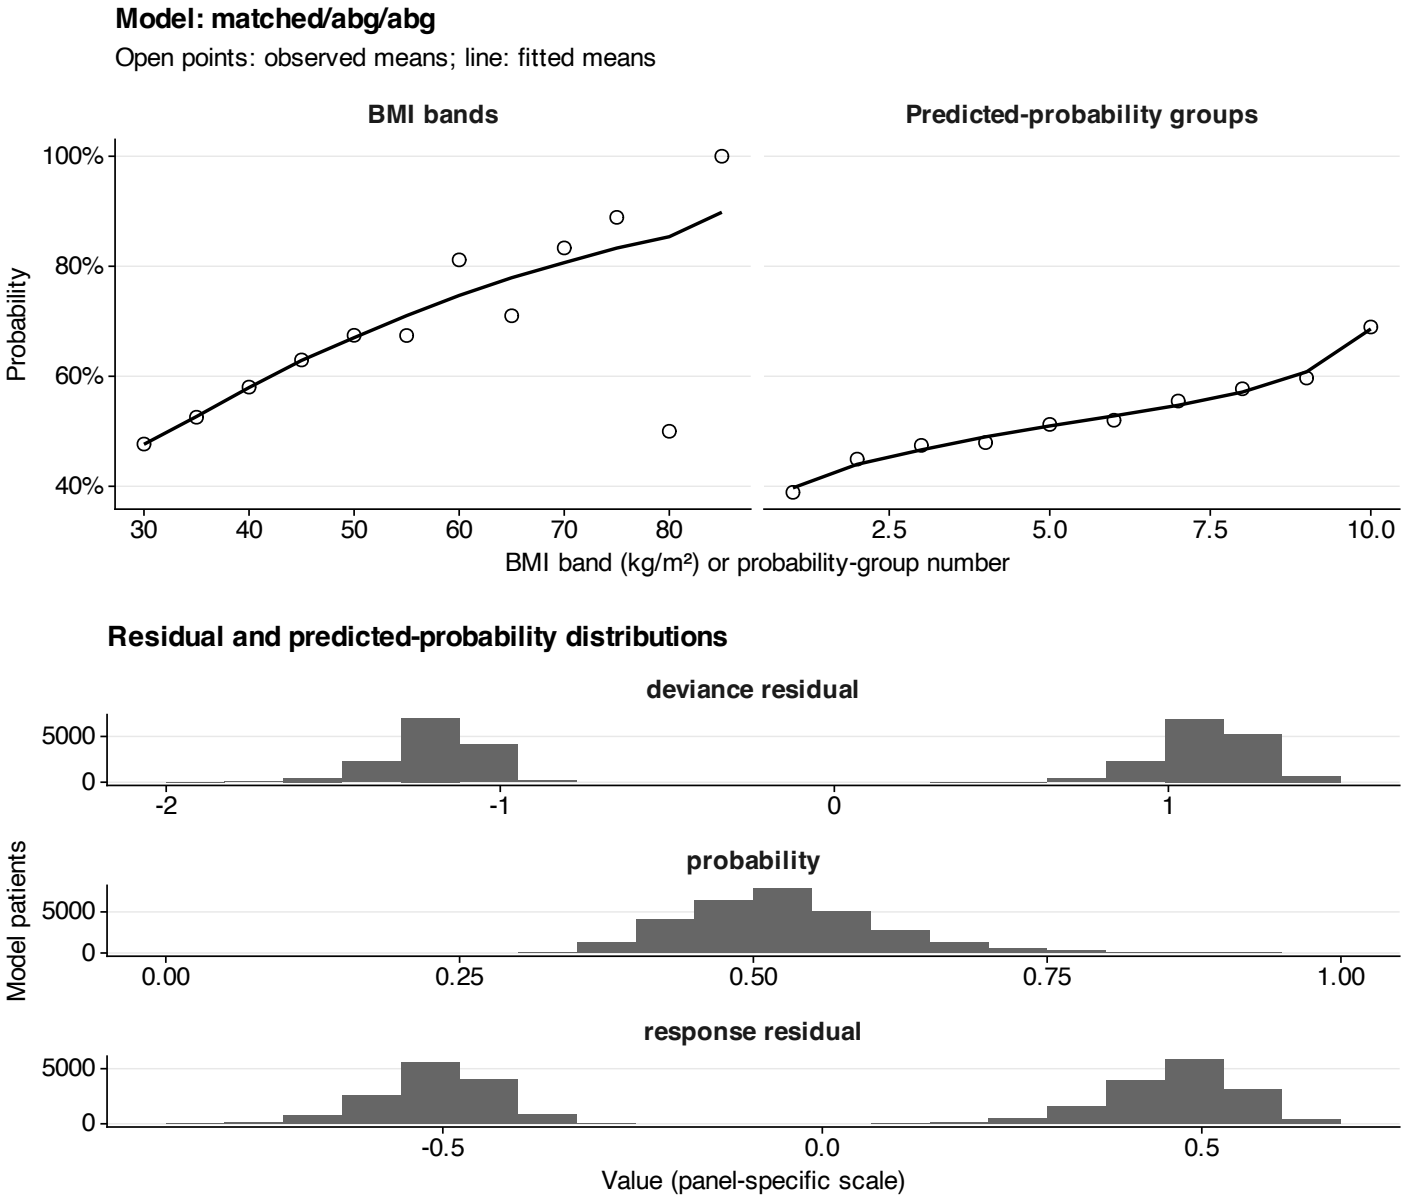

Figure 1236: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F4. Model matched/abg/abg apparent fit and full-sample diagnostics. Influence flags do not exclude observations. Failure positions remain visible.

Complete model diagnostics

Training N = 52,978; events = 4,689; in-sample diagnostics

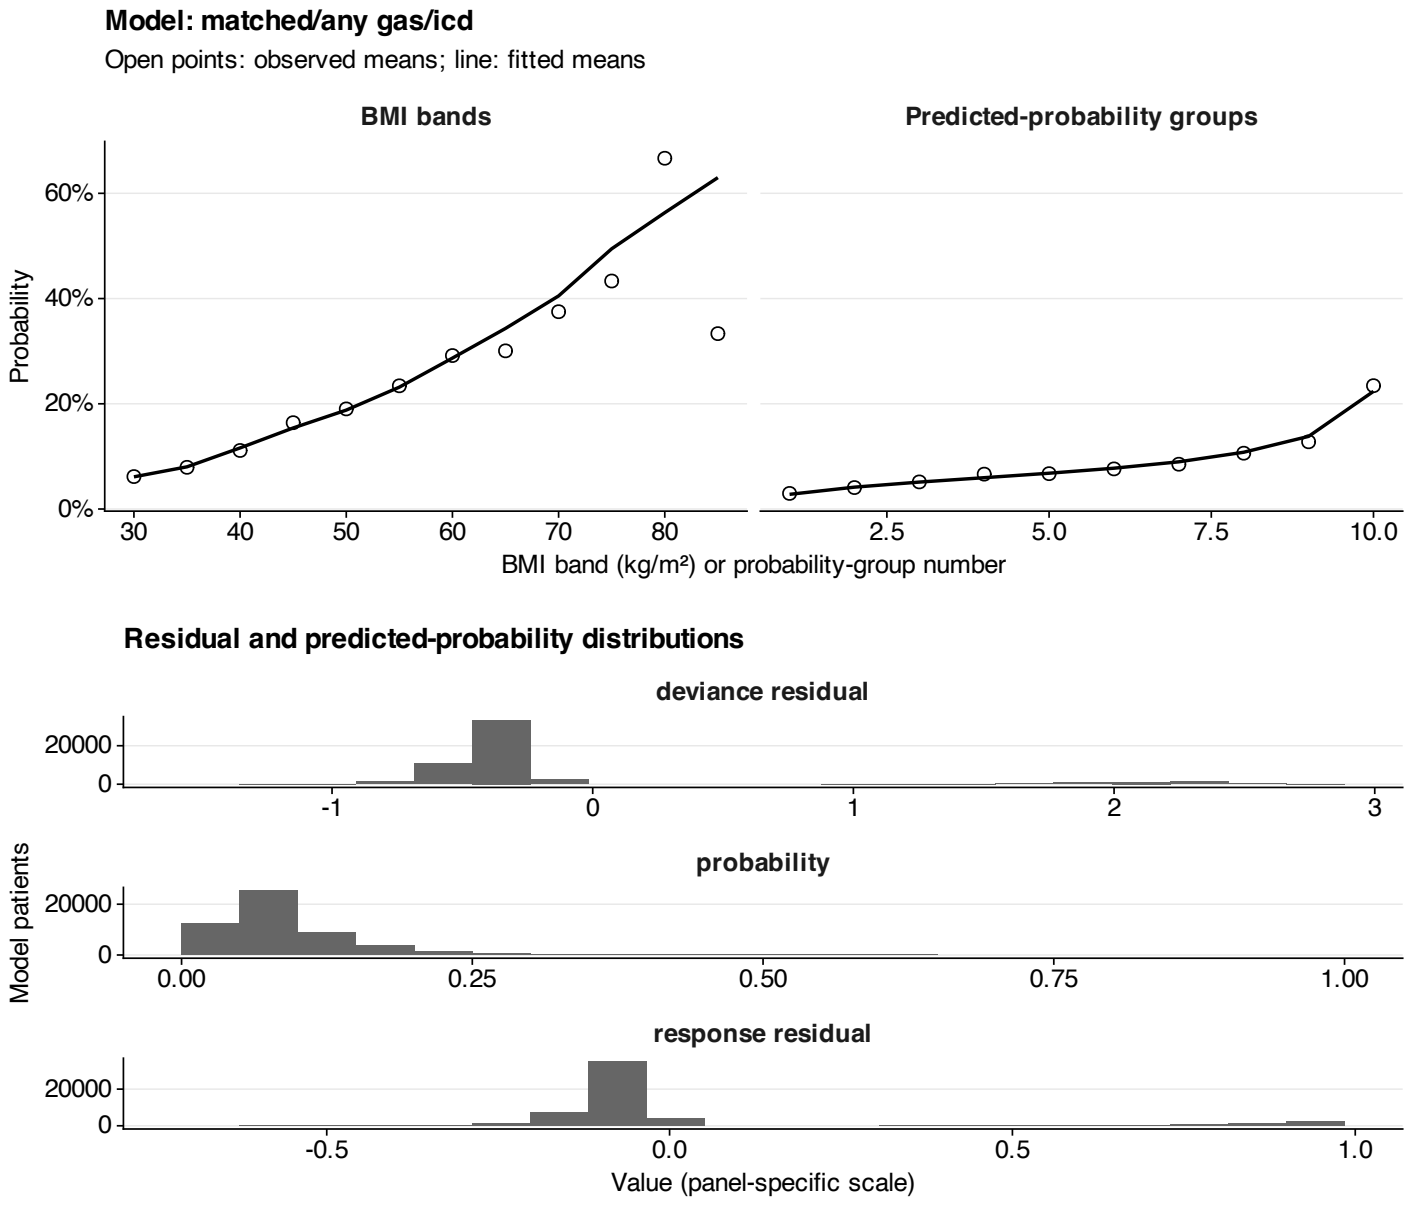

Figure 1237: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F4. Model matched/any_gas/icd apparent fit and full-sample diagnostics. Influence flags do not exclude observations. Failure positions remain visible.

Complete model diagnostics

Training N = 52,978; events = 23,621; in-sample diagnostics

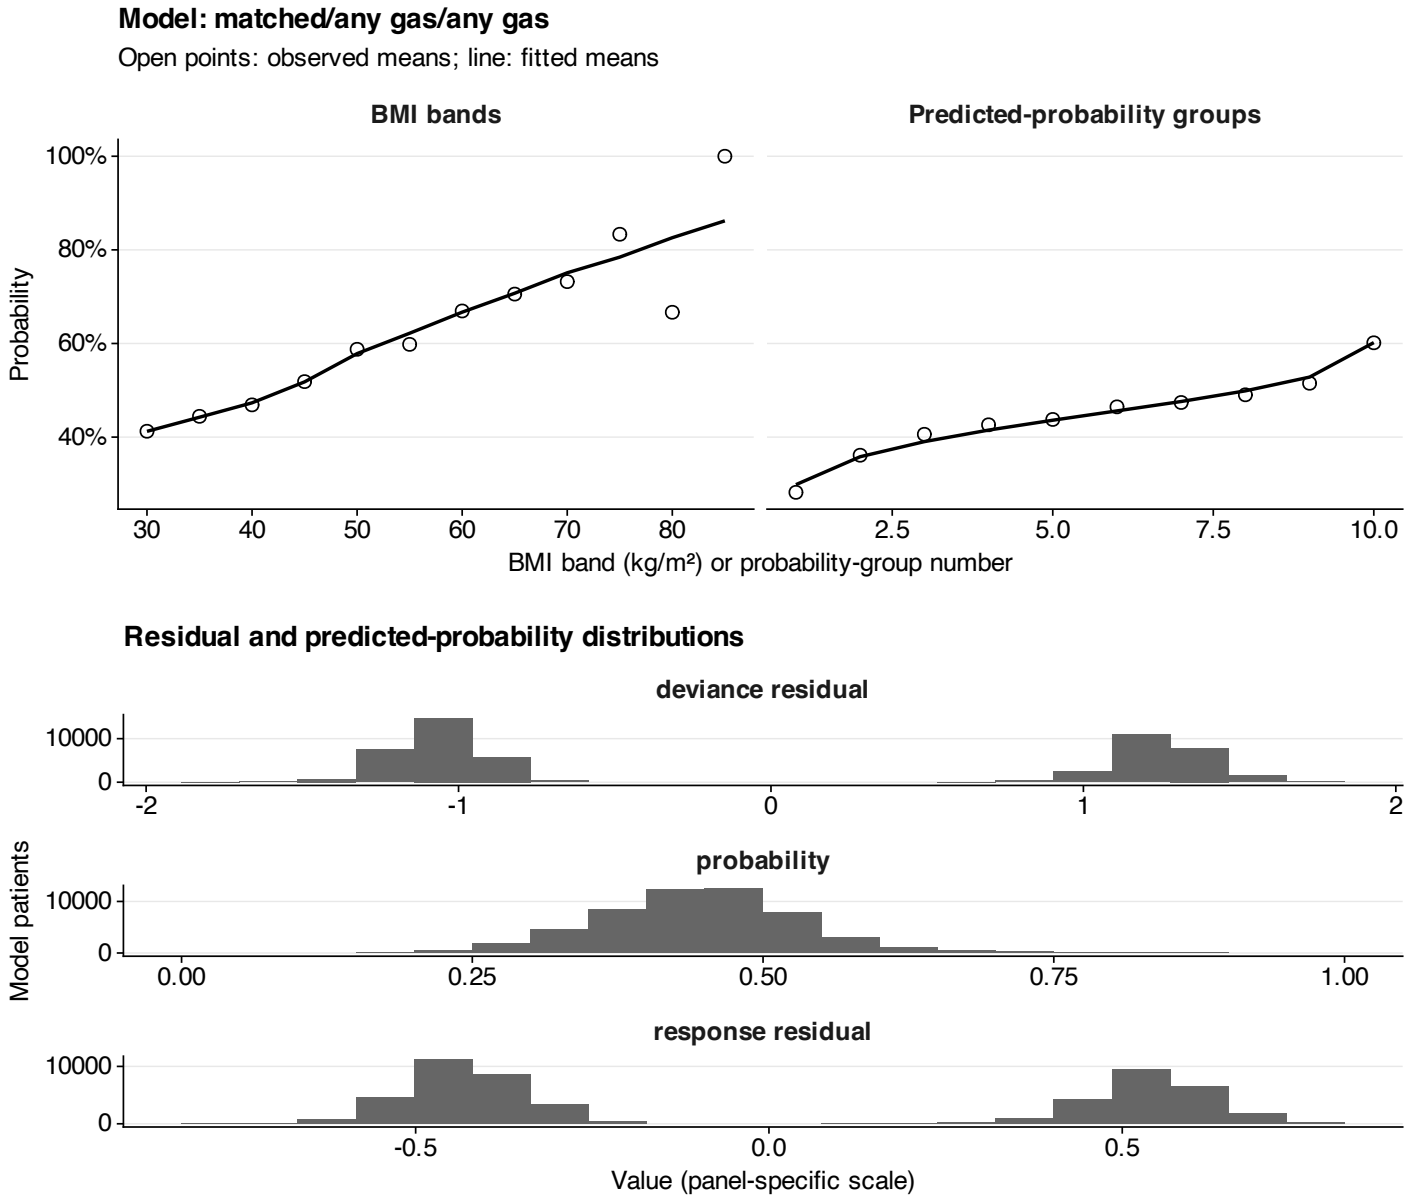

Figure 1238: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F4. Model matched/any_gas/any_gas apparent fit and full-sample diagnostics. Influence flags do not exclude observations. Failure positions remain visible.

Complete model diagnostics

Training N = 23,051; events = 12,201; in-sample diagnostics

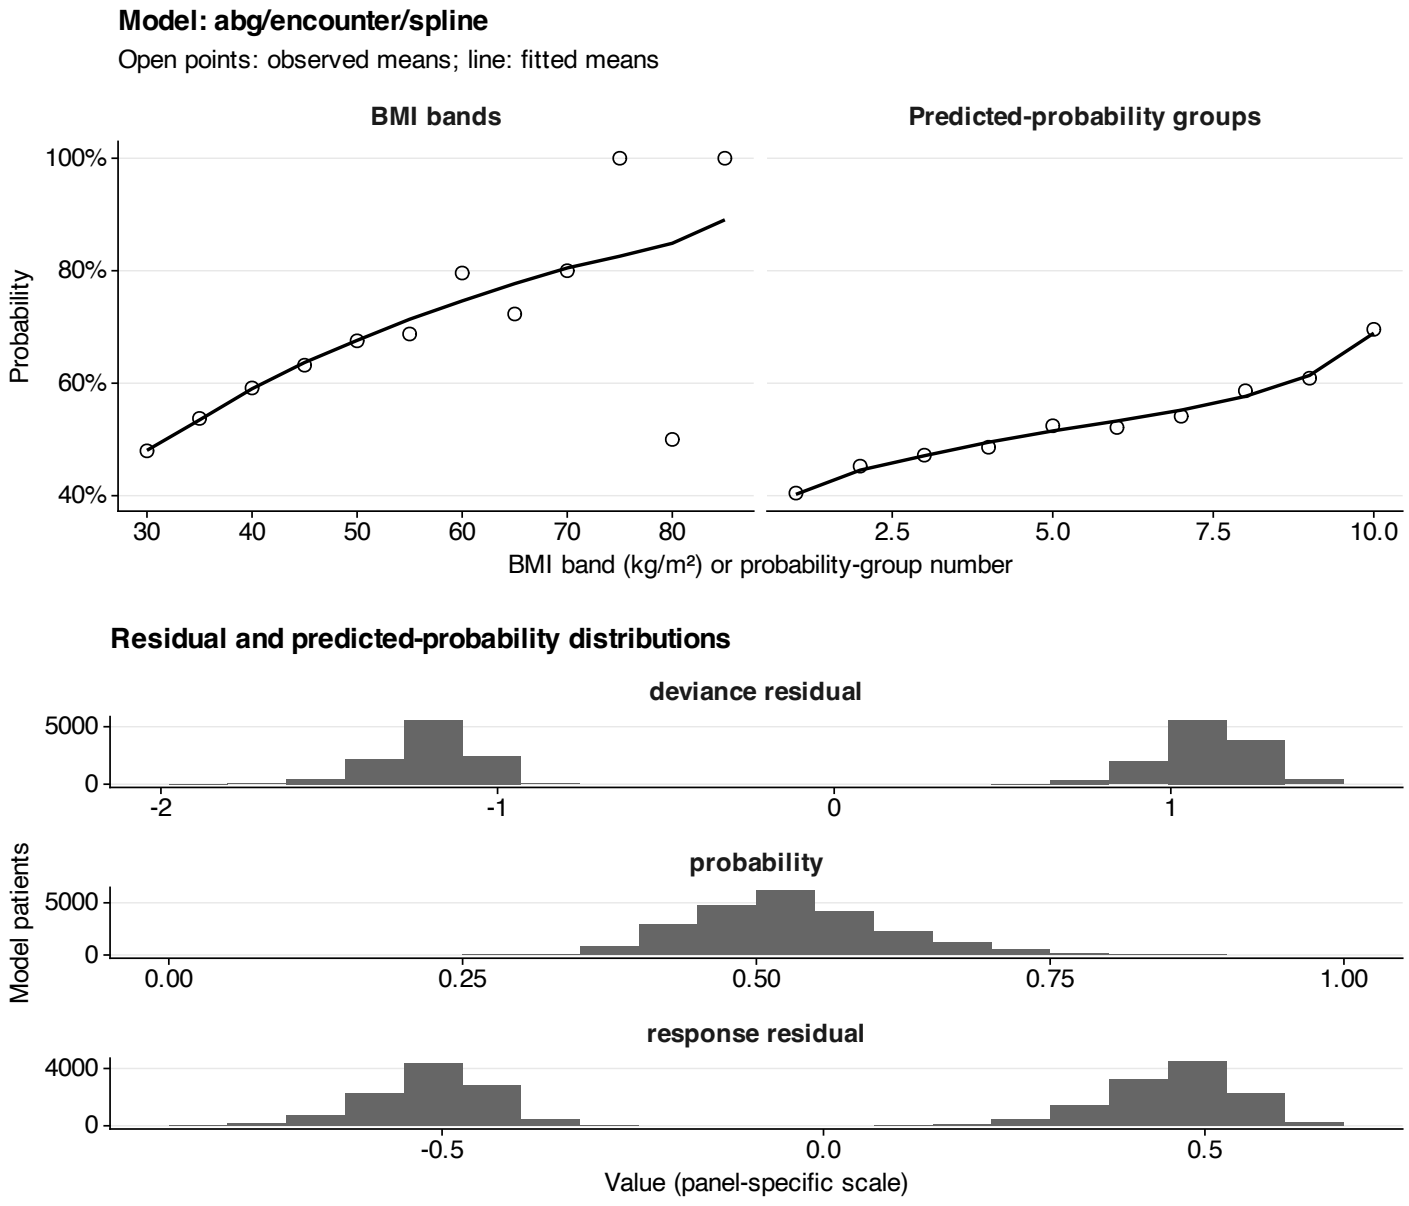

Figure 1239: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F4. Model abg/encounter/spline apparent fit and full-sample diagnostics. Influence flags do not exclude observations. Failure positions remain visible.

Complete model diagnostics

Training N = 38,615; events = 17,769; in-sample diagnostics

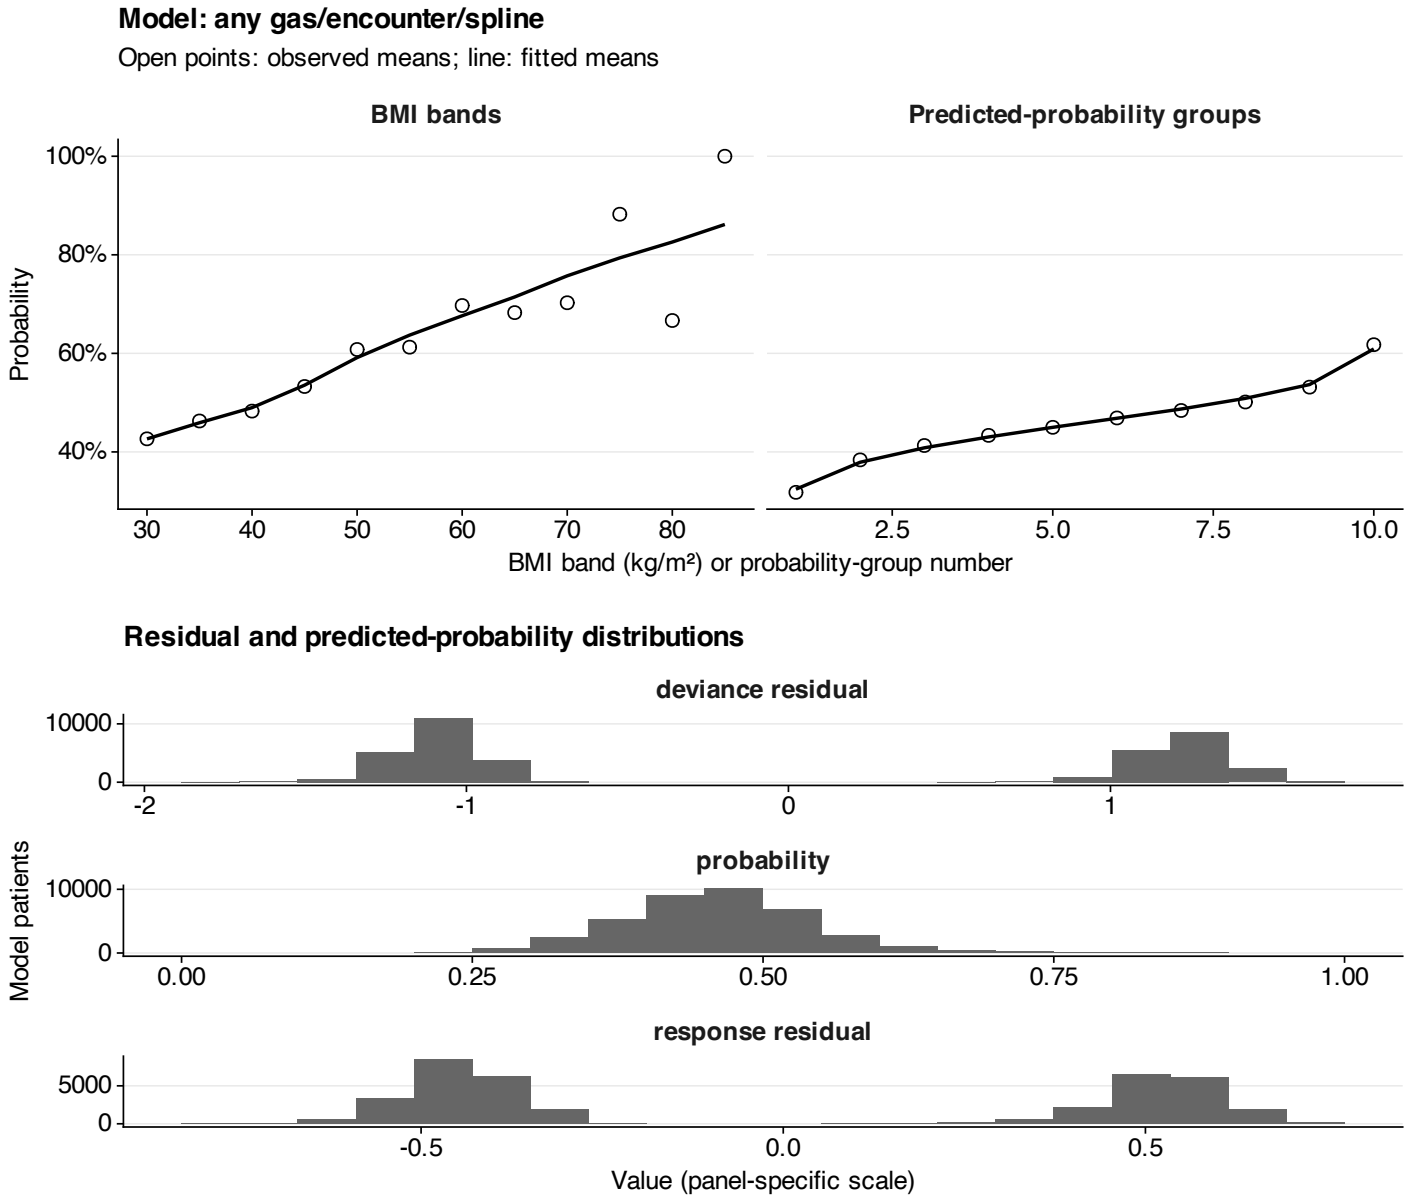

Figure 1240: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F4. Model any_gas/encounter/spline apparent fit and full-sample diagnostics. Influence flags do not exclude observations. Failure positions remain visible.

Complete model diagnostics

Training N = 126,480; events = 6,258; in-sample diagnostics

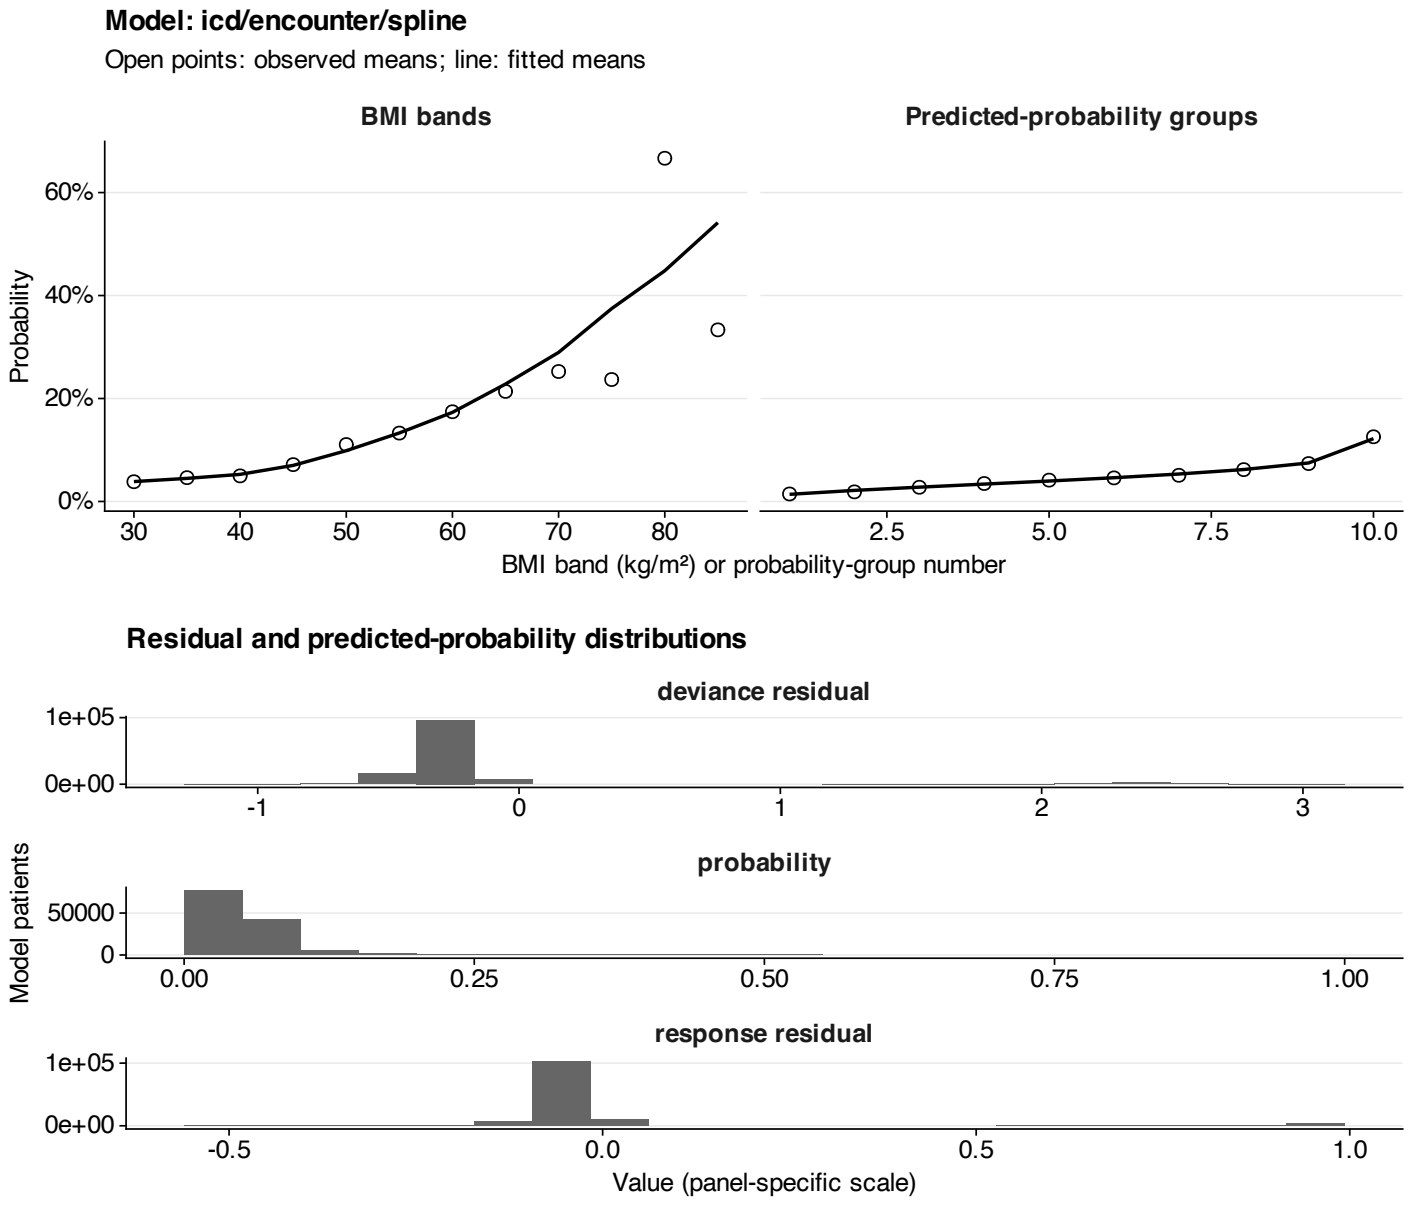

Figure 1241: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F4. Model icd/encounter/spline apparent fit and full-sample diagnostics. Influence flags do not exclude observations. Failure positions remain visible.

Complete model diagnostics

Training N = 3,746; events = 2,380; in-sample diagnostics

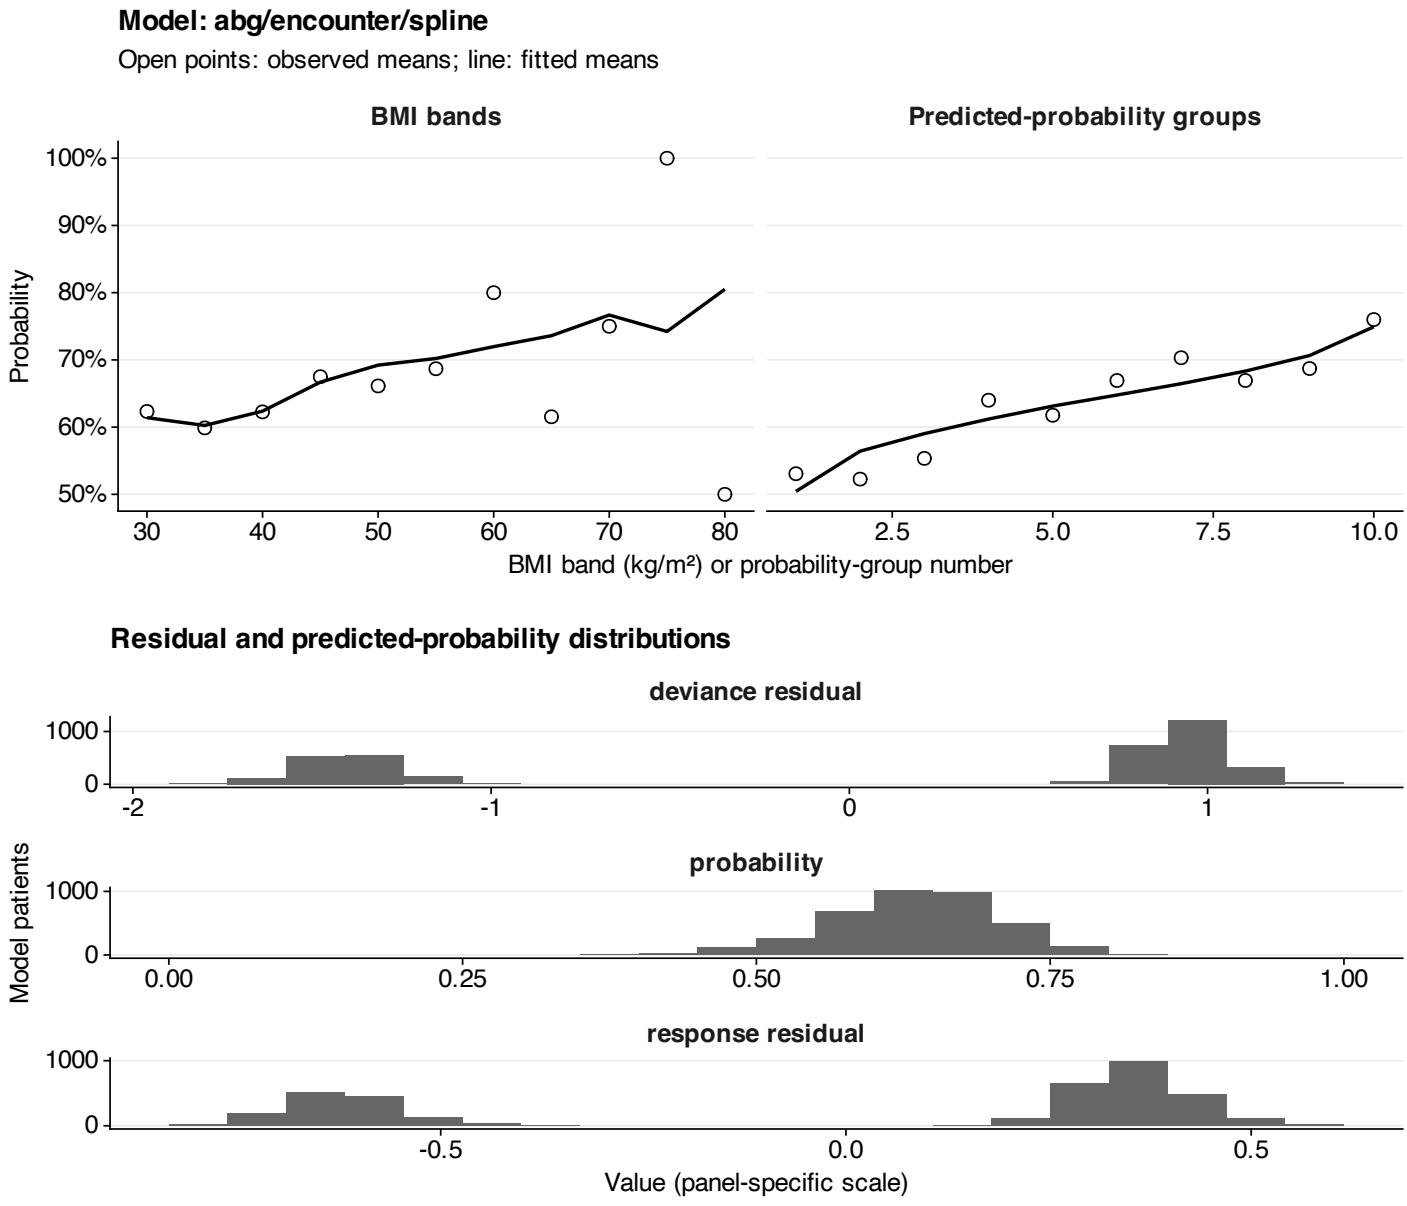

Figure 1242: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F4. Model abg/encounter/spline apparent fit and full-sample diagnostics. Influence flags do not exclude observations. Failure positions remain visible.

Complete model diagnostics

Training N = 6,235; events = 3,284; in-sample diagnostics

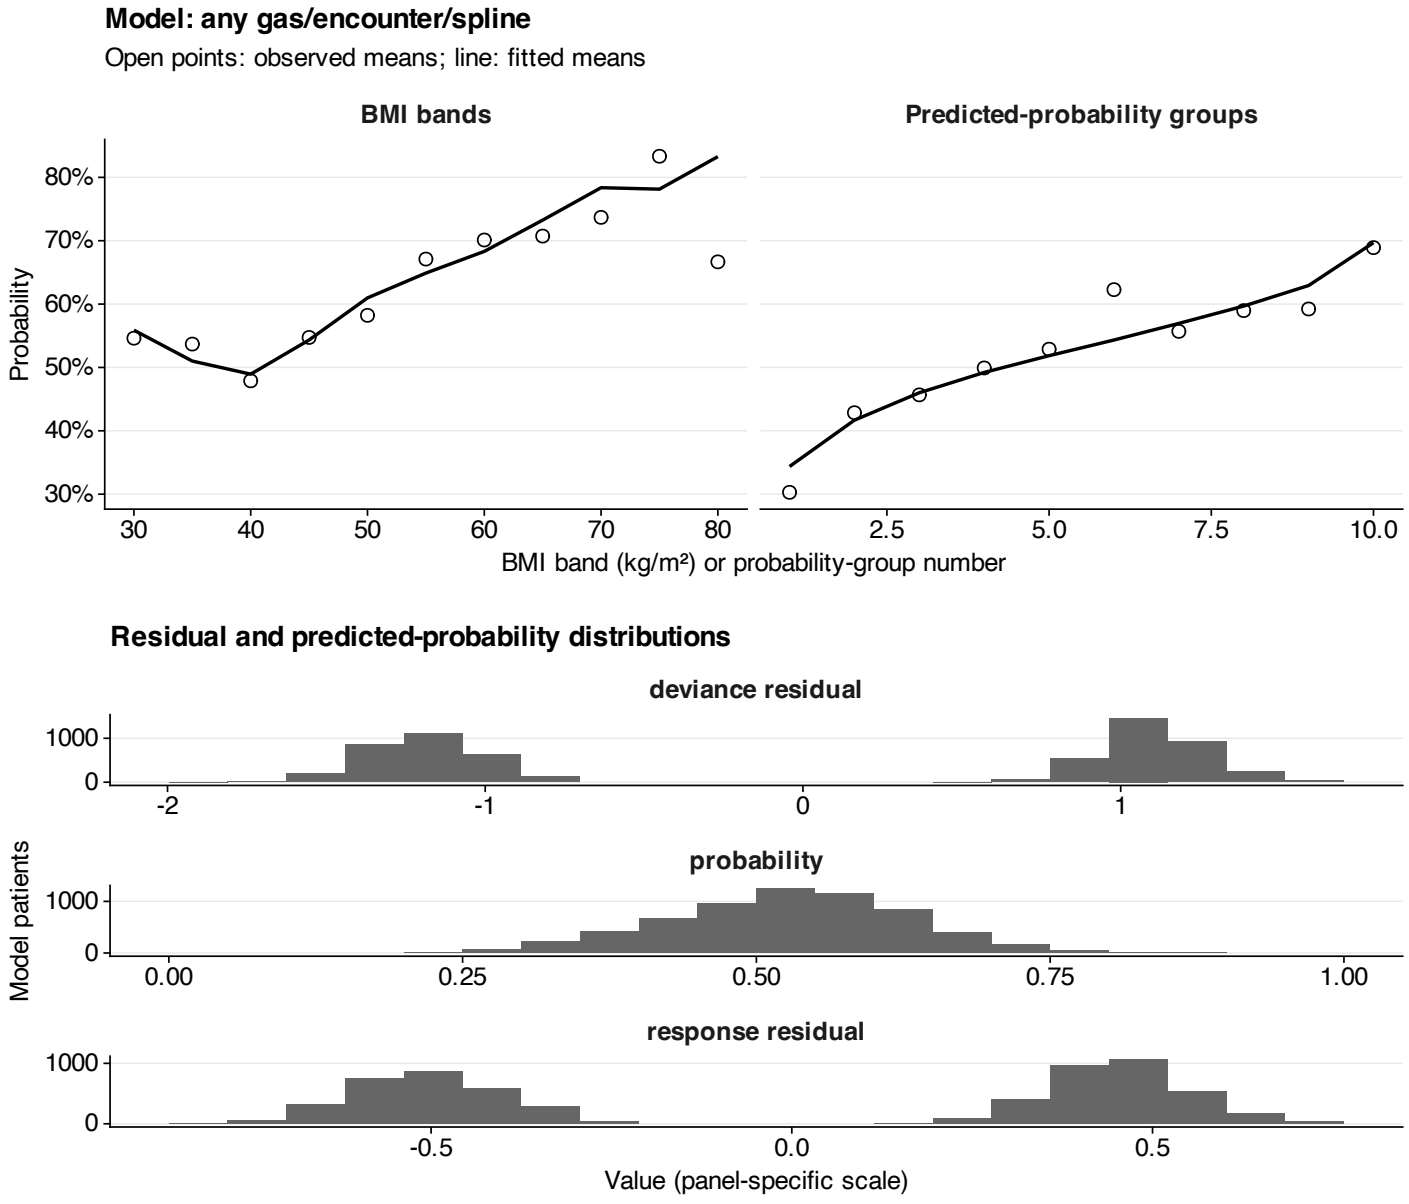

Figure 1243: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F4. Model any_gas/encounter/spline apparent fit and full-sample diagnostics. Influence flags do not exclude observations. Failure positions remain visible.

4.27 Model: all_obesity::icd/encounter/spline

5 Relationship, support and scenario reconciliation

Curves are policy-independent. Gas curves and scenarios standardize to their outcome-observed training populations; ICD curves use C_icd with known diagnosis capture. Observation models describe evidence availability over C. No physiological outcomes are projected to untested patients. Full-cohort MAR/MNAR projections remain only in the frozen historical run. No cross-model difference test is inferred from independent interval overlap.

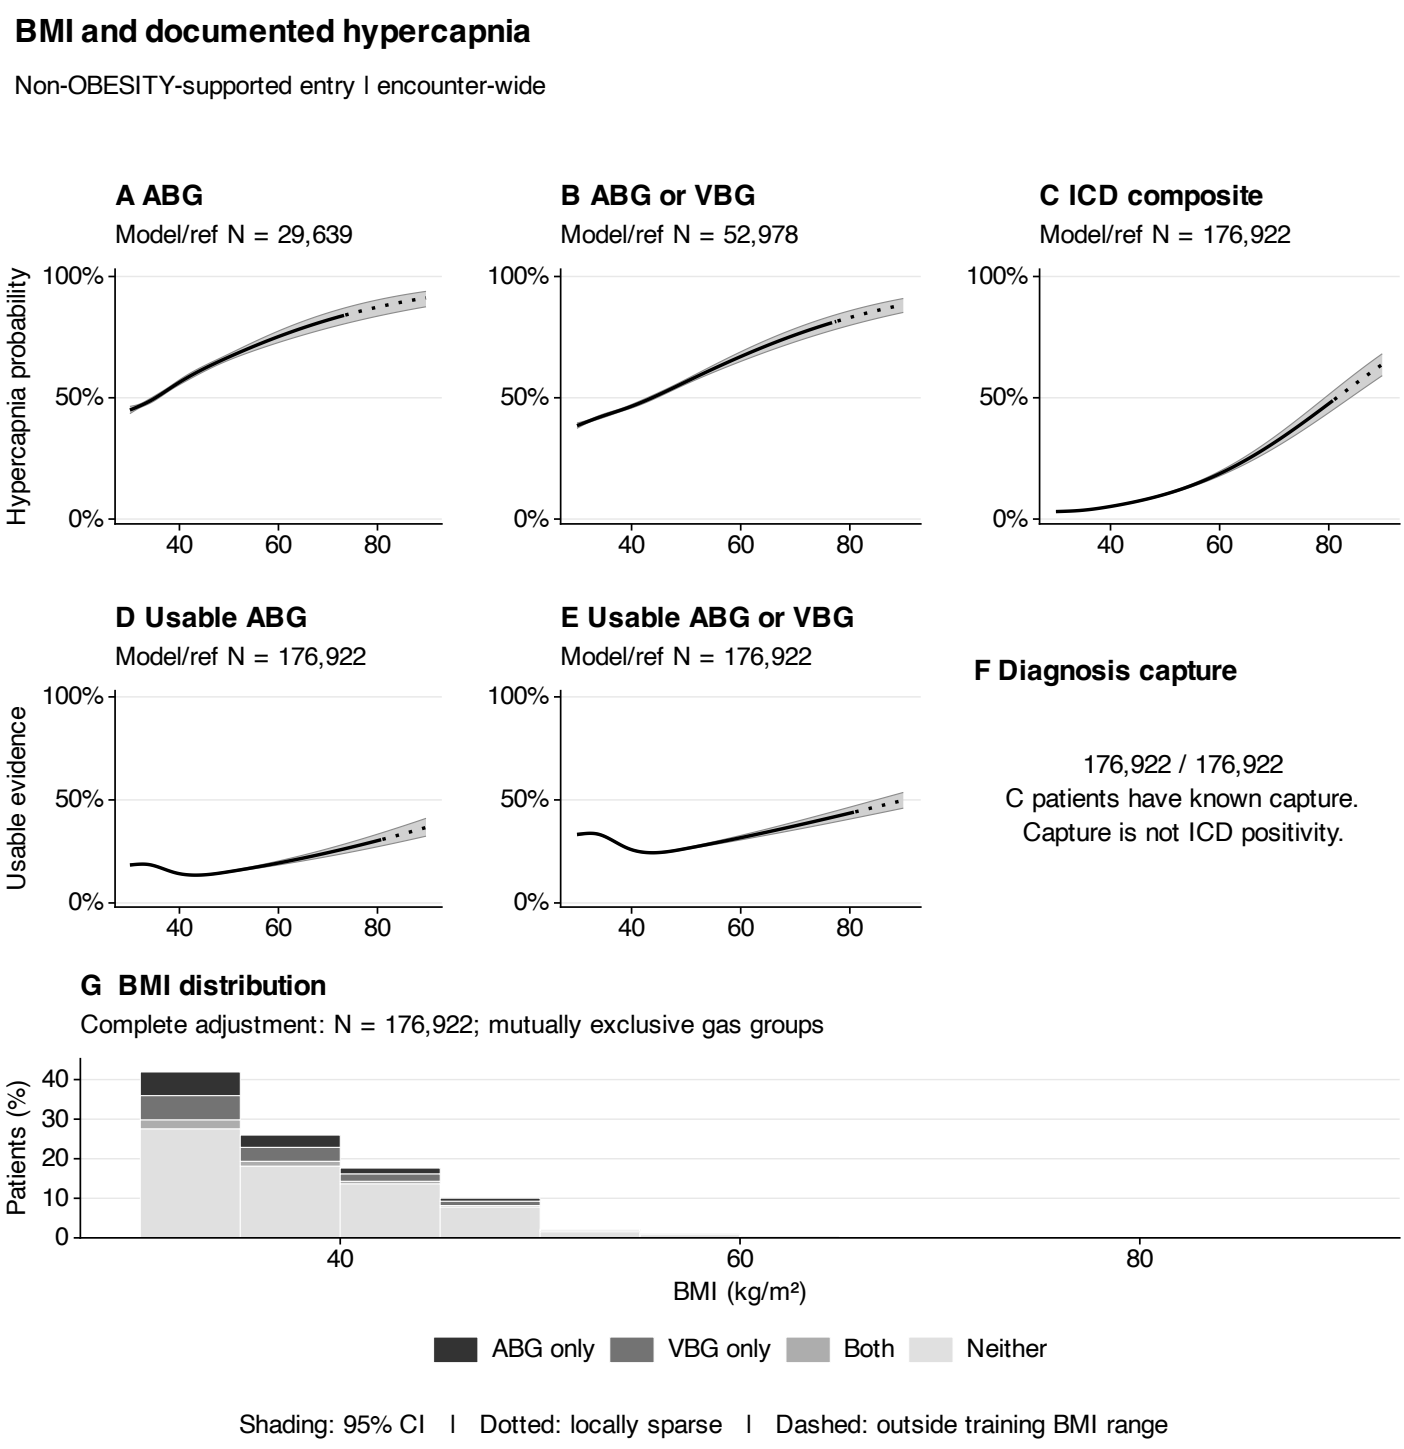

Figure 1246: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F1. BMI–hypercapnia relationships at the first eligible adult 2022 acute-care encounter. ABG denotes $PaCO_2$ ≥45 mm Hg; ABG or VBG denotes $PaCO_2$ ≥45 or $PvCO_2$ ≥50 mm Hg. ICD denotes the five-code composite, including E66.2. Gas curves standardize over outcome-evaluable patients; ICD uses known diagnosis capture. Model/ref N is the common model and reference count. Availability and BMI frequency use all adjustment-complete patients (C); the four frequency groups are mutually exclusive. Adjustment: age, sex, race/ethnicity and region with a fixed natural BMI spline. Shading and fine boundaries show pointwise model-based 95% CIs; dotted segments are locally sparse and dashed segments exceed training BMI support. Open availability points use Wilson intervals when no model is estimable. Known capture is distinct from ICD positivity. ABG/VBG: arterial/venous blood gas. Conditional model uncertainty excludes selection and measurement assumptions; no population transport or causal effect is inferred.

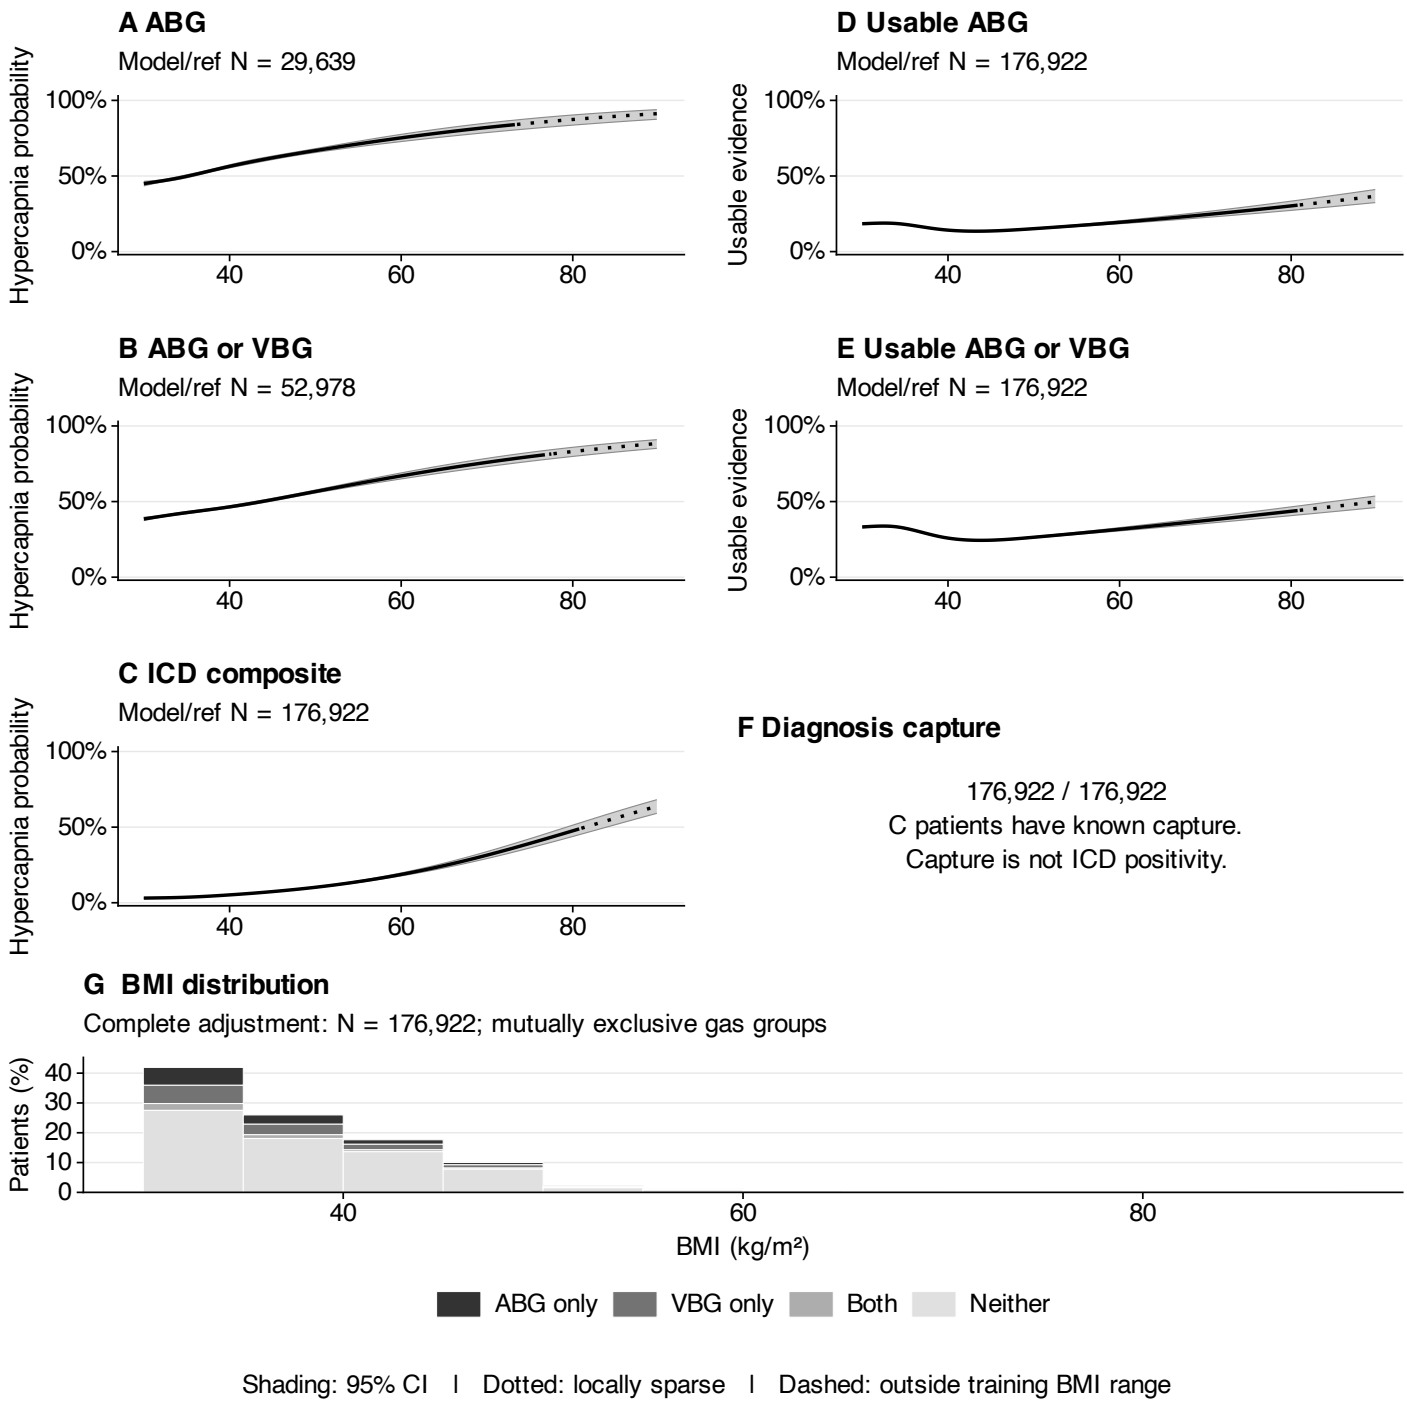

Figure 1247: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F1. BMI–hypercapnia relationships at the first eligible adult 2022 acute-care encounter. ABG denotes $PaCO_2$ ≥45 mm Hg; ABG or VBG denotes $PaCO_2$ ≥45 or $PvCO_2$ ≥50 mm Hg. ICD denotes the five-code composite, including E66.2. Gas curves standardize over outcome-evaluable patients; ICD uses known diagnosis capture. Model/ref N is the common model and reference count. Availability and BMI frequency use all adjustment-complete patients (C); the four frequency groups are mutually exclusive. Adjustment: age, sex, race/ethnicity and region with a fixed natural BMI spline. Shading and fine boundaries show pointwise model-based 95% CIs; dotted segments are locally sparse and dashed segments exceed training BMI support. Open availability points use Wilson intervals when no model is estimable. Known capture is distinct from ICD positivity. ABG/VBG: arterial/venous blood gas. Conditional model uncertainty excludes selection and measurement assumptions; no population transport or causal effect is inferred.

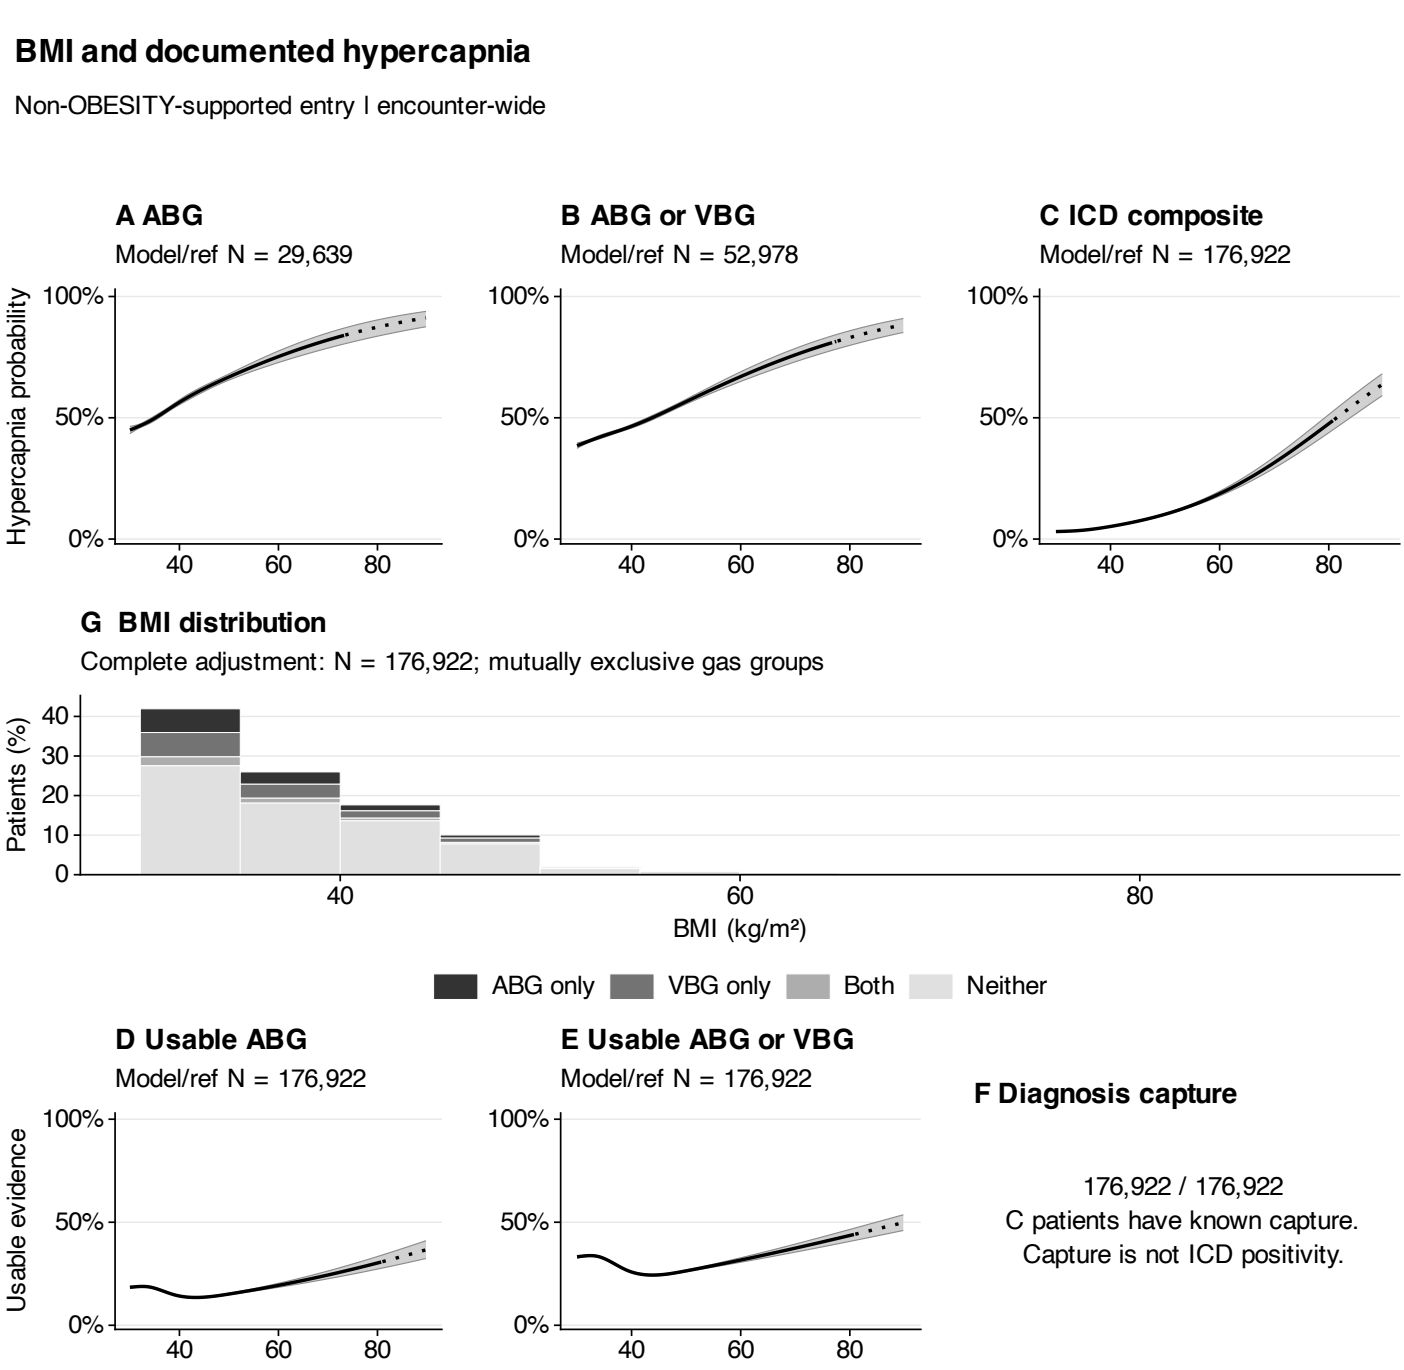

Figure 1248: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F1. BMI–hypercapnia relationships at the first eligible adult 2022 acute-care encounter. ABG denotes $PaCO_2$ ≥45 mm Hg; ABG or VBG denotes $PaCO_2$ ≥45 or $PvCO_2$ ≥50 mm Hg. ICD denotes the five-code composite, including E66.2. Gas curves standardize over outcome-evaluable patients; ICD uses known diagnosis capture. Model/ref N is the common model and reference count. Availability and BMI frequency use all adjustment-complete patients (C); the four frequency groups are mutually exclusive. Adjustment: age, sex, race/ethnicity and region with a fixed natural BMI spline. Shading and fine boundaries show pointwise model-based 95% CIs; dotted segments are locally sparse and dashed segments exceed training BMI support. Open availability points use Wilson intervals when no model is estimable. Known capture is distinct from ICD positivity. ABG/VBG: arterial/venous blood gas. Conditional model uncertainty excludes selection and measurement assumptions; no population transport or causal effect is inferred.

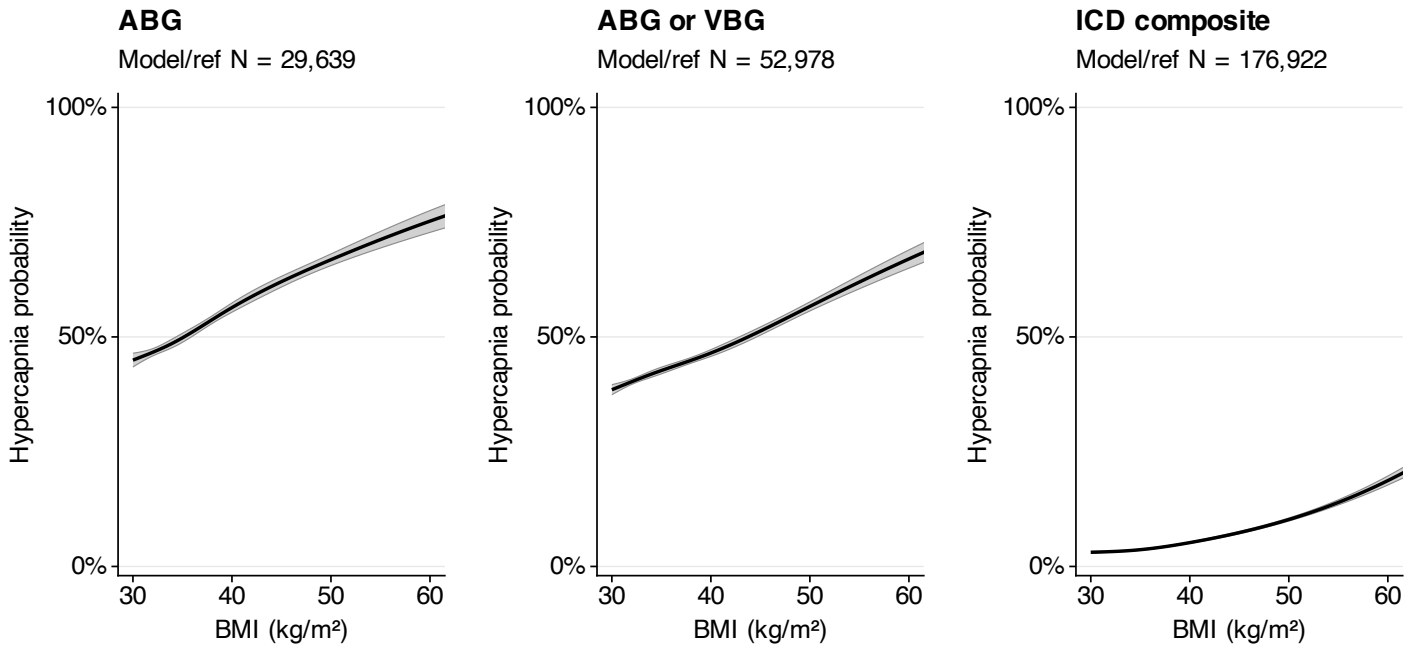

Figure 1249: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F1. BMI–hypercapnia relationships at the first eligible adult 2022 acute-care encounter. ABG denotes $PaCO_2$ ≥45 mm Hg; ABG or VBG denotes $PaCO_2$ ≥45 or $PvCO_2$ ≥50 mm Hg. ICD denotes the five-code composite, including E66.2. Gas curves standardize over outcome-evaluable patients; ICD uses known diagnosis capture. Model/ref N is the common model and reference count. Availability and BMI frequency use all adjustment-complete patients (C); the four frequency groups are mutually exclusive. Adjustment: age, sex, race/ethnicity and region with a fixed natural BMI spline. Shading and fine boundaries show pointwise model-based 95% CIs; dotted segments are locally sparse and dashed segments exceed training BMI support. Open availability points use Wilson intervals when no model is estimable. Known capture is distinct from ICD positivity. ABG/VBG: arterial/venous blood gas. Conditional model uncertainty excludes selection and measurement assumptions; no population transport or causal effect is inferred. This labeled detail view limits the displayed BMI axis to 30–60; no observations were removed from estimation.

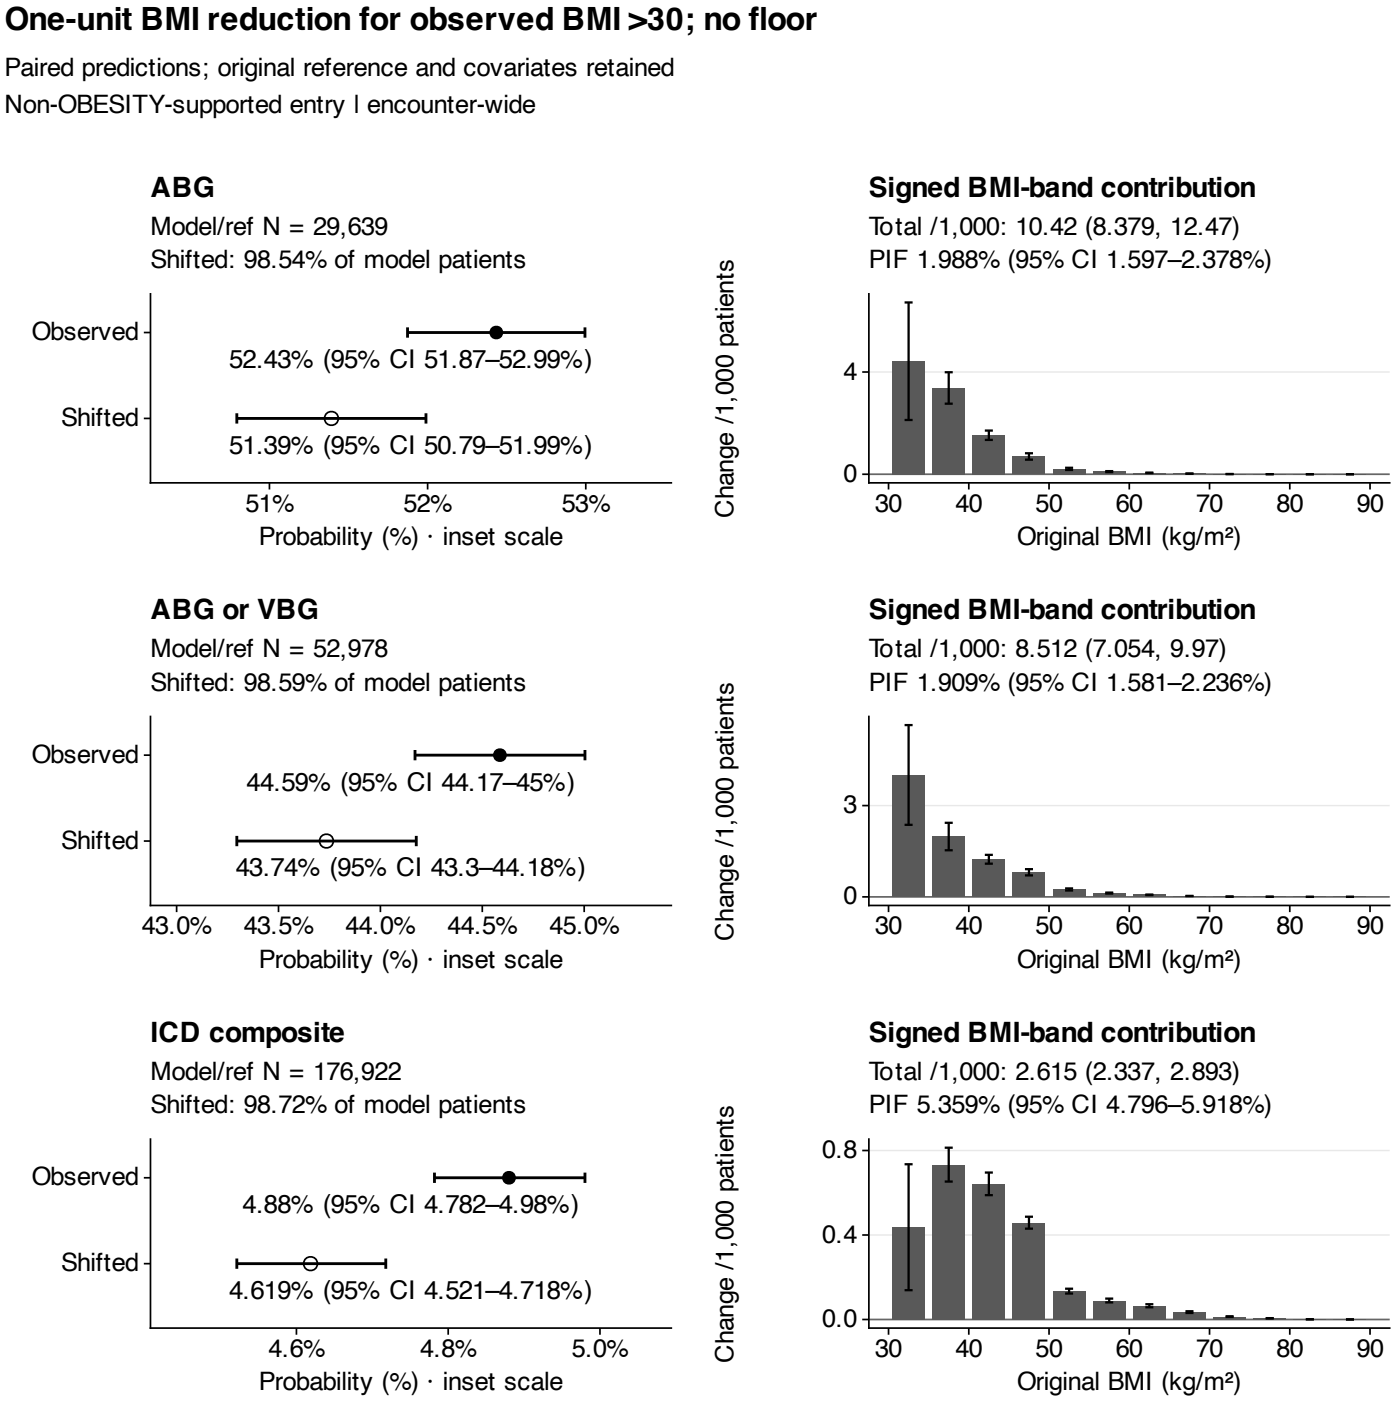

Figure 1250: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F2. Paired scenario: One-unit BMI reduction for observed BMI >30; no floor. ABG: arterial PCO_2 ≥45 mm Hg; ABG or VBG: arterial ≥45 or venous ≥50 mm Hg; ICD: five-code composite including E66.2. Left: observed and shifted standardized probabilities with model-based 95% CIs and printed limits. Left probability axes use different labeled inset scales; compare printed values across outcomes. N identifies the common model/reference population; shifted percentage is a descriptive cohort fraction. Right: signed original-BMI-band contributions per 1,000 reference patients, with 95% CIs. Total-difference/PIF limits are printed; contribution covariance reproduces total variance. Right axes vary by outcome and retain zero and all limits. Gas samples are outcome-evaluable; ICD uses known capture. Adjustment, source-entry membership and covariates are fixed. PIF is the model-standardized potential impact fraction. These conditional scenarios do not estimate a weight-loss treatment effect.

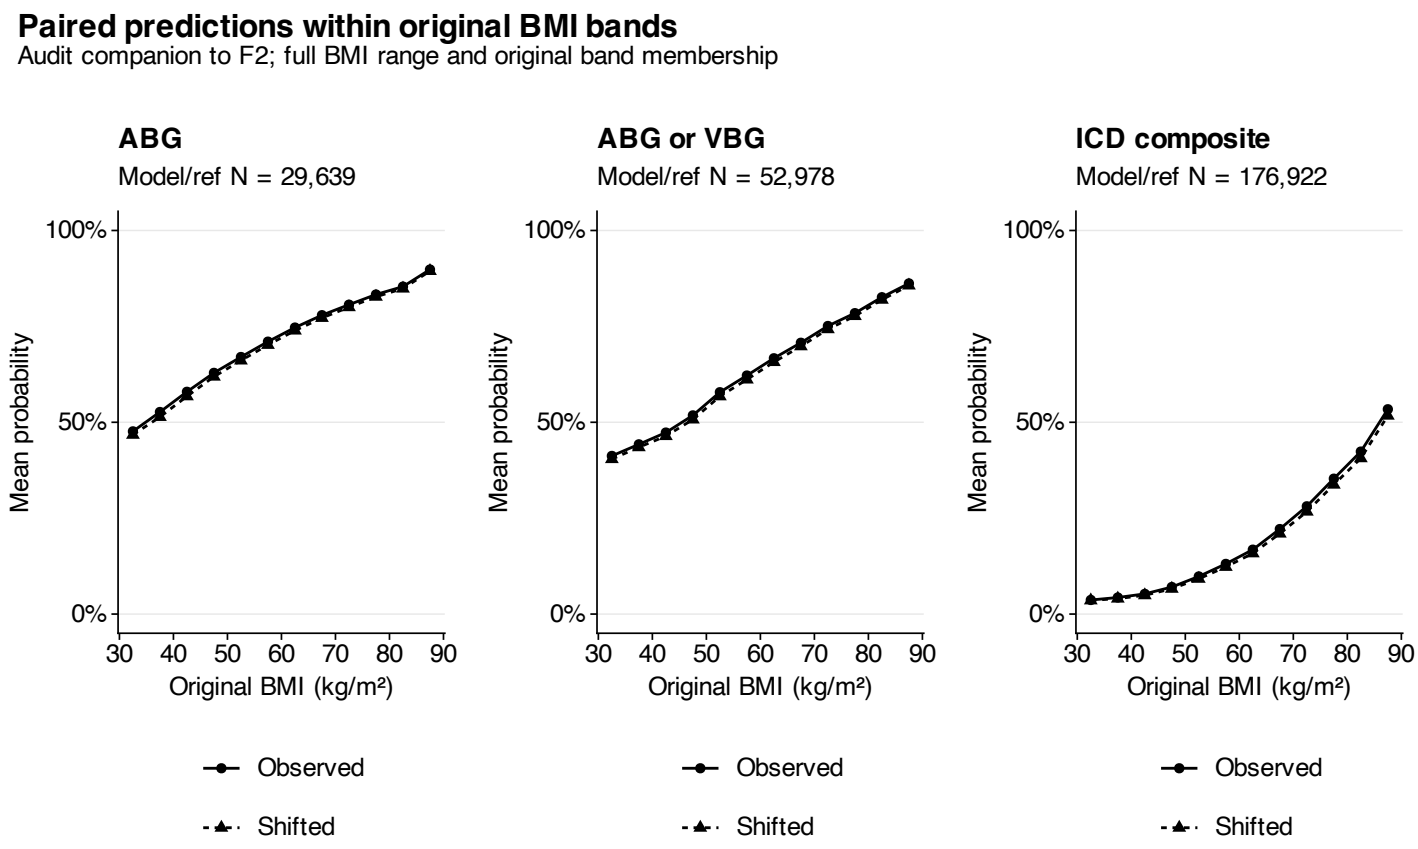

Figure 1251: Source-entry population: primary. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F2 bands. Mean observed and shifted predictions within each original BMI band; the displayed N is the model/reference population. These are paired conditional predictions, not fixed-BMI risk curves. Band-specific probability intervals are not persisted in the bundle and are not fabricated here; aggregate probability and signed contribution intervals appear in F2. All band means and contribution covariances remain available in the aggregate tables.

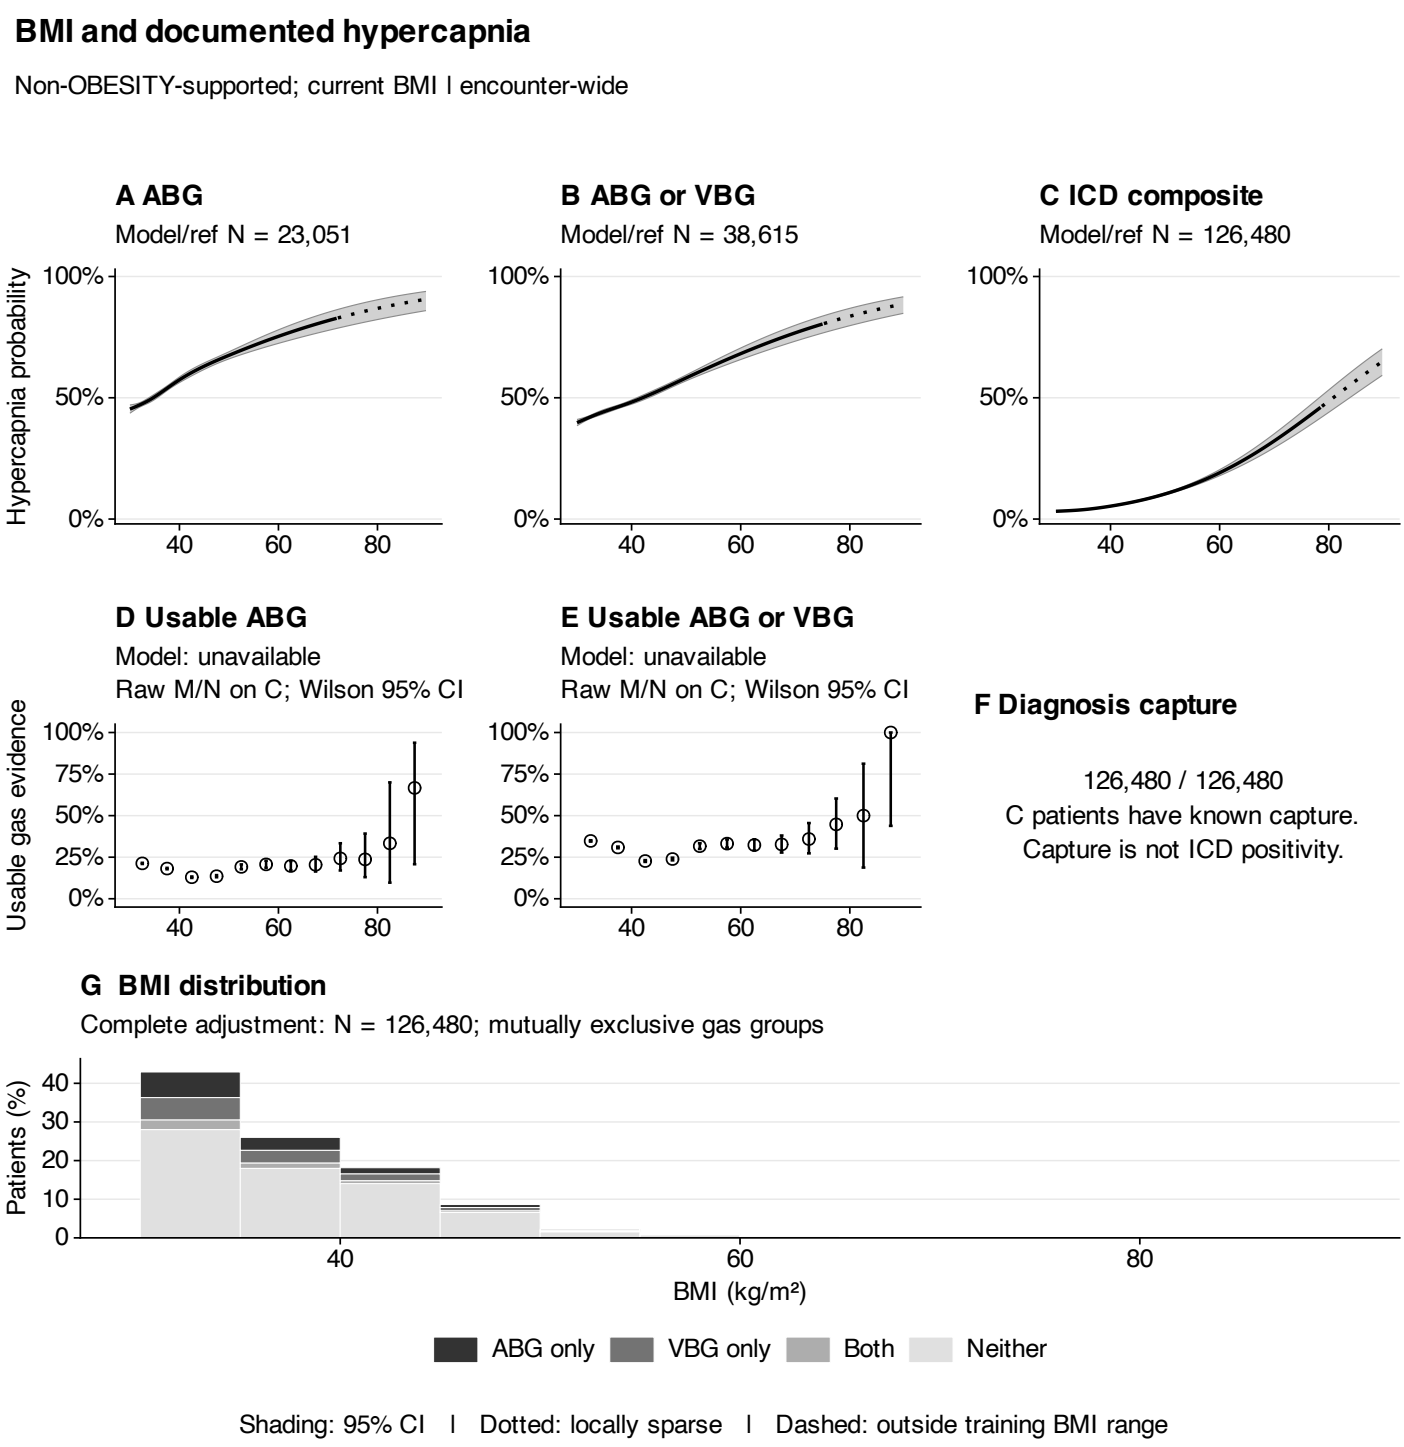

Figure 1252: Source-entry population: primary_current. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F1. BMI–hypercapnia relationships at the first eligible adult 2022 acute-care encounter. ABG denotes $PaCO_2$ ≥45 mm Hg; ABG or VBG denotes $PaCO_2$ ≥45 or $PvCO_2$ ≥50 mm Hg. ICD denotes the five-code composite, including E66.2. Gas curves standardize over outcome-evaluable patients; ICD uses known diagnosis capture. Model/ref N is the common model and reference count. Availability and BMI frequency use all adjustment-complete patients (C); the four frequency groups are mutually exclusive. Adjustment: age, sex, race/ethnicity and region with a fixed natural BMI spline. Shading and fine boundaries show pointwise model-based 95% CIs; dotted segments are locally sparse and dashed segments exceed training BMI support. Open availability points use Wilson intervals when no model is estimable. Known capture is distinct from ICD positivity. ABG/VBG: arterial/venous blood gas. Conditional model uncertainty excludes selection and measurement assumptions; no population transport or causal effect is inferred.

Hypercapnia definitions in matched patients

Encounter-wide; identical patients within each comparison

ICD composite

Model/reference N unavailable

Not assessed

ABG

Model/reference N unavailable

Not assessed

Figure 1264: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F5. Matched ICD/gas curves use identical training/reference patients within each pair and shared BMI/probability scales. Arterial and combined pairs can have different membership. Bands are pointwise model-based 95% CIs; dotted segments are locally sparse and dashed segments exceed training BMI support. ICD is the five-code composite including E66.2. Separate bands are not a test of between-model differences.

Figure 1266: Source-entry population: all_obesity. Subgroup accounting begins with fixed indexes; source/input nodes in these subgroup views do not repeat upstream selection. F5. Encounter versus encounter-start-calendar-day curves reuse the same indexes and fixed spline basis, on shared BMI/probability scales. Each curve standardizes over its displayed model/reference population. Bands are pointwise model-based 95% CIs; dotted segments are locally sparse and dashed segments exceed training BMI support. Pending source or failed models remain explicit. Index day is a calendar-date restriction, not elapsed 24 hours.

Encounter versus encounter-start-calendar-day curves reuse the same indexes and fixed spline basis, on shared BMI/probability scales. Each curve standardizes over its displayed model/reference population. Bands are pointwise model-based 95% CIs; dotted segments are locally sparse and dashed segments exceed training BMI support. Pending source or failed models remain explicit. Index day is a calendar-date restriction, not elapsed 24 hours.

6 Export and review record

The immutable bundle contains all tables, configuration, source hashes and input receipt. Figures and reports are fresh views of that bundle. Rendering is guarded against clinical input reads and model refits. Consult the adjacent render receipt, figure manifest and actual visual-review receipt for checks performed; successful rendering does not establish source or scientific acceptance.
